Number and Letter Series

CHAPTER HIGHLIGHTS

- *Number Series*
- *Difference Series*
- *Product Series*
- *Squares/Cubes Series*
- *Miscellaneous Series*
- *Combination Series*
- *Letter Series*

Introduction

Number and Letter Series form an important part of the Reasoning section in various competitive examinations. There are two or three broad categories of questions that appear in various exams from this particular chapter.

In the first category of questions, a series of numbers/letters is given with one number/letter (or two numbers/letters) missing, represented by a blank or a question mark. The given series of numbers/letters will be such that each one follows its predecessor in a certain way, i.e. according to a definite pattern. Students are required to find out the way in which the series is formed and, hence, work out the missing number/numbers or letter/letters to complete the series. For the purpose of our discussion, we will refer to this category of questions as Number Series Type I or Letter Series Type I questions. Under Type I questions, there are a large variety of patterns that are possible, and the student requires a proper understanding of various patterns to be able to do well in these types of questions.

In the second category of questions, a series of numbers/letters is given, and the student is required to count how many numbers/letters in that series satisfy a given condition and mark that as the answer. For the purpose of our understanding, we will refer to this category of questions as Number Series Type II or Letter Series Type II questions. These questions will mainly involve counting of numbers/letters satisfying a given condition.

Number Series

For better understanding, we will classify this into the following broad categories.

1. Difference series
2. Product series
3. Squares/cubes series
4. Miscellaneous series
5. Combination series

Difference Series

The difference series can be further classified as follows.

1. Number series with a constant difference.
2. Number series with an increasing or decreasing difference.

In the number series with a constant difference, there is always a constant difference between two consecutive numbers. For example, the numbers of the series 1, 4, 7, 10, 13, … are such that any number is obtained by adding a constant figure of 3 to the preceding term of the series.

If we have to find the next number in the aforementioned series, we need to add a 3 to the last term 13. Thus, 16 is the next term of the series.

Under the series with constant difference, we can have series of odd numbers or series of even numbers also.

In the series with increasing/decreasing difference, the difference between consecutive terms keeps increasing (or decreasing, as the case may be). For example, let us try to find out the next number in the series 2, 3, 5, 8, 12, 17, 23, …

Here, the difference between the first two terms of the series is 1; the difference between the second and third terms is 2; the difference between the third and the fourth terms is 3; and so on. That is, the difference between any pair of consecutive terms is one more than the difference between the first number of this pair and the number immediately preceding this number. Here, since the difference between 17 and 23 is 6, the next difference should be 7. So, the number that comes after 23 should be (23 + 7) = 30.

We can also have a number series where the difference is in decreasing order (unlike in the previous example where the difference is increasing). For example, let us find out the next term of the series 10, 15, 19, 22, 24, …

10, 15, 19, 22, 24

+5 +4 +3 +2

Here, the differences between 1st and 2nd, 2nd and 3rd, 3rd and 4th numbers, etc., are 5, 4, 3, 2, and so on. Since the difference between 22 and 24 is 2, the next difference should be 1. So, the number that comes after 24 should be 25.

Product Series

A product series is usually a number series where the terms are obtained by a process of multiplication. Here also, there can be different types of series. We will look at these through examples.

Consider the series 2, 4, 8, 16, 32, 64, …

2, 4, 8, 16, 32, 64

× 2 × 2 × 2 × 2 × 2

Here, each number in the series is multiplied by 2 to get the next term. So, the term that comes after 64 is 128. So, each term is multiplied by a fixed number to get the next term. Similarly, we can have a series where we have numbers obtained by **dividing** the previous term with a constant number. For example, in the series 64, 32, 16, 8, …, each number is obtained by dividing the previous number by 2 (or in other words, by multiplying the previous term by $\frac{1}{2}$). So, here, the next term will be 4 (obtained by dividing 8 with 2).

Consider the series 4, 20, 80, 240, …

4 20, 80, 240,

+5 +4 +3

Here, the first term is multiplied by 5 to get the second term; the second term is multiplied by 4 to get the third term; the third term is multiplied by 3 to get the fourth term. Hence, to get the fifth term, we have to multiply the fourth term by 2, i.e. the fifth term is 480. So, each term is multiplied by a decreasing factor (or it could also be an increasing factor) to get the next term. That is, with whatever number a particular term is multiplied to get the next term, this latest term is multiplied by a number different from the previous multiplying factor to get the next term of the series. All the multiplying factors follow a certain pattern (normally of increasing or decreasing order).

Consider the series 2, 6, 12, 20, 30, …

2, 6, 12, 20, 30

+4 +6 +8 +10

This can be looked at a series of increasing differences. The differences of consecutive pairs of terms are 4 (between 2 and 6), 6 (between 6 and 12), 8 (between 12 and 20), 10 (between 20 and 30), and so on. Hence, the difference between 30 and the next term should be 12, and, so, the next term will be 42. But, this series can also be looked at as a product series.

2,	6,	12,	20,	30
↓	↓	↓	↓	↓
1×2	2×3	3×4	4×5	5×6

The first term is the product of 1 and 2; the second term is the product of 2 and 3; the third term is the product of 3 and 4; the fourth term is the product of 4 and 5; the fifth term is the product of 5 and 6. Hence, the next term will be the product of 6 and 7, that is 42.

Squares/Cubes Series

There can be series where all the terms are related to the squares of numbers or cubes of numbers. With squares/cubes of numbers as the basis, there can be many variations in the pattern of the series. Let us look at various possibilities of series based on squares/cubes.

Each term of the series may be the square of a natural number, such as 1, 4, 9, 16, …

1,	4,	9,	16
↓	↓	↓	↓
1^2	2^2	3^2	4^2

The numbers are squares of 1, 2, 3, 4 …, respectively. The number which follows 16 (which is the square of 4) will be 25 (which is the square of 5).

The terms of the series may be the squares of odd numbers (e.g. 1, 9, 25, 49, …) or even numbers (e.g. 4, 16, 36, 64, …).

The terms of the series could be such that a number and its square are both given one after the other and such pairs are given in some specific pattern. For example, take the series 2, 4, 3, 9, 4, 16, …

2, 4, 3, 9, 4, 16,

+1 +1

Here, 2 is followed by its square 4; then comes the number 3 (which is one more than 2) followed by its square 9 and so on. Hence, the next number in the series is 5, and the one after that is its square, i.e. 25.

Similarly, each term could be the square root of its predecessor. For example, in the series 81, 9, 64, 8, 49, 7, 36, …, 81 is the square of 9, 64 the square of 8, and so on. Therefore, the next number which follows in the series should be the square root of 36, i.e. 6.

The terms of the series could be the squares of natural numbers increased or reduced by certain number. For example, in the series 3, 8, 15, 24, …

$$\begin{array}{cccc} 3, & 8, & 15, & 24 \\ \downarrow & \downarrow & \downarrow & \downarrow \\ 2^2-1 & 3^2-1 & 4^2-1 & 5^2-1 \end{array}$$

We have {Squares of natural numbers – 1} as the terms. The first term is $2^2 - 1$; the second term is $3^2 - 1$; the third term is $4^2 - 1$, and so on. Hence, the next term will be $6^2 - 1$, i.e. 35. [Please note that the above series can also be looked at as a series with increasing differences. The differences between the 1st and 2nd terms, the 2nd and 3rd terms, and so on are 5, 7, 9, and so on. Hence, the next difference should be 11 giving us the next term as 35.] There could also be a series with {squares of natural numbers + some constant}.

Like we have seen series with squares of numbers, we can have similar series with cubes of numbers. For example, take the series 1, 8, 27, 64, …

$$\begin{array}{cccc} 1, & 8, & 27, & 64 \\ \downarrow & \downarrow & \downarrow & \downarrow \\ 1^3 & 2^3 & 3^3 & 4^3 \end{array}$$

Here, all the terms are cubes of natural numbers. So, the next term will be 5^3, i.e. 125.

Consider the series 2, 9, 28, 65, …

$$\begin{array}{cccc} 2, & 9, & 28, & 65 \\ \downarrow & \downarrow & \downarrow & \downarrow \\ 1^3+1 & 2^3+1 & 3^3+1 & 4^3+1 \end{array}$$

Here, the terms are {Cubes of natural numbers + 1}. The first term is $1^3 + 1$; the second term is $2^3 + 1$; the third term is $3^3 + 1$, and so on. Hence, the next term will be $5^3 + 1$, i.e. 125.

Miscellaneous Series

There are series that do not come under the other patterns and are of general nature but are important and are fairly common. Even here, some times, there can be a specific pattern in some cases.

Take the series 3, 5, 7, 11, 13, … . This is a series of consecutive PRIME NUMBERS. It is an important series and the student should look out for this as one of the patterns. The next term in this series is 17.

There can also be variations using prime numbers. Take the series 9, 25, 49, 121, … . In this series, the terms are squares of prime numbers. Hence, the next term is 13^2, i.e. 169.

Take the series 15, 35, 77, … . The first term is 3×5; the second term is 5×7; the third term is 7×11; here, the terms are product of two consecutive prime numbers. So, the next term will be the product of 11 and 13, i.e. 143.

Take the series 8, 24, 48, 120, 168, … Here, the 2nd term is 3 times the first term and the 3rd term is 2 times the 2nd term, but after that, it does not follow this pattern any more. If you look at the terms carefully, you will find that the terms are {one less than squares of prime numbers}. Hence, the next term will be $17^2 - 1$, i.e. 288.

Consider the series 1, 4, 9, 1, 6, 2, 5, 3, …

At first sight, there is nothing we can say about the series. This is actually a series formed by squares of natural numbers. However, if any of the squares is in two or more digits, each of the digits is written as a separate term of the series. Thus, the first terms are 1, 4, and 9, the squares of 1, 2, and 3, respectively. After this, we should get 16 (which is the square of 4). Since this has two digits 1 and 6, these two digits are written as two different terms 1 and 6 in the series. Similarly, the next square 25 is written as two different terms 2 and 5 in the series. So, the next square 36 should be written as two terms 3 and 6. Of these, 3 is already given. So, the next term of the series is 6.

Consider the series 1, 1, 2, 3, 5, 8, …

$$\begin{array}{cccccc} 1, & 1, & 2, & 3, & 5, & 8 \\ & & \downarrow & \downarrow & \downarrow & \downarrow \\ & & 1+1 & 1+2 & 2+3 & 3+5 \end{array}$$

Here, each term, starting with the third number, is the sum of the two preceding terms. After taking the first two terms as given (1 and 1), then onwards, to get any term, we need to add the two terms that come immediately before that position. Hence, to get the next term of the series, we should take the two preceding terms 5 and 8 and add them up to get 13. So, the next term of the series is 13. The term after this will be 21 (= 8 + 13).

Combination Series

A number series which has more than one type of (arithmetic) operation performed or more than one series combined together is a combination series. The series that are combined can be two series of the same type or could be different types of series as described earlier. Let us look at some examples.

First, let us look at those series that are formed by more than one arithmetic operation performed on the terms to get the subsequent terms.

Consider the series: 2, 6, 10, 3, 9, 13, 4, 12, … Here, the first term 2 is multiplied by 3 to get the second term, and 4 is added to get the third term. The next term is 3 (one more than the first term 2), and it is multiplied by 3 to get 9 (which is the next term) and then 4 is added to get the next term 13. The next term 4 (which is one more than 3), which is multiplied with 3 to get 12. Then, 4 is added to this to get the next number 16.

Consider the series: 1, 2, 6, 21, 88, …. Here, we can observe that 88 is close to 4 times 21. It is in fact $21 \times 4 + 4$. So, if we now look at the previous term 21, it is related to

the previous term 6 as $6 \times 3 + 3$. Now we get the general pattern: to get any term, multiply the previous term with k and then add k where k is a natural number with values in increasing order from 1. So, to get the second term, the first term has to be multiplied with 1 and then 1 is added. To get the third term, the second term is multiplied with 2 and then 2 is added and so on. Hence, after 88, the next term is $88 \times 5 + 5$, i.e. 445.

Now, let us look at a series that is formed by combining two (or more) different series. The two (or more) series can be of the same type or of different types described earlier.

Consider the series: 8, 12, 9, 13, 10, 14, …. Here the 1st, 3rd, 5th, … terms, which are 8, 9, 10, …, form one series whereas the 2nd, 4th, 6th, etc. terms, which are 12, 13, 14, form another series. Here, both series that are being combined are two simple constant difference series. Therefore, the missing number will be the next term of the first series 8, 9, 10, …, which is equal to 11.

Consider the series: 0, 7, 2, 17, 6, 31, 12, 49, 20, …. Here, the series consisting of 1st, 3rd, 5th, … terms (i.e. the series consisting of the odd terms), which is 0, 2, 6, 12, 20, … is combined with another series consisting of 2nd, 4th, 6th, … terms (i.e. the series consisting of the even terms) which is 7, 17, 31, 49, … . The first series has the differences in increasing order 2, 4, 6, 8, 10, and so on. The second series also has the difference in increasing order 10, 14, 18, …. Since, the last term 20 belongs to the first series, a number from the second series should follow next. The next term of the second series will be obtained by adding 22 to 49, that is 71.

Consider the series: 1, 1, 2, 4, 3, 9, 4, 16, …. Here, one series consisting of odd terms, which is 1, 2, 3, 4, …, is combined with the series of even terms which is 1, 4, 9, 16, …. The first series is a series of natural numbers. The second series is the squares of natural numbers. Hence, the next term is 5.

Consider the series: 1, 1, 4, 8, 9, 27, …. Here, the series of squares of natural numbers is combined with the series of cubes of natural numbers. The next term in the series will be 4.

Consider the series: 2, 4, 5, 9, 9, 16, 14, ?, 20, …. Here, we have to find out the term that should come in place of the question mark. The odd terms form one series 2, 5, 9, 14, 20, … where the difference is increasing. The differences are 3, 4, 5, 6, … This series is combined with the series of even terms 4, 9, 16, … where the terms are squares of numbers 2, 3, 4, … . Hence, the term that should come in place of the question mark is the next term of the second series which is 5^2, i.e. 25.

A general approach to the number Series: The best way of approaching the number series questions is to first observe the difference between terms. If the difference is constant, it is a constant difference series. If the difference is increasing or decreasing by a constant number, then it is a series with a constant increasing or decreasing difference. If there is no constant increasing or decreasing difference, then try out the product series approach. For this, first divide the second term with the first term, third with the second, and so on. If the numbers obtained are the same, then it is a product series. Alternatively, try writing each term of the series as a product of two factors and see if there is any pattern that can be observed. If still there is no inference, but the difference is increasing or decreasing in a rapid manner, then check out the square series. If the increase is very high, and it is not a square series, then try out the cube series.

If the difference is alternately decreasing and increasing (or increasing for some time and alternately decreasing), then it should most probably be a mixed series. Therefore, test out the series with alternate numbers. If still the series is not solved, try out the general series.

Letter Series

The questions here are similar to the questions in Number Series Type I. Instead of numbers, we have letters of the alphabet given here. We have to first identify the pattern that the series of letters follow. Then, we have to find the missing letter based on the pattern already identified. Ins number series, we saw different patterns that the numbers in the series can follow—like squares, cubes. In letter series, obviously, patterns like squares, cubes will not be possible. In letter series, in general, we have a series with constant or increasing or decreasing differences. The position of the letters in the English alphabet is considered to be the value of the alphabet in questions on letter series. Also, when we are counting, after we count from *A* to *Z*, we again start with *A*, i.e. we treat the letters as being cyclic in nature. Like in number series, in this type of letter series also, we can have a 'combination' of series, i.e. two series are combined and given. We need to identify the pattern in the two series to find out the missing letter. Sometimes, there will be some special types of series also. Let us look at a few examples to understand questions on letter series.

Solved Examples

Example 1

Find the next letter in the series

D, G, J, M, P, ______.

(A) Q (B) R (C) S (D) T

Solution

Three letters are added to each letter to get the next letter in the series.

i.e. $D^{+3}, G^{+3}, J^{+3}, M^{+3}, P^{+3}, \underline{S}$

P + 3 and P = 16 and 16 + 3 = 19 and the 19th letter in the alphabet is S.

Example 2

Find the next letter in the series

A, B, D, H, ______.

(A) L (B) N (C) R (D) P

Solution

Each letter in the given series is multiplied with 2 to get the next letter in the series.

$A \times 2 \Rightarrow 1 \times 2 = 2$ and the 2nd letter is B, $B \times 2 \Rightarrow 2 \times 2 = 4$ and the 4th letter is D.

Similarly, $H \times 2 \Rightarrow 8 \times 2 = 16$ and the 16th letter is P.

Example 3

What is the next letter in the series?

B, D, G, K, P, ______

(A) S (B) V (C) W (D) X

Solution

$B^{+2}, D^{+3}, G^{+4}, K^{+5}, P^{+6}$, ______

$P + 6 = 16 + 6 = 22$ and the 22nd letter is V.

Example 4

I, X, J, W, K, V, L, ______.

(A) M (B) U (C) S (D) T

Solution

The given series is an alternate series.

I^{+1}, J^{+1}, K^{+1}, L is one series and X^{-1}, W^{-1}, V^{-1}, ______ is the other series.

$X - 1 = W$, $W - 1 = V$ and $V - 1 = 22 - 1 = 21$ and the 21st letter is U.

Example 5

97, 83, 73, 67, 59, ______

(A) 53 (B) 49 (C) 47 (D) 51

Solution

The given numbers are alternate prime numbers in decreasing order, starting with 97. Hence, the next number in the series is 47.

Example 6

75, 291, 416, 480, 507, ______

(A) 515 (B) 532 (C) 511 D) 521

Solution

$75^{+216}, 291^{+125}, 416^{+64}, 480^{+27}, 507$, ______

The differences are cubes of consecutive natural numbers in decreasing order. Hence, the next number in the series in $507 + (B)^3 = 515$.

Exercises

Direction for questions 1 to 25: Complete the following series.

1. 17, 19, 23, 29, 31, 37, ______
(A) 41 (B) 43 (C) 40 (D) 42

2. 225, 196, 169, ______, 121, 100, 81
(A) 156 (B) 144 (C) 136 (D) 125

3. 64, 125, 216, 343, ______
(A) 64 (B) 424 (C) 317 (D) 512

4. 54, 66, 82, 102, 126, ______
(A) 146 (B) 130 (C) 154 (D) 144

5. 7, 11, 20, 36, 61, ______, 146
(A) 25 (B) 91 (C) 97 (D) 92

6. 8, 16, 48, 96, 288, 576, ______
(A) 1152 (B) 1728
(C) 1052 (D) 1428

7. 125, 375, 377, 1131, 1133, ______
(A) 3399 (B) 1136
(C) 1135 (D) 1234

8. 12, 35, 106, 317, 952, ______
(A) 2851 (B) 2855
(C) 1851 (D) 1849

9. 2, 4, 7, 35, 42, 462, ______
(A) 5016 (B) 470 (C) 4712 (D) 475

10. $13\frac{1}{3}, 15, \frac{120}{7}, 20, 24$, ______
(A) 30 (B) 36 (C) 40 (D) $37^1/_3$

11. 6, 15, 35, 77, 143, 221, ______
(A) 357 (B) 437 (C) 323 (D) 383

12. 29, 29, 27, 23, 25, 19, 23, 17, ______, ______
(A) 19, 13 (B) 19, 15 (C) 21, 13 (D) 19, 13

13. 24, 625, 26, 729, 28, 841, ______
(A) 30 (B) 29 (C) 900 (D) 961

14. 3731, 2923, 1917, 1311, ______
(A) 117 (B) 119 (C) 917 (D) 75

15. 11, 28, 327, 464, ______
(A) 525 (B) 5625 (C) 5125 (D) 5250

16. 6, 24, 60, 120, 210, ______
(A) 336 (B) 343 (C) 368 (D) 322

17. 132, 182, 306, 380, 552, 870, ______
(A) 930 (B) 1010 (C) 992 (D) 1142

18. KPD, LOE, MNF, NMG, ______
(A) ONF (B) OLH (C) MLH (D) MNH

19. BEP, CIQ, DOR, FUS, GAT, ______
(A) HEV (B) HIT (C) IET (D) IEU

20. GKF, IPC, LTY, PWT, UYN, ______
(A) ABZ (B) XBX
(C) XAH (D) AZG

21. QLR, JPD, RNU, GNC, SPX, DLB, ______
(A) TRA (B) AJA
(C) BTU (D) KJE

22. GTB, CYV, YDP, ______, QND
(A) DIV (B) UIJ
(C) DDV (D) UVV

23. ABDH, BDHP, CFLX, DHPF, ______
(A) EKNT (B) TNEK
(C) EJTN (D) JNTE

24. TCFK, RADI, OXAF, JSVA, ______
(A) DMPU (B) DMOT
(C) CMOT (D) CLOT

25. KJAM, GGWJ, ______, YAOD, UXKA
(A) CDUI (B) DFTC
(C) DCTF (D) CDSG

Chapter 2

Analogies

CHAPTER HIGHLIGHTS

- *Analogy*
- *Number Analogies*
- *Letter Analogies*
- *Verbal Analogies*

Analogy

Analogy means 'similarity' or 'similar relationship'. In questions on number or letter analogies, a pair, that has a certain relationship between them, is given. This number/letter pair is followed by a third number/letter. The student is expected to identify the relationship between the pair given and find out a FOURTH number such that the relationship between the third and the fourth is similar to the relationship that exists between the first and the second. (In some cases, it may not be the fourth one that has to be found out. The fourth one will be given and the student has to find out one of the other three, whichever is not given).

Number Analogies

Typical relationships between the numbers in a given pair can be any of the following:

- One number is a multiple of the other.
- One number is the square or square root of the other.
- One number is the cube or cube root of the other.
- The two numbers are squares of two other numbers which themselves are related. For example, the two numbers are squares of two consecutive integers or squares of two consecutive even integers or squares of two consecutive odd integers.
- The two numbers are such that they are obtained by subtracting a certain number from the squares or cubes of the two related numbers.
- The two numbers are such that they are obtained by adding a certain number to the squares or cubes of the two related numbers.
- The two numbers can be consecutive, even, odd, or prime numbers.

There can be many more combinations that one can think of but the student has to note an important point in solving questions on number analogies. In number series-related questions, since a series of numbers (more than two numbers) will be given, the relationship or pattern can be identified uniquely. In number analogies, since only two numbers are given, it may be possible to think of more than one relationship existing between the two numbers in the given pair. But, it should be kept in mind that generally, simple addition of one number or subtraction of one number is not what is given in number analogies. The questions try to test the insight that the student has got into the relationship between the numbers.

Let us take a few examples and understand the questions on number analogies.

Solved Examples

Example 1

Find the missing number 25 : 36 : : 49 : _____.

(A) 61 (B) 63 (C) 65 (D) 60

Solution

When the numbers in the question are considered the students tend to consider 25 and 36 as squares of two consecutive natural numbers. But, the answer choices does not consist of an answer suitable to the above logic. Hence, it is important that, the student keeps the answer choices in view in arriving at the logic.

$$25 + 11 = 36$$

Similarly, $49 + 11 = 60$

Example 2

Find the missing number 27 : 51 : : 83 : _____.

(A) 102 (B) 117 (C) 123 (D) 138

Solution

The given analogy can be written as

$$5^2 + 2 : 7^2 + 2 : : 9^2 + 2 : \_\_\_\_\_.$$

5 and 7 are successive odd numbers.

Similarly, next odd number to 9 is 11 and $11^2 + 2 = 121 + 2 = 123$.

Example 3

Find the missing number.

11 : 25 : : 17 : _____.

(A) 33 (B) 28 (C) 41 (D) 37

Solution

$$11 \times 2 + 3 = 22 + 3 = 25$$

Similarly, $17 \times 2 + 3 = 34 + 3 = 37$.

Letter Analogies

The questions in this area are similar to verbal analogies. Here, the questions are based on the relationship between two groups of letters (instead of two words as in verbal analogies). Typically, three sets of letters are given followed by a question mark (where a fourth set of letters is supposed to inserted). The student has to find the relation or order in which the letters have been grouped together in the first two sets of letters on the left hand side of the symbol : : and then find a set of letters to fit in place of the question mark so that the third and the fourth set of letters will also have the same relationship as the first and the second. The sequence or order in which the letters are grouped can be illustrated by the following examples.

Example 4

BDEG : DFGI : : HKMO : _____.

(A) ILNP (B) JMOP

(C) JMOQ (D) JNOQ

Solution

Two letters are added to each letter to get the next letters in the analogy.

B	D	E	G;	Similarly,	H	K	M	O
+2	+2	+2	+2		+2	+2	+2	+2
D	F	G	I		J	M	O	Q

Example 5

ACDF : CGJN : : BEHI : _____.

(A) DJNQ (B) DINQ

(C) DINR (D) DHNQ

Solution

A	C	D	F;	Similarly,	B	E	H	I
+2	+4	+6	+8		+2	+4	+6	+8
C	G	J	N		D	I	N	Q

Example 6

SUWY : LPTX : : PRTV : _____.

(A) INRU (B) INQU

(C) IMRU (D) IMQU

Solution

S	U	W	Y;	Similarly,	P	R	T	V
–7	–5	–3	–1		–7	–5	–3	–1
L	P	T	X		I	M	Q	U

Example 7

BCDE : DFHH : : FGHI : _____.

(A) LJPL (B) LKPL

(C) JKPJ (D) IKPL

Solution

B	C	D	E;	Similarly,	F	G	H	I
×2	+3	×2	+3		×2	+3	×2	+3
D	G	H	H		L	J	P	L

Verbal Analogies

Here, the questions are based on relationship between two words. In these kind of questions, three words are followed by a blank space, which the student has to fill up in such a way that the third and the fourth words have the same relationship between them as the first and the second words have. The following examples help in understanding the concepts.

Example 8

Gum : Stick : : Needle : _____

(A) Cloth (B) Prick

(C) Taylor (D) Stitch

Solution

Gum is used to stick and needle is used to stitch.

Example 9

Socks : Feet : _____ : Hands

(A) Arms (B) Shirt
(C) Gloves (D) Fingers

Solution

Socks are worn on feet, similarly gloves are worn on hands.

Example 10

Soft : Hard : : Cold : _____

(A) Hot (B) Shirt
(C) Gloves (D) Fingers

Solution

Soft and hard are antonyms; similarly, the antonym of cold is hot.

Exercises

Direction for questions 1 to 25: Find the missing term.

1. 97 : 89 : : 43 : _______
(A) 37 (B) 31 (C) 39 (D) 41

2. 196 : 256 : : 324 : _______
(A) 361 (B) 400 (C) 411 (D) 484

3. 121 : 169 : : 361 : _______
(A) 529 (B) 400 (C) 484 (D) 576

4. 125 : 343 : : 343 : _______
(A) 512 (B) 1331 (C) 1728 (D) 81

5. 4 : 256 : : 5 : _______
(A) 625 (B) 1025 (C) 525 (D) 875

6. 12 : 144 : : 18 : _______
(A) 160 (B) 180 (C) 190 (D) 150

7. 25 : 21 : : 59 : _______
(A) 42 (B) 46 (C) 76 (D) 56

8. 8 : 72 : : 10 : _______
(A) 95 (B) 106 (C) 99 (D) 90

9. 8 : 0.125 : : 4 : _______
(A) 0.5 (B) 0.4 (C) 0.35 (D) 0.25

10. 11 : 143 : : 19 : _______
(A) 443 (B) 450 (C) 420 (D) 437

11. 568 : 352 : : 732 : _______
(A) 516 (B) 496 (C) 526 (D) 536

12. 6 : 222 : : 9 : _______
(A) 738 (B) 720 (C) 729 (D) 744

13. 5 : 120 : : 8 : _______
(A) 520 (B) 504 (C) 448 (D) 512

14. 16 : 68 : : 36 : _______
(A) 216 (B) 210
(C) 222 (D) 226

15. 10 : 95 : : 16 : _______
(A) 218 (B) 318 (C) 248 (D) 102

16. 3829 : 3851 : : 2987 : _______
(A) 301 (B) 3007
(C) 3017 (D) 3023

17. 47 : 121 : : 89 : _______
(A) 183 (B) 187 (C) 193 (D) 195

18. NATURE : PEVASI : : ISOMERS : _______
(A) OTUNJTV (B) OTUNIST
(C) PUVNJST (D) OVTNJST

19. BAD : BBL : : JDFE : _______
(A) JHRI (B) JHPX
(C) JFTV (D) JHRT

20. FIELD : LRJXH : : CRICKET : _______
(A) FHRDXLJ (B) FJPDTLN
(C) FJRDXAL (D) FJRFVJN

21. TAP : SUZBOQ : : RED : _______
(A) QTDGDE (B) PSDEDF
(C) QSDFCE (D) QRDGBE

22. Train : Track : : Bus : _______
(A) Driver (B) Road
(C) Petrol (D) Passengers

23. Earth : Planet : : Carrot : _______
(A) Vegetable (B) Plant
(C) Cooking (D) Nut

24. Wood : Carpenter : : Iron : _______
(A) Goldsmith (B) Instrument
(C) Melting (D) Blacksmith

25. Pen : Write : : Knife : _______
(A) Vegetable (B) Cut
(C) Sharp (D) Shoot

Answer Keys

1. D	**2.** B	**3.** A	**4.** B	**5.** A	**6.** D	**7.** D	**8.** D	**9.** D	**10.** D
11. A	**12.** A	**13.** B	**14.** C	**15.** C	**16.** A	**17.** B	**18.** B	**19.** D	**20.** D
21. C	**22.** B	**23.** A	**24.** D	**25.** B					

Chapter 3

Odd Man Out

CHAPTER HIGHLIGHTS

- *Odd Man Out*
- *Alphabet Classification*
- *Word Classification*
- *Number Classification*

Introduction

Finding the odd man out from the given alternatives is a very common type of questions that one comes across in different competitive examinations. In the questions on odd man out, all the items—except one—follow a certain pattern (in their formation) or belong to a group. The item that does not follow the pattern or does not belong to the group has to be marked as the answer choice.

The problems of this variety often fall under the category of CLASSIFICATION. When a given set of elements is classified under a single head, one of the items will not fall into that group to which the rest belong, i.e. it will not have the common property, which the others will have. Hence, it becomes the odd man out.

Questions on classification can be asked in any form. Some of the commonly asked ones are given below.

Alphabet Classification

In this type, a group of jumbled letters typically consisting of three letters, (but can be four or two or just a single letter) are put together. The pattern or order in which they are grouped is to be studied and we need to find out which groups have the same pattern or relationship between the letters. There will be one choice, which will have a pattern different from the rest and that is our answer.

Solved Examples

Example 1

Find the odd one among the following.

(A) ZW (B) TQ
(C) SP (D) NL

Solution

$$Z^{-3}W,\ T^{-3}Q,\ S^{-3}P,\ N^{-2}L$$

Hence, NL is the odd one.

Example 2

Find the odd one among the following.

(A) CFD (B) GJH
(C) KNM (D) JMK

Solution

$$C^{+3}F^{-2}D,\ G^{+3}J^{-2}H,\ K^{+3}N^{-1}M,\ J^{+3}M^{-2}K$$

Hence, KNM is the odd one.

Word Classification

Here, different items are classified based on common properties like names, places, professions, and parts of speech. A few examples are illustrated further.

Example 3

Find the odd one among the following.

(A) Mercury (B) Moon
(C) Jupiter (D) Saturn

Solution

All others except Moon are planets, whereas Moon is a satellite.

Example 4

Find the odd one among the following.

(A) SORE (B) SOTLU
(C) NORGAE (D) MEJNIAS

Solution

The words are jumbled. The actual words are ROSE, LOTUS, ORANGE, and JASMINE. All, except ORANGE, are flowers, whereas ORANGE is a fruit.

Example 5

(A) Cow (B) Goat
(C) Horse (D) Dog

Solution

All except dog are herbivorous animals.

Example 6

(A) Shoe (B) Spectacle
(C) Scissor (D) Shirt

Solution

All except shirt are in prises.

Number Classification

In this case, we need to choose the odd number from the given alternatives. The numbers may belong to a particular set, i.e. they may be odd, even, prime, rational, squares, cubes, and they may also be coded into binary digits (involving 0's and 1's), etc. and only one of the choices will not follow the rule that others do and that is our answer. A few illustrations are given further.

Example 7

Find the odd one among the following.

(A) 17 (B) 27
(C) 37 (D) 47

Solution

All the given numbers except 27 are prime numbers, whereas 27 is a composite number.

Example 8

(A) 441 (B) 289
(C) 361 (D) 343

Solution

The given numbers can be written as $(21)^2, (17)^2, (19)^2, (7)^3$. All except 343 are the squares, whereas 343 is a cube.

Example 9

(A) 10 (B) 50
(C) 120 (D) 290

Solution

All expect 120 can be expressed as $n^2 + 1$

$$10 = 3^2 + 1,\ 50 = 7^2 + 1$$

$290 = 17^2 + 1$ but $120 = 11^2 - 1$.

Example 10

(A) 235 (B) 352
(C) 523 (D) 253

Solution

All expect 352 are odd numbers but whereas 352 is an even number.

Exercises

Direction for questions 1 to 25: Find the odd man out.

1. (A) 16 (B) 28
(C) 36 (D) 64
2. (A) 27 (B) 37
(C) 47 (D) 67
3. (A) 8 (B) 27
(C) 64 (D) 125
4. (A) 42624 (B) 37573
(C) 84284 (D) 93339
5. (A) 30 (B) 630
(C) 10 (D) 520
6. (A) 8 : 9 (B) 25 : 25
(C) 64 : 81 (D) 16 : 16
7. (A) $\frac{3}{\sqrt{4+25}}$ (B) $\frac{7}{\sqrt{36+64}}$
(C) $\frac{11}{\sqrt{49+169}}$ (D) $\frac{5}{\sqrt{9+49}}$

8. (A) $13\frac{17}{23}$ (B) $41\frac{45}{49}$
(C) $71\frac{73}{79}$ (D) $83\frac{89}{97}$

9. (A) 4422 (B) 2442
(C) 4242 (D) 2244

10. (A) 350 (B) 70
(C) 30 (D) 520

11. (A) N (B) O
(C) B (D) K

12. (A) $E\frac{V}{R}$ (B) $O\frac{L}{B}$
(C) $I\frac{R}{V}$ (D) $U\frac{B}{L}$

13. (A) ABD (B) BDH
(C) CEJ (D) DFL

14. (A) BCDE (B) FGHI
(C) RSTU (D) WXYZ

15. (A) DFRTH (B) ABEJM
(C) NBEJM (D) DHKVY

16. (A) Cat (B) Dog
(C) Tiger (D) Elephant

17. (A) Chameleon (B) Crocodile
(C) Turtle (D) Allegator

18. (A) Trivandrum (B) Hyderabad
(C) Calicut (D) Bangalore

19. (A) Part (B) Trap
(C) Cart (D) Dart

20. (A) Rocket (B) Star
(C) Planet (D) Comet

21. (A) Skin (B) Tongue
(C) Leg (D) Nose

22. (A) Baseball (B) Boxing
(C) Chess (D) Wrestling

23. (A) Walk (B) Talk
(C) Drink (D) Plank

24. (A) Ganga (B) Nagarjuna sagar
(C) Yamuna (D) Sutlez

25. (A) HEWAT (B) CERI
(C) ROWAJ (D) EECRALS

Answer Keys

1. B	**2.** A	**3.** C	**4.** C	**5.** B	**6.** B	**7.** B	**8.** B	**9.** C	**10.** B
11. B	**12.** D	**13.** A	**14.** D	**15.** A	**16.** D	**17.** A	**18.** C	**19.** B	**20.** A
21. C	**22.** A	**23.** D	**24.** B	**25.** D					

Chapter 4

Coding and Decoding

CHAPTER HIGHLIGHTS

- *Coding*
- *Decoding*

Coding and Decoding

Before looking at the different types of questions and some of the codes that can be used with the help of examples, let us first understand what we mean by ***coding*** and ***decoding***. When we say ***coding***, a particular code or pattern is used to express a word in English language as a different word or in a different form. The coded word itself does not make any sense unless we know the pattern or code that has been followed. ***Decoding*** refers to the process of arriving at the equivalent English word from the code word given.

In the questions, a particular code is given and on the basis of this given code, we have to find out how another word (in English language) can be coded. The correct code for the given word has to be selected from the answer choices on the basis of the code given in the question.

Solved Examples

Example 1

In a certain code language, if the word 'PARTNER' is coded as OZQSMDQ, then what is the code for the word 'SEGMENT' in that language?

(A) TFHNFOU (B) RDFLDMS
(C) RDELDMS (D) RDFEDNS

Solution

Word : P A R T N E R
Logic :–1 –1 –1 –1 –1 –1 –1
Code : O Z Q S M D Q

Similarly, the code for SEGMENT is

Word : S E G M E N T
Logic : –1 –1 –1 –1 –1 –1 –1
Code : R D F L D M S

Example 2

In a certain code language, if the word RECTANGLE' is coded as TGEVCPING, then how is the word 'RHOMBUS' coded in that language?

(A) TJOQDWV (B) TJQNDWU
(C) TJQODWU (D) TJQOEWU

Solution

Word : R E C T A N G L E
Logic : +2 +2 +2 +2 +2 +2 +2 +2 +2
Code : T G E V C P I N G

Similarly, the code for RHOMBUS is

Word : R H O M B U S
Logic : +2 +2 +2 +2 +2 +2 +2
Code: T J Q O D W U

Example 3

In a certain code language, if the word 'SPHERE' is coded as EREHPS, then how is the word 'EXHIBITION' coded in that language?

(A) NOTITBIHXE (B) NOITIDIHXE
(C) NOITIBIHWE (D) NOITIBIHXE

Solution

Word: S P H E R E
Logic: The letters in the given word are reversed.
Code: E R E H P S

Similarly, the code for EXHIBITION, is

Word: E X H I B I T I O N
Logic: The letters in the given word are reversed.
Code: N O I T I B I H X E

Example 4

In a certain code language, if the word 'REJECTION' is coded as SGMIHZPWW, then how is the word 'MECHANIC' coded in that language?

(A) NGFLFTPK (B) NGPLFTPK
(C) NGFKFTPK (D) NGPTPKIL

Solution

Word:	R	E	J	E	C	T	I	O	N
Logic :	+1	+2	+3	+4	+5	+6	+7	+8	+9
Code :	S	G	M	I	H	Z	P	W	W

Similarly, the code for MECHANIC is

Word :	M	E	C	H	A	N	I	C
Logic :	+1	+2	+3	+4	+5	+6	+7	+8
Code :	N	G	F	L	F	T	P	K

Example 5

In a certain code language, if the word 'PLAYER' is coded as AELPRY, then how is the word 'MANAGER' coded in that language?

(A) AEAGMNR (B) AAGEMNR
(C) AAEGMNR (D) AAEGNMR

Solution

Word: P L A Y E R
Logic: The letters in the word are arranged in the increasing order of their value as in the alphabet.
Code: A E L P R Y

Similarly, the code for MANAGER is AAEGMNR.

Example 6

In a certain code language, if the number 1 is assigned to all the letters in odd numbered places in the alphabet and the remaining letters are assigned the number 2, then what is the code for the word 'INDIAN'?

(A) 121212 (B) 111222
(C) 112212 (D) 122112

Solution

The code for the word INDIAN is 122112.

Example 7

In a certain code language, if CRICKET is coded as 3923564, ROCKET is coded as 913564, and KETTLE is coded as 564406, then how is LITTLE coded in that language?

(A) 244060 (B) 024406
(C) 020446 (D) 200446

Solution

As we observe that the letters and their corresponding codes are given in an order, i.e. the code for C is 3, R is 9, I is 2, and so on. Hence, the code for LITTLE is 024406.

Direction for questions 8 to 10: In a certain code language, the codes for some words are as follow.

NATION	-	agvnab
REMOTE	-	rzgrbe
STAIR	-	efgnv
FORMAL	-	bensyz
COMMON	-	zabzpb
FOR	-	ebs

On the basis of the above coding pattern, answer the following questions.

8. What is the code for 'SCREEN'?
(A) fepcra (B) fpersa
(C) fpreba (D) fperra

9. What is the code for 'RATION'?
(A) ensvba (B) engvba
(C) engrba (D) engvca

10. What is the code for 'CREATOR'?
(A) prengbc (B) persbgc
(C) perngbe (D) pebryc

Solutions for questions 8 to 10:

The given words and their codes are as follow

(A)	NATION	-	agvnab
(B)	REMOTE	-	rzgrbi
(C)	STAIR	-	efgnv
(D)	FORMAL	-	bensyz
(E)	COMMON	-	zabzpb
(6)	FOR	-	ebs

In the 1st word, the letter N is repeated and so is the code *a*. Hence, for N, the code is a. Similarly, from the 2nd word, the code for E is '*r*'. In 1st and 6th words, the letter *o* is common and so is the code *b*. Hence, the code for *o* is *b*. In the 5th word, the letter *m* is repeated and so is the code *z*. Hence, the code for *m* is *z*. Similarly, the codes for the remaining letters can be determined.

The letters and their respective codes are as follows:

Letter	A	C	E	F	I	L	M	N	O	R	S	T
Code letter	n	p	R	s	v	y	z	a	b	e	f	G

8. The code for 'SCREEN' is fperra.
Hence, the correct option is (D).

9. The code for 'RATION' is engvba.
Hence, the correct option is (B).

10. The code for 'CREATOR' is perngbe.
Hence, the correct option is (C).

Exercises

Direction for questions 1 to 12: Select the correct alternative from the given choices.

1. In a certain code language, if the word CIRCUMSTANCE is coded as CRUSACICMTNE, then how is the word HAPPINESS coded in that language?
(A) HPEISAPNS (B) HPISEAPNS
(C) HPIESPANS (D) HPIESAPNS

2. In a certain code language, if the word REGISTRATION is coded as TSIGERNOITAR, then how is the word ACCURATE coded in that language?
(A) UCCAETAR (B) UACCETAR
(C) UCACETAR (D) UCCATEAR

3. In a certain code language, if the word LIBERAL is coded as MJCFSBM, then how is the word REDUCTION coded in that language?
(A) EDCTBSHNM (B) SFEVDUJPO
(C) SFEVCTJPO (D) SFDUCTJPO

4. In a certain code language, if the word STRUCTURE is coded as TVUYHZBZN, then how is the word REMEDY coded in that language?
(A) SGPIJE (B) SGPEJD
(C) SGPIHE (D) SGPIIE

5. In a certain code language, if the word SEARCH is coded as IDSBFT, then how is the word FURNISH coded in that language?
(A) ITKNSVG (B) ITJORWG
(C) ITJOSVG (D) ITHNRVG

6. In a certain code language 'two' is called 'three', 'three' is called 'four', 'four' is called 'one', 'one' is called 'five', 'five', is called 'six', and 'six' is called 'nine', then what in the code language is the sum of one and three?
(A) six (B) two (C) nine (D) one

7. In a certain code language if 'pink' means 'black', 'black' means 'white', 'white' means 'yellow', 'yellow' means 'orange', 'orange' means 'red', and 'red' means 'green', then which colour stands for peace in that code?
(A) Red (B) Black
(C) Orange (D) Green

8. In a certain code language, if MENTION = 49 and NEUROTIC = 64, then MARVELLOUS = ?
(A) 81 (B) 88 (C) 64 (D) 100

9. In a certain code language, if CABINET = 70 and BEAUTY = 60, then PRODUCTION = ?
(A) 90 (B) 100 (C) 110 (D) 120

10. In a certain code language, if IMPEND = 61 and DISH = 40, then FRUIT = ?
(A) 86 (B) 68 (C) 74 (D) 76

11. In a certain code language, if BUG = 90 and ALMS = 180, then CADET = ?
(A) 153 (B) 165 (C) 175 (D) 148

12. In a certain code language, if INFER = 25 and JERSEY = 28, then CHOICE =?
(A) 34 (B) 39 (C) 41 (D) 47

Direction for questions 13 to 15: These questions are based on the following data.

In a certain code language, if the word ROUTINE is coded as JMPRRLJ and the word FIDELITY is coded as LGHCXGNW, then how will you code the following words in that language?

13. PREVAIL
(A) FPLRDGX (B) FPJTBGX
(C) FTJBNKX (D) FPJVBIX

14. LANGUAGE
(A) XYBDPXNC (B) XYBDPXMC
(C) XYCEPXNC (D) XYBEPYNC

15. TOBACCO
(A) NMDXEAF (B) NMDYEBF
(C) NMCYFBD (D) NMDYFAD

Direction for questions 16 to 20: For the following groups of letters given in column I, the codes are given in column II. Answer the following questions by finding the codes for the groups from the given columns.

	Column I	Column II
(A)	lit kit bit dit	b r p d
(B)	fit git mit kit	t d s v
(C)	rit bit git tit	x p v w
(D)	nit dit fit rit	r s x j

16. What is the code for lit?
(A) v (B) r (C) p (D) b

17. What is the code for tit?
(A) w (B) x (C) p (D) v

18. What is the code for rit?
(A) j (B) s (C) r (D) x

19. What is the code for nit?
(A) x (B) s (C) j (D) r

20. What is the code for kit?
(A) r (B) p (C) x (D) d

Direction for questions 21 to 25: For the words given in column I, the codes are given in column II. Answer the following questions by finding the codes for the letters from the words and their codes given in the columns.

	Column I	Column II
(A)	PRETEND	4396408
(B)	COMMON	615715
(C)	HOUSE	4*2&1
(D)	SUPPORT	3*21839
(E)	DRUM	5*08

21. What is the code for the word PROTECT?
(A) 3895479 (B) 3846978
(C) 3819479 (D) 3814978

22. What is the code for the word HORMONE?
(A) &385364 (B) &176561
(C) &175184 (D) &185164

23. What is the code for the word EMPEROR?
(A) 5495717 (B) 4534818
(C) 3453919 (D) 4537178

24. What is the code for the word DETHRONE?
(A) 049&7264
(B) 049&8164
(C) 059&7164
(D) 059&8164

25. What is the code for the word COMPOUND?
(A) 71531*60 (B) 72532*80
(C) 91531*70 (D) 72542*60

Answer Keys

1. D	**2.** A	**3.** B	**4.** D	**5.** C	**6.** D	**7.** B	**8.** D	**9.** B	**10.** C

Chapter 5

Blood Relations

CHAPTER HIGHLIGHTS

- *Blood Relations*
- *Grandparents*
- *Parents and In-Laws*
- *Siblings, Spouse, and In-Laws*
- *Children and In-Laws*
- *Grand Children*

Blood Relations

There are two types of questions based on blood relations that are given in different competitive examinations. For the sake of convenience, we will refer to the two types of questions as Type I and Type II. (Please note that the questions on blood relationships are not categorised as above in the actual exam papers. It is being done purely from the point of better understanding.)

In the exams, the success of a candidate in the questions on blood relations depends upon his knowledge about various blood relations. Some of the relationships given below help in solving the problems.

The easiest and non-confusing way to solve these types of problems would be to draw a family tree diagram and increase the levels in the hierarchy as shown below:

1st stage :	GRANDPARENTS	→ (Grandfather, Grandmother, Granduncle, Grandaunt)
2nd stage :	PARENTS and IN-LAWS	→ (Father, Mother, Uncle, Aunt, Father-in-law, Mother-in-law)
3rd stage :	SIBLINGS, SPOUSE, and IN-LAWS	→ (Brother, Sister, Cousin, Wife, Husband, Brother-in-law, Sister-in-law)
4th stage :	CHILDREN and IN-LAWS	→ (Son, Daughter, Niece, Nephew, Son-in-law, Daughter-in-law)
5th stage :	GRAND CHILDREN	→ (Grandson, Granddaughter)

Mother's or Father's son	:	Brother
Mother's or Father's daughter	:	Sister
Mother's or Father's brother	:	Uncle
Mother's or Father's sister	:	Aunt
Mother's or Father's mother	:	Grandmother
Mother's or Father's father	:	Grandfather
Grandmother's brother	:	Granduncle
Grandmother's sister	:	Grandaunt
Grandfather's brother	:	Granduncle
Grandfather's sister	:	Grandaunt

Sister's or Brother's son	:	Nephew
Sister's or Brother's daughter	:	Niece
Uncle or Aunt's son or daughter	:	Cousin
Son's wife	:	Daughter-in-law
Daughter's husband	:	Son-in-law
Husband's or Wife's sister	:	Sister-in-law
Husband's or Wife's brother	:	Brother-in-law
Sister's husband	:	Brother-in-law
Brother's wife	:	Sister-in-law
Children of same parents	:	Siblings (could be all brothers, all sisters or some brothers and some sisters)
Children	:	Son, Daughter
Children's Children	:	Grandchildren (Grandson, Granddaughter)

In addition, remember the word spouse, which means either husband or wife.

Grandfather and grandmother will come in the first stage; mother, father, uncle, and aunt will come in the second stage; sister, brother, and cousin will come at the third stage; son, daughter, niece, and nephew will come in the fourth stage; and finally, granddaughters and grandsons will come. These stages are made from the point of view of an individual.

In Type-I questions, the relationship between two people is given through a roundabout way of relating them through other people. We have to go through the series of relationships and finally determine the relationship between the two people given in the question. The relationship can be given as a simple statement or as a statement made by a person. In the first example given, a person is involved in making a statement, whereas in the second question, there is no person involved in making a statement.

Solved Examples

Example 1

A's father's mother-in-law's only daughter's son is B. How is A related to B?

(A) Brother
(B) Sister
(C) Nephew
(D) Cannot be determined

Solution

A's father's mother-in-law's only daughter is A's mother. A's mother's son is A's brother.
But A can be either brother or sister to B.

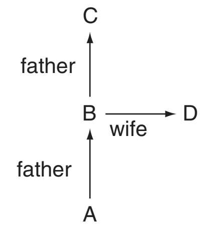
Example 2

If A's father is B, C is the father of B, and D is A's mother, then how is C related to D?

(A) Father (B) Grandfather
(C) Father-in-law (D) Uncle

Solution

A's father is B and mother is D. Therefore, D is B's wife and C is the father of B. Hence, C is D's father-in-law.



Example 3

A + B means A is the son of B.
A – B means A is the daughter of B.
A × B means A is the father of B.
A ÷ B means A is the mother of B.

If M × N + O – P ÷ Q, then how is M related to Q?

(A) Husband (B) Cousin
(C) Brother-in-law (D) Uncle

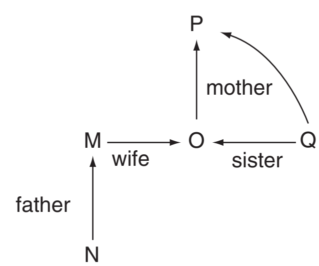
Solution

M × N + O – P ÷ Q means M is the father of N, N is the son of O, O is the daughter of P, P is the mother of Q.

M is the father of N and N is the son of O means M is the husband of O.

O is the daughter of P and P is the mother of Q means O is the sister of Q.

M is the husband of O and O is the sister of Q means M is the brother-in-law of Q.



Example 4

A + B means A is the son of B.
A – B means A is the daughter of B.
A × B means A is the father of B.
A ÷ B means A is the mother of B.

Which of the following means S is the son-in-law of P?

(A) P + Q ÷ R × S – T
(B) P × Q ÷ R – S + T
(C) P + Q × R – S ÷ T
(D) P × Q – R ÷ S × T

Solution

P + Q ÷ R × S – T means P is the son of Q. Q is the mother of R, R is the father of S, and S is the daughter of T. Hence, S is the nephew of P.

P × Q ÷ R – S + T means P is the father of Q, Q is the mother of R, R is the daughter of S, and S is the son of T. Hence, S is the son-in-law of P.

P + Q × R – S ÷ T means P is the son of Q, Q is the father of R, R is the daughter of S, and S is the mother of T. Hence, S is the mother of P.

P × Q – R ÷ S × T means P is the father of Q, Q is the daughter of R, R is the mother of S, and S is the father of T. Hence, S is the son of P.

Example 5

Pointing to a person, Raju said, 'He is the only brother of my father's mother's daughter'. How is the person related to Raju?

(A) Brother (B) Father
(C) Uncle (D) Nephew

Solution

Raju's father's mother's daughter is Raju's father's sister. Raju's father's sister's only brother is Raju's father. Hence, the person is Raju's father.

Example 6

A's mother's father is the husband of B's mother. How is A related to B, if A and B are both male.

(A) Uncle (B) Father
(C) Nephew (D) Son

Solution

A's mother's father is the husband of B's mother. That means A's mother is the sister of B. Hence, all the nephew of B.

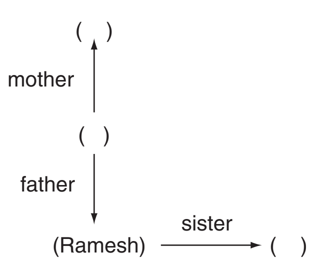
Example 7

Pointing to a photograph Ramesh said, 'she is the sister of my father's mother's only child's son.' How is the person in the photograph related to Ramesh?

(A) Sister (B) Aunt
(C) Mother (D) Cousin

Solution

My father's mother's only child is my father. My father's son's sister is in the photograph. Hence, she is Ramesh's sister.



Example 8

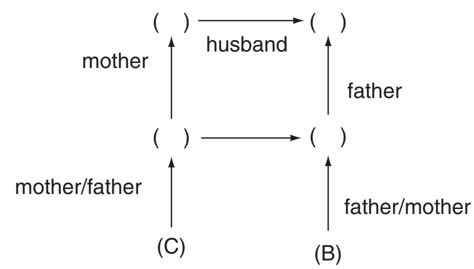
B's father's father is the husband of C's mother's mother. How is B related to C?

(A) Brother
(B) Sister
(C) Cousin
(D) Cannot be determined

Solution

B's father's father is B's grandfather.

B's grandfather is the husband of C's mother's mother, i.e. grandmother. It is possible that B and C are sibling's and the persons mentioned are their paternal/maternal grand parents. It is also possible that B and C are cousins. Hence, the relationship cannot be determined.



Direction for questions 9 and 10:

A × B means A is the daughter of B
A ∗ B means A is the son of B
A + B means A is the mother of B
A – B means A is the brother of B
A ÷ B means A is the sister of B
A = B means A is the father of B

Example 9

Which of the following means S is the nephew of P?

(A) P – Q ÷ R = S (B) P – Q × R ∗ S
(C) S ∗ R – Q ÷ P (D) P + Q – R × S

Solution

P – Q ÷ R = S means P is the brother of Q, Q is the sister of R, and R is the father of S. As we do not know whether S is the son or daughter of R, we cannot determine that S is the nephew.

P – Q × R ∗ S means P is the brother of Q, Q is the daughter of R, and R is the son of S. Here, S is the grand-father of P.

S ∗ R – Q ÷ P means S is the son of R. R is the brother of Q, and Q is the sister of P. Hence, S is the nephew of P.

Example 10

Which of the following means T is the husband of V?

(A) T = S – R ∗ V (B) T + S – R × V
(C) R × V – T ∗ S (D) R + S – T × V

Solution

T = S – R ∗ V means T is the father of S, S is the brother of R, and R is the son of V. Therefore, T is the husband of V.

Exercises

Direction for questions 1 to 15: Select the correct alternative from the given choices.

1. A person who is the husband of my son's sister is my
   (A) Nephew (B) Son-in-law
   (C) Son (D) Brother
2. Y is the daughter of X's brother's wife's father-in-law. Y is X's ________.
   (A) Niece (B) Daughter
   (C) Sister (D) Sister-in-law
3. Showing a photograph P said,' She is my mother's mother's son's daughter'. How is the person in the photograph related to P?
   (A) Sister (B) Cousin
   (C) Niece (D) Mother
4. How is my father's mother's only daughter-in-law's sister related to me?
   (A) Aunt (B) Sister
   (C) Cousin (D) Niece
5. How is my grandmother's only child's husband's mother related to me?
   (A) Mother (B) Grandmother
   (C) Aunt (D) Sister
6. How is Ramu's mother-in-law's only daughter's son related to Ramu?
   (A) Nephew (B) Brother
   (C) Son (D) Uncle
7. How is my son's mother's daughter related to me?
   (A) Niece (B) Granddaughter
   (C) Daughter (D) Aunt
8. How is my father's brother's only sibling's mother related to me?
   (A) Mother (B) Cousin
   (C) Daughter (D) Grandmother
9. A is the father of B. C is the son of D. E is the brother of C while D is the sister of B. How is B related to E?
   (A) Uncle (B) Aunt
   (C) Mother (D) Either (A) or (B)
10. My mother's sister's son's father's mother-in-law is related to me as
    (A) Mother (B) Grandmother
    (C) Mother-in-law (D) Aunt
11. How is David's father's only daughter-in-law's son's wife related to David?
    (A) Daughter (B) Daughter-in-law
    (C) Niece (D) Granddaughter
12. How is Ravi's mother's father's son related to Ravi's father?
    (A) Cousin (B) Uncle
    (C) Brother-in-law (D) Son-in-law
13. Divya's father, pointing towards a person, said, 'He is the brother of my father's only sibling'. How is the person related to Divya?
    (A) Father (B) Uncle
    (C) Brother (D) Grandfather
14. Tinku, introducing a person to Rinku, said 'He is the father of your sister's son and he is also my mother's husband'. How is Tinku's father related to Rinku's mother?
    (A) Nephew (B) Uncle
    (C) Son-in-law (D) Father
15. A is B's father, B is C's daughter, E is D's only sibling. C is D's only daughter. How is B related to E's niece?
    (A) Niece (B) Granddaughter
    (C) Daughter (D) Mother

Direction for questions 16 to 20: Use the relations defined below and answer the following questions.

$A + B$ means A is the mother of B.
$A - B$ means A is the sister of B.
$A \times B$ means A is the father of B.
$A \div B$ means A is the son of B.
$A = B$ means A is the brother of B.
$A \neq B$ means A is the daughter of B.

16. Which of the following means P is the aunt of Q?
    (A) $P - R \div Q$ (B) $P + R \times Q$
    (C) $P \neq R \times Q$ (D) $P - R + Q$
17. Which of the following means, S is the son of T's daughter?
    (A) $T \times M + S + N$ (B) $T \times M + S = N$
    (C) $T + M \times S - N$ (D) $S \div M \div T - N$
18. Which of the following means W is the uncle of Z?
    (A) $W \times A - B + Z$ (B) $W = A + B - Z$
    (C) $W = A + B + Z$ (D) $W \times A \times B = Z$
19. Which of the following means C is the grandfather of both D and E?
    (A) $C \times A \div D - E$ (B) $C + A + D \neq E$
    (C) $C \div A \neq D = E$ (D) $C \times A \times D - E$
20. Which of the following means I is the mother of L?
    (A) $I + B - C \neq D \times L$ (B) $I \neq B + C \times L$
    (C) $I + B \times C \neq D - L$ (D) $I + B - C \times L$

Direction for questions 21 to 25: These questions are based on the information given below.

A, B, C, D, E, and F are six members of a family. A is the mother of B, who is the husband of D. F is the brother of one of the parents of C. D is the daughter-in-law of E and has no siblings. C is the son of D.

21. How is C related to A?
    (A) Nephew
    (B) Son-in-law
    (C) Grandson
    (D) Father

22. How is F related to D?
(A) Cousin
(B) Brother-in-law
(C) Brother
(D) Father

23. How is E related to F?
(A) Mother
(B) Son
(C) Father
(D) Father-in-law

24. If F is married to G, then how is G related to B?
(A) Sister
(B) Sister-in-law
(C) Cousin
(D) Mother

25. How many male members are there in the family?
(A) Two
(B) Three
(C) Four
(D) Cannot be determined

Answer Keys

1. B	**2.** C	**3.** B	**4.** A	**5.** B	**6.** C	**7.** B	**8.** D	**9.** D	**10.** B
11. B	**12.** C	**13.** D	**14.** C	**15.** C	**16.** D	**17.** B	**18.** B	**19.** D	**20.** A
21. C	**22.** B	**23.** C	**24.** B	**25.** C					

Chapter 6

Venn Diagrams

CHAPTER HIGHLIGHTS

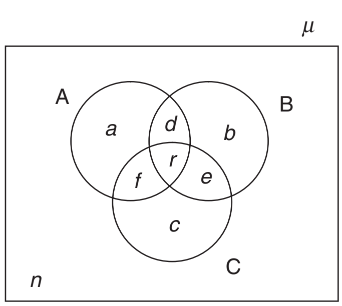
- *Venn Diagrams*
- *Venn Diagram Type I*
- *Venn Diagram Type II*

Venn Diagrams

Venn Diagrams are diagrammatic representation of sets, using geometrical figures like circles, triangles, and rectangles. Each geometrical figure represents a group as shown in the examples. The area common to two or more figures represent those elements which are common to two or more groups. There are various models in Venn diagrams, which we will discuss with examples.

Venn Diagram Type I

In this type, two, three, or four different groups could be given with some elements common to two or more groups. Let us observe the diagram given.



Here, A, B, and C are three different groups, and the various regions can be explained as follows:

Only A = a
Only B = b
Only C = c
A and B only = d
B and C only = e
C and A only = f
All the three (A, B, and C) = r
Both A and B = $d + r$
Both B and C = $e + r$
Both C and D = $f + r$
Neither A, nor B, nor C = n
A, B, or C and none = μ
Also, $\mu = (A \cup B \cup C) + n$

Here, the rectangle represents the sample space, which consists of three groups A, B, and C, and also n, which is the number of people belonging to neither A, nor B, nor C.

Some more formulae are as given under:

1. $A' = (b + e + c) + n$; where A' = A complement (not in A)
2. $B' = (a + f + c) + n$; where B' = B complement (not in B)
3. $C' = (a + d + b) + n$; where C' = C complement (not in C)
4. $A - B = A - (A \cap B)$
5. $A \Delta B = (A - B) \cup (B - A)$
6. Number of people (or things) belonging to at least one out of the three groups = $A \cup B \cup C$
   $= \underbrace{(a + b + c)}_{\text{exactly one}} + \underbrace{(d + e + f)}_{\text{exactly two}} + \underbrace{r}_{\text{exactly three}}$
7. $A + B + C = (A \cup B \cup C) + (d + e + f) + 2r$
   $= (a + b + c) + 2\,(d + e + f) + 3r$

Solved Examples

Direction for questions 1 to 3: These questions are based on the data given.

In a class of 165 students, 45 students are passed in Maths a well as in English, whereas 60 students are failed in Maths and 65 students are failed in English.

Example 1: How many students are passed in exactly one subject?
(A) 160 (B) 100
(C) 115 (D) 165

Example 2: How many students are failed in both the subjects?
(A) 25 (B) 20 (C) 45 (D) 5

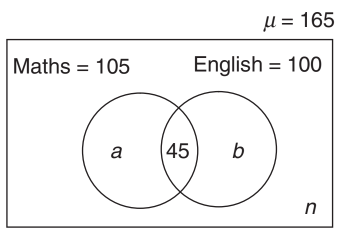
Example 3: How many students are failed only in Maths?
(A) 55 (B) 60 (C) 65 (D) 70

Solutions for questions 1 to 3:
Since, 60 students are failed in Maths.

∴ 165 – 60 = 105 students passed in Maths similarly, 65 students failed in English.

∴ 165 – 65 = 100 students passed in English.

The respective Venn diagrams is as follows, which shows the number of students who passed the subject.



45 students passed in Maths as well as English.

∴ $a = 105 - 45 = 60$ students passed only in Maths and $b = 100 - 45 = 55$ students passed only English.

Number of students passed in atleast one subject = 60 + 55 + 45 = 160.

Hence, $n = 165 - 160 = 5$ students failed in both.

Solution 1: $a + b = 60 + 55 = 115$ students passed exactly in one subject.

Hence, the correct option is (C).

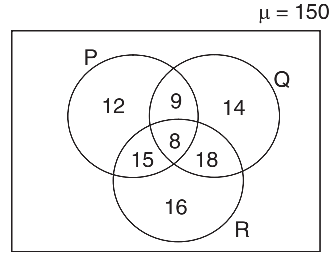
Solution 2: 5 students failed in both the subjects.

Hence, the correct option is (D).

Solution 3: As 55 students passed only in English which implies that 55 students failed only in Maths.

Hence, the correct option is (A).

Direction for questions 4 to 7: These questions are based on the given diagram.



Example 4: How many elements are there in Q′ (complement of Q)?
(A) 100 (B) 49 (C) 101 (D) 50

Example 5: How many elements are there in $P' \cap Q' \cap R'$?
(A) 35 (B) 8 (C) 58 (D) 48

Example 6: How many elements are there in R?
(A) 16 (B) 57 (C) 41 (D) 8

Example 7: How many elements are there in $P \cap (Q \cup R)$?
(A) 32 (B) 48 (C) 54 (D) 44

Solutions for questions 4 to 7:

Solution 4: Number of elements in Q′ = (μ) – (number of elements in Q)
= 150 – (14 + 18 + 8 + 9)
⇒ 150 – 49 = 101.

Hence, the correct option is (C).

Solution 5: Number of elements in $P' \cap Q' \cap R'$

$$= \mu - (P \cup Q \cup R)$$
$$= 150 - (12 + 15 + 9 + 8 + 18 + 16 + 14)$$
$$= 150 - 92 = 58.$$

Hence, the correct option is (C).

Solution 6: Number of elements in R = 16 + 15 + 8 + 18 = 57

Hence, the correct option is (B).

Solution 7: Number of elements in $Q \cup R$ =

(14 + 9 + 8 + 15 + 18 + 16)

Number of elements in P = (12 + 9 + 15 + 8)

$P \cap (Q \cup R)$ is the region common to P and $Q \cup R$

Number of elements in $P \cap (Q \cup R)$

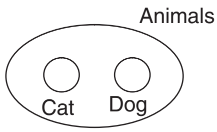
= 9 + 8 +15 = 32.

Hence, the correct option is (A).

Venn Diagram Type II

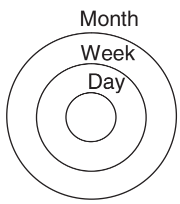
In this type, Venn diagrams are used to establish relationship between the given groups. In other words, two or more groups are given, and the Venn diagram, which most correctly establishes a relation between them, has to be chosen out of the various Venn diagrams given in the choices. Let us look at some of the examples given.

Examples: Animals, Cat, Dog



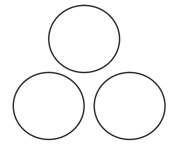
Here, in animals we have many species of which cat and dog are two different kinds of species, having nothing in common. So the above diagram is the most appropriate representation of the given groups.

Examples: Month, week, day



We know that day is a part of the week and week is a part of the month. So, the given diagram is the most appropriate representation of the given groups.

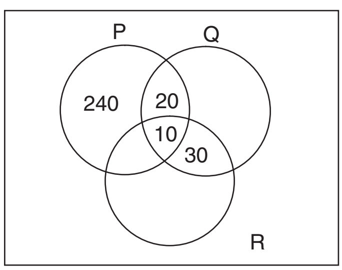
Examples: Mars, Earth, Jupiter



We know that Mars, Earth, and Jupiter are three independent entities having nothing in common. So the above-given diagram is the most appropriate representation of the given groups.

Exercises

Direction for questions 1 to 5: There are 1500 students in a college. Each student can be a member of three student communities namely P, Q, and R. Now, using the data mentioned and the diagram given, answer the questions that follow.



- Total members in community P is 300.
- Total members in community Q is 420.
- Total members in community R is 490.

1. How many students are part of only community R?
(A) 360 (B) 420 (C) 210 (D) 350

2. How many students is not part of any community?
(A) 390 (B) 420 (C) 410 (D) 490

3. How many students are part of at least two communities?
(A) 10 (B) 30
(C) 80 (D) 90

4. How many students are part of at least one community?
(A) 1000 (B) 1090
(C) 1110 (D) 1100

5. How many students are part of exactly two communities?
(A) 90 (B) 80
(C) 100 (D) 120

Direction for questions 6 to 10: These questions are based on the data given.

In a class of 95 students, 40 play cricket, 50 play football, and 10 play both cricket and football.

6. How many students play only football?
(A) 45 (B) 30 (C) 40 (D) 28

7. How many students play at least one game?
(A) 80 (B) 70 (C) 60 (D) 50

8. How many students play only cricket?
(A) 30 (B) 35 (C) 40 (D) 25

9. How many students play exactly one game?
(A) 85 (B) 80 (C) 70 (D) 75

10. How may students play neither cricket nor football?
(A) 12 (B) 15 (C) 18 (D) 20

Direction for questions 11 to 15: Study the following data and answer the questions given.

In a certain college, 37% of the students write EAMCET exam, 47% of the students write IIT-JEE exam, and 50% of the students write AIEEE exam. Also known that, 11% of the students write both EAMCET and IIT-JEE, 11% of the students write both EAMCET and AIEEE, 15% of the students write both IIT-JEE and AIEEE, while 15 students write all the three exams. Each student in the college writes at least one of the three exams.

11. How many students appear for the exams from the college?
(A) 400 (B) 200
(C) 500 (D) 600

12. How many students write exactly two exams?
(A) 120 (B) 110 (C) 140 (D) 150

13. The number of students who write only EAMCET as a percentage of the number of students who write only AIEEE is

(A) $33\frac{1}{3}\%$ (B) $66\frac{2}{3}\%$

(C) $33\frac{2}{3}\%$ (D) $66\frac{1}{3}\%$

14. How many students write exactly one exam?

(A) 345 (B) 395 (C) 198 (D) 398

15. What is the ratio of the number of students who write only AIEEE to that of those who write only IIT JEE?

(A) 3 : 2 (B) 2 : 3 (C) 8 : 9 (D) 9 : 8

Direction for questions 16 to 20: These questions are based on the data given.

In a library maintained by a student, there are books on different subjects. It was found that 35 books are on sports, 45 books are on business, and 15 books are on current affairs;14 books are on at least two subjects among sports, business, and current affairs; 3 books have sports, business as well as current affairs in them. Every book in the library is assumed to contain at least one of sports, business, or current affairs in them.

16. How many books are there, which contain information regarding only one subject?

(A) 58 (B) 64 (C) 60 (D) 62

17. What are the total number of books in his library?

(A) 78 (B) 72 (C) 68 (D) 80

18. How many books contained information regarding exactly two subjects?

(A) 11 (B) 10 (C) 9 (D) 14

19. How many books are there, which contain information regarding at most two subjects?

(A) 11 (B) 64 (C) 72 (D) 75

20. If the number of books on only sports is equal to 26, then how many books are there in the library, which are on both business and current affairs but not sports?

(A) 5 (B) 3 (C) 2 (D) 8

Direction for questions 21 to 25: These questions are based on the data given.

In a colony, it is known that three brands of mobile phones are used, namely Nokia, Sony Ericsson, and Motorola. 70 families use only one brand, 47 families use exactly two brands, and 8 use all the three brands. It is assumed that each family uses at least one of these three brands.

21. How many families are there in the colony?

(A) 75 (B) 100 (C) 105 (D) 125

22. How many families use at least two brands?

(A) 117 (B) 55 (C) 47 (D) 125

23. If 10 families stop using Nokia and start using Motorola, then what is the maximum number of families who use exactly two brands?

(A) 57 (B) 37 (C) 47 (D) 67

24. What is the ratio of the number of families which use exactly one brand to that which use at least one brand?

(A) 14 : 25 (B) 14 : 11

(C) 11 : 25 (D) 11 : 14

25. How many families do not use all the three brands?

(A) 125 (B) 117 (C) 0 (D) 8

Chapter 7

Seating Arrangements

CHAPTER HIGHLIGHTS

- *Seating Arrangement*
- *Linear Sequencing*
- *Circular Arrangement*

Linear Sequencing

Linear sequencing is essentially arranging the items given in a sequence (in a single line). The questions of this type are also referred to as 'seating arrangement'. The word 'seating arrangement' should not be misconstrued—it should not be treated as consisting of questions involving only persons sitting as per specified conditions. Essentially, these questions involve arranging subjects (people or things) satisfying the given conditions. The arrangement is done only on one 'axis' and, hence, the position of the subjects assumes importance here in terms of order: first position, second position, etc.

Let us look at the examples:

Direction for questions 1 to 5: Read the data given below carefully and answer the questions that follow.

Seven persons Paul, Queen, Rax, Sam, Tom, Unif, and Vali are sitting in a row facing us. Rax and Sam sit next to each other. There must be exactly four persons between Queen and Vali. Sam sits to the immediate right of Queen.

Solved Examples

Example 1: If Paul and Tom are separated exactly by two persons, then who sits to the immediate left of Vali?

(A) Paul (B) Tom (C) Unif (D) Rax

Example 2: If Queen is not sitting at either extreme of the row, then who among the following has as many persons on his left as on his right?

(A) Sam (B) Unif (C) Rax (D) Vali

Example 3: If Queen sits at one extreme, then who is at the other extreme?

(A) Paul (B) Tom

(C) Vali (D) Cannot be determined

Example 4: Tom sits to the right of Queen, and Paul is separated from Tom by exactly three persons. Then, who is sitting to the immediate left of Vali?

(A) Unif (B) Paul (C) Tom (D) Rax

Example 5: In how many different ways can the seven persons sit in a row?

(A) 3 (B) 2 (C) 10 (D) 12

Solutions for questions 1 to 5:

Let us write down the conditions given in short form and then represent them pictorially. Also, let us treat the left of the persons sitting as 'left' and their right as 'right' for interpreting the conditions.

Rax and Sam sit next to each other → RS or SR.

There are exactly 4 persons between Queen and Vali → Q — — — — V or V — — — — Q.

Sam sits to the immediate right of Queen → SQ.

Now, let us analyse the data/conditions that we are given and then put the three conditions together. Let us number the seats from *our* left to right as Seat 1 to Seat 7.

Since S is to the right of Q and since R and S have to be next to each other, R can come only to the immediate right of S. Thus, R, S, and Q, will be in the order RSQ. Since there are four persons between Q and V, Q can be placed in seats 1, 2, 6,' or 7. But if Q is in Seat 1 or 2, then, there are no seats for R and S. Hence, there are only two seats available for Q. Let us fix the positions of R, S, and V in each of these two positions of Q and write them down. The directions left and Right are as shown below.

◀ R ▶ L

Arrangement I:

1	**2**	**3**	**4**	**5**	**6**	**7**
	V			R	S	Q

Arrangement II:

1	**2**	**3**	**4**	**5**	**6**	**7**
	V			R	S	Q

These are the only two arrangements possible for the four persons V, R, S, and Q. The other three persons Paul, Tom, and Unif can sit in the three vacant seats in any order, as no information is given about them. Now let us look at each of the questions.

Example 1: Paul and Tom are separated by exactly two persons.

Arrangement I is the only one possible as in Arrangement II, Paul and Tom cannot have exactly two persons between them. So, we have the arrangement as follows:

T/P, V, U, P/T, R, S, Q

So, Unif must be sitting to the immediate left of Vali.

Hence, the correct option is (C).

Example 2: If Queen is not at the extreme right, then only Arrangement II above is possible. The person who has as many persons on his left as on his right can only be the person who is sitting in the middle seat, i.e., seat 4. In this arrangement, Rax is sitting in seat 4.

Hence, the correct option is (C).

Example 3: 'Queen sits at one extreme' means that we should look at arrangement I. In this arrangement, any one out of the three persons Paul, Tom, and Unif can be in seat 1, i.e. extreme right.

Hence, the correct option is (D).

Example 4: If Tom and Paul are separated by exactly three persons, then only Arrangement II is possible. So, Tom and Paul have to be in seats 3 and 7, Since, we are also given that Tom is to the right of Queen, Tom has to be in seat 3 and Paul, in seat 7. So, the arrangement must be as follows:

V, U, T, R, S, Q, P

The person sitting to the immediate left of Vali is Unif.

Hence, the correct option is (A).

Example 5: We have two possible arrangements—Arrangement I and Arrangement II that we looked at already. In each arrangement, the remaining three people can sit in the remaining three seats in 6 ways. Thus, a total of 12 ways of seating the seven persons is possible.

Hence, the correct option is (D).

Direction for questions 6 to10: Read the data given carefully and answer the questions that follow.

Seven boys—Rajan, Shyam, Vardhan, Mithra, Vimal, Raj and Kishan—are sitting in a row. Shyam sits to the immediate left of Vardhan and third to the right of Rajan, whereas Mithra, who sits at the left extreme, is next to Kishan.

Example 6: Who is sitting to the immediate right of Shyam?

(A) Mithra (B) Kishan
(C) Vimal (D) Vardhan

Example 7: If Vardhan and Kishan exchange places with each other without changing the rest of the arrangement that is already done, who will be sitting to the immediate left of Rajan?

(A) Kishan (B) Raj
(C) Vimal (D) Vardhan

Example 8: If only Shyam sits between Raj and Vardhan, who is exactly in the middle of the row?

(A) Raj (B) Vardhan
(C) Vimal (D) Rajan

Example 9: Which of the following cannot confirm the seating arrangement of all the boys?

(A) Raj is to the immediate right of Rajan, whereas Vimal is to the left of Shyam.
(B) Mithra and Raj have two persons between them.
(C) Raj and Kishan have two persons between them.
(D) Rajan and Shyam have two persons in between them.

Example 10: After arranging all the boys as per the conditions given in the data, if Rajan now exchanges his place with Mithra, and Vardhan exchanges his place with Vimal, then how many persons will be there between Vimal and Rajan?

(A) Three (B) Two
(C) Five (D) Cannot be determined

Solutions for question 6 to10:

Let us denote left and right as shown below:

◀ L ▶ R

Now, let us represent the data given in pictorial form (we use R for Raj and Rn for Rajan; Va for Vardhan; Vi for Vimal; S for Shyam; M for Mithra; and K for Kishan).

Mithra sits at the left extreme—next to Kishan → M K — — — — — —.

Shyam sits to the immediate left of Vardhan and third to the right of Rajan → Rn — — S Va.

Putting both the arrangements together, Va can go only to extreme right position. Thus, we have the arrangement as M K Rn — — S Va.

Raj and Vimal occupy the two vacant seats between Rajan and Shyam.

Example 6: From the seating arrangement figure, Vardhan is to the immediate right of Shyam.

Hence, the correct option is (D).

Example 7: If Kishan and Vardhan exchange places, as can be seen from the arrangement, the person to the immediate left of Rajan will be Vardhan.

Hence, the correct option is (D).

Example 8: If Shyam sits between Raj and Vardhan, then the seating arrangement is as follows: Mithra, Kishan, Rajan, Vimal, Raj, Shyam, Vardhan. Then, Vimal will be exactly in the middle of the row.

Hence, the correct option is (D).

Example 9: Statement (A) makes the arrangement as:
Mithra, Kishan, Rajan, Raj, Vimal, Shyam, Vardhan

Statement (B) gives the seating arrangement as:
Mithra, Kishan, Rajan, Raj, Vimal, Shyam, Vardhan.

Statement (C) makes the seating arrangement as:
Mithra, Kishan, Rajan, Vimal, Raj, Shyam, Vardhan.

So, only statement (D) cannot make the seating arrangement unique while others can.

Hence, the correct option is (D).

Important point to note is that, on the basis of the given data, we know that the places of only Raj and Vimal have not been fixed. Hence, if there is an additional statement that we are considering to determine the arrangement uniquely, it should have at least one of the two people Raj and Vimal. In this case, choice (D) does not have either one of the two names, and, hence, this statement cannot help us determine the arrangement uniquely. So, this becomes the answer choice.

Hence, the correct option is (D).

Example 10: The arrangement is

M K Rn R/Vi Vi/R S Va

Rajan exchanges his place with Mithra, and Vimal with Vardhan, then we have the following arrangement:

Rn K M R/Va Va/R S Vi.

While we still do not know the exact position of Vardhan (or which place Vimal sits), we can see that there are five persons between Rajan and Vimal.

Hence, the correct option is (C).

In addition to the questions that we saw, where a set of questions are based on the data given, there are also 'stand-alone' questions. In these questions, on the basis of the data given, only one question is asked. Given below is an example of this type.

Direction for question 11: Select the correct alternative from the given choices.

Example 11: Four persons A, B, C, and D arrive to attend a meeting. D arrives 10 minutes after B and 20 minutes before A, who arrives 10 minutes before C. Who is the first person to arrive at the meeting?

(A) A (B) B (C) C (D) D

Solution for question 11:

C arrived after A. A arrived after D. D arrived after B. This implies that B arrived first.

Hence, the correct option is (B).

CIRCULAR ARRANGEMENT

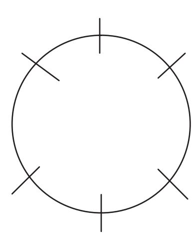
Questions on circular arrangement involve seating of people around a table or arrangement of things in a circular manner (e.g. different coloured beads strung to form a necklace).

In case of people sitting around a table, the table could be of any shape—rectangular, square, circular, or any other.

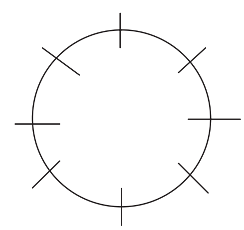
The data given in such sets of questions specify the positions of some or all of the individuals (or things) in the arrangement. The positions are specified through conditions involving specified persons sitting (or not sitting) opposite each other or a particular person sitting to the right or left of another person, etc.

Once you read the data, first draw the shape specified in the data and then draw the slots in the seating arrangement.

Six people around a circular table



Eight people around a circular table



Statements like 'A and B are sitting farthest from each other' or 'A and B sit across the table' imply that A and B sit opposite each other.

On the other hand, you should remember that, unlike in straight-line arrangement, the words 'immediately' and 'directly' do not play any role in circular arrangement. In general, there is no left side or right side (unless we are talking of 'immediate right' or 'immediate left').

So, if it is given that C sits to right of B, then it is clear that C must be to the immediate right of B. Go 'anti-clockwise' if anybody's right has to be located, and go 'clockwise' if somebody's left has to be located.

Let us take some examples.

Direction for questions 12 to 16: Read the following information and answer the questions that follow.

P, Q, R, S, and T sit around a table.

P sits two seats to the left of R and Q sits two seats to the right of R.

12. If S sits in between Q and R, who sits to the immediate right of P?

(A) T (B) S (C) Q (D) R

13. Which of the following cannot be the correct seating arrangement of the five persons in either the clockwise direction or the anticlockwise direction?

(A) P, Q, R, S, T (B) P, S, R, T, Q
(C) P, Q, S, R, T (D) P, T, R, S, Q

14. If S is not sitting next to Q, who is sitting between Q and S?

(A) R (B) P
(C) T (D) Both (R) and (P)

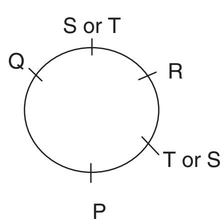
15. If a new person U joins the group such that the initial conditions for the seating arrangement should be observed and also a new condition that U does not sit next to R be satisfied, then which of the following statements is true?

(A) U sits to the immediate right of S.
(B) U sits to the immediate left of T.
(C) U sits to the immediate left of P.
(D) Either (A) or (B) above

16. If a new person U joins the group such that the initial conditions for the seating arrangement should be observed and also a new condition that U does not sit next to P, S or T be satisfied, then who will be the neighbours of P (one on either side)?

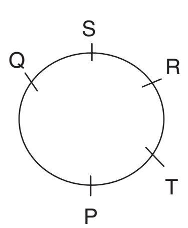
(A) S and T (B) S and Q
(C) T and R (D) R and Q

Solutions for questions 12 to 16:



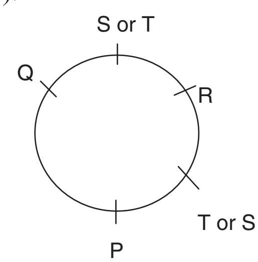
P sits two seats to the left of R, and Q sits two seats to the right of R. We can represent this information in the diagram below.

12. If S sits between Q and R, then the arrangement is as follows.



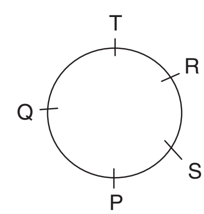
As can be seen from the diagram, T is to the immediate right of P.
Hence, the correct option is (A).

13. We will take each choice and see whether it fits in the arrangement that we represented through a diagram in the analysis of the data (the same diagram is reproduced below).



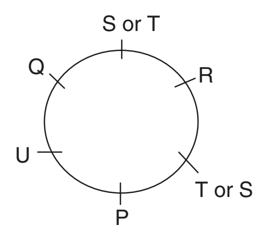
We can see that the arrangement given in choice (A) is not possible,' and, hence, the answer choice is (A).
Hence, the correct option is (A).

14. If S is not next to Q, then the seating arrangement is fixed as follows.



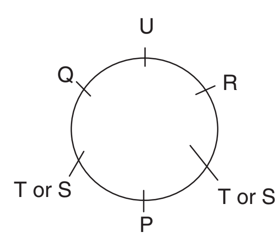
Now P is between Q and S.
Hence, the correct option is (B).

15. On the basis of the diagram that we drew, we find that to accommodate U we have to create a new slot between P and Q.



Hence, choice (C) is the correct answer.

16. We create a new slot for the sixth person. But since U will not sit next to P, S, or T, he will have to sit between R and Q. The arrangement will then look as follows:



As we can see from the diagram, the neighbours of P will be T and S.
Hence, the correct option is (A).

Direction for questions 17 to 21: Read the following information and answer the questions that follow.

There are 10 persons at a round table conference, consisting of a Professor, a Lawyer, a Doctor, a Scientist, an Accountant, a Grocer, two Computer Specialists, and two Marketing Executives. The Professor sits opposite to the Lawyer. The Scientist and the Doctor sit opposite each other. The two Marketing Executives sit opposite each other with one of them sitting to the immediate left of the scientist. The Professor sits to the immediate right of the Scientist.

17. If the two Computer Specialists sit opposite each other but neither of them is immediately next to any Marketing Executive, who sits to the immediate right of the professor?
(A) Computer Specialist
(B) Marketing Executive
(C) Grocer
(D) Accountant

18. If the Grocer and Accountant do not sit opposite each other, then which of the following must be TRUE?
(A) The Computer Specialist cannot sit beside the Lawyer.
(B) One of the Computer Specialists is next to a Marketing Executive.
(C) The Professor cannot have the Scientist and a Computer Specialist on his either side.
(D) The Computer Specialists must sit next to one another.

19. If the Grocer and the Accountant each have a Marketing Executive as his immediate neighbour, then which of the following is definitely FALSE?
(A) The two Computer Specialists are opposite each other.
(B) A Computer Specialist is an immediate neighbour of the Scientist.
(C) The Grocer is next to a Computer Specialist.
(D) A Computer Specialist is an immediate neighbour of the Lawyer.

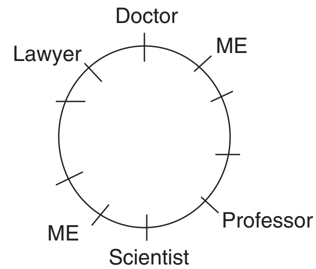
20. If a Computer Specialist is the immediate neighbour of a Marketing Executive and the Grocer is the immediate neighbour of the Lawyer, how many different kinds of seating arrangements are possible? (Assume that the two Computer Specialists are indistinguishable from each other and the two Marketing Executives are indistinguishable from each other.)
(A) 3 (B) 6 (C) 16 (D) 8

21. The maximum number of persons you can count if you start counting with the Scientist and end with a Marketing Executive (excluding both) is
(A) 0 (B) 8 (C) 5 (D) 6

Solutions for questions 17 to 21:

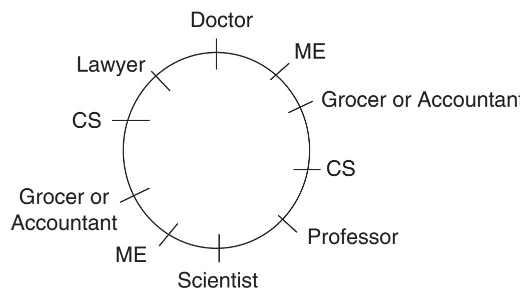
The Professor sits to the immediate right of the Scientist and opposite to the Lawyer. The Scientist sits opposite to the Doctor and one Marketing Executive is to the immediate left of the Scientist.

Choosing to place the Scientist in one of the 10 seats, we have the arrangement as follows.



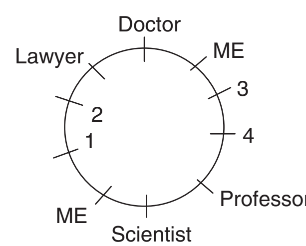
The vacant seats are one each for the two Computer Specialists, one for the Grocer and one for the Accountant.

17. The two Computer Specialists sit opposite each other. Neither of them is next to any Marketing Executive. So, the arrangement must be as follows



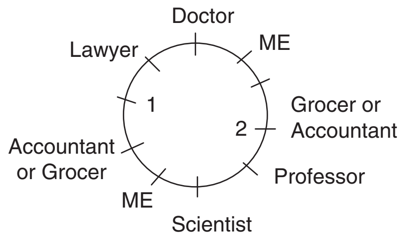
So, a Computer Specialist sits to the immediate right of the professor.
Hence, the correct option is (A).

18. The Grocer and the Accountant do not sit opposite each other. Then, the arrangements can be as follows:



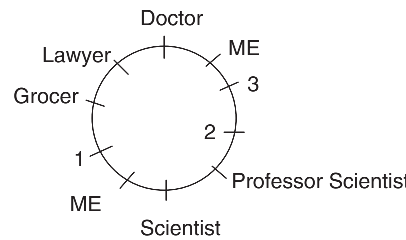
The Grocer and the Accountant can occupy the following pairs of seats: 3 and 4, 1 and 4, 1 and 2, or 2 and 3. Then, the two Computer Specialists may occupy one of the pairs of seats 1 and 2, 2 and 3, 3 and 4, or 4 and 1. We check for the choices given in the question, one by one, and find that whichever combination is taken, there is a Computer Specialist in seat 1 or seat 3, both of, which are next to the Marketing Executives seats. So, choice (B), which states that one of the Computer Specialists is next to a Marketing Executive, is true.
Hence, the correct option is (B).

19. The Grocer and the Accountant have one each of the Marketing Executives on their immediate side. So, the arrangement must be as follows.



Now the Computer Specialists must sit in chairs 1 and 2 only. But, no Computer Specialist can be the immediate neighbour of the Scientist. Choice (B) is definitely FALSE. (Note that choices (A), (C), and (D) are true). Hence, choice (B) is the correct answer.
Hence, the correct option is (B).

20. Given that the Grocer is the immediate neighbour of the Lawyer, we have the three slots numbered 1, 2, and 3 (in the following diagram) free for the two Computer Specialists and the Accountant. Since a Computer Specialist has to be next to a Marketing Executive, he should be in slot 1 or 3. By fixing the Accountant in any one of the three slots 1, 2, or 3, we can ensure that there is a Computer Specialist next to a Marketing Executive. Hence, there are three possible seating arrangements.



Hence, the correct option is (A).

21. Based on the seating arrangement that we discussed, the number of persons between the Scientist and a Marketing Executive can be 3 or 8 (counted clockwise) or 0 or 5 (counted anticlockwise). Maximum number that can be counted is 8.
Hence, the correct option is (B).

Exercises

Direction for questions 1 to 3: These questions are based on the following information.

Five boys Anil, Charan, David, John and Kamal sit in a row facing north, not necessarily in the same order.

I. John sits exactly in between Anil and David.
II. John sits exactly in between Charan and Kamal.

1. Who sits exactly at the middle of the row?
(A) John
(B) Kamal
(C) David
(D) Cannot be determined

2. In how many different ways these five boys can sit?
(A) 2 (B) 4 (C) 8 (D) 16

3. If Anil sits to the immediate left of John and if a boy sits to the immediate right of Kamal then who is that boy?
(A) David
(B) Anil
(C) Charan
(D) None of these

Direction for questions 4 to 6: These questions are based on the following information.

Seven girls A, B, C, D, E, F, and G sit in a row facing north, not necessarily in the same order. It is also known that,

I. Two girls sit in between B and F.
II. Three girls sit in between C and G.
III. Four girls sit in between A and D.

4. Who sits exactly at the middle of the row?
(A) B
(B) D
(C) E
(D) Cannot be determined

5. If B sits to the immediate right of D then who sits in between A and E?
(A) F
(B) C
(C) G
(D) Cannot be determined

6. If F and G sit on either sides of E then who sits at the right end of the row?
(A) A
(B) C
(C) D
(D) Cannot be determined

Direction for questions 7 to 9: These questions are based on the following information.

Five persons P, Q, R, S, and T sit in a row facing North not necessarily in the same order. The following information is known about them:

I. Either P or S sits at the one end of the row.
II. Either Q and T or S and T sit on either sides of P.
III. R sits to the left of S and to the immediate left of Q.

7. In how many different ways can these five people sit?
(A) 2 (B) 3
(C) 1 (D) 4

8. If Q sits to the immediate left T then who sits exactly at the middle of the row?
(A) P (B) R
(C) T (D) Cannot be determined

9. If P is not sitting adjacent to S, then who sits to the immediate right of Q?
(A) Q (B) P
(C) R (D) Cannot be determined

Direction for questions 10 to 12: These questions are based on the following information.

Each of six persons Pavan, Raman, Kiran, Charan, Shravan and Rajan stay in a different floor of a six-storied (1^{st}, 2^{nd}, 3^{rd}, 4^{th}, 5^{th}, and 6^{th} from bottom to top, respectively) building.

I. Raman stays above Kiran but below Charan.
II. Pavan stays below Rajan but above Shravan.
III. Kiran stays above Pavan but below Raman who stays above Rajan.

10. Who stays in the 2^{nd} floor?
(A) Pavan
(B) Shravan
(C) Rajan
(D) Cannot be determined

11. Who stays in the 4^{th} floor?
(A) Raman
(B) Rajan
(C) Kiran
(D) Cannot be determined

12. If one person stays in between Pavan and Kiran then who stays in the 3^{rd} floor?
(A) Shravan (B) Pavan
(C) Rajan (D) Charan

Direction for questions 13 to 15: These questions are based on the following information.

There are five buildings of different heights in a row. These houses are painted with a different colour among red, blue, white, green, and yellow such that each house is painted with exactly one colour.

The following information is know about them:

I. Yellow and green buildings are on either sides of the white building.
II. The shortest building is painted in red colour but it is neither at any end of the row nor adjacent to the tallest building.
III. The white building is exactly in between the tallest and the second tallest buildings.

13. Which among the following buildings is definitely at one end of the row?
(A) Yellow building
(B) Green building
(C) The tallest building
(D) The third tallest building

14. Which among the following is definitely false?
(A) The white building is the third tallest
(B) The third tallest and the shortest buildings are together
(C) Blue and yellow buildings are at either ends of the row.
(D) Yellow and green buildings are at either ends of the row.

15. If the yellow building is to the immediate left of the third tallest building, then what could be the order of these buildings in the descending order of their heights?
(A) blue, yellow, red, white, green
(B) blue, green, white, yellow, red
(C) green, white, blue, yellow, red
(D) green, yellow, white, blue, red

Direction for questions 16 to 18: These questions are based on the following information.

Each of the six persons—John, Ted, Humpty, Dumpty, Jack and Jill, is from one different country among India, Japan, China, Australia, America, and England and are sitting around a circular table, may not be in the same order. John, who is from China, is sitting adjacent to American, who is not Humpty. Ted is not an Indian, and Chinese is not sitting adjacent to Indian. The person from England is sitting one place away to the left of the Australian. Humpty is sitting opposite the Indian, who is adjacent to the Japanese. Australian and Dumpty are sitting opposite each other. Jack is not from India and Ted is not from Japan but both are not adjacent to each other.

16. Who among them is from India?
(A) Jill (B) Dumpty
(C) Humpty (D) None of these

17. If Jack is the Japanese, then who is sitting opposite the American?
(A) Jill (B) Ted
(C) Jack (D) Dumpty

18. Which country does Humpty belong to?
(A) Japan (B) Australia
(C) America (D) England

Direction for questions 19 to 22: These questions are based on the following information.

Eight persons—Ram, Ramesh, Mohan, Sohan, Seema, Saroj, Sakshi, and Saloni, are sitting around a circular table. Each of them is one among doctor, engineer, dancer, singer, teacher, lawyer, Accountant, and Pilot, not necessarily in the given order. Further more it is known that

I. Pilot is sitting opposite Ramesh, who is adjacent to the accountant.
II. Dancer is sitting opposite the lawyer and is not adjacent to Sakshi who is not sitting adjacent to the lawyer.
III. Saloni is sitting opposite the engineer, Ramesh is not a lawyer or doctor or engineer.

IV. Sakshi, the singer, is sitting one place away to the right of Saroj.
V. Seema is sitting opposite the lawyer and Ram is sitting opposite the dancer.
VI. Ramesh is sitting three places to the right of singer. Mohan is neither the accountant nor adjacent to the dancer.

19. Who among the following is the doctor?
(A) Ramesh
(B) Saloni
(C) Saroj
(D) Cannot be determined

20. What is the profession of Mohan?
(A) Accountant
(B) Pilot
(C) Engineer
(D) Cannot be determined

21. Who is sitting opposite Ramesh?
(A) Seema (B) Sakshi
(C) Saroj (D) None of these

22. Who is sitting opposite the accountant?
(A) Sakshi (B) Mohan
(C) Seema (D) Saroj

Direction for questions 23 to 25: These questions are based on the following information.

Eight persons—Arun, Pankaj, Rohan, Veda, Suman, Shanu, Dimple, and Pinky, are sitting around a circular table for a group discussion. Suman is not sitting opposite Pinky, and Shanu is sitting three places away to the right of Pankaj. Dimple is sitting in between Pankaj and Suman. Rohan is sitting adjacent to Pankaj who is sitting opposite Arun.

23. Who is sitting opposite Dimple?
(A) Piniky
(B) Shanu
(C) Rohan
(D) Cannot be determined

24. Who is sitting opposite Veda?
(A) Suman
(B) Pinky
(C) Shanu
(D) Cannot be determined

25. If Rohan is sitting to the left of Veda, then who is sitting opposite Shanu?
(A) Rohan
(B) Dimple
(C) Suman
(D) Cannot be determined

Answer Keys

1. A	**2.** C	**3.** B	**4.** C	**5.** D	**6.** D	**7.** A	**8.** C	**9.** B	**10.** A
11. D	**12.** C	**13.** C	**14.** D	**15.** D	**16.** B	**17.** A	**18.** B	**19.** B	**20.** C
21. C	**22.** A	**23.** D	**24.** A	**25.** B					

Chapter 8

Puzzles

CHAPTER HIGHLIGHTS

- *Distribution*
- *Order Sequence*
- *Selections*
- *Questions on Routes/Networks*

Puzzles

In this type of problems, you have to match two or more 'variables'. (Variable means a 'subject' as used in the discussion of linear arrangement.) In double line-up, the data given may talk of four people living in four houses each of a different colour. What we need to find out is the colour of the house of each of the four persons. There is no first position or second position of the houses.

Sometimes, double line-up is also called as 'distribution'. An example of data given for this variety of questions is:

'Each of the four persons A, B, C, and D wears a different coloured shirt—red, pink, blue, and white. A has a red shirt and D does not have a pink shirt'.

From the statement, it becomes clear that no person among A, B, C, and D can have shirts of two different colours among red, pink, blue, and white.

As discussed in the questions on single line-up, questions can be solved easily by representing the given data pictorially. In case of double line-up, it will help us if we represent the data in the form of a matrix or a table.

Let us see how to draw a matrix for the data given.

Names	Colours			
	Red	Pink	Blue	White
A	✓			
B				
C				
D		×		

As it is given that A has red shirt, it is clear that he does not have any other colour shirt. Similarly B, C, D do not have red shirt. So, in all the other cells in the row belonging to A, we put a cross ('×'). Then, the table will look as follows:

Names	Colours			
	Red	Pink	Blue	White
A	✓	×	×	×
B	×			
C	×			
D	×	×		

In this manner, we can fill up the cells on the basis of the data given to us. Once, we use up all the data, we will draw any conclusions that can be drawn and then answer the questions given in the set.

Let us Take a Few Examples

Direction for questions 1 to 5: These questions are based on the following information.

P, Q, R, S, T, U, V, an d W are eight employees of a concern. Each is allotted a different locker, out of eight lockers numbered 1 to 8 in a cupboard. The lockers are arranged in four rows with two lockers in each row.

Lockers 1 and 2 are in the top row from left to right, respectively, while lockers 7 and 8 are in the bottom row—arranged from left to right, respectively. Lockers 3 and 4 are in the second row from the top—arranged from right to left, respectively. So are lockers 5 and 6—arranged from right to

left, respectively—in the second row from the bottom. P has been allotted locker 1 while V has been allotted locker 8. T's locker is just above that of Q which is just above that of R, whereas W's locker is in the bottom row.

Solved Examples

Example 1: Which of the following cannot be the correct locker number–occupant pair?
(A) 3-Q (B) 7-W (C) 4-U (D) 6-R

Example 2: If U's locker is not beside Q's locker, whose locker is just above that of W?
(A) U (B) S (C) R (D) Q

Example 3: Which of these pairs cannot have lockers that are diagonally placed?
(A) P-Q (B) S-R
(C) U-R (D) Either (B) or (C)

Example 4: Which of the following groups consists only occupants of odd numbered lockers?
(A) Q, R, W (B) R, V, W
(C) T, R, Q (D) P, T, Q

Example 5: If U's locker is in the same row as that of R, and S exchanges his locker with V, then who is the new neighbour of V in the same row? (Assume that nothing else is disturbed from the original arrangement)
(A) P (B) Q (C) R (D) U

Solutions for questions 1 to 5:
Let us first try to locate the lockers in the cupboard as per the conditions given. Then, we will do the allotment to the persons.

Lockers 1 and 2 are in the top row and lockers 7 and 8 are in the bottommost row. In these two rows, the lockers are numbered from left to right. In the other two rows, the lockers are numbered from right to left.

L	R	
1	2	Top Row
4	3	
6	5	
7	8	Bottom Row

Now let us look at the conditions given for the allotment of the lockers.

P has locker 1. V has locker 8.

1-P	2
4	3
6	5
7	8-V

Locker of W is in the bottom row → W's locker must be 7.

1-P	2
4	3
6	5
7-W	8-V

T's locker is just above that of Q, which is just above that of R → The lockers of T, Q, and R must be 2, 3, and 5, respectively (there are no other group of lockers which satisfy this condition).

1-P	2-T
4	3-Q
6	5-R
7-W	8-V

S and U have lockers 4 and 6 left for them.

Thus, on the basis of the data given to us, we can show the final arrangement of lockers as below:

1-P	2-T
4-S/U	3-Q
6-U/S	5-R
7-W	8-V

Now we can answer the questions easily on the basis of the above.

Example 1: By looking at the final arrangement of lockers above, we find that choice (D) does not represent the correct combination of locker number-occupant pair.

Hence, the correct option is (D).

Example 2: If U's locker is not beside Q's locker, then U's locker must be locker 6. So, it is U's locker that will be immediately above W's.

Hence, the correct option is (A).

Example 3: R's locker is in the same row as that of exactly one of S or U and diagonally placed to the other one. Hence, 'either S-R or U-R' is the answer.

Hence, the correct option is (D).

Example 4: The odd-numbered lockers 1, 3, 5, and 7, which belong to P, Q, R, and W, respectively. Of the choices, we find that Q, R, W appear in choice (A). Hence, this is the correct choice.

Hence, the correct option is (A).

Example 5: U's locker is in the same row as that of R, which means that locker 6 belongs to U. So, locker 4 belongs to S. Now, V and S exchange lockers. Then, the new neighbour of V is Q.

Hence, the correct option is (B).

Direction for questions 6 to 10: These questions are based on the following information.

There are four trees—lemon, coconut, mango, and neem—each at a different corner of a rectangular plot.

A well is located at one corner and a cabin at another corner. Lemon and coconut trees are on either side of the gate, which is located at the centre of the side opposite to the side, at whose extremes, the well and the cabin are located. The mango tree is not at the corner where the cabin is located.

Example 6: Which of the following pairs can be diagonally opposite to each other in the plot?
(A) Neem tree and lemon tree
(B) Cabin and neem tree
(C) Mango tree and well
(D) Coconut tree and lemon tree

Example 7: If the lemon tree is diagonally opposite to the well, then the coconut tree is diagonally opposite to the
(A) Mango tree (B) Well
(C) Cabin (D) Gate

Example 8: If the coconut tree and the neem tree cannot be at adjacent corners of the plot, then which of the following will necessarily have to be at diagonally opposite corners of the plot?
(A) Coconut tree and well
(B) Lemon tree and cabin
(C) Lemon tree and coconut tree
(D) Lemon tree and well

Example 9: Which of the following must be TRUE?
(A) Cabin and well are not at adjacent corners.
(B) Cabin and coconut tree cannot be at the adjacent corners.
(C) Neem tree and well are at adjacent corners.
(D) Neem tree and well are not at adjacent corners.

Example 10: Which of the following is definitely FALSE?
(A) Mango tree is adjacent to the well at one corner.
(B) Neem tree is adjacent to the cabin at one corner.
(C) Coconut tree is at the corner adjacent to the well.
(D) Lemon tree is not on the same side of the plot as the gate.

Solutions for questions 6 to 10:
Lemon and coconut trees are on either sides of the gate.

Lemon Or Coconut	Gate	Coconut Or Lemon

The well and the cabin are at either end of the wall opposite to the gate.

Mango tree and cabin are not at the same corner. So, neem tree and well are not at the same corner. This means that mango tree and the well are at the same corner and neem tree and the cabin are at the same corner.

(Well, Mango) Or (Cabin, Neem) Lemon or Coconut	(Cabin, Neem) or (Well, Mango) Coconut or Lemon

Gate

Example 6: Let us take each choice and check with the above diagram to see if it is possible or not.

Neem and lemon trees can be diagonally opposite each other. Hence, this is the correct answer choice. (In an exam, you do not need to check the other choices since the first choice is correct. But, for the sake of clarity and proper understanding, we will check all the choices.)

From the diagram given, we can see that cabin and neem tree cannot be located diagonally opposite each other.

Mango tree and well cannot be located diagonally opposite to each other.

Coconut and lemon trees cannot be located diagonally opposite each other.

Hence, the correct option is (A).

Example 7: If lemon tree is diagonally opposite to the well, then we can have the following two possible arrangements.

Neem Cabin		Well Mango
Lemon	Gate	Coconut

OR

Well Mango Coconut	Gate	Cabin Neem Lemon

The coconut tree is diagonally opposite the cabin and neem.

Hence, the correct option is (C).

Example 8: Since coconut and neem trees cannot be at adjacent corners, the following arrangements are possible.

(Well, Mango)	(Cabin, Neem)
Coconut	Lemon

OR

(Cabin, Neem)	(Well, Mango)
Lemon	Coconut

From these diagrams, we find that choice (D) is the correct answer.

Hence, the correct option is (D).

Example 9: We can check each statement with the diagram that we drew initially. We find that the statement in choice (C) which says that neem tree and the well are at the adjacent corners is true. Hence, choice (C) is the correct answer.
Hence, the correct option is (C).

Example 10: We check each statement with the diagram that we drew initially to find out which of the statements has to be false.

We find that choice (D) has to be false.

Hence, the correct option is (D).

Direction for question 11: Select the correct answer from the given choices.

Example 11: A, B, C, and D play four different games among baseball, cricket, kabaddi and volleyball. A does not play baseball or cricket. B does not play kabaddi or volleyball. C plays volleyball and D plays either baseball or volleyball. Who plays cricket?

(A) A (B) B (C) C (D) D

Solution for question 11:

C plays volleyball. A does not play cricket and D does not play cricket as he plays either baseball or volleyball.

∴ B should play cricket.

Hence, the correct option is (B).

Order Sequence

The term 'order sequence' is self-explanatory. In questions for this category, you will be asked to deal with relative positions of subjects. The absolute values of the subjects is not what you should be interested in. It is comparison between different subjects that you have to deal with. The data also specify the relationships like 'A is greater than B' or 'C is not less than D', and so on. You have to decide the positions of the subjects in ascending or descending order on the parameters given. The subjects of comparison can be people or things.

In short, data will be given to compare the quality or quantity. The parameters on which the subjects are compared can be heights or weights of people, the money with them, complexion, sizes of things, etc.

In such questions, you will come across typical statements like 'A is taller than B,' 'B is not shorter than C', and so on. You may use the following symbols to symbolically represent the conditions given and, then later, represent all the subjects pictorially.

Greater than	>
Less than	<
Greater than or equal	≥
Less than or equal	≤.

'Not greater than' is the same as 'less than or equal to'. Similarly, 'not less than' is the same as 'greater than or equal to'.

Words like 'Who, And, Which, But' used in the data play a significant role in analysing the data. 'And' and 'But' play the same role, whereas 'Who' and 'Which' play the same role.

Let us take one statement.

'A is taller than B, who is shorter than C and taller than D but shorter than E, who is taller than F and G but shorter than H'.

By using appropriate symbols, the above statement can be represented as follows.

$$A > B; B < C; B > D; B < E; E > F; E > G; E < H$$

Questions on the given data can be as follows.

1. Who is the tallest?
2. Who is the shortest?
3. Who is the second tallest in the group? etc.

Let us take some examples.

Direction for questions 12 to 16: Read the information given and answer the questions that follow.

A, B, C, D, and E are five cars while P, Q, and R are three motorcycles. A is the fastest of the cars and R is the slowest of the motorcycles. C is costlier than D and Q but cheaper than B. Among cars, A is not the costliest. D is cheaper than E and there is no car whose cost lies between the cost of these two. E is faster than three of the cars and all the motorcycles. Q is costlier than R but cheaper than P, who is faster than Q.

Example 12: Which of the following cars cannot stand exactly in the middle position among cars as far as their cost is concerned?

(A) A (B) C
(C) E (D) D

Example 13: Which of the following statements is true about the motorcycles?

(A) P is the costliest as well as the fastest motorcycle.
(B) The fastest motorcycle is not the costliest motorcycle.
(C) The slowest motorcycle is also the cheapest motorcycle.
(D) Both (A) and (C)

Example 14: If P is costlier than E, how many cars are cheaper than P?

(A) 1
(B) 2
(C) 3
(D) Cannot be determined

Example 15: If P is cheaper than A, which is not costlier than E, which of these is the cheapest of all the cars and motorcycles put together?

(A) R
(B) Q
(C) E
(D) Cannot be determined

Example 16: Which of these is the slowest of the cars, if B and C are faster than D?

(A) B (B) D (C) E (D) A

Solutions for questions 12 to 16:

Let us first write down all the comparisons given for costs and speeds. Then we will tabulate them.

Speed

A → fastest car

E → Faster than three of the cars ➔ E is the second fastest car

R → slowest motorcycle

P > Q

Cost

C > D

C > Q

B > C

A → Not the costliest among cars

E > D → No other car lies between these two

Q > R

P > Q

Now let us tabulate these data.

Speed

Cars

Fastest	A	E				Slowest

Motorcycles

Fastest	P	Q	R	Slowest

Cost

Cars

Costliest	B C E D	Cheapest

Here, we know that A is not the costliest car but we do not know where it will fit in. It can come anywhere after B except between E and D.

Motorcycles

Costliest	P	Q	R	Cheapest

In addition, we have to also keep in mind that C > Q in cost. (From this, we can conclude that B > Q, B > R, C > R in cost.)

Example 12: In terms of cost of the cars, A can come between B and C or between C and E or to the right of E. In each of the cases, the middle car will be C, A, and E, respectively. Hence, among the cars given, D cannot be in the middle.

Hence, the correct option is (D).

Example 13: By looking at the tables, we can make out that choices (A) and (C) are both correct, and, hence, the correct answer is choice (D).

Hence, the correct option is (D).

Example 14: If P is costlier than E, we can also conclude that it is costlier than D but we cannot conclude anything about the relationship between the cost of P and that of B, C and A.

Hence, the correct option is (D).

Example 15: Since A is not costlier than E, it means that A is at the same level of E or cheaper than E. We cannot conclude which of these two positions A is in. Hence, we cannot conclude which the cheapest of all the vehicles is. {Please note that if A is the cheapest car, then R will be the cheapest of all the vehicles. However, if A is at the same level as E in cost, then there is a possibility of R or D being the cheapest of all the vehicles.}

Hence, the correct option is (D).

Example 16: If B and C are faster than D, then the order will be as follows:

1	2	3	4	5
A	E	B/C	C/B	D

Hence, D is the slowest of all the cars.

Hence, the correct option is (B).

Direction for questions 17 to 21: Read the information given and answer the questions that follow.

J, K, L, M, and N are five boys in a class. They are ranked in the order of heights—from the tallest to the shortest—and in order of cleverness—from the cleverest to the dullest. K is taller than N, but not as clever as J and L, whereas M is the cleverest of all but shorter than J. While L is shorter than M but taller than K, L is not as clever as J. No two persons got the same ranks in any of these parameters.

Example 17: Who is the third in the order of heights?

(A) J (B) N (C) K (D) L

Example 18: If N is not the last in at least one of the two comparisons, which of the following is the dullest of all the five?

(A) K (B) L (C) M (D) J

Example 19: If L is the third in order of cleverness, who is the dullest of all?

(A) M

(B) N

(C) L

(D) Cannot be determined

Example 20: Who among the following is cleverer as well as taller than K?

(A) L and J only (B) N

(C) L and N (D) J, L and M

Example 21: How many people are definitely shorter than K?

(A) 1 (B) 2

(C) 3 (D) None of these

Solutions for questions 17 to 21:
Let us first write down all the conditions given and then tabulate the data.

Cleverness
J > K
L > K
M is the cleverest.
J > L

Height
K > N
J > M
M > L
L > K

Now, let us put together all the information we have.

Cleverness

Cleverest	M J L K	Dullest

We do not know where N will come in the order of cleverness but he will definitely be after M.
Height

Tallest	J M L K N	Shortest

Example 17: From the table, we can clearly see that L is ranked third in order of heights.
Hence, the correct option is (D).

Example 18: N is the last in terms of height. Since we are given that he is not the last in at least one of the lists, he cannot be the last in cleverness. So, K is the dullest of all.
Hence, the correct option is (A).

Example 19: If L is the third in the order of cleverness, as can be seen from the table, either N or K can be the dullest.
Hence, the correct option is (D).

Example 20: By looking at the tables we made and from the answer choices, we find that L, J, and M are taller as well as cleverer than K.
Hence, the correct option is (D).

Example 21: Only N is shorter than K.
Hence, the correct option is (A).

Direction for question 22: Select the correct alternative from the given choices.

Example 22: P, Q, R, S, and T are five girls competing in a running race. R and P have at least two girls ahead of each of them. T and P do not have more than one girl behind each of them. Who arrives at the finishing line after two girls as well as before two other girls, if no two girls finish the race at the same time?
(A) Q (B) S (C) T (D) R

Solution for question 22:
R and P have at least two girls before them ➔ R and P have to be in two out of 3rd, 4th, and 5th positions.
T and P have not more than one girl behind each of them ➔ T and P have to be in the 4th or 5th positions.
These two statements together mean that R will have to be in the third position.
Hence, the correct option is (D).

Selections

In this category of questions, a small group of items or persons has to be selected from a larger group satisfying the given conditions. The conditions will specify as to when a particular item or person can be included or cannot be included in the subgroup. For example, the condition may specify that two particular persons should always be together or that two particular persons should not be together.
Sometimes, the conditions given for selection or non-selection of items or persons may be based on logical connectives if-then, either-or, unless, etc. You should be careful in interpreting the logical connectives used in the conditions.

Direction for questions 23 to 27: These questions are based on the following information.
Amit, Bittu, Chintu, Dumpy, Falgun, Hitesh, Ronit, Purav, and Saurav are nine players from among whom three teams consisting of 4 members, 3 members, and 2 members, respectively, must be formed subject to the following conditions.
Chintu must have three more players with him while Dumpy must have only two more with him.
Chintu and Saurav cannot be in the same team.
Purav and Bittu cannot be in the same team.
Ronit and Hitesh must be in the same team.

Example 23: If Dumpy, Falgun, Purav form the team of 3 members, then which of the following must be TRUE?
(A) Hitesh must be in a team with Bittu.
(B) Saurav must form a two-member team with Amit or Chintu.
(C) Saurav must form a two-member team with Bittu or Amit.
(D) Chintu should form a team of 4 members with Hitesh, Ronit, and Amit.

Example 24: If Dumpy takes Amit as a part of his three-member team, which of the following must go into Chintu's team?
(A) Bittu and Hitesh (B) Hitesh and Ronit
(C) Purav and Ronit (D) Purav and Falgun

Example 25: If Chintu and Falgun are together and Saurav is in the team of two members, then how many sets of different teams are possible?
(A) 4 (B) 3 (C) 2 (D) 1

Example 26: If Chintu does not have Purav in his team and the two member team consists of Saurav and Amit, then Chintu should take
(A) Hitesh, Bittu, and Ronit.
(B) Bittu but not Ronit.
(C) Bittu and Falgun.
(D) Hitesh and Ronit.

Example 27: If Purav is in the same team as Chintu and Falgun, then Saurav must be in the same team as
(A) Bittu (B) Bittu and Amit.
(C) Amit (D) Bittu and Dumpy.

Solutions for questions 23 to 27:
It is given that:
Chintu must form a team of 4 members only
Dumpy must form a team of 3 members only.
Since Chintu and Dumpy are in two different teams, let us, for convenience, denote the two teams as the respective teams of these two persons. Let us call the team with four members as the first team and the team with three members as the second team. The third team should have two persons.

Number of members		
4	3	2
Chintu	Dumpy	Saurav
	Saurav	

Now let us take the other conditions and fill them up in the table.
Chintu and Saurav cannot be in the same team.
➔ Saurav will be in the second or the third team.

Purav and Bittu cannot be in the same team.
Hitesh and Ronit must be in the same team.
We cannot represent these two conditions right now in the table but we will use them as we go along.

Example 23: If Dumpy, Falgun, Purav form the team of 3 members, then Saurav should be in the third team.
Since Hitesh and Ronit must be in the same team, they have to be in the first team. That leaves only Amit or Bittu to be with Saurav in the third team.
Hence, the correct option is (C).
(Also, note that we can eliminate choice (B) easily.)

Example 24: Dumpy takes Amit as a member of his team.
If we take Hitesh and Ronit as the two members of the third team, then Saurav has to be in the second team, in which case we will have both Purav and Bittu coming into the same team—the first team—which is not possible.
Since Saurav cannot be in Chintu's team and Purav and Bittu cannot be in the same team, the three people required for Chintu's team will **have to be** Hitesh and Ronit check-font Falgun or Purav or Bittu.
Hence, the correct option is (B).

Example 25: Let us analyse the conditions. It is given that Chintu and Falgun are together, whereas Saurav is in the team of two members. Let us fill up these details in the box that we made and then see in how many ways we can fill up the remaining cells in the box.

Chintu	Dumpy	Saurav
Falgun		

First let us look at Hitesh and Ronit who must be in the same team.
They can go into the first team or the second team. Let us consider these two cases.

Case 1: Hitesh and Ronit go into the first team.
Then, one out of Bittu and Purav will to go into the third team and the other into the second team. This gives rise to two ways of forming the teams: one with Bittu in the second team and the other with Bittu in the third team.

Case 2: Hitesh and Ronit go into the second team.
In this case too, one out of Bittu and Purav will go into the third team and the other into the second team. Hence, this will also give rise to two ways of forming the teams.
Hence, there are total four ways of forming the teams.
Hence, the correct option is (A).

Example 26: Let us use the table that we built in the initial analysis and fill up the details that we have in this problem. Since the two member team is already formed and Chintu does not take Purav, hence Purav will have to go into the second team.

Chintu	Dumpy	Saurav
	Purav	Amit

Since Ronit and Hitesh have to be in the same team, they should go into the first team. Since Bittu cannot go with Purav, he should also be in the first team. This leaves Falgun for the second team. Thus, we can fill up the table as follows:

Chintu	Dumpy	Saurav
Ronit	Purav	Amit
Hitesh	Falgun	
Bittu		

Hence, the correct option is (A).

Example 27: If Purav is with Chintu and Falgun, then Bittu cannot be with them. Since Ronit and Hitesh should be together, the only other person left is Amit. These four members form the first team.

If Hitesh and Ronit together form the two member team, then Bittu and Saurav will be part of the three member team.

Instead, if Hitesh and Ronit are in the three-member team, then Saurav and Bittu will form the two-member team.

In either case, Saurav and Bittu are together in one team. Hence, the correct option is (A).

Direction for questions 28 to 31: These questions are based on the following information.

A, B, C, D, E, F, and G are seven players. They form two teams of two players each and one team of three players. A and B cannot be in the same team. B and C cannot be in the same team whereas E and F must be in the same team. G and D cannot be in the same team.

Example 28: If C, D, and A form a team of three players, which of the following can be the members of one of the other teams?

(A) A and E (B) G and B
(C) E and F (D) Both (B) and (C)

Example 29: If E, F, and G form a team of three members, then in how many ways can the remaining two teams of two players each be formed?

(A) 2 (B) 4 (C) 3 (D) 1

Example 30: If D and A are not in the same team, then altogether in how many ways can the teams of two members be formed?

(A) 4 (B) 7 (C) 8 (D) 5

Example 31: If B, E, and F form a team of three members, which of the following cannot be the two teams of two members each?

(A) AC, GD (B) AD, CG
(C) AG, CD (D) Both (A) and (B)

Solutions for questions 28 to 31:

Let Team I be of 3 players, Team II be of 2 players, and Team III be of 2 players.

It is given that A and B cannot be together. We will represent it as $A \times B$.

Similarly, we have $B \times C$ and $G \times D$.

E and F must be in the same team. So, E and F can form a team of 2 members on their own or can form a team of 3 members with another person.

Let us now take up the questions and work them out.

Example 28: Given that C, D, A form a team of 3 members, one of the other teams **has** to have E and F together. Hence, B and G should form one team.

Hence, the correct option is (D).

Example 29: Given that E, F, G form a team of 3 players. Since A and B or B and C cannot be in the same team, we must necessarily have A and C together in one team and B and D in the other team. So the teams can be formed only in one way.

Hence, the correct option is (D).

Example 30: Given that A and D are not in the same team. Hence, $A \times B$, $B \times C$, $G \times D$, and $A \times D$.

We already know that E and F must be in the same team. They may form a team of 3 members or they themselves be a team of 2 members. Let us consider these two possibilities and then fill up the other teams. They can be formed as follows:

	Team I	Team II	Team III
1.	A E F	B D	C G
2.	A E F	C D	B G
3.	B E F	A G	C D
4.	C E F	A G	B D
5.	D E F	A C	B G
6.	G E F	A C	B D
7.	A C G	B D	E F

Thus the teams can be formed in 7 ways.

Hence, the correct option is (B).

Example 31: If B, E, F form a team of 3 members, then the two members teams must be formed from A, C, D, G. The teams can be AD and CG or AG and CD. As D and G cannot form a team, AC and GD cannot be formed. Choice (A). {Please note that we can answer this question from the answer choices—from choice (A), we find that G and D are together in one team which is not possible. Thus, choice (A) is the answer.}

Hence, the correct option is (A).

Direction for question 32: Select the correct alternative from the given choices.

Example 32: At least two boys out of A, B, C, and D and at least two girls out of P, Q, R, and S have to be chosen to form a group of 5 members.

Neither A nor C can go with Q.

Neither P nor S can go with B.

Q and R cannot be together.

Which of the following is an acceptable team?

(A) ARCQP
(B) ASQPD
(C) ASQRP
(D) PSRAD

Solution for question 32:

The required group of 5 members must be formed with at least two boys from A, B, C, D and at least 2 girls from P, Q, R, S.

Answers 1, 2, and 3 can be ruled out as A and Q cannot be together.

In choice (D), P, S, R, A, D can be together without violating any of the given conditions.

Hence, the correct option is (D).

Questions on routes/networks involve different points or locations between which there is some movement or communication. The way the movement or communication is effected is described in the data/conditions. Sometimes, these are also referred to as 'maps' because the routes given resemble a map.

The data given in these types of questions may not always have the word 'route' or 'network' in them but a network is indicated by some sort of connectivity between two 'points'. The way the statements are worded is important. The wording includes statements like

1. Some poles are connected through wires.
2. Some towers send signals to one another.
3. Some cabins, market, cities, etc. are connected via. passages or roads and so on.

The connectivity between the two 'points' can be only one-way or two-way. In one-way connectivity, the flow will be in only one direction, whereas in two-way connectivity, the flow will be in both directions between the points.

Read the data carefully and then draw the diagram or network. The words 'from' and 'to' play an important role in these questions, and, hence, care should be taken while interpreting the data. While drawing a diagram, arrow marks can be used very effectively to indicate the direction of connectivity as explained below.

1. If the statement mentions that there is a one-way route from city A to B then it can be represented as follows.

   $A \longrightarrow B$

2. If the statement mentions that cities X and Y have roads on which you can travel in either direction, it means that it is a two-way connectivity. Then it can be represented as follows.

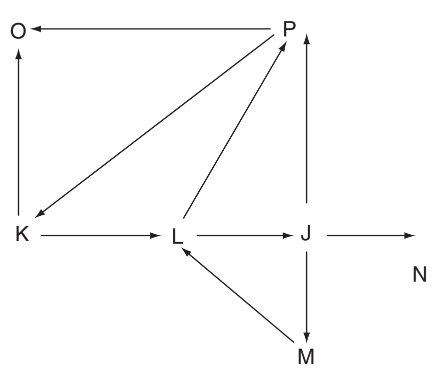
   $X \longleftrightarrow Y$

3. If the statement mentions that all the projected roads are one-ways and there is a route from point K to P and then from P to K, then it should be represented as follows.

   $P \rightleftarrows K$

   i.e. from P to K is one route and from K to P is another route.

   Now, consider the following network.



In this network, let us say that a person starts from J and he wants to reach K. We want to find out the number of distinct routes he can take without touching any point twice. Starting from J, the possible directions of movement are from J to N, J to M, and J to P, but if he goes from J to N then coming back or travelling in some other direction is not possible. Hence, the person has only two options for movement from J (J to M and J to P). Now, if he goes to M, he has to go to L from M. At L, it appears that he has two options—he can go to P or to J. But, since he started from J and as he cannot touch any point twice, he cannot go to J. So, there is only one option at L—that is going to P. So, to reach P from J, there are two options—one directly to P from J and the other via. M and L. Once he reaches P, he has only one way of reaching K—along the diagonal PK. If he goes to O from P, then he cannot travel to K from O (the route is one way in the O to K). Thus, the total number of ways from J to K is two (JPK and JMLPK).

Thus, one has to look at all the possible routes carefully in the above-discussed manner.

In the aforementioned example, if the route between J and L is two-way and then we have to find out the number of ways to reach O stating from J, the routes we have will be as follows:

JPO, JPKO, JMLPO, JMLPKO, JLPO, JLPKO

This gives us a total of six distinct ways of reaching O from J.

Direction for questions 33 to 37: Read the following information and answer the questions given below.

P, Q, R, S, T, U, V are seven places on a map. The following places are connected by two-way roads: P and Q; P and U; R and U; R and S; U and V; S and T; Q and R; T and V. No other road exists.

Example 33: The shortest route (the route with the least number of intermediate places) from P to V is

(A) P-R-V (B) P-T-V
(C) P-Q-R-U-V (D) P-U-V

Example 34: How many distinct routes exist from S to U (without touching any place more than once)?

(A) 3 (B) 2 (C) 1 (D) 4

Example 35: The route covering the maximum number of places and going from P to R does not pass through

(A) U (B) T (C) S (D) Q

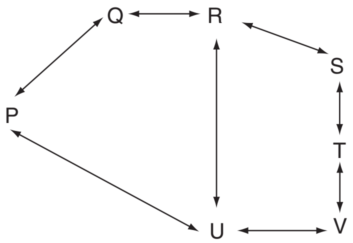
Example 36: If U to V and S to R are only one-way routes, then which of the following places lose contact with P?

(A) V
(B) T
(C) S
(D) No place loses contact with P

Example 37: If the number of places to which a place is connected directly considered as the measure of importance, then which of the following places is of the highest importance?

(A) Q (B) P (C) R (D) S

Solutions for questions 33 to 37:
The route map of the places is as follows:



Example 33: As is seen, P-U-V is the shortest way (with only one intermediate point) from P to V.
Hence, the correct option is (D).

Example 34: To travel from S to U, the routes available are: S-R-U; S-T-V-U, and S-R-Q-P-U—a total of 3 routes.
Hence, the correct option is (A).

Example 35: First let us write down the route from P to R with the maximum number of intermediate points. By observation, we find that it is P-U-V-T-S-R. It does not touch Q.
Hence, the correct option is (D).

Example 36: If U to V and S to R are only one-way routes, from the figure, we find that all places can still be reached from P. Hence, none of the places loses contact with P.
Hence, the correct option is (D).

Example 37: For each of the places given in the choices, Q, P, R, and S, let us see how many places are directly connected.
Q is directly connected to 2 places.
P is directly connected to 2 places.
R is directly connected to 3 places.
S is directly connected to 2 places.
Hence, the correct option is (C).

Direction for questions 38 to 41: Read the following information and answer the questions given.
Five cities P, Q, R, S, and T are connected by different modes of transport as follows:
P and Q are connected by boat as well as by rail.
S and R are connected by bus and by boat.
Q and T are connected only by air.
P and R are connected only by boat.
T and R are connected by rail and by bus.

Example 38: Which of the following pair of cities are connected by any of the routes directly [without going through any other city]?
(A) P and T (B) T and S
(C) Q and R (D) None of these

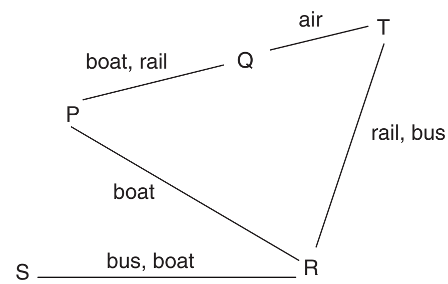
Example 39: Which mode of transport would help one to reach R starting from Q but without changing the mode of transport?
(A) Boat (B) Rail (C) Bus (D) Air

Example 40: If a person visits each of the places starting from P and gets back to P, which of the following places must he visit twice?
(A) Q (B) R
(C) S (D) T

Example 41: Between which two cities among the pairs of cities given below are there maximum travel options available? (If there is more than one route possible between two cities, consider the route with least number of cities enroute.)
(A) Q and S (B) P and R
(C) P and T (D) Q and R

Solutions for questions 38 to 41:

Example 38:



P and T are connected through Q.
T and S are connected through R
Q and R are connected through T or P. Q and S are connected through R and P or T. So, none of the pairs in the choices are directly connected.
Hence, the correct option is (D).

Example 39: From Q to P, he can reach by boat.
From P to R also he can travel by boat.
So, a person should travel by boat to reach R from Q without changing the mode of transport.
Hence, the correct option is (A).

Example 40: If a person wants to visit all the places and again return to P, then he can go in the order of $P \to Q \to T \to R \to S$ and then
$S \to R \to P$ (OR)
$P \to R \to S$ and then
$S \to R \to T \to Q \to P$
He must visit R twice.
Hence, the correct option is (B).

Example 41: One has to travel between any of the two cities with a restriction that if there is more than one possible route, he has to go by the least number of cities enroute. It is better to take the pair of cities given in each of the choices.
Choice (A) Q and S: A person can go from Q to T to R to S (or) Q to P to R to S or vice versa. In both the routes, there are two cities enroute. We can calculate the number of options in the entire route by multiplying the options available in each segment of the route.

For the route Q-T-R-S, the number of options = $1 \times 2 \times 2 = 4$

For the route Q-P-R-S, the number of options = $2 \times 1 \times 2 = 4$

Choice (B) P and R: The route between P and R has only one mode of travel, that is boat.

Choice (C) P and T: A person can go by PQT in either way or by PRT in either way. If it is by PQT, then the options are boat–air or rail–air, i.e. two ways. If it is by PRT, then the options are boat-rail or boat-bus in either way. Hence, they are only two options.

Choice (D) Q and R: If a person travels between Q and R, then he can go by QTR or by QPR. If he goes by QTR, then the options are air–rail or air–bus, that gives two options or if he goes by QPR, then the options are rail–boat or boat–boat, that will again give us two options.

So, it is very clear that Q and S have maximum number of travel options available between them.

Hence, the correct option is (A).

Direction for question 42: Select the correct alternative from the given choices.

Example 42: Four computers P, Q, A, and B are interconnected for the transmission of data. A and B each can send data to both P and Q but B cannot receive data from A. P and Q can have data flow in both directions between them but they cannot transmit the data so received to B but can otherwise send the data directly to B. Which of the following routes can be followed if B has to receive data from A?

I. AQPB II. APB

III. AQB IV. APQB

(A) I and III (B) II and III

(C) III and IV (D) All four

Solution for question 42:

AQPB and APQB can be eliminated because P and Q cannot send the data to B.

The paths AQB and APB do not violate any conditions and hence can be possible routes to send data from A to B.

Hence, the correct option is (B).

Exercises

Direction for questions 1 to 3: These questions are based on the following information.

Each of the seven delegates A through G came to India to attend a conference from seven different countries—China, Japan, Malaysia, England, Australia, Germany, and Poland.

(i) China, Japan, and Malaysia are the only Asian countries.

(ii) A and B are from Asian countries, whereas D is neither from England nor from Australia.

(iii) E and F are from non Asian countries but neither of them came from either Australia or England.

(iv) C is not from England and the person from Poland is not F.

(v) A is from China.

1. Who is from Germany?

(A) E (B) C (C) F (D) G

2. Who is from Malaysia?

(A) B (B) D

(C) A (D) Either (A) or (B)

3. Which country did G come?

(A) England

(B) Australia

(C) Poland

(D) Cannot be determined

Direction for questions 4 to 6: These questions are based on the following information.

Bingo, Pingo, Tingo, Hingo, and Mingo are five friends, each of whom is working in a different company among C_1, C_2, C_3, C_4 and C_5 and they belongs to the same city but a different locality—l_1, l_2, l_3, l_4, and l_5.

(i) The persons who are working with C_1 and C_2 are from l_3 and l_4

(ii) Bingo is from l_5 but does not work for C_5.

(iii) Tingo is not from l_4 but works for C_2.

(iv) Pingo works neither for C_5 nor in C_3 and is not form l_2.

(v) The person working for C_3 is from l_1.

(vi) Mingo does not work for C_3.

4. For which company does Hingo work?

(A) C_3 (B) C_4 (C) C_5 (D) C_2

5. Who is from l_4?

(A) Mingo (B) Hingo

(C) Tingo (D) Pingo

6. Who works for C_4?

(A) Bingo (B) Mingo

(C) Pingo (D) Hingo

Direction for questions 7 to 9: These questions are based on the following information.

A team of three is to be selected from six persons Amar, Bhavan, Chetan, Dawan, Ekta, and Farheen under the following constraints:

(i) If Amar or Bhavan is selected, then Chetan must not be selected.

(ii) If Chetan or Dawan is selected, then at least one of Ekta and Farheen must be selected.

7. If Dawan is selected, then who must not be selected?

(A) Amar

(B) Bhavan

(C) Chetan

(D) None of these

8. If Amar is selected, then in how many ways the team can be selected?
(A) 5 (B) 6 (C) 4 (D) 7

9. If Bhavan is selected, then who must be selected?
(A) Dawan
(B) Ekta
(C) Farheen
(D) Either (B) or (C)

Direction for questions 10 to 12: These questions are based on the following information.

Three girls Anjali, Bharathi, and Chandrika and four boys Kiran, Lala, Manoj, and Naveen are to be divided into two teams under the following constraints.

(i) Each team must have at least one girl and at least one boy and at least three persons in total.
(ii) If Anjali and Bharathi are selected in a team, then the team must have only one boy.
(iii) Kiran and Lala cannot be in the same team.
(iv) Chandrika and Naveen can be in the same team, only if Bharathi is selected in that team.

10. If Kiran and Chandrika are in the same team, then in how many ways can the other team be selected?
(A) 6 (B) 3 (C) 4 (D) 5

11. If Manoj is not in the same team as Bharathi, then in how many ways can the teams be selected?
(A) 3 (B) 4 (C) 5 (D) 6

12. If three boys are selected into one team, then in how many ways can the teams be selected?
(A) 4 (B) 5 (C) 3 (D) 6

Direction for questions 13 to 15: These questions are based on the following information.

Seven persons—P, Q, R, S, T, U and V, who are of different ages, are comparing their ages. We know the following information.

(i) P is younger than R, who is not older than S.
(ii) S is younger than only two persons.
(iii) Q is not the oldest but older than fourth youngest person.
(iv) T is older than only U.

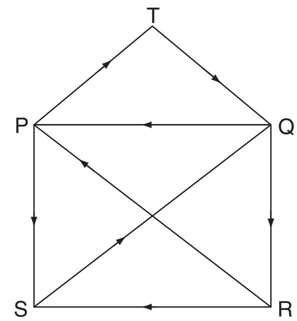
13. Who is oldest?
(A) S (B) T (C) U (D) V

14. Who is the third youngest?
(A) V (B) P (C) R (D) S

15. Who is the fourth eldest?
(A) R (B) P (C) S (D) V

Direction for questions 16 to 19: These questions are based on the diagram given.

Five cities P, Q, R, S, and T are connected by one-way rail routes as shown. One takes one hour duration to travel between any two directly connected cities.



At station S, for every 2 hours, one train departs and the departure time of the first train is 6:00 a.m. Similarly, at station R, for every 3 hours, one train departs in each route and the departure time of the first train is 4 a.m.

At station Q, one train departs for every 2 hour in each route and the departure time of the first train is 7 a.m.

At station P, train departs for every 1 hour in each route and the departure time of the first train is 8 a.m.

At station T, for every 3 hours, one train departs and the departure time of the first train is 5:30 a.m.

16. What is the least time will it take to reach P from R, if one takes the longest route without visiting any station more than once?
(A) 6 hours (B) 3 hours
(C) 5 hours (D) 4 hours

17. If a person reaches Q at 1:00 p.m. from R, which of the following can be the time at what time he must have started from R if that person takes the shortest route?
(A) 10:00 a.m. (B) 9:00 a.m.
(C) 11:00 a.m. (D) None of these

18. A person wants to travel from R to T and he takes the longest route without visiting any station more than once. If he starts at 4:00 a.m., then for how much time he has to wait for the trains altogether in all stations before reaching T.
(A) 2 hours (B) 3 hours
(C) 2 hours (D) 1 hour

19. If a person starts from P at 10:00 a.m. to reach S and he takes the longest route without visiting any station more than once then at what time will he be reachings?
(A) 1:00 p.m. (B) 4:00 p.m.
(C) 5:00 p.m. (D) 2:00 p.m.

Direction for question 20: This question is based on the information given.

Five cities Ahmedabad, Bangalore, Calicut, Delhi, and Indore are connected by one-way routes from Ahmedabad to Bangalore, Delhi to Ahmedabad, Indore to Delhi, Delhi to Calicut, Ahmedabad to Calicut, Bangalore to Calicut, Calicut to Indore, Indore to Bangalore, and Ahmedabad to Indore.

20. In how many ways a person can travel from Delhi to Indore without visiting any city more than once?
(A) 5 (B) 3 (C) 6 (D) 4

Direction for questions 21 and 22: Select the correct alternative from the given choices.

21. There are 15 identical coins out of which fourteen are of equal weights and one coin lighter than each of the other coins. What is the minimum number of weighings required using a common balance to definitely identify the counterfeit coin?

(A) 3 (B) 4
(C) 5 (D) None of these

22. Beside a lake, there are three temples and a flower garden. Whenever some flowers are dipped into the lake, the flowers gets triplet. A person brought some flowers from the garden and dipped then into the lake. He placed x flowers in front of the first temple and dipped the remaining flowers into the lake. He placed x flowers in front of the second temple and dipped the remaining flowers into the lake. Now, he placed x flowers in front of the third temple and has no flowers. Which of the following numbers can be the value of x?

(A) 9 (B) 18 (C) 27 (D) 36

Direction for questions 23: These questions are based on the following letter – multiplication in which each letter is represents a unique non-zero digit.

A	B	C		
×	C	B	A	
C	D	E	F	C

Also, it is known that D = 3C and F = 4B

23. What is the value of D?

(A) 3
(B) 6
(C) 9
(D) Cannot be determined

Direction for questions 24 and 25: These questions are based on the following data.

Each individual of a city called 'Josh' belongs exactly to one of the two types, viz., Yes-type or No-type. Yes-type people always give the true reply, while the No-type always lies. Answer the following questions based on the information.

24. You met three residents A, B, and C, of the city and asked them, 'who among you are married?' and got the following replies.

A: I am married to B.
B: I am married to C.
C: I am not married to A.

If it is further known that A is married to one of B and C and there is exactly one married couple among the three, then which of the following is definitely true?

(A) C is married to A.
(B) B is married to A.
(C) A is of Yes-type.
(D) B is of No-type.
(E) A is of No-type.

25. You approached three inhabitants A, B, and C of the city and asked them, 'Who is of No-type among you?', and got the following replies.

A: B is of No-type.
B: C is of No-type.
C: A is of No-type.

It can be concluded that:

(A) A is a No-type.
(B) B is a No-type.
(C) C is a No-type.
(D) Either A or B is of No-type.
(E) Data inconsistent.

Answer Keys

1. C	**2.** D	**3.** A	**4.** A	**5.** D	**6.** A	**7.** D	**8.** A	**9.** D	**10.** D
11. D	**12.** A	**13.** D	**14.** B	**15.** A	**16.** B	**17.** A	**18.** D	**19.** C	**20.** D
21. A	**22.** C	**23.** C	**24.** D	**25.** C					

Chapter 9

Clocks and Calendars

CHAPTER HIGHLIGHTS

- Clocks
- Calendar
- Leap and Non-leap Year
- Counting the Number of Odd Days

Clocks

The hour hand and the minute hand of a clock move in relation to each other continuously, and at any given point of time, they make an angle between 0° and 180° with each other.

If the time shown by the clock is known, the angle between the hands can be calculated. Similarly, if the angle between two hands is known, the time shown by the clock can be found out.

When we say angle between the hands, we normally refer to the acute/obtuse angles (upto 180°) between the two hands and not the reflex angle (> 180°).

For solving the problems on clocks, the following points will be helpful.

- Minute hand covers 360° in 1 hour, i.e. in 60 minutes. Hence, MINUTE HAND COVERS 6° PER MINUTE.
- Hour hand covers 360° in 12 hours. Hence, hour hand covers 30° per hour. Hence, HOUR HAND COVERS 1/2° PER MINUTE.

The following additional points also should be remembered. In a period of 12 hours, the hands make an angle of

- 0° with each other (i.e. they coincide with each other), 11 times.
- 180° with each other (i.e., they point exactly in opposite directions), 11 times.
- 90° or any other angle with each other, 22 times.

NOTE

We can also solve the problems on clocks using the method of 'Relative Velocity'.

In 1 minute, minute hand covers 6° and hour hand covers 1/2°.

Therefore, relative velocity = 6 – 1/2 = $5\frac{1}{2}^{\circ}$ per minute. Alternately, in 1 hour, the minute hand covers 60 minute divisions, whereas the hour hand covers 5 minute divisions.

∴ Relative speed = 60 – 5 = 55 minutes per hour.

However, adopting the approach of actual angles covered is by far the simplest and does not create any confusion.

Points to Note

- Any angle other than (0° and 180°) is made 22 times in a period of 12 hours.
- In a period of 12 hours, there are 11 coincidences of the two hands, when the two hands are in a straight line facing opposite directions.
- The time gap between any two coincidences is 12/11 hours or $65\frac{5}{11}$ minutes.
- If the hands of a clock (which do not show the correct time) coincide every p minutes, then

If $p > 65\frac{5}{11}$, then the watch is going slow or losing time.

If $p < 65\frac{5}{11}$, then the watch is going fast or gaining time.

To calculate the angle 'θ' between the hands of a clock, we use the following formula (where m = minutes and h = hours)

1. $\theta = \frac{11}{2}m - 30h \left(\text{when } \frac{11}{2}m > 30h \right)$
2. $\theta = 30h - \frac{11}{2}m \left(\text{when } 30h > \frac{11}{2}m \right)$

Solved Examples

Example 1

What is the angle between the minute hand and the hour hand of a clock at 3 hours 40 minutes?

(A) 20° (B) 70° (C) 90° (D) 130°

Solution

The angle between the hands can be calculated by $\theta = \left|\frac{11}{2}m - 30h\right|$, where m is minutes and h is hours. Here, $m = 40$ and $h = 3$

$$\therefore \quad \theta = \left|\frac{11}{2} \times 40 - 30 \times 3\right| = |220 - 90| = 130°$$

The angle between the two hands is 130°.

Example 2

Find the time between 2 and 3 O'clock at which the minute hand and the hour hand make an angle of 60° with each other.

Solution

In the formula $\theta = \left|\frac{11}{2}m - 30h\right|$,

$$\theta = 60° \text{ and } h = 2$$

$$\therefore \quad 60 = \frac{11}{2}m - 30 \times 2$$

$$\frac{11}{2}m = 120$$

$$m = \frac{240}{11} = 21\frac{9}{11}\,m \text{ past } 2$$

(or) $$60 = 30 \times 2 - \frac{11}{2}m$$

$$\therefore \quad \frac{11}{2}m = 0$$

$$m = 0$$

Therefore, the angle between the hour hand and the minute hand is 60° at 2 O'clock and at $21\frac{9}{11}$ minutes past 2 O'clock.

Example 3

Find the time between 2 and 3 O'clock at which the minute hand and the hour hand overlap.

Solution

When the two hands overlap, the angle between them is 0°.

$$\theta = \left|\frac{11}{2}m - 30h\right|$$

$$\therefore \quad \theta = 0° \quad \text{and} \quad h = 2$$

$$\frac{11}{2}m = 30 \times 2$$

$$m = \frac{120}{11} = 10\frac{10}{11} \text{ min past 2.}$$

Example 4

Find the time between 2 and 3 O'clock at which the minute hand and the hour hand are perpendicular to each other.

Solution

When two hands are perpendicular, $\theta = 90°$ and $h = 2$

$$\therefore \quad \theta = \left(\frac{11}{2}m - 30h\right) \quad \text{or} \quad \left(30h - \frac{11}{2}m\right)$$

$$90 = \frac{11}{2}m - 30 \times 2; \quad \frac{11}{2}m = 150$$

$$m = \frac{300}{11} = 27\frac{3}{11} \text{ minutes past 2}$$

(or) $$90 = 30 \times 2 - \frac{11}{2}m$$

$$\Rightarrow \quad \frac{11}{2}m = -30$$

As m cannot be negative, this case is not possible.

So, the hands are perpendicular to each other only once i.e. at $27\frac{3}{11}$ minutes past 2 O'clock.

Example 5

Find the time between 2 and 3 O'clock at which the minute hand and the hour hand are on the same straight line but are pointing in opposite directions.

Solution

When two hands are pointing opposite directions and are on a straight line the angle between them would be 180°. i.e. $\theta = 180°$ and $h = 2$.

$$180° = \frac{11}{2}m - 30h; \quad \frac{11}{2}m = 180 + 60 = 240$$

$$m = \frac{480}{11} = 43\frac{7}{11}$$

So, at $43\frac{7}{11}$ minutes past 2 O'clock the hands will be at 180°.

CALENDAR

Suppose you are asked to find the day of the week on 30th June, 1974, it would be a tough job to find it if you do not know the method. The method of finding the day of the week lies in the number of 'odd days'.

NOTE

Every 7^{th} day will be the same day count wise, i.e. if today is Monday, then the 7^{th} day counting from Tuesday onwards will once again be Monday. Odd days is the days remaining after completion of an exact number of weeks. Odd days is the reminder obtained on dividing the total number of days with seven.

Example: 52 days ÷ 7 = 3 odd days.

Leap and Non-leap Year: A non-leap year has 365 days, whereas a leap year has one extra day because of 29 days in the month of February. Every year which is divisible by 4 is called a leap year. Leap year consists of 366 days (52 complete weeks + 2 days), the extra two days are the odd days. So, a leap year has two odd days.

An non-leap year consists of 365 days (52 complete weeks + 1 day). The extra one day is the odd day.

NOTE

Every century, year which is a multiple of 400, is a leap year. A century year which is not divisible by 400 is a non-leap year.

Example: 400, 800, 1200, 1600 … are leap years.
500, 700, 900, 1900 … are non-leap years.

Counting the number of Odd Days: 100 years consist of 24 leap years + 76 ordinary years. (100 years when divided by 4, we get 25. But at the 100^{th} year is not a leap year, hence only 24 leap years).

$$= 2 \times 24 \text{ odd days} + 1 \times 76 \text{ odd days} = 124 \text{ days}$$

$$= 17 \text{ weeks} + 5 \text{ days}$$

The extra 5 days are the odd days.

So, 100 years contain 5 odd days.

Similarly, for 200 years we have 10 extra days (1 week + 3 days).

∴ 200 years contains 3 odd days.

Similarly, 300 years contain 1 odd day and 400 years contain 0 odd days.

Counting of number of odd days, when only one date is given: Here, we take January 1^{st} 1 AD as the earlier date and we assume that this day is a Monday. We take its previous day, i.e. Sunday as the reference day. After this the above-mentioned method is applied to count the number of odd days and find the day of the week for the given date.

Counting number of odd days, when two dates are given: Any month which has 31 days has 3 odd days.

(∵ 31 ÷ 7 leaves 3 as remainder) and any month which has 30 days has 2 odd days (30 ÷ 7 leaves 2 as remainder).

Then, the total number of odd days are calculated by adding the odd days for each month. The value so obtained is again divided by 7 to get the final number of odd days. The day of the week of the second date is obtained by adding the odd days to the day of the week of the earlier date.

Example 6

If you were born on 14^{th} April, 1992, which was a Sunday, then on which day of the week does your birthday fall in 1993?

(A) Monday (B) Tuesday
(C) Wednesday (D) Cannot be determined

Solution

14^{th} April 1992 to 14^{th} April 1993 is a complete year, which has 365 days. Hence, the number of odd days from 14^{th} April 1992 to 14^{th} April 1993 is 1.

Hence, 14^{th} April 1993 is one day after Sunday, i.e. Monday.

Example 7

If 1^{st} Jan, 1992, is a Tuesday then on which day of the week will 1^{st} Jan, 1993, fall?

(A) Wednesday (B) Thursday
(C) Friday (D) Saturday

Solution

Since 1992 is a leap year there are 2 odd days.

Hence, 1^{st} January 1992 is two days after Tuesday, i.e., Thursday.

Example 8

If 1^{st} April, 2003 was Monday, then which day of the week will 25^{th} December of the same year be?

(A) Tuesday (B) Wednesday
(C) Thursday (D) Friday

Solution

The number of days from 1^{st} April to 25^{th} December

(29 + 31 + 30 + 31 + 31 + 30 + 31 + 30 + 25) days = 268 days

$$= \frac{268}{7} = 38 + 2 \text{ odd days.}$$

Hence, 25^{th} December is two days after Monday, i.e. Wednesday.

Example 9

Which year will have the same calendar as that of 2005?

(A) 2006 (B) 2007
(C) 2008 (D) 2011

Solution

Year: 2005 + 2006 + 2007 + 2008 + 2009 + 2010

Odd days : 1+ 1+ 1+ 2+ 1 + 1

Total number of odd days from 2005 to 2010 are 7 ≅ 0 odd days.

Hence, 2011 will have the same calendar as that of 2005.

Example 10

What day of the week was 18th April 1901?

(A) Monday (B) Tuesday
(C) Wednesday (D) Thursday

Solution

18th April 1901 ⇒ (1600 + 300) years + 1st January to 18th April 1901.

1600 years have – 0 odd days

300 years have – 1 odd day

The number of days from 1st January, 1901 to 18th April 1901 is (31 + 28 + 31 + 18) days

108 days ≅ 3 odd days

∴ Total number of odd days = 3 + 1 = 4

Hence, 18th April 1901 is Thursday.

Exercises

Direction for questions 1 to 25: Select the correct alternative from the given choices.

1. What is the angle covered by the minute hand in 22 minutes?
(A) 66° (B) 110° (C) 132° (D) 220°

2. By how many degrees will the minute hand move, in the same time, in which the hour hand moves 6°?
(A) 54° (B) 84° (C) 72° (D) 60°

3. What is the angle between the hands of the clock, when it shows 40 minutes past 6?
(A) 40° (B) 70° (C) 80° (D) 90°

4. What is the angle between the two hands of a clock when the time is 25 minutes past 7 O'clock?
(A) $62\frac{1}{2}°$ (B) $66\frac{1}{2}°$
(C) $72\frac{1}{2}°$ (D) $69\frac{1}{2}°$

5. At what time between 9 and 10 O'clock, will the two hands of the clock coincide?
(A) $43\frac{3}{11}$ minutes past 9 O'clock
(B) $45\frac{6}{11}$ minutes past 9 O'clock
(C) $49\frac{1}{11}$ minutes past 9 O'clock
(D) $49\frac{6}{11}$ minutes past 9 O'clock

6. At what time between 4 and 5 O'clock are the two hands of a clock in the opposite directions?
(A) $52\frac{3}{11}$ minutes past 4 O'clock
(B) $54\frac{6}{11}$ minutes past 4 O'clock
(C) $51\frac{7}{11}$ minutes past 4 O'clock
(D) $53\frac{9}{11}$ minutes past 4 O'clock

7. The angle between the two hands of a clock is 20° and the hour hand is in between 2 and 3. What is the time shown by the clock?
(A) $7\frac{3}{11}$ minutes past 2
(B) $14\frac{6}{11}$ minutes past 2
(C) $15\frac{5}{11}$ minutes past 2
(D) Both (A) and (B)

8. Which of the following can be the time shown by the clock, when the hour hand is in between 4 and 5 and the angle between the two hands of the clock is 60°?
(A) $16\frac{4}{11}$ min past 4 (B) $18\frac{9}{11}$ min past 4
(C) $32\frac{8}{11}$ min past 4 (D) $36\frac{5}{11}$ min past 4

9. How many times, the two hands of a clock will be at 30° with each other in a day?
(A) 36 (B) 40 (C) 44 (D) 48

10. If the time in a clock is 10 hours 40 minutes, then what time does its mirror image show?
(A) 2 hours 20 minutes
(B) 1 hour 15 minutes
(C) 1 hour 10 minutes
(D) 1 hour 20 minutes

11. There are two clocks on a wall, both set to show the correct time at 5:00 p.m. The clocks lose 2 minutes and 3 minutes respectively in an hour. When the clock which loses 2 minutes in one hour shows 9:50 p.m. on the same day, then what time does the other clock show?
(A) 9:30 p.m. (B) 9:40 p.m.
(C) 9:45 p.m. (D) 10:15 p.m.

12. A watch that gains uniformly was observed to be 1 minute slow at 8:00 a.m. on a day. At 6:00 p.m. on the same day it was 1 minute fast. At what time did the watch show the correct time?
(A) 12:00 noon (B) 1:00 p.m.
(C) 2:00 p.m. (D) 3:00 p.m.

13. A watch, which gains uniformly, was observed to be 6 minutes slow at 9:00 a.m. on a Tuesday and 3 minutes fast at 12:00 noon on the subsequent Wednesday. When did the watch show the correct time?
(A) 9:00 p.m. on Tuesday
(B) 12:00 a.m. on Wednesday
(C) 3:00 a.m. on Wednesday
(D) 6:00 a.m. on Wednesday

14. The number of odd days in a non-leap year is
(A) 0 (B) 1 (C) 2 (D) 3

15. What will be next leap year after 2096?
(A) 2100 (B) 2101 (C) 2104 (D) 2108

16. If 21st March 2000 was a Monday, what day of the week will 21st March 2003 be?
(A) Tuesday (B) Friday
(C) Thursday (D) Wednesday

17. If 5th January 2001 was a Friday then what day of the weak will 25th December 2001 be?
(A) Monday (B) Tuesday
(C) Wednesday (D) Thursday

18. If 14th February 2001 was a Wednesday, then what day of the week will 14th February 2101 be (i.e. after a century)?
(A) Friday (B) Saturday
(C) Sunday (D) Monday

19. If 8th February 1995 was a Wednesday, then what day of the week will 8th February 1994 be?
(A) Wednesday (B) Thursday
(C) Tuesday (D) Monday

20. If holidays are declared only on Sundays and in a particular year 12th March is a Sunday, is 23rd September in that year a holiday?
(A) Yes
(B) No
(C) Yes, if it is a leap year.
(D) No, if it is a leap year.

21. Which day of the week was 1601, Jan 15?
(A) Monday (B) Tuesday
(C) Wednesday (D) Thursday

22. In a year, if 23rd November is a Friday then what day of the week will 14th March in that year be?
(A) Monday
(B) Wednesday
(C) Sunday
(D) Cannot be determined

23. The calendar of which of the following years is the same as that of the year 2001?
(A) 2005 (B) 2006 (C) 2007 (D) 2008

24. Pankaj met his friend three days ago. He told his friend that he has his last exam five days later. He met his friend again, three days after the last exam. Six days after he met his friend after the last exam, they left for a vacation. The day on which they left for a vacation is a Saturday. What is today?
(A) Saturday (B) Tuesday
(C) Sunday (D) Cannot be determined

25. Five days ago Shweta lost her phone. Two days after loosing the phone she lodged a complaint with the police. Six days after lodging the complaint she bought a new phone. Four days after buying a new phone, i.e. on a Thursday she found her old phone. On which day did she loose her phone?
(A) Friday (B) Saturday
(C) Thursday (D) None of these

Previous Years' Questions

1. The Palghat Gap (or Palakkad Gap), a region about 30 km wide in the southern part of the Western Ghats in India, is lower than the hilly terrain to its north and south. The exact reasons for the formation of this gap are not clear. It results in the neighbouring regions of Tamil Nadu getting more rainfall from the South West monsoon and the neighboring regions of Kerala having higher summer temperatures. **[GATE, 2014]**
What can be inferred from this passage?
(A) The Palghat gap is caused by high rainfall and high temperatures in Southern Tamil Nadu and Kerala.
(B) The regions in Tamil Nadu and Kerala that are near the Palghat Gap are near the low–lying.
(C) The low terrain of the Palghat Gap has a significant impact on weather patterns in neighbouring parts of Tamil Nadu and Kerala.
(D) Higher summer temperatures result in higher rainfall near the Palghat Gap area.

2. Geneticists say that they are very close to confirming the genetic roots of psychiatric illnesses such as depression and Schizophrenia, and consequently, that doctors will be able to eradicate these diseases through early identification and gene therapy.
On which of the following assumptions does the statement above rely? **[GATE, 2014]**
(A) Strategies are now available for eliminating psychiatric illnesses.
(B) Certain psychiatric illnesses have a genetic basis.
(C) All human diseases can be traced back to genes and how they are expressed.
(D) In the future, genetics will become the only relevant field for identifying psychiatric illness.

3. The old city of Koenigsberg, which had a German majority population before World War 2, is now called Kaliningrad. After the events of the war, Kaliningrad is now a Russian territory and has a predominantly Russian population. It is bordered by the Baltic Sea on the north and the countries of Poland to the South and West Lithuania to the east respectively. Which of the statements below can be inferred from this passage? **[GATE, 2014]**

(A) Kaliningrad was historically Russian in its ethnic make up.
(B) Kaliningrad is part of Russia despite it not being contiguous with the rest of Russia.
(C) Koenigsberg was renamed Kaliningrad, as that was its original Russian name.
(D) Poland and Lithuania are on the route from Kalinigrad to the rest of Russia.

4. The number of people diagnosed with dengue fever (contracted from the bite of a mosquito) in north India is twice the number diagnosed last year. Municipal authorities have concluded that measures to control the mosquito population have failed in this region.
Which one of the following statements, if true, does not contradict this conclusion? **[GATE, 2014]**

(A) A high proportion of the affected population has returned from neighbouring countries where dengue is prevalent.
(B) More cases of dengue are now reported because of an increase in the Municipal Office's administrative efficiency.
(C) Many more cases of dengue are being diagnosed this year since the introduction of a new and effective diagnostic test
(D) The number of people with malarial fever (also contracted from mosquito bites) has increased this year.

5. At what time between 6 am and 7 am, will the minute hand and hour hand of a clock make an angle closest to 60°? **[GATE, 2014]**

(A) 6:22 am (B) 6:27 am
(C) 6:38 am (D) 6:45 am

6. Which number does not belong in the series below?
2, 5, 10, 17, 26, 37, 50, 64 **[GATE, 2014]**

(A) 17 (B) 37
(C) 64 (D) 26

7. A dance programme is scheduled for 10:00 am. Some students are participating in the programme and they need to come an hour earlier than the start of the event. These students should be accompanied by a parent. Other students and parents should come in time for the programme. The instruction you think that is appropriate for this is **[GATE, 2014]**

(A) Students should come at 9:00 am and parents should come at 10:00 am.
(B) Participating students should come at 9:00 am accompanied by a parent, and other parents and students should come by 10:00 am.
(C) Students who are not participating should come by 10:00 am and they should not bring their parents. Participating students should come at 9:00 am.
(D) Participating students should come before 9:00 am. Parents who accompany them should come at 9:00 am. All others should come at 10:00 am.

8. By the beginning of the 20th century, several hypotheses were being proposed, suggesting a paradigm shift in our understanding, of the universe. However, the clinching evidence was provided by experimental measurements of the position of a star which was directly behind our sun.
Which of the following inference(s) may be drawn from the above passage?

I. Our understanding of the universe changes based on the positions of stars.
II. Paradigm shifts usually occur at the beginning of centuries.
III. Stars are important objects in the universe.
IV. Experimental evidence was important in confirming this paradigm shift. **[GATE, 2014]**

(A) I, II and IV (B) III only
(C) I and IV (D) IV only

9. After several defeats in wars, Robert Bruce went in exile and wanted to commit suicide. Just before committing suicide, he came across a spider attempting tirelessly to have its net. Time and again, the spider failed but that did not deter it to refrain from making attempts. Such attempts by the spider made Bruce curious. Thus, Bruce started observing the near-impossible goal of the spider to have the net. Ultimately, the spider succeeded in having its net despite several failures. Such act of the spider encouraged Bruce not to commit suicide. And then, Bruce went back again and won many a battle, and the rest is history.
Which one of the following assertions is best supported by the above information? **[GATE, 2013]**

(A) Failure is the pillar of success.
(B) Honesty is the best policy.
(C) Life begins and ends with adventures.
(D) No adversity justifies giving up hope.

10. Given the sequence of terms AD, CG, FK, JP, ? the next term is **[GATE, 2012]**

(A) OV (B) OW
(C) PV (D) PW

11. Few school curricula include a unit on how to deal with bereavement and grief, and yet all students at some point in their lives suffer from losses through death and parting.
Based on the above passage which topic would not be included in a unit on bereavement? **[GATE, 2012]**
(A) How to write a letter of condolence
(B) What emotional stages are passed through in the healing process
(C) What the leading causes of death are
(D) How to give support to a grieving friend.

12. 25 persons are in a room. 15 of them play hockey, 17 of them play football and 10 of them play both hockey and football. The number of persons playing neither hockey nor football is ______. **[GATE, 2010]**
(A) 2 (B) 17
(C) 13 (D) 3

13. The question below consists of a pair of related words followed by four pairs of words. Select the pair that best expresses the relation in the original pair.
Unemployed : Worker **[GATE, 2010]**
(A) Fallow : Land
(B) Unaware : Sleeper
(C) Wit : Jester
(D) Renovated : House

14. Hari (H), Gita (G), Irfan (I) and Saira (S) are siblings (i.e., brothers and sisters). All were born on 1st January, in different years. The age difference between any two successive siblings (that is born one after another) is less than 3 years. Given the following facts:
I. Hari's age + Gita's age > Irfan's age + Saira's age
II. The age difference between Gita and Saira is 1 year. However Gita is not the oldest and Saira is not the youngest.
III. There are no twins.
Which of the following in a possible order in which they were born? **[GATE, 2010]**
(A) HSIG
(B) SGHI
(C) IGSH
(D) IHSG

Test

Logical Ability

Time: 25 Minutes

Direction for questions 1 to 7: Complete the following series.

1. 11, 26, 51, 76, ____
   (A) 101 (B) 115
   (C) 125 (D) 133
2. 23, 57, 1113, 1719, ____
   (A) 2329 (B) 2931
   (C) 3137 (D) 3743
3. VIQ, TAC, WJR, VCE, XKS, XEG, _____
   (A) YGL (B) ZFH
   (C) YLT (D) YNR
4. 25 : 343 : : 49 : _____
   (A) 121 (B) 343
   (C) 512 (D) 1331
5. BIDM : DLPR : : HSBC : _____
   (A) PVEH (B) PXDH
   (C) PVHH (D) RVHD
6. 2Y5 : 4W9 : : 3J6 : _____
   (A) 4W9 (B) 6L4
   (C) 8C1 (D) 6N4
7. Aeroplane : Pilot : : Ship : _____
   (A) Driver (B) Chef
   (C) Captain (D) Marshal

Direction for questions 8 to 11: Find the odd man out.

8. (A) 38 – 121 (B) 48 – 144
   (C) 68 – 196 (D) 98 – 361
9. (A) BDGC (B) DHKR
   (C) FLOH (D) EJMZ
10. (A) 6V12 (B) 2H4
    (C) 9F18 (D) 3R6
11. (A) Mercury (B) Mars
    (C) Moon (D) Venus

Direction for questions 12 to 14: Choose the correct alternative from the given choices.

12. In a certain code language the word PRIVATE is coded as AEIPRTV then how is the word PRESENT coded in that language?
    (A) EEPNRST (B) EENPRST
    (C) EPSNERT (D) EENRPST
13. In a certain code, if the word CHLORATE is written as DFOKWUAW then how is the word PHOSPHATE written in that code?
    (A) QFRUOBHLN (B) QFROBUHLN
    (C) QFHROUBLN (D) QFROUBHLN
14. In a certain code, if the word PRESSURE is written as KIVHHFIV then how is the word SOLUTION written in that code?
    (A) HLOUTRLM (B) HLPGFRLM
    (C) HLOFGRLM (D) HLOGTROM

Direction for questions 15 and 16: These questions are based on the following information.

Six persons—P through U—are standing in a queue in the increasing order of their heights so that the shortest is at the front of the queue and the tallest is at the back. Furthermore,

(i) U is the shortest.
(ii) Exactly two persons are taller than T.
(iii) P is taller than S and exactly two persons stand between P and S.
(iv) Q is taller than P.

15. Who is the second tallest person?
    (A) T (B) R
    (C) S (D) P
16. Who is/are the persons in between P and R?
    (A) Only T (B) Q and S
    (C) T and U (D) Only S

Direction for questions 17 to 19: These questions are based on the following data.

Eight persons A, B, C, D, E, F, G, and H attended a conference and are sitting around a circular table. Among them, there are CEOs of 4 companies who came along with one assistant each. Each CEO has his assistant sitting to his right.

(i) Assistants of C and A are sitting opposite each other.
(ii) E, who is the assistant of B, is sitting opposite F.
(iii) E was not sitting adjacent to A.
(iv) G is neither adjacent nor opposite to D.

17. Who is to the left of A?
    (A) D (B) G
    (C) F (D) H
18. Who is the assistant of C?
    (A) D (B) G
    (C) E (D) H
19. If H is opposite to G, then D is to the right of ____.
    (A) A (B) B
    (C) F (D) H

Direction for questions 20 to 24: These questions are based on the following data.

In a class, 50 students failed in Maths.

40 students failed in Physics.

30 students failed in Chemistry.

10 students failed in Physics and Chemistry.

10 students failed in Maths and Physics.

No student failed in both Maths and Chemistry.

None of the students failed in all the three subjects.

20. How many students failed atleast in one subject?
(A) 50 (B) 100
(C) 75 (D) 125

21. What is the ratio of the number of students who failed in Maths and Physics to that who failed in Physics and Chemistry?
(A) 1 : 2 (B) 2 : 1
(C) 1 : 1 (D) 4 : 3

22. How many students failed in exactly two subjects?
(A) 10 (B) 20
(C) 30 (D) 40

23. The number of students who failed in only Maths, in only Physics and in only Chemistry respectively is
(A) 40, 20, 20 (B) 20, 40, 20
(C) 20, 20, 40 (D) 50, 40, 30

24. Which of the following statements is true?
(A) The number of students who failed in only Maths equals to that of the students who failed in only Physics.
(B) The number of students who failed in only Maths equals to that of the students who failed in only Physics or in only Chemistry.
(C) The number of students who failed in all the three subjects is 10.
(D) None of these.

Direction for question 25 to 30: Select the correct alternative from the given choices.

25. In the following addition each latter represents a different digit from of O to 9. which of the following is a possible number represented by FAN ?

	H	A	N
F	A	F	N
5	5	8	8

(A) 434 (B) 534
(C) 345 (D) 135

26. At what time between 10 O' clock and 11 O' clock are the hands of the clock together?
(A) $54^6/_{11}$ past 10 (B) $27^8/_{11}$ past 10
(C) Both A and B (D) None of these

27. How many times the hands of a clock are at right angles in a day?
(A) 24 (B) 22
(C) 44 (D) 48

28. On a particular day if it is found that a clock is showing 10 minutes less at 1:00 pm and 5 minutes more at 6:00 pm on the same day. At what time did the clock show the correct time?
(A) 3 hr 20 min (B) 4 hr 20 min
(C) 5 hr 40 min (D) 6 hr 40 min

29. If 21st March 2000 was a Monday, which day of the week will be 21st March 2003?
(A) Tuesday (B) Friday
(C) Thursday (D) Wednesday

30. The movie of my favorite hero is going to be released on Wednesday. To watch the movie on the first day of release, I booked my ticket the day before yesterday. If I watch the movie on the fourth day from today, on which day of the week did I book my ticket?
(A) Wednesday (B) Thursday
(C) Friday (D) Saturday

Answer Keys

1. B	**2.** A	**3.** C	**4.** D	**5.** C	**6.** B	**7.** C	**8.** D	**9.** A	**10.** A
11. C	**12.** B	**13.** D	**14.** C	**15.** D	**16.** A	**17.** C	**18.** D	**19.** D	**20.** B
21. C	**22.** B	**23.** A	**24.** B	**25.** B	**26.** A	**27.** C	**28.** B	**29.** C	**30.** B

Logical Ability Test I

Number of Questions: 35 **Time: 35 min**

Directions for questions 1 to 5: Complete the following series.

1. 4, 27, 25, 343, 121, ______ .
(1) 169 (B) 2197
(C) 3197 (D) 2457

2. 11, 25, 77, 157, 473, ______.
(A) 978 (B) 1421
(C) 949 (D) 1431

3. 12, 30, 56, 132, 182, ______.
(A) 240 (B) 300
(C) 316 (D) 306

4. 53, 61, 71, 79, 89, ______.
(A) 91 (B) 93
(C) 101 (D) 95

5. 19, 58, 175, 526, ______.
(A) 1578 (B) 1238
(C) 1458 (D) 1579

Directions for questions 6 to 10: Find the missing term.

6. 24 : 576 : : 32 : ______ .
(A) 961 (B) 1000
(C) 1225 (D) 1024

7. 4 : 27 : : 25 : ______.
(A) 64 (B) 216
(C) 125 (D) 36

8. BILK : DLPP : HMTO : ______.
(A) JOWQ (B) JRWS
(C) JPVS (D) JPXT

9. Cricket : Game : : Kangaroo : ______.
(A) Animal (B) Team
(C) Bird (D) Fish

10. Driver : Bus : : ______ : Horse
(A) Saddle (B) Jockey
(C) Horseman (D) Cowboy

Directions for questions 11 to 15: Find the odd man out.

11. (A) 11 (B) 21
(C) 31 (D) 41

12. (A) 3527 (B) 2357
(C) 5723 (D) 7532

13. (A) Brown (B) Green
(C) Yellow (D) Red

14. (A) June (B) May
(C) November (D) September

15. (A) Radish (B) Carrot
(C) Potato (D) Cabbage

Directions for questions 16 to 20: Select the correct alternative from the given choices.

16. If ‘CENTURY’ is coded as ‘AGLVSTW’, then what is the code for ‘SACHIN’?
(A) QCAFKL (B) UCEFGL
(C) QCAJGP (D) UCAJGP

17. If the code for ‘AMBITION’ is ‘GSHOZOUT’, then which of the following is coded as ‘VXOTZUAZ’?
(A) PRINTOUT (B) PRINTING
(C) PREDATOR (D) PROFOUND

18. If ‘PRESIDENT’ is coded as ‘KIVHRWVMG’, then ‘MAHENDAR’ is coded as ______.
(A) NZTVMWZI (B) NZTUMWZI
(C) NZSVMWZI (D) NZSUMWZI

19. In a code language, if pen is called pencil, pencil is called eraser, eraser is called paper, paper is called book, book is called table, table is called chair and chair is called desk, then on which of the following do we sit? (according to that language)
(A) Table (B) Paper
(C) Desk (D) Book

20. In a code language, if shirt means shoe, shoe means wallet, wallet means spectacle, spectacle means fan, fan means cabin and cabin means card, then which of the following do we use when we want some air? (according to that language)
(A) Wallets (B) Spectacles
(C) Fans (D) Cabins

Directions for questions 21 to 25: In a certain code language, the codes for sentences given in column I are given in column II. Each word has a unique code. Answer the questions based on these codes.

Column I	**Column II**
earth gets heat from sun	pep tep nep mep wep
moon gets light from sun	hep kep tep pep nep
sun gave energy to plants	bep pep dep zep lep
human gets food from plants	qep tep nep dep rep
heat and light gave life	hep fep sep wep bep
life needs food, food needs light	fep qep gep qep gep hep

21. What is the code for the word ‘food’?
(A) gep (B) fep
(C) qep (D) pep

22. What is the code for the word ‘sun’?
(A) pep (B) nep
(C) mep (D) wep

23. Which word is coded as ‘lep’?
(A) gave (B) energy
(C) to (D) Cannot be determined

24. what is the code for 'earth sun and moon'?
(A) mep kep sep pep (B) mep tep nep sep
(C) kep qep sep mep (D) sep pep rep tep

25. What can be the meaning of 'fep gep zep sep hep'?
(A) life needs energy and light
(B) sun gave light and energy
(C) human needs sun and moon
(D) plants need sun and moon

Directions for questions 26 to 30: These questions are based on the following data.

A, *B*, *C*, *D*, *E*, *F* and *G* are the seven members in a family. Among them, there are two couples and each couple has exactly two children. *B*, who is married, has no siblings and he is not married to *E*, a female, who is also married. *D* is the father of *G*. *F*, the youngest in the family, has a paternal uncle. *A* is unmarried while *F* and *C* are of the same gender. *A* and *G* are of different gender.

26. How is *F* related to *A*?
(A) Daughter (B) Niece
(C) Nephew (D) Son

27. How is *C* related to *E*?
(A) Mother (B) Daughter
(C) Daughter-in-law (D) Mother-in-law

28. How is *A* related to *E*?
(A) Brother-in-law (B) Husband
(C) Brother (D) Father-in-law

29. Which among the following is the complete group of females in the family?
(A) *E*, *F* and *G* (B) *A*, *C*, *E* and *F*
(C) *C*, *E*, *B* and *F* (D) *C*, *E*, *F* and *G*

30. How is *C* related to *G*?
(A) Mother (B) Father
(C) Uncle (D) Grandmother

Directions for questions 31 to 35: These questions are based on the following data.

Five artists - a violinist, a pianist, a singer, a dancer and an actress-have to present their work one after the other, not necessarily in that order. The five artists are Anu, Gowri, Radhika, Sudha and Mythili. Also
(i) Mythili presents her work after the singer - not necessarily immediately.
(ii) the dancer presents her work immediately after Radhika.
(iii) Gowri, the violinist, plays second.
(iv) Radhika's item is not immediately next to Gowri's.
(v) Anu is not an actress.
(vi) Radhika is the singer.

31. Who is the dancer?
(A) Mythili (B) Sudha
(C) Anu (D) Radhika

32. If the actress plays first, who plays third?
(A) Anu (B) Mythili
(C) The dancer (D) Radhika

33. Who is the actress?
(A) Anu (B) Sudha
(C) Mythili (D) Radhika

34. The order in which the artists present their programmes is
(A) pianist, violinist, actress, singer, dancer.
(B) actress, violinist, pianist, dancer, singer.
(C) actress, violinist, dancer, pianist, singer.
(D) Cannot be determined.

35. If the actress plays third, when does Sudha play?
(A) Immediately after Radhika.
(B) Immediately before the singer.
(C) After the dancer.
(D) After Gowri but not immediately.

Directions for questions 36 to 39: These questions are based on the following data.

A man goes to work in his car on all days except Sundays. There are 4 different parking spaces near his office. Out of these, the cellar and the ground floor are the closest to his office while the garage and the parking lot are the farthest. Whenever he comes to office, he parks his car in one of the four parking spaces. It is known that
(i) the parking lot is open on all days of the week but he can afford it for only 2 days a week.
(ii) the Garage is open on Mondays, Tuesdays and Thursdays but he can use it only once a week.
(iii) he can use the cellar for 2 days of the week but he cannot use it on Tuesdays, Thursdays and Saturdays.
(iv) he can use the ground floor for one day of the week, but not on Mondays, Wednesdays, and Fridays.
(v) as he is always late on Mondays, he likes to park his car close to his office.

36. If he parks his car on the ground floor on Tuesday and in the parking lot on Wednesday, then where should he park it on Friday?
(A) Cellar (B) Parking lot
(C) Ground floor (D) Garage

37. If he uses the garage on Tuesday and the parking lot on Thursday, where does he park his car on Wednesday?
(A) Cellar (B) Parking lot
(C) Ground floor (D) Either (A) or (B)

38. If he uses the garage on Tuesday and parking lot on Saturday, then which is the place he uses on Thursday?
(A) Ground floor or Parking lot
(B) Cellar
(C) Ground floor
(D) Parking lot

39. If he uses the parking lot on Tuesday, then what must he use on Thursday?
(A) Parking lot
(B) Garage or Ground floor
(C) Ground floor
(D) Garage

Directions for questions 40 to 42: These questions are based on the following information.

Eight persons – Anand, Brijesh, Chandak, Dweepesh, Sayan, Jagat Rupak and Palak – are sitting around a square table such that two persons are sitting along each side. The following information is known about them.

(i) Jagat, who is sitting to the immediate right of Rupak, is sitting opposite Chandak who is sitting to the immediate right of Brijesh.

(ii) Sayan is sitting opposite Dweepesh, who sits along the same side as Brijesh.

(iii) Palak is not sitting along the same side as Sayan.

40. Who is sitting along the same side as Chandak?
(A) Anand (B) Palak
(C) Sayan (D) Rupak

41. Who is sitting opposite Rupak?
(A) Palak (B) Anand
(C) Brijesh (D) Data inadequate

42. Who is sitting to the immediate right of Sayan?
(A) Anand (B) Rupak
(C) Chandak (D) Data inadequate

Directions for questions 43 to 45: These questions are based on the following information.

Three people are to be selected from a group of six people – M, N, P, Q, R and S under the following constraints.

(i) If M is not selected, then N is selected.

(ii) If P is not selected, then Q is selected.

(iii) If R is not selected, then S is selected.

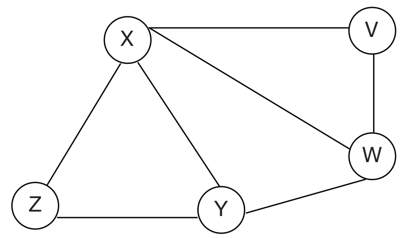
43. In how many ways can the team be selected?
(A) 2 (B) 4
(C) 8 (D) None of these

44. Who must be there in the team?
(A) N (B) Q
(C) S (D) None of these

45. Which of the following is a possible team?
(A) P, R, S
(B) P, Q, S
(C) M, Q, S
(D) More than one of the above

Directions for questions 46 and 47: Answer the questions on the basis of the following information.

Shown below is the layout of the major cities of a state and the rail tracks, connecting those cities.



Five trains – T_1, T_2, T_3, T_4 and T_5 run only on two days (Saturday and Sunday), along the following routes, between these cities.

$T_1 : Y – X – V$
$T_2 : Z – Y – X – V$
$T_3 : Z – Y – W – V$
$T_4 : Z – X – W – V$
$T_5 : Z – X – W$

Route $Y – W$ cannot be used on Sunday. On any day, no two trains are scheduled to run on the same track connecting two adjacent cities.

Each train should run exactly once in these two days.

46. T_4 can run
(A) only on Saturday
(B) only on Sunday
(C) on either day
(D) only if $W – Y$ route is used on Sunday.

47. Which of the following is NOT true?
(A) T_2 and T_4 can be scheduled to run on the same day.
(B) T_5 cannot be scheduled to run on Sunday.
(C) T_3 can be scheduled to run on Saturday.
(D) T_4 and T_1 can be scheduled to run on the same day.

Directions for questions 48 to 50: These questions are based on the data given below.

Six persons – A, B, C, D, E and F – stand in a row. A is to the left of B. C is to the right of D. E and F have two persons standing between them and neither of these two persons is C or A.

48. What is the total number of possible arrangements?
(A) 2 (B) 4
(C) 6 (D) 5

49. Who among the following stand at the extreme ends of the row?
(A) E and F (B) E and C
(C) A and C (D) F and A

50. If A sits to the immediate left of E, then who sits to the immediate right of B?
(A) D
(B) F
(C) C
(D) Cannot be determined

ANSWER KEYS

1. B	**2.** C	**3.** D	**4.** C	**5.** D	**6.** D	**7.** B	**8.** D	**9.** A	**10.** B
11. B	**12.** D	**13.** A	**14.** B	**15.** D	**16.** C	**17.** A	**18.** C	**19.** C	**20.** B
21. C	**22.** A	**23.** D	**24.** A	**25.** A	**26.** B	**27.** D	**28.** A	**29.** D	**30.** D
31. A	**32.** A	**33.** B	**34.** D	**35.** B	**36.** A	**37.** D	**38.** C	**39.** D	**40.** B
41. A	**42.** B	**43.** C	**44.** D	**45.** C	**46.** B	**47.** D	**48.** B	**49.** C	**50.** D

HINTS AND EXPLANATIONS

1. The given series can be expressed as follows.
$2^2, 3^3, 5^2, 7^3, 11^2$ where 2, 3, 5, 7, 11 are prime numbers.
The next in the series is $13^3 = 2197$ Choice (B)

2. The given series can be expressed as follows.
$(11 \times 2) + 3 = 25$; $(25\ 3) + 2 = 77$; $(77 \times 2) + 3 = 157$
$(157 \times 3) + 2, = 473$; $(473\ 2) + 3 = 949$ Choice (C)

3. The given series can be expressed as follows.
$3^2 + 3, 5^2 + 5, 7^2 + 7, 11^2 + 11, 13^2 + 13$ with 3, 5, 7, 11, 13 being prime numbers. The next number in the series is $17^2 + 17 = 289 + 17 = 306$ Choice (D)

4. The given series is the series of alternate prime numbers. The next in the series is 101. Choice (C)

5. The given series can be expressed as
$6 \times 3 + 1 = 19$; $19 \times 3 + 1 = 58$; $58 \times 3 + 1 = 175$
$175 \times 3 + 1 = 526$; $526 \times 3 + 1 = 1579$ Choice (D)

6. $24 : (24)^2 : : 32 : \underline{(32)^2}$
Square of the first number is the second number.
$(32)^2 = 1024$. Choice (D)

7. 4 : 27 : : 25 : ______
$(2)^2 : (3)^3 : : (5)^2 : \underline{(6)^3}$
This is of the form $(n)^2 : (n + 1)^3$.
$(6)^3 = 216$ is the next number. Choice (B)

8. BILK : DLPP : : HMTO : ______

B	I	*L*	*K*	
+2	+3	+4	+5	
D	*L*	*P*	*P*	
Similarly, H		*M*	*T*	*O*
+2	+3	+4	+5	
J	*P*	*X*	*T*	

Hence, JPXT is the next term. Choice (D)

9. Cricket is a type of game.
Similarly, kangaroo is type of animal. Choice (A)

10. Bus is driven by a driver.
Similarly, jockey rides a horse. Choice (B)

11. All the given numbers except 21 are prime numbers where as 21 is a composite number. Choice (B)

12. All the given numbers except 7532 are odd numbers whereas 7532 is an even number. Choice (D)

13. All the given colours except brown are the colours in (rainbow) VIBGYOR. Choice (A)

14. All the given months except May have 30 days where as in May there are 31 days. Choice (B)

15. All except Cabbage, grow under the soil. Choice (D)

16.

Word:	C	E	N	T	U	R	Y
	↑	↑	↑	↑	↑	↑	↑
Logic:	–2	+2	–2	+2	–2	+2	–2
	↓	↓	↓	↓	↓	↓	↓
Code:	A	G	L	V	S	T	W

Similarly,

Word:	S	A	C	H	I	N
	↑	↑	↑	↑	↑	↑
Logic:	–2	+2	–2	+2	–2	+2
	↓	↓	↓	↓	↓	↓
Code:	Q	C	A	J	G	P

∴ QCAJGP is the code for ‘SACHIN’. Choice (C)

17.

Word:	A	M	B	I	T	I	O	N
	↑	↑	↑	↑	↑	↑	↑	↑
Logic:	+6	+6	+6	+6	+6	+6	+6	+6
	↓	↓	↓	↓	↓	↓	↓	↓
Code:	G	S	H	O	Z	O	U	T

Similarly,

Code:	V	X	O	T	Z	U	A	Z
	↑	↑	↑	↑	↑	↑	↑	↑
Logic:	–6	–6	–6	–6	–6	–6	–6	–6
	↓	↓	↓	↓	↓	↓	↓	↓
Word:	P	R	I	N	T	O	U	T

‘PRINTOUT’ is coded as ‘VXOTZUAZ’ Choice (A)

18. The code for the letter whose place value is ‘n’ is the letter whose place value is $(27 - n)$.
∴ MAHENDAR is coded as NZSVMWZI.
Choice (C)

19. We sit on a chair and chair is called desk. Choice (C)

20. We use fans when we want air and spectacles means fan. Choice (B)

Solutions for questions 21 to 25:

The given statements and their codes are as follows.
(1) earth gets heat from sun – pep tep nep mep wep
(2) moon gets light from sun – hep kep tep pep nep
(3) sun gave energy to plants – bep pep dep zep lep

(4) human gets food from plants – qep tep nep dep rep
(5) heat and light gave life – hep fep sep wep bep
(6) life needs food, food needs light – fep qep gep qep gep hep

From (6), the words ‘food’ and ‘needs’ are repeated and the codes ‘qep’ and ‘gep’ are repeated. And now from (4) and (6) as only the word food is repeated the code for ‘food’ is ‘qep’ and hence the code for ‘needs’ is ‘gep’.

From (2) and (6) the word ‘light’ and the code ‘hep’ are common.

Hence, the code for ‘light’ is ‘hep’. The code for the remaining word in (6), i.e., ‘life’ is ‘fep’.

The words ‘gets’ and ‘from’ are common for (1), (2) and (4).

Similarly the codes ’tep’ and ‘nep’ are common. But the codes for ‘gets’ and ‘from’ cannot be individually obtained. Except the word ‘and’ and the code ‘sep’ in (5), all other words and codes are used in at least one of the other sentences. Hence, the code for ‘and’ is ‘sep’.

By using comparison and elimination procedures we can find the codes for other words.

Word	earth	sun	heat	gets/ from	moon	light	gave	energy/ to	plants	human	and	life	needs	food
Code	mep	pep	wep	nep/tep	kep	hep	bep	zep/lep	dep	rep	sep	fep	gep	qep

21. The code for ‘food’ is ‘qep’. Choice (C)

22. The code for ‘sun’ is ‘pep’. Choice (A)

23. Either ‘energy’ or ‘to’ is coded as ‘lep’. Choice (D)

24. The code for ‘earth sun and moon’ is ‘mep kep sep pep’. Choice (A)

25. The meaning of ‘fep gep zep sep hep’ can be ‘life needs energy and light’ . Choice (A)

Solutions for questions 26 to 30:

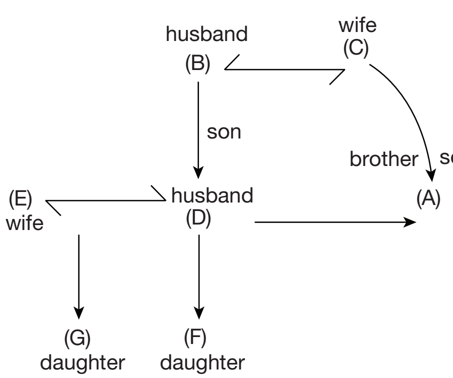
It is given that there are seven members in the family. *A*, *B*, *C*, *D*, *E*, *F* and *G*.

There are two couples in the family and each couple has exactly two children.

F, the youngest in the family has a paternal uncle which implies that *F*’s father has a brother. *B*, who is a male has no siblings and he is married. Hence, *B* will come in the first generation and he has two children and a spouse.

E is married and is a female. Hence, *E* is the mother of *F* and she is married to *D*. *G* is the child of *D* and *A* is the brother of *D*. Hence, *C* is the wife of *B*.

F and *C* are of same gender. Hence, *F* is female. *A* and *G* are of different gender. Since *A* is male, *G* is female. The given information can be represented in the diagram as follows:



26. *F* is *A*’s brother’s daughter. Hence, *F* is the niece of *A*. Choice (B)

27. *C* is *E*’s husband’s mother. Hence, *C* is the mother-in-law of *E*. Choice (D)

28. *A* is *E*’s husband’s brother. Hence, *A* is the brother-in-law of *E*. Choice (A)

29. *C*, *E*, *F* and *G* are the females. Choice (D)

30. *C* is the grandmother of *G*. Choice (D)

Solutions for questions 31 to 35:

From the given information, we have

Gowri, the violinist, plays second. Radhika is a singer who does not come immediately after Gowri, Radhika cannot be 3rd since the dancer presents her work immediately after Radhika. Radhika cannot be 1st or 5th so, Mythili comes in the 5th place. Radhika has to be 4th and dancer 5th.

So, Anu is a Pianist and Sudha is an actress and they come in the first and the third places – not necessarily in that order. Thus we have

Order	Artist	Profession
1		
2	Gowri	Violinist
3		
4	Radhika	Singer
5	Mythili	Dancer

31. Mythili is the dancer. Choice (A)

32. If actress plays first, then Anu plays third. Choice (A)

33. Sudha is the actress. Choice (B)

34. It is not clear whether the actress or the pianist plays first. Hence, cannot be determined. Choice (D)

35. If the actress (Sudha) plays third, then Sudha plays immediately before the singer.(Radhika) Choice (B)

Solutions for questions 36 to 39:

Let us tabulate the days of the week when different slots are available.

	Cellar	Ground Floor	Garage	Parking lot
Monday		X	✓	
Tuesday	X		✓	
Wednesday		X		
Thursday	X		✓	
Friday		X		
Saturday	X			
Can use for	2 days of the week	Only one day	Only one day	2 days of the week

In addition, on Mondays he should park the car closest to his office, i.e., cellar or ground floor. But since ground floor cannot be used on Mondays, only the cellar can be used on Mondays. Hence, garage cannot be used on Mondays. Now, we can answer the questions.

36. If ground floor is used on Tuesday & parking lot on Wednesday; then we have

	Cellar	Ground Floor	Garage	Parking lot
Monday	✓	X	X	X
Tuesday	X	✓	X	
Wednesday	X	X	X	✓
Thursday	X	X	✓	
Friday		X	X	
Saturday	X	X	X	
Total	2	1	1	2

As can be seen, he has to park his car in the cellar on Friday. Otherwise he won't be able to use the cellar 2 times a week. Choice (A)

37. On Wednesday, he can park his car in the cellar or in the parking lot. Choice (D)

	Mon	Tue	Wed	Thur	Fri	Sat
Cellar	✓	X		X		X
Ground Floor	X	X	X	X	X	✓
Garage	X	✓	X	X	X	X
Parking Lot	X	X		✓		

38

	Mon	Tue	Wed	Thur	Fri	Sat	Total
Cellar	✓	X		X		X	2
Ground Floor	X	X	X	✓	X	X	1
Garage	X	✓	X	X	X	X	1
Parking Lot	X	X				✓	2

As can be seen, on Thursday only ground floor can be used (because, if he uses the parking lot on Thursday, then no day is available for the ground floor).

Choice (C)

39.

	Mon	Tue	Wed	Thur	Fri	Sat
Cellar	✓	X				
Ground Floor	X	X	X		X	
Garage	X	X	X		X	X
Parking Lot	X	✓				

Now, garage has only Thursday and no other day left. Hence, garage should be used on Thursday.

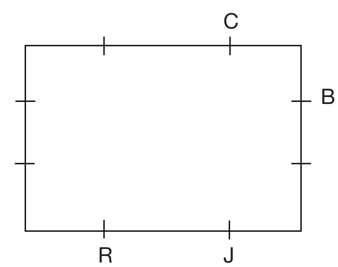
Choice (D)

Solutions for questions 40 to 42:

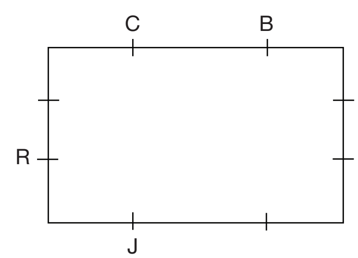
Let us represent the persons by the first letters of each name.

From (i), we get the following possibilities

Case (*a*),

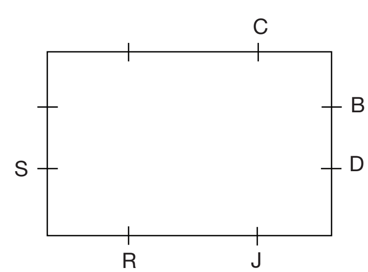


Case (*b*)

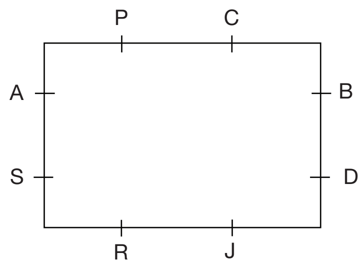


From (ii) as Brijesh and Dweepesh are sitting along the same side, case (*b*) is not possible.

From (ii) we get



From (iii) the possibility is as follows.



40. Palak is sitting along the same side as Chandak. Choice (B)

41. Palak is sitting opposite Rupak. Choice (A)

42. Rupak is sitting to the immediate right of Sayan. Choice (B)

Solutions for questions 43 to 45:

From (i), M and N can be selected as follows.
→ Only M is selected.
→ Only N is selected.
→ Both M and N are selected.
This implies, at least one between M and N must be selected.
Similarly, from (ii) and (iii)
At least one among P and Q must be selected.
At least one among R and S must be selected.
As only 3 persons are to be selected, both M and N, both P and Q and both R and S cannot be selected.
∴ Exactly one among M and N, exactly one among P and Q and exactly one among R and S must be selected.
⇒ $M / N, P / Q, R / S$

43. The number of possible ways to select the team.
$= 2 \times 2 \times 2 = 8$ Choice (C)

44. There is no such person who must always be there in the team. Choice (D)

45. M, Q, S is a possible team. Choice (C)

Solutions for questions 46 and 47:

Given that the route $Y – W$ cannot be used on Sunday. Hence T_3 can be scheduled to run on Saturday. As it is given that, on any day, no two trains are scheduled to run on the same track connecting two adjacent cities, $Z – Y$ and $W – V$ should not run on Saturday ($\because T_3$ is covering the route).
As T_2 is covering $Y – X – V$ on Sunday, T_1 has to be scheduled on Saturday. Similarly, T_5 is to scheduled on Saturday.
Finally, T_1, T_5, T_3 are to be scheduled on Saturdays and T_2 and T_4 are to be scheduled on Sundays.

46. T_4 should on run Sunday. Choice (B)

47. From the choices,
T_4 and T_1 can be scheduled on two different days. Choice (D)

Solutions for question 48 to 50:

The data is as given below:
(i) Six persons – A, B, C, D, E and F stand in a row.
Left of
(ii) A B
Right
(iii) D C
(iv) $\frac{E}{F}$ —— $\frac{F}{E}$

x C/A (neither C nor A)
Let us make all the possible arrangements as per the above data.

–	E/F	–	–	F/E	–
1	2	3	4	5	6

Positions 2 and 5 would be occupied by E or F. A cannot be at 3 and 4 (condition (iv)) and also A cannot be at 6 (condition (ii)). Hence, A must be at position 1. Similarly, C must be at position 6. Hence, we will get the following arrangement:

$\underline{A}$ $\underline{E/F}$ $\underline{B/D}$ $\underline{D/B}$ $\underline{F/E}$ $\underline{C}$

Therefore, the total number of arrangements are 4.

48. Total possible arrangements are four. Choice (B)

49. A and C stand at extreme ends. Choice (C)

50. The arrangement will be as shown below:
$\underline{A}$ $\underline{E}$ $\underline{B/D}$ $\underline{D/B}$ $\underline{F}$ $\underline{C}$
Hence, the person sitting to the immediate right of B cannot be determined. Choice (D)

Logical Ability Test 2

Number of Questions: 35 **Time: 35 min**

Directions for questions 1 to 4: These questions are based on the following data.

Out of a group of 315 students who went to Mumbai, 125 visited Essel World, 140 visited Lumbini Garden and 160 visited Film Nagar. Twenty Five of them visited all the three places while 200 visited exactly one of the three places. The number of students, who visited exactly 2 out of the three places, is five times as many as those who have not visited any of the places.

1. How many did not visit any of the three places?
(A) 75 (B) 25
(C) 125 (D) 15

2. How many students visited not more than one place?
(A) 200 (B) 180
(C) 250 (D) 215

3. If the number of students who visited at least one of the two places, Lumbini Gardens and Film Nagar is 255, then how many students visited only Essel World?
(A) 45 (B) 25
(C) 125 (D) 75

4. If the number of students who visited at least one of the two places, Lumbini Gardens and Film Nagar is 255, then how many students visited only one of the two places, Lumbini Gardens and Film Nagar (and not any of the other two places)?
(A) 215 (B) 125
(C) 155 (D) 175

Directions for questions 5 to 9: These questions are based on the following data.

In a colony, a survey was conducted regarding the ownership of three different types of vehicles – car, scooter and bicycle.

-- The number of residents owning all three vehicles is the same as those owning none.
-- The number of residents owning any two out of the three vehicles is the same as those owning any other two which in turn is the same as those owning none of the three.
-- The number of residents owning scooters alone is the same as those owning cars alone and each in turn is twice those owning bicycles alone.
-- Half the number of residents who own a bicycle also own at least one of the other two vehicles.

5. If the number of residents who own only bicycles is 150, then what is the total number of residents in the colony?
(A) 500 (B) 1000
(C) 750 (D) 1250

6. What percentage of the residents, who own a car, also own at least another vehicle?
(A) $66^{2}/_{3}$% (B) $13^{2}/_{3}$%
(C) $28^{4}/_{7}$% (D) $33^{1}/_{3}$%

7. If 15 residents do not own any of the three vehicles, then how many residents are there in the colony?
(A) 100 (B) 200
(C) 300 (D) 400

8. What percentage of the colony residents own exactly one type of vehicle?
(A) 15% (B) 25%
(C) 55% (D) 75%

9. What percentage of the residents own a scooter or a car but not a bicycle?
(A) 65% (B) 55%
(C) 75% (D) 45%

Directions for questions 10 to 12: These questions are based on the following data.

There are three trade unions – Viram, Vishram and Be-kam – and three thousand six hundred workers in a company. Becoming a member of a trade union is optional. A worker can be a member of more than one of the three trade unions also.

There are 500 workers who are members of at least two trade unions while Vishram has 1400 members. There are 100 workers who are members of only Viram and Be-kam, whereas 200 Vishram members also are Be-kam members; 550 workers are members of only Be-kam, whereas 20% of Viram members are members of exactly one more union. An eighth of all the workers in the company are members of exactly two unions.

10. How many workers are members of only Viram or only Be-kam?
(A) 3200 (B) 2700
(C) 1400 (D) 1700

11. If 10 workers give up their Be-kam membership and take up Vishram membership, then how many workers will now have membership of all the three unions?
(A) 40 (B) 50
(C) 60 (D) 45

12. How many workers are members of Vishram but not members of Be-kam?
(A) 400 (B) 800
(C) 1200 (D) 1600

Directions for questions 13 to 15: These questions are based on the following data.

In a school, 60% of the students passed in English, and 25% of the students who passed in English passed in the foreign language also, whereas $66^{2}/_{3}$% of the students who passed

in the foreign language failed in English. Twenty students failed in both English and the foreign language.

13. What percent of the students passed in exactly one of the two subjects – English and the foreign language?
(A) 15% (B) 65%
(C) 45% (D) 75%

14. The students who failed in exactly one subject are allowed to take a re-exam and it was found that the number of students who passed in both the subjects increased by 20%. What is the least value for the percentage of students in the school who pass only in English?
(A) 42% (B) 46%
(C) 34% (D) 28%

15. All the students, who failed in one or more subjects, are given grace marks and it was found that the number of students passing in exactly one subject went up by 4 and the number of students who failed in both the subjects dropped by 40%. What percent of the school now pass in both subjects?
(A) 40% (B) 15%
(C) 12% (D) 17%

Directions for questions 16 to 35: Select the correct alternative from the given choices.

16. The angle between the two hands of a clock at 9:00 a.m. is 90°. What will the angle between them be one minute later?
(A) 84.5° (B) 95.5°
(C) 101° (D) 79°

17. The angle between the two hands of a clock at 5:00 p.m. is 150°, what will the angle between them be one minute later?
(A) 144.5° (B) 155.5°
(C) 161° (D) 139°

18. What is the angle between the two hands of a clock at 7:28 p.m.?
(A) 56° (B) 58°
(C) 60° (D) 63°

19. At what time between 6 and 7 O' clock will the angle between the two hands of a clock be 50°?
(A) 6 hr.$41^9/_{11}$ min (B) 6 hr. $23^7/_{11}$ min
(C) 6 hr.$^2/_{11}$ min (D) Either (A) or (B)

20. At which of the following times between 8 and 9 O' clock, will the angle between the hands of the clock be 120°?
(A) 8 hr.$21^9/_{11}$ min (B) 8 hr. $16^9/_{11}$ min
(C) 8 hr. $34^6/_{11}$ min (D) 8 hr. $29^3/_{11}$ min

21. A watch, which gains uniformly was observed to be 10 minutes slow at 12 noon and 5 minutes fast at 6:00 p.m. on the same day. When did the watch show the correct time?
(A) 2:00 p.m. (B) 3:00 p.m.
(C) 4:00 p.m. (D) 5:00 p.m.

22. A watch, which loses uniformly was observed to be 5 minutes fast at 5:00 p.m. and 4 minutes slow at 8:00 p.m. on the same day. When did the watch show the correct time?
(A) 6:20 p.m. (B) 6:40 p.m.
(C) 7:00 p.m. (D) 6:30 p.m.

23. Two clocks show the correct time at 3:00 p.m. One clock gains 4 minutes in an hour, while the other loses 4 minutes. At 6:00 p.m. on the same day, by how much time will the two clocks differ?
(A) 8 minutes (B) 16 minutes
(C) 12 minutes (D) 24 minutes

24. The minutes hand of a clock overtakes the hours hand after every 60 minutes of correct time. How much time does the clock gain or lose in eleven hours of normal time?
(A) Gains 11 minutes (B) Loses 11 minutes
(C) Gains 60 minutes (D) Loses 60 minutes

25. If the time in a clock is 8 hours 20 minutes, then what time does its mirror image show?
(A) 3 hours 20 minutes (B) 3 hours 50 minutes
(C) 3 hours 40 minutes (D) 4 hours 40 minutes

26. If 22nd April, 1982 was a Thursday, then what day of the week was 3rd November, 1982?
(A) Monday (B) Wednesday
(C) Friday (D) Sunday

27. If 30th June, 1989 was a Friday, then what day of the week was 17th September, 1993?
(A) Monday (B) Wednesday
(C) Friday (D) Sunday

28. If 10th April, 1963 was a Wednesday, then what day of the week was 23rd August, 1959?
(A) Sunday (B) Monday
(C) Friday (D) Tuesday

29. If today is Sunday, then what day of the week will be the 426th day from today?
(A) Saturday (B) Friday
(C) Tuesday (D) Wednesday

30. If today is Wednesday, what day will it be, 1 year and 10 days from today?
(A) Sunday
(B) Friday
(C) Monday
(D) Cannot be determined

31. In a year, if two successive months start with the same day of the week, then the year is
(A) a century year.
(B) a leap year.
(C) a non-leap year.
(D) only a non-leap century year.

32. If a year has 53 Sundays, how many Saturdays will be there in that year?

(A) 52 (B) 53
(C) 54 (D) Cannot be determined

33. Three days ago I met my friend and asked him to lend me his maths book. He promised that he will lend it on the eighth day from that day. If today is Thursday, on which day will he lend me the book?
(A) Friday (B) Tuesday
(C) Monday (D) Sunday

34. There are three more days to go for my cousin to arrive. Eight days ago when I talked to him he said he would write his last exam three days later and that he would leave three days after his last exam. If his last exam is on a Saturday, on which day of the week will my cousin arrive?
(A) Saturday (B) Friday
(C) Tuesday (D) Sunday

35. If the second Sunday of a month falls on the 8th, what is the date of the fourth day after the third Saturday of that month?
(A) 2 (B) 15
(C) 25 (D) 21

Answer Keys

1. D	**2.** D	**3.** A	**4.** C	**5.** B	**6.** D	**7.** C	**8.** D	**9.** A	**10.** D

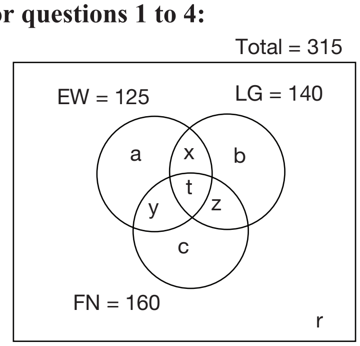
Hints and Explanations

Solutions for questions 1 to 4:



EW - Essel World
LG - Lumbini Gardens
FN - Film Nagar
25 visited all three $\Rightarrow t = 25$
125 visited *EW* $\Rightarrow a + x + y + t = 125$
$\Rightarrow \quad a + x + y = 100$ …. (1)
140 visited *LG* $\Rightarrow b + x + t + z = 140$
$\Rightarrow \quad b + x + z = 115$ …. (2)
160 visited *FN* $\Rightarrow c + y + z + t = 160$
$\Rightarrow \quad c + y + z = 135$ …. (3)
Number of students who visited exactly 2 places = 5 times those who did not visit any.
$\Rightarrow \quad x + y + z = 5r$
200 students visited exactly one place = $a + b + c = 200$.

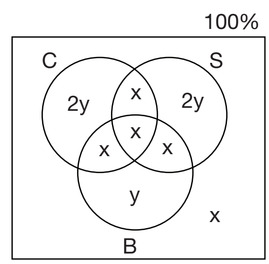
1. Total no of students = 315
$\Rightarrow \quad a + b + c + x + y + z + t + r = 315$
$\Rightarrow \quad 200 + 5r + 25 + r = 315$
$6r = 90 \Rightarrow r = 15$
$\therefore$ 15 did not visit any of the three places. Choice (D)

2. Number of students who did not visit more than one place = Number of students who visited exactly one place + those who did not visit any = $a + b + c + r$ = 200 + 15 = 215. Choice (D)

3. Number of students who visited at least one of *LG* and *FN*
$= 255 \Rightarrow b + x + z + t + y + c = 255$ … (4)
We know $a + b + c + x + y + z + t$
$= 315 - r = 300$ …… (5)
(5) – (4) $\Rightarrow a = 45$ visited only *EW*. Choice (A)

4. Number of students who visited only one among *LG* and *FN* $= b + c = 200 - a = 200 - 45 = 155$.
Choice (C)

Solutions for questions 5 to 9:



The first three statements can be represented as shown in the diagram and hence, $5x + 5y = 100$
(because we have taken x & y as percentages)
or $x + y = 20$ …. (1)
From the fourth condition, we get $(y + 3x) = B$
i.e., $y = 3x$ …. (2)
From equations (1) and (2).
We get $x = 5\%$ and $y = 15\%$.

5. $y = 15\% = 150$.
Hence, total number % of residents
$= x = \dfrac{150 \times 100}{15} = 1000.$ Choice (B)

6. $\dfrac{3x}{3x + 2y} = \dfrac{15}{45} = \dfrac{1}{3} = 33^{1}/_{3}\%.$ Choice (D)

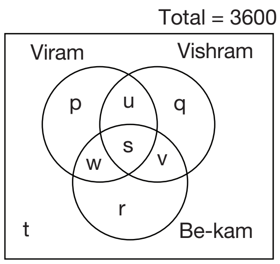
7. $x = 5\% = 15$. Hence total $= \dfrac{15}{0.05} = 300$. Choice (C)

8. $2y + 2y + y = 75\%$. Choice (D)

9. $2y + 2y + x = 65\%$. Choice (A)

Solutions for questions 10 to 12:

Represent in various segments as in the following diagram,



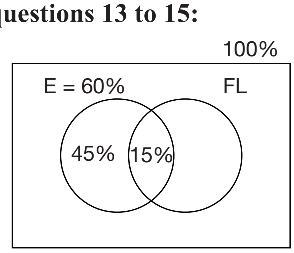
Members of at least two unions $= u + v + w + s = 500$ ….. (1)
Vishram members $= q + s + u + v = 1400$ ……… (2)
Only Viram and Be-kam $= w = 100$ ……. (3)
Vishram and Be-kam $= s + v = 200$ ….. (4)
Only Be-kam $= r = 550$ …… (5)
Members of Viram who are members of only one more union $= w + u = 20\%$ of $(p + u + s + w)$.. (6)
$u + v + w = {}^1/_8$ (Total workers) $= 450$. ….. (7)
From (1), (3) and (4), $u = 200$.
From equations (2),
$q = 1400 - u - (s + v)$
$= 1400 - 200 - 200 = 1000$
From (7), $v = 450 - 200 - 100 = 150$
From (4), $s = 200 - 150 = 50$
From (6), $p = 1150$
$t = 3600 - (p + q + r + s + u + v + w)$
$= 3600 - (1150 + 1000 + 550 + 50 + 200 + 150 + 100)$
$= 3600 - (3200) = 400$.
Now, we have all the figures and the questions can be answered.

10. $p + r = 1150 + 550 = 1700$. Choice (D)

11. Since 10 workers have given up their Be-kam membership and taken Vishram membership, it means these 10 workers were initially Be-kam members but not Vishram members, i.e., they must be a part of r or w. When they give up Be-kam and take up Vishram, they will move to q or u respectively. So, s does not undergo any change at all. Hence, 50 is the answer. Choice (B)

12. $q + u = 1000 + 200 = 1200$. Choice (C)

Solutions for questions 13 to 15:



-- 25% of 60%, i.e., 15% of the school passed in both English and Foreign Language.

-- Since $66^2/_3\%$ of the students who passed in Foreign Language failed in English, $33^1/_3\%$ of students who passed in Foreign Language passed in English also, i.e., ${}^1/_3$ Foreign Language = 15%

$\Rightarrow$ Foreign Language = 45%

So, we have only passed in (English) $= 60 - 15 = 45\%$,
Only Foreign Language pass $= 45 - 15 = 30\%$
Passed both in English & Foreign Language = 15%.
A total of 90% passed in at least one of the subjects. So, 10% failed in both.

Number of students in the school $= \dfrac{20}{0.10} = 200$.

13. $45\% + 30\% = 75\%$. Choice (D)

14. 20% of 15% = 3% increase in pass in both subjects. Hence, least value of pass only in English will come when all the new people who pass in both subjects are from the group which passed only in English. i.e., $45 - 3 = 42\%$. Choice (A)

15. 40% of 20 students = 8 students. Out of this, 4 students passed in exactly one subject. Hence, the remaining 4 students (which is 2% of the school strength) pass in both subjects. So, pass in both the subjects $= 15 + 2 = 17\%$. Choice (D)

Solutions for questions 16 to 35:

16. As the minute hand is 5.5°/minute faster than the hour hand and the minute hand is ahead of the hour hand, the angle after one minute, i.e., at 9:01 a.m., will be $90° + 5.5° = 95.5°$. Choice (B)

17. The angle between the hands will change by 5.5°/min. In this case, since the minute hand is behind the hour hand the angle will decrease by 5.5°. Hence, the angle at $5{:}01 = 150 - 5.5 = 144.5°$. Choice (A)

18. The angle $= \left|\dfrac{11}{2}(28) - 30(7)\right| = 56°$. Choice (A)

19. $\theta = \left|\dfrac{11}{2}(m) - 30(h)\right| \Rightarrow m = (30h \pm \theta)\left(\dfrac{2}{11}\right)$.

Here $h = 6$ and $\theta = 50°$

$\Rightarrow \quad m = (180 \pm 50°)\left(\dfrac{2}{11}\right) = \dfrac{460}{11}$ or $\dfrac{260}{11}$.

The two hands are 50° apart at $6\,\text{hr.}\ 41\dfrac{9}{11}\ \text{min}$ and at

$6\ hr.\ 23\dfrac{7}{11}\ \text{min}$. Choice (D)

20. $m = (30h \pm \theta)\left(\dfrac{2}{11}\right)$

Here $h = 8$ and $\theta = 120°$

$\Rightarrow \quad m = (240 \pm 120)\left(\dfrac{2}{11}\right) \Rightarrow 65\dfrac{5}{11}$ or $21\dfrac{9}{11}$

If $m = 65\frac{5}{11}$, then the time will be more than 9 O'clock.

$\therefore$ The time is 8 hr. $21\frac{9}{11}$ min Choice (A)

21. In 6 hours, the watch gained 15 minutes.
$\therefore$ In order to gain 10 minutes, (the initial difference) it takes 4 hours.
$\therefore$ At 4:00 p.m. it shows the correct time. Choice (C)

22. In 3 hours, the watch loses 9 minutes.
$\therefore$ In order to lose 5 minutes, (the initial difference) it takes 5 x 3/9 hours, i.e., 1 hour 40 minutes.
$\therefore$ At 6 : 40 p.m., it shows the correct time. Choice (B)

23. In one hour, the clocks will differ by (4 + 4) minutes i.e., 8 minutes.
$\therefore$ In three hours they will differ by 24 minutes. Choice (D)

24. As $60 < 65\frac{5}{11}$, the watch is gaining time.

The gain is $65\frac{5}{11} - 60 = 5\frac{5}{11}$ minutes per hour.

$\therefore$ In eleven hours, the watch will gain $11\left(\frac{60}{11}\right)$ = 60 minutes. Choice (C)

25. Actual time + mirror image time = 12 hours
$\therefore$ Mirror image time = 12 – 8 : 20 = 3 : 40 = 3 hours 40 minutes. Choice (C)

26. It is given that 22nd April, 1982 was a Thursday.
Number of days from 22nd April 1982 to 3rd November 1982. Month: April + May + June + July + August + September + October + November
In each month number of odd days :
1 + 3 + 2 + 3 + 3 + 2 + 3 + 3 = 6 odd days
6^{th} day after Thursday is Wednesday. Choice (B)

27. Number of odd days from 30th June, 1989 to 30th June, 1993 are five.
Number of days from 30th June, 1993 to 17th September, are
Month: July + August + September
Odd days : 3 + 3 + 3 = 9
Number of odd days = 9 + 5 =14 = 0 odd days
Hence, 17th September 1993 was a Friday. Choice (C)

28. Number of days from 10th April, 1963 to 23rd August, 1963
Month: April + May + June + July + August
Days: 20 + 31 + 30 + 31 + 23 = 135
Number of odd days in 135 days = 135/7 = 20 days
23rd August 1963 is 2 days to Wednesday i.e., Friday
Number of odd days form 23rd August 1963 to 23rd August 1959 are five odd days.
Hence, 23rd August 1959 is five days back to Friday is Sunday. Choice (A)

29. Number of odd days in 426 days
= 426/7 = 60 complete weeks + 6 odd days.
6th day after Sunday is a Saturday. Choice (A)

30. Whether the given year is a leap year or a non-leap year, is not given, hence the answer cannot be determined. Choice (D)

31. Two successive months can start with the same day of the week, only if the previous month does not have any odd days. This is possible only when February has 28 days. Hence, the year is a non-leap year. Choice (C)

32. A leap year has 52 weeks and two additional days, while a non-leap year has 52 weeks and one additional day. In any year each day of the week occurs at least 52 times.
A non-leap year starts and ends with the same day of the week. In a leap year the first two days of the year repeat. As it is not known whether the 53rd Sunday is the last day of the year or not, the number of Saturdays could be 52 or 53. Choice (D)

33. Today is a Thursday. Hence, the required day
= Thursday – 3 (ago) + 8 (from 3days ago)
= Thursday + 5 = Tuesday. Choice (B)

34. Eight days ago my cousin said that his last exam is three days later i.e. five days ago from today. He is going to arrive three days later from today. i.e. eight days after the last exam. As the last exam is on a Saturday, he is arriving on a Sunday. Choice (D)

35. Since, 8th is the second Sunday, 7th is the first Saturday. Hence, the third Saturday is on 21st and four days later it is 25th. Choice (C)

CHAPTER HIGHLIGHTS

- *Grammar*
- *Nouns, Pronouns, Articles*
- *Verbs, Auxiliaries, Modals*
- *Adjectives, Adverbs*
- *Prepositions, Conjunctions*
- *Active/Passive Voice, Direct/Indirect speech*
- *Verbal Phrases*
- *Sentence Completion*

Introduction

The Verbal Ability section of the book includes inputs followed by Practice Exercises. It comprises inputs in the following sections:

1. Grammar
2. Sentence Corrections
3. Vocabulary

Grammar

The questions under this category are based on English Grammar. These questions test the student's knowledge of grammar and ability to use English Language correctly. The grammar section includes

1. Nouns, Pronouns, Articles
2. Verbs, Auxiliaries, Modals
3. Adjectives, Adverbs
4. Prepositions, Conjunctions
5. Active/Passive Voice, Direct/Indirect speech
6. Verbal Phrases

Sentence Completion

This section includes sentence correction and sentence rephrasing questions. Questions in this section test a student's ability to comprehend a given context and indentify grammatical errors.

Section I: Grammar

Overview

A. Sentence

A group of words that makes complete sense is a sentence.

Examples:

1. Birds fly.
2. It is a good college.
3. The children of that school wear blue uniform.
4. This is the theory that throws light on superconductivity.

B. Parts of a sentence

A sentence can be divided into two parts:
(1) subject and (2) predicate
Here are some sentences divided into the two parts.

	A (subject)	B (predicate)
1.	Birds	fly.
2.	Mohan	is an engineer.
3.	He	teaches Engineering Graphics.
4.	This intelligent girl	has passed her examination in the first division.
5.	The President of India	has awarded him a gold medal.

NOTES

1. The words underlined in Part A are subject words and those underlined in Part B are verbs.
2. The subject is a noun or a pronoun with or without other words going with it.
3. The predicate is the verb with or without other words going with it (other words may be object, complement, adverb, adverb phrase, etc.).
4. The subject of the sentence usually comes first but occasionally the predicate precedes.

Example:

- Down went the Royal Francis.

Sample Exercise–1

Underline the subject parts in the following sentences.

1. The train arrived late.
2. He was the captain of his team.
3. There was a large crowd on the platform to receive the team.
4. Birds of the same feather flock together.
5. The Prime Minister with all his Cabinet members has submitted his resignation to the President.

Sample Exercise–2

Underline the predicate parts in the following sentences.

1. Aeroplanes fly over my house frequently.
2. They are shortly moving out of their house.
3. He is suffering from a fever.
4. The college is equipped with new furniture.
5. The Secretary and the members of the club have been discussing the issue since morning.

Now study the following sentences:

Group A

1. There is a beautiful garden in front of my house.
2. It has been raining heavily since morning.
3. There is a phone call for your friend.

NOTE

The words underlined in these sentences are not real subjects. They are said to be grammatical or dummy subjects.

Now study the following sentences:

Group B

1. Here come my friends and their parents.
2. There go the principal and the members of the teaching staff.

NOTE

In these sentences, you notice that the predicate part precedes the subject part. This is called S.P and P.P inversion. This construction is allowed in standard English. This is used for emphasis.

Parts of Speech: Identification

English words (according to their functions in a sentence) can be classified into parts of speech as follows:

1. Noun
2. Pronoun
3. Adjective
4. Verb
5. Adverb
6. Preposition
7. Conjunction
8. Interjection

Noun

A noun is a word used as the name of a person, place, animal, thing, etc.

Examples: Rajitha, Hyderabad, lion, table, etc.

Pronoun

A word used instead of a noun.

Examples: he, she, it, they, etc.

Adjective

A word that qualifies or describes a noun or a pronoun.

Examples:

1. Our team played a good game.
   adj. noun
2. Every sentence that he spoke was listened to with
   adj. noun
   great attention.
3. All these proposals are good.
   noun adj.

NOTE

Some words are used either as pronouns or as adjectives as in the following examples.

Pronoun	Adjective
a. These are good students.	1. These students are good.
b. Each of these books is worth reading.	2. Each book has some special features worth reading.
c. Some of the problems are difficult to solve	3. Some problems are difficult to solve.
d. Either of you can participate in the competition.	4. Either book is good for reference.

Verb

A verb expresses what the subject of a sentence is or does, or has or what is done to it.

1. Dr. Rao teaches English.
   verb
2. He has taught the subject for twenty-five years.
   verb
3. He is a capable teacher.
   verb
4. She has a car.
   verb

Adverb

A word that modifies an adjective or a verb or another adverb.

1. I am deeply grateful to you for your timely help.
   adv. adj.
2. This horse runs very fast.
   verb adv. adv.
3. He read the passage quickly.
   verb adv

Preposition

A preposition is a word used with a noun or a pronoun to show how the person or thing denoted by the noun or pronoun stands in relation to something else.

1. Work in the college begins at 10 a.m.
2. He wrote the document with a pen.
3. The Professor gave a lecture on superconductivity.
4. I washed my plate after I had eaten.

In the above sentences, the words underlined are called prepositions.

Conjunction (Connector)

A conjunction is a word that joins words, phrases or sentences.

1. Delhi and Kolkata are densely populated cities.
2. She must be either the President or the Secretary of YMCA.
3. The professor read the essay and was impressed by it.
4. He is not only intelligent but also industrious.

Interjection

A word that expresses a strong or sudden feeling such as surprise, joy, fear, sorrow, etc. It is not grammatically connected with the rest of the sentence. Usually, an exclamatory mark is put after it.

Examples: Ah!, Hurrah!, Well!, Dear!, Oh!

1. Alas! she is dead.
2. Hurrah! we won the match.

NOTE

As words are divided into different parts of speech, depending on the work they do in the sentences, it is not possible to say to which part of speech a word belongs unless we see what function it performs in the sentence.

Phrases and Clauses

Phrase

A phrase is a group of words without a finite verb. There are three types of phrases.

1. Noun phrase
   A fifty-year-old man is seen in the garden.
2. Adjective phrase
   This chain is made of gold.
3. Adverb phrase
   Please place the chemicals in the storeroom.

NOTE

A 'finite verb' is a word that denotes tense and a 'non-finite' is a verb that does not.

Examples:

1. He has written some books. (finite verb) (present perfect tense)
2. Speaking on the occasion, the Minister said prohibition would be lifted soon. (non-finite verb)

There are three types of non-finites in English: INFINITIVE, GERUND, PARTICIPLE.
(*Please note that there is a separate chapter on non-finites.)

Clause

A clause is a group of words that contains a 'finite verb'. Clauses are of two types:

1. Main clause
2. Subordinate clause

A main clause is also called a principal clause or an independent clause because it makes complete sense.

A subordinate clause, which can also be called a dependent clause, is divided into three types:

NOUN CLAUSE, ADJECTIVE CLAUSE, ADVERB CLAUSE

Now study the uses (functions) of these three types of clauses.

1. **THE NOUN CLAUSE** is used as

   (a) the subject of a verb.
   That he will be appointed to the job is certain.
   subject verb

   (b) the object of a verb.
   We knew that the plan was impractical.
   verb object

   (c) the complement of a verb.
   Our hope is that he will secure first rank.
   v. complement

   (d) the complement of an adjective.
   We were certain that he would pass.
   adj. complement

   I am hopeful that he will agree to our proposal.
   adj complement

NOTE

When the noun clause is an object or a complement, the conjunction that may be omitted.

Examples:
I believed he was right. (I believed that he was right)
verb object

I was sure he was right. (I was sure that he was right)
adj. compl.

   (e) in apposition to the noun before it.
   The suggestion, that the meeting should be adjourned, was unanimously accepted.
   N N.Cl (in apposition)

   (f) Wh - clauses as Noun Clauses
   Wh - clauses perform all the five functions that the 'that' clauses do. In addition to these, they can function as the objects of prepositions.

   Examples:
   Subject: What you say is true. Where he lives is a mystery.

   Object: I don't know what he would say to this proposal.

   Subject Complement: The question is who will bell the cat.

   In apposition: My question, who is responsible for the loss, has not been answered.

   Adjectival Complement: I wasn't sure whose fault it was.

   Object of a Preposition: We were not aware of what they were doing.

   (g) If/whether clauses as noun clauses:
   - I asked him if/whether he can speak French.
   - I don't know if/whether he has been appointed or not.
   - I don't care whether he attends the meeting or not.
   - Whether or not he comes doesn't worry my boss.

2. **ADJECTIVE CLAUSES:** (also called relative clauses). It does the work of an adjective. It qualifies a noun or a pronoun in the main clause.

   (a) The young man who was here a little while ago is the President of the union.
   antecedent adj. cl

   (b) I have finished reading the novel (that) you gave me.
   ant. adj. cl

   (c) This is the story (which) my friend wrote.
   ant. adj. cl

   Note: ( ) indicates optional use, i.e., may or may not be used.

NOTES

1. The words who, that, and which introducing the relative clauses are relative pronouns.
2. Who is used to refer to persons; that is used to refer to persons or things; and which is used to refer to things, animals, etc.
3. The noun or noun phrase, which a relative pronoun refers to, is called its antecedent (ant.)

Special Note 1: The object form 'whom' can also function as a relative pronoun introducing adjective clauses.

Example: This is the person whom you want to meet.

Special Note 2: When the adjective clause defines a place, time, or reason, we use where, when, and why in place of the relative adverbs.

Examples:
1. We visited the place where Mr. Gandhi was assassinated. (place)
2. At a time when prices are high, we must reduce our expenditure. (time)
3. Could you tell me the reason why he has not been appointed? (reason)

NOTE

The possessive form whose can also introduce a relative clause. 'Whose' can be used in speaking of persons, animals, and non-living things.

Example: The doctor whose car I bought wants to buy it back.

3. **ADVERBIAL CLAUSES:** Adverbial clauses are of different kinds. They modify the verbs to which they are connected in meaning, i.e. they do the work of an adverb.
   (a) Adverbial clauses of time:
   (The conjunctions used are : when, as, while, till/until, before, after, as soon as, whenever, since, as long as, etc.)

   Example: Some persons in the audience were asleep while the chief guest was speaking.

   (b) Adverbial clause of place:
   You may go wherever you like.

   (c) Adverbial clause of reason or cause :
   (as, because, since, now that)
   You can be punctual to school now that you have a school bus.

   (d) Adverbial clause of purpose:
   (so that, that, in order that)
   The police officer went in plain clothes so that no one might recognize him.

   (e) Adverbial clause of result or effect:
   (that, so that, that)
   It rained very heavily for two days so that the rivers and lakes were flooded.

   (f) Adverbial clause of condition:
   (if/unless)
   If he apologizes to me, I shall forgive him.

   (g) Adverbial clause of concession:
   (though, although, even though)
   Though he is intelligent, he cannot argue well.

   (h) Adverbial clause of manner:
   You may complete the work as you please.

Sample Exercise–3

In each of the following sentences, you will find a word/a group of words underlined. Write (P) or (C) in the bracket to denote phrase or clause respectively, as the case may be.

1. Mangoes are expensive this year. ( )
2. I found this book in the university library. ( )
3. This is the novel that Saul Bellow has written. ( )
4. Smoke from vehicle exhausts causes air pollution. ( )
5. He bought the house that belonged to his friend. ( )

Sample Exercise–4

Given below are a few sentences in which clauses are underlined. Identify the type of clause noun clause, adjective clause and adverb clause) in each sentence and write its name in the brackets provided against each sentence.

1. He reached the place when the sun had set. ( )
2. Because you have done this, you must explain ( )
3. If you can do it fast, please do so. ( )
4. The table that has a broken leg is from the staff room. ( )
5. He expects that he would get through the examination. ( )
6. He is very rich, yet he is unhappy. ( )
7. Although he is an industrious student, he failed in the examination. ( )
8. The children clapped as the clown entered the ring. ( )
9. People started running out as soon as the accident took place. ( )
10. Please answer the call for me in case I go out. ( )

Conditionals

There is a great variety of conditional sentences.

The two main divisions are detailed further:

Type A

Those with clauses that contain a condition that may or may not be fulfilled.

These are called clauses of open condition or factual condition.

Example: What shall we do if it rains?

In the above-mentioned example, the speaker does not declare that the condition will be realized or that it will not be realized.

He leaves the question open or unanswered.

The speaker here merely puts forward the possibility that it may rain.

More examples:

- Don't come unless I tell you to come.
- We shall go provided the weather is fine.

Type B

Those with clauses in which a theoretical condition is put forward.

These are clauses in which the condition is combined with improbability or unreality.

- He would come, if he had time.
- If you were a bird, you could fly.

Conditional clauses may be introduced by if (even if, if only), so long as, suppose or supposing (that), on condition (that), provided (that), and, for a negative condition, unless (which means the same as if ….not but is more emphatic). In case is used to introduce a contingency or possibility against which a precaution is needed.

- If you have enough money, why don't you buy a house?
- So long as you return the book faithfully, I will lend it to you with pleasure.
- You'd better take an umbrella with you in case it rains.

If–Conditionals

Type–I

Look at the following example.

If he comes to the library, I will give him these books.
pres. fut.
(It is possible that he will come)

NOTE

This is an open condition, i.e. this expresses a possible situation.

In the aforementioned example, the present tense is used in the if–clause (or conditional clause), and the future tense is used in the result clause.

Type–II

If she practised well, she could win the game.
(She doesn't practise well)

If she came to my house, I would give her your message.
(She doesn't come to my house)

NOTE

This is an unlikely condition. This is called unreal condition used for impossible or unreal situations.

The past tense is used in the 'if–clause' and would, could, or might + the simple past tense verb is used in the main clause.

Type–III

If she had come to my house, I would have given her your message. Would + have + past participle
past perf. (She didn't come to my house)

NOTE

This is a closed condition.

When the past perfect is used in the 'if–clause', would, could, or might + have + the past participle are used in the main clause.

We can summarize the usage of the above-discussed conditionals as follows:

If–clause		Main clause
If + present	....	future (result)
If + past	....	would + verb (result)
If + past perfect	....	would + have + past participle (result)

NOTES

(A) In general, avoid using would in the if–clause.

(B) If the if–conditionals express a

(i) doubt or supposition or

(ii) a wish or desire, the form of the verb to be used is 'were'.

Examples: If he were rich, he would go to the USA for higher studies.

If I were a bird, I would fly to England without a visa.

Examples of Errors in the Usage of Conditionals

The following examples will make clear some of the common mistakes committed in the usage of conditionals.

1. WRONG: If I will win the contest, I will buy a new house.

   RIGHT: If I win the contest, I will buy a new house.

2. WRONG: If I had been there, I would make a speech.

   RIGHT: If I were there, I would make a speech.

   If I had been there, I would have made a speech.

3. WRONG: If I would have a degree from that University, I would get a good job.

   RIGHT: If I had a degree from that University, I would get a good job.

Types of Sentences (Structural)

A sentence, for the purpose of analysis, can be examined from the point of view of its structure. Depending on the number of clauses it contains, a sentence can be called SIMPLE, COMPLEX, or COMPOUND.

Let us look at each of these types of sentences with examples.

1. Simple Sentence

A simple sentence is one that contains only one subject and one predicate.

(The subject: Person or thing about which something is said).

(The predicate: What is said about the subject).

In other words, a simple sentence contains only one main clause. It does not have subordinate clauses.

Examples:

1. My father is a senior manager in this organization.
   subject (s). The predicate (p)
2. Chandigarh is a planned city.
   s p
3. Microbiology is an interesting subject for me.
   s p

Note that there is only one finite verb in each of the above sentences. That means there is only one clause. One clause sentence is a simple sentence.

2. Compound Sentence

A compound sentence is one that contains two or more main or principal clauses. It may or may not have subordinate clauses.

In other words, a compound sentence consists of two or more independent sentences joined together by a coordinating conjunction.

Example: He is poor yet he is happy.

The above sentence consists of two parts.
(i) He is poor (ii) He is happy

These two are joined by the co-ordinating conjunction 'yet'.

In the above example, each part contains a subject and a predicate of its own, i.e. each part is called a clause.

Each clause makes good sense by itself and, hence, can stand independent of the other. Hence, each is called a principal clause or a main clause.

Study the following examples.

Examples:

1. You may either stay in the hostel or stay with your relatives.
2. The flowers were blooming, the birds were singing, and spring was in the air.

Analysis: In sentence 1, there are two main clauses.

In sentence 2, there are three main clauses.

So, each of them is a compound sentence.

Some more examples of compound sentences:

1. I went to his farmhouse several times, but I was unable to meet him.
2. He is very intelligent, yet he has failed in the examination.
3. Many doctors are attending on him, still he is not out of danger.
4. He is very tired, for he has been working since morning.
5. There is no quorum, so the meeting was adjourned.

NOTE

In the aforementioned examples, the underlined words are called coordinating conjunctions. Coordinating conjunctions join main clauses.

The following is a list of some coordinating conjunctions

and, as well as, also, too, both … and, not only … but also, now, well, either … or, neither … nor, otherwise, or else, still, yet, only, however, whereas, but, nevertheless, therefore, for, so then, so then.

3. Complex Sentence

A complex sentence is one that contains only one main clause and one or more subordinate clauses. Study the following examples.

Example 1: If you work hard, you will pass.

In the aforementioned example, the clause 'you will pass' makes good sense by itself and, hence, can stand by itself. This is called the principal or independent clause.

The clause 'If you work hard,' cannot stand independently, it depends on the clause, 'you will pass'. It is, therefore, called a dependent or a subordinate clause.

Example 2: As soon as the meeting began, a member said that he wanted to raise a point of order.

Analysis: This sentence has only one main clause and two subordinate clauses. Therefore, this is a complex sentence.

Subordinate clause 1: That he wanted to raise a point of order.

Subordinate clause 2: As soon as the meeting began.

Main clause: A member said

Some more examples of complex sentences:

1. The children rode an elephant when they visited the zoo.
2. I think that the president will not accept this proposal.

3. They were so tired that they simply had to sit down to take rest.
4. He knew that he had to get someone to cut down the trees in the garden.
5. If you want a passport, you must consult the passport issuing authority in the city.

In the aforementioned examples, the underlined words are called subordinating conjunctions that introduce subordinate classes.

The following is a list of some subordinating conjunctions: after, before, since, as soon as, while, until, as, so long as, till, in order to, lest, so that, that, because, since, supposing, unless, whether, on condition, so … that, than, no less than, as much as, so far as, according as, if, though, although, however, notwithstanding, even if, whatever, whichever.

Sample Exercise–5

Identify the type of sentence—simple, complex, or compound.

1. As soon as the boy saw the cobra, he began to run.
2. The South Pole is too cold for human beings to live in.
3. A hundred per cent in English is a very high scores, and it is almost impossible for a student to achieve this.
4. On account of mismanagement, the company suffered a great loss.
5. In spite of being supplied with the best weapons, the army could not win the battle.
6. The rooms were so selected as to enable me to reach the place of my interview.
7. It is in the field of education that the seed of secularism has to be sown at the earliest stage possible so that the plant can be carefully nurtured as it grows.
8. Our hope that the clouds would disperse was cheering.
9. To most people, a long journey by motorcar is exhausting and disagreeable.
10. Although mountains are undoubtedly impressive, they have a kind of dreadful monotony that makes people like me feel hostile to their beauty.

Types of Sentences (Semantic)

On the basis of the meaning (semantic), sentences are categorised into:

1. Assertive sentences
2. Imperative sentences
3. Interrogative sentences
4. Exclamatory sentences
5. Affirmative sentences
6. Negative sentences

Assertive Sentences (or) Declarative Sentences

Sentences that state facts, describe things, or report events are called assertive or declarative sentences.

Examples:
Dr. Mohan teaches English.
Varanasi is on the banks of the Ganga.
Hyderabad is the capital of Andhra Pradesh.

Imperative Sentences

Sentences that express an order, a request, an advice, a direction, a suggestion, a command, etc. are imperative sentences. These sentences start with the verb, and the subject (you) is understood.

Examples:

Take these books to the library.

Get me a cup of coffee, please.

Be neither a borrower nor a lender.

NOTE

There are some sentences that express 'commands' in an indirect way. Let is used at the beginning of these sentences. Subject is not omitted but expressed in these sentences.

Examples:

Let the manager talk to the director first.

Let's start at once.

Let the boys assemble in the auditorium for the seminar.

Interrogative Sentences

Sentences that are used to make enquiries and to ask questions are interrogative or question sentences.

Examples:

Can I help you?

What shall we have for lunch?

Is the bus late this morning?

Exclamatory Sentences

Sentences that express surprise, admiration, pity, sorrow, and other feelings in an emphatic way are called exclamatory sentences.

Examples:

How fast time flies!

What a beautiful view we have from here!

What a wonderful piece of art this is!

What a tragedy!

Affirmative Sentences

You have seen that all the above-given sentences as examples are statements, commands, questions, and exclamations. They affirm something in a positive way. They are affirmative sentences.

Negative Sentences

Look at the following sentences.

Examples:

He is not a rich man.

I cannot complete this work today.

They don't understand our difficulties.

I have never watched a test match.

All these are also statements, but they use words such as NOT and NEVER and are negative in meaning. They are called negative sentences.

NOTE

Commands can also be negative.

Example: Don't touch those glass exhibits.

Sentences of this kind are called negative commands or prohibitions. There can also be questions that are negative:

Hasn't he got a car?

Why didn't you come to the class in time?

Sentences of this kind are called negative questions.

Section II: Sentence Correction

Correct Use of Nouns

A noun is a naming word. It is the name of a person, place, thing, animal, concept, river, etc. Nouns are divided into five main kinds.

1. **Common Noun:** A name given in common to every person or thing of the same class is called a common noun.
   Examples:
   - Hyderabad is a big city.
   - She is a good girl.
2. **Proper Noun:** The name of a particular person or place is called a proper noun.
   Examples:
   - King Solomon was a wise king.
   - Kalidas was a great poet.
3. **Collective Noun:** It is the name of a number of persons or things taken together and spoken of as a whole.
   Examples:
   - A herd of cattle is grazing in the field.
   - A bunch of keys is on the table.
4. **Abstract Noun:** The name of a quality, a state of mind or a stage of life is called an abstract noun.
   Examples:
   - Kindness is a virtue.
   - Childhood is the happiest stage of one's life.
5. **Material Noun:** All those nouns, which are used to refer to metals and materials, are called material nouns.
   Examples:
   - This chain is made of gold.
   - This house is built of brick.

In the aforementioned examples 'gold' and 'brick' are material nouns.

Nouns are further classified into two types depending on whether they can be counted or not.

1. **Countable nouns:** Countable nouns are nouns that we can count: e.g. boy—one boy, two boys, three boys, etc. **Note:** The classes of nouns known as 'common nouns' (boy, table, etc.) and 'collective nouns' (flock, regiment, crowd, troop, etc.) can be included in the larger class of countable nouns.
2. **Uncountable Nouns:** (also called non-count nouns) Uncountable nouns (NCNs) name things that we cannot count or usually don't count. The classes of nouns known as material nouns and abstract nouns can be included in this category.

Uncountable nouns fall into the following groups:

1. Things that are considered in mass or quantity and not in numbers: sugar, sand, hair, dust etc.
2. **Materials:** wood, cloth, silver, gold, iron, etc.
3. **Liquids:** water, milk, oil, ink, honey, etc.
4. **Gases:** steam, mist, nitrogen, air, etc.
5. **Natural phenomena:** heat, cold, electricity, lightning, etc.
6. **Abstract nouns:** stages of life, states of mind, qualities, processes, actions, ideas, etc.
   courage, happiness, freedom, attention, childhood, honesty, enjoyment.

   Note: A number of words used to refer to qualities, states, actions, etc. are however countable. These may be considered exceptions.

   Examples: joys, sorrows, dreams, miseries, etc.
7. **Branches of learning:** Economics, Mathematics, Politics, etc.

   Note: There are some uncountable nouns, which we refer to in parts. When we do so, we use them with expressions such as a piece of, a grain of and a kilo of. Here is a list of such expressions:

a piece of chalk	a piece of information
a cake of soap	a piece of furniture
a block of ice	a loaf of bread
a piece of advice	a log of wood, etc.

These expressions have their plural forms: pieces of chalk, cakes of soap, etc.

Proper nouns are not categorized either as countable nouns or as uncountable nouns.

Now, study carefully some rules related to the correct use of nouns:

Rule 1: A proper noun becomes a common noun when it is used in the plural form or when an article is placed before it.

Examples:

There are five Gandhis in our college.

Vijay Kumar is the Milton of your college.

Kalidas is the Shakespeare of India.

Rule 2: A collective noun takes a singular verb when the whole group is considered as one unit.

Examples:

The committee consists of five members.

The family living next door has come from Chennai.

NOTE

If we refer to the members of the committee or family separately, the collective noun takes a plural verb, but it (the collective noun) remains singular in form, e.g. The committee have taken their seats.

Rule 3: An abstract noun can also be used as a common noun by placing an article before it.

Example: Rajani is a beauty (a beautiful girl).

Rule 4: An abstract noun can also be used in the sense of a collective noun. When an abstract noun is used as a collective noun, it takes a plural verb.

Example: Youth are the pillars of the nation. (collective noun)

Rule 5: When a material noun denotes a mass of matter, it is not used in the plural form.

Examples:

Their house is built of bricks and stones. (incorrect)

Their house is built of brick and stone. (correct)

Rule 6: Some nouns have the same form for the plural as well as for the singular. The following are some nouns that belong to this category.

Example: sheep, species, deer, aircraft, offspring, yoke, space craft and salmon.

Rule 7: Some nouns are used in the singular only. The following are some nouns that belong to this category.

Example: advice, corn, grain, justice, clothing, information, poetry, scenery, machinery and hair.

NOTE

Advice is the noun form, and advise is the verb form.

The advice of the doctor is that I should not smoke. (noun)

The doctor advised me not to smoke. (verb)

Similarly, practice is noun, and practise is verb.

Rule 8: There are some nouns that are used only in the plural form.

Examples:

scissors	shears	spectacles
trousers	pantaloons	shorts
bowels	intestines	biceps
genitals	gymnastics	premises
proceeds	riches	thanks
nuptials	outskirts	gallows
doldrums	earnings	

Rule 9: Some nouns are apparently plural in form but are singular in use.

Example: news, economics, physics, measles, mumps, ethics.

NOTE

Summons is singular and summonses plural.

Rule 10: The following nouns are always used in plural.

Example: cattle, police, people, vermin, poultry.

Rule 11: When a plural noun denotes a specific amount, length, weight, quantity, etc. considered as a whole, the verb must be in the singular form.

Examples:

Ten thousand rupees is a large amount.

Six kilometres is not a long distance for a runner like you.

Rule 12: Inanimate objects (lifeless objects), which are remarkable for beauty, gentleness, gracefulness, tenderness, weakness, and so on, are treated as feminine gender.

Example: the moon, the earth, spring, virtue, peace, charity, fame, nature, hope, justice, mercy, pity, fortune, truth, victory, defeat, modesty, liberty.

NOTE

Poets refer to them as feminine gender.

Rule 13: Inanimate things that are known for strength, courage, violence, superiority, and so forth are treated as masculine.

Example: the sun, death, summer, winter, war, anger, fear, thunder.

NOTE

The possessive case of nouns is formed when we put's to the noun (apostrophe s)

Examples:

- The girl's dress.
- The boy's pen.

The possessive case is used with the nouns of living things but not with inanimate objects.

- Table's leg (incorrect)
- Leg of the table (correct)

The possessive is used with the names of personified objects.
- Death's icy hands

Rule 14: When the noun is plural and ends in s, the possessive case is formed by adding only an apostrophe (after s).

Examples:
- Girls' hostel
- Birds' nests

Rule 15: When the noun is plural but does not end in s, the possessive case is formed by adding 's.

Examples:
- Men's club
- Children's park
- Women's day

Rule 16: When a noun or a title consists of several words, the possessive case is formed by adding 's to the last word.

Examples:
- The Prime Minister of India's speech.
- The King of Bhutan's visit to India….

Rule 17: When two or more proper nouns are joined by 'and' and a common possession is meant, the possessive case will be formed by adding ('s) to the last noun.

Example: Amar and Kumar's house is really beautiful.

NOTE

This sentence denotes that the house belongs to both Amar and Kumar.

Rule 18: When there are two nouns in apposition, the possessive case will be formed by adding ('s) to the second noun.

Examples:
1. Penicillin, Flemming's discovery, has saved the lives of many people.
2. Mohan, the professor's son, is very intelligent.

Rule 19: The possessive case of a compound noun will be formed by adding ('s) to the last word.

Examples:
Sister-in-law's house.
Commander-in-chief's office.

Rule 20: If the last syllable of a singular noun ends in '-s' or –'ce' and the noun is followed by the word 'sake', the possessive case of the noun will be formed by adding (') only. However, modern day English accepts the use of 's' after apostrophe as the word is pronounced so, e.g. goodness's sake.

Examples:
for goodness' sake, for justice' sake.
for conscience' sake, for Jesus' sake.

Sample Exercise–6

Correct the following sentences where necessary.

1. This scissor will not cut such a hard wire.
2. I have seen many cannons in the military parade ground.
3. The beggar is begging for alm.
4. He has lost all his luggages on his way home.
5. The company wants to dispose of the equipment.
6. She took great pain to write the essay properly.
7. The first innings is over just now.
8. These sceneries of Kashmir are beautiful.
9. My brother-in-laws will come to our house next week.
10. These golds have been brought from South Africa.

Correct Use of Articles

There are two types of articles:

1. The Indefinite Article
2. The Definite Article

The Indefinite Article:	A and An (Please note that 'An' is a variant of 'A'.)
The Definite Article:	The

NOTE

1. A or An is used before a singular countable noun.
2. The choice between A and An wholly depends on the pronunciation of the word.
3. In English, the 'spelling of a word' is different from its 'pronunciation'.
4. 'An' is used before the word, the pronunciation of which starts with a vowel sound.
5. There are 44 sounds (each is given a symbol from the International Phonetic Alphabet).
6. Out of the 44 sounds, there are 20 vowel and 24 consonant sounds.
7. Please note that, strictly speaking, A, E, I, O, U are not vowels but just letters of the English Alphabet consisting of 26 letters.
8. The indefinite article 'a' is used before
   (a) a word beginning with a letter that has a consonant sound, e.g.: a book, a man, a pen.
   (b) a word that begins with a letter (like O) with the sound like 'wa' e.g.: a one-rupee note, a one-eyed man.
   (c) a word beginning with 'u' or 'eu' giving the consonant sound 'yu'.
   Examples: a university, a European.
9. The indefinite article 'an' is used before:
   (a) a word beginning with a letter that has a vowel sound.
   Examples: an apple, an egg, an umbrella, etc.
   (b) a word beginning with 'h' but the pronunciation of which starts with a vowel sound.
   Examples: an heir, an hour, an honest man.

(c) an abbreviation, the first letter of which has a vowel sound
Examples: an MLA, an MP, an MCom, an SDO, an FRCS, an X-mas gift.

Some Important Rules Regarding the Use of Articles

Rule 1: A or an is not used before:

1. plural nouns: a books, a universities, a dinners (wrong)
2. uncountable nouns: an advice, an information (wrong)
3. names of meals:

Examples:
Let us have dinner. (correct)
Let us have a dinner. (incorrect)

NOTE

An indefinite article can be used before names of meals when these are preceded by an adjective.

Example: She gave me a good breakfast at 8 a.m.

Rule 2: A or an is used in the following ways:

Before the word 'most' when it is used in the sense of very or much or exceedingly.

Examples:
Sreedhar is a most intelligent student.
This is a most unfortunate event.

NOTE

It must be borne in mind that 'man' or 'woman', when used in a general sense to represent 'mankind' as a whole, never takes an article.

Example: Man is mortal.

Rule 3: With a noun complement. This includes names of professions.

Examples:
He is an actor.
She is a good dancer.
It was an accident.

* The words underlined are noun complements. They are also called subject complements.

Rule 4: In certain phrases: a cold, a pain, on an average, make a noise, make an effort, make a mistake, a fever, etc.

Rule 5: With certain numbers: a hundred, a thousand, a million, etc.

Rule 6: 'A' can be used before Mr./ Miss/ Mrs. + name

Example: a Mr. Bose, a Mrs. Bose, etc.

NOTE

A Mr. Bose denotes a person who is called Bose and implies that he is a stranger to the speaker.

Mr. Bose without 'a', implies that the speaker knows Mr. Bose or knows of his existence.

Rule 7: Before a proper noun to make it a common noun.

Examples:
Mohan is a Newton. (Mohan is a great scientist.)
Amaresh is a Shakespeare. (Amaresh is a great dramatist.)

Rule 8: Before certain uncountable nouns preceded by nouns + of

Example: a piece of advice, a bit of news, a drop of water.

Rule 9: After the words many, rather, such, quite, etc. in certain structures.

Examples:
Many a friend of mine is attending the party.
Such a show cannot be arranged now.
He is rather a fool to take such decisions.

Rule 10: In certain expressions of quantity.

Example: a lot of, a couple, a great many, a good deal of, a good many, a great deal of, a few, a little.

THE is used in the following ways:

Rule 11: Before a noun denoting a hospital, temple, school, college, prison, etc. if its purpose or use is not referred to or if used not in its primary purpose.

Example: He has gone to the hospital to visit a friend.

Rule 12:
Before an adjective in the superlative degree.

Example: Michael is the tallest boy in the class.

Rule 13: With nouns that refer to things that are unique.

Example: the sun, the moon, the sky, the earth, the equator.

Rule 14: Before an abstract noun or a material if it is used with an adjunct (a qualifying clause)

(or when there is a particular reference to the material noun).

Example: The gold you have brought from the USA is of good quality.

Rule 15: Before a singular countable noun that picks out one individual, object, etc. as representative of a class.

Example: The tiger is a ferocious animal.

NOTE

All the following sentences mean the same thing.

The tiger is a fierce animal.

A tiger is a fierce animal.

Tigers are fierce animals.

Rule 16: The is used before certain adjectives to give a plural meaning.

Examples:
rich, poor, dead, sick, healthy, deaf, blind

the rich = rich people

the poor = poor people

Rule 17: With certain adjectives indicating nationality.

Example: the Dutch, the Spanish, the Chinese, the Burmese.

Rule 18: Before 'only' and ordinal numbers, such as first, second, millionth.

Examples:
All the students of the first year are invited.

The second ranker is my son.

Rule 19: Before a noun when special emphasis is needed.

Example: This is the novel I am talking about.

Rule 20: Before a common noun to give it the meaning of an abstract noun.

Example: At last, the father in him prevailed and excused him.

Rule 21: Before an adjective in the comparative degree, when the selection of one out of only two persons, places, or things is meant.

Example: Nalini is the more beautiful of the two girls in the class.

Rule 22: In special comparatives.

Examples:
The more you earn, the more you spend.

The more, the better.

The higher you go, the cooler you feel.

Rule 23: Before musical instruments.

Example: Rajani can play the piano very well.

Rule 24: Before the proper names of certain well-known or sacred books.

Example: the Mahabharat, the Ramayana, the Gita, the Bible, the Quran.

Rule 25: Before the names of certain countries each of which is a union of smaller units.

Example: the USA, the UAE, the U.K. and, etc.

Rule 26: Before the words like north south when these are used as nouns.

Example: the north of India, the Middle East, the West Asia

Rule 27: Before some proper nouns consisting of adjectives and noun or noun + of + noun.

Example: the State Bank of India, the National Museum

Rule 28: The + singular noun + clause or phrase can be used to distinguish one person from another of the same name.

Examples:
We have two Reddys, which Reddy do you want?

I want the Reddy who signed the letter.

Rule 29: Before the names of political parties.

Example: The Congress, The BJP.

Rule 30: When it is clear from the context that a particular person, place, or thing is meant.

Examples:
I talked to the principal yesterday.

The students are playing in the garden.

Rule 31: Before the names of the historical or public buildings.

Example: the Taj Mahal, the Red Fort, the Rashtrapati Bhavan.

Rule 32: Before the names of rivers.

Example: the Krishna, the Ganga, the Yamuna.

Rule 33: Before the names of seas.

Example: the Arabian Sea, the Red Sea.

Rule 34: Before the name of Oceans.

Example: the Indian Ocean, the Atlantic Ocean.

Rule 35: Before the names of certain chains of Mountains.

Example: the Himalayas, the Alps.

Rule 36: Before the names of deserts

Example: the Sahara, the Thar.

Rule 37: Before the names of newspapers, magazines.

Example: the Hindustan Times, the Statesman, the Deccan Chronicle.

Rule 38: Before groups of islands.

Example: the Andamans, the West Indies.

Rule 39: Before the names of certain countries.

Example: the Yemen, the Sudan, the Hagues.

Rule 40: Before the dates of months.

Example: the 23rd October, 1949, the 15th August, 1947, etc.

THE is omitted in the following cases:

Rule 41: Before a common noun used in the widest sense.

Examples:
In general, woman is kind-hearted.

Man is mortal.

Rule 42: Before material nouns.

Example: Gold is a precious metal.

NOTE

The may be used with a material noun if it is used with an adjunct that makes it definite.

Example: The gold we use in India is all imported.

Rule 43: Usually before proper nouns.

Example: Hyderabad is the capital of Andhra Pradesh.

Rule 44: Before abstract nouns used in a general sense.

Examples:

Honesty is the best policy.

Sincerity pays dividends.

NOTE

If an abstract noun is qualified by an adjective or an adjectival phrase or clause, it may have the article 'the' before it.

Example: The wisdom of Moses is biblically significant.

Rule 45: Before the words—father, mother, aunt, uncle, etc., in general sense.

Example: Father is very angry today.

Rule 46: Before predicative nouns denoting a position that is normally held at one time by one person only.

Examples:
Mr. Kiran was elected chairman of the committee.

He became principal of our college in 1996.

Rule 47: Before plural nouns that are used to denote a class.

Examples:
Historians study old monuments for research purposes.

Camels are useful animals in deserts.

Rule 48: Before plural nouns used in general sense.

Example: Members are requested to pay their subscriptions in time.

Rule 49: Before the names of meals.

Examples:
I had lunch at 2.30 p.m.

Let's have dinner at 9.00 p.m.

NOTE

'The' can be used when meals are preceded by an adjective or a clause or phrase particularising them.

Examples:
The dinner given by our colony association yesterday was not properly arranged.

What about the wedding dinner tonight?

Rule 50: Before common nouns used in pairs.

Examples:
He worked day and night to prepare for the Civil Service exam.

Both husband and wife are supposed to take part in this competition.

Rule 51: No article is used before the nouns in the following expressions:

to catch fire	to send word	to give ear
to lose heart	to leave home	to take offence
at home	in hand	in debt
by day	at sunrise	at noon
on demand	by land	by air
at night	on foot	at ease

Rule 52: 'The' is not used before the words—bed, hospital, sea, temple, prison, court, school, university, college, etc. when these places are visited or used for their primary purpose.

We go to bed to sleep.

We go to hospital as doctors.

We go to university for higher studies.

NOTE

When these places are visited or used for the other reasons or purposes, 'the' should be used.

Example: Sometimes I go to the prison to give lectures on morality, social behaviour, etc.

The articles a, an, or the can be used as follows in some cases:

Rule 53: When two or more adjectives qualify the same noun, the article is used before the first adjective only.

Example: He has a black and white coat.

Rule 54: When two or more connected nouns refer to the same person or thing, the article is placed before the first noun only.

Example: The chief accounts officer and financial adviser is supposed to certify your documents.

Rule 55: In expressing a comparison, if two nouns refer to the same person or thing, article 'a' is used before the first noun only.

Example: He is a better teacher than administrator.

Articles are omitted in the following cases:

English	⇒	the English language
the English	⇒	the English people

Examples:
We speak English at home.

The English and the French have fought various wars.

He has gone to market	⇒	He has gone to make purchases.
He has gone to the market	⇒	He has gone to the place where there is a market, not necessarily to make purchases.
To see light	⇒	to look at light
To see the light	⇒	to be born

Examples:
I see light at the end of the tunnel. (metaphoric use which means there is hope)

His proposals for a new international airport never saw the light of the day.

The article 'the' is omitted before the nouns in the phrases below:

He invited me to lunch/tea/dinner.

NOTE

lunch/tea/dinner are used in general sense.

Correct use of Pronouns

A pronoun is a word used in the place of a noun.

Types of pronouns:

Personal Pronouns

Person	Singular	Plural
First person	I	We
Second person	You	You
Third person	He, She, It	They

Forms of pronouns: (cases)

Nominative case (subject)	Accusative case (object)	Possessive	
I	Me	My	Mine
We	Us	Our	Ours
You	You	Your	Yours
He	Him	His	His
She	Her	Her	Hers
It	It	Its	Its
They	Them	Their	Theirs

NOTE

The forms my, our, your, his, her, its, and their are determiners. They can also be used as possessive adjectives.

Possessive Pronouns

Example: This book is his.

Reflexive Pronouns

Examples:

1. She washed herself at a well.
2. They killed themselves for no reason.
3. I must blame myself for this.

Emphatic Pronouns

Example: I offered to drive the car myself. She herself made the mistake.

Demonstrative Pronouns

Examples:

1. That is Dr. Rao's house.
2. Those are some new buildings.
3. This is your passport.
4. These are good books.

Indefinite Pronouns

Example:

1. Some are born great.
2. Anyone can take a horse to the pond, but no one can make it drink.

Other indefinite pronouns are:
somebody, anybody, anything, something, (the) other, others, another, nobody, nothing etc.

Pronouns of Number

Examples:

1. Of the ten guests, three were men.
2. Many of them are not good books.

Pronouns of Quantity

Examples: more, much, little, etc.

Distributive Pronouns

Look at the pronouns underlined in the sentences given below:

Examples:

1. Everyone has his own problems.
2. Either of these applicants can be employed.
3. Neither of the students can get through the examination.
4. Each of those players deserves a prize.
5. Everybody will be given a chance to participate in this match.

These words, which are underlined, are distributive pronouns. They are called so because they refer to persons considered individually. The distributive pronouns are in the singular number and are therefore followed by singular verbs.

NOTES

1. Neither is a negative word that is used to refer to two persons or things.
2. None is also a negative word that is used to refer to more than two persons or things.
3. The usage: Each one of the boys … (is wrong because 'one' becomes redundant).

Reciprocal Pronouns

Look at these sentences:

Examples:

1. The two girls helped each other in every respect.
2. The political parties quarrelled with one another.

Each other and one another express a mutual or reciprocal relationship. They are considered as single units and are called reciprocal pronouns or 'compound personal pronouns'.

NOTE

Each other is usually used to refer to two persons or things and one another to more than two persons or things.

Interrogative Pronouns

The words underlined in the following sentences are called interrogative pronouns because they are used in questions.

Examples:

1. Who is the president of India?
2. Whose is this calculator?
3. To whom did you give the parcel?
4. Which is the road to the hospital?
5. What have you to do now?
6. Whom did you borrow this book from?
7. Whom did she refer to in her lecture?

Relative Pronouns

Look at these sentences:

Examples:

1. The gentleman who is speaking is our principal.
2. This is the gentleman whose guest I was in Bombay.

The words underlined are pronouns standing for the nouns used before them. The nouns are called antecedents, and the pronouns are called relative pronouns. They relate the adjective clauses to the main clauses.

Rules for use of Pronouns

Now let us look at some aspects related to pronouns that will be helpful in answering questions in Sentence Correction.

Rule 1: Some important uses of the pronoun 'it' are given below with examples.

1. To introduce a sentence
   Example: It is not certain that the president will come.
2. To give emphasis to the noun or pronoun that follows
   Example: It was you who began the quarrel with us.
3. As an indefinite nominative of an impersonal verb.
   Examples:
   It rains.
   It is snowing outside.
4. In sentences showing distance
   Example: It is not far to walk.
5. In sentences indicating time.
   Example: It is ten O'clock now.
6. To introduce a phrase.
   Example: It is decided to declare a holiday today.
7. In exclamatory sentences.
   Example: What a beautiful book it is!
8. To introduce a that clause.
   Example: It is said that smoking is injurious to health.
9. As a sort of object in order to avoid repetition.
   Example: Let us fight it (the issue) out.

Rule 2: While confessing a fault (or expressing a negative idea), the sequence of the personal pronouns should be as follows:

Example: I, you, and he are in the wrong and will be punished.

Sequence: First person first, second person next, and third person last.

Rule 3: While expressing a positive idea or praise, the sequence of the personal pronouns should be as follows:

Example: You, he, and I will get an award for the good work we have done.

Sequence: Second person, third person, and first person.

In standard English, however, the sequence of third second and first is also accepted (i.e.) He, you and I ______.

Rule 4: When two singular nouns joined by and denote the same person or thing, the pronoun used for them must be singular in number. The definite article the is placed before the first noun.

Example: The accounts officer and treasurer should be careful in his work of keeping accounts.

Rule 5: When two singular nouns are joined by 'and' and are preceded by each or every, the pronoun must be in singular number.

Example: Every student and every teacher took his or her seat.

Rule 6: When a personal pronoun is connected by a conjunction with some other word in the objective case, it must be in the objective or accusative case.

Example: These clothes are for you and me.

Rule 7: When a singular noun and a plural noun are combined by or, either ... or, neither ... nor, the singular noun usually comes first in the sentence, and the pronoun must be in the plural number, corresponding to the plural noun that is closer to it.

Example: Either the manager or his subordinates failed in their duty in sending the official message.

Rule 8: The personal pronouns—yours, ours, hers, theirs and its—are written without the apostrophe (').

Examples:

Your's sincerely. (wrong)
Yours sincerely. (right)

NOTE

'It's' means 'It is' and not belonging to it.

Example: It's a mad dog which bites its tail.

Rule 9: When a personal pronoun is used as a complement to the verb to be, it (the pronoun) must be in the nominative case.

Example: It was he, who could solve the problem easily.

Rule 10: A pronoun should be used in the objective case in a sentence beginning with let.

Examples:
Let him go to his office immediately.

Let her submit the records in time.

Rule 11: One can be used to talk about people in general. The pronoun that follows one should be one's. (not his/her)*

Examples:
One should do his duty. (wrong)

One should do one's duty. (correct)

NOTE

But there is a controversy here. In American English, one can be followed by his or her. Students taking TOEFL or GRE or GMAT or SAT should keep this in mind. However, usually one need not worry about this problem. If a sentence begins with one, be sure that you or they DOES NOT follow. Hence, it is never correct to say:

If one takes this exam without studying, you are likely to fail.

Additional example: One should never tell his secrets to a gossip if he wishes them to remain secret. (correct)

Rule 12: A relative pronoun must always be placed as near its antecedent as possible. Also, it must always agree with its antecedent in number, gender, and person.

Example:
This is the manager who abused the clerk.
ant. rel. pr.

Rule 13: Generally, the relative pronoun in the objective case is omitted.

Example: The student (whom is omitted) you wanted to punish is absent today.

Rule 14: The pronouns who, whom, and whose are generally used for persons.

Who is used in the nominative case.

Whom is used in the objective case.

Whose is used in the possessive case.

Examples:
1. Sarita is the student who got an award.
2. They are the thieves whom the police caught.
3. This is the student whose certificates are lost.

Rule 15: When the relative pronoun is in different cases, one in the nominative and the other in the objective, it must be mentioned twice, once for each verb.

Example: The girl, who is my daughter and whom you met in the library yesterday, left for Mumbai this morning.

In the aforementioned example, the subject of the sentence 'the girl' is also the object of the sentence. Hence, both 'who' and 'whom' are used.

Rule 16: Uses of WHICH:

'Which' is used in the following ways:

1. For infants, small animals, and objects
   Examples:
   This is the baby which was lost in the theatre.
   This is the dog which my friend bought from the Kennel's club.
2. When selection is expressed.
   Example: Which of these television sets do you want to purchase?
3. To refer to a sentence.
   Example: He was said to be drunk, which was not true.

Rule 17: Uses of THAT:

'That' is used in the following ways:

1. For persons, lifeless things, and small animals in the singular or in the plural number.
   Examples:
   This is the girl that failed in the exam.
   This is the radio that I bought yesterday.
2. As a substitute for a singular noun already mentioned.
   (pay attention to this use, particularly in the comparative degree)
   Examples:
   The weather of Hyderabad is far better than Chennai (wrong).
   The weather of Hyderabad is far better than that of Chennai.

3. After a noun phrase used as direct object.
   Example:
   I vividly remember the night that she came.
   (Here that is used in the sense of when)

Rule 18: 'Either' and 'neither' are used in speaking of two persons or places or things etc.

Examples:
Neither Mahesh nor Mohan is intelligent.
(negative meaning is implied)

Either Mahesh or Mohan is expected to get a prize.
(positive meaning is implied)

Rule 19: Uses of each other and one another

1. Each other is used for two persons or things or places etc.
   Example: These two students love each other.
2. One another is used for more than two persons or things.
   Example: Those four countries always disagree with one another.

Rule 20: Each can come in three different positions in a sentence.

1. Each of the students got a prize. (initial)
2. The students got a prize each. (end)
3. The students were each given a prize. (middle)

Rule 21: ONE is used in the following ways :

1. For people in general.
   Examples:
   One must try to do one's duty.
   One must not be proud of oneself.
2. In place of a noun previously mentioned.
   Examples:
   Give me a banana which is a fresh one.
   Give me bananas which are fresh ones.

Rule 22: As regards anybody, everyone, everybody, etc. the pronoun of the masculine or feminine gender should be used according to the context.

Example: Everyone of the boys got his hall ticket.

Sample Exercise–7

Rewrite the following sentences after making the necessary corrections.

1. She availed of the opportunity.
2. Those two companies always help one another.
3. India and Pakistan should cooperate with one another in this matter.
4. Dear students, enjoy during the holidays.
5. The committee were divided in its opinion regarding this issue.
6. The team, after taking its bath, have gone for practice of cricket.
7. My opinion is the same as your.
8. We were told to let only you and she enter.
9. This is the scientist which won the first prize.
10. His problems are the same as my.

Correct Use of Adjectives

An adjective is a word which qualifies a noun or a pronoun.

Example:
She is a good teacher.
adj. noun

An adjective can be used in two ways:
(1) attributively (2) predicatively

An adjective is used attributively if it is placed immediately before the noun it qualifies.

Example:
She is a good teacher.
adj. noun

An adjective is used predicatively if it is used after the verb.

Example:
Bimala is intelligent.
v. adj.

An adjective has three forms: positive, comparative, and superlative. These are the three degrees of comparison:

Look at the following examples:

Superlative degree:	Mohan is the best student in the class.
Comparative degree:	Mohan is better than any other student in the class.
Positive degree:	No other student in the class is as good as Mohan.

- The positive degree of an adjective is the adjective in its simple form. It is used to refer to the mere existence of a particular quality.
- The comparative degree of an adjective denotes a higher degree of the quality than the positive, and is used, when two things are compared.
- The superlative degree denotes the highest degree of the quality.

NOTES

1. The usages 'as … as' and 'so … as' appear in positive degree.
Comparative degree has 'adjective + er ... than'.
Superlative degree has 'the + adjective in the superlative form'.
Note the use of 'the' before the adjective in the Superlative (superlative form).

2. There is no superlative degree if the comparison involves only two objects, persons, or place.

Examples:
Of the two sisters, she is the best. (wrong)
Of the two sisters, she is the better. (correct)
When selection of one of the two persons or things (sets of things) of the same kind is meant, the comparative degree is preceded by 'the' and is followed by 'of'.

Example:
She is the better of the two sisters.
Let us look at some important rules in the use of adjectives:

Rule 1: Most adjectives form their comparatives by the addition of -r or -er and their superlative by the addition of -st or -est (depending on the spelling) to the positive.

Examples:

Positive	Comparative	Superlative
Great	Greater	Greatest
Brave	Braver	Bravest

Rule 2: Some adjectives (usually having more than two syllables in the spelling) form their comparative by using the adverb more with the positive and the superlative by using the adverb most with the positive.

Examples:

Positive	Comparative	Superlative
beautiful	more beautiful	most beautiful
interesting	more interesting	most interesting

Rule 3: (very important) When two qualities in the same person or thing are compared, the comparative degree is formed by using more, instead of -r or -er with the positive.

Example:
Reddy is more wise than intelligent.

(This sentence means that Reddy is both wise and intelligent. But his wisdom is greater than his intelligence.)

Rule 4: When an object is compared with the rest of the group, the latter term of comparison must exclude the former by using 'any other'.

Examples:
Gold is more precious than any other metal. (correct)

Gold is more precious than any metal. (wrong)

Rule 5: There are some words which are used only in the positive and cannot be used in the comparitive or in the superlative.

Example: interior, exterior, ulterior, major, minor.

- This is more inferior than that. (wrong)
- This is inferior to that. (right)

Rule 6: The following are used as comparative adjectives and are followed by to and not than:

Example: superior, senior, junior, inferior, prior, anterior, posterior, prefer.

Rule 7: The adjectives—empty, excellent, circular, extreme, chief, entire, complete, perfect, final, last, unique, universal, round, square, triangular, eternal, etc., are not used in the comparative or superlative degree.

Rule 8: Some adjectives can be used only in the positive and in the superlative. They are:

Positive	Superlative
top	topmost
northern	northernmost
southern	southernmost
eastern	easternmost
western	westernmost

Rule 9: The adjective 'preferable' is used as a comparative. It is followed by to. It is not used with more.

Examples:
This is more preferable than that. (wrong)
This is preferable to that. (correct)

Rule 10: The comparative adjectives ending in 'or' are followed by the preposition to.

Inferior, superior, prior, anterior, posterior, senior, junior

Examples:
He is superior to me. (correct)
He is superior than me. (incorrect)

Rule 11: Sometimes the words much, less, far, etc. are used before the comparatives to denote emphasis or excess.

Example: Ramakrishna is by far the ablest lecturer in the college.

Rule 12: Two adjectives that refer to the same noun or pronoun joined by a conjunction must be in the same degree of comparison.

Example: Gandhiji is the noblest and wisest of all national leaders.

Rule 13: Certain adjectives, when preceded by 'the' become nouns in plural and require a plural verb if they are used as subjects.

These are rich, poor, needy, aged, blind, dead, meek, wicked, etc.

Examples: The rich (rich people) usually hate the poor (poor people).

Rule 14: Some adjectives often confused:

1. FARTHER - FURTHER
   Farther denotes more distant in space,
   Examples:
   Sheela lives at the farther end of this street.
   Further means additional; more

Examples:
There is nothing further to say about him.
For further details, please contact the director.

2. Many, a great many, a good many
All these take a plural noun and a plural verb after them.

Examples:
1. A great many people died in the cyclone.
2. My sister has a good many friends.

3. Use of many + a + noun (singular) + verb (singular) structure :

Examples:
Many a delegate is attending this seminar.
(meaning: Many delegates are attending this seminar)

4. MODIFIERS: FEW, LITTLE, MUCH, and MANY
Few is used with plural nouns. Little is used with singular non-count nouns.

Without articles, few and little usually have rather negative meanings. They often suggest 'not as much/many as one would like', or 'not as much/many as expected' or a similar idea.

With articles 'few' and 'little', i.e. a few, and a little, are more positive in meaning. Their meaning is closer to 'some'. They often suggest ideas like 'better than nothing' or 'more than expected'.

Examples:
(a) There are few books on 'Thermodynamics' in the library; so, you have to purchase them.
(b) You don't need to go shopping. There are a few eggs in the fridge.
(c) I've got a little bread and cheese. It'll be enough for supper.

Difference between fewer and less: In theory, fewer (the comparative of few) is used before countable nouns and less (the comparative of little) before uncountable words.

Examples:
(a) There are fewer exploited workers than there used to be.
(b) My friend earns lesser than a postman does.

Note the following:

PD		CD		SD
few	-	fewer	-	fewest
little	-	less/lesser	-	least

* fewer and less (lesser) are followed by than as they are the comparative forms.

NOTE

'Many' like 'few' is used before a count noun.

Example:
Many/few students.
CN

'Much', like 'less' is used before a non-count or a material noun.

Example:
Much/less water.
NCN

5. MODIFIERS—TOO, VERY, ENOUGH
Compare the meanings and patterns of too, very, and enough.

(a) Very means to a high degree but does not suggest impossibility.
Mary is very intelligent.

(b) Too suggests impossibility or undesirable degree.
too + adj + to + v
She is too sick to come to class today

Note: It is better not to use 'too' with a positive adjective.
Instead of 'too' it is better to use 'very'.

(c) Enough suggests possibility or sufficient degree.
He is tall enough to play basketball.

NOTES

1. Be careful to put enough after the adjective.
2. Be careful to put to+v (infinitive) after enough.
3. In patterns 1 and 2, do not use any other structure word after the adjective or adverb except to.
4. In the aforementioned patterns, adverbs can be used in the same position as adjectives.
Example:
Mary sings very well.
5. Enough can come before or after a noun to express sufficiency.

Examples:
He had money enough to buy a new car.
N
OR
He had enough money to buy a new car.
N

6. MODIFIERS—NEGATION
There are some words that have negative meanings even though they do not appear to be negative, for example: hardly, scarcely, rarely, seldom, without, and only. Do not use another negative word with these words.

Examples:
(a) He had scarcely enough money to purchase books.
(b) They went to bed without dinner.

Note: Scarcely and hardly are followed by when and not than. No sooner is followed by than.

These expressions mean 'as soon as'.

Examples:

(a) As soon as I reached the station, the train left.

(b) No sooner had I reached the station, than the train left.

No sooner + had + subject + past participle + ….

(c) No sooner did I reach the station, than the train left.

No sooner + did + subject + present tense verb + ….

Similarly: Hardly/Scarcely + had + subject + past participle … when ….

OR

Scarcely/Hardly + did + subject + present tense verb … when ….

Rule 15: MODIFIERS—ADJECTIVES AFTER VERBS OF SENSATION

These verbs of sensation are generally followed by adjectives* not by adverbs: feel, look, seem, appear, smell, taste, and sound.

(* These are also called predicate adjectives)

He feels bad	(correct)
He feels badly	(wrong)
The soup smells delicious	(correct)
The soup smells deliciously	(wrong)

Rule 16: MODIFIERS—HYPHENATED OR COMPOUND ADJECTIVES

Nouns are sometimes found as part of hyphenated or compound adjectives (adjectives of more than one word joined by hyphens). These nouns are never plural.

I bought a four hundred year-old painting in Germany.

HYPHENATED ADJ. N

Some more examples:

1. B.Com is a three-year degree course.
2. This is a ten-kilometre-long distance.
3. The professor has delivered a two-hour lecture today.

Rule 17: MODIFIERS—CARDINAL AND ORDINAL NUMBERS

There are two kinds of numbers, cardinal and ordinal.

Examples:

CARDINAL	ORDINAL
one	first
two	second
three	third
four	fourth
twenty-one	twenty-first

The following patterns are used to designate items in a series:

1. Ordinal numbers are used in this pattern:
   THE + ORDINAL + NOUN
   The first book of the series is about verbs.
2. Cardinal numbers are used in this pattern:
   NOUN + CARDINAL
   Book one of the series is about verbs.

NOTES

1. Use the with ordinal numbers.
2. Do not use the with cardinal numbers.
3. Be careful to use the correct word order for each pattern.

Rule 18: MODIFIERS: NOUN ADJECTIVES

The first noun (N) in the following pattern is used as an adjective.

All these are language students.
N N

NOTES

1. When nouns are used as adjectives, they do not have plural or possessive forms.
2. Exceptions: The following nouns always end in -s but are singular in number when they are used as names of courses or sciences : Physics, Mathematics, etc.

He is an Economics teacher.
N N

BUT The current economic situation is extremely uncertain.

NOTES

'Economic' is an adjective here.
'Economical' means frugal, thrifty.

SAMPLE EXERCISE–8

Correct the mistakes relating to the use of adjectives in the following sentences where necessary.

1. The two first chapters of this book are very important.
2. Suvarna is greater than any student in the class.
3. Shakuntala is better than any drama in Sanskrit.
4. His house is further from the station than yours.
5. The later suggestion is better than the former.
6. These flowers smell sweetly.
7. Little learning is a dangerous thing.
8. Her birthday is the most happiest event this year.
9. Usually the rich people hate poor.
10. Go and meet the concerned clerk in the university.
11. Honour is dear to me than life.
12. Little act would have saved the situation.
13. The tiger is the ferocious of all animals in the forest.
14. My knife is the sharpest of the two.

Correct use of Adverbs

An adverb is a word which modifies a verb, an adjective, or another adverb in a given sentence.

Examples:

She is reading very fast.
verb adv.

She is a very intelligent girl.
adv. adj.

The horse runs very quickly.
adv. adv.

(**Note:** usually the adverbs end with -ly.)

Rules Pertaining to Use of Adverbs

Rule 1: In order to make our meaning clear, an adverb must be placed as near as possible to the word it modifies.

Examples:

She has only three dollars with her.
adv. adj.

He says he often visits my place.

He often says he visits my place.

NOTE

Other adverbs like only are: just, nearly, hardly, almost, and scarcely.

Read the following examples:

Wrong : We only have four hours to finish this paper.
Right : We have only four hours to finish this paper.
Wrong : She just wants to take one class. (not anything else)
Right : She wants to take just one class. (not even second)
Wrong : That building nearly costs sixty thousand rupees.
Right : That building costs nearly sixty thousand rupees.

Rule 2: When an adverb modifies an intransitive verb, it usually follows it.

Examples:

- She sang melodiously.
- She writes neatly.

Rule 3: When a verb consists of an auxiliary and a main verb, the adverb is placed between the auxiliary and the main verb.

Wrong : I have told him often not to come late.

Right : I have often told him not to come late

Rule 4: When an adverb modifies an adjective or another adverb, the adverb usually comes before it.

Examples:

The cuckoo sings quite sweetly.
adv.

Do not speak so fast.
adv.

NOTE

The adverb 'enough' is always placed after the word it modifies.

- Why don't you speak loud enough to be heard.

Rule 5: The word 'only' should be placed before the word it is intended to modify.

Examples:

- Only she gave me this book. (i.e. she and nobody else)
- She only told me the truth. (and nothing else)
- I solved only two problems. (correct)
- I only solved two problems. (incorrect)

Rule 6: POSITION OF ADVERBS

The position of adverbs is often determined by shades of meaning, for which rules cannot be given, but some generalizations can be made.

Adverbs of frequency: always, often, rarely, never, ever, generally, usually, sometimes, occasionally, etc.

- If the verb is in the simple tense form, the adverb is usually placed between the subject and the verb, preferably before the verb it modifies.
  He always goes to college on foot.
  He often visits the US.
  His brother never takes alcohol.
- When the verb is some form of 'be' (is, am, was, are), the adverb follows the verb:
  They are always late.
  He is never punctual.
  If you are ever in trouble, please meet me.

If the verb is a compound one, the adverb is usually placed after the auxiliary:

I shall never forget his help.

He will always behave properly.

In negative sentences, the adverb of frequency follows not.

They are not often late.

In interrogative sentences, the adverb of frequency follows the subject immediately:

Does he often go fishing?

Has he ever travelled by air?

At times 'often' may be placed at the end to emphasize it. This is mainly confined to negative statements and questions.

He does not see his friend often, as he lives in a remote village,

'Never' is sometimes placed at the beginning to emphasize it. Then, the verb and subject are inverted as in a question.

I never saw such an accident.

Never did I see such an accident.

(S–V becomes V–S here)

Rule 7: USE OF HARD, HARDLY, SCARCE, SCARCELY

1. Hard as an adverb means 'diligently' . It usually follows the verb.
   He works hard to make both ends meet.
2. Hardly when used as an adverb means scarcely, barely It conveys a negative meaning.
   Hardly (scarcely) had he reached the station, when the train left.
   Note: Hardly and scarcely are followed by when, not than. No sooner is followed by than not when. (This is very important.)
3. Scarce as an adjective means 'not plentiful', hard to find, not often found.
   Coal has become scarce in England.
   Scarcely as an adverb is almost synonymous with 'hardly'.
   I can scarcely hear you.
   They have scarcely enough money to look after their children.

Rule 8: SPLIT INFINITIVE

The infinitive is to + the simple form of the verb (V).
Do not put an adverb between to and verb.

1. He refused to do the work quickly.
   to+v Adv.
2. They have decided to repeat the experiments carefully.
   to+v adv.

Wrong: He wanted to carefully read the directions.
Right: He wanted to read the directions carefully.

Rule 9: DANGLING MODIFIER

The subject of the main clause must be the same as the understood subject of the introductory phrase. In other words, the introductory phrase modifies the subject of the main clause.

Examples:

1. Looking at his watch, Mr.Vijaykumar got up and left.
   Introductory Ph. Subject
   Who looked at his watch? Mr. Vijaykumar
   Who got up and left? Mr. Vijaykumar
2. Traveling to Bombay, Nalini injured her leg.
   Introductory Ph. Subject

NOTE

Both these sentences are right. In both these sentences, the subject of the introductory phrase and the subject of the main clause are same.

Wrong: When only a baby, my mother took me to the circus.
Right: When only a child, I was taken to the circus by my mother.

Sample Exercise–9

Direction for questions 1 to 4: Fill in the blanks with suitable adverbs.

1. The speaker pauses ________ in order to heighten the beauty of his speech.
(A) hastily (B) briefly
(C) lustrously (D) incandescently

2. He always speaks ________ unmindful of the seriousness of situation.
(A) facetiously (B) soberly
(C) solemnly (D) thoughtfully

3. Though they are married, they are living ________.
(A) apart (B) away
(C) differently (D) together

4. The politician was careless and ________ made promises.
(A) uncommunicatively (B) inconsiderately
(C) uncommittedly (D) unceremoniously

Correct Use of the Verb

Structure of the Verb Phrase

A verb indicates the action done by the subject or the state of being of the subject.

Examples:

1. He has completed the work. (action)
2. Radha is an intelligent student. (state)
   In every sentence you find a verb phrase (VP).
   A verb phrase may have a single word, two words or a group of words.

Examples:

1. The Sun rises in the east.
   1
2. He has ordered tea for us.
   1 2
3. She has been teaching English since 1965.
   1 2 3
4. She will have been typing when I meet her at 10 a.m.
   1 2 3 4

Verbs —
- Main Verb
- Auxiliary Verb

Main Verb – Basic forms —
- Simple Present Tense - Sing
- Simple Past Tense - Sang
- Present Participle - Singing
- Past Participle - Sung

Auxiliary Verbs and Their Forms

	Primary Auxiliaries	Modal Auxiliaries
BE	be, is, are, am, was, were, being, been	can, might, may, must, will, needn't
HAVE	have, has, had, having	shall, daren't, should, ought
DO	do, does, did, doing, done	would, used to, could

NOTE

The verb phrase in any sentence is constituted by using only the main verb form or one of the basic forms of the main verb and the primary auxiliaries or modal auxiliaries or both the primary auxiliaries and the modal auxiliaries.

Examples:

1. I teach English.
   MV
2. I am teaching English now.
   PA MV
3. I will have been teaching English.
   MA PA PA MV

Special Note: Every verb phrase has a particular structure acceptable according to standard written English.

The verb phrases in the following sentences are wrong.

1. I will the work
2. I will did the work
3. I going there
4. I can done the work

Verbs: Transitive and Intransitive

The verbs that do not require or do not have objects in the sentence in which they are used are called intransitive verbs (IV).

In the following sentences, complements are used, not objects.

Examples:

This book costs ten rupees
IV comp.

The play lasted an hour
IV comp.

The birds fly in the sky
IV adv. ph.

The verbs that require or have objects are called transitive verbs

Example:

The professor gave them some assignments
v object

NOTE

There are a number of verbs which can be used with or without objects, that is, 'transitively' or 'intransitively.' Here are some examples of verbs used both intransitively and transitively.

Intransitive use	Transitive use
My father is reading.	He is reading the newspaper.
The play ended at five.	Rain ended the play.

Verb—Voice

There are two voices:

1. Active voice
2. Passive voice

Notice the change in the following sentences.

1. She has done the work. (A.V)
   The work has been done by her. (P.V)
2. These engineers can draw good designs. (A.V)
   Good designs can be drawn by these engineers. (P.V)
3. The Principal read the report. (A.V)
   The report was read by the Principal. (P.V)

NOTES

1. Depending on the emphasis we want to lay, we use a particular voice in a particular context.
Examples:
Some people dug a well to provide water to the village (A.V)
A well was dug to provide water to the village (P.V)
Here we would prefer to use the second rather than the first sentence, because what we want to refer to is not the action of the Panchayat but the result of the action, namely, a well, being provided in order to supply water to the village. Who dug the well is not the main idea in our minds.

2. Intransitive verbs do not have passive voice, i.e. we cannot transform a sentence from active to passive if the verb is intransitive.

For example, the sentence 'Birds fly in the sky' cannot be transformed into passive voice.

A more detailed note on voice is included in a later chapter.

Verb—Form and Use of the Tenses

There are 12 tense-structures in English.

PRESENT

Simple Present	:	I teach English.
Present Continuous	:	I am teaching English.
Present Perfect	:	I have taught English
Present Perfect Continuous	:	I have been teaching English.

PAST

Simple Past	:	I taught English.
Past Continuous	:	I was teaching English
Past Perfect	:	I had taught English.
Past Perfect Continuous	:	I had been teaching English

FUTURE

Simple Future	:	I will teach English.
Future Continuous	:	I will be teaching English.
Future Perfect	:	I will have taught English.
Future Perfect Continuous	:	I will have been teaching English.

Uses of Tenses—Some Important Rules

Simple present tense is used to express habitual actions, permanent or verifiable truths, or facts (scientific or universal).

1. He goes to church every Sunday.
2. Water boils at 100°c.
3. Calcutta stands on the banks of the Hoogli.
4. The sun rises in the east.

The simple present tense is used to express a planned future action or a series of such planned actions.

1. We leave Hyderabad at 8:30 p.m. next Tuesday and arrive in New Delhi at 11 a.m. on Thursday.

The present continuous tense is used to describe an action that is in progress at the time of speaking.

2. The children are playing in the garden now.

The present continuous tense is also used to describe an action that is in progress and will be continued, but not necessarily going on at the moment of speaking.

3. The college authorities are building a new hostel.

The present continuous tense can also express an action that has been arranged to take place in the near future and one's immediate plans.

1. I am meeting the CM tomorrow morning.
2. We are going to a movie this evening.

There are a number of verbs that are not normally used in the present continuous tense. These are:

1. verbs of perception :
   see, hear, smell, notice, etc.
2. verbs used to express feelings or states of mind:
   want, desire, wish, refuse, forgive, care, hate, like, admire, love, etc.
3. verbs involving the process of thinking:
   feel, know, mean, remember, forget, recall, etc.
4. verbs denoting possession:
   have, own, belong, possess, etc.
5. verbs such as:
   contain, consist, keep, seem, cost

When some of the above-listed verbs are used in the present continuous tense, their meanings change.

1. I see several mistakes in this book.
   I am seeing the principal at 3 p.m.
   (will be meeting)
2. We hear several rumours about the Minister.
   The judge is hearing the case tomorrow. (conducting the trial)
3. I have a house at Malakpet.
   I am having my breakfast. (act of eating)

The following sentences are wrong:

1. I am loving that girl. (love ✓)
2. They are understanding the lesson. (understand ✓)
3. I am slowly understanding you. (wrong)
   I have begun to understand you. (right)
4. I am having a telephone at my residence. (have ✓)

The present perfect tense is used to indicate an action that has just been completed.

Examples:
I have finished my work. (just now)

The present perfect tense is also used to represent a past action continuing to the present.

Examples:
We have lived in Hyderabad for ten years. (I.e. we are still living in Hyderabad.)

Do not use present perfect tense (has or have) when time is specified (e.g. last year, 1994) in the sentence.

Examples:
I have seen this film last year. (incorrect)

I saw this film last year. (correct)

Also note that for and since are commonly used with the present perfect tense. 'For' shows length of time and 'since' shows some point of time in the past as being the starting point of the action or event.

Examples:
1. My friend has lived in Hyderabad for twenty years. (He still lives here)
2. These monuments have been here since 1650 A.D. (still they are here)

The following are some time-expressions that go with the simple past and some that go with the present perfect.

Simple Past Tense	Present Perfect Tense
yesterday	so far
a week ago	since
recently	lately

Note the difference in meaning between the following two sentences:

Dr. Mohan lived in Delhi for fifteen years. (in the past)

Dr. Mohan has lived in Delhi for fifteen years.
(still Dr. Mohan lives in Delhi)

Simple past tense indicates an action completed sometime in the past.

Example: I lived in Hyderabad for ten years. (in the past)

Past Progressive Tense:

1. The past progressive (continuous) tense expresses an action that was in progress at a point of time in the past, having begun before that point and probably continuing after it.
   Examples:
   (a) I was reading the newspaper at 7 a.m. this morning.
   (b) I was having my breakfast at 9 a.m.
2. The past progressive tense expresses an action continuing over a period of time in the past.
   Example: The students in the hostel were listening to the cricket commentary the whole of yesterday.
3. The past continuous tense describes two or more actions going on at the same time; often the conjunction 'while' is used to connect the clauses.
   Example: While some boys were reading in the library, the others were playing.

Past Perfect Tense:
This tense is used when we wish to emphasize the sequence of the two actions in the past and when the earlier action has some relation to the later action or situation.

Examples:
1. On reaching the school, I found that I had forgotten to bring my English textbook.
2. When we reached the theatre, the play had begun already.
3. I borrowed some money from a friend of mine, since I had lost my purse.

The Future Tense:
There are several ways of expressing future time in English.

One of the most common ways to express this is to use shall or will with the bare forms of the verb : shall come, will go, etc. But there are other ways of expressing the future :

Example: Our cricket team leaves for Bombay this evening. They play two matches in Bombay. They play one at Poona. They return next Monday.

In the aforementioned sentences, the present simple tense is used to express a series of intended or planned actions in future.

1. The PM is visiting the city tomorrow.
2. The college team is playing a match with the city team next Sunday.

The present continuous tense is used in these sentences to express a future event. Usually, the time is mentioned (tomorrow, next sunday, etc.), and it is in the near future. Note that the verbs go and come are not usually used with going to. We don't say, for instance, He is going to go to Bombay tomorrow; we say, He is going to Bombay tomorrow.

Special expressions to indicate future:

1. The train is about to leave.
2. The President is about to speak.

This construction be about to + verb expresses events that are likely to happen in a very short while.

1. I am to be at a meeting at 5 o'clock.
2. There is to be an enquiry into the railway accident.

In these sentences, the form be + to + the base form of the verb is used to express a duty or necessity or planned course of action in the future.

Subject and Verb Concord (Agreement)

General rule: The verb must agree with its subject in number and person. In other words, the verb must be of the same number and person as the subject.

NOTE

In the correction of sentences section of many competitive examinations, the S–V concord is usually tested.

Rule 1: When two subjects are joined by 'and', the verb is plural.
My friend and his father are in India.

Rule 2: When two singular nouns joined by and refer to the same person or thing, the verb is singular.

The secretary and treasurer has been arrested.

The District Magistrate and Collector is on leave today.

NOTES

1. Article 'the' is used only once when the two nouns refer to the same person or thing.
2. If the two nouns refer to different persons or things, article 'the' is used before each noun. In such cases, the verb will be in the plural form.

Example: The secretary and the president have been given warm welcome.

Rule 3: If two different singular nouns express one idea, the verb should be in the singular form.

Bread and milk is good for breakfast.

Rice and curry is my favourite dish.

This is the long and the short of the matter.

Rule 4:
When two singular subjects are practically synonymous, the verb should be in the singular form.

The law and order situation in the state is under control.

His power and influence is on the decline.

Power and position has no charm for my friend.

Peace and prosperity is the need of the day.

Rule 5: If two singular subjects (combined by and) are preceded by each or every, the verb should be in the singular.

1. Every boy and girl was present in the class yesterday.
2. Every man and every woman has the right to express his or her view.

Rule 6: When the subjects joined by 'either–or' or 'neither–nor' are of different persons, the verb will agree in person and number with the noun nearest to it. Also, the plural subject must be placed nearest to the verb. (This is very important and)

Either Radha or Rajani has done this mischief.

Neither Mohini nor Ragini is beautiful.

* Either the chief minister or the cabinet ministers are responsible for this problem.

Neither you nor he is to take up this task.

Either you or I am responsible for this mistake.

Rule 7: If connectives such as with, together with, as well as, accompanied by are used to combine two subjects, the verb agrees with the subject mentioned first.

The President of India together with his personal secretaries is invited to this function.

The actress, along with her manager and some friends, is attending the function.

Mr. Michael, accompanied by his wife and children, is arriving tonight by train.

NOTE

If the conjunction and is used instead, the verb would then be plural.

Compare (i) Saritha and Rajitha are our professor's daughters.

Rule 8: When 'not only … but also' is used to combine two subjects, the verb agrees with the subject close to it.

Not only Harish, but also his brothers were arrested.

Rule 9: None / No

None can take either a singular or a plural verb depending on the noun which follows it;

Structure: none + of the + non-count noun + singular verb

None of the counterfeit money has been found.

Structure: none + of the + plural count noun + plural verb

None of the students have finished the exam yet.

No can take either a singular or plural verb depending on the noun which follows it.

Structure: No + singular noun + singular verb.
Example: No example is relevant to this case.

Structure: No + plural noun + plural verb
Example: No examples are relevant to this case.

Rule 10: Many words indicating a number of people or animals are singular. The following nouns are usually singular. In some cases, they are plural if the sentence indicates that the individual members are acting separately.

congress	family	group
committee	class	organisation
team	army	club
crowd	government	jury
minority	public	

Examples of collective nouns used with a singular verb:
The committee has met, and it has accepted the proposal.
The family was happy at the news.
The crowd was wild with excitement.
The Congress has initiated a new plan to combat inflation.
Our team is certain to win the match.
Some collective nouns are used in plural:

Examples:
The committee have arrived by different trains.
The family were fighting over inheritance.
The family living next door often quarrel among themselves

Rule 11: Majority can be singular or plural. If it is alone it is usually singular, if it is followed by a plural noun, it is usually plural.

The majority believes that the country can progress.

V

The majority of the lecturers believe that the student has not copied in the examination.

V

Rule 12: A number of/the number of observe the two structures:

1. A number of + plural noun + plural verb.
2. The number of + plural noun + singular verb.

Examples:
1. A number of students are going to the class picnic.
2. The number of days in a week is seven.
3. The number of residents who have been living in this colony is quite small.
4. A number of the applicants have already been interviewed.

Rule 13: Collective nouns indicating time, money, and measurements used as a whole are singular and take a singular verb.

Twenty-five rupees is not such a big amount for him.
Two miles is too much for this man to run.

Rule 14: When a lot of, a great deal of, plenty of, most of, and some of refer to number, a plural verb is used.

Examples:
A lot of people were present in the gallery.
Some of the students were absent.

NOTE

If these expressions refer to an amount or an uncountable noun, the verb is in the singular number.

Examples:
A lot of work has to be completed before we go.
A great deal of work has been finished.

Rule 15: When the percentage or a part of something is mentioned with plural meaning the plural verb is used.

Examples:
30% of Indian women are literate.

Three-quarters of the food has been eaten.

(Here the reference is to the food as a whole.)

Rule 16: 'Barracks', 'headquarters', 'whereabouts' 'alms', etc. take a singular verb, as well as the plural verb.

The headquarters of the UNO is/are New York.

Rule 17: In sports, while referring to the players, the name of the country is followed by plural verb.

England have won the World Cup.
V

Rule 18: When the word 'enemy' is used in the sense of 'armed forces' of a nation with which one's country is at war, we have to use the plural verb:

The enemy were forced to retreat.

Sample Exercise–10

Direction for questions 1 to 4: Fill in the blanks with 10 appropriate verbs.

1. I am sure that you will soon ________ to this environment.
(A) get used (B) be used
(C) be habituated (D) be linked

2. I ________ him from taking unnecessary loans.
(A) distinguished (B) dissuaded
(C) diverted (D) dissented

3. He ________ his studies.
(A) has left (B) is learning
(C) deserts (D) has discontinued

4. This big book ________ 30 chapters.
(A) is comprising of (B) consists
(C) comprises of (D) comprises

Non-Finites

Verbs can be classified as

1. Finites and
2. Non-finites.

A finite verb is a verb that denotes tense.

Example:
He goes to school.

'Goes' represents the simple present tense.

Similarly 'went', 'gone' are the other forms of the verb. These have been discussed in a later chapter.

Non-finites are verb forms that do not give complete (finite) meaning. They have none of the tenses, have no number, and take no modals (auxiliary verbs). There are four types of non-finites:

1. Infinitive
2. Gerund
3. Present participle
4. Past participle

Look at these sentences:
1. She wants to buy a new house. (Infinitive)
2. Buying a new house needs money. (Gerund)
3. I found him looking for a new house. (Present participle)
4. Wounded in the war, the soldier was brought to the medical camp. (Past participle)

The Infinitives

1. Look at the forms of the infinitive in the following sentences:
(a) Rajitha wanted to learn photography.
(b) She is reported to be learning it.
(c) She is reported to have learnt painting already.
(d) She is known to have been learning music for the last five years.

In these sentences, you see four forms of the infinitive. The following are the structures of these four infinitives.

Sentence (a)	to + verb
Sentence (b)	to be + verb -ing (present participle)
Sentence (c)	to have + past participle
Sentence (d)	to have + past participle of be + verb -ing

Some of these forms have the corresponding passive voice.

to learn—to be learnt:
There is a great deal to be learnt in photography.
To have asked—to have been asked:
He was happy to have been asked to deliver the convocation address.

2. The aforementioned infinitives have the word to before them.
   But look at these sentences:
   (a) The mother made the child drink the medicine.
   (b) Then she let the child go out and play.

'To' is very commonly used with the infinite, but it is not a necessary sign of the infinitive. The following verbs take the infinitive without 'to'.

1. The principal verbs: can, must, let, make, bid, dare, please, need, etc.
2. Verbs denoting some kind of perception: see, hear, feel, watch, know, think, etc.

Examples:

1. Make her do the work.
2. You need not go there.
3. Please go there.
4. Let him stand there.

The infinitive without 'to' is used after had better, had rather, had sooner, would rather, sooner than, rather than.

Examples:

1. You had better meet your uncle.
2. He would rather fight than give up.
3. I had rather write than play.
4. She had sooner run than walk.

SAMPLE EXERCISE–11

Rewrite the following sentences using to, wherever necessary, before the verbs given in the brackets.

1. Dr. Rao asked his daughter _____ home before 9 o' clock. (come)
2. If you have planned _____ the airport before five, you had better _____ at once. (reach, start)
3. He wouldn't let anyone _____ his bicycle. (use)
4. We wanted _____ the house where Mahatma Gandhi was born. (see)
5. He would rather _____ than _____ a lie. (die, tell)

THE GERUND

The gerund and the present participle have the same form, verb + ing : swimming, walking, cutting, etc. (the gerund is also called the verbal noun)

Uses of the gerund:

1. As the subject of a verb:
   Swimming is a good exercise.
   Smoking is injurious to health.
   Speaking is easier than writing.
   Looking after children needs a lot of patience.
2. As the object of a verb:
   He likes reading detective novels.
   Would you mind returning these books to him?
   I hate waiting at bus stop.
3. As the object of a preposition:
   The minister inaugurated the school by lighting a lamp.
   He was fined for being drunk.
   He is thinking of resigning his job.
   They resumed their journey after resting for an hour.
4. As the subject complement:
   Talking to him is wasting time.
   Seeing is believing.

NOTE

When a noun or pronoun is placed before a gerund, it must be in the possessive case.

Example:

- I was pleased at Robert coming here (Incorrect)
- I was pleased at Robert's coming here (Correct)
- They insisted upon me writing the essay. (Incorrect)
- They insisted upon my writing the essay. (Correct)

But the possessive case cannot be used with the gerund in the following cases.

1. When the noun denotes a lifeless thing.

Examples:

There is no danger of the wall's falling down. (Incorrect)

There is no danger of the wall falling down. (Correct)

NOTES

1. The following verbs can take either an infinitive or a gerund as an object.

Continue regret	try	propose
forget	neglect	remember learn

2. The following verbs can be followed by the infinitive (to + V) as the direct object.

agree	forbid	learn	offer
care	forget	plan	decide
hope	pretend	deserve	intend
mean	refuse		fail

3. The following verbs can be followed by the gerund (V + ing) as the direct object.

admit	deny	postpone	appreciate
enjoy	practise	avoid	finish
stop	cannot help	keep	suggest
consider			

4. The following verb phrases (verb + preposition) can be followed by the gerund (V + ing). Remember that gerunds, not infinitives, follow prepositions in general.

decide on	think about	keep on	think of
plan on	put off	look forward to	

The Participle

Look at the words underlined in these sentences.

1. The crying child gets milk.
2. We found a man running for the bus.
3. Inaugurating the seminar, the Education Minister spoke about the prohibition policy.

The words underlined are participles. There are two types of participles.

1. The present participle
2. The past participle

The form of the present participle:

Verb + ing	Example:	cry + ing

The form of the past participle:

V + ed	Example:	wound + ed
	(OR)	
V + en	Example:	drunk + en

Wrong use of participles:

1. Whenever a participle is used, the noun or pronoun to which it refers, must also be mentioned.
   Look at the following sentence:
   While taking a bath, the shampoo bottle fell.
   What is wrong with this sentence?

The sentence, as it stands means that the 'shampoo bottle' was taking a bath. In other words, there is no noun or pronoun to which the participle 'taking' refers. Hence, the sentence should be re-written, as 'while I was taking bath, the shampoo bottle fell.'

Given below are a few more examples.

1. Being a rainy day, I did not go out. (Incorrect)
   It being a rainy a day, I did not go out. (Correct)
2. Crossing the road, a truck hit her. (Incorrect)
   While she was crossing the road, a truck hit her. (Correct)

NOTES

1. Sometimes the spellings of the past participles are not different in the case of some verbs.
Example: come, hit, etc.
2. Sometimes, the present participle and the past participle can function like adjectives.

Examples:

1. The wounded soldier was carried to the medical camp.
   past. part.
2. A rolling stone gathers no moss.
   pre. part.

Correct Use of Prepositions

A preposition is a word placed before a noun or a pronoun or a noun equivalent and shows some relationship between that and some other word in the sentence.

1. Mohan gave a lecture on patriotism.
   prep N
2. The prize is given to her
   prep. pr. noun
3. His objection is to what all you say.
   prep. noun eq. (clause)

The words underlined are called prepositions because they normally take position before (pre) a noun. The preposition is said to 'govern' the noun that follows it. The noun is said to be the 'object' of the preposition.

Besides single-word prepositions, there are also phrases which do the work of prepositions and are called 'phrase prepositions.'

Types of Prepositions:

1. Single-word prepositions
   in, on, after, at, with, under, above, etc. (These are simple prepositions.)
2. Phrase prepositions (complex prepositions)

Some types of complex preposition structures with examples are given below.

1. Adverb + preposition
   along with, apart from, as for, as to, away from, onto, out of, together with, upto, such as, instead of
2. Verb/adjective/conjunction, etc. + preposition
   except for, owing to, due to, but for, because of.
3. Preposition + noun + preposition
   by means of, on account of, in comparison with, in accordance with, in view of, in spite of,

NOTE

On certain occasions, it is both necessary and correct to end a sentence with a preposition. English is a flexible language and defies pedantic rules of grammar.

Now, look at the following sentences:
This is the boy I gave the book to.
This is the house that I was born in.
In these sentences, the preposition is used at the end of a sentence.

Object of the Preposition

The noun or noun-equivalent (pronoun, adverb, gerund, infinitive, adverbial clause, or any clause that can be used as the object of the preposition) before which the preposition is placed is called its object.

Examples:

The glass is on the table.	(noun)
I depend on him.	(pronoun)
Go away from here.	(adverb)
He is fond of playing.	(gerund)
She was well till a few days ago.	(adverbial phrase)
I shall see it for what it is worth.	(adverbial clause)

Rules Pertaining to the Use of Prepositions

Rule 1: A preposition is placed at the end of a sentence in the following ways:

1. When the relative pronoun is 'that':
   Example: Here is the pen that you are looking for.
2. If a preposition governs a relative pronoun:
   Example: This is the student whom I spoke about.
3. When the relative pronoun is understood:
   Example: This is the person you spoke to.
4. If a preposition governs an interrogative pronoun or an interrogative adverb:
   Example: What are you looking at?
5. When the preposition is used with the infinitive placed at the end of the sentence:
   Example: Do you have a chair to sit on?
6. When the object governed by the preposition is placed first:
   Examples: This I insist on.
   He is known all the world over.

Rule 2: A preposition can also be used at the beginning of an interrogative sentence.

Examples:
In which city do you live?
To whom are you referring?

Rule 3: There are many words which can be used as prepositions or as adverbs. The most important of these are about, above, across, along, before, below, behind, besides, by, down, in, near, off, over, past, round, through, under, up, etc.

Examples:

Preposition	Adverb
He was here before ten.	*He has done this before.*
He was behind us.	*She is long way behind.*
The shop is just round the corner.	*Come round and see me this afternoon.*

Rule 4: There are some words with prepositions, which require gerunds after them.

Examples:

refrain from hurting	abstain from drinking
prevent from working	aid at doing
persist in disobeying	addicted to gambling
succeed in doing	bent upon doing
disqualified from doing	averse to playing
knack of getting	expert in inventing
prohibit from entering	desist from talking
tired of writing	capable of teaching
pretext for delaying	desirous of going
fond of playing	insist on going

Rule 5: The verbs that are placed immediately after prepositions are usually in the gerund form.

Examples:
Manohar insisted on buying a television.
She left the hotel without paying the bill.

Rule 6: Some words with prepositions can take the gerund as well as the infinitive.

Examples:
He is afraid of going out alone at night.
He is afraid to go out alone at night.

Rule 7: Some intransitive verbs become transitive by placing prepositions after them.

Examples: laugh at, listen to, depend on/upon, prevail on/upon, etc.

Rule 8: In and Within

1. In refers to the end of a period of time usually in the future, e.g. He will return in a month. (at the end of one month)
2. Within means before the end of a period of time.
   (at any time before the specified period)
   He will return within a month. (he may come after two weeks also)

Rule 9: In and Into

1. 'In' indicates rest or motion inside anything.

   Examples:
   She is in the garden. (rest, inside)
   She is walking in the garden (motion inside)
2. 'Into' means motion towards the inside of anything.

   Examples:
   I walked into the garden.
   Thieves broke into my friend's house yesterday.

Rule 10: On and Upon
1. On is used:
   (i) in speaking of things at rest.
   He sat on a big stone.
   (ii) before the names of days and dates.
   On Friday, on the 2nd of August, etc.
   (iii) to denote support for and concern about somebody or something.
   He lives on his maternal uncle's wealth.
   I wrote books on politics.
2. Upon is used:
   in speaking of things in motion.
   The tiger sprang upon the goat.

Rule 11: Beside and Besides

Beside means 'by the side of'

Example:
My house is beside the Kali temple.

Besides means in addition to or moreover

Examples:
- There are four professors in the department besides the head of the department.
- Besides English we are taught French.

Rule 12: Between and Among

Between is used for two persons or things

Examples: Distribute these sweets between the two children.

There is a good understanding between him and her.

Among is used for more than two persons or things.

Example: The boys were fighting among themselves in the absence of their teacher.

Rule 13: By is used to mean:

1. according to; from the evidence of
   By my watch, it is 10.30.
2. to denote the doer of an action in the passive voice.
   The thief was beaten by the policeman.

Rule 14: Prepositions from, since, for with reference to time.

From, since indicate a point of time.

1. I have not seen her since Monday.
   I have not seen her from August.
   For indicates a length or period of time.
2. I have not seen her for six months.

SAMPLE EXERCISE–12

Direction for questions 1 to 5: Fill in the blanks with appropriate prepositions.

1. The aggrieved party demands that the CBI should investigate _____ the case.
(A) into (B) in
(C) at (D) no preposition required

2. He is persistently prevailing _____ his wife to resign her job.
(A) to (B) upon
(C) at (D) over

3. Though she searched _____ the ring everywhere, it was in vain.
(A) for (B) about
(C) out (D) no preposition required

4. The speaker has not yet entered _____ the assembly hall.
(A) into (B) in
(C) to (D) no preposition required

5. Which pen would you like to write _____?
(A) for
(B) with
(C) in
(D) no preposition required

CORRECT USE OF CONJUNCTIONS

A conjunction is a word which connects words, phrases, clauses or sentences. It also brings about relationship between the elements which are thus joined. There are two types of conjunctions:

1. Co-ordinate conjunctions
2. Subordinate conjunctions

A co-ordinate conjunction joins two clauses or sentences of equal rank. Also, it joins two words of equal grammatical rank.

And, but, for, nor, or, but, otherwise, else, also, either–or, neither–nor, etc. are the chief co-ordinate conjunctions.

Examples:
He went to the hospital and met the doctor.
Dr. Rao and Dr. Reddy are best friends.
The co-ordinate conjunctions are of four kinds:

1. **Cumulative Conjunction:** A conjunction which adds one statement or fact to another is a cumulative conjunction.

   Example:
   The professor as well as the lecturer has accepted to conduct the examination next week.

   The following are the cumulative conjunctions:
   Not only ----- but also,
   Both ----- and,
   as well as
   too, also, moreover etc.

2. **Alternative Conjunctions:** A conjunction of this kind expresses a choice between two alternatives.
   Either–or, neither–nor, otherwise, else, etc. are alternative conjunctions.

   Examples:
   She is good neither at games nor at studies.
   Work hard, otherwise you will fail.

3. **Adversative Conjunctions:** An adversative conjunction expresses a contrast between two facts or statements.
   Only, however, but, still, yet, whereas, nevertheless, etc. are adversative conjunctions.

   Examples:
   She was angry, but she kept quiet.
   She hates me, yet I love her.

4. **Illative Conjunctions:** Such a conjunction shows that a statement or fact is proved or inferred from another.
   Therefore, hence, so, consequently, for, etc. are illative conjunctions.

   Example:
   He is honest and amiable, hence he is revered.

5. **Subordinate Conjunctions:** They are the conjunctions that connect a clause to another on which it depends for its full meaning.
   The adverbial clauses are usually connected to the main clauses by means of the subordinate conjunctions.

The chief subordinating conjunctions are after, because, if, another, though, till, etc.

The following are some sentences in which important subordinate conjunctions are used.

1. The patient had died before the doctor arrived.
2. We eat so that we may live.
3. He behaved in such a manner that all disliked him.

The following compound expressions also can be used as conjunctions.

Examples: In order that, on condition that, even if, so that, provided that, as though, as well as, as if.

NOTE

There are some words that are used as both conjunctions and prepositions.

Conjunctions	Prepositions
We went home after he came to the office	*We went home after sunset.*
I went to bed early, for I was tired.	*I shall do it for him.*

The following conjunctions are used in pairs and hence are called correlative conjunctions.

Either … or
Neither … nor
Both … and
Whether … or
Not only … but also

NOTE

When conjunctions are used as correlatives, each of the correlated words should be placed immediately before the words to be connected.

For example

- He not only visited Bombay but also Pune. (wrong)
- He visited not only Bombay but also Pune. (correct)
- He is neither good at Mathematics nor at Science. (incorrect)
- He is good at neither Mathematics nor Sceince. (correct)

Sample Exercise–13

Direction for questions 1 to 10: Fill in the blanks with appropriate conjunctions.

1. I don't know how to rate him; he is neither innocent ________ intelligent.
(A) And (B) Nor
(C) Or (D) But

2. I am ready to help him, ________ he may not accept it.
(A) Therefore (B) However
(C) Even (D) Despite

3. In functions, better be first as far as food is concerned ________ you might starve.
(A) Lest (B) Otherwise
(C) So that (D) Hence

4. He says that he is speaking the truth but I don't think ________.
(A) Still (B) Although
(C) So (D) No conjunction

5. ________his ill health, he has successfully completed the given task.
(A) Despite (B) Besides
(C) Because of (D) Owing to

6. Beyond doubt he is rich, ________ he could afford to study abroad.
(A) As well as (B) Though
(C) Still (D) Hence

7. ________ it was very hot, we could not walk further.
(A) Because (B) As such
(C) Although (D) Though

8. Many people waste power and water ________ many others are completely deprived of it.
(A) When (B) Because
(C) While (D) For

9. The weather is very hot, ________ it is middle of May.
(A) While (B) Since
(C) Supposing (D) Hence

10. He is very poor ________ he managed to get a good education.
(A) Where (B) Nevertheless
(C) Despite (D) Inspite

Notes on Phrasal Verbs

Phrasal verbs: Certain verbs when followed by certain prepositions or adverbs acquire a new significance.

They are said to be phrasal verbs.

Given below are a few phrasal verbs with meanings and usage. Study them carefully.

1. Back up: to support; to sustain.
   You need to back up your statement with correct data.
2. Bear down: to overthrow; to overcome.

When people could not endure the atrocities of the government in power, they bore it down.

3. Bear with: to tolerate.
 I cannot bear with his peevish nature any further.
4. Break out: to escape from a place or a situation.
 I think Archana needs to break out of her daily routine and do something exciting.
5. Break in/into: to enter a building by force.
 Burglars broke into my neighbour's house while they were not at home.
6. Call for: to demand.
 The Reading Comprehension section calls for good reading skills from the students.
7. Call up: to recall.
 The beautiful scenery around called up memories of my childhood.
8. Come by: to obtain.
 How did you come by that beautifully embroidered skirt?
9. Come upon: to find by accident.
 I came upon some very interesting facts about our planet in this Encyclopaedia.
10. Go about: to start working on something, to tackle.
 Can you just explain to me how to go about solving this problem?
11. Go by: to be guided by.
 This is a good example to go by while solving the problems.
12. Hang back: to hesitate to proceed.
 Don't hang back, you can do it as well as anyone else can do.
13. Hang on: to depend on.
 Your success hangs on how much effort you are going to put in.
14. Fall back: to recede, or to retreat.
 Having seen the armed guards, the civilians fell back.
15. Fall off: to withdraw; to drop off.
 A true friend does not fall off in adversity.
16. Live for: to devote one's life to.
 All through his life he lived for the amelioration of the poor and the destitute.
17. Live on: to depend on.
 Most people of this region live on rice and fish.
18. Lay about: to attack some one violently.
 A group of ruffians laid about him with sticks while he was returning home.
19. Lay out: to plan how something should look and arrange it in this way.
 The ancient Chinese laid out beautiful gardens with lawns and flower beds.
20. Make away with: to squander.
 After his father's demise, he made away with the entire property.

Parallelism

1. Items in a series must be parallel: that is, they must have the same grammatical form.

(a) NOUNS He likes music, art, and history.
N N N

(b) GERUNDS He likes swimming, dancing, and riding.
V+ING V+ING V+ING

(c) ADJECTIVES He is tall, dark, and handsome.
ADJ ADJ ADJ

(d) ADJECTIVES They wanted to paint the living room, to lay a new carpet, and to buy a new sofa.
INFIN. INFIN. INFIN.

(e) PAST TENSE The Romans conquered, colonized, and governed much of the world.
PAST PAST PAST

(f) PAST PERFECT TENSE

He had finished the game, had taken a shower, and had eaten lunch by the time I went to his house.

NOTE

The auxiliary 'had' may be omitted in the second and the third verb phrases.

2. The structure joined by and, but, as, or then, or although must have the same grammatical form.

(a) AND
He enjoyed the music of Spain and the sculpture of France.
N PHRASE N PHRASE

(b) BUT
That verb form is not active but passive
ADJ ADJ

(c) AS
Taking the bus can be as costly as taking a plane.
V+ING V+ING

(d) OR
He wanted to borrow a car or to hire one while his car was being repaired.
INFIN. INFIN.

(e) THAN
Eating in a restaurant is more fun than cooking at home.
V+ING V+ING

(f) ALTHOUGH
Although he liked to eat good food, he did not like to pay a high price for it.
INFIN. INFIN. INFIN.

Question Tags

Question Tags are a feature of most languages, but English differs from many of them. Consequently, the following error is sometimes found.

Examples:

You are going to the cinema this evening, isn't it? (Incorrect)

You are going to the cinema this evening, aren't you? (Correct)

The following rules pertaining to the use of question tags should be borne in mind to avoid making errors:

1. Use the same auxiliary verb as in the main clause.
2. If the sentence has no auxiliary verb, use do, did, or does
   Examples:
   John sings very well, doesn't he?
   John does not sing very well, does he?
3. If the given sentence is positive, the tag is negative. If the given sentence is negative, the tag is positive.
   Examples:
   Positive Statement Negative Tag
   Rajini is a music teacher, isn't she?

   Negative Statement Positive Tag
   Rajini is not a music teacher, is she?
4. Don't change the tense.
   The tense of the verb in the tag should be the same as the one in the statement.
   Examples:
   Mahesh did not accept the job, did he ? (correct)
   Mahesh did not accept the job, doesn't he? (incorrect).
5. Both the main sentence and the tag should have the same subject. The tag must contain the subject form of the pronoun.
   Example: You are teaching them grammar, aren't you?
6. If the main sentence consists of the forms like it is, there are and there is; the question tag also takes there or it.
   Example: There are only twenty boys in this class, aren't there?

Observe the following: (All of the following are correct)

1. Dr. Rao is a professor of English, isn't he?
2. My cousin cannot run fast, can he?
3. She mustn't see the film, must she?
4. We used to live in Nigeria, didn't we?
5. You couldn't swim a mile, could you?
6. Mr. Brown will be our new principal, won't he?
7. I am not a good player, am I?
8. I am a good player, aren't I?

ACTIVE-PASSIVE VOICE

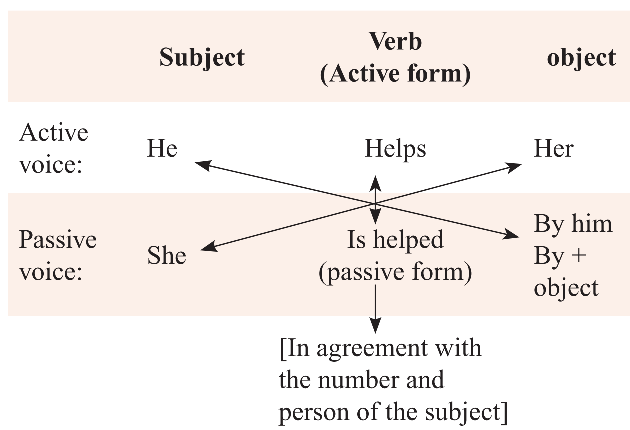
In English, the active voice is more common than the passive voice, although the passive voice is acceptable and even preferred at times. It is the context that is to be taken into consideration while deciding upon the type of construction: active or passive. While both types of construction may be grammatically correct, one of them could be more elegant. The following are some of the points of observation.

1. When the subject of the sentence is the doer of the action, denoted by the verb, then the sentence is said to be in active voice.*
   * **Example:** The hunter shot the tiger.
   s v o
2. When the subject of the sentence is the receiver of the action denoted by the verb, then it is said to be in the passive voice.
   The tiger was shot by the hunter.
   s v o

   Note: The subject of the verb in the active voice is made the object of the verb in the passive voice and is introduced with the preposition 'by'. Sometimes, the word 'by' is omitted when the agent is not required to be mentioned.

   Example: He was elected the leader of the group.

This can be shown graphically:



3. The passive voice is preferred when the doer of the action is unknown or unimportant.
   The cure for cancer will probably be discovered by some unknown scientist in a laboratory.
   ('the cure for cancer' is the main idea in the sentence and not 'the unknown scientist')
   That church was built in the 16th century.
   (who built the church is unimportant and hence not mentioned)

4. When discussing history, the passive voice is often used.
   Example:
   The war was fought over gold.
5. The active voice is used when the subject is more important than the object.
   We watched the news.
   Archimedes discovered the laws of floating bodies.
6. Avoid using active and passive in the same sentence.
   The food was cooked and served.
   passive passive
   Susan cooked the dinner and washed the dishes.
   active active
7. Use one verb instead of two whenever possible.
   Saritha enjoys good food and music.
   (Saritha enjoys good food and music is also enjoyed by her.)

The following table will help you to note the changes from the active voice to the passive voice:

	Tense	Active	Passive
1.	*Simple present tense*	*He writes a letter*	*A letter is written by him*
2.	*Present continuous*	*He is writing a letter*	*A letter is being written by him.*
3.	*Present perfect tense*	*He has written a letter*	*A letter has been written by him.*
4.	*Present prefect continuous tense*	*He has been writing a letter*	*No passive form.*
5.	*Simple past tense*	*He wrote a letter*	*A letter was written by him.*
6.	*Past continuous tense*	*He was writing a letter*	*A letter was being written by him.*
7.	*Past perfect tense*	*He had written a letter.*	*A letter had been written by him.*
8.	*Past perfect continuous tense*	*He had been writing a letter.*	*No passive form.*
9.	*Simple future*	*He will write a letter.*	*A letter will be written by him.*
10.	*Future continuous tense*	*He will be writing a letter.*	*No passive form.*
11.	*Future perfect tense*	*He will have written a letter.*	*A letter will have been written by him.*
12.	*Future perfect continuous tense*	*He will have been writing a letter.*	*No passive form.*

NOTE

Sentences with intransitive verbs cannot be changed to passive voice because such verbs do not take objects after them.

Example:
The sky is blue.
He goes to school. (intransitive verb)

Additional Examples

In the following examples, we cannot say that the first sentence is absolutely wrong. In certain contexts, it may even be preferred. However, generally speaking, the corrected sentence (the second sentence) is preferrable. We are calling the first sentence AWKWARD and the second sentence BETTER.

1. AWKWARD: Ice cream was eaten at the party by the children.
   BETTER: The children ate ice cream at the party.
2. AWKWARD: Some people painted pictures of animals on ancient cave walls.
   BETTER: Pictures of animals were painted on ancient cave walls.
3. AWKWARD: Henry likes swimming and golfing is also liked by him
   BETTER: Henry likes swimming and golfing.

Direct and Indirect Speech

Speech can be reported in two ways

1. The actual words of the speaker can be repeated. This is called DIRECT SPEECH
   Example: Meena said, 'I don't want to play now'.
2. We can report what the speaker said without quoting his exact words. This is called INDIRECT SPEECH.
   Example: Meena said that she didn't want to play then.

The verb that introduces the reported speech is called the reporting verb and the words that are put within inverted commas are called the reported speech.

Direct speech is always enclosed within inverted commas and always begins with a capital letter.

It is separated from the reporting verb (said) by a comma.

Rules for changing direct speech into indirect speech.

1. No inverted commas are used in indirect speech, and no comma is used after the reporting verb.

2. The tense of the reporting verb is never changed.
3. The conjunction 'that' is used after the reporting verb in the case of statements.
4. When the reporting verb is in the past tense, the present tenses of the direct speech are changed into the corresponding past tenses.

   (a) Simple present becomes simple past

   Examples:
   Raju said, 'I am happy.'
   Raju said that he was happy.

   (b) Present continuous becomes past continuous

   Examples:
   Madhav said, 'My father is sleeping'. Madhav said that his father was sleeping.

   (c) Present perfect becomes past perfect.

   Examples:
   Umesh said, 'I have failed in my duty'. Umesh said that he had failed in his duty.

   (d) 'Shall' of the future tense changes to 'should', 'will' changes to 'would' or 'should'.

   Example:
   He said to me, 'I will meet you tomorrow'.
   He told me that he would meet me the next day.

Exceptions

1. If the reporting verb is in the present or in the future tense, the tense of the verb in the reported speech does not change.

   Examples:
   He says, 'I will never come back'.
   He says that he will never come back.
   My father will say, 'I cannot buy you a car'.
   My father will say that he cannot buy me a car.
2. If the reported speech expresses a universal truth or a habitual fact its tense remains unchanged.

   Examples:
   The teacher said, 'Honesty is the best policy'.
   The teacher said that honesty is the best policy.
   Mother said, 'Mahesh drinks milk before going to bed every night'.
   Mother said that Mahesh drinks milk before going to bed every night.
3. When the reported speech contains a time clause and both the main verb and the verb in the time clause are in the simple past, the verbs remain unchanged.

   Examples:
   He said, 'The bus did not move till all the passengers were seated'.
   He said that the bus did not move till all the passengers were seated.

NOTE

If the main verb is in the simple past tense and the verb in the time clause is in the past continuous tense, it is usual to change the main verb to past perfect and leave the verb in the time clause unchanged.

   Examples:
   She said, 'Dhiren fell while he was crossing the road'.
   She said that Dhiren had fallen while he was crossing the road.
4. If the reported speech describes a state of affairs that still exists when the speech is reported, its tense remains unchanged.

   Examples:
   Ram said, 'My wife keeps complaining of aches and pains'.
   Ram said that his wife keeps complaining of aches and pains.
5. When the verb in the spoken sentence is in the past perfect tense, there is no change in the tense of the verb in the reported speech.

   Examples:
   He said, 'I had waited there for half an hour before the bus arrived'.
   He said that he had waited there for half an hour before the bus arrived.
6. (a) The simple past in direct speech becomes past perfect in indirect.

   Examples:
   The student said,' I wrote a letter yesterday'.
   The student said that he had written a letter the previous day.

   (b) Past continuous tense of direct speech is changed to past perfect continuous.

   Examples:
   Seema said, 'We were watching TV the whole evening'.
   Seema said that they had been watching TV all evening.
7. The pronouns of the direct speech are changed where necessary so that it is clear who said what to whom, about whom.

   Examples:
   He said, 'I don't understand you'.
   He said he didn't understand me.

   I said to him, 'I don't trust you'.
   I told him that I didn't trust him

NOTE

'Said' followed by 'to' changes to 'told'.

   They said, 'We will come again tomorrow'. They said that they would come again the next day.
   I said, 'I have done my duty'.
   I said that I had done my duty.

The teacher said, 'You have done well'.
The teacher said that I had done well.
He said, 'You should be regular to class'.
He said that I should be regular to class.

8. Words expressing nearness in terms of time and place become words of distance.

Direct	Indirect
this/these	that/those
here	there
now	then
ago	before
thus	so
today	that day
tomorrow	the next day
yesterday	the day before the previous day
last night	the night before/the previous night
next week	the following week

Examples:
He said, 'These are the books I am looking for'.
He said that those were the books he was looking for.

9. **Reporting different kinds of sentences**
   (a) **Statements**
   In indirect statements, the conjunction 'that' is placed after the reporting verb. However, it is often omitted. Indirect statements are introduced by such verbs as 'say', 'tell', 'reply', and 'inform'
   Examples:
   He said, 'I am feeling very weak'.
   He said that he was feeling very weak.
   She said to me, 'You must obey your parents'.
   She told me that I must obey my parents.
   Sheela said, 'No, I will not be able to come'.
   Sheela replied that she would not be able to come.
   Madhav said, 'The last train leaves at 10 o'clock'.
   Madhav informed me that the last train leaves at 10 o' clock.

   (b) **Questions**
   In reporting questions, the indirect speech is introduced by verbs such as 'asked', 'inquired', etc. In indirect questions, the question form changes to the statement form. That is, the verb is placed after the subject.
   Examples:
   He said, 'Where is the letter?'
   He asked where the letter was.
   If the question in direct speech begins with a question word (e.g. who, what, which, when), this word serves as a link between the reporting verb and the reported question.
   'Why did she come?' Sekhar said.
   Sekhar asked why she had come.
   If the question has no question word and can be answered with a 'yes' or 'no', the conjunction 'whether' or 'if' is placed after the reported verb.
   Examples:
   'Do you know French?' she said.
   She asked me if I knew French.

   (c) **Commands and Requests**
   In reporting commands and requests, the indirect speech is introduced by a verb expressing command or request and the Imperative mood is changed into the infinitive.
   In indirect commands and requests, a verb such as 'tell', 'ask', 'order', 'command', and 'request' is followed by the person addressed and the 'to infinitive'.
   Examples:
   He said to his servant, 'Bring me a glass of milk'.
   He ordered his servant to bring him a glass of milk.
   'Can you post this letter for me?' she said.
   She requested me to post that letter for her.

   (d) **Exclamations**
   In reporting exclamations and wishes, the indirect speech is introduced by a verb that expresses an exclamation or a wish such as exclaimed, praised, blamed, applauded, called to witness, wished and desired.
   Examples:
   'What a beautiful house you have!' my friend said.
   My friend exclaimed that I had a very beautiful house.
   Alice said, 'How clever you are!'
   Alice exclaimed that I was very clever.
   'Bravo! You have done well', the Principal said.
   The Principal applauded the boy for doing well.

Here are some more reporting verbs for statements.

declare	inform	maintain
state	propose	announce

When the spoken sentence is by way of a reply to a question, we can use 'answer', 'reply', 'respond', etc.

Some more verbs for reporting imperative sentences:

order	tell	pray
command	advise	suggest

Diction (Words often confused)

Diction is the choice of words. In English, there are many words which are usually confused. Some words have similar meanings but cannot be used interchangeably; that is, a choice must be made according to the grammatical situation. The following are some pairs of words that are often confused in their usage.

1.	Advice	: (noun)	The teacher gave much advice to the students.
	Advise	: (verb)	The doctor advised me to take nutritious food.
2.	Adapt	: (make suitable)	Novels are adapted for the stage.
	Adopt	: (take a child as one's own)	He adopted a son.
3.	Allusion	: (reference)	The allusion that I am stingy is a mistake.
	Illusion	: (false notion)	I do not have illusions about his ability.
4.	Amiable	: (pleasant and good-tempered)	Radha is quite an amiable person.
	Amicable	: (friendly)	The dispute is quite serious and therefore cannot be settled amicably.
5.	Apposite	: (relevant)	His speech was apposite to the occasion.
	Opposite	: (contrary)	Heavy is the opposite of light.
6.	Beside	: (by the side of, close)	His mother sat beside him.
	Besides	: (in addition to)	Is anyone else coming besides you?
7.	Childish	: (silly)	I don't like his childish behaviour.
	Childlike	: (innocent)	Gandhiji always put on a childlike smile on his lips.
8.	Confidant	: (person with whom one trusts with secrets)	Nehruji was a confidant of Gandhiji in political matters.
	Confident	: (to be sure)	I am confident of success in the examination.
9.	Continual	: (very frequent)	He had continual arguments with his wife.
	Continuous	: (going on without a break)	There was continuous rain yesterday.
10.	Deny	: (ascertain that something is wrong)	The minister denied the allegation that he had taken bribe.
	Refuse	: (decline to take something that is offered or to do something that one is asked to do)	He refused the money given as bribe.

Exercises

Grammar—Nouns/Articles/Pronouns

Basic

Direction for questions 1 to 5: Fill in the blanks with the correct pair of words or phrases so that the sentence is grammatically correct and meaningful.

1. ______ man loves ______ money.
(A) The . . . . the
(B) A . . . .the
(C) The . . . .no article
(D) No article required . . . . no article required

2. ______ student of the class ______ to finish the work by tomorrow.
(A) All . . . .has
(B) Each . . . .have
(C) Every . . . .were
(D) Each . . . .has

3. ______ platinum is ______ any other metal.
(A) The . . . .costlier than
(B) No article required . . . . costlier than
(C) The . . . .more costlier than
(D) No article required . . . . more costlier than

4. The ______ of my professors inspired me to ______ hard and win the competition.
(A) Advise . . . .practise
(B) Advice . . . .practise
(C) Advise . . . .practice
(D) Advice. . . . practice

5. In India, ______ power to commute a death sentence is vested ______ the president.
(A) The. . . . for
(B) No article required . . . . by
(C) No article required . . . .on
(D) The. . . . in

Direction for questions 6 to 10: Fill in the blanks with suitable articles.

6. ______ British ruled India for four hundred years.
(A) No article (B) A
(C) An (D) The

7. The teacher ordered the students not to make ______ noise.
(A) A (B) An
(C) No article (D) The

8. Women in many Middle Eastern countries are deprived of ______ freedom even to this day.
(A) A (B) An
(C) The (D) No article

9. Besides being a scholar, he is also ______ eminent orator.
(A) The (B) No article
(C) An (D) A

10. ______ Rome is one of the ancient cities of the world.
(A) An
(B) No article
(C) A
(D) The

Advanced

Direction for questions 11 to 14: Correct the following sentences where necessary.

11. The doctor has given me many informations about the disease.

Chapter 2

Vocabulary

CHAPTER HIGHLIGHTS

- *Vocabulary*
- *Synonyms*
- *Antonyms*
- *Analogy*
- *Reverse Analogy*
- *Verbal Reasoning*
- *Critical Reasoning*
- *Logical Reasoning*

Vocabulary

Common Roots

In this chapter, some of the most commonly used roots are given. Corresponding to the root in the first column, its meaning is given in the second column. Given in the third column are words (and their meanings) that contain the corresponding root given in the first column.

The verbal questions are based on the meanings of words or their opposites. These question types are designed to test the students vocabulary. This section includes

1. Synonyms
2. Antonyms

Verbal Analogies

The word 'Analogy' means a comparison. Vocabulary plays an important part here. This question type involves identifying the logical relationship between the words. This section includes

1. Analogy
2. Reverse Analogy

Verbal Reasoning

The ability to isolate the key issue and to identify irrelevant issues is important.

Logical reasoning is important. This section includes

1. Critical Reasoning
2. Logical Reasoning

Root	Meaning	Example	Meaning
ac, acr	*sharp*	*ACRIMONIOUS* *ACERBITY* *ACIDULATE*	*bitter, caustic* *bitterness of temper* *to make somewhat acid or sour*

(A) Cantankerous (B) Grumpy
(C) Contented (D) Surly

55. IMPUDENT
(A) Rude (B) Courteous
(C) Impertinent (D) Insolent

56. MITIGATE
(A) Soothe (B) Abate
(C) Assuage (D) Aggravate

57. EXPOSTULATION
(A) Immigration (B) Susceptibility
(C) Elegance (D) Approbation

58. DISPARAGE
(A) Evolve (B) Expose
(C) Appreciate (D) Converge

59. OSSIFICATION
(A) Liquefaction (B) Flexibility
(C) Vigour (D) Viability

60. PEDESTRIAN
(A) Mobile (B) Regular
(C) Exciting (D) Imaginative

61. TUMULTUOUS
(A) Halcyon (B) Mope
(C) Cold (D) Conniving

62. ANACHRONISM
(A) Obsession (B) Vogue
(C) Radicalism (D) Pre-emption

63. BESEECH
(A) Charge (B) Cajole
(C) Command (D) Request

64. BATTERY
(A) Slimy (B) Individual
(C) Dense (D) Clean

65. BLANDISHMENTS
(A) Smack (B) Reproof
(C) Scuttle (D) Extradition

Advanced

Direction for questions 66 to 80: In each of the questions given below, identify the word that is opposite (antonym) in meaning to the question word.

66. DEMENTED
(A) Abundant (B) Opulent
(C) Sane (D) Divine

67. BRUSQUE
(A) Abrupt (B) Polite
(C) Art (D) Gruff

68. BUCOLIC
(A) Pastoral (B) Rural
(C) Rustic (D) Urban

69. CONTRITE
(A) Apologetic (B) Penitent
(C) Defiant (D) Ecstatic

70. CONTROVERT
(A) Change (B) Accept
(C) Control (D) Deny

71. COWER
(A) Come Out (B) Cringe
(C) Smother (D) Blush

72. CREDIBLE
(A) Legal (B) Unbelievable
(C) Legendary (D) Logical

73. CRESTFALLEN
(A) Abashed (B) Cheerful
(C) Broken (D) Treble

74. JEOPARDY
(A) Vivacity (B) Temerity
(C) Consummation (D) Security

75. MUSTY
(A) Desolate (B) Uncertain
(C) Fragrant (D) Clear

76. HAZY

(C) Indolent (D) Spirited

77. PROVIDENTIAL
(A) Difficult (B) Spartan
(C) Inopportune (D) Usurping

78. ABATE
(A) Appease (B) Subside
(C) Intensify (D) Curtail

79. ABSTEMIOUS
(A) Disciplined (B) Uninteresting
(C) Unrestricted (D) Intemperate

80. SPONTANEOUS
(A) Voluntary (B) Automatic
(C) Coercive (D) Irritable

Analogies

Basic

Direction for questions 81 to 95: In each of the following questions a pair of words in capitals is given followed by four numbered pairs of words. Select from the choices the pair that exhibits the same relationship as the capitalized pair of words and mark the letter as your answer.

81. MONEY : MERCENARY
(A) Fame : Soldier
(B) Love : Mother
(C) Pass : Student
(D) Gold : Midas

82. POLYMER : CELL
(A) Coin : Money
(B) Food : Wheat
(C) Chain : Link
(D) Fibre : Plastic

83. POETRY : RHYME
(A) Chair : Table
(B) Mystery : Suspense
(C) Shakespeare : Drama
(D) Clothes : Paper

84. COMPUTER : RAM
(A) Book : Page
(B) Cloud : Rain
(C) Table : Tablecloth
(D) Sky : Blue

85. BELLS : JINGLE
(A) Crow : Caw
(B) Anklets : Tinkle
(C) Pig : Snuff
(D) Clock : Time

86. COGENT : CONVINCING
(A) Insane : Distinguished
(B) Laconic : Pithy
(C) Illogical : Reasonable
(D) Jovial : Abstruse

87. RETROSPECTION : PAST
(A) Syllogism : Logic
(B) Idiosyncrasy : Coherence
(C) Prognostication : Future
(D) Transience : Rigidity

88. BENEVOLENT : GRASPING
(A) Repulsive : Pushing
(B) Euphonious : Discordant
(C) Churlish : Impolite
(D) Rebellious : Disorderly

89. FRIGHTEN : PETRIFY
(A) Enamour : Protect
(B) Sneer : Appreciate
(C) Abbreviate : Interest
(D) Humiliate : Mortify

90. MUNIFICENT : STINGY
(A) Inclement : Merciless
(B) Incorrigible : Recalcitrant
(C) Articulate : Obscure
(D) Egregious : Outstanding

91. CRAVENLY : COWARD
(A) Synthetic : Savant
(B) Menial : Composer
(C) Brazen : Drunkard
(D) Duplicitous : Cheat

92. DIFFIDENT : SHY
(A) Lacklustre : Dull
(B) Covering : Encompass
(C) Infuriating : Regale
(D) Overhauling : Desert

93. RIGOUR : ONEROUS
(A) Vigour : Tentative
(B) Tedium : Boring
(C) Narration : Timely
(D) Simplicity : Rudimentary

94. ESOTERIC : SCHOLARLY
(A) Meandering : Accurate
(B) Dogmatic : Anomalous
(C) Honourable : Shameless
(D) Profuse : Plentiful

95. ADVOCATE : PROPAGATE
(A) Sap : Deliberate
(B) Exact : Demand
(C) Afflict : Ameliorate
(D) Deteriorate : Roughen

Advanced

Direction for questions 96 to 110: In each of the following questions a capitalized pair of words if given followed by four pairs of numbered words. Three of the numbered pairs exhibit the same relation between the words as the capitalized pair of words. Identify the numbered pair that does not exhibit the same relationship as the capitalized pair and mark its number as your answer.

96. IMPORT : EXPORT
(A) Inhale : Exhale
(B) Include : Exclude
(C) Inspire : Expire
(D) Increase : Decrease

97. MILK : MILKMAID
(A) Letters : Postman
(B) Biscuit : Baker
(C) Newspaper : Newspaper Boy
(D) Sweets : Street Vendor

98. ORNITHOLOGIST : BIRDS
(A) Entomologist : Insects
(B) Herpetologist : Reptiles
(C) Psychologist : Mind
(D) Ichthyology : Fossils

99. DISHONOUR : DEMEAN
(A) Demolish : Annihilate
(B) Glorify : Extol
(C) Consecrate : Sanctify
(D) Articulate : Obfuscate

100. LEPROSY : BACTERIA
(A) Summer : May
(B) Cloud : Evaporation
(C) Violence : Anger
(D) Day : Sun

101. MILK : CHEESE
(A) Water : Ice
(B) Cotton : Clothes
(C) Rainbow : Rain
(D) Tobacco : Cigar

102. PRINCIPAL : SCHOOL
(A) President : India
(B) Monarch : Britain
(C) God : Universe
(D) Buddha : Burma

103. FASTIDIOUS : FINICKY
(A) Parsimonious : Miserly
(B) Asinine : Unintelligent
(C) Precocious : Talented
(D) Prudent : Injudicious

104. INSIPID : ORIGINAL
(A) Ambidextrous : Unskilled
(B) Foppish : Affected
(C) Tranquil : Disturbed
(D) Winding : Succinct

105. ATTRITION : WEAR
(A) Rupture : Tear
(B) Mammon : Money
(C) Sacrilege : Honesty
(D) Melody : Rhythm

106. ANTIQUATED : ANCIENT
(A) Compassionate : Lustful
(B) Fortuitous : Coincidental
(C) Pristine : Pure
(D) Spiteful : Wicked

107. EMANCIPATE : LIBERATE
(A) Misconstrue : Misinterpret
(B) Commiserate : Sympathize
(C) Sequestrate : Align
(D) Ape : Imitate

108. COSMIC : UNIVERSE
(A) Sidereal : Stars
(B) Arboreal : Trees
(C) Aquatic : Water
(D) Despotic : Depot

109. BOUNTIFUL : PLENTITUDE
(A) Bizarre : Absurdity
(B) Consecutive : Succession
(C) Depraved : Wickedness
(D) Somnolent : Sombreness

110. STYMIE : OBSTRUCT
(A) Parry : Fight
(B) Ponder : Mull
(C) Imbue : Soak
(D) Intervene : Mediatez

Logical Reasoning

Basic

Direction for questions 111 to 115: Select the correct alternative from the given choices.

111. If you find the next version of software products from Microsoft coming with the feminine touch, don't be surprised because the world's largest software major is planning to add more women to its development centre in Hyderabad. Microsoft India Development Centre (MSIDC), the second largest development centre of the company outside its headquarters in the US is planning to kick-start a diversity event, a women's recruitment drive, this Women's Day. As part of the programme, the company has invited applications from girl students who are doing final year computer science engineering across the country.

Which of the following could be the reason behind Microsoft's decision to recruit girl students?

(A) The women recruitment initiative is a pilot project which, if successful, could be replicated at the company's other centres in the country.

(B) Though, due to social conditions, women may opt for engineering colleges near their hometown, rather than IITs, their competency levels are on par with men.

(C) A diverse workforce will be able to anticipate the needs of the diverse customers spread across the world.

(D) This kind of recruitment drive will encourage more women to enrol for engineering course.

112. Its not just media agencies that are obsessed with numbers—even the creative side does not shy away from romancing with digits. Whether it is instructions (Ujala : chaar boondan wala) or just plain information (Complan's 23 vital nutrients), a lot of contemporary advertising serves up a tidal wave of figures. Whether its personal care products, refrigerators, washing machine, tea or tooth paste, everyone is using numbers as a USP. While the claims work for Maggi's 2-minutes noodles in many cases, it is veering towards a game of one -upmanship. Baffling concept innundate the viewers—12 times more volume mascara, natural care tea with 'paanch ayurvedic tatva', a fridge with 6th sense cooling, and a tooth paste that claims to fight 10 problems.

Which of the following does not point to the advantage of using numbers?

(A) People don't believe advertising; so, if you can give a quantified claim, it adds credibility to your brand.

(B) Numbers in advertisements cause disillusionment when they are not borne out.

(C) When numbers are put into context, they prove to be symbolic and evocative, as in the case of Britannia cheese, which says one slice in equal to two glasses of milk.

(D) The number definitely adds a competitive advantage: if one fairness cream claims results in 'six weeks' another will take a mere '30 days'.

113. Art shows in India by Indian artists settled abroad have increased over the past few years and are on the rise.

Which of the following does not account for the above occurrence?

(A) This trend is being fuelled by the booming Indian economy—people have spare funds which they can invest in art.

(B) These artists fetch higher price in India than abroad, probably because their acceptance back home is greater than it is in the oversea art scene.

(C) While acquisition of Indian art overseas continues to grow, purchases are still triggered by the Indian diaspora.

(D) A large cross section of wealthy businessmen travelling abroad drop by at galleries and museums and this develops an understanding of and love for art.

114. Andreas Gursky bestrides the art world like a colossus. For once, in the contemporary art scene, form, content, and price come together like a rare planetary alignment. Yet critics conclude that A. Gursky's photographs are famous mainly because of their massive price tags.

Which one of the following prove his critics wrong?

(A) His photographs are rendered with a pin sharp focus that seems to defy the laws of physics.

(B) The hammer prices of Gursky's works simply reflect the herd instincts of billionaires for unique things.

(C) His pictures depict his ability to freeze a transient moment for ever.

(D) The photographic aesthetic embodied in his work is based on an uncanny dichotomy that makes it singular to every viewer.

115. A visit to the abattoir usually transforms a non-vegetarian into a vegetarian. Similarly, a visit to the Bose Institute in Kolkatta is sure to make a tourist lead an austere life thereafter, even, perhaps, going to the extent of becoming a mineral eater.

Which of the following supports the above conclusion?

(A) The visitor can watch the graphic reaction of the plant when a leaf is plucked.

(B) One marvels at the intricacies of the composition of a plant.

(C) One realizes the fact that it takes years of sunlight, water, and earth to help a tree flourish.

(D) The onlooker gets a very clear picture of the intricate process of photosynthesis.

Advanced

Direction for questions 116 and 117: In each of the following questions, a statement is followed by three assumptions. An assumption is an idea or opinion taken for granted. Find out which of the given assumptions is/are implicit considering that everything given in the statement is true.

116. Statement: We have come a long way from the barter system to cowrie currency to a complex monetary system to womb renting and sperm selling. These are innovative methods of making ends meet in hard times.

Assumptions:

I. Innovative methods are needed to make ends meet in hard times.
II. Barter system is not an innovative method.
III. Womb renting and sperm selling are innovative methods.

(A) All are implicit (B) Only I and II
(C) Only II (D) Only III

117. Statement: Why the brouhaha over dynastic politics? Have not many children followed their parents' profession? May be, genes play a part in their choice of profession.

Assumption:

I. Genes play a part in the choice of profession.
II. Choosing politics as profession because the parents are in politics is the same as choosing any other profession because the parents are in that profession.
III. There is nothing wrong with dynastic politics.

(A) Only III (B) Only II and III
(C) Only II (D) Only I and II

Direction for questions 118 and 119: Each question given below consists of a statement followed by two conclusions numbered I and II. You have to assume everything in the statement to be true and then consider the two conclusions together and decide which of them logically follows beyond a reasonable doubt from the information given in the statement. Give your answer as

(A) If only conclusion I follows.
(B) If only conclusion II follows.
(C) If neither I nor II follows.
(D) If both I and II follow.

118. Statement: 'Had I been asked to choose a portfolio, I would have probably chosen the ministry of environment and forest', Home Minister.

Conclusions:

I. It is easier to handle the environment and forest portfolio rather than the home ministry.
II. The person did not become a home minister by choice.

119. Statement: 'Getting angry makes me mentally tough',–Mr. X.

Conclusions:

I. Mr. X does not get angry.
II. Mr. X is not mentally tough.

Direction for questions 120 to 122: In making decisions about important questions, it is desirable to be able to distinguish between 'strong' arguments and 'weak' arguments. So far, as they relate to the question, 'strong' arguments are those which are both important and directly related to the question. 'Weak' arguments are those which are of minor importance and may not be directly related to the question or may be related to a trivial aspect of the question.

Each question below is followed by two arguments numbered I and II. You have to decide which of the arguments is a 'strong' argument and which is a 'weak' argument. Mark your answer as

(A) If only argument I is strong.
(B) If only argument II is strong.
(C) If neither I nor II is strong.
(D) If both I and II are strong.

120. Statement: Should the Indian police be equipped with more sophisticated weapons?

Arguments:

I. No, they do not know how to use them.
II. Yes, the recent incidents in USA have proved that terrorists have very sophisticated weapons.

121. Statement: Is financial freedom necessary for women?

Arguments:

I. No, their husbands give them sufficient money.
II. No, women have a very important role to play at home in developing a good society.

122. Statement: Should history be removed from school curriculum?

Arguments:

I. No, it helps students to know about their past.
II. No, history provides information which helps in building the future.

Direction for questions 123 and 124: In each question below is given a statement followed by some courses of action. A course of action is a step or administrative decision to be taken for improvement follow-up or further action with regard to the problem, policy, etc. on the basis of the information given in the statement. Assume everything in the given statement to be true, and then decide which of the courses of action logically follow for pursuing.

123. Statement:

The competition among corporate hospitals has not done any good to the people.

Course of action:

I. Permission should be given to open more corporate hospitals.

II. The government should review the norms for corporate hospitals so that they take up some social responsibility.
III. All the corporate offices should be closed down.
(A) Only III follows
(B) Only II follows
(C) Either I or III follows
(D) Only II and III follows

124. Statement:
It is reported that 61 per cent of crimes including murder are committed by those below 25 years. Unemployment and rising prices drive the youth into taking up a life of crime.

Courses of action:
I. Criminals aged below 25 should be given employment.
II. Pocket money given to the young should be increased.
III. Economics should be taught at schools, so that the young understand the mechanism of price changes and creation of employment.

(A) Only I and III follows
(B) Only III follows
(C) Only I and II follows
(D) None follows

Previous Years' Questions

1. Which of the following options is the closest in meaning to the word below: **[GATE, 2010]**
Circuitous
(A) Cycle (B) Indirect
(C) Confusing (D) Crooked

2. Choose the most appropriate work from the options given below to complete the following sentence:
If we manage to _______ our natural resources, we would leave a better planet for out children. **[GATE, 2010]**
(A) uphold (B) restrain
(C) cherish (D) conserve

3. Choose the most appropriate word form the option given below to complete the following sentence:
His rather casual remarks on politic _______ his lack of seriousness about the subject. **[GATE, 2010]**
(A) masked (B) belied
(C) betrayed (D) suppressed

4. Modern warfare has changed from large scale clashes of armies to suppression of civilian populations. Chemical agents that do their work silently appear to be suited to such warfare; and regretfully, there exist people in military establishments who think that chemical agents are useful tools for the cause.
Which of the following statements best sums up the meaning of the above passage: **[GATE, 2010]**
(A) Modern warfare has resulted in civil strife.
(B) Chemical agents are useful in modern warfare.
(C) Use of chemical agents in warfare would be undesirable.
(D) People in military establishments like to use chemical agents in war.

5. Which of the following options is the closest in the meaning to the word below: **[GATE, 2011]**
Inexplicable
(A) Incomprehensible (B) Indelible
(C) Inextricable (D) Infallible

6. Choose the word from the options given below that is most nearly opposite in meaning to the given word: **[GATE, 2011]**
Amalgamate
(A) Merge (B) Split
(C) Collect (D) Separate

7. Choose the most appropriate word from the options given below to complete the following sentence.
If you are trying to make a strong impression on your audience, your cannot do so by being understated, tentative or _______. **[GATE, 2011]**
(A) hyperbolic (B) restrained
(C) argumentative (D) indifferent

8. Choose the most appropriate word(s) from the options given below to complete the following sentence.
I contemplated _______ Singapore for my vacation but decided against it. **[GATE, 2011]**
(A) to visit (B) having to visit
(C) visiting (D) for a visit

9. Few school curricula include a unit on how to deal with bereavement and grief, and yet all students at some point in their lives suffer from losses through death and parting.
Based on the above passage which topic would not be included in a unit on bereavement? **[GATE, 2011]**
(A) How to write a letter of condolence
(B) What emotional stages are passed through in the healing process
(C) What the leading causes of death are
(D) How to given support to a grieving friend

10. Choose the most appropriate alternative from the options given below to complete the following sentence:
Despite several _____ the mission succeeded in its attempt to resolve the conflict. **[GATE, 2012]**
(A) attempts (B) setbacks
(C) meetings (D) delegations

11. Choose the most appropriate alternative from the options given below to complete the following sentence:

Suresh's dog is the one ______ was hurt in the stampede. **[GATE, 2012]**

(A) that (B) which
(C) who (D) whom

12. Choose the grammatically **INCORRECT** sentence: **[GATE, 2012]**

(A) They gave us the money back less the service charge of three hundred rupees.
(B) This country's expenditure is not less than that of Bangladesh.
(C) The committee initially asked for a funding of fifty lakh rupees, but later settled for a lesser sum.
(D) This country's expenditure on educational reforms is very less.

13. Which one of the following options is the closest in meaning to the word given below? **Mitigate** **[GATE, 2012]**

(A) Diminish (B) Divulge
(C) Dedicate (D) Denote

14. Wanted temporary, part time persons for the post of Field Interviewer to conduct personal interviews to collect and collect economic data requirements: High school pass, must be available for day, Evening and Saturday work. Transportation paid, expenses reimbursed.

Which one of the following is the best inference from the above advertisement? **[GATE, 2012]**

(A) Gender–discriminatory
(B) Xenophobic
(C) Not designed to make the post attractive
(D) Not gender–discriminatory

15. <u>The professor</u> <u>ordered to</u> <u>the students</u> <u>to go out of the class</u>

Which of the above underlined parts of the sentence is grammatically incorrect? **[GATE, 2013]**

(A) I (B) II
(C) III (D) IV

16. Which of the following options is the closest in meaning to the word given below: **[GATE, 2013]**

Primeval

(A) Modern
(B) Historic
(C) Primitive
(D) Antique

17. Friendship, no matter how ______ it is, has its limitations

(A) cordial
(B) intimate
(C) secret
(D) pleasant

18. Abhishek is elder to Savar

Saver is younger to Anshul

Which of the given conclusion is logically valid and is inferred from the above statements? **[GATE, 2013]**

(A) Abhishek is elder to Anshul
(B) Anshul is elder to Abhishek
(C) Abhishek and Anshul are of the same age
(D) No conclusion follows

19. A student is required to demonstrate a high level of <u>comprehension</u> of the subject, especially in the social sciences.

The word closest in meaning to <u>comprehension</u> is **[GATE, 2014]**

(A) understating
(B) meaning
(C) concentration
(D) stability

20. Choose the most appropriate word from the options given below to complete the following sentence. One of his biggest ______ was his ability to forgive. **[GATE, 2014]**

(A) vice (B) virtues
(C) choices (D) strength

21. Rajan was not happy that Sajan decided to do the project on his own. On observing his unhappiness, Sajan explained to Rajan that he preferred to work independently. **[GATE, 2014]**

Which one of the statements below is logically valid and can be inferred from the above sentences?

(A) Rajan has decided to work only in a group.
(B) Rajan and Sajan were formed into a group against their wishes.
(C) Sajan had decided to give into Rajan request to work with him.
(D) Rajan had believed that Sajan and he would be working together.

22. Choose the most appropriate word from the options given below to complete the following sentence.

A person suffering from Alzheimer's disease ______ short term memory loss. **[GATE, 2014]**

(A) experienced
(B) has experienced
(C) is experiencing
(D) experiences

23. Choose the most appropriate word from the options given below to complete the following sentence. ______ is the key to their happiness; they are satisfied with what they have. **[GATE, 2014]**

(A) Contentment
(B) Ambition
(C) Perseverance
(D) Hunger

24. Which of the following options is the closest in meaning to the sentence below?

'As a woman, I have no country'. **[GATE, 2014]**

(A) Women have no country.
(B) Women are not citizens of any country.
(C) Women's solidarity knows no national boundaries.
(D) Women of all countries have legal rights.

25. Moving into a world of big data will require us to change our thinking about the merits of exactitude. To apply the conventional mindset of measurement to the digital, connected world of the twenty–first century is to miss a crucial point. As mentioned earlier, the obsession with exactness is an artifact of the information deprived analog era. When data was sparse, every data point was critical and thus great care was taken to avoid letting any point bias the analysis.

From 'BIG DATA' viktor mayer-schonberger and Kenneth cukier

The main point of the paragraph is; **[GATE, 2014]**

(A) The twenty first century is a digital world
(B) Big data is obsessed with exactness
(C) Exactitude is not critical in dealing with big data
(D) Sparse data leads to a bias in the analysis

26. Extreme focus on syllabus and studying for tests has become such a dominant concern of Indian students that they close their minds to anything ______ to the requirement of the exam. **[GATE, 2015]**

(A) related (B) extraneous
(C) outside (D) useful

27. The Tamil version of ______ Join Abraham-starrer Madras Café ______ cleared by the Censor Board with no cuts last week, but the film's distributors ______ no takers among the exhibitors for a release in Tamil Nadu ______ this Friday. **[GATE, 2015]**

(A) MR., was, found, on (B) a, was, found, at
(C) the, was found, on (D) a, being, find at

28. Alexander turned his attention towards India, since he had conquered Persia.

Which one of the statements below is logically valid and can be inferred from the above sentence?
[GATE, 2015]

(A) Alexander would not have turned his attention towards India had the not conquered Persia.
(B) Alexander was not ready to rest on his laurels, and wanted to march to India.
(C) Alexander was completely in control of his army and could command it to move towards India.
(D) Since Alexander's kingdom extended to Indian borders after the conquest of Persia, he was keen to move further.

29. Most experts feel that in spite of possessing all the technical skills required to be a batsman of the highest order, he is unlikely to be so due to lack of requisite temperament. He was guilty of throwing away his wicket several times after working hard to lay a strong foundation. His critics pointed out that until he addressed this problem, success at the highest level will continue to elude him.

Which of the statement(s) below is/are logically valid and can be inferred from the above passage?

(i) He was already a successful batsman at the highest level.
(ii) He has to improve his temperament in order to become a great batsman.
(iii) He failed to make many of his good starts count.
(iv) Improving his technical skills will guarantee success. **[GATE, 2015]**

(A) (iii) and (iv)
(B) (ii) and (iii)
(C) (i), (ii) and (iii)
(D) (ii) only

30. Choose the most appropriate word from the options given below to complete the following sentence.

The official answered ______ that the complaints of the citizen would be looked into. **[GATE, 2015]**

(A) respectably
(B) respectfully
(C) reputably
(D) respectively

31. Choose the statement where underlined word is used correctly. **[GATE, 2015]**

(A) The minister insured the victims that everything would be all right.
(B) He ensured that the company will not have to bear any loss.
(C) The actor got himself ensured against any accident.
(D) The teacher insured students of good results.

32. Which word is not a synonym for the word *vernacular*? **[GATE, 2015]**

(A) regional
(B) indigenous
(C) indigent
(D) colloquial

33. The word similar in meaning to 'dreary' is **[GATE, 2015]**

(A) cheerful
(B) dreamy
(C) hard
(D) dismal

Test

Verbal Ability

Time: 25 Minutes

Direction for questions 1 to 4: In these questions, you are to analyse the situation on which each question is based and then select the answer choice that is the most appropriate response to the question.

1. The residents of a particular locality were administered a particular medicine of a company continuously for three months. The locality which had reported high incidence of Hepatitis B before the administration of the medicine reported no cases at the end of this period. The company claimed that this was because their medicine helped the residents develop immunity against Hepatitis B.

Which of the following, if true, most seriously weakens the claim of the company?

(A) A few cases of Hepatitis B were reported in the locality a month after the company started administering the medicine to the residents.
(B) The incidence of Hepatitis B is found to be very high during winter, which lasts for about four months in the region, and winter set in three months back.
(C) Research shows that any medicine capable of helping develop immunity against Hepatitis B takes about six months to show results.
(D) Usually newborn children are more affected by Hepatitis B, and there were no children born in the locality in the past three months.

2. Ms. E, a serious protagonist of environmental protection, wins a mayoral election to city 'C' against Mr. D. The success of Ms. E, against Mr. D in the election could be attributed to her concern for the environment in all of the following cases EXCEPT when

(A) The citizens of 'C' are highly environment conscious.
(B) The city administration has powers to act against activities resulting in environmental degradation.
(C) Ms. E is also known to possess excellent leadership qualities.
(D) Mr. D is a champion of environmental protection.

3. The life expectancy of the population of a country has increased from forty five (twenty five years ago) to seventy now—due to increased medical facilities and better health consciousness in people. However, an insurance company in the country has not lowered the premium substantially despite the life expectancy going up.

Which of the following, if true, would rationalize the action of the insurance company in not lowering the insurance premium?

(A) The increase in life expectancy has been significant only in the past five years.
(B) There have been fewer deaths due to cancer in recent years, whereas twenty five years back it was claiming a number of lives.
(C) The average age of the population of the country remained at around forty five only due to the increased birth rate in the past twenty five years.
(D) The country had been at war with all its neighbours during the past twenty five years, resulting in heavy casualties among its soldiers.

4. A company found that the attrition rate among its employees, especially among the skilled, has been particularly high in the last three months. As the company had introduced night shifts three months ago, it was concluded that this was the reason for the attrition. The employees working in night shifts were, therefore paid per cent extra wages.

Which of the following would strongly support the above conclusion?

(A) The wages of the employees compared to those of employees in other companies of comparable size in the same locality are 25% higher.
(B) The productivity of employees working in the night shift is higher.
(C) The number of night shift employees is less than that of the day shift employees.
(D) The attrition rate is higher in the case of night shift employees.

Direction for questions 5 to 10: Each question has a word followed by four choices. From the choices, identify the one which is opposite in meaning (antonym) to the main word and mark its number as your answer.

5. IGNOMINIOUS
(A) Crooked (B) Dishonest
(C) Ominous (D) Laudable

6. MELLOWED
(A) Ripened (B) Sensational
(C) Immature (D) Ridiculous

7. ROBUST
(A) Sturdy (B) Feeble
(C) Muscular (D) Ridiculous

8. VINDICTIVE
(A) Forgiving (B) Relentless
(C) Revengeful (D) Disproving

9. ALTRUISM
(A) Kindness (B) Selfishness
(C) Tenderness (D) Benevolence

10. BOISTEROUS
(A) Serene (B) Rowdy
(C) Violent (D) Tumultuous

Direction for questions 11 to 18: Fill in the blanks in the given sentences so as to make sense. Select the correct word from the answer choices and mark its number as the answer.

11. The angry officer called _____ an explanation from his subordinate for the error.
(A) on (B) for
(C) out (D) in

12. I shall keep _____ nothing from you regarding my family affairs as you are a close friend.
(A) on (B) out
(C) back (D) in

13. Mulk Raj Anand is a novelist with a/an _____.
(A) attribute (B) mission
(C) idea (D) need

14. The motivation to _____ comes from a burning desire to achieve a purpose.
(A) meet (B) start
(C) succeed (D) idolize

15. Rainfall _____ the work being done by the fire-fighters at the site of the tragedy.
(A) protected (B) cherished
(C) hindered (D) illuminated

16. The Americans appreciated the _____ made by Pervez Musharraf.
(A) posture (B) texture
(C) gesture (D) resources

17. She ______ the tray on a table next to the bed.
(A) slowed (B) kept
(C) set (D) shook

18. We have ______ some good times together, she and I.
(A) looked (B) laughed
(C) smiled (D) seen

Direction for questions 19 to 24: Each question gives a word followed by four choices. From the choices, select the most suitable synonym (word which means the same) for the main word and mark its number as the answer.

19. ABSTRACT
(A) Peculiar (B) Summary
(C) Normal (D) Diagnostic

20. COMPLACENT
(A) Disappointed (B) Evasive
(C) Satisfied (D) Flimsy

21. EXTERMINATE
(A) Evict (B) Dissociate
(C) Accuse (D) Annihilate

22. UMPTEEN
(A) Numerous (B) Youthful
(C) Rainy (D) Convergent

23. OSTENSIBLE
(A) Strong (B) Desirable
(C) Apparent (D) Fateful

24. STALWART
(A) Watchful (B) Sturdy
(C) Delicate (D) Encomium

Direction for questions 25 to 26: In each of the following questions, a pair of words in capitals is given followed by four numbered pairs of words. Select from the choices the pair which exhibits the same relationship as the capitalised pair of words and mark the number as your answer.

25. PROPERTY : MORTGAGE
(A) Money : Lend
(B) Equity : Interest
(C) Inventory : Merchandise
(D) Security : Price

26. NEGOTIABLE : CHEQUE
(A) Frozen : Asset
(B) Oil : Seed
(C) Bank : Money
(D) Security : Price

Direction for questions 27 to 30: For the word given on the top of the table, match the dictionary definitions given in the left-hand columns (A, B, C, D) with their corresponding usage given in the right-hand column (E, F, G, H). Out of the four numbered choices given in the boxes below the table, identify the one that has all definitions and usages correctly matched.

27. RAISE

A.	Levy or collect or bring together	E.	The girl has been raised in a very conservative environment.
B.	Cause to be heard or considered	F.	We decided to raise some money to help the flood victims.
C.	Increase the amount or value or strength of	G.	I will raise this issue at the right moment.
D.	Bring up; educate	H.	The doctor raised the potency of the drug before administering it to the patient.

10. Injustice and discrimination (A) / can never be (B) / tolerated by (C) / no one. (D)

11. Alas! (A) / How lovely (B) / and fragrant (C) / these flowers are! (D)

12. Your story is (A) / so ridiculous that (B) / it could not/ (C) be believed. (D)

13. Government schools (A) / has too many students (B) / in a class (C) / for a teacher to control. (D)

14. Either of (A) / the methods (B) / lead to the (C) / same result. (D)

15. The doctor has (A) / advised him (B) / to avoid the sugar (C) / in his milk. (D)

Directions for questions 16 to 20: Each sentence given below is divided into four parts. One of them has an error. Mark the number of the incorrect part as your answer.

16. The church accepts this popular sentiment / (A) gives it a religious significance (B) /and crystallizes / (C) in a system (D)

17. The government of the Tudors / (A) were masters in the art of disguising / (B) common place, and sometimes sordid, motives / (C) beneath a glittering façade of imposing principles. (D)

18. The increasing reluctance of the sun to rise,/ (A) the extra nip in the breeze / (B) the patten of shed leaves dropping - all the evidences of fall / (C) drifting in winter were clearer each day. (D)

19. Because of it's hardness / this steel is / used principally/ for making razors.
(A) (B) (C) (D)

20. Laying aside all hindrance / thrusting away all private aims / devote yourself unswerving and unflinchingly / to the vigorous and successful prosecution of this war
(A) (B) (C) (D)

Directions for questions 21 to 25: In each question below, two sentences are given. These two sentences are to be combined into a single sentence without changing their meaning. Three probable starters of the combined sentence are given which are denoted by (A), (B) and (C). Any one or more or none of them may be correct. Find out the correct starters(s) and accordingly select your answer from among the given five answer choices.

21. I am a layman. I do not know how a computer works.
(A) Being a layman, I ………..
(B) As I am a layman, I ……….
(C) While I am a layman, I……..
(A) A and B (B) B and C
(C) A and C (D) B only
(E) A only

22. He always listened to good advice. He rose to a good position in life.
(A) Though he listened to good advice ……..
(B) As he rose to good position in life ……..
(C) Since he listened to good advice …….
(A) A and B (B) B and C
(C) A only (D) B only
(E) C only

23. The soldiers saw the camp of the enemy. They started attacking the enemy.
(A) While the soldiers saw the enemy camp ……
(B) When the soldiers saw the camp …….
(C) Because the soldiers saw the camp …….
(A) B and C (B) A and C
(C) B only (D) A only
(E) C only

24. The weather is warm. I like to go for swimming now.
(A) If the weather is …………
(B) Whenever the weather is ………
(C) As the weather is …….
(A) A and B (B) A only
(C) B only (D) C only
(E) None of these

25. We cannot achieve our goals. We lack confidence in our abilities.
(A) When we lack confidence ………..
(B) However we can achieve our goals if we lack …..
(C) Whenever we achieve our goals ………
(A) A and B (B) A only
(C) B only (D) C only
(E) B and C

Directions for questions 26 to 30: Each sentence has a missing part. Choose the best option from those given below the statement to make up the missing part.

26. Given the long and porous border between the two countries and, more important, the links _______.
(A) among Nepalese and Indian rebel groups, New Delhi cannot afford ignoring the Maoists threat of Nepal
(B) between Nepalese and Indian rebel groups, New Delhi cannot afford the ignorance of the Maoists threat in Nepal
(C) among Nepalese and Indian rebel groups, New Delhi cannot afford to ignore the Maoists threat of Nepal
(D) between Nepalese and Indian rebel groups, New Delhi cannot afford to ignore the Maoists threat in Nepal

27. At a time when Beijing's officially scripted anti-Japanese protests are bound to prompt a rethink in Japan about the advisability of continued investment in China, India should be __________.
(A) persuading aggressively Japanese business to shifting at least some of their mammoth investments to its secure location
(B) aggressively persuading Japanese business to shifting at least some of their mammoth investments to its secure location
(C) aggressively persuading Japanese business to shift at least some of their mammoth investments to its secure location
(D) persuading aggressively Japanese business to shift at least some of their mammoth investments to its secure location

28. ________, that they could compete successfully, even with the higher techniques of production, which were being established in England.
(A) So efficient and highly organized were Indian methods of production, and such was the skill of India's artisans and craftsmen
(B) So efficiently and highly organized were Indian methods of production, and such were the skill of India's artisans and craftsmen
(C) So efficient and highly organized were Indian methods of production, and such was the skill of India's artisan and craftsman
(D) So efficiently and highly organized were Indian methods of production, and such were the skill of India's artisan and craftsman

Directions for questions 29 to 33: In the following questions, two sentences are given. There may be an error in the sentence(s). Mark as your answer

(A) if there is an error only in the first sentence;
(B) if there is an error only in the second sentence;
(C) if there are errors in both the sentences and
(D) if there is no error in either of the two sentences.

29. I. He said that he will come, but he didn't.
II. I admit, 'No news is good news now - a -days'.

30. I. I and my friend like to play tennis in grass court.
II. Each of the mistakes have to be corrected before printing.

31. I. I cannot see anything wrong with the plan.
II. You may read the book if you have enough time.

32. I. There is a little truth in what we have heard.
II. You are not going to the theatre, isn't it?

33. I. He informed me before he had posted the letter yesterday.
II. No one is as happy as he.

Directions for questions 34 to 40: A sentence is given in four different forms. Only one of them is correct grammatically. Mark the number of the correct one as the answer.

34. (A) My sister likes painting, dancing and to cooking.
(B) My sister likes painting, dancing and to cook.
(C) My sister like painting, dancing and cooking.
(D) My sister likes painting, dancing and cooking.

35. (A) If you want to play well, you must practise.
(B) If you want to play well, one must practise.
(C) If one want to play well, you must practise.
(D) If one wants to play well, he must practise.

36. (A) Einstein was more cleverer than any other scientist.
(B) Einstein was more cleverer than any scientist.
(C) Einstein was cleverer than any other scientist.
(D) Einstein was cleverer than any scientist.

37. (A) An argument developed among his sister and him.
(B) An argument developed between his sister and he.
(C) An argument developed between his sister and his.
(D) An argument developed between his sister and him.

38. (A) The youngster will benefit from the experience.
(B) The youngster will benefit by the experience.
(C) The youngster will benefit of the experience.
(D) The youngster will benefit out of the experience.

39. (A) There were lesser children in the class than expected.
(B) There were fewer children in the class than expected.
(C) There were a little children in the class than expected.
(D) There were a small children in the class than expected.

40. (A) The child can't hardly wait till its birthday.
(B) The child can wait till it's birthday.
(C) The child can hardly wait till its birthday.
(D) The child can wait hardly till its birthday.

Answer Keys

1. B	**2.** C	**3.** D	**4.** A	**5.** A	**6.** C	**7.** D	**8.** B	**9.** B	**10.** D
11. A	**12.** C	**13.** B	**14.** C	**15.** C	**16.** C	**17.** B	**18.** D	**19.** A	**20.** C
21. A	**22.** D	**23.** C	**24.** D	**25.** B	**26.** D	**27.** C	**28.** A	**29.** A	**30.** C
31. D	**32.** B	**33.** A	**34.** D	**35.** A	**36.** C	**37.** D	**38.** A	**39.** B	**40.** C

Hints and Explanations

1. Indences correlate. Choice (B)

2. 'Nor' must be replaced by 'or'. Choice (C)

3. 'Who the winner is' is redundeant. Use only 'the winner'. Choice (D)

4. 'Went about' is the wrong phrase in the context of the given sentence. Choice (A)

5. "A score of apples' is the correct phrase, as 'score' means twenty or a set of twenty. Choice (A)

6. Choice (C)

7. Choice (D)

8. Choice (B)

9. Choice (B)

10. Choice (D)

11. Choice (A)

12. Choice (C)

13. Choice (B)

14. Choice (C)

15. Choice (C)

16. The third part of the sentence should be 'and crystallizes it'. Crystallizes is a verb which takes an object. Choice (C)

17. Part 2 of the sentence is faulty as the preposition used should be 'of' and not 'in'. One is the 'master of the art' not in the art. Choice (B)

18. The fourth part of the sentence is faulty, as 'drifting into winter' is correct - it indicates motion. 'In' does not indicate motion. Choice (D)

19. In the first part of the sentence 'its' is in the genitive case, so there need not be an apostrophe, 'Because of its hardness' is correct. Choice (A)

20. The third part of the sentence should read 'devote yourself unswervingly and unflinchingly' to maintain parallelism in construction. Choice (C)

21. The two sentences can be combined into a simple sentence by changing the verb 'am' into '*v* + ing' (i.e.) 'being'. Hence 'A' is possible. The conjunction 'as' also can be used, as it shows reason. But 'C' cannot be used as the sentence cannot be combined with the conjunction 'while'. Choice (A)

22. The sentence donates a positive meaning. Hence it cannot begin with 'though'. The conjunction 'as' and 'since' can begin the sentence. But here 'B' begins with the second sentence which changes the meaning of the given sentence. Choice (E)

23. The sentences cannot give the same meaning if the conjunctions 'while' or 'because' are used. It shows a particular time and hence 'when' would be the right way to begin the sentence. Choice (C)

24. 'If' or 'whenever' can also begin the sentence. But here it is not a general statement. It specifies that particular time as 'now' is used. Hence 'as' is the most appropriate way to begin this sentence. Choice (D)

25. The sentence is about 'not achieving'. 'B' and 'C' talk about 'achieving' and hence cannot be appropriate. Choice (B)

Solutions for questions 26 to 28:

26. 'Between' is better than 'among' since only two – the Indian and Nepalese – rebel groups are mentioned. (Between is used for two or more, among for three or more). We are talking of the threat <u>in</u> Nepal not <u>of</u> Nepal. New Delhi cannot ignore (disregard intentionally) not ignorance (lacking knowledge). Choice (D)

27. The adverb 'aggressively' qualifies 'persuading' and hence must precede it (rules out choices 1 and 4). Choice 2 is wrong because 'to shifting' is incorrect. Choice (C)

28. Since the verb at the beginning of the sentence is 'were' (plural) it must be 'efficient and highly organized'. If it were 'efficiently' then both (efficiently and highly) qualify 'organized' and the verb would be was (rules out 2 and 4). We are talking of artisans and craftsmen (plural again not singular) Choice (A)

29. The past tense should be used. The first sentence should be "He said that he would come, but he didn't". Choice (A)

30. The second person must come first.
Statement 1 should be "My friend and I like to play tennis on grass court."
Statement 2 Each of the mistakes has to be corrected before printing. Choice (C)

31. No error in both the sentences. Choice (D)

32. You are not going to the theatre, are you? Choice (B)

33. He informed me before he posted the letter yesterday. Choice (A)

34. The gerund form should be maintained throughout a sentence. Choice (D)

35. 'You' must be followed by 'you'. 'One' must be followed 'one'. Therefore, Choice (A) is right and the other choices are incorrect. Choice (A)

36. ……. Cleverer than any other……… Choice (C)

37. 'Between' should be followed by the objective case 'him' and not the subjective case 'he'. Choice (D)

38. You benefit from something. Correct preposition. Choice (A)

39. In case of numbers we use 'fewer'. 'Less/Lesser' are used in the case of weight and 'little/small' in the case of size. Choice (B)

40. 'Hardly' indicates 'cannot'. So, 'the child cannot wait for its birthday' is being intended. Choice (C)

VERBAL ABILITY TEST 2

Number of Questions: 40 **Time: 30 min**

Directions for questions 1 to 5: In each of the following questions, 3 words are related in some way. Find the "odd man" out.

1. (A) Expert (B) Professional (C) Civilized (D) Maestro

2. (A) Blue (B) Crimson (C) Ruby (D) Scarlet

3. (A) Commentary (B) Critique (C) Authority (D) Review

4. (A) Decahedron (B) Decade (C) Decagon (D) Decibel

5. (A) Grave (B) Coffin (C) Tomb (D) Monument

Directions for questions 6 to 15: In each question given below, identify the word which is similar in meaning (synonym) to the question word.

6. ABATE
(A) improve (B) decrease
(C) subside (D) sharpen
(E) sweep

7. RENOUNCE
(A) relinquish (B) withdraw
(C) forgive (D) punish
(E) accept

8. ABDUCT
(A) ransack (B) surround
(C) induce (D) destroy
(E) kidnap

9. DETEST
(A) hate (B) rebel
(C) neglect (D) pretend
(E) captivate

10. CLEANSE
(A) polish (B) flow
(C) absolve (D) reveal
(E) revolve

11. ABODE
(A) sanctuary (B) residence
(C) reformatory (D) dwelling
(E) shelter

12. RESCIND
(A) withhold (B) countermand
(C) hamper (D) suppress
(E) encroach

13. EPITOMIZE
(A) disappoint (B) distend
(C) exemplify (D) generate
(E) lengthen

14. REPEAL
(A) continue (B) prolong
(C) promote (D) reject
(E) abrogate

15. ABSCOND
(A) run away (B) give away
(C) move away (D) forbid
(E) waste away

Directions for questions 16 to 25: In each of the questions given below, identify the word which is opposite (antonym) in meaning to the question word.

16. FUSION
(A) union (B) participation
(C) isolation (D) marriage
(E) gloom

17. SOMNOLENT
(A) drowsy (B) lively
(C) cheerful (D) joyous
(E) active

18. MELLIFLUOUS
(A) harmonious (B) pitchable
(C) discordant (D) internal
(E) external

19. PRODIGAL
(A) generous (B) revisable
(C) frugal (D) pauper
(E) rich

20. DISASTER
(A) puzzle (B) success
(C) omen (D) festival
(E) fiasco

21. ANIMATE
(A) truthful (B) false
(C) active (D) dull
(E) lazy

22. WRETCHED
(A) filthy (B) tidy
(C) neat (D) clear
(E) scenic

23. SQUANDER
(A) waste (B) liberate
(C) presume (D) donate
(E) economize

24. PERTURBED
(A) servable (B) controllable
(C) composed (D) decided
(E) resolved

25. SLUGGISH
(A) lethargic (B) indolent
(C) apathetic (D) intelligent
(E) exuberant

Directions for questions 26 to 29: In each of the following questions, an idiomatic expression and its five possible meanings are given. Pick out the correct meaning of the idiomatic expression and mark the number of that meaning as your answer.

26. To be on the fiddle
(A) to work on something important
(B) to be doing something dishonest to get money
(C) to constantly find fault with others
(D) to have a less important position than somebody or something else alive

(A) smell anything wrong
(B) meddle officiously
(C) forget
(D) combine

Directions for questions 35 to 40: In each of the following questions four numbered choices are given. Three of them belong to the same category. Mark the number of the 'odd man' as your answer.

35. (A) Parents (B) Love
(C) Guidance (D) Punishment

36. (A) Periphery (B) Perfunctory
(C) Cursory (D) Superficial

37. (A) Prune (B) Abridge
(C) Trim (D) Spruce

38. (A) Overfly (B) Overeat
(C) Overdressed (D) Overdose

39. (A) Serendipity (B) Fortuity
(C) Guess (D) Coincidence

40. (A) Vague (B) Abstract
(C) Intangible (D) Empirical

Answer Keys

1. C	**2.** A	**3.** C	**4.** D	**5.** D	**6.** B	**7.** A	**8.** D	**9.** A	**10.** C
11. D	**12.** B	**13.** C	**14.** D	**15.** A	**16.** C	**17.** D	**18.** C	**19.** C	**20.** B
21. D	**22.** B	**23.** D	**24.** C	**25.** D	**26.** B	**27.** B	**28.** D	**29.** A	**30.** C
31. A	**32.** B	**33.** C	**34.** B	**35.** A	**36.** A	**37.** D	**38.** A	**39.** C	**40.** D

Hints and Explanations

1. Expert, professional and maestro talk about the skill or knowledge of a person; 'civilised' talks about the behaviour of a person. Choice (C)
2. Crimson, ruby and scarlet are shades of red. Choice (A)
3. Commentary, critique, review refer to the expression of opinion. Choice (C)
4. Choices 1, 2 and 3 are related to 'ten' (ie) 'deca'. In 'decibel', 'deci' means one-tenth. Choice (D)
5. Grave, tomb and coffin are related to death. Choice (D)
6. The words abate and decrease are synonymous. Choice (B)
7. The word relinquish is synonymous with renounce (give up, discard). Choice (A)
8. Abduct and kidnap are synonymous. Choice (E)
9. Detest means to loathe or hate. Choice (A)
10. Cleanse (rid of something unpleasant or unwanted) is synonymous with absolve (declare free from guilt, blame or sin). Choice (C)
11. The word abode which is a formal or literary term means a house or home, 'dwelling' is its closest synonym. The word 'residence' can be ruled out because it refers only to a person's home, whereas the word 'abode' has a wider connotation. For eg. the abode of animals, the abode of god but it is absurd to say the residence of god or the residence of animals. Choice (D)
12. Rescind means to cancel (a law, order or agreement) the word countermand, which also the means the same, is its synonym. Choice (B)
13. The word epitomize means to be a perfect example of. The word 'exemplify' is its closest synonym. Choice (C)
14. Repeal means to officially cancel (a law of act of parliament) the word 'abrogate' also means the same. Choice (E)
15. Abscond means to leave quickly and secretly to escape from custody or avoid arrest. Choice (A)
16. Fusion (the process of joining two or more things to form a whole) and isolation are antonymous. Choice (C)
17. Active (alert) is an antonym of somnolent (sleepy; drowsy). Choice (E)
18. The word mellifluous means pleasingly smooth or musical to hear. The word discordant (cacophonous, harsh) is its antonym. Choice (C)
19. Prodigal (wasteful, extravagant) and frugal (thrifty, economical) are antonyms. Choice (C)
20. Success is an antonym of the word disaster which also means failure. Choice (B)
21. Animate (alive) and dull are antonyms. Choice (D)
22. The words wretched (miserable) and tidy are antonyms. Choice (B)
23. Squander means to waste (money, time, etc) in a reckless or foolish way. Economize is its antonym. Choice (E)
24. Composed (calm) is an antonym of the word perturbed (alarmed). Choice (C)
25. Exuberant (lively, cheerful) and sluggish (inactive) are antonyms. Choice (E)
26. "To be on the fiddle" means doing something dishonest to get money. Choice (B)
27. The idiom, 'as the crow flies' means 'in a straight line'. Choice (B)
28. The idiom, 'in a melting pot' means 'in the process of changing'. Choice (E)
29. 'To open somebody's eyes' is to cause or make someone realize or understand something. Choice (E)
30. Choice (C)
31. Choice (A)
32. Choice (B)
33. Choice (C)
34. Choice (B)
35. Parents are not concepts as the other three are. Choice (A)
36. Periphery. The other three are associated with casual attitude. Choice (A)
37. The first three refer to cutting short. Choice (D)
38. Overfly is to fly above a place. In all the other three over has the meaning of excessive. Choice (A)
39. Guess. The others refers to a favourable chance. Choice (C)
40. Empirical is verifiable the others are not. Choice (D)

VERBAL ABILITY TEST 3

Number of Questions: 40 **Time: 30 min**

Directions for questions 1 to 10: In each question the word at the top is used in four different ways. Select the option in which the usage of the word is INCORRECT or INAPPROPRIATE.

1. COMMUNICATE

A.	The deaf and dumb communicate by means of sign language.
B.	The excitement was palpable and communicated itself to the crowd.
C.	People living in the suburbs have to communicate a long distance every day.
D.	A contagious disease is communicated through physical contact.

2. OPPOSITE

A.	Being an adolescent, Mrinal felt shy talking to members of the opposite sex.
B.	I expected the bride to be shy and quiet, but she was just the opposite.
C.	The Raos live further down, on the opposite side of the road.
D.	The bank is opposite to the supermarket.

3. RAW

A.	Dostovsky's novels often portray life in the raw.
B.	Women labourers often get raw deal from contractors.
C.	Her own experiences provided the raw material for her first novel.
D.	Being marooned on the island forced them to eat raw meat.

4. PICTURE

A.	There have been a number of changes recently - let me put you in picture.
B.	Atticus always told the old lady that she looked a picture.
C.	Ever since he went into pictures the couple have been drifting apart.
D.	From the reports, the picture for the service sector is encouraging.

5. MASTER

A.	Vivek realised that he was expected to master Japanese before leaving for Japan.
B.	Tilak has a masters in Business Administration.
C.	The master bedroom was spacious and comfortable.
D.	"Don't be led by others, be your own master," Sampath said severely.

6. CLOSE

A.	The soldiers advanced in a close formation.
B.	Over the next few months we have to keep a close eye on sales.
C.	Alind closed down in the nineties.
D.	The police often close ranks when one of their officers is accused.

7. BACKGROUND

A.	The name 'TIME' is written in red on a white background.
B.	The film has good background music by Rehman.
C.	The elections in Sri Lanka took place on a background of violence.
D.	The Director asked for more background on the company's financial position.

8. DEFENCE

A.	Whenever Roja was criticized, her brother leapt to her defence.
B.	Why don't you give a chance for the body's natural defence mechanism to protect it?
C.	No cost is too high when it is for the defence of the country.
D.	News of an imminent attack forced the troops onto the defence.

9. CHANGE

A.	The property changed hands several times in the last decade.
B.	Expecting a change of heart from that stubborn mule is useless.
C.	Some of my old dresses will have to be changed to fit me now.
D.	Marriage has changed Sania for better.

10. EARTH

A.	Yasho was the happiest person on earth when she won the gold medal.
B.	Aditya flung his bike on the earth and rushed inside when he saw smoke emanating form the house.
C.	The good earth always gives back several times what you put in.
D.	Be sure to earth household electrical gadgets so that they are safe to handle.

Directions for questions 11 to 20: In each of the following questions, a paragraph with a 'blank' is given. From the four choices, select the sentence, which can go into the blank to make the paragraph logically coherent.

11. India has the distinction of becoming a country with a billion people. Thus, it becomes the second largest populated country in the world. (____.)
(A) The global population has almost touched the six billion mark.
(B) Statistically speaking, every sixth person in the world is an Indian.
(C) Forced population control is not desirable.
(D) It is difficult to judge how many forests have been encroached upon.

12. In the armed forces, before independence, Muslims constituted around 35 percent of the total strength. (____.) Why so few Muslims?
(A) Most of them were recruited from Punjab and nearby areas.
(B) Today, it has gone down to just a mere two percent out of a total close to a million.
(C) This is basically due to a lack of lobby.
(D) This can be attributed to a change in human behaviour.

13. It would be a Herculean task to remodel our settlements to keep them clean through proper waste disposal systems. As such we have already realized that, recycling of waste liquids and solids would be a saner approach. (____.)
(A) Now we are very used to human interference with nature.
(B) We may not be able to survive utilising the available resources.
(C) But organising such measures will involve considerable time, effort, management and education.
(D) Many of our organisation lack this foresight.

14. When a bird hits an aircraft, it can cause potentially catastrophic damage. (____.) So a team at Britain's Defence Evaluation and Research Agency plans to use crystals that glow when fractured to warn of such unseen damage.
(A) This makes visual inspection of damage unreliable.
(B) This is one of the greatest dangers of information technology.
(C) This is the ease with which communication goes on these days.
(D) But in planes made of carbon composites, such damage may be impossible to spot.

15. The General Electric Company is setting up India's first multi-disciplinary research centre. (____.) It will contribute to the development of multi-disciplinary engineering capabilities in India.
(A) Named the GE India Technology centre, it is also the largest of its kind.
(B) It plans to recruit 500 research scientists.
(C) This will help develop GE's global business.
(D) The project will be over by December, 2000.

16. One major change in careers is that one can work from home. (_____.) So far, only work relating to Information Technology has been thus affected. It is expected that many other careers will afford this flexibility in the future.
(A) Therefore one should develop a confident, outgoing personality.
(B) There is no such thing as a permanent job.
(C) New technologies ensure that geographical distance is not a hindrance to one's work.
(D) While it is true that people will switch jobs faster than ever before, one must be loyal to one's organisation.

17. (____.) There are several cave paintings, stone engravings and carved figures which bear this out. The Neanderthal man attempted this too, but his drawings of the tools he used show that they were rather crude.
(A) Prehistoric man used sophisticated tools for drawing and carving figures.
(B) The Cro-Magnon man, who was the forerunner of modern man, earned his daily bread through paintings.
(C) The Cro-Magnon man, who was the forerunner of modern man, was the first fine artist in the history of man's evolution.
(D) Prehistoric man pursued painting and carving figures as a hobby.

18. The natural atmosphere which man has inherited from the past, has been deteriorating under the impact of industrialization. Factories pump millions of tons of dust into the air, vehicles spread fumes and sprays are used to kill agricultural pests – all combine to change the ideal picture. (____.) The situation near big cities and heavily industrialized areas has become particularly bad, and the air is not fit for breathing.
(A) Movement of vehicular traffic on the roads should be restricted.
(B) The pollution of air has become a matter of great concern because it continues to increase as civilization spreads.
(C) Society will have to move towards stricter pollution control.
(D) The atmosphere should be protected as it is a great and irreplaceable resource for living.

19. In recent times, the number of working women has increased considerably in urban areas. With more and more women opting for career-oriented courses, offices and business establishments are flooded with applications from qualified women. (____.) Women are working side by side with men in all walks of life.
(A) A working woman's life is not a bed of roses.
(B) In fact, there are very few workplaces today which do not have single women.

(C) It is possible to maintain a good standard of living only if the woman contributes to the family income.
(D) Even in small towns and villages, most women are employed.

20. For several thousands of years, the moon has been the only satellite of the earth. Today, however, the earth has many other satellites – all made by man. (____.) However, some of them will still be going around the earth thousands of years from now.
(A) Artificial satellites do not fall because they are not affected by earth's gravity.
(B) They travel in an orbit around the earth.
(C) As they speed along, they tend to go straight off into space.
(D) These artificial satellites are very much smaller than the moon.

Directions for questions 21 to 30: In the following passage there are blanks, each of which has been numbered. These numbers are printed below the passage and against each, five words are suggested, one of which fits the blank appropriately. Find the appropriate word in each case and mark its number as your answer.

In most developed and developing nations, the illicit trade in live wild animals is (21). Each year millions of (22) are wrenched from their natural habitats by people (23) to make quick money, then routed through a ragtag chain of middlemen and international dealers to meet the (24) demand of private collectors in Saudi Arabia, pet shops in Germany, Japan and the U.S.; zoos and circuses in Eastern Europe and folk healers in Asia. According to a wildlife expert, it is the third biggest (25) business, after drugs and arms.

Though many exotic species can be purchased (26) trade in animals and birds that are in (27) danger of extinction is (28) under the United Nations Convention on International Trade in Endangered Species (CITES), which has been signed by 120 nations. The treaty also regulates trade in other species that are seriously threatened, but its provisions are widely (29), even in signatory countries. Tigers have all but (30) from China and are fast disappearing from India and Siberia.

21. (A) diminishing (B) unfavourable (C) miserable (D) flourishing

22. (A) creatures (B) categories (C) people (D) characters

23. (A) hopeless (B) agreeable (C) desperate (D) susceptible

24. (A) fulfilled (B) imperative (C) unavoidable (D) insatiable

25. (A) licensed (B) virtual (C) authentic (D) illegal

26. (A) inequitably (B) immorally (C) legally (D) profitably

27. (A) imminent (B) preliminary (C) precursory (D) terrible

28. (A) authorized (B) recommended (C) sanctioned (D) banned

29. (A) defended (B) ignored (C) cherished (D) maintained

30. (A) departed (B) depleted (C) withdrawn (D) vanished

Directions for questions 31 to 40: In each of the following questions a pair of words in capitals is given followed by four numbered pairs of words. Select from the choices the pair which exhibits the same relationship as the capitalised pair of words and mark the number as your answer.

31. COGENT : CONVINCING
(A) Insane : Distinguished
(B) Laconic : Pithy
(C) Illogical : Reasonable
(D) Jovial : Abstruse

32. RETROSPECTION : PAST
(A) Syllogism : Logic
(B) Idiosyncrasy : Coherence
(C) Prognostication : Future
(D) Transience : Rigidity

33. EULOGISE : LAMBAST
(A) Mystify : Narrate
(B) Dissemble : Besmirch
(C) Invigorate : Debilitate
(D) Malinger : Adhere

34. LION : PRIDE
(A) Rabbit : Burrow (B) Pup : Litter
(C) Whale : Consort (D) Sow : Sty

35. PENURIOUS : AFFLUENCE
(A) Interrogation : Accusation
(B) Garnishment : Command
(C) Taciturn : Verbosity
(D) Condemnation : Mischief

36. MACHIAVELLIAN : DECEIT
(A) Amphibious : Plants
(B) Acquisition : Assumption
(C) Acquittal : Suit
(D) Naïve : Gullibility

37. BENEVOLENT : GRASPING
(A) Repulsive : Pushing
(B) Euphonious : Discordant
(C) Churlish : Impolite
(D) Rebellious : Disorderly

38. FRIGHTEN : PETRIFY
(A) Enamour : Protect
(B) Sneer : Appreciate
(C) Abbreviate : Interest
(D) Humiliate : Mortify

39. MUNIFICENT : STINGY
(A) Inclement : Merciless
(B) Incorrigible : Recalcitrant
(C) Articulate : Obscure
(D) Egregious : Outstanding

40. EUPHORIC : ECSTASY
(A) Modified : Version
(B) Redundant : Relevant
(C) Licentious : Sentiment
(D) Cryptic : Enigma

Answer Keys

1. C	**2.** D	**3.** B	**4.** A	**5.** B	**6.** A	**7.** C	**8.** D	**9.** C	**10.** B
11. B	**12.** B	**13.** C	**14.** D	**15.** A	**16.** C	**17.** A	**18.** B	**19.** D	**20.** D
21. D	**22.** A	**23.** C	**24.** D	**25.** D	**26.** C	**27.** A	**28.** D	**29.** B	**30.** D
31. B	**32.** C	**33.** C	**34.** B	**35.** C	**36.** D	**37.** B	**38.** D	**39.** C	**40.** D

Hints and Explanations

1. In sentence 3 the intended word is 'commute' (travel regularly by bus, train etc between your place of work and home) and not "communicate" (to exchange information, ideas etc). Choice (C)

2. In sentence 4 opposite is a preposition meaning "on the other side of a particular area from something" and does not require 'to'. Choice (D)

3. In sentence 2 it should be 'a raw deal'. The idiom means 'the fact of somebody being treated unfairly'. Choice (B)

4. Sentence 1 should read … in the picture. The idiomatic expression 'to put somebody in the picture' means to give somebody the information they need in order to understand a situation. In sentence 2 'to look a picture' means to look very beautiful or special. Choice (A)

5. When 'masters' refers to a university degree it takes the apostrophe, hence 'Master's in Business Administration'. Choice (B)

6. In sentence 1 'close' means 'without space'. Hence it is 'close formation' not '<u>a</u> close formation'. To "close ranks" (sentence 4) means to work closely together to defend themselves. Choice (A)

7. In sentence 3, background refers to the past. It should be '. . . <u>against</u> a background of violence' but not 'on'. Choice (C)

8. Sentence 4 should read ' . . . onto the defensive' - an idiom that means acting in a way that shows that you expect to be attacked or criticized. Choice (D)

9. 'Change' is a very general term that is used to describe any act of making something different. In sentence 3 the right word is 'alter' not 'change'. You 'alter' something by making a difference in its appearance, character or use. You cannot use 'change' here. Choice (C)

10. To talk about our planet we use 'earth'. Earth is also used to refer to the soil. As a verb it means making an electrical equipment safe by connecting it to the ground by a wire. But when we refer to the hard surface we walk on, we use 'ground' for outside and 'floor' for inside. In sentence 2 it should be 'ground' not earth. Choice (B)

11. The topic is about India. Global population, population, forests are irrelevant. Hence, option B is the only relevant choice. Choice (B)

12. Option B is the only statement that leads to the question, "Why so few Muslims?" Choice (B)

13. The first line has the words "Herculean task" indicating that the task is not easy. Option C brings out the aspect that such measures will require a lot in terms of time, effort, management and education. Option C is the right answer. Choice (C)

14. Choice D is the only relevant statement. Since, the damage could be impossible to spot, an agency is coming up with a new alternative (as suggested by the last line). Choice (D)

15. Stylistically, the flow of the sentences is as follows: GE is going to set up a research center. Named . . ., it is . . . largest of its kind. It will (this research center will) contribute to . . . Hence, option A is the right answer, as it fits the blank perfectly. Choice (A)

16. Sentence 3 is the ideal choice because it supports the previous sentence and explains the subsequent sentences. Choice (C)

17. The second line states, "There were . . . Figures which <u>bear this out</u>. He attempted to create his daily life <u>through this</u>. The Neanderthal man attempted <u>this too</u>, but <u>his drawings</u> of the tools . . . So, we need a statement in the blank which is a general statement on the pre-historic man and drawing/painting. Our choice narrows down to (A) and (D). Out of these two choices, option A is better because it contrasts the sophisticated tools used by pre historic man with crude ones used by Neanderthal man. Choice (A)

18. Sentence 2 explains how air pollution has increased with the spread of civilization. This sentence explains the last sentence of the paragraph. Choice (B)

19. Choice (D) best supports the argument put forth in the paragraph. Choice (D)

20. Choice (D) speaks about artificial satellites, which though smaller than the moon will revolve around the earth even after several years. The sentence emphasizes the power of artificial satellites.

Choice (D)

21. The illicit trade in wild animals is prospering or growing or 'flourishing' in most developed and developing nations. The passage goes on to explain how it is 'flourishing'. All the other choices are negative terms which are inappropriate in this context.

Choice (D)

22. Animals live in their natural habitat. These 'creatures' are wrenched or harshly pulled away from their natural habitat. Choice (A)

23. Who are the people who wrench these creatures away from their natural habitat? They are those who are 'desperately' looking for quick money. The 'desperate' desire to make quick money drives these people to get themselves involved in this illicit trade. Choice (C)

24. The paragraph goes on to give a list of people who are interested in this trade – from private collectors to folk healers. Hence there is always a heavy demand or an 'insatiable' (impossible to satisfy) demand for these animals. Choice (D)

25. But this trade in live wild animals is an 'illegal' business and is rated next to drugs and arms business at the global level. It cannot be 'authentic' or 'licensed' or 'legal' as the second para goes on to explain the directives of the CITES treaty made by various nations in order to protect the endangered species from extinction. Choice (D)

26. Some of these exotic species can be purchased. The use of 'though' indicates that this purchase is considered 'legal' with reference to certain species of animals and birds which are available in plenty. Further the sentence goes on to say that trade in some species of birds and animals that are near extinction is not allowed under the UN convention. Hence 'legally' is the most appropriate word. Choice (C)

27. There are certain species of animals and birds that are in 'imminent' (impending) danger of extinction. Trading of such animals and birds are considered illegal. Choice (A)

28. It is considered illegal because it has been 'banned' by the CITES, a world organisation established in order to protect endangered species of birds and animals globally. Choice (D)

29. The treaty not only 'bans' the trade of certain endangered species but also regulates trade in other species that are threatened. But still the illegal trade of all these animals continues to flourish even in the 120 countries that have signed the treaty. This means that the treaty and its directives are 'ignored' even by these countries. All the other choices are positive and conveys an opposite meaning and hence are incorrect. Choice (B)

30. The last sentence says that tigers are fast disappearing from India and Siberia. Preceding this, it says tigers have already disappeared from China. Hence 'vanished' is the most appropriate choice. 'Deplete' or 'withdrawn' or 'depart' shows that they are decreasing. But the sentence suggests that tigers have already disappeared from China. Hence choice D is most appropriate. Choice (D)

31. Cogent and convincing are synonyms as are laconic and pithy. Choice (B)

32. Retrospection is analysis of something related to the past. Prognostication means prediction, which is related to the future. Choice (C)

33. Eulogise means praise, whereas lambast indicates criticism. Hence, option (C) is the answer as this choice also has a pair of antonyms. 'Invigorate' means 'to energise' and 'debilitate' means to 'weaken'.

Choice (C)

34. A group of lions is referred to as a 'pride', whereas a group of pups (puppies) is called 'litter'. Choice (B)

35. Antonyms Choice (C)

36. A machiavellian person indulges in deceit. A naïve person shows gullibility. Choice (D)

37. Antonymous relationship Choice (B)

38. Relationship of degree. Petrify indicates extreme fright. Mortify indicates extreme humiliation. Choice (D)

39. A munificent person is generous (not stingy) Likewise, any argument which is articulate is very clear (not obscure). Choice (C)

40. Cryptic and enigma are also synonymous.
In both the first is an adjective and the second a noun.
Choice (D)

Verbal Ability Test 4

Number of Questions: 40 **Time: 30 min**

Directions for questions 1 to 8: Four alternative summaries are given below each text. Choose the option that best captures the essence of the text.

1. An experiment is an observation that can be repeated, isolated and varied. The more frequently you can repeat an observation, the more likely are you to see clearly what is there and to describe accurately what you have seen. The more strictly you can isolate an observation, the easier does your task of observation become, and the less danger is there of being led astray by irrelevant circumstances, or of placing emphasis on the wrong point. The more widely you can vary an observation, the more clearly will the uniformity of experience stand out and the better is your chance of discovering laws.

(A) It is essential that scientific experiments be repeated, isolated and varied because repetition increases accuracy, isolation facilitates observation and variety increases the chance of discovering laws.

(B) Isolation and repetition of experiments help in reducing the possibility of error in observation. The lesser the margin of error, the better is the chance of discovering new laws.

(C) Scientific experiments should be isolated, repeated and varied. Repetition helps to see clearly and isolation reduces the chance of being led astray. But it is uniformity in the variety that gives a better chance of discovering laws.

(D) An experiment should be isolated, repeated and varied. They help in observing things clearly and accurately. They also increase the chance of discovering new laws.

2. Aristotle in his little treatise on 'Definitions' suggests that every good definition has two parts, stands on two solid feet: first it assigns the object in question to a class or group whose general characteristics are also its own - so man is, first of all, an animal : and secondly, it indicates wherein the object differs from all the other members in its class - so man, in Aristotelian system, is a rational animal, his 'specific difference' is that unlike all other animals he is rational. Aristotle drops an object into the ocean of its class, then takes it out all dripping with generic meaning with the marks of its kind and group; while its individuality and difference shine out all the more clearly for this juxtaposition with other objects that resemble it so much and are so different.

(A) A good definition is like a man standing on two solid feet. It not only helps in assigning an object to a generic group but also shows the differences and dissimilarities to make it shine out of the group.

(B) Aristotle suggests that man as an object has to be defined first as an animal and then shown to be different from other animals in his rationality. Such an interpretation helps in revealing the unique characteristic of an object.

(C) In order to define an object, Aristotle first assigns it to its class and then points out its dissimilarities. Such a comparison makes its individuality more conspicuous.

(D) According to Aristotle, any good definition of an object has two parts, one that identifies it with its group and the other that shows its uniqueness. A definition that includes both these will help in identifying the individuality of the object.

3. Sociologists are often criticized for their use of jargon, their apparent predilection to develop new words while at the same time giving new and often strange meanings to old and familiar terms. The charges are often justified. Equally often they go beyond reason. Systematic discussion is impossible if one does not work with more or less precisely defined terms. Without a technical language, scientific communication becomes cumbersome and inefficient. In the humanities too, the desire to be more precise in analysis leads to the elaboration of technical terms.

(A) Sociologists are often criticized for the use of strange jargon and for giving extended meaning to familiar terms. But they are justified in doing so as such usage makes their analysis more precise and systematic.

(B) Critics are justified in their charge against the sociologists for their use of strange jargon or for giving extended meaning to familiar terms. But the sociologists give the example of the scientists to justify their stand.

(C) In a desire to be more precise in their analysis sociologists develop new words or give strange meaning to old terms. Their justification is that only such extension of meaning can help them in systematic discussions.

(D) While critics are justified in accusing sociologists of using strange jargons and for giving extended meaning to familiar terms, sociologist use such terms in their desire to be more precise and systematic in their discussions and analysis.

4. How big is your footprint? We're not talking about whether you walk around in dainty Cinderalla's slippers or size 18 Wellington boots, but rather the size of the damaging dent that you leave in the Earth's environment

and its resources while going about your daily life. One way of finding out if your impact on the world is like teetering on tiptoes or stomping about in steel-capped boots is to measure your personal ecological and carbon footprints. A carbon foot print is a measurement of the effect you have on the climate in terms of the total amount of greenhouse gases that your actions cause to be produced, while an ecological footprint is a measure of the amount of productive land required to support your resource demands and to absorb the waste you produce.

(A) Is your footprint on the environment like walking on tiptoe or stomping around in steel boots? That is what is measured by ecological footprint - the land you require for resources to meet your needs, the waste you dump and the greenhouse gases that you cause.

(B) How much we impact our environment is measured by carbon footprint and ecological footprint - the former a measure of the greenhouse gases we are responsible for and the latter the land we need for resources and waste.

(C) If one walks around daintily like Cinderella, one harms the environment less than if one tramps around in boots. The greenhouse gases one emits, the waste one generates and the resources one needs, all measure the damage one inflicts on one's surrounding.

(D) The effect our actions have on our environment is measured by carbon footprint, the amount of land we need to sustain ourselves, the waste and greenhouse gases generated by us are noted to arrive at this figure.

5. It's clear that in many countries protected areas are seriously compromised. The dramatic rise of hunting for bushmeat in west and central Africa over the past 30 years has been well documented, as has the explosion in the past decade of illegal logging in southeast Asia. But elsewhere, protected areas face more insidious threats. The Dong Hua Sao National Biodiversity Conservation Area in Laos, for example, has suffered a gradual erosion of its boundaries at the hands of coffee growers keen to take advantage of its rich volcanic soil. The reasons for such pressures are varied and complex, but they often include population growth, land pressure, poverty, corruption and poor law enforcement.

(A) While hunting and logging are generally considered the main threat to protected areas, a greater evil is the gradual occupation of land by people living around who are attracted by its fertile land.

(B) Population growth, poverty, and corruption have led people in Laos to gradually occupy the land under conservation for biodiversity. Thus it is a greater challenge than the rise in hunting for bushmeat in west and central Africa or logging in southeast Asia.

(C) Protected areas are threatened by hunting and logging as also by subtle actions like poaching on its land for cultivation. The main reason for the threat are population pressure on land, poverty and corruption.

(D) Poaching by coffee growers of protected land is as much a threat as hunting and logging in Asia. The villain of the piece is, however, corruption and poor law enforcement.

6. Two decades after the event, and the word 'Chernobyl' still carries a lot of baggage but then, we're still 25,000 years away from being clean. The meltdown at Reactor 4 of the Soviet nuclear power station was caused by an unnecessary low-power test, an experiment to determine whether the reactor could restart itself with all external power shut off. The result was a black fireball that blew the reactor's roof off and spread radiation across much of the Northern Hemisphere. Equally toxic was the Soviet government's initial response : a three-day silence as to the dangers of the situation. Protective foam was sprayed around the nearby towns, Chernobyl and Pripyat, whose combined population was 135,000, but otherwise, life proceeded as normal - children played in the foam, marched in the May Day parade and breathed in the contaminated air. While the official death toll remains at 41, who knows how many fatalities resulted from the delay in evacuating these towns?

(A) Twenty years after Chernobyl, caused by an experiment, we are still emotionally involved and haven't been able to wipe out the radiation that spread over the Northern Hemisphere. No one knows how many deaths have resulted from the Soviet government's refusal to evacuate the people in the region.

(B) Chernobyl was caused by an unnecessary test that affected millions. The Soviet government's low-keyed response led to many more deaths though officially it is only 41. We are still emotionally swayed by the memory and are far from cleaning up the mess.

(C) The Soviet government's reaction to Chernobyl was as poisonous as the gas it emitted. The government's apathy led to millions of avertable deaths and we still do not know how to stop the radiation from continuing and spreading.

(D) Chernobyl spread radiation across the Northern Hemisphere and affected so many that two decades later we are still emotionally affected by the memory. The Soviet government put up a brave front by not evacuating the people and spraying foam to contain the radiation.

7. Down syndrome babies are generally born to older mothers. The probability of having a Down syndrome baby grows rapidly and exponentially as the age of the

mother increases, from 1 in 2,300 at the age of twenty to 1 in 100 at forty. It is for this reason alone that Down embryos are the principal victims or their mothers the principal users, of genetic screening. In most countries amniocentesis is now offered to - perhaps even imposed on - all older mothers to check whether the foetus carries an extra chromosome. If it does, the mother is offered or cajoled into an abortion. The reason given is that despite the happy demeanor of these children, most people would rather not be parent of a Down child. If you are of one opinion, you see this as a manifestation of benign science, miraculously preventing the birth of cruelly incapacitated people at no suffering. If you are of another opinion you see the officially encouraged murder of a sacred human life in the dubious name of human perfection and to the disrespect of disability. You see, in effect, eugenics still in action, more than fifty years after it was grotesquely discredited by Nazi atrocities.

(A) Since Down syndrome babies are born to women over forty, they are often forced to have amniocentesis. This has been controversial. Some see the prevention of the birth of a disabled child as kindness while others think the state is indulging in eugenics as did the Nazis.

(B) The probability of having a child with Down syndrome increases as the age of the mother increases. So older women take the amniocentesis test and abort a Down embryo even though this amounts to a murder. The killing of the disabled is similar to the practices of the Nazis.

(C) The amniocentesis has been a controversial test since it is used to identify and do away with a Down embryo in older women. While some think it is kindness to prevent the birth and unnecessary suffering that a Down child suffers, others think they are murdering the disabled to selectively breed a healthy generation.

(D) Mothers over forty are more likely to have a Down child. They are persuaded or forced to have amniocentesis. The abortion of Down embryo can be seen as an expression of benevolent science or as officially sanctioned murder of disabled, that is eugenics fifty years after the Nazis.

8. “I place economy among the first and most important of Republican virtues and public debt as the greatest of the dangers to be feared”. So wrote Thomas Jefferson in 1816 in a letter to William Plumer, the governor of New Hampshire. However, contrary to the wisdom of the great man, national debt is by no means an inherently bad thing. Borrowing money is a historically tried-and-tested method of expanding the productive capacity of an economy, if not a pre-requisite. The USA would go on to amass an enormous debt, but this was used relatively sensibly to bring about a more-than-proportionate growth in the size of its economy.

(A) Though Jefferson warned against public debt, the USA accumulated enormous debt as it considered it to be an essential prerequisite for an economy to grow.

(B) As the USA amassed an enormous debt, Jefferson felt public debt to be an evil that should be avoided. But it is essential for an economy to grow.

(C) Though Jefferson called public debt ‘the greatest of dangers’ yet the example of the USA reaffirms it to be a proven method of bringing about growth in the economy.

(D) Jefferson said public debt would lead to the weakening of an economy but his own country showed that it is one of the means of achieving a more than proportionate progress.

Directions for questions 9 to 18: A number of sentences are given below which, when properly sequenced, form a coherent paragraph. Each sentence is labelled with a letter. Choose the most logical order of sentences from among the four given choices to construct a coherent paragraph.

9. (a) Here is the world’s newest temple of modern art, an artistic triumph in itself, and combinig grandeur, originality and stunning power.

(b) It can be compared to a cathedral, in that it occupies such a vast space as inspires awe.

(c) One of the unique elements of this edifice is a monstrous steel spider that must surely have been inspired by a horror movie.

(d) The place is a huge physical entity, vast, and stupendous.

(A) abdc (B) cdba
(C) adbc (D) cadb

10. (a) In the South, freshly grated coconut is the usual gamish.

(b) In other parts, fresh coriander leaves provide the mandatory finishing touch.

(c) Besides the tempering exercise, the fat-laden coconut helps to release fat-soluble carotence, from a carrot for example.

(d) Traditional gamishes are another characteristic feature of our cooking.

(A) cabd (B) dacb
(C) acdb (D) cbda

11. (a) Every ceramic object is a sculpture in miniature, and constitutes a study in several kinds of paradox.

(b) The fragility of material culture is nowhere more manifest than it is in the art of pottery.

(c) At the formal level, the solidity of the ceramic object conveys a sense of permanence and enduring value.

(d) At the same time, the baked earth, from which it is made, renders it fragile, frangible, a hostage to chance and threat of damage.

(A) bacd (B) abcd
(C) bcda (D) acdb

12. (a) It is more than 200 years since Tipu Sultan's mysterious death occurred while defending his fort in Srirangapattana near Mysore in India.
(b) As a warrior, he was a formidable and implacable enemy.
(c) His reputation in the annals of British history puts him in the same class as Chenghis Khan, Attila the Hun and Emperor Napoleon.
(d) But his legend in India and in the West, is still going stron.

(A) abcd (B) adcb
(C) acbd (D) adbc

13. (a) Puranic literature describes the progression of the cosmos which passes through various yugas, each of which is measured in precise numerical terms.
(b) But in the cosmic scheme of Time, it does not amount to much.
(c) Ten centuries may be a substantial time-span in human reckoning.
(d) In that calculation, our millennium, just over, does not form even a small fraction of the Kaliyuga, the last of the four cosmic cycles.

(A) cdba (B) abcd
(C) adbc (D) cbad

14. (a) My boss asked me to call on one of the Ministers he knew there.
(b) I was leaving for Delhi on work as usual.
(c) This meeting was supposed to sort out the mess he was in, created by a new amendment to excise duty provisions on export of cotton.
(d) At Delhi I sought an appointment with the Minister concerned.

(A) dabc (B) bdca
(C) bacd (D) cdab

15. (a) Since then sponsorship and endorsements started playing a big role, with the profit motive becoming all pervasive.
(b) Recent reports trace the corruption of Olympic movement to the total commercialisation of games in 1984.
(c) Sordid behind the scenes going on in the IOC have been finally exposed.
(d) Salt Lake city which is bidding for Winter Olympics bent all the norms and even bribed IOC members.

(A) cdba (B) cabd
(C) cdab (D) dcba

16. (a) Which pump out an enormous quantity of smoke, poisonous gases and other wastes in the surrounding environs.
(b) The land to accommodate huge population was obtained by cutting down trees.
(c) Area cleared by chopping down forests was used to set up industries, thermal plants etc.
(d) Acre after acre of forest is cleared in one day leaving the atmosphere susceptible to pollution and the earth poorer.
(e) The speed of cutting down forest has increased ever since.

(A) cabde (B) ecdba
(C) bcaed (D) dcbae

17. (a) No place in the house seemed secure.
(b) I remembered the agonies of my own childhood when my sister discovered I was writing poems and began to tease me by chanting them in public.
(c) When my daughter began to write her memories, at the age of four, I decided that she must have a place to keep them, if only a section of a bureau drawer or as it happened, a box with a key.
(d) It seems to me that we can't learn too early in life to respect the privacy of the individual.
(e) I tried desperately to hide the notebook of poems.

(A) bcdae (B) dcbea
(C) cedba (D) aecbd

18. (a) My father and mother were the complements of each other.
(b) Her face was responsive, my father's impassive.
(c) My mother was fragile, my father robust.
(d) My mother was not intellectual her natural propensity was intuitive. Her face illustrated that saying "Appearances are deceptive: for it did not show the immense strength of her moral convictions.
(e) My mother's face rippled to emotions as waters to the wind.

(A) acbed (B) cabde
(C) ecbad (D) dbcea

Directions for questions 19 to 23: In each question below, a paragraph or a statement is given followed by four statements. Classify each of the four statements as per the following categories and from among the answer choices, select the one that gives the sequence of letters that matches with your categorization. Categorise the statement as

(A) if it is a CONCLUDING ASSERTION
(B) if it is a SUPPORTING REASON
(C) if it is a STATEMENT OF ARGUMENT
(D) if it is a COUNTER ARGUMENT

19. With globalisation making its presence felt, a number of foreign influences are gradually seeping into our culture. And these are felt in food as well. Moreover, with the break-up of the joint family system and more and more working couples setting up homes on their own, people prefer eating out to returning home to cook after a hectic day's work. Capitalising on this new trend,

established as well as upcoming restaurateurs feel that constant improvisation and innovation is the key to a successful restaurant.

(a) Most restaurateurs feel that sticking to the cuisine of the 60's evokes feelings of nostalgia and improves sales.
(b) Customers want to experiment and wish to tryout cuisine from other countries.
(c) Similar changes have been noticed in the entertainment industry where viewers now give preference to comedies and action parked adventure movies.
(d) Restaurants which improvise and innovate will definitely be successful.

(A) cbbd (B) bcda
(C) cbca (D) bbcb

20. Organization of the Petroleum Exporting Countries (OPEC) has used output curbs to maintain average oil prices over the past three years in its \$ 22 to \$ 28 target range. OPEC was worried that rising supplies from rival non-OPEC nations and another year of modest demand growth could cause a downward price spiral. It is particularly vulnerable to a price fall during the second quarter when demand eases. Forecasts from the Paris based International Energy Agency backed this outlook. It is estimated that if OPEC keeps pumping unchecked it will overwhelm world demand next year by 1.8 million BPb causing a huge stock build-up.

(a) The existence of a similar cartel in the global coal market would have definitely pushed up the price of coal.
(b) A price range of \$ 22 - \$ 28 ensures that the producers make the minimum possible profit out of their operations required to keep their economy in shape.
(c) Any excess production by OPEC would be mopped up in an energy hungry global market and thus OPEC need not worry about excess production.
(d) OPEC countries should concentrate on developing their non oil based economy so as to be able to absorb any adverse shocks as a result of decreasing oil reverses.

(A) cbdc (B) bcca
(C) abcd (D) bcda

21. The recent elections have thrown up so many critical weaknesses in the American electoral system - inconsistent voting procedures from state to state, early declaration of the winner by the media before the polls closed and partisanship of breathtaking proportions that intensified after the balloting. Surely a set of statutory rules about the counting and recounting of votes could have saved the US all this embarrassment.

(a) The adoption of a set of rules to be uniformly applied all over the country would most certainly eradicate the weakness in the electoral system.
(b) Countries which had adopted similar procedures have now started reaping the benefits.
(c) The media should be banned from pronouncing the winner before the polls close so as to prevent any sort of malpractice from taking place.
(d) Different voting procedures in various states and the massive media involvement ensures free and fair polls and thus are invaluable.

(A) abbb (B) abcd
(C) abdd (D) abbd

22. Memory may have been found to be affected by genes, but no gene has been found to have even a small causative relationship with normal 'intelligence'. Intelligence has never been successfully defined or measured, unless one refers to highly specialized, arbitrary, narrowly defined and largely learned skills measured by standard IQ tests. Why should genetic intelligence have evolved along the lines of IQ tests when better measures could have been evolved is something inexplicable.

(a) Genes that influence 'intelligence' are masked by chemicals produced in the brain and are thus difficult to detect.
(b) IQ tests are the most accurate way of measuring intelligence exhibited by humans and no other measure is required.
(c) IQ tests are not the best measure of intelligence as these tests can be taken quite successfully by people who have practiced hard enough.
(d) IQ levels in a human being are function of the nutrition that one receives in childhood.

(A) ddbc (B) ddda
(C) dbaa (D) dbad

23. After Rwanda and Kosovo, another dark page of modern history is being written in East Timor by the Indonesian army. It's a shame the international community did not react faster in condemning Indonesia and preventing the genocide, which has been on-going since the mid 70's in East Timor. Above all political and economic considerations, the international community should never forget that the brave people of East Timor are struggling and dying for something that is so dear to all of us - freedom.

(a) The international community has not found any evidence of wrong doing by the Indonesian army and hence has been averse to condemning it.
(b) The East Timorians are waging a battle not for freedom but because of the fact that most of them are being forced to convert to Christianity.
(c) Genocide in any place under any pretext is abominable and it is the responsibility of the international forum to put a stop to it.
(d) History has proved that freedom is a concept for which people have sacrificed their lives and hold it in high esteem.

(A) dcbb (B) dcaa
(C) dcab (D) abcc

Directions for questions 24 to 28: Each of the following questions has a paragraph from which a sentence has been deleted. From the given options, choose the sentence that completes the paragraph in the most appropriate way.

24. This is a rare moment in the history of economic globalisation. Policy making across the developed and developing world has never been so uniform and homogenised. Whether it is G-7 or G-20 economies the only buzz word among policy makers is 'inject more liquidity". President George Bush himself made the unusal gesture of walking into the meeting of G-20 countries, seeking their active support in mitigating the impact of the financial meltdown. ____________
(A) At a macro level, the attempt by the G-7 governments is to ensure that the big asset bubble built over the past six years must not be allowed to burst.
(B) There are clear pointers that the global financial crises will result in loss of demand across the board.
(C) The thirst for more money seems unending.
(D) Never before have the heads of state met only to discuss how to put in extra cash in the global financial system.

25. At the heart of the wellness concept is the most romantic notion of all: the suggestion that we might postpone, halt and even reverse the aging process itself. While some scientists are doing research on ageing and on human mortality, many wellness buffs-and even some reasonably accredited scientists-are promising that we may soon penetrate the secret of the ageing process and with this knowledge, actually extend Homo Sapiens' normal life span. ________________
(A) While some may search for a magic elixir, others stress on diet and exercise as the keys.
(B) The death barrier may actually be broken.
(C) Wellness is a kind of superstate of mental and physical well being.
(D) Those who remain impervious to these romantic hopes have other incentives or coercions.

26. To test the role of cognition in hypocrisy, scientists had volunteers assign themselves an easy task and a stranger an onerous one. But before judging the fairness of their actions they had to memorize seven numbers. This play keeps the brain's thinking regions too tied up to think about anything else, and it worked: hypocrisy vanished. People judged their own behaviour as harshly as they did others'-strong evidence that moral hypocrisy requires a high-order cognitive process. ____________
(A) When 'people like us' torture, it is justified; when people unlike us do, it is an atrocity.
(B) When the thinking part of the brain is otherwise engaged, we are left with gut-level reaction and instinctively condemn bad behaviour.
(C) Scientists have long wondered whether hypocrisy is driven by emotion or reason.
(D) When we judge our own transgressions less harshly than we judge the same transgressions in others it may be because we have this instinct to preserve our self-image.

27. Celebrity has become the primary commodity of popular culture. Fans used to fall for a specific album or film, but now the public tends to base its consumption on the aura of celebrity attached to any given product. Singers can act in films and actors can record albums, not thanks to any special talent but because their brand is big enough to transcend categories. ____________
(A) Witness the birth of the celebrity luxury fashion brand.
(B) Fashion magazines have all but abandoned the practice of putting models on the cover of their magazines.
(C) Celebrities have wised up to their incredibly powerful market potential, moving from endorsing someone else's high end products to producing their own.
(D) The most successful start-ups have been those by celebrities with iconic personal style.

28. The growth stories of China and India have always been different–China is well known for being the world's factory, while India's new wealth has been built on services. But the result is the same. Over the next twenty years 213 million Chinese households and 123 million Indian ones will begin to have discretionary income. ____________
(A) If both countries continue roughly on their current growth paths we will witness the creation of massive new consumer markets.
(B) The speed of the change will rival Japan's economic miracle of the 1950s.
(C) That will lead to an Asian shopping spree of historic proportions.
(D) The projection is that incomes will grow eight fold cutting China's poverty rate to just 16 percent.

Directions for questions 29 to 40: Select the correct alternative from the given choices.

29. Manufacturers of a food drink claim that their product is a complete planned food containing all the nutrients necessary for the health and growth of a child. However, it is better that children are given a well-balanced diet consisting of a variety of foods for health and growth.
Which of the following, if true would best support the position above?
(A) The flavour of the food drink does not appeal to many children.

(B) Children who are used to taking the food drink do not take natural foods rich in these nutrients.
(C) The nutrients contained in a well-balanced diet are more easily absorbed by the body for effective use.
(D) The contention of the manufacturers that the food drinks are complete planned foods is yet to be proved right.

30. A recent study conducted with school children aged ten to fifteen showed that a plan where these children were provided with a proper meal at school ensured that they were less likely to remain absent from the school than other children. Thus providing a proper meal at school plays a role in reducing student absenteeism. So such a plan must be introduced in schools to reduce absenteeism.
Under which of the following conditions will the breakfast plan work best?
(A) In a locality where student absenteeism is significant.
(B) In a school where there are more boys, (who are more likely to remain absent), than girls.
(C) In schools, where a majority of students have both parents working.
(D) In schools where the students are wards of those who cannot afford a square meal a day.

31. It is generally said that radiations emitted by cell phones cause immediate damage to the membrane in the ear and results in hearing impairment. Hence one is advised to avoid using a cell phone to prevent total loss of hearing.
Which of the following, if true, seriously weakens the above argument?
(A) Use of electronic gadgets such as computers also impairs hearing besides affecting eyesight.
(B) Electronic gadgets such as i pods do not damage hearing in users.
(C) A majority of those who use hearing-aids are found to have never used cell phones in their lives.
(D) It is found in a survey that ninety per cent of employees working as telephone operators have been regular users of cell phones for years.

32. Last year, Alpha University implemented a procedure that encouraged students to evaluate the teaching effectiveness of their professors.
Which of the following principles can the above plan be taken to be based upon?
(A) The effectiveness of any service depends on how useful it actually is to the receiver of the service.
(B) The effectiveness of any service is measured by the perception of the receiver of the service regarding its utility.
(C) The receiver of a service should have the freedom to choose the mode of delivery.
(D) The service provided should take care of the ultimate beneficiary of the services.

33. A recent study indicates that Venadial, a new medicine currently produced in the country *X* only, actually reduces cholesterol levels. Venadial, derived from the resin of pine trees, works by activating a metabolic response that is not yet well understood. However, cholesterol levels fell fifteen to twenty per cent among participants in the study who consumed Venadial daily and reduced the risk of heart attack by one-third. Therefore company *A* in country *Y* should obtain the exclusive right to sell Venadial in *Y*. The profits are sure to increase within a short span of time.
Which of the following, if possible must first be done in order to translate the above optimism into reality?
(A) A publicity campaign informing the public of cholesterol and its permissible levels.
(B) A publicity campaign advertising the role of Venadial in reducing heart attacks.
(C) Conducting research on the metabolic response to Venadial which is not yet well understood.
(D) Convince the government to allow import without restraint.

34. Software companies have grown by leaps and bounds. The employees required to man these companies far outnumber the available candidates with academic skills relevant to the jobs that they are required to perform.
Which of the following plans, if possible, can allow such companies to meet their manpower requirements?
(A) The institutions can enhance the pay of the existing employees to encourage them to take up additional work.
(B) The institutions can scale down their operations to the extent where the requirements can be met with the number of available persons with the needed academic skills.
(C) The institutions can recruit even those who do not have the necessary skills and give them training to enable them to perform their jobs.
(D) The institutions can enter into agreements with the academic institutions like colleges and universities to absorb their students in toto.

35. Smoking is a serious health concern as it affects not only those who smoke, but also others who don't, as they inhale the polluted air. The Government is concerned about this. So it has decided to rope in film celebrities for its campaign against smoking, through documentary films. Which of the following, if true, most strengthens the plan of the Government in its campaign against smoking?
(A) The general public abides by the advice of film celebrities on the screen.

(B) The film celebrities are role models for the common man.
(C) Film celebrities earn huge sums of money and it is in the fitness of things that they contribute to a social cause.
(D) It is easier to produce such films with film personalities as they are already well versed in acting.

36. It is true that there are international laws against drug traffic. But if the Government takes stern action to plug its entry in one place, drugs will enter the country through other sources.
Which of the following is most like the argument above in its logical structure?
(A) It is true that the officials of the police department are expected to be incorruptible. But if they are paid poorly, they may resort to graft to sustain a decent living.
(B) It is true that most of the terrorists are religious fundamentalists. But there are several persons who are deeply religious but they are not terrorists.
(C) It is true that there are severe laws against violation of copy rights. But some company would have done it if the defendant had not done it first.
(D) It is true that adoption of third degree methods against prisoners to extract confessions is against law. But it cannot be helped in certain cases where the prisoner does not reveal all the truth.

37. Balance of trade refers to the difference between the exports and imports of a country. It is said to be positive when exports are more than imports and negative if imports are more than exports. The exports of a country '*C*' increased over the previous years' exports. However the balance of trade has become negative though it was positive last year.
Which of the following cannot be true if the above statements are true?
(A) The imports during this year are more than last year's.
(B) Exports during the previous year were more than imports.
(C) Last year's imports were more than this year's exports.
(D) The imports during this year are more than the exports.

38. The town administration of a hill station where tourists far outnumber the local residents, found that the tourists were using non biodegradable plastic cups, plates and polyethylene bags in the place of substitutes made out of paper which are environmentally preferable. In order to reduce the use of non biodegradable goods but at the same time not to annoy the tourists the administration encouraged the sale of both plastic and paper made goods, but the paper-made goods were sold at substantially very low rates compared to the plastic goods. Which of the following, if true, would undermine the purpose for which paper - made goods are sold at very low rates by the administration?
(A) The shop keepers were found to sell the plastic goods at a price higher than that fixed by the administration.
(B) The tourists were found to possess a higher value for aestheticism (which they find in plastic goods compared to the paper goods) than for costs.
(C) The tourists themselves were well aware of the desirability of using biodegradable goods as against non biodegradable ones.
(D) A similar strategy adopted in another hill station in the same country did not produce desired results immediately.

39. Company "Trendy" is engaged in the manufacture of products which face stiff competition from others in the market. Constant change in the products, their design, packaging, etc is the key to success in the industry. Trendy has been allocating a significant portion of the resources over the years to research and development which takes care of devolvement of products and innovations in designs etc. However, the allocation has fallen from a whopping ten percent to a mere 6 percent of the total resources, in the current year, because of which it is feared that the sales might drop significantly this year. Which of the following is an assumption made in the conclusion drawn above?
(A) Ten per cent of the total resources is enough allocation for research development activities, to for achieve the desired levels of sales.
(B) The allocation of resources to research and development efforts determines the extent of innovation in products and product designs.
(C) Sales of the company will also fall from ten per cent to six per cent.
(D) The production of goods by the company would also drop significantly in the current year.

40. Which of the following, if the dictum 'more the resources for R&D, more will be the innovations' be true, would most weaken the conclusion drawn in question 5 above?
(A) The total resources allocated by the company to all the activities put together were double those of the previous year.
(B) The sales of the same products by the other companies also drop in the year.
(C) The market share of the company for the products it manufactures increases during the current year.
(D) The resources allocated to marketing during this year increased substantially over the previous year.

Answer Keys

1. A	**2.** C	**3.** D	**4.** B	**5.** C	**6.** B	**7.** D	**8.** C	**9.** C	**10.** B
11. D	**12.** D	**13.** D	**14.** C	**15.** A	**16.** C	**17.** B	**18.** A	**19.** C	**20.** A
21. B	**22.** A	**23.** C	**24.** D	**25.** B	**26.** B	**27.** C	**28.** C	**29.** D	**30.** D
31. D	**32.** B	**33.** B	**34.** C	**35.** A	**36.** C	**37.** C	**38.** B	**39.** B	**40.** A

Hints and Explanations

1. The main points are:
(1) An experiment is repeated to increase accuracy.
(2) It is isolated to make the task of observation easier.
(3) Variety in experiments gives a better chance of discovering laws.
Choice A covers all the important points and hence can be called its summary. Choice B does not say anything about 'variety'. Choice C is not as clear or comprehensible as choice A. Choice D does not specify what helps in what aspect. Choice (A)

2. The main points are:
(1) Aristotle says any good definition of an object has two parts.
(2) The first is to assign the object to its class or genre with which it has common features.
(3) The second is to indicate where and how it is unique.
(4) Juxtaposing it with objects of the same kind helps in identifying its individuality.
Choice A does not mention 'Aristotle' and Choice B focuses on the definition of 'man' in particular and then says 'object'. Hence A and B can be ruled out. Choice C summarises the passage. The idea given in the last sentence of choice D is incorrect. Choice (C)

3. The main points are:
(1) Sociologists use strange jargon or give extended meaning to familiar terms.
(2) They are criticized for doing this.
(3) But they have their reasons.
(4) They do it in a desire to be more precise and systematic in their analysis.
Choice A is incorrect as it says' . . . They are justified to do so . . .' which is not stated in the passage. It is the critics 'who are justified'. The second sentence in choice B makes it incorrect. 'The charges/criticism . . .' is not mentioned in choice C. Choice D precisely summarizes the passage. Choice (D)

4. The main points in the text are:
(1) The damage we inflict on our surrounding is measured by carbon footprint and ecological footprint.
(2) Carbon footprint measures the greenhouse gases that is emitted because of us.
(3) Ecological footprint measures the land we need for resources and for dumping waste.
Choice A misses carbon footprint.
Choice B is the right answer.
The first sentence in choice C makes an absurd suggestion.
Choice D mixes up the concept of ecological footprint and carbon footprint. Choice (B)

5. The main points in the text are:
(1) Hunting and logging are a threat to protected areas.
(2) A more subtle threat is illegal occupation of forest land by cultivators.
(3) The reason for all the above is pressure of population on land, poverty, corruption and poor law enforcement.
Choice A is wrong because it calls poaching 'a greater evil', not stated in the passage.
Choice B becomes too specific by mentioning Laos, west and central Africa and southeast Asia. Choice D is again specific as it talks of coffee growers. Choice C is appropriate. Choice (C)

6. The main points in the text are:
(1) Chernobyl still evokes poignant memories after 20 years and we are far from cleaning up the mess.
(2) It was caused by an unnecessary experiment.
(3) The Soviet government did not act immediately and we do not know how many deaths were caused by the failure of the government to evacuate the people.
The original para does not mention that the Soviet government refused to evacuate people. It was reluctant and delayed the process. So, choice A is a distortion. Choice C distorts in calling the radiation 'a gas', and it leaves out many important points. Choice D distorts in saying 'the Soviet government put up a brave front' – not stated in the text. Choice B is concise and correct.
Choice (B)

7. The main points in the text are:
(1) Older women, those over forty, are more likely to have a child with Down syndrome.
(2) As such they are offered, or forced to have, amniocentesis.
(3) The abortion of a Down embryo can be seen as a benign aspect of science or as officially encouraged murder.

(4) It is eugenics, fifty years after the Nazis.

Choice A is not the best summary because it is not amniocentesis but abortion that is controversial. Choice B is not apt since it says older women take the test and abort, as if the initiative is theirs. Choice C makes the test controversial. Choice D is apt. Choice (D)

8. The main points in the text are :

(1) Jefferson warned against public debt.

(2) But it is a tried-and-tested method. The USA being an example.

Choice A distorts the meaning when it says the USA considered it to be a prerequisite. Choice B distorts in saying that because the USA amassed debt Jefferson warned against it. Choice C is an apt summary. Choice D appears to be right but Jefferson never said (as per the passage) that public debt would weaken economy. Choice (C)

9. A and C are our possible starting parts. 'One of the' in C indicates that it is a continuation of 'a them' rather than a starting part and hence C is rejected as our starting part which leaves A as the only possible starting part. "The place' in D relates to 'the newest temple' in A and hence D follows A. 'Vast space' in B connects with 'huge physical entity' in D and hence B follows D. Choice (C)

10. As per the choices A, C and D are our possible starting parts. 'Besides' in C rules it out as our starting part and out of A and D, D is a better starting part as it is a more generalized statement than A. 'Usal garnish' in A follows 'garnishes' in D. 'Fat-laden coconut' in C links up with 'freshly greated cocounut' in A and hence C follows A. B provides a contrast to A and hence follows C. Choice (B)

11. The 'paradoz' associated with ceramic sculptures is elaborated in C and D. C says that the ceramic object's solidity gives a sense of permanence but this is contrasted by D which states that the baked earth form which this sculpture is made makes it more prone to damage on account of its fragile nature. "fragility in B connets with 'fragile, frangible' in D and hence B follows D. Choice (D)

12. A is our starting part 'but' in D offers a contrast by emphasizing the fact that though 200 years have elapsed since Tipu's death yet his fame is growing and hence D follows A. B describes Tipu and hence follows D. 'Reputation' in C is a logical extension of 'formidable and implacable' in B. Choice (D)

13. A and C are our possible starting part of which C is better as it is a very general statement. 'It' in B refers to the 'ten centuries' in C and hence B follows C. 'In that calculation' in D refers to the 'yugas' in A and hence D follows A. Choice (D)

14. B is the opening sentence (it makes a generalized statement). A follows - it explains what the work (mentioned in B) is. C follows A – 'This meeting' in C linking it 'to call on….' In A. D concludes with what he did.

Choice (C)

15. C is a better opening sentence than D, as it is a generalized statement. D follows C – it explains what the 'sordid' going on mentioned in C are. A follows B – 'sponsorship and endorsements' in A linking it to 'commercialization' in B. Choice (A)

16. B is the opening sentence. C follows B – 'Areas cleared' in C linking it to 'land..... obtained by cutting down trees' in B. A follows C – 'set up industries ….. which pump out …..'. E and D follow – The speed of cutting down has increased and its consequences.

Choice (C)

17. D is the opening sentence – 'privacy' is the central idea of the para. C follow D giving an example to elaborate the need for privacy. B follows C – the author's child hood experience compared to his daughter's. E and A follow to complete the author's reminiscence.

Choice (B)

18. A is the opening sentence – it sets out the basic idea of the para. C follows A – explaining (very briefly) how his parents were the complements of each other. B follows C – one more instance of complementing. E and D follow elaborating the qualities of his mother.

Choice (A)

19. The passage states that globalisation has made its impact on the food tastes of the masses, it goes on to state that people prefer innovation in cooking.

A - states a point that runs counter to the argument given in the passage regarding the changing tastes of the masses hence it is a COUNTER ARGUMENT.

B - gives one more reason for the changing states and hence it is a SUPPORTING ARGUMENT.

C - states a point that is not mentioned in the passage and hence this is a STATEMENT OF ARGUMENT.

D - categorically states that restaurants which cater to the changed tastes will be definitely successful and hence it is a CONCLUDING ASSERTION.

Choice (C)

20. The passage talks about the efforts made by OPEC to maintain he level of prices at a certain level and also the scenario that emerges as a result of the efforts that it makes to achieve this objective.

A - talks about a hypothetical case of how the coal prices would have benefited from the existence of such a cartel. Hence this is a STATEMENT OF ARGUMENT.

B - gives a reason as to why the OPEC nations would want to maintain the oil prices in a specific range and hence it is a SUPPORTING REASON.

C - This point runs against the view of the passage that excess production by Opec would result in a decrease of the general price of oil and hence it is a COUNTER ARGUMENT.

D - talks about a possible remedy to the problem and as such it is a new argument that has been proposed. Hence, it is a STATEMENT OF ARGUMENT.

Choice (A)

21. The passage talks about the weakness by the American electoral system and gives a few examples to substantiate this.

A - states categorically that the adoption of a system of rules across the country would correct the system and stress the root hence, this is an ASSERTION.

B - gives a SUPPORTING REASON as to how other countries have benefited by implementing the rules.

C - the role played by the media has been specified in the passage but the question of banning it has not been discussed and as such C which proposes that the media be banned from announcing results is a STATEMENT OF ARGUMENT.

D - gives a reason in support of the measures being proposed in the passage to remedy the situation and as such it is a SUPPORTING REASON.

Choice (B)

22. The passage states the relation between memory and genes and says that intelligence has not been defined clearly and talks about how ineffective IQ tests are in measuring intelligence.

A - this contradicts the first line of the passage and hence this is a COUNTER ARGUMENT.

B - also contradicts what is stated in the passage and hence it is a COUNTER ARGUMENT.

C - provides support to the view given in the passage and hence it is a SUPPORTING REASON.

D - states a new point not mentioned hitherto in the passage and hence it is a STATEMENT OF ARGUMENT. Choice (A)

23. The passage laments the apathy shown by the international community towards the genocide being perpetrated in East Timor by the Indonesian army in order to the quell the demand for freedom.

A - contradicts what is stated in the passage and hence it is a COUNTER ARGUMENT.

B - introduces a new angle to the problem stated and hence it is a STATEMENT OF ARGUMENT.

C - firmly states that genocide is an aberration or civil society and must be stopped and hence this is an assertion.

D - substantiates what is given in the passage and hence it is a supporting reason. Choice (C)

24. The central idea of the paragraph is the notion that the meeting of G-20 nations to discuss how to inject more liquidity was a rare or unusual event. This idea reaches its natural conclusion in 4. Choice (D)

25. The paragraph harps on the fact that wellness can reverse the ageing process. The penultimate sentence refers to 'extending life span'. This leads to the conclusion that death may be conquered which is presented in option B. Choice D begins another idea and so cannot conclude this paragraph. Choice (B)

26. The focus of the paragraph is on the role of cognition in hypocrisy and the revelation that when the mind is busy thinking about other things morality becomes a gut-reaction. This conclusion is brought out in option (B) which summarizes the result of the experiment and is hence a good conclusion. Choice (B)

27. The paragraph focuses on the idea that celebrity status sells. Awareness of celebrities regarding their brand value has led to the stars producing their own products instead of endorsing those of others. This is the logical conclusion found in option C. Option A can continue the para rather than conclude it. Option D can begin a new paragraph. Choice (3)

28. The central idea of the paragraph is the growth track of India and China and the fact that this will lead to greater disposable incomes in both countries. Sentence 3 which states the consequence of such incomes is the logical conclusion of the idea. Sentence 1 can be ruled out because the 'if' in the sentences raises doubts about the growth pattern and thus contradicts what has been stated earlier. Choice (3)

29. **Argument evaluation:**

Situation: Manufacturers claim that their food drinks contain all the nutrients necessary for a child. But a balanced diet containing variety of foods is better.

Reasoning: A well balanced diet is preferable to a food drink because it acts better for the child.

(A) 'Flavour' is irrelevant to the argument.

(B) Children's preference is not the issue.

(C) Also outside the scope of the argument.

(D) Correct. It properly identifies the statement which supports the argument.

D is correct. Choice (D)

30. **Evaluation of plan:**

Situation: Providing a meal to school going children is likely to reduce absenteeism.

Reasoning: A proper meal provided to school going children reduces absenteeism. This plan will best work only where the absenteeism has been due to non-availability of a good meal to the children.

(A) The absenteeism may be due to other reasons and hence the plan to provide as usual may not work.

(B) The composition of the students whether they are boys or girls is beyond the scope of the argument.
(C) 'Working parents' doesn't provide ground for providing breakfast and hence reducing absenteeism.
(D) Correct. It properly identifies the condition under which the breakfast plan will succeed. Choice (D)

31. Argument evaluation:
Situation: Radiations from cell phones cause hearing defects. Hence cell phones must be avoided.
Reasoning: The argument is that cell phones should not be used as they cause heaving defects. Hence the statement which tells us that cell phones do not affect the ears weakens the argument.
(A) The effect of using 'computers' is beyond the scope of the argument.
(B) Use of a `Ipod' is not the question.
(C) It is not necessary that all those who are defective in hearing must use hearing aids.
(D) Correct. It properly identifies the statement which weakens the argument. Since the telephone operators' job involves having, the fact that their hearing is not impaired despite using cell phones regularly weakens the argument. Choice (D)

32. Evaluation of a plan:
Situation: The students of Alpha University were asked to evaluate the teaching effectiveness of their professors.
Reasoning: The university asks the students, the recipients of the service, to evaluate the effectiveness of teaching of the professors, the providers of services. So the plan is based on the principle that the effectiveness of a service rendered is measured by how the receiver views it.
(A) The plan doesn't measure the actual effectiveness of teaching which must have been done by evaluating the students not the teachers.
(B) Correct. The statement properly identifies the principle on which the plan is based.
(C) It is irrelevant to the argument.
(D) This may be the purpose of the plan but not the principle on which it is based.
B is correct. Choice (B)

33. Evaluation of a plan:
Situation: Venadial is effective in reducing cholesterol levels and the risk of heart attack according to a study. Company *A* in country *Y* should sell the medicine, as its sole selling agent, to earn profit in a short span of time.
Reasoning: To realise the optimism expressed above people must be made aware of the effectiveness of Venadial in reducing heart attacks.
(A) Knowing the permissible cholesterol level will not induce the public to go for the medicine.
(B) Correct. It properly identifies the course to be adopted.
(C) Research on the metabolic response to Venadial is irrelevant to the issue.
(D) This is also irrelevant to the argument.
B is correct. Choice (B)

34. Evaluation of a plan:
Situation: Software companies find the persons required outnumbering the availability. The plan is to meet the requirement.
Reasoning: The available candidates with necessary academic skills is insufficient to meet the requirement. So the only way is to recruit even those without the necessary academic skills, but impart them training to make them fit for the jobs.
(A) It is irrelevant to the discussion as 'pay' is the issue.
(B) The question is of a plan to meet the enhanced demand. So scaling down operations is not the answer.
(C) Correct. It properly identifies the correct plan to meet the increased need.
(D) As it is already stated that the number of candidates with necessary skills is insufficient, entering into agreement to absorb the students in to will not help.
C is correct. Choice (C)

35. Evaluation of plan:
Situation: The Government wants to involve film celebrities in anti smoking campaigns as it is concerned about the health hazards that smoking causes to the public.
Reasoning: The Government plans to involve film celebrities in its anti smoking campaign. This plan will be successful if the general public heeds the film celebrities words on the screen.
(A) Correct. It properly identifies the situation when the Government's plans will be successful.
(B) The film celebrities may be smokers in real life and hence if the public emulates their lives, the plan will not be successful.
(C) 'Why the film celebrities need to be involved in social causes' is beyond the scope of the argument.
(D) It may be helpful in production of the film but it does not strengthens the achievement of the purpose of the plan. Choice (A)

36. Argument constructions:
Situation: Though laws exist against drug trafficking, it is bound to exist. Even if the Government plugs one source, as it will enter through others.
Reasoning: The situation is one where there is a law against something. But even if it is curbed at one end, it is bound to be committed by someone else.
(A) It is not similar. It provides a reason for why the police may be corrupt despite laws.
(B) It only says that all religious persons need not be terrorists.

(C) Correct. It properly identifies the situation which is a similar argument to the one given.

(D) It gives an explanation as to why third degree methods become inevitable. Choice (C)

37. Argument construction:

Situation: Last year exports were more than imports. This year imports were more than exports. Also exports during this year were more than last year's exports.

Reasoning: Last year E, > I, (E – Exports and I – Imports). This year $I_2 > E_2$. Also $E_2 > E_1$. So $I_2 > E_2 > E_1 > I_1$. Any statement contradicting the cannot be an inference.

(A) It is correct because $I_2 > I_1$ so it is not the answer.

(B) It is correct as $E_1 > I_1$, so it is not the correct choice.

(C) Correct. It properly identifies a situation which cannot be inferred. This statement implies $I_1 > E_2$. This is not possible as $E_2 > I_1$.

(D) It can be inferred as $I_2 > E_2$.

C is correct. Choice (C)

38. Evaluation of a plan:

Situation: The Administration wants to encourage the use of biodegradable paper products by encouraging their sale at very low prices.

Reasoning: The strategy will fail to work if the users do not take the bait, i.e. they don't give importance to price differentials.

(A) It should in effect actually help the administration in realising it s purpose.

(B) Correct. It properly identifies a situation where the tourists may not give any importance to the price differentials.

(C) It should actually strengthen not undermine the administrations purpose.

(D) It is said that the results were not produced only in the short run.

B is correct. Choice (B)

39. Argument construction:

Situation: Trendy' is a company engaged in the manufacture of goods which need constant innovation in products and their designs. It is feared that a drop in the percentage of allocation of resources of R&D will reduce sales.

Reasoning: Unless the proportion of resources allocated to R&D is going to determine the extent of innovation, the conclusion cannot be drawn as above.

(A) It cannot be an assumption as there is no mention from which it can be assumed that a particular percentage of resources has to be allocated for research and development to achieve the desired results.

(B) Correct. It correctly identifies the assumption that unless the proportion of resources allocated to the research and development to the total resources determines the extent of innovation, it cannot be held that sales will be affected.

(C) It is not an assumption.

(D) It is outside the scope of the argument.

B is correct. Choice (B)

40. Argument evaluation:

Situation: As above

Reasoning: Allocation of resources are held to directly govern the sales. Then the argument will be weakened if there had been no real decrease in allocation of resources to R&D.

(A) Correct. If the total resources are doubled, then six percent of it will be more than ten percent of the pervious years total resources. Hence there has been a real increase in allocation to R&D which can if anything only increase the sales.

(B) It is outside the scope of the argument.

(C) It may be true but it does not mean that the sales have improved, as the sales of other companies also might have dropped.

(D) Resources allocated to marketing is not the crux the argument.

A is correct. Choice (A)

Verbal Ability Test 5

Number of Questions: 20 **Time: 30 min**

Directions for question 1: The question has a sentence with three blanks followed by four pairs of words as choices. From among the choices, select the pair of words that can best complete the given sentence

1. It is now recognized in many countries that family and social environment of the children have a ______ impact on their performance than the quality of teaching at school and children from poor families score significantly ______ in vocabulary, communication skills, simple arithmetic and the ability to concentrate compared to children from ______ income households.
(A) meagre...higher...higher
(B) lower......lower....greater
(C) prime.....faster.....lower
(D) greater....lower.....higher

Directions for questions 2 to 11: Fill in the blanks in the given sentences so as to make sense. Select the correct word from the answer choices and mark its number as the answer.

2. If the items in a diary are reliably listed and the list is ________ reviewed then certainly nothing should be forgotten.
(A) perversely (B) phlegmatically
(C) languidly (D) conscientiously

3. The child had a _____ birth defect in the form of a cleft palate.
(A) hereditary (B) compulsive
(C) congenial (D) congenital

4. The people of South Asia had been left behind in economic development _____ of tensions and conflicts.
(A) in view of (B) because
(C) want (D) full

5. Financial difficulties ________ him to discontinue his studies, and take up a job.
(A) enchanted (B) compelled
(C) entreated (D) dictated

6. Sixty houses were totally gutted ______the fire accident.
(A) at (B) beyond
(C) in (D) off

7. The Kaveri community in Bihar, which has for long _______ with poverty and backwardness, is yet to join the mainstream because of its nomadic lifestyle.
(A) suffered (B) exhausted
(C) struggled (D) figured

8. Alzheimer's disease is not usually _______ until significant memory loss is evident.
(A) detected (B) observed
(C) revealed (D) disclosed

9. When the dilapidated structure collapsed, the _____ of the people could be heard from a distance.
(A) gossip (B) wails
(C) eviction (D) bombardment

10. He does not _____ the ugly aspects of human nature in his picture of life.
(A) eliminate (B) include
(C) exclude (D) extricate

11. The airline has increased its frequency _____ nine flights a week to eleven flights a week.
(A) between (B) of
(C) from (D) for

Directions for question 12 to 17: The question has a sentence with two blanks followed by four pairs of words as choices. From among the choices, select the pair of words that can best complete the given sentence.

12. I am not a _____, I am a _____.
(A) 'have been' . . . ''will be'
(B) 'has been' . . . 'will be'
(C) 'was been' . . . 'will being'
(D) 'had been' . . . 'will be'

13. During his childhood, Williams ______ his parents ______ teachers.
(A) never obeyed . . . . or
(B) never had obeyed . . . . or
(C) never obeyed . . . .nor
(D) never had obeyed . . . . nor

14. The two men were very ______ and rather looked the same but had ______ views on important aspects of life.
(A) close . . . wide (B) similar . . . diverse
(C) different . . . complex (D) familiar . . . similar

15. I am not a ____, I am a ____.
(A) 'have been' . . . 'will be'
(B) 'had been' . . . 'will be'
(C) 'was been' . . . 'will being'
(D) 'has been' . . . 'will be'

16. The two thieves _______ arrested on the charge of stealing from _______ house
(A) was . . . an (B) am . . . a
(C) were. . . an (D) were. . . a

17. The country has no need to test its nuclear arsenal in the absence of an external _____ which is precisely why we have a voluntary _____ on testing.
(A) provocation . . . regression
(B) collaboration . . . relapse
(C) wherewithal . . . setback
(D) aggression . . . moratorium

Directions for question 18 to 20: Read the following paragraph and answer the question that follows:

18. People are throwing themselves off the Golden Gate Bridge at the rate of two a month, which makes it the most popular place in the world for suicide. Many San Franciscans think that the solution is to put up a simple barrier. The Psychiatric Foundation of California, which has proposed to construct a barrier to act as a deterrent, has heard several arguments against a barrier; the most persistent has been that people would simply kill themselves somewhere else, so why bother? Here the word 'deterrent' is closest in meaning to?

(A) Impediment (B) Assistance
(C) Indemnity (D) Restitution

19. In "ambush marketing" campaigns, companies try to promote their brands at sporting events without paying sponsorship fees. Ambush marketers have replaced hooligans as the villains of sporting events, because they undermine official sponsors, who are the main source of revenue in some sports. The IPL organizers have responded by taking control of all prominent advertising sites in the city, including those at train stations and airports, and their use will be limited to official sponsors only. Nevertheless, preventing ambushes is difficult.
Which of the following is closest in meaning to 'ambush'?

(A) Deception (B) Integrity
(C) Virtue (D) Equity

20. Studies of promising young prodigies frequently reveal that most turned out to be failures, in both their professional and personal lives, in later years. Researchers also found that most of the prodigies were diagnosed with symptoms of paranoia and schizophrenia at a later stage. The researchers concluded that mental illnesses inhibited the prodigies from realizing their full potential in later life.
Here, the word 'prodigies' is closest in meaning to

(A) genius (B) Maestros
(C) Adept (D) Apprentice

Answer Keys

1. D	**2.** D	**3.** D	**4.** B	**5.** B	**6.** C	**7.** C	**8.** A	**9.** B	**10.** B
11. C	**12.** B	**13.** A	**14.** B	**15.** D	**16.** D	**17.** D	**18.** A	**19.** A	**20.** A

Hints and Explanations

Explanatory notes for question 1:

1. The sentence compares the social environment and the quality of teaching on the performance of children. Hence the comparative degree of an adjective has to be used in the first blank. 'Lower', and 'greater' are comparative degree adjectives and ore apt. Hence choices A and C can be ignored. According to the passage, children from low income social background are likely to score '*lower'* than their affluent counterparts with *higher* income background. All these words are found in choice D making it the right answer. Choice (D)

Explanatory notes for questions 2 to 11:

2. The context demands 'proper listing' and 'meticulous review' of the list. Among all the options only option D conveys this meaning. Options B and C refer to 'laziness' and 'perversely' refers to 'contrary to what is accepted'. The correct option is D 'conscientiously' which refers to 'being careful and thorough in one's work'. Choice (D)

3. Birth defects are congenital (present from birth) and not hereditary (genetic), compulsive (uncontrollable), or congenial (affable; friendly). Choice (D)

4. The reason the people of South Asia have been left behind in tensions and conflicts. Choice (B)

5. Compel means to force. Financial difficulties forced him to drop his studies and take up a job. Choice (B)

6. **'**In' is the correct preposition to be used as it expresses a period of time during which an event happens. Choice (C)

7. The sentence is about a community in Bihar which has not progressed. The reason for this is its poverty and backwardness. Exhausted means extremely tired. This is a wrong choice. 'Figured' means to understand. 'Sustained' means continued for a long time. The word 'suffered' means to experience physical or mental pain. So these words are not suitable when used in this particular context. 'Struggled' means to use a lot of effort to defeat someone, prevent something, or achieve something. The community has been struggling for a long time to join the mainstream. Choice (C)

8. Detected, which means to discover or identify the presence or existence of something, fits the blank appropriately. Choice (A)

9. Wails are prolonged high-pitched cries of pain or grief thus the word is apt here. Choice (B)

10. The preposition with choices (A), (B), and (D) is 'from' (exclude "from"). Only 'include' will collocate with the preposition 'in'. Choice (B)

11. The frequency is increased from something to something. Hence 'from' is the appropriate preposition in the blank. Choice (C)

Explanatory notes for questions 12 to 17:

12. The sentence implies that the focus should be on what the speaker 'will be' in the future and not what he was in the past. I has - been is a person considered to be outmoded, past his/her prime or no longer of any importance. Choice (B)

13. The correct option is 1. "Never……or" is more apt then "Never……nor". Similarly, there are no two actions taking place here. Therefore, the sentence should be in simple past.

Choice (A)

14. The words apt in the context are 'similar' and diverse; note the use of the conjunction 'but' to link these opposite words. Choice (B)

15. A 'has been' is a person or thing considered to be no longer of any importance. The speaker say that he/she does have it him/her to remain relevant. Choice (D)

16. Since 'thieves' is plural, 'very' should be 'were'. Since the word 'house' begins with a consonant, the article before it should be '*a*' Choice (D)

17. The word 'voluntary' rules out 'regression' 'relapse' and 'setback'. Only 'moratorium' makes sense.

Choice (D)

Explanatory notes for questions 18 to 20:

18. The word 'deterrent' means an obstacle. This is closest in meaning to 'impediment'. The rest of the options are antonyms or inapt in the given concept. Choice (A)

19. The word 'ambush' means to be in a concealed position, waiting to make a move. Choice (A)

20. The meaning of the word 'prodigy' is a genius.

Choice (A)

Chapter 1

Simple Equations

CHAPTER HIGHLIGHTS

- *One Equation in One Unknown*
- *Two Equations in Two Unknowns*
- *Three Equations in Three Unknowns*
- *Additional Cases in Linear Equations*

Introduction

There will be linear equations of one or two unknowns invariably in every problem. A linear equation is one where each variable occurs only in its first power and not in any higher powers. Sometimes, we get three equations in three unknowns. In general, we need as many equations as the variables we will have to solve for. So, for solving for the values of two unknowns, we need two equations (or two conditions given in the problem) and for solving for the values of three unknowns, we need three equations (and hence the problem should give three conditions from which we can frame three equations). Solving the equations by itself is not a difficult task. The most important part of the problem is framing the equation/equations. Once the equations are framed, solving them is very easy. In this chapter, we will deal with problems involving as many equations (of first degree) as the number of unknowns. Later on, we will look at equations of second degree (quadratic equations) and linear equations where the number of equations will be less than that of the number of variables (under the chapter special equations).

One Equation in One Unknown

An equation like $2x + 4 = 26$ is an equation in one unknown. We have only one variable x whose value we have to find out. The steps in solving this are:

Step 1: Take all quantities added to (or subtracted from) the x term (term with the unknown) to the right side with a change of sign.
i.e., $2x = 26 - 4 = 22$.

Step 2: Take the co-efficient of x from left-hand side and divide right-hand side with this term to get the value of x:
i.e. $x = 22/2 = 11$. Therefore, $x = 11$.

Two Equations in Two Unknowns

A set of equations like

$$2x + 3y = 8 \qquad (1)$$

$$5x + 4y = 13 \qquad (2)$$

is called a system of simultaneous equations in two unknowns. Here, we have two variables (or unknowns) x and y whose values we have to find out. This can be done using the two given equations. The steps for this are as follows:

Step 1: Using both the equations, we first eliminate one variable (so that we can then have one equation in one unknown).
For this purpose, we multiply equation (1) with 5 (the co-efficient of x in the second equation) and multiply equation (2) with 2 (the co-efficient of x in the first equation) to eliminate x. Thus, we have

$$(1) \times 5 \Rightarrow 10x + 15y = 40 \qquad (3)$$

$$(2) \times 2 \Rightarrow 10x + \ \ 8y = 26 \qquad (4)$$

Now, subtracting equation (4) from equation (3) we have

$$7y = 14 \qquad (5)$$

This is one equation in one unknown.

Step 2: Solve for the value of one variable from the equation (in one unknown) obtained from Step I above. Therefore, $y = 2$.

Step 3: Substitute this value of the variable in one of the two equations to get the value of the second variable.

Substituting the value of y in equation (1) or equation (2), we get $x = 1$. Therefore the values of x and y that satisfy the given set of equations are $x = 1$ and $y = 2$.

Three Equations in Three Unknowns

A set of equations like

$$x + 2y + 3z = 14 \qquad (6)$$

$$2x + y + 2z = 10 \qquad (7)$$

$$3x + 3y + 4z = 21 \qquad (8)$$

is a system of three equations in three unknowns.

Here we have three unknowns x, y and z which we have to solve for from the three given equations. The procedure for the same is as follows:

Step 1: Take two out of the three equations [say, eqn. (6) and (7)] and eliminate one variable (say x) so that we get an equation in two unknowns (y and z in this case).
For this purpose, take equations (6) and (7). Multiply equation (6) by 2 and subtract equation (7) from it.

Equation (6) × 2 ⇒ $2x + 4y + 6z = 28$

$$2x + y + 2z = 10$$

$$3y + 4z = 18 \qquad (9)$$

Step 2: Repeat Step 1 for two other equations [say equations (7) and (8)] and eliminate the same variable (x in this case) so that we get one more equation in two unknowns (y and z).
For this purpose, take equations (7) and (8). Multiply equation (7) by 3 and from that subtract equation (8) multiplied by 2.

Equation (7) × 3 ⇒ $6x + 3y + 6z = 30$

Equation (8) × 2 ⇒ $6x + 6y + 8z = 42$

$$-3y - 2z = -12 \qquad (10)$$

Step 3: Now the equations in two unknowns that have been obtained from the above two steps have to be solved as discussed previously (in TWO EQUATIONS IN TWO UNKNOWNS) to get the values of two of the three variables (y and z in this case).
In this case, solving equations (9) and (10), we get $y = 2$ and $z = 3$.

Step 4: Substitute these values of the two variables in one of the three equations to get the value of the third variable.
Substitute the value of y and z in equation (6) to get the value of $x = 1$.
Thus, the values of the three variables x, y and z that satisfy the three given equations are $x = 1$; $y = 2$ and $z = 3$

Solved Examples

Example 1

The cost of 3 tables and 4 chairs is ₹2500. The cost of 4 tables and 3 chairs is ₹2400. Find the costs of each table and each chair.

Solution

Let the cost of each table be ₹x.
Let the cost of each chair be ₹y.

$$3x + 4y = 2500 \qquad (1)$$

$$4x + 3y = 2400 \qquad (2)$$

Method 1:
Multiplying (1) by 3 and subtracting it from (2) multiplied by 4, we get

$$7x = 2100$$

$$x = 300$$

Substituting $x = 300$ in (1),

$$y = 400$$

Method 2:
Adding both the equations (1) and (3), we get $7(x + y) = 4900$

$$x + y = 700 \qquad (3)$$

subtracting (2) from (1),

$$-x + y = 100 \qquad (4)$$

Adding (3) and (4), $2y = 800$

$$y = 400$$

Substituting $y = 400$ in either (3) or (4), $x = 300$

Example 2

Raju bought 6 pens, 5 erasers, and 4 sharpeners for ₹32. Had he bought 4 pens, 3 erasers, and 5 sharpeners, his total expenditure would have been ₹23. Had he bought 7 pens, 2 erasers, and 6 sharpeners, his total expenditure would have been ₹31. Find the cost of 1 pen, 1 eraser, and 2 sharpeners.

Solution

Let the prices of each pen, each eraser, and each sharpener be ₹p, ₹e, and ₹s respectively.

$$6p + 5e + 4s = 32 \qquad (1)$$

$$4p + 3e + 5s = 23 \qquad (2)$$

$$7p + 2e + 6s = 31 \qquad (3)$$

Multiplying (1) by 2 and subtracting from (2) multiplied by 3,

$$-e + 7s = 5 \qquad (4)$$

Multiplying (3) by 4 and subtracting it from (2) multiplied by 7,

$$13e + 11s = 37 \tag{5}$$

Multiplying (4) by 13 and adding it to (5), $102s = 102$

$$s = 1$$

Substituting $s = 1$ in (4),

$$e = 2$$

Substituting values of e and s in (1), $p = 3$.

Example 3

In a two digit number, the digits differ by 2. 10 times the number exceeds 5 times the sum of the number formed by reversing its digits and the sum of its digits by 90. Find the number.

Solution

Let the number be xy. Hence, the value of the number is $10x + y$.

$$x - y = 2 \quad \text{or} \quad y - x = 2 \tag{6}$$

$$10\,(10x + y) - 5\,(10y + x + x + y) = 90$$

$$90x - 45y = 90$$

$$2x - y = 2;\ 2x - (x \pm 2) = 2$$

$$x = 4 \quad \text{or} \quad 0$$

As x cannot be 0, $x = 4$

$\therefore \qquad y = 6$

$\therefore$ the number is 46.

Example 4

The age of a man 15 years ago was 5 times his son's age. His age 10 years ago was thrice his son's age. After how may years will their combined age become 80 years?

Solution

Let the present age of the man and his son be f years and s years, respectively.

$$f - 15 = 5\,(s - 15) \quad \Rightarrow \quad f = 5s - 60$$

$$f - 10 = 3\,(s - 10) \quad \Rightarrow \quad f = 3s - 20$$

$$f = 5s - 60 = 3s - 20$$

$$s = 20,\ f = 40$$

Their combined present age is 60 years. For the combined present age to become 80 years, the age of each of them must increase by 10 years.

$\therefore$ Their combined age will become 80 years after 10 years.

Example 5

If the numerator and the denominator of a fraction are both increased by 1, the fraction becomes $\frac{3}{5}$. If both are decreased by 1, it becomes $\frac{5}{9}$. Find the fraction.

Solution

Let the fraction be $\frac{x}{y}$.

$$\frac{x+1}{y+1} = \frac{3}{5}$$

$$\Rightarrow \qquad 5x + 5 = 3y + 3$$

$$5x + 2 = 3y \tag{1}$$

$$\frac{x-1}{y-1} = \frac{5}{9}$$

$$\Rightarrow \qquad 9x - 9 = 5y - 5$$

$$9x - 4 = 5y \tag{2}$$

Multiplying (1) by 5 and subtract it from (2) after multiplying by 3,

$$5\,(5x + 2) = 3\,(9x - 4)$$

$$\Rightarrow \qquad x = 11$$

substituting $x = 11$ in (1), $y = 19$

$\therefore$ The fraction $= \frac{11}{19}$

Additional Cases in Linear Equations

1. If the number of equations is less than the number of unknowns, then we say the variables are 'indeterminate' or we have an 'indeterminate' system of equations. Here, we cannot uniquely determine the values of all the variables. There will be infinite sets of solutions that satisfy the equations.
   For example, if we take the following two equations in three unknowns,

   $$x + y + 2z = 8$$

   $$2x - y + 3z = 13$$

   this system of equations have infinite number of solutions and no unique solution is possible. For any value we take for x, we can find a corresponding set of values for y and z.
2. However, even in case of indeterminate equations, say, of three variables, it is possible that the value of one of the variables may be uniquely determined, i.e. if we have two equations and three unknowns, we may be still able to determine the value of one variable uniquely but the other two variables will

have infinite number of values. This will happen if the ratio of the co-efficients of two variables in one equation is the same as the ratio of the co-efficients of the same two variables in the second equation.
This depends on the equations given. Example 8 will clarify this aspect.

Example 6

Tarun bought 2 shirts, 4 trousers, and 5 pairs of shoes for ₹3600. Had he bought 6 shirts, 5 trousers, and 15 pairs of shoes, his total expenditure would have been ₹8700. Find the price of each trouser.

Solution

Let the prices of each shirt, each trouser and each pair of shoe be ₹x, ₹y, and ₹z, respectively.

$$2x + 4y + 5z = 3600 \quad (1)$$

$$6x + 5y + 15z = 8700 \quad (2)$$

Multiplying (1) by 3 and subtracting (2) from it, $7y = 2100$

$\therefore \quad y = 300$

3. Even in case of indeterminate equations, when some additional conditions are either implicitly built into the problem or explicitly imposed by specifying some constraints on the values of the variables, we may some times be able to determine the values of the variables uniquely or find out a finite set of values that the variables may take. Such problems are separately considered under the chapter 'SPECIAL EQUATIONS.'
4. Sometimes, even if we have equations less in number than the number of variables (i.e., indeterminate equations), while we cannot find out the values of ALL the variables uniquely, it may be possible to find out the value of some specific combination of the variables.

Example 7

The cost of 3 dosas, 5 idlis, and 7 vadas is ₹154. The cost of 5 dosas, 8 idlis, and 11 vadas is ₹246. Find the total cost of one idli, one dosa, and one vada.

Solution

Let the cost of each dosa, each idli, and each vada be ₹d, ₹i, and ₹v, respectively.

$$3d + 5i + 7v = 154 \quad (1)$$

$$5d + 8i + 11v = 246 \quad (2)$$

Multiplying (1) by 3 and subtracting it, from twice (2), $d + i + v = 30$

5. Sometimes, even if we have three equations in three unknown, we may not be able to uniquely determine the values of the variables if the equations are not 'INDEPENDENT,' i.e. one of the given equations can be written as a 'linear combination' of the other two equations.

For example, let us take the following system of three equations in three unknowns.

$$3x + 5y + 7z = 12 \quad (3)$$

$$x - 3y + 9z = 16 \quad (4)$$

$$9x + 8y + 31z = 54 \quad (5)$$

If we try to solve these equations, we will find that we cannot get a unique solution. That is because these equations are not independent. In this case, equation (5) can be obtained by multiplying equation (3) by 2.5 and equation (4) by 1.5 and adding them.

If there are three equations l_1, l_2, and l_3 in three unknowns, we say that they are linearly dependent if one of the three equations can be written as a linear combination of the other two, i.e. $l_3 = l_1 + kl_2$ where k is any constant.

In such a case, the system of equations will have infinite number of solutions.

If it is not possible to write the three equations in the form above, then they are linearly independent and the system of equations will have a unique solution.

6. Sometimes, we can have 'inconsistent' equations. For example, if we know that $x + 2y = 4$, then the value of $2x + 4y$ has to be 8. The expression $(2x + 4y)$ cannot take any other value. If it is given any other value, there will be inconsistency in the data because then we will effectively be saying that $x + 2y = 4$ and at the same time $x + 2y \neq 4$.

So, if we have the system of equations $x + 2y = 4$ and $2x + 4y = k$, this system of equations will be consistent ONLY If the value of $k = 8$. For any other value of k, the system of equations will be inconsistent.

In the above system of equations, when $k = 8$, there will be infinite number of solutions (and not a unique solution).

Example 8

Find the value of k for which the following system of equations will be consistent.

$$2x - 5y = 10 \quad \text{and} \quad 6x - 15y = k$$

Solution

In the given system of equations, the ratio of the coefficients of x equals the ratio of the coefficients of y.

$\therefore$ They would be consistent only if this ratio equals the ratio of the constant terms.

$\therefore$ If $\frac{10}{k} = \frac{2}{6} = \frac{-5}{-15}$ i.e.

if $k = 30$, the given system of equations would be consistent.

Exercises

Direction for questions 1 to 25: Select the correct alternative from the given choices.

1. P, Q, and R are successive even natural numbers in ascending order. Five times R is eight more than seven times P. Find Q.
(A) 6 (B) 8 (C) 12 (D) 14

2. Divide 1 kg weight into two parts such that the sum of the parts is $5/4^{th}$ the difference.
(A) 550 g, 450 g (B) 200 g, 800 g
(C) 900 g, 100 g (D) 400 g, 600 g

3. A is greater than B by $1/3^{rd}$ the sum of A and B. If B is increased by 40, it becomes greater than twice A by 10. Find A, B.
(A) 30, 20 (B) 60, 30
(C) 20, 10 (D) 20, 40

4. Ajay was asked to find $(2/9)^{th}$ of a number. He instead multiplied the number by (9/2) and obtained an answer which was 4235 more than the correct answer. Find the number.
(A) 900 (B) 945
(C) 990 (D) 810

5. An amount of ₹5,600 is divided among A, B, and C. The sum of the shares of B and C is equal to thrice the share of A. The sum of the shares of A and C is equal to nine-fifths the share of B. What is the share of C?
(A) ₹1,400 (B) ₹2,400
(C) ₹2,200 (D) ₹2,000

6. Four times the sum of the digits of a two-digit number is 18 less than the number and is also 9 less than the number formed by reversing its digits. Find the product of its digits.
(A) 12 (B) 20 (C) 30 (D) 42

7. Six years ago, Ram's age was four times Shyam's age. Six years hence, Ram's age will be thrice Shyam's age. After how many years from now will their combined age be 150 years?
(A) 21 (B) 9 (C) 36 (D) 18

8. The sum of the ages of Bharat and Sharat is twice the sum of their ages seven years ago. What is the product of their present ages, if the sum of the squares of their ages is 400?
(A) 192 (B) 180 (C) 200 (D) 164

9. Ashok has a total of 30 notes in denominations of ₹20 and ₹5. The total value of the notes with him is ₹300. Find the number of ₹20 notes with him.
(A) 5 (B) 10 (C) 8 (D) 6

10. A fraction is such that the numerator is five less than the denominator. Also four times, the numerator is one more than the denominator. Find the fraction.
(A) 4/9 (B) 3/8 (C) 2/7 (D) 7/12

11. The digits of a two digit number differ by 3. Find the difference of the number and the number formed by reversing its digits.
(A) 18 (B) 27 (C) 36 (D) 45

12. Two chocolates, three milk shakes and four cakes cost ₹190. Four chocolates and eight cakes cost ₹320. Find the cost of a milkshake (in ₹).
(A) 10 (B) 20
(C) 30 (D) Cannot be determined

13. Three consecutive even integers are such that one-third of the second number is equal to one-fourth of the third number. Find the three numbers.
(A) 4, 6, 8 (B) 8, 10, 12
(C) 12, 14, 16 (D) 2, 4, 6

14. Amar, Bhavan, Chetan, and Dinesh have a total of ₹150 with them. Amar has one-fourth of the total amount with the others. Find the amount with Amar (in ₹).
(A) 20 (B) 25 (C) 30 (D) 37.5

15. Ramesh is thrice as old as Suresh. Two years hence, Ramesh will be twice as old as Suresh. Find Ramesh's present age (in years).
(A) 2 (B) 3 (C) 4 (D) 6

16. Nalini has an amount of ₹20 in coins of denominations of 50 paise and ₹1. If she has a total of 30 coins with her, how many ₹1 coins does she have?
(A) 20 (B) 10 (C) 15 (D) 30

17. A two-digit number is one more than six times the sum of its digits and also five more than forty six times the difference of its digits. Find the number.
(A) 79 (B) 97 (C) 49 (D) 94

18. Find the value of k if the equations $3x + (k/3 + 2)y = 1$ and $kx + 2ky = 4$ have infinite solutions.
(A) 9 (B) 6 (C) 18 (D) 12

19. Cost of two pens, five pencils, and seven erasers is ₹37. Cost of seven pens, one eraser, and two pencils is ₹49. What is the cost of nine pencils and fortyseven pens?
(A) ₹184 (B) ₹276
(C) ₹284 (D) None of these

20. The sum of two numbers is 250. The difference of their squares is 12,500. Find the larger number.
(A) 130 (B) 140 (C) 150 (D) 160

21. Five three-digit numbers including N, were to be added. While adding, the reverse of N was added by mistake instead of N. Hence, the sum increased by 11 times the sum of the digits of N. Eight times the difference of N's units and hundreds digits is 6 more than twice its hundreds digit. Find its tens digit.
(A) 4 (B) 6 (C) 8 (D) 2

22. The cost of two pens, one eraser, and three sharpeners, is ₹23. The cost of six pens, three erasers, and one sharpener is ₹45. The cost of fourteen pens, seven erasers, and twenty one sharpeners is ₹161. Find the cost of each pen (in ₹).
(A) 3
(B) 4
(C) 5
(D) Cannot be determined

23. A child went to a shop to buy a pen, a pencil and a ruler where costs are integral values (in ₹) and are in decreasing order. Each item costs at least ₹4. The total cost is ₹15 and the cost of a pencil is ₹5. How many pencils can he purchase with the amount required to purchase ten rulers?
(A) 10 (B) 12 (C) 8 (D) 9

24. Nitya and Satya have some marbles with them. Nitya says to Satya, 'If you give one marble to me, we will have equal number of marbles'. Satya says to Nitya, 'If you give me one marble, I will have twice the number of marbles you have'. How many marbles do Nitya and Satya have respectively?
(A) 4, 6 (B) 5, 7
(C) 6, 4 (D) 7, 5

25. John covers 10 km per hour more than Peter while driving. On doubling his speed, Peter covers 15 km per hour more than John who is driving at his normal speed. What is John's speed?
(A) 40 km/hr
(B) 25 km/hr
(C) 45 km/hr
(D) 35 km/hr

Answer Keys

1. B	**2.** C	**3.** C	**4.** C	**5.** C	**6.** B	**7.** B	**8.** A	**9.** B	**10.** C
11. B	**12.** A	**13.** A	**14.** C	**15.** D	**16.** B	**17.** B	**18.** D	**19.** D	**20.** C
21. B	**22.** D	**23.** C	**24.** B	**25.** D					

Chapter 2

Ratio–Proportion–Variation

CHAPTER HIGHLIGHTS

- *Ratio*
- *Proportion*
- *Variation*
- *Direct Variation*
- *Inverse Variation*
- *Joint Variation*

Ratio

If the values of two quantities A and B are 4 and 6, respectively, then we say that they are in the ratio 4:6 (read as 'four is to six'). Ratio is the relation which one quantity bears to another of the same kind, the comparison being made by considering what multiple, part or parts, one quantity is of the other. The ratio of two quantities 'a' and 'b' is represented as a:b and read as 'a is to b'. Here, 'a' is called antecedent, 'b' is the consequent. Since the ratio expresses the number of times one quantity contains the other, it's *an abstract* quantity.

Ratio of any number of quantities is expressed after removing any common factors that ALL the terms of the ratio have. For example, if there are two quantities having values of 4 and 6, their ratio is 4:6, i.e. 2:3 after taking the common factor 2 between them out. Similarly, if there are three quantities 6, 8, and 18, there is a common factor among all three of them. So, dividing each of the three terms by 2, we get the ratio as 3:4:9.

If two quantities whose values are A and B, respectively, are in the ratio a:b, since we know that some common factor $k(> 0)$ would have been removed from A and B to get the ratio a:b, we can write the original values of the two quantities (i.e. A and B) as ak and bk respectively. For example, if the salaries of two persons are in the ratio 7:5, we can write their individual salaries as $7k$ and $5k$, respectively.

A ratio a:b can also be expressed as a/b. So, if two items are in the ratio 2:3, we can say that their ratio is 2/3. If two terms are in the ratio 2, it means that they are in the ratio of 2/1, i.e. 2:1.

'A ratio is said to be a ratio of greater or less inequality or of equality according as antecedent is greater than, less than or equal to consequent'. In other words,

1. The ratio a:b where $a > b$ is called a ratio of greater inequality (example 3:2)
2. The ratio a:b where $a < b$ is called a ratio of less inequality (example 3:5)
3. The ratio a:b where $a = b$ is called a ratio of equality (example 1:1)

From this, we can find that a ratio of greater inequality is diminished and a ratio of less inequality is increased by adding same quantity to both terms, i.e. in the ratio a:b, when we add the same quantity x (positive) to both the terms of the ratio, we have the following results

$$\begin{array}{lll} \text{if } a < b & \text{then} & (a+x):(b+x) > a:b \\ \text{if } a > b & \text{then} & (a+x):(b+x) < a:b \\ \text{if } a = b & \text{then} & (a+x):(b+x) = a:b \end{array}$$

This idea can also be helpful in questions on Data Interpretation when we need to compare fractions to find the larger of two given fractions.

If two quantities are in the ratio a:b, then the first quantity will be $a/(a + b)$ times the total of the two quantities and the second quantity will be equal to $b/(a + b)$ times the total of the two quantities.

Solved Examples

Example 1

If $a:b = 3:4$, find $3a + 4b:4a + 5b$.

Solution

$3a + 4b:4a + 5b$

$$= \frac{3a+4b}{4a+5b} = \frac{\frac{3a+4b}{b}}{\frac{4a+5b}{b}} = \frac{3\left(\frac{a}{b}\right)+4}{4\left(\frac{a}{b}\right)+5} = \frac{3\left(\frac{3}{4}\right)+4}{4\left(\frac{3}{4}\right)+5} = \frac{25}{32}$$

Example 2

The ratio of the number of marbles with Ram and Shyam is 19:13. If Ram gives Shyam 30 marbles, both will have equal number of marbles. Find the number of marbles with Ram.

Solution

Let the number of marbles with Ram and Shyam be $19x$ and $13x$, respectively. Total number of marbles with them = $32x$

If Ram gives Shyam 30 marbles, each will have $\frac{32x}{2} = 16x$ marbles.

$\therefore \quad 19x - 16x = 30$

$$x = 10$$

$$19x = 190$$

Example 3

1400 is divided into 4 parts such that half of the first part, one third of the second part, one fourth of the third part, and $\frac{1}{12}$th of the last part are all equal. Find the 4 parts.

Solution

Let the first part, second part, third part, and fourth part be a, b, c, and d respectively.

$$\frac{1}{2}a = \frac{1}{3}b = \frac{1}{4}c = \frac{1}{12}d$$

$$d = 6a,\ b = \frac{3}{2}a,\ c = 2a$$

Given, $\quad a + b + c + d = 1400$

$\Rightarrow \quad a + \frac{3}{2}a + 2a + 6a = 1400$

$\Rightarrow \quad a = \frac{400}{3}$

$\therefore \quad b = 200,\ c = \frac{800}{3},\ d = 800$

Alternative method:

As b is common to both ratios and since it is divisible by 3 (from the first ratio) and it is divisible by 2 (from the second ratio), it is divisible by LCM (3, 2), i.e. 6. Hence if $b = 6$, $a = 4$, and $c = 9$

$\therefore \quad a:b:c = 4:6:9$

Example 4

There are 2 classes A and B. If 10 students leave class A and join class B, then the ratio of the number of students in class A and class B would reverse. Find the difference in the numbers of students in class A and class B.

Solution

Let the numbers of students in class A and class B be ax and bx, respectively.

Given, $\quad \frac{ax - 10}{bx + 10} = \frac{b}{a}$

$$a^2x - 10a = b^2x + 10b$$

$\Rightarrow \quad a^2x - b^2x - 10a - 10b = 0$

$\Rightarrow \quad (ax - bx - 10)(a + b) = 0$

$\therefore \quad ax - bx = 10$

Example 5

A husband's age exceeds that of his wife by 6 years. 10 years ago, the ratio of their ages was 5:4. Find the present age of the husband.

Solution

Let the present age of the husband be x years.

$\Rightarrow \quad$ Present age of the wife = $(x - 6)$ years.

10 years ago, the ages of the husband and the wife will be $(x - 10)$ years and $(x - 16)$ years, respectively.

Given $\quad x - 10 = \frac{5}{4}(x - 16)$

$\therefore \quad x = 40$

Alternative method:

Let the age of the husband 10 years ago be $5x$ years. Age of his wife at that time = $4x$ years.

The husband would then also be 6 years, older than his wife.

$\therefore \quad 5x = 4x + 6 \quad \Rightarrow \quad x = 6$

Hence, the present age of the husband

$$= 5x + 10, \quad \text{i.e. } 40 \text{ years}$$

Proportion

When two ratios are equal, then the four quantities involved in the two ratios are said to be proportional, i.e. if $a/b = c/d$, then a, b, c, and d are proportional.

This is represented as $a{:}b{::}\ c{:}d$ and is read as 'a is to b (is) as c is to d'.

When a, b, c, and d are in proportion, then a and d are called the EXTREMES and b and c are called the MEANS. We also have the relationship:

Product of the MEANS = Product of the EXTREMES, i.e. $b\,c = adv$

If $\quad a:b = c:d$ then

$$b:a = d:c \quad \text{(A)}$$

$$a:c = b:d \quad \text{(B)}$$

$$(a + b):b = (c + d):d \quad \text{(C)}$$

(obtained by adding 1 to both sides of the given relationship)

$$(a-b):b=(c-d):d \qquad \text{(D)}$$

(obtained by subtracting 1 from both sides of the given relationship)

$$(a+b):(a-b)=(c+d):(c-d) \qquad \text{(E)}$$

{obtained by dividing relationship (C) above by (D)}

Relationship (A) above is called INVERTENDO;
Relationship (B) is called ALTERNENDO;
Relationship (C) is called COMPONENDO;
Relationship (D) is called DIVIDENDO;
Relationship (E) is called COMPONENDO –DIVIDENDO.

The last relationship, i.e. COMPONENDO–DIVIDENDO is very helpful in simplifying problems. By this rule, whenever we know $a/b = c/d$, then we can write

$$(a+b)/(a-b)=(c+d)/(c-d).$$

The converse of this is also true—whenever we know that $(a+b)/(a-b)=(c+d)/(c-d)$, then we can conclude that $a/b = c/d$.

If $\frac{a}{b}=\frac{c}{d}=\frac{e}{f}\ldots$, then each of these ratios is equal to $\frac{a+c+e+\ldots}{b+d+f+\ldots}$.

Variation

Two quantities A and B may be such that as one quantities changes in value, the other quantity also changes in value **bearing certain relationship** to the change in the value of the first quantity.

Direct Variation

One quantity A is said to vary directly as another quantity B if the two quantities depend upon each other in such a manner that if B is increased in a certain ratio, A also increases in the same ratio and if B is decreased in a certain ratio, A also decreases in the same ratio.

This is denoted as $A \,\alpha\, B$ (A varies directly as B).
If $A \,\alpha\, B$ then $A = kB$, where k is a constant. It is called the constant of proportionality.

For example, when the quantity of sugar purchased by a housewife doubles from the normal quantity, the total amount she spends on sugar also doubles, i.e. the quantity and the total amount increase (or decrease) in the same ratio.

From the above definition of direct variation, we can see that when two quantities A and B vary directly with each other, then $A/B = k$ or the ratio of the two quantities is a constant. Conversely, when the ratio of two quantities is a constant, we can conclude that they vary directly with each other.

If X varies directly with Y and we have two sets of values of the variables X and Y – X_1 corresponding to Y_1 and X_2 corresponding to Y_2, then, since $X \,\alpha\, Y$, we can write down

$$\frac{X_1}{Y_1}=\frac{X_2}{Y_2} \quad \text{or} \quad \frac{X_1}{X_2}=\frac{Y_1}{Y_2}$$

Inverse Variation

A quantity A is said to vary inversely as another quantity B if the two quantities depend upon each other in such a manner that if B is increased in a certain ratio, A gets decreased in the same ratio and if B is decreased in a certain ratio, then A gets increased in the same ratio.

It is the same as saying that A varies directly with $1/B$. It is denoted as $A \,\alpha\, 1/B$, i.e. $A = k/B$ where k is k the constant of proportionality.

For example, as the number of men doing a certain work increases, the time taken to do the work decreases and conversely, as the number of men decreases, the time taken to do the work increases.

From the definition of inverse variation, we can see that when two quantities A and B vary inversely with each other, then $AB = a$ constant, i.e. the product of the two quantities is a constant. Conversely, if the product of two quantities is a constant, we can conclude that they vary inversely with each other.

If X varies inversely with Y and we have two sets of values of X and Y – X_1 corresponding to Y_1 and X_2 corresponding to Y_2, then since X and Y are inversely related to each other, we can write down

$$X_1Y_1 = X_2Y_2 \quad \text{or} \quad \frac{X_1}{X_2}=\frac{Y_2}{Y_1}$$

Joint Variation

If there are three quantities A, B, and C such that A varies with B when C is constant and varies with C when B is constant, then A is said to vary jointly with B and C when both B and C are varying, i.e. $A \,\alpha\, B$ when C is constant and $A \,\alpha\, C$ when B is a constant; $\Rightarrow A \,\alpha\, BC$.

$A \,\alpha\, BC \Rightarrow A = kBC$ where k is the constant of proportionality.

Example 6

Find the value(s) of x if $\frac{2x+5}{x+1}=\frac{x+2}{x-1}$.

Solution

$$(2x+5)(x-1)=(x+2)(x+1)$$

$$2x^2+5x-2x-5=x^2+2x+x+2$$

$$\Rightarrow \quad x^2 = 7$$

$$\therefore \quad x = \pm\sqrt{7}$$

Example 7

X varies directly with $Y^2 + 18$. When $Y = 18$, $X = 18$. Find Y when $X = 1$.

Solution

$$\frac{X_1}{X_2} = \frac{Y_1^2+18}{Y_2^2+18}\ ;\ \frac{18}{1} = \frac{18^2+18}{Y_2^2+18}$$

$$Y_2^2 + 18 = 19$$

$$Y_2 = \pm 1$$

In these types of problems on variation, there are typically three parts:

1. The relationship between different variables is defined to frame an equation involving the variables and the constant of proportionality.
2. One set of values of all the values of all the variables is given to enable us find the value of the constant of proportionality.
3. The values of all but one variable of a second set are given, and we are asked to find the value of the one variable whose value is not given.

Example 8

The ratio of the monthly incomes of A and B is 4:3. The ratio of their monthly expenditures is 5:4. If A saves one fourth of his monthly income, find the ratio of their monthly savings.

Solution

Let the monthly incomes of A and B be ₹$4x$ and ₹$3x$, respectively.

Let the monthly expenditures of A and B be ₹$5y$ and ₹$4y$ respectively. Monthly savings of A = ₹$(4x - 5y)$. Monthly savings of B = ₹$(3x - 4y)$.

Given that $4x - 5y = \frac{1}{4}(4x)$

$$3x = 5y.$$

$\therefore$ Monthly saving of $B = 3x - 4y = 5y - 4y$, i.e. ₹y.

Required ratio $= \frac{1}{4}(4x) : y = x{:}y = 5{:}3$

Example 9

If x varies directly with y, check whether $x^3 + y^3$ varies directly with $x^3 - y^3$.

Solution

Let $\frac{x}{y} = k$, where k is a constant

$$x = k\,y$$

$$x^3 + y^3 = y^3\,(k^3 + 1)$$

$$x^3 - y^3 = y^3\,(k^3 - 1)$$

$$\frac{x^3 + y^3}{x^3 - y^3} = \frac{k^3+1}{k^3-1} \text{ a constant}$$

$\therefore$ $(x^3 + y^3)$ varies directly with $(x^3 - y^3)$

Example 10

The monthly expenses of Raja on his car are partly constant and partly vary with the number of kilometres he travels in a month. If he travels 100 km in a month his total car expenses will be ₹3,500. If he travels 200 km in a month, his total car expenses will be ₹4,000. If he travels 250 km in a month, what will be his total car expenses.

Solution

Let his total car expenses be ₹T. Let the fixed expense be ₹F. Let the variable expense be ₹V.

$$T = F + V$$

If he travels D km in a month, $\frac{V}{D} = k$, where k is a constant.

$\therefore$
$$T = F + k\,D$$

Given that

$$3500 = F + 100k \quad (1)$$

$$4000 = F + 200k \quad (2)$$

Solving (1) and (2),

$$F = 3000 \text{ and } k = 5.$$

Total car expenses if he travels 250 km

$$= F + 250k = ₹4250.$$

The problems involving ratio and proportion are just different forms of the models of the basic problems we saw above. For example, the problem we just solved above might be reframed bringing in mangoes, bananas, baskets, etc. Here, practice and perseverance pay you a lot. In entrance exams, there will be either direct problems on ratio, proportion, and variation or indirect problems of application of these concepts just discussed to areas like time and work or time and distance.

Exercises

Direction for questions 1 to 18: Select the correct alternative from the given choices.

1. If $p:q = 5:4$ and $p = a + b$ and $q = a - b$, find $a:b$.
   (A) 1:9 (B) 9:1
   (C) 5:4 (D) 4:5
2. The number of marbles with A and B are in the ratio of 10:11. Which of the following cannot be a possible number of marbles with A and B together?
   (A) 189 (B) 210 (C) 231 (D) 153
3. The ratio of the number of students in three classes A, B, and C is 3:7:8. If ten students, are transferred from C to B, B will have 80 students. Find the total number of students in the three classes.
   (A) 150 (B) 160 (C) 180 (D) 210
4. Three positive numbers p, q, and r satisfy $\frac{q+r}{p} = \frac{p+r}{q} = \frac{p+q}{r} = K$. $K =$ ______.
   (A) 3/2 (B) 5/2 (C) 3 (D) 2
5. What must be subtracted from p and added to q so that the ratio of the resultants becomes 1:3?
   (A) $\frac{p+q}{3}$ (B) $\frac{3p-q}{4}$
   (C) $\frac{p-q}{p+q}$ (D) $\frac{q-3p}{4}$
6. Vipin's present age is twice the age of Kishore one year ago. What is the sum of their present ages (in years), if the ratio of the sum of their present ages to the difference of their present ages is 19:5?
   (A) 21 (B) 19 (C) 24 (D) 34
7. Three different types of balls priced at ₹5, ₹8, and ₹13 per piece are displayed in three different boxes by a trader. Mr. Paul bought from this shop all three types of balls spending a total sum of ₹768. The numbers of the balls he bought, taken in the order in which the prices are mentioned above, are in the ratio 5:4:3. How many balls of the costliest variety did he buy?
   (A) 104 (B) 64 (C) 48 (D) 24
8. If $a:b = 2:3$ $b:c = 4:3$ and $c:d = 2:3$, then find $a:b:c:d$.
   (A) 8:12:9:27
   (B) 16:24:18:27
   (C) 18:27:36:8
   (D) 12:18:15:20
9. The weights of Bimal and Basu are in the ratio 2:3 and the weights of Basu and Bali are in the ratio 4:3. What is Basu's weight (in kg) if the sum of the weights of Bimal, Basu, and Bali is 203 kg?
   (A) 84 (B) 76
   (C) 49 (D) 65
10. If $3x - 4y + 2z = 0$ and $4x - 2y - z = 0$, find $x:z:y$.
    (A) 8:10:11 (B) 8:11:40
    (C) 11:40:8 (D) 8:40:11
11. If $a + b - c:b + c - a:a + c - b = 5:6:7$, then find $a:b:c$.
    (A) 12:13:11 (B) 12:11:13
    (C) 13:12:11 (D) 13:11:12
12. Which of the following represents a possible value of $p : q$ satisfying $\frac{20p^2 - 40pq}{pq + 4q^2} = 20$?
    (A) 3:1 (B) 1:4
    (C) 4:1 (D) 5:1
13. Ninety three is divided into two parts such that thrice the first part and twice the second part are in the ratio 25:4. Find the first part.
    (A) 60 (B) 75
    (C) 50 (D) 70
14. If three is subtracted from the numerator and five is added to the denominator of a fraction, the new fraction formed is 1/2. If two is added to the numerator of the initial fraction, the ratio of the new numerator to the denominator becomes 1:1. Find the original fraction.
    (A) 11/13 (B) 18/23
    (C) 13/15 (D) 13/11
15. The ratio of the number of students in classes A, B, and C is 3:7:8. If 10 students leave C and join B, the ratio of the number of students in B and C would be reversed. Find the total number of students in the classes A, B, and C.
    (A) 144 (B) 162 (C) 180 (D) 198
16. A person has with him a certain number of weighing stones of 100 g, 500 g, and 1 kg in the ratio of 3 : 5 : 1. If a maximum of 5 kg can be measured using weighing stones of 500 g alone, then what is the number of 100 g stones he has?
    (A) 6 (B) 3 (C) 9 (D) 5
17. The ratio of the prices of tea last year and this year is 5:6. The ratio of the prices of coffee last year and this year is 7:8. The sum of prices of a kg of tea and a kg of coffee this year is ₹48. Find the price of tea (in ₹) last year if it was $\frac{20}{21}$ of the price of coffee last year.
    (A) 15 (B) 20 (C) 25 (D) 10
18. Ajay and Vijay wrote a test. The sum of Ajay's score and twice Vijay's score is 310. The sum of Vijay's score and twice Ajay's score is 290. Find the ratio of the scores of Ajay and Vijay.
    (A) 9:11 (B) 13:17
    (C) 11:19 (D) 7:13

Direction for questions 19 and 20: These questions are based on the data given below.

A test of 60 minutes contains questions on Mathematics and English only. The time taken to solve a Mathematics question is twice the time taken to answer an English question and the ratio of time taken to solve all Mathematics questions to time taken to answer all English questions is 8/7.

19. What is the ratio of the number of English questions to that of Mathematics?
(A) 11/7 (B) 7/4
(C) 9/4 (D) 7/5

20. If the total number of questions is 22, how many English questions can be answered in 18 minutes?
(A) 8 (B) 10 (C) 11 (D) 9

Direction for questions 21 to 25: Select the correct alternative from the given choices.

21. The pressure of a gas varies directly with the temperature when the volume is constant and varies inversely with the volume when temperature is constant. If the present temperature is 100 K, what will be the increase in temperature if the pressure triples and the volume doubles?
(A) 200 K (B) 600 K
(C) 500 K (D) 100 K

22. For a body starting from rest, the distance travelled (d) is directly proportional to the square of the time elapsed from the start (t). When $t = 4$ s, $d = 48$ m. What is the value of d (in metres) at $t = 7$ s?
(A) 128 (B) 150
(C) 115 (D) 147

23. 'A' varies directly as the sum of two quantities 'B' and 'C'. 'B' in turn varies directly as 'x' and 'C' varies inversely as 'x'. When $x = 1$ or 2, $A = 3$. Find the value of A when $x = 4$.
(A) 5 (B) 4.5
(C) 5.5 (D) 6

24. The extension of a spring from its rest position is directly proportional to the force acting on the spring. An additional force applied on the already stretched spring produces a further extension, which is twice that of the initial extension. What is the ratio of the additional force to the initial force?
(A) 3:1 (B) 2:1
(C) 4:1 (D) 1:3

25. The kinetic energy of a body is directly proportional to the square of its speed when the mass is kept constant and is directly proportional to mass when its speed is kept constant. A body with a mass of 2 kg and a speed of 10 m/s has a kinetic energy of 100 joules. What is the kinetic energy of a body whose mass is 20 kg and speed is 1 m/s?
(A) 100 joules (B) 1000 joules
(C) 10 joules (D) 20 joules

- *Perfect Numbers*
- *Hierarchy of Arithmetic Operations*
- *Number of Factors of a Number*
- *Involution and Evolution*
- *LCM and HCF Models*
- *Successive Division*
- *Factorial*
- *Number Systems*
- *Conversions*
- *Binary Arithmetic*

Numbers

NUMBERS is one of the most important topics required for competitive entrance exams—particularly, the MBA entrance exams. In this chapter, we have put together a number of models of problems—mainly based on various problems that have been appearing in different exams.

ADDITION is the process of finding out single number or fraction equal to two or more quantities taken together.

SUBTRACTION is the process of finding out the quantity left when a smaller quantity (number/fraction) is reduced from a larger one.

MULTIPLICATION signifies repeated addition. If a number has to be repeatedly added then that number is multiplicand. The number of multiplicands considered for addition is multiplier. The sum of repetition is product. For example, in the multiplication $3 \times 4 = 12$, 3 is the multiplicand, 4 is the multiplier and 12 is product.

DIVISION is a reversal of multiplication. In this we find how often a given number called divisor is contained in another given number called dividend. The number expressing this is called the quotient and the excess of the dividend over the product of the divisor and the quotient is called remainder.

For example, in the division 32/5, 32 is dividend, 5 is divisor, 6 is quotient, and 2 is remainder.

Rule of Signs

The product of two terms with like signs is positive; the product of two terms with unlike signs is negative.

Example: $-1 \times -1 = +1$;

$+1 \times -1 = -1$;

$+1 \times +1 = +1$;

$-1 \times +1 = -1$;

Classification of Real Numbers

Real numbers are classified into rational and irrational numbers.

Rational Numbers: A number which can be expressed in the form p/q where p and q are integers and $q \neq 0$ is called a rational number.

For example, 4 is a rational number since 4 can be written as 4/1 where 4 and 1 are integers and the denominator $1 \neq 0$. Similarly, the numbers 3/4, –2/5, etc. are also rational numbers.

Recurring decimals are also rational numbers. A recurring decimal is a number in which one or more digits at the end of a number after the decimal point repeats endlessly (For example, 0.333…, 0.111111…, 0.166666…, etc. are all recurring decimals). Any recurring decimal can be expressed as a fraction of the form p/q, and hence it is a rational number. We will study in another section in this chapter the way to convert recurring decimals into fractions.

Between any two numbers, there can be infinite number of other rational numbers.

Irrational Numbers: Numbers which are not rational but which can be represented by points on the number line are called irrational numbers. Examples for irrational numbers are $\sqrt{2}$, $\sqrt{3}$, $\sqrt[4]{5}$, $\sqrt[3]{9}$, etc.

Numbers like π, e are also irrational numbers.

Between any two numbers, there are infinite number of irrational numbers.

Another way of looking at rational and irrational numbers is terminating decimals and recurring decimals are both rational numbers.

Any non-terminating, non-recurring decimal is an irrational number.

Integers: All integers are rational numbers. Integers are classified into negative integers, zero, and positive integers. Positive integers can be classified as prime numbers and composite numbers. In problems on numbers, we very often use the word 'number' to mean an 'integer.'

Prime Numbers: A number other than 1 which does not have any factor apart from one and itself is called a prime number.

Examples for prime numbers are 2, 3, 5, 7, 11, 13, 17, 19, 23, etc.

There is no general formula that can give prime numbers. **Every prime number greater than 3 can be written in the form of $(6k + 1)$ or $(6k - 1)$ where k is an integer.** For the proof of this, refer to 4th point under 'Some important points to note' given later on in this chapter.

Composite Numbers: Any number other than 1, which is not a prime number is called a composite number. In other words, a composite number is a number which has factors other than one and itself.

Examples for composite numbers are 4, 6, 8, 9, 10, 14, 15, etc.

NOTE

The number 1 is neither prime nor composite.

The only prime number that is even is 2.

There are 15 prime numbers between 1 and 50 and 10 prime numbers between 50 and 100. So, there are a total of 25 prime numbers between 1 and 100.

Relative Primes: Two numbers are said to be relative primes or co-primes if they do not have any common factor other than 1. For example, the numbers 15 and 16 do not have any common factors, and, hence, they are relative primes. Please note that none of the two numbers may individually be prime and still they can be relative primes. Unity is a relative prime to all numbers.

Multiples: If one number is divisible exactly by a second number, then the first number is said to be a multiple of the second number. For example, 15 is a multiple of 5; 24 is a multiple of 4.

Factors: If one number divides a second number exactly, then the first number is said to be a factor of the second number. For example, 5 is a factor of 15; 3 is a factor of 18. Factors are also called sub-multiples or divisors.

Even and odd numbers: Numbers divisible by 2 are called even numbers whereas numbers that are not divisible by 2 are called odd numbers.

Examples for even numbers are 2, 4, 6, 8, 10, etc. Examples for odd numbers are 1, 3, 5, 7, 9, etc.

NOTE

Every even number ends in 0, 2, 4, 6, or 8.

The sum of any number of even numbers is always even.

The sum of odd number of odd numbers (i.e. the sum of 3 odd numbers, the sum of 5 odd numbers, etc.) is always odd whereas the sum of even number of odd numbers (i.e., the sum of 2 odd numbers, the sum of 4 odd numbers, etc.) is always even.

The product of any number of odd numbers is always odd.

The product of any number of numbers where there is at least one even number is even.

Perfect Numbers

A number is said to be a perfect number if the sum of ALL its factors excluding itself (but including 1) is equal to the number itself.

For example, 6 is a perfect number because the factors of 6, i.e. 1, 2, and 3 add up to the number 6 itself.

Other examples of perfect numbers are 28, 496, 8128, etc.

Rules for Divisibility

In a number of situations, we will need to find the factors of a given number. Some of the factors of a given number can, in a number of situations, be found very easily either by observation or by applying simple rules. We will look at some rules for divisibility of numbers.

Divisibility by 2: A number divisible by 2 will have an even number as its last digit (128, 246, 2346, etc.).

Divisibility by 3: A number is divisible by 3 if the sum of its digits is a multiple of 3.

For example, take the number 9123, the sum of the digits is 9 + 1 + 2 + 3 = 15, which is a multiple of 3. Hence, the given number 9123 is divisible by 3. Similarly 342, 789, etc. are all divisible by 3. If we take the number 74549, the sum of the digits is 29 which is not a multiple of 3. Hence, the number 74549 is not divisible by 3.

Divisibility by 4: A number is divisible by 4 if the number formed with its last two digits is divisible by 4.

For example, if we take the number 178564, the last two digits form 64. Since this number 64 is divisible by 4, the number 178564 is divisible by 4.

If we take the number 476854, the last two digits form 54 which is not divisible by 4 and hence the number 476854 is not divisible by 4.

Divisibility by 5: A number is divisible by 5 if its last digit is 5 or zero (15, 40, etc.).

Divisibility by 6: A number is divisible by 6 if it is divisible both by 2 and 3 (18, 42, 96, etc.).

Divisibility by 7: If the difference between the number of tens in the number and twice the units digit is divisible by 7, then the given number is divisible by 7. Otherwise, it is not divisible by 7.

Take the units digit of the number, double it and subtract this figure from the remaining part of the number. If the result so obtained is divisible by 7, then the original number is divisible by 7. If that result is not divisible by 7, then the number is not divisible by 7.

For example, let us take the number 595. The units digit is 5 and when it is doubled, we get 10. The remaining part of the number is 59. If 10 (which is the units digit doubled) is subtracted from 59 we get 49. Since this result 49 is divisible by 7, the original number 595 is also divisible by 7.

Similarly, if we take 967, doubling the units digit gives 14 which when subtracted from 96 gives a result of 82. Since 82 is not divisible by 7, the number 967 is not divisible by 7.

If we take a larger number, the same rule may have to be repeatedly applied till the result comes to a number which we can make out by observation whether it is divisible by 7. For example, take 456745, We will write down the figures in various steps as shown below.

Col(1) Number	Col(2) Twice the units digit	Col(3) Remaining part of the number	Col(3) – Col(2)
456745	10	45674	45664
45664	8	4566	4558
4558	16	455	439
439	18	43	25

Since 25 in the last step is not divisible by 7, the original number 456745 is not divisible by 7.

Divisibility by 8: A number is divisible by 8, if the number formed by the last 3 digits of the number is divisible by 8.

For example, the number 3816 is divisible by 8 because the last three digits form the number 816, which is divisible by 8. Similarly, the numbers 14328, 18864 etc. are divisible by 8. If we take the number 48764, it is not divisible by 8 because the last three digits' number 764 is not divisible by 8.

Divisibility by 9: A number is divisible by 9 if the sum of its digits is a multiple of 9.

For example, if we take the number 6318, the sum of the digits of this number is 6 + 3 + 1 + 8 which is 18. Since this sum 18 is a multiple of 9, the number 6318 is divisible by 9. Similarly, the numbers 729, 981, etc. are divisible by 9. If we take the number 4763, the sum of the digits of this number is 20 which is not divisible by 9. Hence, the number 4763 is not divisible by 9.

Divisibility by 10: A number divisible by 10 should end in zero.

Divisibility by 11: A number is divisible by 11 if the sum of the alternate digits is the same or they differ by multiples of 11—that is, the difference between the sum of digits in odd places in the number and the sum of the digits in the even places in the number should be equal to zero or a multiple of 11.

For example, if we take the number 132, the sum of the digits in odd places is 1 + 2 = 3 and the sum of the digits in even places is 3. Since these two sums are equal, the given number is divisible by 11.

If we take the number 785345, the sum of the digits in odd places is 16 and the sum of the digits in even places is also 16. Since these two sums are equal, the given number is divisible by 11.

Divisibility by numbers like 12, 14, 15 can be checked out by taking factors of the number which are relatively prime and checking the divisibility of the given number by each of the factors. For example, a number is divisible by 12 if it is divisible both by 3 and 4.

Recurring Decimals: A decimal in which a digit or a set of digits is repeated continuously is called a recurring decimal. Recurring decimals are written in a shortened form, the digits which are repeated being marked by dots placed over the first and the last of them, thus

$$\frac{8}{3} = 2.666..... = 2.\dot{6} \text{ or } 2.\overline{6};$$

$$\frac{1}{7} = 0.142857142857142857... = 0.142857$$

In case of 1/7, where the set of digits 142857 is recurring, the dot is placed on top of the first and the last digits of the set or alternatively, a bar is placed over the entire set of the digits that recur.

A recurring decimal like $0.\overline{3}$ is called a pure recurring decimal because all the digits after the decimal point are recurring.

A recurring decimal like $0.1\overline{6}$ (which is equal to 0.16666...) is called a mixed recurring because some of the digits after the decimal are not recurring (in this case, only the digit 6 is recurring and the digit 1 is not recurring).

A recurring decimal is also called a 'circulator'. The digit, or set of digits, which is repeated is called the 'period' of the decimal. In the decimal equivalent to 8/3, the period is 6 and in 1/7 it is 142857.

As already discussed, all recurring decimals are rational numbers as they can be expressed in the form p/q, where p and q are integers. The general rule for converting recurring decimals into fractions will be considered later. Let us first consider a few examples so that we will be able to understand the rule easily.

Solved Examples

Example 1

Express $0\cdot\overline{4}$ in the form of a fraction.

Solution

Let $x = 0\cdot\overline{4} = 0.444 \ldots$ (1)

$$10x = 4.444 \ldots = 4.\overline{4} \quad (2)$$

Subtracting (1) from (2),

$$9x = 4$$

$$\Rightarrow \quad x = \frac{4}{9}.$$

Example 2

Express $0\cdot\overline{63}$ in the form of a fraction.

Solution

Let $x = 0\cdot\overline{63} = 0.636363 \ldots$ (3)

$$100x = 63.636363 \ldots = 63\cdot\overline{63} \quad (4)$$

Subtracting (3) from (4),

$$99x = 63$$

$$\Rightarrow \quad x = \frac{7}{11}.$$

We can now write down the rule for converting a pure recurring decimal into a fraction as follows:

A pure recurring decimal is equivalent to a vulgar fraction which has the number formed by the recurring digits (called the period of the decimal) for its numerator, and for its denominator, the number which has for its digits as many nines as there are digits in the period.

Thus, $0.\overline{37}$ can be written as equal to $\frac{37}{99}$; $0.\overline{225}$ can be written as equal to $\frac{225}{999} = \frac{25}{111}$;

$$0.\overline{63} = \frac{63}{99} = \frac{7}{11}.$$

A mixed recurring decimal becomes the sum of a whole number and a pure recurring decimal, when it is multiplied by suitable power of 10 which will bring the decimal point to the left of the first recurring figure. We can then find the equivalent vulgar fraction by the process as explained in case of a pure recurring decimal.

Now we can write the rule to express a mixed recurring decimal into a (vulgar) fraction as below:

In the numerator, write the entire given number formed by the (recurring and non-recurring parts) and subtract from it the part of the decimal that is not recurring. In the denominator, write as many nines as the period (i.e. as many nines as the number of digits recurring) and then place next to it as many zeroes as there are digits without recurring in the given decimal.

i.e.,
$$0.1\overline{56} = \frac{156-1}{990} = \frac{155}{990} = \frac{31}{198}$$

$$0.7\overline{3} = \frac{73-7}{90} = \frac{66}{90} = \frac{11}{15}$$

Number of Factors of a Number

If N is a composite number such that $N = a^p \,.\, b^q \,.\, c^r \ldots$ where a, b, c are prime factors of N and p, q, r ... are positive integers, then the number of factors of N is given by the expression

$$(p + 1)\,(q + 1)\,(r + 1) \ldots$$

For example $140 = 2^2 \times 5^1 \times 7^1$.

Hence, 140 has (2 + 1)(1 + 1)(1 + 1), i.e. 12 factors.

Please note that the figure arrived at by using the above formula includes 1 and the given number N also as factors. So if you want to find the number of factors the given number has excluding 1 and the number itself, we find out $(p + 1)\,(q + 1)\,(r + 1)$ and then subtract 2 from that figure.

In the above example, the number 140 has 10 factors excluding 1 and itself.

Number of Ways of Expressing a Given Number as a Product of Two Factors

The given number N (which can be written as equal to $a^p.\, b^q.\, c^r \ldots$ where a, b, c are prime factors of N and p, q, r … are positive integers) can be expressed as the product of two factors in different ways.

The number of ways in which this can be done is given by the expression $1/2\ \{(p + 1)(q + 1)(r + 1)\ldots\}$

So, 140 can be expressed as a product of two factors in 12/2 or 6 ways {because $(p + 1)\,(q + 1)\,(r + 1)$ in the case of 140 is equal to 12}

If p, q, r, etc. are all even, then the product $(p + 1)\,(q + 1)\,(r + 1) \ldots$ becomes odd and the above rule will not be valid since we cannot take 1/2 of an odd number to get the number of ways. If p, q, r, … are all even, it means that the number N is a perfect square. This situation arises in the specific cases of perfect squares because a perfect square can also be written as {square root × square root}. So, two different cases arise in case of perfect squares depending on whether we would like to consider writing the number as {square root x square root} also as one of the ways.

Thus, to find out the number of ways in which a perfect square can be expressed as a product of 2 factors, we have the following two rules.

1. as a product of two DIFFERENT factors: $\frac{1}{2}\{(p+1)(q+1)(r+1)\ldots-1\}$ ways (excluding $\sqrt{N}\times\sqrt{N}$).
2. as a product of two factors (including $\sqrt{N}\times\sqrt{N}$) in $\frac{1}{2}\{(p+1)(q+1)(r+1)\ldots+1\}$ways.

Example 3

Find the number of factors of 3025.

Solution

$3025 = (5)(605) = (5)(5)(121) = 5^2\,11^2$
Number of factors of 3025

$$= (2+1)(2+1) = 9$$

Example 4

In how many ways can 22500 be written as a product of two different factors?

Solution

$22500 = 150^2 = ((2)(5)(3)(5))^2 = 2^2 5^4 3^2$
Number of ways

$$= \frac{1}{2}\{(2+1)(4+1)(2+1)-1\} = 22.$$

Sum of all the Factors of a Number

If a number $N = a^p \,.\, b^q \,.\, c^r \ldots$ where $a, b, c\ldots$ are prime numbers and $p, q, r\ldots$ are positive integers, then, the sum of all the factors of N (including 1 and the number itself) is:

$$\left(\frac{a^{p+1}-1}{a-1}\right)\cdot\left(\frac{b^{q+1}-1}{b-1}\right)\cdot\left(\frac{c^{r+1}-1}{c-1}\right)\ldots$$

The above can be verified by an example.

Consider the number 48, when resolved into prime factors, $48 = 2^4 \times 3^1$. Here $a = 2$, $b = 3$, $p = 4$, $q = 1$.

Hence, sum of all the factors

$$= \left(\frac{2^{4+1}-1}{2-1}\right)\left(\frac{3^{1+1}-1}{3-1}\right) = \frac{31}{1}\times\frac{8}{2} = 124$$

The list of factors of 48 is:

1, 2, 3, 4, 6, 8, 12, 16, 24, 48.

If these factors are added, the sum is 124 and tallies with the above result.

Product of all the Factors of a Number

We shall now consider another kind of question which has also appeared frequently in exams. These questions refer to the 'structure' of numbers, i.e. the prime factors of a number and the canonical representation of a number. We shall begin by working out the product of all the factors of a given number.

Example 5

What is the product of all the factors of 180?

Solution

$180 = 4(45) = 2^2 3^2 5^1$. There are $(2+1)(2+1)(1+1)$ or 18 factors.

If the given number is not a perfect square, at least one of the indices is odd and the number of factors is even. We can form pairs such that the product of the two numbers in each pair is the given number (180 in this example).

$\therefore$ The required product is 180^9.

In general, if $N = p^a\, q^b\, r^c$ (where at least one of a, b, c is odd), the product of all the factors of N is $N^{\frac{d}{2}}$, where d is the number of factors of N and is given by $(a+1)(b+1)(c+1)$.

Example 6

Let us see what happens when N is a perfect square, say 36.

We want the product of all the factors of 36.

Solution

$36 = 2^2 3^2$ (there are 9 factors)

$$1(36) = 2(18) = 3(12) = 4(9) = 6(6)$$

$\therefore$ The product of all the factors is 36^4 (6).

In general, let $N = p^a\, q^b\, r^c$ where each of a, b, c is even.

There are $(a+1)(b+1)(c+1)$ say d factors. We can form $\frac{d-1}{2}$ pairs and we would be left with one lone factor, i.e. $\sqrt{N}$. The product of all these factors is $N^{\frac{d-1}{2}}(\sqrt{N}) = N^{\frac{d}{2}}$

$\therefore$ Whether or not N is a perfect square, the product of all its factors is $N^{\frac{d}{2}}$, where d is the number of factors of N.

Number of Ways of Writing a Number as Product of Two Co-primes

Using the same notation and convention used earlier.

If $N = a^p \,.\, b^q \,.\, c^r\ldots$, then, the number of ways of writing N as a product of 2 co-primes is 2^{n-1}, where 'n' is the number of distinct prime factors of the given number N.

Taking the example of 48, which is $2^4 \times 3^1$, the value of 'n' is 2 because only two distinct prime factors (i.e. 2 and 3 only) are involved.

Hence, the number of ways $= 2^{2-1} = 2^1 = 2$ i.e., 48 can be written as product of 2 coprimes, in two different ways. They are (1 and 48) and (3, 16).

Number of Co-primes to *N*, That are Less than *N*

If N is a number that can be written as $a^p \,.\, b^q \,.\, c^r\ldots$, then, the number of co-primes of N, which are less than N, represented by $\phi(N)$ is,

$$N\left(1-\frac{1}{a}\right)\left(1-\frac{1}{b}\right)\left(1-\frac{1}{c}\right)\ldots$$

For example if, 48 is considered,

$$N = a^p \,.\, b^q \,.\, c^r \ldots$$

i.e., $48 = 2^4 \,.\, 3^1$.

Hence, $a = 2$, $b = 3$, $p = 4$, $q = 1$.

$$\phi(48) = 48\left(1-\frac{1}{2}\right)\left(1-\frac{1}{3}\right)$$

$$= 48\times\frac{1}{2}\times\frac{2}{3} = 16.$$

NOTE

If numbers less than 48 are listed, and co-primes to 48 are picked up, the count of co-primes will be 16.

Sum of Co-primes to *N* That Are Less Than *N*

The sum of the co-primes of N, that are less than N is $\frac{N}{2}\,.\,\phi(N)$. If we consider the above example, already we have $\phi(48) = 16$.

Hence, sum of co-primes of 48 that are less than $48 = \frac{N}{2}\,.\,\phi(N) = \frac{48}{2}\times 16 = 384$.

NOTE

After picking out the co-primes of 48 that are less than 48, they can be added and the sum can be verified.

Least Common Multiple (LCM) and Highest Common Factor (HCF)

Least common multiple (LCM) of two or more numbers is the least number that is divisible by each of these numbers (i.e. leaves no remainder or remainder is zero). The same can be algebraically defined as 'LCM of two or more expressions is the expression of the lowest dimension which is divisible by each of them, i.e. leaves no remainder or remainder is zero'.

Highest common factor (HCF) is the largest factor of two or more given numbers. The same can be defined algebraically as 'HCF of two or more algebraical expressions is the expression of highest dimension which divides each of them without remainder'.

HCF is also called GCD (greatest common divisor).

$$\boxed{\textit{Product of two numbers} = LCM \times HCF}$$

$$\boxed{\textit{LCM is a multiple of HCF}}$$

For finding **LCM and HCF of fractions,** first reduce each fraction to its simplest form, i.e. cancel out any common factors between the denominator and numerator and then apply appropriate formula from the following:

$$\textit{HCF of fractions} = \frac{\textit{HCF of numerators}}{\textit{LCM of denominators}}$$

$$\textit{LCM of fractions} = \frac{\textit{LCM of numerators}}{\textit{HCF of denominators}}$$

LCM and HCF Models

LCM—Model 1: In this model of problem, you will need to find out the smallest number (or number in a specified range like the largest five-digit number) which when divided by 2 or more other numbers (i.e. divisors) leaves the same remainder in all cases.

The basic distinguishing feature of this model of problems is that the remainder will be the **same** in all the cases (and that remainder will also be given).

The smallest such number will be the remainder itself. The next higher number that satisfies the given conditions is the LCM of the given numbers (i.e. divisors) plus the remainder given, i.e. add the remainder (which is the same in all cases) to the LCM of the given numbers (i.e. divisors).

To find any larger number that satisfies a given condition, we will first need to find out a multiple of the LCM in that range and add the remainder to this multiple of the LCM.

The general rule can be written as follows:

Any number which when divided by p, q, or r leaving the same remainder s in each case will be of the form ***k (LCM of p, q, and r)*** $+$ ***s*** *where* $k = 0, 1, 2, \ldots$

If we take $k = 0$*, then we get the smallest such number.*

Example 7

Find the HCF of 1363 and 1457.

Solution

```
         1
1363)1457
     1363          14
       94)1362
          1316    2
            47)94
               94
               --
                0
               --
```

$\therefore$ HCF (1367, 1457) = 47

Example 8

Find the smallest number which when divided by 5 or 11 leaves a remainder of 4 and is greater than the remainder.

Solution

Set of such numbers are of the form K [LCM (5, 11)] + 4 where K is a whole number.

We get the required number when $K = 1$

∴ Smallest number = LCM (5, 11) + 4

$$= 55 + 4 = 59.$$

LCM—Model 2: In this model, the remainders in the divisions given will not be the same but the difference between the divisor and the remainder (i.e. the complement of the remainder) will be the same in each case. For example, you may be asked to find out 'the smallest number which when divided by 4 or 6 gives respective remainders of 3 and 5'. Here, the remainders are not the same as in LCM —Model 1; but the difference between the divisor and the remainder is same in each case. In the first case, the difference between the divisor and the remainder is 1(= 4 – 3). In the second case, also the difference between the divisor and the remainder is 1(= 6 – 5).

The smallest such number is LCM minus constant difference (the constant difference being the difference between the divisor and the corresponding remainder in all cases).

Similarly, any multiple of the LCM minus the constant remainder also will satisfy the same condition.

In the aforementioned example, the LCM of 4 and 6 is 12, and hence the required number is 11 (which is equal to 12 – 1).

The general rule can be written as follows:

Any number which when divided by p, q, or r leaving respective remainders of s, t, and u where (p – s) = (q – t) = (r – u) = v (say) will be of the form ***k (LCM of p, q, and r)*** *– v*

The smallest such number will be obtained by substituting k = 1.

Example 9

Find the smallest number which when divided by 9 and 11 leaves remainders of 7 and 9, respectively.

Solution

Required number = LCM (9, 11) – 2 = 97.

Example 10

Find the largest four-digit number which when divided by 9 and 11 leaves remainders of 7 and 9, respectively.

Solution

Required number must be in the form LCM (9, 11) $k - 2$, i.e. $99k - 2$, where k is the largest natural number satisfying $99k - 2 < 10000$.

$$\therefore \quad k < 101\frac{1}{33}$$

$$\therefore \quad k = 101$$

∴ Largest number = 9997.

LCM—Model 3: In this model, the remainders will not be the same and even the differences between each of the given divisors and the corresponding remainders also will not remain the same.

Let us take an example and see how to solve this type of problem.

Example 11

Find the smallest number which leaves a remainder of 7 when divided by 11 and leaves a remainder of 12 when divided by 13.

Solution

Let the number be in the forms $11k_1 + 7$ and $13k_2 + 12$ where k_1 and k_2 have the least possible values.

$$11k_1 + 7 = 13k_2 + 12$$

$$k_1 = k_2 + \frac{2k_2 + 5}{11}$$

As k_1 is an integer, $2k_2 + 5$ must be divisible by 11.

Hence $k_2 = 3$.

∴ Smallest number = 51.

HCF—Model 1: In this model, we have to identify the largest number that exactly divides the given dividends (which are obtained by subtracting the respective remainders from the given numbers).

The largest number with which the numbers p, q, or r are divided giving remainders of s, t, and u, respectively, will be the ***HCF of the three numbers (p – s), (q – t), and (r – u).***

Let us understand this model with an example.

Example 11

Find the largest number which leaves remainders of 2 and 3 when it divides 89 and 148, respectively.

Solution

Largest number = HCF (89 – 2, 148 – 3) = 29

HCF—Model 2: In this model, the problem will be as follows:

'Find the largest number with which if we divide the numbers p, q and r, the remainders are the same'.

Take the difference between any two pairs out of the three given numbers. Let us say we take the two differences $(p - q)$ and $(p - r)$. The HCF of these numbers will be the required number.

Here, the required number = HCF of $(p \sim q)$ and $(p \sim r)$ = HCF of $(p \sim q)$ and $(q \sim r)$ = HCF of $(q \sim r)$ and $(p \sim r)$

Let us take an example and look at this model.

Example 12

Find the largest number which divides 444, 804, and 1344 leaving the same remainder in each case.

Solution

Largest number

$$= \text{HCF } (804 - 444, 1344 - 804)$$

$$= \text{HCF } (360, 540) = 180.$$

Successive Division

If the quotient of a division is taken and this is used as the dividend in the next division, such a division is called 'successive division'. A successive division process can continue upto any number of steps—until the quotient in a division becomes zero for the first time, i.e. the quotient in the first division is taken as dividend and divided in the second division; the quotient in the second division is taken as the dividend in the third division; the quotient in the third division is taken as the dividend in the fourth division and so on.

If we say that 2479 is divided successively by 3, 5, 7, and 2, then the quotients and remainders are as follows in the successive division.

Dividend	Divisor	Quotient	Remainder
2479	3	826	1
826	5	165	1
165	7	23	4
23	2	11	1

Here we say that when 2479 is successively divided by 3, 5, 7, and 2 the respective remainders are 1, 1, 4 and 2.

Example 13

A number when divided by 6 and 4 successively leaves remainders of 5 and 2, respectively. Find the remainder when the largest such two digit number is divided by 9.

Solution

Let the quotients obtained when the number is divided by 6 and 4 successively be q_1 and q_2, respectively.

$$\text{Number} = 6q_1 + 5$$

Its successive division, the quotient obtained for each division starting from the first, forms the dividend for the next division.

$\therefore \quad q_1 = 4q_2 + 2$

$\therefore \quad \text{number} = 6\,(4q_2 + 2) + 5 = 24q_2 + 17$

Largest two-digit number satisfying the given conditions is obtained when $24q_2 + 17 < 100$ and q_2 is maximum, i.e. $q_2 < 3\frac{11}{24}$ and it is maximum, i.e. $q_2 = 3$.

$\therefore \quad$ number = 89. required remainder = 8

Alternative method:

Divisors: 6 × 4

Remainders: 5 2

The smallest number satisfying the given conditions is found using the following method. Each divisor and the remainder it leaves are written as shown above. Starting with the last remainder, each remainder is multiplied with the previous divisor and added to that divisor's remainder. This procedure is carried out until the divisor's remainder is the first remainder.

Smallest possible value of the number

$$= (6)\,(2) + 5 = 17$$

General form of the number $= k(6 \times 4) + 17 = 24k + 17$ where k is any whole number.

The number would be the largest two-digit number when $24\,k + 17 < 100$ and k is maximum, i.e. $k < 3\frac{11}{24}$ and k is maximum, i.e. $k = 3$.

$\therefore$ Largest two-digit number = 89

$\therefore$ Required remainder = 8

Example 14

A number when divided by 3, 5, and 6 successively leaves remainders of 1, 3, and 2, respectively. Find the number of possible values it can assume which are less than 1000.

Solution

Let the quotients obtained when the number is divided by 3, 5, and 6 successively be q_1, q_2, and q_3, respectively.

$$\text{Number} = 3q_1 + 1$$

$$q_1 = 5q_2 + 3$$

$$q_3 = 6q_1 + 2$$

$\therefore$ number $= 3\,(5q_2 + 3) = 1$

$$= 3\,(5(6q_1 + 2) + 3) + 1 = 90\,q_1 + 40$$

$$90\,q_1 + 40 < 1000$$

$$q_1 < 10\frac{2}{3}$$

$\therefore$ q_1 has 11 possibilities, i.e. 0 to 10.

Alternative method:

Divisors: 3 × 5 × 6

Remainders: 1 3 2

Smallest possible value of the number

$$= ([(5 \times 2) + 3] \times 3) + 1 = 40$$

General form of the number $= k \times (3 \times 5 \times 6) + 40 = 90k + 40$, where k is any whole number.

If $\quad 90k + 40 < 1000,\ k < 10\frac{2}{3}$

$\therefore$ k has 11 possibilities (i.e. 0 to 10).

FACTORIAL

Factorial is defined for any positive integer. It is denoted by $\angle$ or !. Thus, 'Factorial n' is written as $n!$ or $\angle n$. $n!$ is defined as the product of all the integers from 1 to n.

Thus $n! = 1, 2, 3, \ldots (n-1)\,n$.

0! is defined to be equal to 1.

0! = 1 and 1! is also equal to 1.

Largest Power of a Number in *N*!

There is a specific model of problems relating to factorial which appeared about 3 to 4 times in CAT papers. This involves finding the largest power of a number contained in the factorial of a given number. Let us understand this type of problem with the help of an example.

Example 15

Find the number of zeros that 324! ends with.

Solution

The largest power of A in B! can be found using the method below when A is composite.

The largest power of each prime factor of A in B! is found. The minimum of these results is the required power.

In the given problem, $10 = (2)(5)$. The required power is the minimum of the largest power of 2 in 324! and the largest power of 5 in 324!. Using the approach shown in the previous example, the largest power of 2 in 324! is 32!. From the previous example, the largest power of 5 in 324! is 78.

$\therefore$ Required power = min (321, 781) = 78.

Alternative method:

Largest power of 10 = Largest power of (2) (5)

As 5 > 2, the largest power of 5 which can divide 324! < the largest power of 2 which can divide 324!

$\therefore$ Largest power of (2) (5) which can divide 324! = largest power of 5 which can divide 324! is 10^{78}.

$\therefore$ 324! ends with 78 zeros.

Some Important Points to Note

Please note the following points also which will be very useful in solving problems on numbers.

1. When any two consecutive integers are taken, one of them is odd and the other is even. Hence, the product of any two consecutive integers is always even, i.e. divisible by 2.
   Two consecutive integers can be written in the form of n and $n - 1$ or n and $n + 1$. Hence, any number of the form $n(n-1)$ or $n(n+1)$ will always be even.
2. Out of any 3 consecutive integers, one of them is divisible by 3 and at least one of the three is definitely even. Hence, the product of any 3 consecutive integers is always divisible by 6.
   Three consecutive integers can be of the form $(n-1)$, n, and $(n+1)$. The product of 3 consecutive integers will be of the form $(n-1)n(n+1)$ or $n(n^2-1)$ or $(n^3 - \text{n})$. Hence, any number of the form $(n-1)n(n+1)$ or $n(n^2 - 1)$ or $(n^3 - n)$ will always be divisible by 6.
3. Out of any n consecutive integers, exactly one number will be divided by n and the product of n consecutive integers will be divisible by n!
4. Any prime number greater than 3 can be written in the form of $6k + 1$ or $6k - 1$. The explanation is:
   Let p be any prime number greater than 3. Consider the three consecutive integers $(p-1)$, p, and $(p+1)$.
   Since p is a prime number greater than 3, p CANNOT be even. Since p is odd, both $(p-1)$ and $(p+1)$ will be even, i.e. both are divisible by 2.
   Also, since, out of any three consecutive integers, one number will be divisible by 3, one of the three numbers $(p-1)$, p, or $(p+1)$ will be divisible by 3. But, since p is prime number—that too greater than 3—p cannot be divisible by 3. Hence, either $(p-1)$ or $(p+1)$, one of them—and only one of them—is definitely divisible by 3.
   If $(p-1)$ is divisible by 3, since it is also divisible by 2, it will be divisible by 6, i.e. it will be of the form $6k$. If $(p-1)$ is of the form $6k$, then p will be of the form $(6k+1)$.
   If $(p+1)$ is divisible by 3, since it is also divisible by 2, it will be divisible by 6, i.e. it will be of the form $6k$. If $(p+1)$ is of the form $6k$, then p will be of the form $(6k-1)$.
   Hence any prime number greater than 3 will be of the form $(6k+1)$ or $(6k-1)$.

Example 16

Find the HCF of $\frac{3}{5}, \frac{6}{10}$, and $\frac{9}{20}$.

Solution

To find the LCM or HCF of fractions, first empress all the fractions in their simplest term.

$$\text{HCF (fractions)} = \frac{\text{HCF(numerators)}}{\text{LCM}\left(\text{denominators}\right)}$$

$$= \frac{\text{HCF}(3,3,9)}{\text{LCM}(5,5,20)} = \frac{3}{20}$$

Example 17

Find the LCM of $\frac{3}{5}, \frac{6}{10}$, and $\frac{9}{20}$.

Solution

To find the LCM or HCF of fractions, first empress all the fractions in their simplest term.

LCM (fractions)

$$= \frac{\text{LCM (numerators)}}{\text{HCF}(\text{denominators})} = \frac{\text{LCM}(3,3,9)}{\text{HCF}(5,5,20)} = \frac{9}{5}$$

Number Systems

The numbers that are commonly used are the decimal numbers, which involve ten symbols, namely 0, 1, 2, 3, 4, 5, 6, 7, 8, and 9. If we consider the number 526 in the decimal system, it means $5 \times 10^2 + 2 \times 10^1 + 6 \times 10^0$. Likewise, 85.67 means $8 \times 10^1 + 5 \times 10^0 + 6 \times 10^{-1} + 7 \times 10^{-2}$. The role played by '10' in the decimal system is termed as the 'base' of the system. In this chapter, we see the numbers expressed in various other bases.

Base: It is a number which decides the place value of a symbol or a digit in a number. Alternatively, it is the number of distinct symbols that are used in that number system.

NOTES

1. The base of a number system can be any integer greater than 1.
2. Base is also termed as radix or scale of notation.

The following table lists some number systems along with their respective base and symbols.

Number System	Base	Symbols
Binary	2	0, 1
Septenary	7	0, 1, 2, 3, 4, 5, 6
Octal	8	0, 1, 2, 3, 4, 5, 6, 7
Decimal	10	0, 1, 2, 3, 4, 5, 6, 7, 8, 9
Duo-decimal	12	0, 1, 2, 3, 4, 5, 6, 7, 8, 9, A, B
Hexa-decimal	16	0, 1, 2, 3, 4, 5, 6, 7, 8, 9, A, B, C, D, E, F

$A = 10, B = 11, C = 12, D = 13, E = 14, F = 15$. Some books denote ten as 'E' and eleven as 'e'.

Representation: Let N be any integer, r be the base of the system, and $a_0, a_1, a_2, \ldots, a_n$ be the required digits by which N is expressed. Then, $N = a_n r^n + a_{n-1} r^{n-1} + a_{n-2} r^{n-2} + \ldots + a_1 r + a_0$, where $0 \le a_i < r$.

We now look into some representations and their meaning in decimal system.

Examples:

1. $(100011)_2$
$= 1 \times 2^5 + 0 \times 2^4 + 0 \times 2^3 + 0 \times 2^2 + 1 \times 2^1 + 1 \times 2^0$
$= 32 + 0 + 0 + 2 + 1 = (35)_{10}$

2. $(1741)_8$
$= 1 \times 8^3 + 7 \times 8^2 + 4 \times 8^1 + 1 \times 8^0$
$= 512 + 448 + 32 + 1 = 993_{10}$

3. $(A3D)_{16}$
$= A \times 16^2 + 3 \times 16^1 + D \times 16^0$
$= 10 \times 256 + 48 + 13 = 2621_{10}$

Conversions

1. **Decimal to binary:**

(a) $(253)_{10} = (11111101)_2$

Working:

$$\begin{array}{r|l}
2 & 253 \\ \hline
2 & 126 - 1 \\ \hline
2 & 63 - 0 \\ \hline
2 & 31 - 1 \\ \hline
2 & 15 - 1 \\ \hline
2 & 7 - 1 \\ \hline
2 & 3 - 1 \\ \hline
 & 1 - 1 \\ \hline
\end{array}$$

NOTE

The remainders are written from bottom to top.

(b) $(37.3125)_{10} = (100101.0101)_2$

Working: The given decimal number has 2 parts:

(i) Integral part 37,
(ii) Fractional part 0.3125.

(i) Conversion of integral part:

$$\begin{array}{r|ll}
2 & 37 & \\ \hline
2 & 18 & -1 \\ \hline
2 & 9 & -0 \\ \hline
2 & 4 & -1 \\ \hline
2 & 2 & -0 \\ \hline
1 & & -0 \\ \hline
\end{array}$$

$\therefore (36)_{10} = (100100)_2$

(ii) Conversion of the fractional part:

Multiply the decimal part with 2 successively and take the integral part of all the products starting from the first.

	Binary digits
$0.3125 \times 2 = 0.6250$	0
$0.6250 \times 2 = 1.2500$	1
$0.2500 \times 2 = 0.500$	0
$0.5000 \times 2 = 1.0$	1

$\therefore (0.3125)_{10} = (0.0101)_2$

NOTE

We should stop multiplying the fractional part by 2, once we get 0 as a fraction or the fractional part is non-terminating. It can be decided depending on the number of digits in the fractional part required.

2. **Binary to decimal:**
   (i) $(101011011)_2 = (347)_{10}$

   Working: $(101011001)_2$

   $= 1 \times 2^8 + 0 \times 2^7 + 1 \times 2^6 + 0 \times 2^5 + 1 \times 2^4 + 1 \times 2^3 + 0 \times 2^2 + 1 \times 2^1 + 1 \times 2^0$

   $= 256 + 0 + 64 + 0 + 16 + 8 + 0 + 2 + 1$

   $= (347)_{10}$

   (ii) $(0.11001)_2 = (0.78125)_{10}$

   Working: $(0.11001)_2$

   $= 1 \times 2^{-1} + 1 \times 2^{-2} + 0 \times 2^{-3} + 0 \times 2^{-4} + 1 \times 2^{-5}$

   $= 1/2 + 1/4 + 1/32 = 25/32 = (0.78125)_{10}$

3. **Decimal to octal:**
   (i) $(2595)_{10} = (5043)_8$

   Working:

$$\begin{array}{r|ll} 8 & 2595 & \\ \hline 8 & 324 & -3 \\ \hline 8 & 40 & -4 \\ \hline & 5 & -0 \end{array}$$

   $\therefore (2595)_{10} = (5043)_8$

4. **Octal to decimal:**
   (i) $(4721)_8 = (2513)_{10}$

   Working: $(4721)_8$

   $= 4 \times 8^3 + 7 \times 8^2 + 2 \times 8^1 + 1 \times 8^0$

   $= 2048 + 448 + 16 + 1 = (2513)_{10}$

   (ii) $(365.74)_8 = (245.9375)_{10}$

   Working:

   (a) Integral part:

   $(365)_8 = 3 \times 8^2 + 6 \times 8^1 + 5 \times 8^0$

   $= 192 + 48 + 5 = 245$

   $\therefore (365)_8 = (245)_{10}$

   (b) Fractional part:

   $(0.74)_8 = 7 \times 8^{-1} + 4 \times 8^{-2}$

   $= \dfrac{56+4}{64} = \dfrac{60}{64} = 0.9375$

   $\therefore (365.74)_8 = (245.9375)_{10}$

5. **Decimal to hexa-decimal:**
   (i) $(47239)_{10} = (B887)_{16}$

   Working:

$$\begin{array}{r|ll} 16 & 47239 & \\ \hline 16 & 2952 & -7 \\ \hline 16 & 184 & -8 \\ \hline & 11 & -8 \end{array}$$

   Recall: 11 is B, in hexa-decimal system.

   $\therefore (47239)_{10} = (B887)_{16}$

   (ii) $(30014)_{10} = (753E)_{16}$

   Working:

$$\begin{array}{r|ll} 16 & 30014 & \\ \hline 16 & 1875 & -14 = E \\ \hline 16 & 117 & -3 \\ \hline & 7 & -5 \end{array}$$

   $\therefore (30014)_{10} = (753E)_{16}$

6. **Hexa-decimal to decimal:**

   $(52B)_{16} = (1323)_{10}$

   Working: $(52B)_{16}$

   $= 5 \times 16^2 + 2 \times 16^1 + B \times 16^0$

   $= 1280 + 32 + 11 = (1323)_{10}$

   $\therefore (52B)_{16} = (1323)_{10}$

7. **Decimal to duo-decimal or duodenary (base 12):**

   $(948)_{10} = (66C)_{12}$

   Working:

$$\begin{array}{r|ll} 12 & 948 & \\ \hline 12 & 78 & -12 \text{ or } C \\ \hline & 6 & -6 \end{array}$$

   $\therefore (948)_{10} = (66C)_{12}$

8. **Duo-decimal to decimal:**

   $(5BC)_{12} = (864)_{10}$

   Working: $(5BC)_{12}$

   $= 5 \times 12^2 + B \times 12^1 + C \times 12^0$

   $= 720 + 132 + 12 = (864)_{10}$

9. **Binary to octal:**

   8 being the base of octal system and 2 being the base of binary system, there is a close relationship between both the systems. One can just club three digits of a binary number into a single block and write the decimal equivalent of each group (left to right).

   Example:

   (i) $(100101111)_2 = (100)_2\ (101)_2\ (111)_2$

   $= (457)_8$

   $\therefore (100101111)_2 = (457)_8$

   (ii) $(11111110)_2 = (011)_2\ (111)_2\ (110)_2$

   $= (376)_8$

   $\therefore (11111110)_2 = (376)_8$

NOTE

Introduce leading zeros to form a block of 3 without changing the magnitude of the number.

10. **Binary to hexa-decimal:**

    This is similar to the method disscused for octal; instead of clubbing 3, we club 4 digits.

Example:

$(10111110)_2 = (1011)_2\ (1110)_2 = (11)\ (14)$

$= (BE)_{16}$

$\therefore\ (10111110)_2 = (BE)_{16}$

NOTE

If the number of digits is not a multiple of 4, introduce leading zeros as done earlier for octal conversion.

Binary Arithmetic

Addition: Elementary Rules

$0 + 0 = 0$

$0 + 1 = 1$

$1 + 0 = 1$

$1 + 1 = 10$ (1 will be regarded as carry

$1 + 1 + 1 = 11$ as we do in decimal system)

Examples of Binary Addition

1. $(110101)_2 + (110)_2$

$$\begin{array}{rl} 1\ \ \ \ & \rightarrow \text{ carry} \\ 1\,1\,0\,1\,0\,1 & \\ 0\,0\,0\,1\,1\,0 & \text{(Introduce leading zeros)} \\ \hline 1\,1\,1\,0\,1\,1 & \\ \hline \end{array}$$

2. $(101111)_2 + (111011)_2$

$$\begin{array}{rl} 1\,1\,1\,1\,1\ & \rightarrow \text{ carry} \\ 1\,0\,1\,1\,1\,1 & \\ 1\,1\,1\,0\,1\,1 & \\ \hline 1\,1\,0\,1\,0\,1\,0 & \\ \hline \end{array}$$

3. $(110)_2 + (100)_2 + (010)_2$

$$\begin{array}{rl} 1\ \ \ \ \ \ & \rightarrow \text{ carry} \\ 1\,1\,0 & \\ 1\,0\,0 & \\ 0\,1\,0 & \\ \hline 11\,0\,0 & \\ \hline \end{array}$$

Subtraction: Subtract 1101 from 11010.

1.

$$\begin{array}{rr} & 2\ \ \ \ \ \ \ \\ & 0\,0\,2\,0\,2 \\ \hline & 1\,1\,0\,1\,0 \\ & -\,1\,1\,0\,1 \\ \hline \text{result} \rightarrow & 1\,1\,0\,1 \\ \hline \end{array}$$

Explanation: Say $N = 11010$,

As 1 cannot be subtracted from 0, we borrow 2 from the next place. This gives $2 - 1 = 1$, as the right most digit of the result. The penultimate digit of N would become 0. A similar calculation gives the 3^{rd} digit of the result from the right as 1 and the 4^{th} digit of N from the right becomes 0.

We now borrow a 2 from the 5^{th} digit of N, this makes the 4^{th} digit of N as 2, thereby resulting in $2 - 1 = 1$ as the 4^{th} digit of the result.

2. Subtract 11011 from 111001

$$\begin{array}{rl} 2\,2\,1\ \ \ & \\ 0\,0\,2\,2 & \rightarrow \text{ Borrow} \\ \hline 1\,1\,1\,0\,0\,1 & \\ -1\,1\,0\,1\,1 & \\ \hline 1\,1\,1\,1\,0 & \end{array}$$

Example 18

If $(624)_7 = 312_k$ then find K.

Solution

$(624)_7 = (6)\ (7^2) + (2)\ (7) + (4)\ (7)^0 = 312.$

$$(312)_k = 3k^2 + k + 2$$

Given $(312)_k = (624)_7$

$$3k^2 + k + 2 = 312$$

$$3k^2 + k - 310 = 0$$

$$(k - 10)\ (3k + 31) = 0$$

$$k > 0$$

$$\therefore \quad k = 10.$$

Example 19

Find the hexadecimal equivalent of the number $(234567)_8$.

Solution

$(234567)_8$

$$= (10\ \ 011\ \ 100\ \ 101\ \ 110\ \ 111)_2$$

$$= (0001\ \ 0011\ \ 1001\ \ 0111\ \ 0111)_2$$

$$= (1\ \ 3\ \ 9\ \ 7\ \ 7)_{16}$$

$$= (13977)_{16}.$$

Example 20

A non-zero number in base 8 is such that twice the number is the number formed by reversing its digits. Find it.

Solution

Let the number be $(xy)_8$,
where $0 \le x, y < 8$.

The number formed by reversing its digits is $(yx)_8$.

$$2(xy)_8 = (yx)_8$$

$$2(8x + y) = 8y + x$$

$$\frac{x}{y} = \frac{2}{5}$$

$x = 2$ and $y = 5$ is the only possibility.

$\therefore \quad (xy)_8 = (25)_8.$

Exercises

Direction for questions 1 to 50: Select the correct alternative from the given choices.

1. If x and y are irrational numbers, then $x + y - xy$ is ________.
   (A) a real number (B) a complex number
   (C) a rational number (D) an irrational number

2. Which of the following is a prime number?
   (A) 851 (B) 589
   (C) 429 (D) 307

3. Which of the following pairs of numbers are not twin primes?
   (A) 131 and 133
   (B) 191 and 193
   (C) 157 and 159
   (D) More than one of above

4. Which of the following is divisible by 11?
   (A) 8787878
   (B) 7777777
   (C) 1234567
   (D) More than one of the above

5. What is the least natural number that should be added to 52341693 so that the sum is a multiple of 8?
   (A) 3 (B) 9 (C) 5 (D) 7

6. The product of 7 consecutive natural numbers is always divisible by
   (A) 5040 (B) 10080
   (C) 3430 (D) 6860

7. How many odd natural numbers have the same parity as their factorials?
   (A) 1 (B) 2 (C) 0 (D) 3

8. N is a perfect number. What is the ratio of the sum of the factors of N and N?
   (A) 1 (B) 2 (C) 3 (D) 4

9. $0.2\overline{55} =$
   (A) $\frac{23}{90}$ (B) $\frac{23}{99}$
   (C) $\frac{253}{990}$ (D) $\frac{253}{900}$

10. $0.3\overline{21} =$
    (A) $\frac{53}{165}$ (B) $\frac{106}{333}$
    (C) $\frac{10}{11}$ (D) None of these

11. $0.32\dot{1} =$
    (A) $\frac{289}{900}$ (B) $\frac{289}{990}$
    (C) $\frac{32}{99}$ (D) $\frac{16}{45}$

12. The least natural number that must be added to 599 so that the sum is a perfect cube is
    (A) 120 (B) 125 (C) 130 (D) 135

13. There are 15 consecutive odd numbers. The sum of the first ten of those odd numbers is 200. What is the sum of the last five odd numbers?
    (A) 125 (B) 175 (C) 150 (D) 200

14. Find the number of prime factors of 19019.
    (A) 1 (B) 2 (C) 3 (D) 4

15. If $N = 2^a \times 3^b \times 5^c$, how many numbers (in terms of N) are less than N and are co-prime to it?
    (A) $\frac{2}{15}N$ (B) $\frac{4}{15}N$
    (C) $\frac{8}{15}N$ (D) $\frac{2}{5}N$

16. Which of the following numbers is divisible by 40 and 72?
    (A) 7560 (B) 3840 (C) 5670 (D) 3780

17. What is the least whole number that should be added to 723111 to make the resultant is a multiple of 11?
    (A) 4 (B) 8 (C) 7 (D) 3

18. (a) Prime factorize: 9000
    (A) $2^2 \times 3^2 \times 5^2$ (B) $2^4 \times 3 \times 5^2$
    (C) $2^3 \times 3^2 \times 5^3$ (D) $2^3 \times 3 \times 5^4$

    (b) Prime factorize: 1936
    (A) $2^2 \times 3 \times 11^3$ (B) $2^3 \times 11^3$
    (C) $2^4 \times 11^2$ (D) $2^2 \times 3^2 \times 11^2$

    (c) Write 3969 as a product of prime factors.
    (A) $3^5 \times 7$ (B) $3^3 \times 7^3$
    (C) $3^4 \times 7^2$ (D) $3^2 \times 7^4$

    (d) Write 14553 as a product of prime numbers
    (A) $3 \times 7^3 \times 11$ (B) $3^2 \times 7 \times 11^3$
    (C) $3^3 \times 7^2 \times 11$ (D) $3 \times 7^2 \times 11^2$

19. Simplify the following:
    (a) $248 \times 555 + 148 \times 445$
    (A) 203500 (B) 302500
    (C) 205300 (D) 305200

    (b) $4\frac{1}{2} + 3\frac{1}{5} - 2\frac{1}{10} - 4\frac{1}{20}$
    (A) $1\frac{1}{10}$ (B) $1\frac{11}{20}$
    (C) $1\frac{1}{5}$ (D) $1\frac{11}{40}$

    (c) $\dfrac{(3.37)^3 + 10.11(6.63)^2 + 19.89(3.37)^2 + (6.63)^3}{(3.37)^2 + 2 \times (6.63)(3.37) + (6.63)^2}$
    (A) 3.26 (B) 6.74 (C) 10 (D) 8

20. Find the square root of 17689
    (A) 143 (B) 137 (C) 133 (D) 147

21. The number of positive integers which are co-prime to 349247 is _______.
(A) 4 (B) 5
(C) 3 (D) infinite

22. The sum of the first N natural numbers is equal to x^2 where x is an integer less than 100. What are the values that N can take?
(A) 1, 9, 27 (B) 1, 7, 26
(C) 1, 8, 48 (D) 1, 8, 49

23. What is the unit's place of $(5^n + 4^{2n} + 7^{4n})^{4n}$?
(A) 4 (B) 8 (C) 2 (D) 6

24. What is the highest power of 5 in 240!?
(A) 58 (B) 17 (C) 116 (D) 39

25. The least possible number which when successively divided by 10, 7, and 6 leaves remainders of 8, 4, and 5 respectively is
(A) 256 (B) 148 (C) 398 (D) 198

26. The LCM and HCF of a pair of numbers is 1232 and 14, respectively. How many such pairs are possible?
(A) 3 (B) 2 (C) 1 (D) None

27. Find the square root of 12345654321.
(A) 1111 (B) 11111
(C) 111111 (D) 1111111

28. There are four prime numbers written in ascending order. The product of the first three prime numbers is 2431 and that of the last three is 4199. Find the greatest of them.
(A) 17 (B) 19 (C) 23 (D) 13

29. Find the minimum number of coins required to pay three persons 69 paise, 105 paise, and 85 paise, respectively, using coins in the denominations of 2 paise, 5 paise, 10 paise, 25 paise, and 50 paise.
(A) 9 (B) 10 (C) 14 (D) 11

30. If a, b, and c are prime numbers satisfying $a = b - 2 = c - 4$. How many possible combinations exist for a, b, and c?
(A) 4 (B) 3 (C) 2 (D) 1

31. Let p, q, and r be distinct positive integers that are odd. Which of the following statements cannot always be true?
(A) $pq^2 r^3$ is odd.
(B) $(p + q)^2 r^3$ is even
(C) $(p - q + r)^2 (q + r)$ is even.
(D) If p, q, and r are consecutive odd integers, the remainder of their product when divided by 4 is 3.

32. If *abcde* is a five-digit number the difference of *abcde* and *acdbe* would always be divisible by which of the following for all values of a, b, c, d and e?
(A) 9
(B) 18
(C) 99
(D) Both (A) and (B)

33. Find the value of the expression below

$$\frac{(0.68)^3 + (0.67)^3 - (0.5)^3 + (0.68)(0.67)(1.5)}{(0.68)^2 + (0.67)^2 + (0.5)^2 - (0.68)(0.67) + (0.67)(0.5) + (0.68)(0.5)}$$

(A) 1.85 (B) 0.51 (C) 0.49 (D) 0.85

34. Find the sum of all possible distinct remainders which are obtained when squares of a prime numbers are divided by 6.
(A) 7 (B) 8 (C) 9 (D) 10

35. The least number, which when successively divided by 2, 3, and 7 leaves respective remainders of 1, 2, and 3, is
(A) 56 (B) 130
(C) 68 (D) 23

36. Find the GCD of the numbers p and q where $p = 2^3 . 3^2 . 7^2 . 11^6$ and $q = 2^2 . 3^1 . 5^4 . 11^2 . 13^2$.
(A) 776 (B) 1452
(C) 1164 (D) 2028

37. Which of the following sets of numbers are relative primes?
(a) 57,61
(b) 396,455
(c) 693,132
(d) 6561,1024
(e) 384,352
(A) (c), (e) (B) (a), (b), (d)
(C) (a), (c), (d) (D) (b), (e)

38. (a) Find the units digit of 8^{173}.
(A) 2 (B) 4 (C) 8 (D) 6

(b) What is the last digit of $518^{163} + 142^{157}$?
(A) 2 (B) 4 (C) 6 (D) 8

(c) Find the last digit of $1567^{143} \times 1239^{197} \times 2566^{1027}$
(A) 2 (B) 3 (C) 4 (D) 6

39. If n is a positive integer, then $43^{5n} - 21^{5n}$ is always divisible by
(A) 11 (B) 18 (C) 25 (D) 64

40. Find the greatest number which when divides 6850 and 2575 leaving respective remainders of 50 and 25.
(A) 425 (B) 850 (C) 1700 (D) 1275

41. Find the least number which when divided by 12, 18, and 33 leaves a remainder of 5 in each case.
(A) 394 (B) 396 (C) 391 (D) 401

42. Find the smallest number that must be added to 1994 such that a remainder of 28 is left when the number is divided by 38 and 57.
(A) 66 (B) 68 (C) 86 (D) 98

43. Find the greatest number which divides 3300 and 3640 leaving respective remainders of 23 and 24.
(A) 13 (B) 113 (C) 339 (D) 226

44. Find the greatest number which divides 68, 140, and 248 leaving the same remainder in each case.
(A) 36 (B) 18 (C) 72 (D) 108

45. Five bells toll at intervals of 5, 6, 10, 12, and 15 seconds respectively. If they toll together at the same time, after how many seconds will they toll together again, for the first time?
(A) 300 (B) 120 (C) 60 (D) 30

46. If three numbers are in the ratio 3 : 4 : 5, and their LCM is 480, then find the sum of the three numbers.
(A) 96 (B) 72 (C) 84 (D) 108

47. If $(121)_8 = (x)_2$, then $x =$
(A) 101001 (B) 1010011
(C) 1010001 (D) 1011001

48. If $(ACD)_{16} = (x)_{10}$, then $x =$
(A) 2765 (B) 6725 (C) 5672 (D) 7625

49. Find the digit in the unit's place, in the product of $(25)^7 \times (37)^{12} \times (123)^9$.
(A) 1 (B) 5 (C) 3 (D) 9

50. What is the remainder when 3^{86} is divided by 6?
(A) 2 (B) 3 (C) 4 (D) 0

Answer Keys

Chapter 4

Percentage, Profit and Loss

CHAPTER HIGHLIGHTS

- *Percentage*
- *Percentage Points*
- *Profit and Loss*
- *Partnerships*
- *Stocks and Shares*

PERCENTAGE

'Percent' implies 'for every hundred'. This concept is developed to make the comparison of fractions easier by equalising the denominators of all fractions to hundred.

For example, 7/11 as percentage is represented as $\frac{7}{11} = \frac{7 \times 100}{11 \times 100} = \frac{(7 \times 100)/11}{100} = \frac{63.63}{100} = 63.63\%$

Percentages can also be represented as decimal fractions. In such a case it is effectively equivalent to the proportion of the original quantity.

For example, 20% is the same as $\frac{20}{100}$, i.e. 0.2.

Any percentage can be expressed as a decimal fraction by dividing the percentage figure by 100, and conversely, any decimal fraction can be converted to percentage by multiplying it by 100.

PERCENTAGE INCREASE or DECREASE of a quantity is the ratio expressed in percentage of the actual INCREASE or DECREASE of the quantity to the original amount of the quantity, i.e.,

$$\text{PERCENTAGE INCREASE} = \frac{\text{Actual increase}}{\text{Original quantity}} \times 100$$

$$\text{PERCENTAGE DECREASE} = \frac{\text{Actual decrease}}{\text{Original quantity}} \times 100$$

For example, if the production of rice went up from 225 MT in 1993 to 242 MT in 1994, then the percentage increase in rice production from 1993 to 1994 is calculated as follows:

Actual increase = 242 – 225 = 17 MT

Percentage increase

$$= \frac{\text{Quality increase from 1993 to 1994}}{\text{Actual production of rice in 1993}} \times 100$$

$$= \frac{17}{225} \times 100 = 7\frac{5}{9}\%$$

Ratio of any two quantities also can be expressed as percentage.

For example, if the ratio of A and B is 3 : 2, we can say the ratio of A : B is 60% : 40%.

Whenever there is any percentage increase or decrease on a quantity, we can directly calculate the new value of the quantity instead of calculating the actual increase/decrease and then adding to/subtracting from the original quantity.

For example, if the increase on a value of 350 is 15%, the new quantity is $1.15 \times 350 = 402.5$ (where $1.15 = 1 + 0.15$, 0.15 being the decimal equivalent of 15%).

If the production in 1994 is given as 400 MT and the increase from 1993 to 1994 is given to be 25%, then the production in 1993 will be equal to 400/1.25 = 320 MT (where $1.25 = 1 + 0.25$, 0.25 being the decimal equivalent of 25%).

Similarly, if there is a decrease of 12% on a quantity of 225, then the new quantity will be equal to 225×0.88 (where $0.88 = 1 - 0.12$, 0.12 being the decimal equivalent of 12%).

If the production in 1994 is given as 400 MT and it is a decrease of 13% from 1993, then the production in 1993 will be equal to 400/0.87 (where $0.87 = 1 - 0.13$, 0.13 being the decimal equivalent of 13%).

On the basis of percentage increase, we can write down how many times the old value gives the new value. For example, if the percentage increase is 100%, then we can conclude that the new value is 2 times the old value. If the percentage increase is 300%, the new value is 4 times the old value. If the percentage increase is 450%, then the new

value is 5.5 times the old value. In general, if the percentage increase is $p\%$, then the new value is $\left(\frac{p}{100}+1\right)$ times the old value.

Conversely, if we know how many times the old value gives the new value, we can find out the percentage increase in the old value to get the new value. For example, if the new value is 3 times the old value, the percentage increase in the old value to get the new value is 200%. If the new value is 4.25 times the old value, then the percentage increase is 325%. In general, if the new value is k times the old value, then the percentage increase is $(k-1) \times 100$.

Solved Examples

Example 1

Rice production in a country increased by 25% from 2000 to 2004. It increased by 20% from 2004 to 2008. Find the percentage increase in the rice production from 2000 to 2008.

Solution

Let the rice production in 2000 be 100 tonnes.
Rice production in 2004

$$= 100 + \frac{25}{100}(100) = 125 \text{ tonnes}$$

Rice production in 2008

$$= 125 + \frac{20}{100}(125) = 150 \text{ tonnes}$$

$\therefore$ Percentage increase in the rice production from 2000 to 2008 is $\frac{150-100}{100} \times 100$ i.e. 50%.

Example 2

The population of a country increased by 10% from 2001 to 2002. It increased by 20% from 2002 to 2003. It increased by 30% from 2003 to 2004. Find the simple average yearly percentage increase in the population from 2001 to 2004.

Solution

Let the population of the country in 2001 be 100 million.
Population in 2002 = 110 million.
Population in 2003 = 110 × 1.2 = 132 million.
Population in 2004 = 132 × 1.3
= 171 × 6 million.
Simple average percentage increase

$$= \frac{\frac{171.6-100}{100}}{3}(100) = 23\frac{13}{15}$$

Example 3

The price of a Swiss watch was ₹10000 in 2001. Due to devaluation of the rupee, it becomes ₹12000 in 2002. Find the percentage increase in its price from 2001 to 2002.

Solution

Percentage increase

$$= \frac{\text{Final price} - \text{Initial price}}{\text{Initial price}}(100)$$

$$= \frac{12000-10000}{10000}(100) = 20\%.$$

Example 4

64% of a number is 416. Find 85% of that number.

Solution

Let the number be x

$$\frac{64}{100}x = 416$$

$$x = 650$$

$$\frac{85}{100}x = 552.5.$$

Alternative method:

$$64\% = 416$$

$$85\% = \frac{85}{64}(416) = 552.5.$$

Example 5

The ratio of the salaries of A and B is $2:2\frac{1}{7}$. By what percentage is B's salary greater than A's salary?

Solution

Let the salary of A be $2x$

$\Rightarrow$ Salary of B = ₹$2\frac{1}{7}x$

$\therefore$ The salary of B is more than the salary of A by $\frac{\frac{1}{7}x}{2x}(100) = 7\frac{1}{7}\%$.

Example 6

The height of a triangle as well as its base are increased by 30%. Find the percentage increase in its area.

Solution

Let the original height as well as the base be 100 cm. Original area

$$= \frac{(100)(100)}{2} = \frac{100^2}{2}$$

New height = New base = 130 cm

$$\text{New area} = \frac{(130)(130)}{2}$$

$$= \frac{1}{2}\left((1\cdot3)(100)^2\right) = \frac{1\cdot69\left(100^2\right)}{2}$$

$$= 1\cdot69 \text{ (original area)}$$

$\therefore$ the area increased by 69%.

Example 7

If the price of tea goes up by $33\frac{1}{3}\%$, what should be the percentage by which its consumption must be reduced so that the expenditure on it remains unchanged?

Solution

Let the original price be ₹300 per kg and the original consumption be 100 kg. Original expenditure = New expenditure = ₹30000.

$$\text{New price} = 300\left(1+\frac{1}{3}\right) = ₹400.$$

$$\text{New consumption} = \frac{30000}{400} \text{ i.e., 75 kg.}$$

Percentage reduction in consumption

$$= \frac{25}{100}(100) = 25\%$$

In the above three examples, if the percentage given initially is x, what is asked to be found is $\frac{100x}{(100+x)}$.

We can generalize each of the three cases as below:

If the value of an item goes up/down by x%, the percentage reduction/increment to be now made to bring it back to the original level is $\frac{100x}{(100 \pm x)}$%.

If A is x% more/less than B, then B is $\frac{100x}{(100 \pm x)}$ *% less/more than A.*

If the price of an item goes up/down by x%, then the quantity consumed should be reduced/increased by $\frac{100x}{(100 \pm x)}$ *% so that the total expenditure remains the same.*

Percentage Points

The concept of 'percentage points' is important in the usage of percentages. Percentage points is the difference of two percentage figures.

Let us understand this with an example.

Suppose that rice forms 20% of total food grain production in Year I and 30% of total food grain production in Year II.

If we are asked to find out the percentage increase in the production of rice, calculating percentage increase from 20 to 30 as $\frac{30-20}{20}\times100$ and saying it is 50% increase is NOT correct. With the available data, we cannot find out the percentage increase in the production of rice from Year I to Year II. We can only say that the production of rice as a percentage of total food grain production went up by 10 PERCENTAGE POINTS (the 10 being the increase from 20 to 30—both percentage figures).

We can see by taking the following figures that the percentage increase in rice production need not be 50%.

	Year I	Year II
Rice	1000	960
Total foodgrains	5000	3200
Rice as percent of Total foodgrains	20%	30%

Here, while rice is 20% of total food grains in Year I and 30% of total food grains in Year II, we find that the actual production of rice has not even increased—it decreased from 1000 in Year I to 960 in Year II.

Profit and Loss

In any business/commercial environment the most important concern is about the profit/loss of the transaction conducted.

The SELLING PRICE (SP) and the COST PRICE (CP) of an article determine the profit or loss made on the particular transaction.

The computation is done as follows:

$$\text{Profit} = \text{Sale Price} - \text{Cost Price} = \text{SP} - \text{CP}$$

$$\text{Percentage Profit} = \frac{\text{SP}-\text{CP}}{\text{CP}}\times100$$

$$= \frac{\text{Profit}}{\text{CP}}\times100$$

$$\text{Loss} = \text{CP} - \text{SP}$$

$$\text{Percentage Loss} = \frac{\text{Loss}}{\text{CP}}\times100.$$

It is customary to express profit/loss as percentage of cost price. However, in some problems, it may specifically be given that profit/loss percentage has been calculated on the selling price or the student may be asked to calculate the profit/loss percentage on the selling price. Unless such specific directions are given, the profit/loss percentage is always to be calculated on the cost price.

Given profit/loss percentage along with SP, CP can be found out, and similarly, given profit/loss percentage along with CP, SP can be found out by using the concepts discussed

at the beginning of this chapter (where, if percentage increase or decrease is given, we can find out the new value from the old value or the old value from the new value).

The following simple rules can be remembered for this purpose.

Given the cost price (CP) and profit percentage p%, the selling price will be given by $SP = CP \times \frac{(100+p)}{100}$

Given the cost price (CP) and loss percentage p%, the selling price will be given by $SP = CP \times \frac{(100-p)}{100}$

Given the selling price (SP) and profit percentage p%, the cost price will be given by $CP = SP \times \frac{100}{(100+p)}$

Given the selling price (SP) and loss percentage p%, the cost price will be given by $CP = SP \times \frac{100}{(100-p)}$

When two articles are SOLD at the same price (i.e., their SP is the same) such that there is a PROFIT of $p\%$ on one article and a LOSS of $p\%$ on the other (i.e. common profit or loss percentage), then, irrespective of what the SP actually is, the net result of the transaction is LOSS. This percentage loss is given by

$$\text{Loss percentage} = \frac{(\text{Common profit or loss})^2}{100} = \frac{p^2}{100}$$

MARKED PRICE or LIST PRICE is the price that is indicated or marked on the product or it is the price which is given in the price list. This is the price at which the product is intended to be sold. However, there can be some DISCOUNT given on this price, and consequently, the actual SELLING PRICE of the product may be less than the MARKED PRICE.

SELLING PRICE = MARKED PRICE – DISCOUNT

The amount of discount given can also be expressed as a percentage. DISCOUNT is always expressed as a percentage of the MARKED PRICE or the LIST PRICE.

DISCOUNT percent

$$= \frac{\text{Marked price} - \text{Selling price}}{\text{Marked price}} \times 100$$

$$= \frac{\text{Discount}}{\text{Marked price}} \times 100$$

Certain discount is given on an article whose selling price is SP. If further discounts are given on this discounted price, such discounts are referred to as successive discounts. If the successive discounts are $p\%$, $q\%$, and $r\%$, on a product whose selling price is SP, then the effective price after all the discounts is given by

$$\textit{Discounted price} = SP \times \frac{(100-p)(100-q)(100-r)}{100 \times 100 \times 100}$$

Example 8

Alok bought a watch for ₹250 and sold it for ₹300. Find his profit percentage.

Solution

Given that

$$\text{SP} = ₹300 \quad \text{CP} = ₹250$$

$$\Rightarrow \quad \text{Profit} = \text{SP} - \text{CP} = ₹300 - ₹250 = ₹50$$

$$\text{Profit } \% = \frac{50}{250}(100) = 20\%.$$

Example 9

Anand gained 20% by selling a book at ₹30. Find his gain percentage if he sells it for ₹36.

Solution

Let his cost price be ₹x

Given, $\left(1+\frac{20}{100}\right)x = 30$

$\Rightarrow \quad x = 25$

Gain percent when sold at ₹36

$$= \frac{36-25}{25}(100) = 44\%.$$

Example 10

Ajay calculated his profit/loss percentage on his selling prices. Find his actual profit/loss percentage if he calculated

(i) his profit percentage to be 25%

(ii) his loss percentage to be 25%

Solution

Let his selling price be ₹100

(i) Profit = ₹25 ⇒ CP = SP – Profit
= ₹75

Actual profit percentage

$$= \frac{25}{75}(100) = 33\frac{1}{3}\%$$

(ii) Loss = ₹25

⇒ CP = SP + Loss
= ₹125

Actual loss percentage

$$= \frac{25}{125}(100) = 20\%.$$

Example 11

The profit made by selling 5 m of a cloth equals the selling price of 2 m of that cloth. Find the profit percentage made.

Solution

SP (5 m) = CP (5 m) + Profit (5 m)
As Profit (5 m) = SP (2 m),

$$\text{SP (5 m)} = \text{CP (5 m)} + \text{SP (2 m)}$$

$$\Rightarrow \quad \text{SP (3 m)} = \text{CP (5 m)}$$

$$\Rightarrow \quad \frac{\text{S.P.}}{\text{C.P.}} = \frac{5}{3}$$

$$\therefore \quad \text{Profit \%} = \frac{5-3}{3} \times 100 = 66\frac{2}{3}\%.$$

Example 12

A trader promised his customers to sell at cost price. But he cheats his customers by giving 100 g less for every kg that he sells. Find his profit percentage.

Solution

Let the cost of each gram to the trader be ₹1. Cost price of 1000 g = Selling price of 900 g.
Cost of 900 g = ₹900
Selling price of 900 g = ₹1000

$$\text{Profit percentage} = \frac{1000-900}{900}(100)$$

$$= 11\frac{1}{9}\%.$$

Partnerships

Two or more people can get together to do business by pooling their resources. The money put in by each of the partners is called his 'INVESTMENT' or 'CAPITAL'.

All the people who have invested money in the partnership are called PARTNERS.

While two or more partners would have invested money, it is not necessary that all of them should be involved in the day-to-day running of the business. The partners involved in the day-to-day activities of the business are called 'working partners', and the others are called 'sleeping partners' or 'dormant partners'.

The profits left after paying the working partners' remuneration/commission are shared amongst all the partners.

Sometimes, the partners also take interest on their investments, and only the remaining profits are shared by the partners.

Sharing of profits among the partners also depends on the understanding between the partners. However, if no special scheme of sharing the profits is specified (in a problem), then the profits are shared based on the investments of the partners. There are three different possibilities that exist here.

1. If the partners invest DIFFERENT amounts each for the SAME period of time, then the profits at the end of the year are shared in the ratio of their investments.
2. If the partners invest the SAME amounts for DIFFERENT periods of time, then the profits at the end of the year are shared in the ratio of the time periods for which their respective investments have been in business.
3. If the partners invest DIFFERENT amounts and the time periods for which their investments are in the business are also DIFFERENT, then the profits at the end of the year are shared in the ratio of the products of (investment x time period) calculated for each partner.

There can be problems that are modelled along the sharing of profits in partnerships. An example of this type is where a particular facility (like renting a tractor for ploughing their fields by three different people) is used by more than one party and the rent has to be shared by all the concerned parties—similar to sharing of profits in a partnership.

Example 13

Sachin started a business with ₹20000, and after 4 months, Sunil joined him with ₹40000. Sachin received ₹39000 as his annual profit share that included a salary of 16% of the annual profit. Find the annual profit share of Sachin.

Solution

Let the total annual profit be ₹x
Ratio of the part of the total annual profit which is shared in the ratio of the (investments × time) = (20000) (12) : (40000) (8) = 3 : 4.

Hence, the share of Sachin

$$= \frac{3}{7}\left(\frac{84}{100}x\right) + \frac{16x}{100} = 39000$$

$$x = 75000$$

∴ Annual profit share of Sachin

= ₹75000 – ₹39000 = ₹36000.

Example 14

A started a business with ₹20000. After 3 months, B joined him with ₹40000. After some more months, C joined them with ₹100000. B received ₹18000 out of the total annual profit of ₹55000. How many months after A started the business did C join?

Solution

Let us say C joined after x months.
Profit is shared in the ratio

$$(20000)\,(12) : (40000)\,(9) : 100000\,(12-x)$$

$$= 24 : 36 : 10\,(12-x)$$

$$\text{Given} \quad \frac{36}{180-10x} = \frac{18}{55} = \frac{36}{110}$$

$$180 - 10x = 110$$

$$\therefore \quad x = 7.$$

Example 15

Mohan started a business with ₹20000. After 4 months, Sachin joined him with ₹30000. At the beginning of the fifth month, Mohan added ₹10000. Find the ratio in which the annual profit will be shared.

Solution

Ratio of the profit share

$$= [(20000)\ (12) + (10000)\ (8)] : [30000\ (8)] = 4 : 3.$$

EXERCISES

Direction for questions 1 to 30: Select the correct alternative from the given choices.

1. Ganesh owns $83\frac{1}{3}\%$ of a property. Three fourths of the part of it he owns is worth ₹5 lakhs. Find the value of the property (in ₹ lakhs).
(A) 7.2 (B) 8 (C) 6.4 (D) 8.8

2. The salaries of two persons are equal. If the salary of one of them is increased by 20% and the salary of the other is decreased by 20%, find the percentage change in the total salary of the two persons.
(A) 4% increase B) 4% decrease
(C) 0% (D) None of these

3. The price of a TV is decreased by 20%. By what percent must it be increased to bring it back to the original price?
(A) 25% (B) 20%
(C) $16\frac{2}{3}\%$ (D) 15%

4. The ratio of two numbers is 5/6 : 2/3. By what percentage is the second number more/less than the first number?
(A) 20% less (B) 25% more
(C) 25% less (D) 20% more

5. In a test, Mohan's mark was 25% more than Sohan's mark. Mohan got the minimum mark required to pass the test. The pass mark was 35. Find Sohan's mark.
(A) 21 (B) 26 (C) 27 (D) 28

6. In 2004, the price of a shampoo bottle increases by 10% with respect to that in 2003. By what percentage is its price in 2003 less than that in 2004?
(A) 10% (B) $9\frac{1}{11}\%$
(C) 11% (D) $10\frac{1}{11}\%$

7. Due to inflation the total cost of monthly household items has gone up by 20%, but the salary of the family increased by only 10%. Initially, the family used to spend 20% of the salary on household items. What percentage of the present salary should the family spend to buy the same quantities of household items?
(A) 10% (B) $20\frac{2}{11}\%$
(C) $22\frac{2}{11}\%$ (D) $21\frac{9}{11}\%$

8. If the area of a rectangle is increased by 32% and its breadth is increased by 10%, what is the percentage increase in its perimeter?
(A) 10%
(B) 12%
(C) 20%
(D) Cannot be determined

9. *A*'s salary is 20% less than *B*'s salary. If *C*'s salary is ₹10000 and it is 25% more than *B*'s salary, then what is *A*'s salary?
(A) ₹6000 (B) ₹9600
(C) ₹8000 (D) ₹6400

10. School *A* has 30% more students than school *B*. If 120 more students join school *B*, the two schools will have the same number of students. What is the sum of the number of students in school *A* and school *B* initially?
(A) 600 (B) 400 (C) 800 (D) 920

11. The price of petrol increased by 2% in a certain week and increased by 4% in the next week. Find the net percentage increase in the price of petrol over these two weeks.
(A) 6.12% (B) 6.08%
(C) 6.16% (D) 6.20%

12. Rahul got 150 marks in a test. He scored 25% more marks than the pass mark in it. Rajesh got 165 marks in it. By what percent did his mark exceed the pass mark?
(A) 40% (B) 37.5%
(C) 45% (D) 32.5%

13. In a college of total strength 1000, 30% of the students are girls. There are 600 PGs and 120 more male UGs than female UGs. What percent of the males are the female UGs?
(A) 20% (B) 15% (C) 25% (D) 10%

14. A machine costs ₹4,00,000. It depreciates by 18% in value in the first year, 16.5% in the second year, 15% in the third year and so on. Find the amount by which it depreciates in the seventh year (in ₹) (Assume all percentages apply to the original cost of the equipment).
(A) 32000 (B) 28000
(C) 36000 (D) 40000

15. The monthly income of Ram increased by 26%. His expenditure which is 70% of his monthly income increased by 20%. His savings must have increased by
(A) 40% (B) 30% (C) 50% (D) 25%

16. A shopkeeper sells an item for ₹60 at a profit of 20%. At what price (in ₹) should he sell it to gain 30%?
(A) 63 (B) 65 (C) 68 (D) 70

17. The profit made on selling 5 m of a cloth equals the cost price of 2 m of that cloth. Find the profit percentage in selling each m of the cloth.
(A) $66\frac{2}{3}\%$ (B) 50%
(C) 40% (D) $28\frac{4}{7}\%$

18. A company manufactures a product for ₹50. It sold it to a dealer for ₹60. The dealer sold it to a shopkeeper for ₹75. The shopkeeper sold it to a customer for ₹100. Find the profit percentage of the company.
(A) $16\frac{2}{3}\%$ (B) 25%
(C) 20% (D) $33\frac{1}{3}\%$

19. The cost price of 80 articles is ₹12.50 per article. Twenty of them were sold for ₹18 each. At what price should each of the remaining articles be sold so as to get an overall profit of ₹4.50 per article?
(A) ₹15 (B) ₹$16\frac{2}{3}$
(C) ₹$17\frac{1}{3}$ (D) ₹18

20. Rohit marked his goods 40% above his cost price. He sold it after a discount at 12% profit. Find his discount percentage.
(A) 20% (B) 25% (C) 15% (D) 30%

21. Two successive discounts of 30% and 10% are equal to a single discount of
(A) 33% (B) 35% (C) 37% (D) 36%

22. *P* and *Q* started a business in which *P* invested ₹10000 and *Q* invested ₹20000. They received a profit of ₹9600 at the end of a year. Find *Q*'s share in profit (in ₹).
(A) 8000 (B) 6400
(C) 4800 (D) 3200

23. Ramesh and Suresh started a business. Ramesh invested ₹9000 for ten months and Suresh invested ₹6000 for a year. If the profit at the end of a year was ₹4500, find Suresh's share.
(A) ₹3600 (B) ₹2700
(C) ₹2500 (D) ₹2000

24. Kanchan has bought 50 articles. He sells 20% of the articles and makes a profit of ₹1200, which is also equal to the cost of 5 articles. If the selling price for all 50 articles is the same, what is the value of the remaining articles at the selling price?
(A) ₹14400 (B) ₹9600
(C) ₹18000 (D) ₹15000

25. If the discount and profit percentage are both 20% by what percent is the marked price above the cost price?
(A) 40% (B) 50% (C) 60% (D) 70%

26. A car dealer sold a car at a discount of ₹100000. Even after the discount, he made a profit of 15%. What is the marked price of the car, if the marked price is 25% more than the cost price?
(A) ₹1000000 (B) ₹1115000
(C) ₹2500000 (D) ₹1250000

27. Simon gets a discount of 25% on purchasing 100 VCD's from Samuel. He sells them and makes a profit equal to the undiscounted price of 25 VCD's. What is the gain percentage?
(A) 25% (B) 30%
(C) 66.66% (D) 33.33%

28. Ashwin bought an article at ₹200 and marked it at ₹300. He offered a discount and then sold it his profit/loss percentage and discount percentage are in the ratio 3 : 2. Find his profit/loss percentage.
(A) 29% profit (B) 25% profit
(C) 20% loss (D) 25% loss

29. Feroze marks up an article by 30% and sells it at a discount of 20% to Sohail. Sohail marks up the price of the article to a certain amount which happens to be 20% more than Feroze's cost price. What is the maximum discount Sohail can offer without going into loss?
(A) 30% (B) 20%
(C) $16\frac{2}{3}\%$ (D) $13\frac{1}{3}\%$

30. Gopal, Hari, and Karthik started a business with investments of ₹8000, ₹12000, and ₹16000 respectively. Hari and Karthik left the business after *x* months. Out of the annual profit share, Gopal got more than Hari but less than Karthik. If *x* is an integer, find the ratio of Gopal's, Hari's and Karthik's shares.
(A) 27 : 21 : 28 (B) 24 : 21 : 28
(C) 30 : 27 : 36 (D) 32 : 30 : 40

Answer Keys

1. B	**2.** C	**3.** A	**4.** A	**5.** D	**6.** B	**7.** D	**8.** D	**9.** D	**10.** D
11. B	**12.** B	**13.** A	**14.** C	**15.** A	**16.** B	**17.** C	**18.** C	**19.** B	**20.** A
21. C	**22.** B	**23.** D	**24.** A	**25.** B	**26.** D	**27.** D	**28.** B	**29.** D	**30.** B

Chapter 5

Simple Interest and Compound Interest

CHAPTER HIGHLIGHTS

- *Interest*
- *Simple Interest*
- *Compound Interest*
- *Compounding More Than Once a Year*
- *Present Value*
- *Repayment in Equal Instalments*

Interest

Interest is money paid to the lender by the borrower for using his money for a specified period of time. Various terms and their general representation are as follows:

1. INTEREST
   Money paid by borrower for using the lender's money. Denoted by I.
2. PRINCIPAL
   The original sum borrowed. Denoted by P.
3. TIME
   Time for which money is borrowed. Denoted by n. (n is expressed in number of periods, which is normally one year.)
4. RATE OF INTEREST
   Rate at which interest is calculated on the original sum. Denoted by r and is expressed as a percentage or decimal fraction.
5. AMOUNT
   Sum of principal and interest. Denoted by A.

Simple Interest

When interest is calculated every year (or every time period) on the original principal, i.e. the sum at the beginning of first year, such interest is called simple interest.

Here, year after year, even though the interest gets accumulated and is due to the lender, this accumulated interest is not taken into account for the purpose of calculating interest for latter years.

$$\text{Simple Interest} = \frac{Pnr}{100}$$

where P, n, r are as explained above.

$$\text{Total Amount } A = P + \frac{Pnr}{100} = P\left(1 + \frac{nr}{100}\right)$$

Compound Interest

Under compound interest, the interest is added to the principal at the end of each period to arrive at the new principal for the next period.

In other words, the amount at the end of first year (or period) will become the principal for the second year (or period); the amount at the end of second year (or period) becomes the principal for the third year (or period); and so on.

If P denotes the principal at the beginning of Period 1, then, principal at the beginning of Period 2

$$= P\left(1 + \frac{r}{100}\right)$$

$$= PR = \text{Amount at the end of Period 1,}$$

where $R = \left\{1 + \left(\frac{r}{100}\right)\right\}$

P at the beginning of Period 3 = $P\left(1+\frac{r}{100}\right)^2$

$= PR^2 =$ Amount at the end of Period 2

P at the beginning of Period $(n + 1)$

$$= P\left(1+\frac{r}{100}\right)^n = PR^n$$

= Amount at the end of Period n

Hence, the amount after n years (periods) = $PR^n = A$

$$\text{Interest} = I = A - P = P\,[R^n - 1]$$

The following table gives an example of how simple interest and compound interest operate, i.e. how the principal is for various years under simple interest and compound interest. A principal at the beginning of 1st year, of ₹100 and a rate of 10% p.a. are considered. The details are worked out for three years and shown below.

(All figures pertaining to principal, interest, and amount are in rupees)

	Under Simple Interest				Under Compound Interest			
Year	Principal at the beginn. of the year	Interest for the year	Interest till the end of the year	Amount at the end of the year	Principal at the beginn. of the year	Interest for the year	Interest till the end of the year	Amount at the end of the year
1	100	10	10	110	100	10	10	110
2	100	10	20	120	110	11	21	121
3	100	10	30	130	121	12.1	33.1	133.1

As can be seen from the table,

In case of simple interest,

1. The principal remains the same every year.
2. The interest for any year is the same as that for any other year.

In case of compound interest,

1. The amount at the end of an year is the principal for the next year.
2. The interest for different years is not the same.

The compound interest for the first year (where compounding is done every year) is the same as the simple interest for one year.

Compounding More Than Once a Year

We just looked at calculating the amount and interest when the compounding is done once a year. But, compounding can also be done more frequently than once a year. For example, the interest can be added to the principal every six months or every four months and so on.

If the interest is added to the principal every six months, we say that compounding is done twice a year. If the interest is added to the principal every four months, we say that compounding is done thrice a year. If the interest is added to the principal every three months, we say that compounding is done four times a year.

The formula that we discussed above for calculating the amount will essentially be the same, i.e.

$$\text{Amount} = P\left(1+\frac{r}{100}\right)^n$$

where r = rate % *per annum* and n = number of *years*, but the rate will *not* be for ONE YEAR but for the time period over which compounding is done and the power to which the term inside the bracket is raised (n in the above case) will *not* be the number of years but the number of years multiplied by the number of times compounding is done per year (this product is referred to as the total number of time periods).

For example, if a sum of ₹10000 is lent at the rate of 10% per annum and the compounding is done for every four months (thrice a year), then the amount will be equal to

$$10000\left(1+\frac{10}{3}\times\frac{1}{100}\right)^{2\times 3}$$

Here, the dividing factor of 3 in the rate and the multiplying factor of 3 in the power (multiplying the number of years)—both shown by arrow marks—are nothing but the NUMBER OF TIMES compounding is done in a year.

> *If compounding is done k times a year (i.e. once every 12/k months), at the rate of r% p.a. then in n years, the principal of P will amount to* = $P\left(1+\frac{r}{k\cdot 100}\right)^{kn}$

When compounding is done more than once a year, the rate of interest given in the problem is called NOMINAL RATE OF INTEREST.

We can also calculate a rate of interest which will yield simple interest in one year equal to the interest obtained under the compound interest at the given nominal rate

of interest. The rate of interest so calculated is called EFFECTIVE RATE OF INTEREST.

If the number of times compounding is done in a year is increased to infinity, we say that the compounding is done EVERY MOMENT and then the amount is given by $P \cdot e^{nr/100}$, where r is the rate % p.a. and n is the number of years.

The following points should also be noted, which are helpful in solving problems.

The difference between the compound interest and simple interest on a certain sum for two years is equal to the interest calculated for one year on one year's simple interest.

In mathematical terms, the difference between compound interest and simple interest for two years will be equal to $P(r/100)^2$, which can be written as $P(r/100)\,(r/100)$. In this, $Pr/100$ is the simple interest for one year, and when this is multiplied by $r/100$ again, it gives interest for one year on $Pr/100$, i.e. interest for one year on one year's simple interest.

The difference between the compound interest for k years and the compound interest for (k + 1) years is the interest for one year on the amount at the end of k^{th} year.

This can also be expressed in terms of the amount as follows:

The difference between the amount for k years and the amount for (k + 1) years under compound interest is the interest for one year on the amount at the end of the k^{th} year.

The difference between the compound interest for the k^{th} year and the compound interest for the $(k + 1)^{th}$ year is equal to the interest for one year on the compound interest for the k^{th} year.

Present Value

Consider a given sum P and a rate of interest r.

We have seen that interest is cost of using the money over a period of time. That means a sum at the beginning of a period is always higher than the same amount after a period greater than or equal to 1.

Let the sum P that is being considered at a rate of interest r% p.a., becomes Y at the end of Year 1 and Z at the end of Year 2 (i.e. Y and Z are the amounts at the end of first and second years, respectively, on a principal of P).

Then, we can say that what is P today is equal to Y at the end of one year and equal to Z at the end of the second year. In other words, if an amount of Y were to come at the end of one year from now, its value today is equal to P. Similarly, if an amount of Z were to come at the end of two years from now, its value today is equal to P.

So, P is the PRESENT VALUE of Y coming at the end of one year and P is the PRESENT VALUE of Z coming at the end of two years.

Similarly, if we consider n years (or n periods in general), and X is the amount that P will become in n periods, then we say that P is the PRESENT VALUE of X coming at the end of n periods.

If we consider a series of payments Y_1 at the end of first year, Y_2 at the end of second year, and so on, the present value of the series of payments will then be equal to the sum of the present values of each of the payments calculated separately. If Z_1 is the present value of Y_1, Z_2 is the present value of Y_2, and so on, then the present value of the series of payments $Y_1, Y_2, \ldots$ is equal to $Z_1 + Z_2 + \ldots$

Present value can be looked at both under simple interest and compound interest.

If an amount of Y whose present value is P_1 comes at the end of Year 1 and an amount of Z whose present value is P_2 comes at the end of Year 2, then the present value of both the amounts together will be equal to $(P_1 + P_2)$, i.e. the present value of the stream of payments that come at different points of time is equal to the sum of the present values of the individual amounts coming in at various points of time.

Present Value under Simple Interest: The principal P is amounting to X in n periods. From this, we know that

$$X = P\left(1 + \frac{nr}{100}\right)$$

$$\Rightarrow \qquad P = \frac{X}{\left(1 + \frac{nr}{100}\right)}$$

Hence, in general, the present value P of an amount X coming (or due) after n periods is given by

$$\boxed{P = \frac{X}{\left(1 + \frac{nr}{100}\right)}}$$

where r is the rate percent per time period.

Present Value under Compound Interest: The principal P is amounting to X in n periods. From this, we know that

$$X = P\left(1 + \frac{r}{100}\right)^n$$

$$\Rightarrow \qquad P = \frac{X}{\left(1 + \frac{r}{100}\right)^n}$$

Hence, in general, the present value P of an amount X coming (or due) after n periods is given by

$$\boxed{P = \frac{X}{\left(1 + \frac{r}{100}\right)^n}}$$

where r is the rate percent per time period.

Repayment in Equal Instalments—Compound Interest

If a sum P borrowed is repaid in n equal instalments compound interest being calculated at $r\%$ per period of instalment, we can find out the value of each instalment. Let us consider the case of n equal ANNUAL instalments. (Even if the instalments are not annual, but monthly, the approach will remain the same except that the rate of interest taken should then be the rate per month and not rate per annum.)

Let each instalment (i.e. the amount paid at the end of each year) be X.

Instalment X paid after Year 1 gives a present value of $\dfrac{X}{\left(1+\dfrac{r}{100}\right)}$.

Instalment X, paid at the end of Year 2 gives a present value of $\dfrac{X}{\left(1+\dfrac{r}{100}\right)^2}$.

Similarly, instalment X paid for nth period (at the end of year n) gives a present value of $\dfrac{X}{\left(1+\dfrac{r}{100}\right)^n}$.

The sum of all these present values would be equal to the loan amount P (because only if the amount borrowed is equal to the amount repaid can we say that the loan is repaid).

$$\frac{X}{\left(1+\frac{r}{100}\right)}+\frac{X}{\left(1+\frac{r}{100}\right)^2}+\ldots+\frac{X}{\left(1+\frac{r}{100}\right)^n}=P$$

Call $\quad \dfrac{1}{\left(1+\dfrac{r}{100}\right)}=k$

$\Rightarrow \quad k=\dfrac{100}{100+r}$

The above equation can then be rewritten as

$$X\{k+k^2+\ldots+k^n\}=P$$

The terms within the brackets form a G.P. with first term k and common ratio k.

The sum of this G.P. $=\dfrac{k\,(k^n-1)}{(k-1)}$;

Thus $\quad \dfrac{X\cdot k\,(k^n-1)}{(k-1)}=P$

$\Rightarrow \quad X=\dfrac{P\,(k-1)}{k\left(k^n-1\right)}$

$$=\frac{\left[P\left\{\frac{100}{100+r}\right\}-1\right]}{\left[\left\{\frac{100}{100+r}\right\}\right]\left[\left\{\frac{100}{100+r}\right\}^n-1\right]}=\frac{P\cdot r}{100\left[1-\left\{\frac{100}{100+r}\right\}^n\right]}$$

$$\boxed{\textit{Each instalment}=\frac{P\cdot r}{100\left[1-\left\{\frac{100}{100+r}\right\}^n\right]}}$$

Solved Examples

Example 1

Find the simple interest on a sum of ₹1000 at 10% p.a. for 4 years.

Solution

Simple interest $=\dfrac{Pnr}{100}$

$$\text{Interest}=\frac{(1000)(4)(10)}{100}=₹\,400.$$

Example 2

A some of ₹4000 becomes ₹4500 in 2 years under simple interest. In how many years will ₹5000 become ₹5625 under simple interest at the same rate of interest?

Solution

Let the rate of interest be $R\%$ p.a.
Interest on ₹4000 = ₹500

$$500=(4000)\left(\frac{R}{100}\right)(2)$$

$$R=6.25\%$$

Interest on ₹5000 = ₹625
Let the required time be T years.

$$625=(5000)\left(\frac{6\cdot 25}{100}\right)T$$

$\Rightarrow \quad T=2.$

Example 3

Find the value that ₹1000 would amount to under compound interest at 20% p.a., interest being compounded annually in 3 years.

Solution

$$\text{Amount}=P\left(1+\frac{R}{100}\right)^N=1000\left(1+\frac{20}{100}\right)^3=₹1728$$

Example 4

Find the sum that would amount to ₹6600 under simple interest in 4 years at 8% p.a.

Solution

Let the sum be ₹P.

Given that $P\left(1+4\left(\dfrac{8}{100}\right)\right)=6600$

$$P=5000.$$

Example 5

If a sum triples in 4 years under simple interest, find the time that it would take to become 5 times itself at the same rate of interest.

Solution

If the sum triples, the interest obtained will be twice the sum. This takes 4 years. If the sum becomes 5 times, the interest must be four times the sum.

∴ This takes a total of 8 years.

Example 6

A sum triples in 4 years under compound interest at a certain rate of interest, interest being compounded annually. Find the time it would take to become 9 times itself.

Solution

The sum triples in 4 years. If it becomes 9 times itself, it has tripled twice.

∴ This takes 8 years.

Let the sum of ₹P, triple in 4 years at R% p.a.

$$\Rightarrow \quad P\left(1+\frac{R}{100}\right)^4 = 3P$$

$$\Rightarrow \quad \left(1+\frac{R}{100}\right)^4 = 3 \qquad (1)$$

Let it take K years to become 9 times.

$$P\left(1+\frac{R}{100}\right)^K = 9P$$

$$\Rightarrow \quad \left(1+\frac{R}{100}\right)^K = 9$$

$$\Rightarrow \quad \left[\left(1+\frac{R}{100}\right)^4\right]^{\frac{K}{4}} = 3^2 \text{ from } \qquad (2),$$

$$3^{\frac{K}{4}} = 3^2$$

$$\Rightarrow \quad \frac{K}{4} = 2$$

$$\therefore \quad K = 8.$$

Example 7

If ₹4000 is lent at 10% p.a, interest being compounded annually, find the interest for the fourth year.

Solution

Interest for the fourth year = Amount at the end of the first 4 years – Amount at the end of the first 3 years

$$= 4000\left(1+\frac{10}{100}\right)^4 - 4000\left(1+\frac{10}{100}\right)^3$$

$$= 4000\ (1.4641 - 1.3310)$$

$$= 4000\ (0.1331) \quad \text{i.e. ₹ } 532.40.$$

Example 8

The interest on a sum is compounded every 3 months. If the rate of interest is 40% p.a., find the effective rate of interest per annum.

Solution

Let the sum be ₹100

Amount at the end of a year

$$= 100\left(1+\frac{40}{4(100)}\right)^4 = ₹146.41$$

∴ effective rate of interest = 46.41%.

Example 9

The compound interest and the simple interest on a sum at certain rate of interest for 2 years are ₹2760 and ₹2400, respectively. Find the sum and the rate of interest.

Solution

Let the sum be ₹P and let the rate of interest be R% p.a.

Difference between the compound interest and the simple interest = ₹360

$$\therefore \quad P\left(\frac{R}{100}\right)^2 = 360 \qquad (5)$$

$$P(2)\left(\frac{R}{100}\right) = 2400$$

$$\Rightarrow \quad \frac{PR}{100} = 1200 \qquad (6)$$

$$\therefore \quad \frac{PR}{100}\left(\frac{R}{100}\right) = 1200\left(\frac{R}{100}\right) = 360$$

$$R = 30$$

Substituting R in (5) or (6),

$$P = 4000.$$

Exercises

Direction for questions 1 to 20: Select the correct alternative from the given choices.

1. Find the amount obtained by investing ₹24,000 at 18% p.a. simple interest for five years
   (A) ₹21,600 (B) ₹44,000
   (C) ₹45,600 (D) ₹48,000

2. The simple interest for the second year on a certain sum at a certain rate of interest is ₹1000. Find the sum of the interest accrued on it for the 6th, 7th, and 8th years.
   (A) ₹3200 (B) ₹3000
   (C) ₹3300 (D) ₹3630

3. In how many years will a sum of money become sixteen times itself at 30% p.a. simple interest?
(A) 25 (B) 40 (C) 30 (D) 50

4. A sum of money becomes ten times itself at simple interest. If the time period (in years) is numerically equal to the rate of interest, find the annual rate of interest.
(A) 25% (B) 20% (C) 30% (D) 90%

5. An amount of ₹2400 is due after six years under simple interest at 10% p.a. Find its present value (in ₹).
(A) 2000 (B) 1600 (C) 1800 (D) 1500

6. If ₹3000 amounts to ₹3630 in two years under compound interest, interest being compounded annually, what is the annual rate of interest?
(A) 10% (B) 21% (C) 11% (D) 10.5%

7. ₹5000 is invested for two years under compound interest at 10% p.a., interest being compounded annually. Find the interest earned (in ₹).
(A) 500 (B) 1000 (C) 2100 (D) 1050

8. A sum under compound interest, interest being compounded annually amounts to ₹6000 in two years and ₹7200 in three years. Find the rate of interest.
(A) 10% p.a. (B) 20% p.a.
(C) 18% p.a (D) 15% p.a

9. The compound interest on a sum for the third year is ₹2420, interest being compounded annually. The interest on it for the fourth year is ₹2662. Find the rate of interest.
(A) 10% p.a. (B) 11% p.a.
(C) 12% p.a (C) 13% p.a

10. A sum of money becomes four times itself in eight years at compound interest. In how many years will the same sum become sixteen times itself?
(A) 64 (B) 32 (C) 44 (D) 16

11. A sum becomes 2.197 times of itself in three years at compound interest. Find the rate of interest.
(A) 30% (B) 13% (C) 39.9% (D) 235

12. Find the interest (in ₹) earned in the first year on ₹200 at 20% p.a. compound interest, interest compounded every six months.
(A) 40 (B) 42 (C) 44 (D) 48

13. Find the effective rate of interest if the rate of interest is 40% p.a., and the interest is compounded quarterly?
(A) 42% p.a (B) 40% p.a.
(C) 44% p.a (D) 46.41% p.a.

14. Ashok borrowed a total of ₹84000 from two banks at compound interest, interest being compounded annually. One of the banks charged interest at 10% p.a. while the other charged interest at 20% p.a. If Ashok paid ₹13200 as the total interest after a year, find the difference of the sums he borrowed (in ₹).
(A) 24000 (B) 48000
(C) 54000 (D) 12000

15. If the annual rate of simple interest at which a sum is lent for two years increases by 10 percentage points, the interest realized would be ₹4000 more. Find the sum (in ₹).
(A) 20000 (B) 10000
(C) 8000 (D) 16000

16. If a sum was ₹10000 more it would fetch ₹4000 extra as simple interest, if it was lent at a certain rate of interest for two years. Find the annual rate of interest.
(A) 5% (B) 10% (C) 20% (D) 25%

17. A sum was invested under compound interest, interest being compounded annually. It fetches ₹14400 as interest in the second year and ₹17280 as interest in the third year. Find the annual rate of interest.
(A) 10% (B) 15%
(C) 20% (D) 25%

18. A sum takes T_1 years to double at R_1% p.a. simple interest. If it is lent at R_2% p.a. compound interest, interest being compounded annually, it would take the same time to double. Which of the following is always true if $T_1 > 1$?
(A) $R_1 > R_2$ (B) $0.5R_2 < R_1 < R_2$
(C) $R_1 = R_2$ (D) $R_2/3 < R_1 < R_2$

19. A sum takes two years to become 40% more under simple interest at a certain rate of interest. If it was lent at the same interest rate for the same time under compound interest, interest being compounded annually, it would amount to x% more than itself. Find x.
(A) 36 (B) 48
(C) 40 (D) 44

20. A sum was divided into two equal parts. One part was lent at 20% p.a. simple interest. The other part was lent at 20% p.a. compound interest, interest being compounded annually. The difference in the interests fetched by the parts in the second year is ₹400. Find the difference in the interests fetched by the parts in the fourth year (in ₹).
(A) 1414 (B) 1442
(C) 1456 (D) 1484

Answer Keys

1. C	2. B	3. D	4. C	5. D	6. A	7. D	8. B	9. A	10. D

Chapter 6

Averages, Mixtures, and Alligations

CHAPTER HIGHLIGHTS

- *Averages*
- *Mixtures*
- *Alligations*

Averages

'Average is a very simple but effective way of representing an entire group by a single value'.

'Average' of a group is defined as:

$$\text{Average} = \frac{\text{Sum of all items in the group}}{\text{Number of items in the group}}$$

'Sum of all the items in the group' means 'sum of the values of all the items in the group'.

A batsman's performance can be expressed as the average number of runs scored per innings rather than giving the scores in individual innings. For example, let us say a cricketer scored the following runs in 9 different innings in a year: 35, 56, 124, 29, 0, 87, 98, 45, and 75. Then his average score (per innings) for the year is

$$\frac{35 + 56 + 124 + 29 + 0 + 87 + 98 + 45 + 75}{9} = 61$$

Similarly, if there are 60 students in a class, instead of talking of the height of each individual student, we can talk of 'average' height of the class. The average height of the class of students is equal to the sum of the heights of all the students of the class divided by the number of students in the class.

Average is also called the 'mean' or mean value of all the values.

Points to Remember

1. If the value of each item is increased by the same value p, then the average of the group or items will also increase by p.
2. If the value of each item is decreased by the same value p, then the average of the group or items will also decrease by p.
3. If the value of each item is multiplied by the same value p, then the average of the group or items will also get multiplied by p.
4. If the value of each item is divided by the same value p ($p \neq 0$), then the average of the group or items will also get divided by p.
5. The average of a group of items will always lie between the smallest value in the group and largest value in the group, i.e. the average will be greater than the smallest value and less than the largest value in the group.

An Easy Method to Calculate Averages

As already discussed, the average of a group of items whose values are given can be found out by the rule given at the beginning of this section. However, in most of the cases, we do not need to perform such elaborate additions and divisions. The calculation of averages can be simplified greatly by taking some arbitrary number (P) as a starting point, take

the deviations (differences) of the given items (Q_i) from this arbitrary number, find the average of all these deviations ($Q_i - P$) and algebracially add it to the arbitrary number (P) to give the correct average of the given items.

If there are n items and they are denoted by Q_1, Q_2, Q_3, …, Q_n, then the average of these n items is given by

$$\text{Average} = P + \frac{1}{n}\sum_{i=1}^{n}(Q_i - P)$$

For example, the cricketer that we considered above earlier scored the following runs in seven innings: 35, 56, 45, 43, 67, 70, and 48. Now, to find his average, we take an arbitrary figure, say 50, and first find the deviations of each of the scores from this figure. The deviations of the scores from 50 are –15, +6, –5, –7, +17, +20 and –2. The sum of these deviations is +14.

Hence, the average of the cricketer's scores is

$$50 + \frac{14}{7} = 52$$

Please note that the number P (= 50 above) can be any value. Let us work out the same example taking a different value for P. Let us take P equal to 45. The deviations of the scores from P are –10, +11, 0, –2, +22, +25 and +3. The sum of these deviations is 49. Hence, the average is 45 + 49/7 = 45 + 7 = 52.

Weighted Average

When two groups of items are combined together, then we can talk of the average of the entire group. However, if we know only the average of the two groups individually, we cannot find out the average of the combined group of items.

For example, there are two sections A and B of a class where the average height of section A is 150 cm and that of section B is 160 cm. On the basis of this information alone, we cannot find the average of the entire class (of the two sections). As discussed earlier, the average height of the entire class is

$$\frac{\text{Total height of the entire class}}{\text{Total number of students in the entire class}}$$

Since we do not have any information regarding the number of students in the two sections, we cannot find the average of the entire class. Now, suppose that we are given that there are 60 students in the section A and 40 students in section B, then we can calculate the average height of the entire class which, in this case will be equal to $\frac{60\times150+40\times160}{60+40} = 154$ cm.

This average height 154 cm of the entire class is called '**weighted average**' of the class.

The aforementioned step in calculating the weighted average of the class can be rewritten:

$$\frac{60\times150+40\times160}{60+40} = \frac{60}{100}150 + \frac{40}{100}160 = \frac{3}{5}150 + \frac{2}{5}160$$

It is clear from the aforementioned step that we would have been able to calculate the average height of the entire class even if we had not been given the number of students in the individual sections but only the **ratio** of the number of students in the two sections (which in this case is 3 : 2).

Even if there are more than two groups of items to be combined, then also the weighted average can be calculated by the same method. For example, if three sections in a class have their average marks as 75, 76, and 79, respectively, and their respective strengths are 30, 35, and 35, then the average mark of the entire class is given by

$$\frac{30\times75+35\times76+35\times79}{30+35+35} = 76.75$$

The method of deviations we used for calculating averages can be applied to calculate weighted average also. Here, that method will involve finding out deviations from the arbitrarily chosen number and calculating the weighted average of these deviations. In the aforementioned example, if we take 70 as the arbitrary figure, then the deviations of the three observed values given from 70 are +5, +6, and +9. The weighted average of these deviations is

$$\frac{30\times5+35\times6+35\times9}{30+35+35} = \frac{675}{100} = 6.75$$

Hence, the weighted average will be 70 + 6.75 = 76.75.

The arbitrary figure chosen can be any figure, and if it is selected, as in the previous case, between the smallest and largest observed figures, some of the deviations will be positive and some negative making the final division relatively simpler. For example, in the aforementioned case, if we take with 76 as the arbitrary figure, the deviations are –1, 0, and +3. Then, the weighted average will be

$$\frac{30-(-1)+35-0+35-(+3)}{30+35+35} = \frac{75}{100} = 0.75$$

Hence, the weighted average will be 76 + 0.75 = 76.75.

'Weighted average' can be defined or calculated for any MIXTURE.

Mixtures

Mixing of two or more qualities of things produces a mixture. When two items of different qualities are thus mixed, the quality of the resultant mixture lies in between the qualities of the original constituent items, i.e. it will be higher than the lowest quality and lower than the highest quality of the items being mixed.

In the aforementioned example that we took, the 'quality' that we looked at was the height of the students. We could also have taken their weights or the marks scored by them or any other 'quality' or 'parameter' and calculated the 'weighted average' value of that particular 'quality' for the entire group.

Similarly, if two types of a product of different prices per unit are mixed, the unit price of the resultant mixture will lie between the prices of the two types that form the mixture.

Here, the average quality is essentially the **weighted average** of the two constituent items.

If q_1 is the quantity (or number of items) of one particular item of quality p_1, and q_2 be the quantity (or number of items) of the second item of quality p_2 are mixed together to give a new mixture, then the **weighted average** value (p) of the quality of the mixture is given by

$$\boxed{p = \frac{p_1\, q_1 + p_2\, q_2}{q_1 + q_2}}$$

Even if there are more than two groups of items mixed, the weighted average rule can be applied. We will only have to take figures (as shown in the formula for the two groups) for all the groups in the numerator as well as the denominator and calculate the weighted average. For example, if there are four groups of quantities q_1, q_2, q_3, and q_4 whose respective qualities are p_1, p_2, p_3, and p_4, then the weighted average quality of the group can be written as

$$\boxed{p = \frac{p_1\, q_1 + p_2\, q_2 + p_3\, q_3 + p_4\, q_4}{q_1 + q_2 + q_3 + q_4}}$$

A mixture can also be a solution—that is, a liquid mixed with another liquid which is normally water. The concentration of the solution is expressed as the proportion (or percentage) of the liquid in the total solution.

For example, if 10 litres of pure alcohol is mixed with 40 litres of water, then in a total solution of 50 litres, there is 10 litres of alcohol. Hence, the concentration of this solution is 0.2 (= 10/50) or 20%.

Similarly, if 30 litres of pure milk is mixed with 10 litres of water, the concentration of this solution can be expressed as 75% (= 30/40) milk or 25% water.

We can also have two solutions mixed together to give a new solution. Such problems can also be handled in the same manner as other mixtures. In the weighted average rule, the quality of the constituents (p_1, p_2, etc.) will then be the concentrations of various solutions mixed together.

Solved Examples

Example 1

Rajiv purchased three dozen mangoes at ₹10 per dozen, two dozen mangoes at ₹15 per dozen, and five dozen mangoes at ₹16 per dozen. Find the average cost per dozen of the mangoes that he purchased.

Solution

The cost of first three dozen mangoes = (3) (10) = ₹30

The cost of next two dozen mangoes = (2) (15) = ₹30

The cost of next five dozen mangoes = (5) (16) = ₹80

Total cost of the mangoes purchased = ₹140.

Average cost per dozen

$$= \frac{\text{Total cost of mangoes}}{\text{Number of dozens}} = \frac{140}{10} = ₹14$$

Example 2

The average age of 5 men is 20 years. Their average age increased by 1 year when a new man joined them. Find the age of the new man.

Solution

Total age of 5 men = (5) (20) = 100 years

Total age of 6 men = (6) (21) = 126 years

The age of the new man = 126 – 100

i.e. 26 years

Example 3

Six kilograms of wheat costing of ₹18 per kg is mixed with nine kilograms of wheat costing of ₹12 per kg. Find the price per kg of the mixture.

Solution

Total cost of 6 kg = (6) (18) = ₹108

Total cost of 9 kg = (9) (12) = ₹108

$$\text{Average cost of the mixture} = \frac{\text{Total cost}}{\text{Total quantity}}$$

$$= \frac{108\,(2)}{15} = ₹\,14.40 \text{ per kg}$$

Example 4

The average marks of three sections in the tenth class were 90, 120, and 150. If the number of students in these sections are 30, 40, and 50, respectively, find the average mark of the tenth class.

Solution

Total mark of the first section = (90) (30) = 2700

Total mark of the second section

= (120) (40) = 4800

Total mark of the third section = (150) (50) = 7500

$$\text{Average mark of class } X = \frac{\text{Total mark}}{\text{Number of students}}$$

$$= \frac{2700+4800+7500}{30+40+50} = \frac{15000}{120} = 125$$

Example 5

Tarun earned an average of ₹1500 per month from January to April in a year. He earned an average of ₹1600 per month from May to October in that year. His earning in the month of December of that year was ₹300 more than his earning in

the month of November of that year. His average monthly earnings for that year was ₹1675. Find his earnings in the month of November.

Solution

Total earnings of Tarun from January to April = (1500) (4) = ₹6000

Total earnings of Tarun from May to October = (1600) (6) = ₹9600

Let his earnings in November be ₹x

His earnings in December = ₹ $(x + 300)$

$$\frac{6000+9600+x+x+300}{12} = 1675$$

$$x = 2100$$

Example 6

The average age of a group of friends is 37 years. If 6 new friends whose average age is 35 years join them, the average age of the entire group becomes 36 years. How many people were there in the group initially?

Solution

Let the initial number of people in the group be n.

The total age of the initial group of friends = $37n$ years

The total age of the six friends who joined the group = 35×6 i.e., 210 years.

Given that, $37n + 210 = 36\ (n + 6)$

$\Rightarrow \quad 37n - 36n = 216 - 210$

$\therefore \quad n = 6$

Alligations

We will take the weighted average rule discussed in the previous section and rewrite the formula such that the quantity terms come on one side and the price terms come on the other side. If we do this we get the rule $\frac{q_1}{q_2} = \frac{p - p_2}{p_1 - p}$

This is called the RULE OF ALLIGATION. This rule connects quantities and prices in mixtures. This can also be written as $\frac{q_1}{q_2} = \frac{p_2 - p}{p - p_1}$

In a descriptive manner, the Rule of Alligation can be written as $\frac{\text{Quantity of Cheaper}}{\text{Quantity of Dearer}}$

$$= \frac{\text{Rate of Dearer} - \text{Average Rate}}{\text{Average Rate} - \text{Rate of Cheaper}}$$

This rule is a very powerful rule and is useful in problems on weighted averages and mixtures. This rule is also useful in a number of problems which can be treated as mixtures and applied to parameters other than price also. We will take examples where alligation rule can be applied.

In actual practice, to apply alligation rule, we do not need to remember the aforementioned formula at all. It can be made very simple by representing the rule pictorially. The formula can be represented as follows:

Dearer Price ↘ ↙ Cheaper Price

Average Price

(Average Price – Cheaper Price) ↙ ↘ (Dearer Price – Average Price)

{We write the dearer and cheaper prices in one line with some gap in between them. Then, we write the average price in between these two but in the line below the line in which dearer and cheaper prices are written. Then, take the differences of quantities as shown along the arrows and write along the same direction of the arrows continued, i.e. in a diagonally opposite corner. The difference between the top left hand quantity (dearer price) and average price has to be written at the bottom right hand corner. Similarly, the difference between the top right hand corner (cheaper price) and the average price has to be written at the bottom left hand corner. Now the ratio of the two quantities in the bottommost line will give us the ratio of the quantities of dearer and cheaper varieties. Please note that since we took dearer price on the top left corner, the ratio of the bottom left figure to that of the bottom right figure will give the ratio of dearer quantity to cheaper quantity.}

Example 7

A bag contains a total of 120 coins in the denominations of 50 p and ₹1. Find the number of 50 p coins in the bag if the total value of the coins is ₹100.

Solution

Let the number of 50 p coins be x.

Total value of the coins = ₹$\left[\frac{50x}{100} + 1\,(120 - x)\right]$

$$\frac{50x}{100} + 120 - x = 100$$

$\Rightarrow \quad x = 40$

Alternative method:

Average value per coin = $\frac{(100)(100)}{120}$

$= \frac{500}{6}$ paise

Using allegation rule, $\frac{x}{120 - x}$

$$= \frac{100 - \frac{500}{6}}{\frac{500}{6} - 50} = \frac{1}{2}$$

$\Rightarrow \quad 2x = 120 - x$

$\Rightarrow \quad x = 40$

Example 8

A vessel has 60 litres of solution of milk and water having 80% milk. How much water should be added to it to make it a solution in which milk forms 60%?

Solution

Let the quantity of water to be added be x litres.

Quantity of milk in the vessel

$$= \left(\frac{80}{100}\right)(60) = 48 \text{ litres}$$

$\Rightarrow \qquad 48 = 0.6\,(60 + x)$

$\therefore \qquad x = 20$

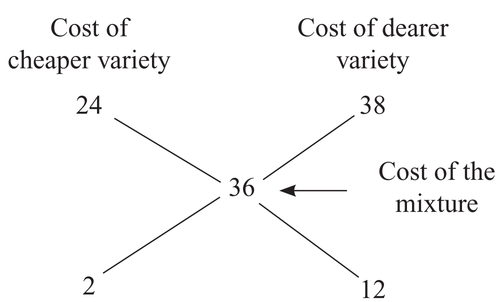
Example 9

In what ratio must Anand mix two varieties of barley costing ₹24 per kg and ₹38 per kg so that by selling the mixture at ₹40 per kg he would make $11\frac{1}{9}\%$ profit?

Solution

Cost price of the mixture $= \dfrac{40(100)}{100 + 11\frac{1}{9}}$

$= ₹36$ per kg



$\therefore$ The ratio of the costs of the cheaper to the dearer variety $= 2 : 12 = 1 : 6$.

If there is P volume of pure liquid initially and, in each operation, Q volume is taken out and replaced by Q volume of water, then at the end of n such operations, the concentration (k) of the liquid in the solution is given by $\left\{\frac{P-Q}{P}\right\}^n = k$

This gives the concentration (k) of the liquid as a Proportion of the total volume of the solution.

If the concentration has to be expressed as a percentage, then it will be equal to 100 k.

If the volume of the liquid is to be found out at the end of n operations, it is given by kP, i.e. the concentration k multiplied by the total volume P of the solution.

Example 10

A vessel has 400 litres of pure milk. 40 litres of milk is removed from the vessel and replaced by water. 40 litres of the mixture thus formed is replaced by water. This procedure is repeated once again. Find the percentage of milk in the resultant solution.

Solution

Let v litre be volume of milk with a concentration of $c_1\%$.

If x litres of the solution is removed and replaced with water, the new concentration is $\left(\frac{v-x}{v} \times c_1\right)\%$

Given that initial concentration is 100%. (pure milk), $v = 400$, $x = 40$ and the replacement is done thrice.

$\therefore$ Concentration of milk in the resultant solution

$$= \left(\frac{400-40}{400}\right)^3 \times 100 = 72.9\%$$

Exercises

Direction for questions 1 to 25: Select the correct alternative from the given choices.

1. Find the average of all the two digit numbers divisible by 10.
   (A) 40 (B) 50 (C) 45 (D) 60
2. Find the average of all odd numbers less than 50.
   (A) 26.5 (B) 25.5 (C) 26 (D) 25
3. Find the average of all the multiples of 12 less than 100.
   (A) 48 (B) 54 (C) 60 (D) 66
4. The average salary per month of a man for the first four months, next four months, and the last four months of a year are ₹6000, ₹8000, and ₹13000, respectively. Find his average salary per month in that year (in ₹).
   (A) 7500 (B) 9000
   (C) 10500 (D) 6600
5. In an office there are 20 employees. The average heights of the male employees is 180 cm. The average height of the female employees is 170 cm. Find the average height of all the employees (in cm).
   (A) 172 (B) 174
   (C) 176 (D) Cannot be determined
6. The average age of the boys in a class is ten years. The average age of the girls in the class is eight years. There are 50% more boys than girls in the class. Find the average age of the class (in years).
   (A) 8.4 (B) 8.8 (C) 9.2 (D) 9.6

7. A vessel has 20 litres of a mixture of milk and water having 60% milk. Five litres of pure milk is added to the vessel. Find the percentage of milk in the new solution.
(A) 34% (B) 51%
(C) 68% (D) None of these

8. In what ratio must two kinds of coffee which cost ₹80 per kg and ₹108 per kg be mixed such that the resultant mixture costs ₹96 per kg?
(A) 1 : 2 (B) 2 : 3
(C) 3 : 4 (D) 2 : 1

9. Vessel *A* has 20 litres of a mixture of milk and water having 75% milk. Vessel *B* has *x* litres of a mixture of milk and water having 60% milk. The contents of the vessels are mixed to form a mixture having 66% milk. Find *x*.
(A) 25 (B) 30 (C) 20 (D) 40

10. A milkman has 15 litres of pure milk. How many litres of water have to be added to it so that he gets a 60% profit by selling at cost price?
(A) 9 (B) 10 (C) 8 (D) 12

11. From 90 litres of pure milk, 9 litres is withdrawn and replaced by water. 9 litres of the mixture is then withdrawn and replaced by water. Find the ratio of milk and water in the present mixture.
(A) 19 : 81 (B) 19 : 100
(C) 81 : 19 (D) 81 : 100

12. Just before the last match in a season, the total number of runs scored by Sachin Tendulkar added up to 2100. In his last match, he scored 101 runs. As a result his average score for the season went up by one run. Find the total number of matches he played in that season if he got out in every match.
(A) 31 (B) 5
(C) 71 (D) Either 31 or 71

13. The average weight of all the students of classes I and II equals the average of the average weight of the students of the two classes. There are twice as many students in class II as in class I. The sum of twice the average weight of the students of class I and the average weight of the students of class II is 60 kg. Find the average weight of class I (in kg).
(A) 10 (B) 15 (C) 20 (D) 25

14. Two varieties of wheat are mixed in the proportion of 3 : 4 and the mixture is sold at ₹28 per kg at a profit of 40%. If the second variety of wheat costs ₹3 more than the first variety of wheat, find the cost price of the first variety of wheat.
(A) ₹128/7 per kg (B) ₹120/7 per kg
(C) ₹141/7 per kg (D) ₹149/7 per kg

15. A man buys milk at ₹4 per litre, mixes it with water and sells the mixture at the same price. If his profit is 25%, find the amount of water mixed with each litre of milk.
(A) 0.25 litres (B) 0.5 litres
(C) 0.75 litres (D) 0.6 litres

16. In what proportion can three varieties of sugar priced at ₹10 per kg, ₹12 per kg, and ₹18 per kg, be mixed so that the price of the mixture is ₹14 per kg?
(A) 2 : 2 : 5 (B) 2 : 3 : 4
(C) 1 : 3 : 4 (D) 3 : 4 : 5

17. The ratio of alcohol and water in three mixtures of alcohol and water is 3 : 2, 4 : 1, and 7 : 3. If equal quantities of the mixtures are drawn and mixed, the concentration of alcohol in the resulting mixture will be______.
(A) 65% (B) 70% (C) 75% (D) 80%

18. In what proportion should milk and water be mixed to reduce the cost of litre of milk from ₹18 per litre to ₹16?
(A) 8 : 1 (B) 6 : 1 (C) 10 : 1 (D) 7 : 1

19. *A*'s weight equals the average weight of *B*, *C,* and *D*. *B*'s weight equals the average weight of *A*, *C,* and *D*. The average weight of *C* and *D* is 30 kg. Find the average weight of *A* and *B*.
(A) 15 kg (B) 30 kg (C) 60 kg (D) 45 kg

20. Of five numbers, the first number is thrice the third, the fourth number is two less than the first, the fifth number is one-seventh of the second and the second number is three less than thrice the first. Find the fifth number, if the average of the numbers is 16.2.
(A) 3 (B) 4 (C) 5 (D) 6

21. There are nine two-digit numbers with distinct tens digits. The units digit of each number is one less than its tens digit. Find the average of the units digits.
(A) 3 (B) 4 (C) 5 (D) 6

22. A sum of ₹7.75 is made up of 100 coins, which are in the denominations of 5 paise and 10 paise. Find the number of 5 paise coins.
(A) 50 (B) 55 (C) 75 (D) 45

23. A businessman lends ₹1800 in two parts, one at 10% and the other at 12% interest. At the end of the year, the average interest he obtained worked out to be 10.5%. Find the interest earned by the businessman from the part which was lent at 10%.
(A) ₹135 (B) ₹150 (C) ₹200 (D) ₹250

24. A vessel is full of a mixture of milk and water, with 9% milk. Nine litres are withdrawn and then replaced with pure water. If the milk is now 6%, how much does the vessel hold?
(A) 27 litres (B) 18 litres
(C) 36 litres (D) 40 litres

25. Three varieties of rice, *A*, *B,* and *C* costing ₹6/kg, ₹9/kg and ₹12/kg are mixed together in a certain ratio. The mixture is sold at $66\frac{2}{3}$% profit for ₹15 / kg. Of the total of 100 kg of the mixture, 50 kg is variety *B*. Find the quantity of variety *A* (in kgs)
(A) 15 (B) 25 (C) 20 (D) 10

Answer Keys

1. B	**2.** D	**3.** B	**4.** B	**5.** D	**6.** C	**7.** C	**8.** C	**9.** B	**10.** A

Chapter 7

Time and Work

CHAPTER HIGHLIGHTS

- *Work and Time*
- *Unitary Method*
- *Pipes and Cisterns*

Work

Work to be done is usually considered as one unit. It may be constructing a wall or a road, filling up or emptying a tank or cistern, or eating certain amount of food.

There are some basic assumptions that are made in the problems on Time and Work. These are taken for granted and are not specified in every problem.

1. If a person (or one member of the workforce) does some work in a certain number of days, then we assume (unless otherwise explicitly stated in the problem) that he does the work uniformly, i.e. he does the SAME amount of work everyday.
   For example, if a person can do some work in 15 days, he does 1/15th of the work in one day.
   If a person completes the work in 4 days, he does 1/4th of the work on each day, and conversely, if a person can complete 1/4th of the work in one day, he can complete the work in 4 days.
   If a tap can fill a tank in 20 minutes, then in one minute, it can fill 1/20th part of the tank.
2. If there is more than one person (or members of 'workforce') carrying out the work, it is assumed that each person (or members of the workforce), unless otherwise specified, does the same amount of work each day. This means they share the work equally.

If two people together can do the work in 8, days, it means that one man can do it in 16 days. This, in turn means, each person can do 1/16th of the work per day.

If a man works three times as fast as a boy does, the man takes one-third of the time the boy takes to complete the work. If the boy takes 12 days to complete the work, then the man takes 4 days to complete the work.

This method is known as '**UNITARY METHOD**', i.e. the time taken per '**Unit Work**' or number of persons required to complete 'Unit Work' or work completed by 'Unit Person' in 'Unit Time', etc. is what is first calculated.

We should recollect the fundamentals on variation (direct and inverse) here.

1. Time remaining constant, Work and Men are directly proportional to each other, i.e. if the work increases the number of men required to complete the work in the same number of days increases proportionately and viceversa.
2. Work remaining constant, Men and Days are inversely proportional, i.e. if the number of men increases, the number of days required to complete the same work decreases in inverse proportion, and viceversa.
3. The number of workingmen remaining constant, Work and Days are directly proportional, i.e. if the work increases, the number of days required to complete the work with the same number of working men also proportionately increases and viceversa.

The concept of MANDAYS is very important and useful here. The number of men multiplied by the number of days that they take to complete the work will give the number of mandays required to do the work. The total number of mandays required to complete a specific task will remain

a constant. So, if we change one of the variables—men or days—the other will change accordingly so that their product will remain constant (remember from our knowledge of VARIATION, two variables whose product is a constant are said to be inversely proportional to each other). The two variables—men and days—are inversely proportional to each other, when work is constant.

Solved Examples

Example 1

If 15 men take 60 days to complete a job, find the time taken by 45 men to complete it.

Solution

Number of mandays required to complete the job = 900 mandays. Time taken by 45 men to complete it = $\frac{900}{45}$, i.e. 20 days.

Example 2

18 men take 20 days to complete a job working 12 hours a day. Find the number of days that 15 men will take to complete it if they work 9 hours a day.

Solution

Total time for which 18 men work = 240 hours. Number of man hours required to complete the job = (18) (240) man hours.

Number of days taken by 15 men working 9 hours a day to complete it = $\frac{(18)(240)}{(15)(9)} = 32$.

Hence, in general we can say that

If M_1 men can do W_1 work in D_1 days working H_1 hours per day and M_2 men can do W_2 work in D_2 days working H_2 hours per day (where all men work at the same rate), then

$$\frac{M_1 D_1 H_1}{W_1} = \frac{M_2 D_2 H_2}{W_2}$$

Example 3

20 men take 10 days to complete a job working 12 hours a day. Find the number of men required to complete a job, twice as large, in 30 days working 8 hours a day.

Solution

Number of man hours required to complete the job = (20) (10) (12) = 2400

Number of men required to complete a job twice as large by 240 hours = $\frac{2400 \times 2}{240}$, i.e. 20 days.

Alternative method:

$$M_1 = 20, D_1 = 10, H_1 = 12$$

$$D_2 = 30, H_2 = 8$$

$$D_2 = 2W_1$$

$$M_2 = \frac{M_1 D_1 H_1 W_2}{W_1 D_2 H_2} = \frac{(20)(10)(12)(2W_1)}{W_1(30)(8)} = 20.$$

If two persons A and B can individually do some work in p and q days, respectively, we can find out how much work can be done by them together in one day. Since A can do $1/p$th part of the work in one day and B can do $1/q$th part of the work in one day, the two of them together do $(1/p + 1/q)$th part of the work in one day.

From this, we can find out the number of days that they take to complete the work.

If A can do a piece of work in p days and B can do it in q days then A and B together can complete the same in $\frac{pq}{p+q}$ *days.*

Example 4

A and B can complete a job in 10 days and 12 days, respectively. Find the time taken to complete it, if both A and B work together.

Solution

Time taken by them to complete it

$$= \frac{(10)(12)}{10+12} = \frac{60}{11} \text{ days.}$$

Example 5

A and B together can complete a job in 12 days. A alone can complete it in 24 days. Find the time taken by B to complete it.

Solution

Part of the job that A and B can complete in a day = $\frac{₹1320}{6}$

Part of the job that A can complete in a day = $\frac{1}{24}$

Part of the job that B can complete in a day

$$= \frac{1}{12} - \frac{1}{24} = \frac{1}{24}$$

∴ B can complete it in 24 days.

Example 6

Ajay and Bala working together can complete a job in 16 days. Ajay alone can complete it in 18 days. Both work together for 4 days and then Bala leaves. Find the time taken by Ajay to complete the remaining work.

Solution

Part of the job that can be done by both in a day $= \frac{1}{16}$

Part of the job that can be done by them in 4 days $= 4 \times \frac{1}{16} = \frac{1}{4}$

Remaining part of the job $= \frac{3}{4}$

Time taken by Ajay to complete it

$$= \frac{3}{4}(18) = 13.5 \text{ days.}$$

Example 7

A can complete a job in 16 days. He started the work and after 4 days, *B* joined him. They completed the job in 4 more days. Find the number of days in which *B* alone can complete it.

Solution

Part of the job done by A in a day $= \frac{1}{16}$

A worked for a total of 8 days

$\therefore$ A completed $(8)\left(\frac{1}{16}\right) = \frac{1}{2}$ of the job.

Hence, B can complete the remaining $\frac{1}{2}$ of the job in 4 days.

$\therefore$ B alone can complete the entire job in 8 days.

Example 8

P and Q together can complete a job in $14\frac{2}{5}$ days. Q and R together can complete it in $20\frac{4}{7}$ days. P and R together can complete it in 16 days. Find the time taken by each of them to complete the job.

Solution

Part of the job that P and Q can do in a day $= \frac{5}{72}$

Part of the job that Q and R can do in a day $= \frac{7}{144}$

Part of the job P and R can do in a day $= \frac{1}{16}$

Let the time taken by P, Q, and R to complete the job be p days, q days, and r days, respectively.

$$\frac{1}{p} + \frac{1}{q} = \frac{5}{72} \quad (5)$$

$$\frac{1}{q} + \frac{1}{r} = \frac{7}{144} \quad (6)$$

$$\frac{1}{p} + \frac{1}{r} = \frac{1}{16} \quad (7)$$

Adding (5) and (6) and subtracting (7),

$$\Rightarrow \quad \frac{2}{q} = \frac{5}{72} + \frac{7}{144} - \frac{1}{16} = \frac{8}{144}$$

$$q = 36$$

substitute $q = 36$, in (5),

we get $p = 24$

substi $q = 36$ in (6),

we get $r = 48$.

Example 9

A contractor decided to complete a job in 30 days for which he employed 20 men in the beginning. After 10 days, he released that the job could not be completed on time. Hence, he employed 15 more men and thus completed the job on time. Find the number of extra days, it would have taken to complete the job if the additional men were not employed.

Solution

Number of mandays required to complete the job = (20)(10) + (20 + 15) (20) = 900 mandays.

If the additional men were not employed, number of extra days $= \frac{900}{20} - 30 = 15$ days.

Example 10

A and B together can complete a job in 18 days and 36 days, respectively. They work on alternate days with A starting the job. In how many days will the job be completed?

Solution

Part of the job completed in the first 2 days

$$= \frac{1}{18} + \frac{1}{36} = \frac{1}{12}$$

$\therefore$ To complete the job, 12 cycles of 2 days, i.e. a total of 24 days will be required.

Example 11

P and Q together can complete a job in 8 days and 16 days respectively. They work on alternate days with Q starting the job. In how many days will the job be completed?

Solution

Part of the job completed by P and Q in the first 2 days $= \frac{1}{8} + \frac{1}{16} = \frac{3}{16}$

After 5 cycles of 2 days, i.e. after 10 days, $\frac{15}{16}$th of the job will be completed.

Remaining part $= \frac{1}{16}$th. Q will work on the 11th day and he takes exactly one day to complete the remaining part.

$\therefore$ The job will be completed in 11 days.

In general, money earned should be shared by people doing the work together in the ratio of the **SHARE OF WORK** done by each of them.

For example, if A does two-fifth of the work, then he should get two-fifth of the total earnings for the work. If the remaining three-fifth of the work is done by B and C in the ratio of 1 : 2, then the remaining three-fifth of the earnings (after paying A) should be shared by B, and C in the ratio of 1 : 2. Suppose ₹500 is paid to A, B, and C together for doing the work, then A will get ₹200 (which is 2/5 of ₹500), B will get ₹100, and C, ₹200 (because the remaining ₹300 after paying A is to be divided in the ratio 1 : 2 between B and C).

When people work for the same number of days each, then the ratio of the total work done will be the same as the work done by each of them PER DAY. Hence, if all the people involved work for the same number of days, then the earnings can directly be divided in the ratio of work done per day by each of them.

Example 12

P, Q, and R can together earn ₹3100 in 10 days. Q and R together can earn ₹1320 in 6 days. P and R together can earn ₹1050 in 5 days. Find R's daily earning.

Solution

Total daily wage of P, Q, and $R = \dfrac{₹3100}{10} = ₹310$

Total daily wage of Q and $R = \dfrac{₹1320}{6} = ₹220$

Total daily wage of P and $R = \dfrac{₹1050}{5} = ₹210$

Total daily wage of P, Q, and $2R = ₹430$

$\therefore$ R's daily wage $= ₹120$.

Example 13

Two men under take a job for ₹960. They can complete it in 16 days and 24 days. They work along with a third man and take 8 days to complete it. Find the share that the third man should get.

Solution

The amount payable should be proportional to the fraction of work done.

Part of the job done by the third man

$$= 1 - \left(\frac{8}{16} + \frac{8}{24}\right) = \frac{1}{6}.$$

$\therefore$ The third man should get $\dfrac{₹960}{6} = ₹160$.

Pipes and Cisterns

There can be pipes (or taps) filling (or emptying) tanks with water. The time taken by different taps (to fill or empty the tank) may be different. Problems related to these can also be dealt with in the same manner as the foregoing problems on Work have been dealt with.

There is only one difference between the problems on regular Work (of the type seen earlier on in the chapter) and those in Pipes and Cisterns. In Pipes and Cisterns, a filling pipe or tap does positive work and an emptying pipe or a leak does negative work.

Example 14

Pipes P and Q take 24 minutes and 36 minutes respectively to fill an empty tank. If both take 18 minutes to fill a tank along with an outlet pipe R, find the time R would take to empty the full tank.

Solution

Let the time taken by R to empty the tank be r minutes.

$$\frac{1}{24} + \frac{1}{36} - \frac{1}{r} = \frac{1}{18}; \quad r = 72.$$

Example 15

Pipes X and Y can fill a tank in 30 minutes and 60 minutes, respectively. Both pipes are opened simultaneously. After how much time should X be closed so that the tank is filled in 30 minutes?

Solution

Let us say pipe X should be closed after n minutes.

i.e. pipe X is in operation for n minutes and pipe Y for all the 30 minutes.

So, $\dfrac{n}{30} + \dfrac{30}{60} = 1$

$\Rightarrow$ $n = 15$.

Example 16

Pipes P, Q, and R together can empty a full tank in 6 hours. All the three pipes are opened simultaneously and after 2 hours, P is closed. The tank is emptied in another 6 hours. Find the time in which P can empty the tank.

Solution

Part of the tank that can be emptied by P, Q, and R per hour $= \dfrac{1}{6}$.

Part of the tank that was emptied by P, Q, and R in 2 hours $= \dfrac{1}{3}$

Part of the tank which was emptied by Q and R per hour

$$= \frac{1 - \frac{1}{3}}{6} = \frac{1}{9}$$

Time in which P can empty the tank

$$= \frac{1}{\frac{1}{6} - \frac{1}{9}}, \text{ i.e. 18 hours.}$$

Example 17

A tank has a leak at its bottom which empties it at 6 litres/minutes. It also has a filling tap which can fill the tank in 6 hours. The tank takes 18 hours to become full. Find the capacity of the tank.

Solution

Let the time that would be taken by the leak to empty the full tank be x hours.

$$\therefore \quad \frac{1}{6} - \frac{1}{x} = \frac{1}{18}; x = 9$$

$\therefore$ Capacity of the tank = (6) (9) (60)

= 3240 litres.

EXERCISES

Direction for questions 1 to 25: Select the correct alternative from the given choices.

1. X men can complete a work in 120 days. If there were 10 men more, the work would be completed in 20 days less. Find the value of X.
   (A) 75 (B) 50 (C) 90 (D) 60

2. Nine men can complete a job in 15 days. If a man works thrice as fast as a woman, find the number of days taken by 15 women to complete the job.
   (A) 20 (B) 24 (C) 27 (D) 36

3. The ratio of the time taken by A, B, and C to complete a job is 3 : 4 : 6. Find the ratio of the work they can complete in an hour.
   (A) 6 : 4 : 3 (B) 4 : 3 : 2
   (C) 2 : 3 : 4 (D) 3 : 4 : 6

4. Amar, Bharat, and Charu can complete a job in 12, 24, and 24 days, respectively. If they all work together, how long will they take to complete the same work?
   (A) 18 days (B) 6 days
   (C) 20 days (D) 16 days

5. Adam can complete a job in 25 days. Adam and Chris together can complete it in $9\frac{3}{8}$ days. In how many days can Chris alone complete the job?
   (A) $12^5/_8$ (B) 10 (C) 25 (D) 15

6. P and Q can complete a job in 10 days. Q and R can complete it in 12 days. P and R can complete it in 20 days. Who is the slowest of the three workers?
   (A) P
   (B) Q
   (C) R
   (D) Cannot be determined

7. Ten men can do a piece of work in 15 days. How many men are needed to complete a work which is five times as large as the first one, in 10 days?
   (A) 60 (B) 75 (C) 70 (D) 85

8. Tap X can fill a tank in 10 hours. Tap Y can fill it in 15 hours. If the two taps fill the tank together, what fraction of the tank is filled by X?
   (A) 1/10 (B) 1/6 (C) 2/3 (D) 3/5

9. Pipe A can fill an empty tank in 9 hours. Pipe B can empty a full thank in 18 hours. If both pipes are opened simultaneously when the tank is empty, find the time taken to fill the tank (in hours).
   (A) 24 (B) 27 (C) 18 (D) 36

10. Raj can build a wall in 18 days and Kiran can do the same in 30 days. After Raj had built half the wall, Kiran joins him. What is the total number of days taken to build the wall?
    (A) 24 (B) $14\frac{5}{8}$ (C) $15\frac{1}{2}$ (D) $16\frac{1}{2}$

11. Kaushik is one and a half times more efficient than Ravi. Kaushik can do a piece of work in 20 days. What portion of the total work can both of them together complete in 10 days?
    (A) 3/10 (B) 4/5 (C) 9/10 (D) 7/10

12. Had then been one men less, then the number of days required to do a piece of work would have been one more. If the number of mandays required to complete the work is 56, how many workers were there?
    (A) 6 (B) 8 (C) 9 (D) 14

13. In 8 days, Peter can do as much work as Pan can do in 12 days. To do a certain job both together take 36 days. In how many days can Pan, working alone, complete the job?
    (A) 60 days (B) 80 days
    (C) 108 days (D) 90 days

14. X can complete a job in 36 days and Y can complete it in 45 days. Z can complete the job in z days. Z started the job. After 28 days, X and Y joined. The job was completed in 4 more days. Find z.
    (A) 40 (B) 35 (C) 30 (D) 50

15. Working in pairs, PQ, QR, and RP can complete a job in 24 days, 20 days, and 30 days, respectively. Find the respective times taken by P, Q, and R individually to complete the same job (in days).
    (A) 48, 80, $\frac{240}{7}$ (B) 80, 48, $\frac{240}{7}$
    (C) 80, $\frac{240}{7}$, 48 (D) 48, $\frac{240}{7}$, 80

16. A frog was at the bottom of a 80 m deep well. It attempted to come out of it by jumping. In each jump, it covered 1.15 m but slipped down by 0.75 m. Find the number of jumps after which it would out of the well.
(A) 198 (B) 201 (C) 200 (D) 199

17. A man, a woman and a boy can do a piece of work in 2, 4, and 8 days, respectively. How many boys must work together with one man and one woman to complete the work in one day?
(A) 5 (B) 4 (C) 2 (D) 1

18. A machine of type *A* which has to produce a set of 1500 bolts, can do so in 30 days. The machine breaks down after 10 days. A machine of type *B* completes the remaining work in 10 days. In 30 days how many bolts can both of them together produce?
(A) 3000 (B) 4500 (C) 6000 (D) 2500

19. In a farm, each cow eats twice as much grass as each sheep. The cost of grass for 10 cows and 40 sheep for 20 days is ₹ 900. Find the cost of grass for 20 cows and 10 sheep for 18 days (in ₹).
(A) 600 (B) 675 (C) 750 (D) 800

20. The cost of grass for 20 cows and 30 sheep for 30 days is ₹720. If the 30 sheep eat double the grass eaten by the 20 cows, then what is the cost of grass eaten by 20 sheep in 15 days?
(A) ₹200 (B) ₹160 (C) ₹240 (D) ₹100

21. George and Gagan together repair a bridge in 45 days and receive ₹13500. If Gagan is three times as efficient as George, what is the amount of money he earns in 10 days?
(A) ₹2000 (B) ₹2250 (C) ₹2500 (D) ₹2750

22. Two pipes *A* and *B* which can fill a tank in 20 and 30 hours, respectively, were opened simultaneously. But there was a leak and it took 3 hours more to fill the tank. In how many hours can the leak empty the tank?
(A) 60 (B) 50 (C) 30 (D) 40

23. Gokul, Govardhan, and Ganesh can do a piece of work in 10, 20, and 30 days, respectively. They begin a new job of similar nature and each of them works on it for one third of the total period of work. If they get ₹6600 for the new job, how much should Govardhan get, given that the amounts distributed are in proportion to the work done by them?
(A) ₹1800 (B) ₹2200 (C) ₹3300 (D) ₹2400

24. Rakesh and Ramesh take 30 days and 60 days, respectively to complete a job. They work on alternate days to complete it with Rakesh starting the job. Find the time in which the job is completed (in days).
(A) 60 (B) 80 (C) 40 (D) 90

25. If Rakesh and Ramesh had instead taken 10 days and 12 days, respectively, to complete the job, find the time in which the job would have been completed (in days).
(A) $10\frac{1}{3}$ (B) $10\frac{5}{6}$
(C) 11 (D) $10\frac{1}{2}$

Chapter 8

Time and Distance

CHAPTER HIGHLIGHTS

- *General problems on Time, Speed, and Distance*
- *Speed*
- *Relative Speed*
- *Average Speed*
- *Boats and Streams*
- *Races and Circular Tracks*

Introduction

In this chapter, we will look at problems in the following different areas:

1. General problems on Time, Speed, and Distance
2. Relative Speed
3. Boats and Streams
4. Races and Circular Tracks

Before we look at problems in various areas, let us first look at some basic concepts pertaining to speed, time and distance.

Speed

Distance covered per unit time is called speed.

i.e. Speed = Distance/Time

The above relationship between the three variables distance, speed, and time can also be expressed as follows:

Distance = Speed × Time or Time = Distance/Speed

1. If two bodies travel with the same speed, distance covered ∝ time (Direct Variation).
2. If two bodies travel for the same period of time, distance covered ∝ speed (Direct Variation).
3. If two bodies travel the same distance,

$$\text{Time} \propto \frac{1}{\text{Speed}} \text{ (Inverse Variation).}$$

Distance is normally measured in kilometres, metres, or miles; time in hours or seconds and speed in km/hr (also denoted by kmph), miles/hr (also denoted by mph), or metres/second (denoted by m/s).

To convert speed in kmph to m/sec, multiply it with 5/18.

To convert speed in m/sec to kmph, multiply it with 18/5.

In the case of moving trains, three different situations need to be considered.

When a train passes a stationary point, the distance covered (in the passing) is the length of the train. If the train is crossing a platform (or a bridge), the distance covered by the train (in the crossing) is equal to the length of the train plus the length of the platform (or bridge). If two trains pass each other (travelling in the same direction or in opposite directions), the total distance covered (in the crossing or the overtaking, as the case may be) is equal to the sum of the lengths of the two trains.

Average Speed

Average speed of a body travelling at different speeds is defined as follows:

$$\text{Average speed} = \frac{\text{Total distance travelled}}{\text{Total time taken}}$$

Please note that the **Average speed** of a moving body is **Not equal** to the **Average of the speeds.**

If a body travels from point A to point B with a speed of p and back to point A (from point B) with a speed of q, then the

average speed of the body can be calculated as $\mathbf{2pq/(p+q)}$. Please note that this does not depend on the distance between A and B.

If a body covers part of the journey at speed p and the remaining part of the journey at speed q and the distances of the two parts of the journey are in the ratio $m : n$, then the average speed for the entire journey is $\mathbf{(m+n)pq/(mq+np)}$.

Solved Examples

Example 1

Ashok covered a certain distance at a certain speed. If his speed was 20% more, he would take 10 minutes less to cover the same distance. Find the time he takes to cover the distance.

Solution

If his speed was 20% more, it would be 120%, i.e. $\frac{6}{5}$ times his actual speed.

$\therefore$ Time taken would be $\frac{5}{6}$ times his actual time.

$$\text{Reduction in time} = \frac{1}{6}(\text{actual time}) = 10 \text{ minutes}$$

$\therefore$ Actual time = 60 minutes.

Example 2

A car covered a certain distance at 90 kmph and returned back at 60 kmph. Find its average speed for the entire journey.

Solution

Let x km be the distance to be covered, each way.

Total time of travel (in hours)

$$= \frac{x}{90} + \frac{x}{60} = \frac{5x}{180} = \frac{x}{36}$$

Average speed (in km/hr)

$$= \frac{\text{Total disance travelled}}{\text{Total time taken}} = \frac{2x}{\frac{x}{36}} = 72.$$

Example 3

Find the time taken by a train, 100 m long, travelling at a speed of 63 kmph to cross a platform of length 250 m.

Solution

Speed of the train $= (63)\left(\frac{5}{18}\right) = \frac{35}{2}$ m/sec

Distance to be travelled by the train to cross the platform = length of the train + length of the platform.

Time taken to cross the platform

$$= \frac{100+250}{\frac{35}{2}} = 20 \text{ sec.}$$

Example 4

Ashok would reach his office 15 minutes early if he walked at 4 kmph from his house. He would reach it 45 minutes late if he walked at 3 kmph from his house. Find the distance between his house and office.

Solution

Let the distance be x km. Time taken by Ashok if he walked at 4 kmph $= \frac{x}{4}$ hours.

Time taken by Ashok if he walked at 3 kmph $= \frac{x}{3}$ hours.

In this case, he would take one hour more to reach his office compared to the time taken if he had walked at 4 kmph.

$$\therefore \quad \frac{x}{3} - \frac{x}{4} = 1$$

$$\Rightarrow \quad x = 12.$$

In general, if a person travelling between two points reaches p hours late travelling at a speed of u kmph and reaches q hours early travelling at v kmph, the distance between the two points is given by $\frac{vu}{v-u}(p+q)$.

Relative Speed

The speed of one (moving) body in relation to another moving body is called the relative speed of these two bodies, i.e. it is the speed of one moving body as observed, from the second moving body.

If two bodies are moving in the same direction, the relative speed is equal to the difference of the speeds of the two bodies.

If two bodies are moving in opposite directions, the relative speed is equal to the sum of the speeds of the two bodies.

Example 5

Find the time taken by a train 175 m long running at a speed of 54 kmph to overtake another train 75 m long running at a speed of 36 kmph.

Solution

Relative speed = 18 kmph = 5 m/sec

Time taken for the faster train to overtake the slower train

$$= \frac{(\text{Length of the faster train}) + (\text{Length of the slower train})}{\text{Their relative speed}}$$

$$= \frac{175+75}{5} = 50 \text{ sec}$$

Example 6

A train overtakes two persons, cyling at 9 kmph and 18 kmph in 40 seconds and 48 seconds, respectively. Find its length and speed.

Solution

Let the length and the speed of the train be ℓ *m* and *s* kmph, respectively.

$$\ell = 40(s-9)\frac{5}{18} = 48(s-18)\frac{5}{18}$$

$$\Rightarrow \quad \frac{s-9}{s-18} = \frac{48}{40}$$

$$\Rightarrow \quad s = 63$$

$$\therefore \quad \ell = 40\ (63-9) \times \frac{5}{18} = 600\ m.$$

Boats and Streams

Problems related to boats and streams are different in the computation of relative speed from those of trains/cars.

When a boat is moving in the same direction as the stream or water current, the boat is said to be moving **WITH THE STREAM OR CURRENT.**

When a boat is moving in a direction opposite to that of the stream or water current, it is said to be moving **AGAINST THE STREAM OR CURRENT.**

If the boat is moving with a certain speed in water that is not moving, the speed of the boat is then called the **SPEED OF THE BOAT IN STILL WATER.**

When the boat is moving upstream, the speed of the water opposes (and hence reduces) the speed of the boat.

When the boat is moving downstream, the speed of the water aids (and thus adds to) the speed of the boat. Thus, we have

Speed of the boat against stream = Speed of the boat in still water – Speed of the stream

Speed of the boat with the stream = Speed of the boat in still water Speed of the stream

These two speeds, the speed of the boat against the stream and the speed of the boat with the stream, are RELATIVE SPEEDS.

If u is the speed of the boat down the stream and v is the speed of the boat up the stream, then we have the following two relationships.

Speed of the boat in still water = $(u + v)/2$

Speed of the water current = $(u - v)/2$

In problems, instead of a boat, it may be a swimmer but the approach is exactly the same. Instead of boats/swimmers in water, it could also be a cyclist cycling against or along the wind. The approach to solving the problems still remains the same.

Example 7

A boat travels 30 km upstream in 5 hours and 100 km downstream in 10 hours. Find the speed of the boat in still water and the speed of the stream.

Solution

Upstream speed $= \frac{30}{5} = 6$ kmph

Downstream speed $= \frac{100}{10} = 10$ kmph

Speed in still water $= \frac{6+10}{2} = 8$ kmph

Speed of the stream $= \frac{10-6}{2} = 2$ kmph .

Example 8

Anand can row 20 km in 2 hours in still water. If the speed of the stream is 6 kmph, he would take 3.75 hours to cover a round trip journey. Find the distance that he would then cover each way.

Solution

Speed of the boat in still water $= \frac{20}{2} = 10$ kmph

Let the total distance covered be $2x$ km.

Given that, $$\frac{x}{10+6} + \frac{x}{10-6} = 3.75$$

$$x = 12$$

Races and Circular Tracks

When two persons *P* and *Q* are running a race, they can start the race at the same time or one of them may start a little later than the other. In the second case, suppose *P* starts the race and after 5 seconds, *Q* starts. Then we say *P* has a 'start' of 5 seconds. Alternatively, in a race between *P* and *Q*, *P* starts first and then when *P* has covered a distance of 10 metres, *Q* starts. Then we say that *P* has a 'start' of 10 metres.

In a race between *P* and *Q* where *Q* is the winner, by the time *Q* reaches the winning post, if *P* still has another 15 metres to reach the winning post, then we say that *Q* has won the race by 15 metres. Similarly, if P reaches the winning post 10 seconds after *Q* reaches it, then we say that *Q* has won the race by 10 seconds.

In problems on RACES, we normally consider a 100 m race or a 1 km race. The length of the track.

NEED NOT necessarily be one of the two figures mentioned above but can be as given in the problem.

When two or more persons running around a circular track (starting at the same point and at the same time), then we will be interested in two main issues:

1. When they will meet for the first time and
2. When they will meet for the first time at the starting point

To solve the problems on circular tracks, you should keep the following points in mind.

When two persons are running around a circular track in **OPPOSITE** directions

1. The relative speed is equal to the sum of the speeds of the two individuals and
2. From one meeting point to the next meeting point, the two of them TOGETHER cover a distance equal to the length of the track.

When two persons are running around a circular track in the **SAME** direction

1. The relative speed is equal to the difference of the speeds of the two individuals and
2. From one meeting point to the next meeting point, the faster person covers one COMPLETE ROUND more than the slower person.

We can now tabulate the time taken by the persons to meet for the first time ever or for the first time at the starting point in various cases.

When TWO people are running around a circular track

Let the two people A and B with respective speeds of a and $b(a > b)$ be running around a circular track (of length L) starting at the same point and at the same time. Then,

	When the two persons are running in the SAME direction	When the two persons are running in OPPOSITE directions
Time taken to meet for the FIRST TIME EVER	$\frac{L}{(a-b)}$	$\frac{L}{(a+b)}$
Time taken to meet for the first time at the STARTING POINT	LCM of $\left\{\frac{L}{a}, \frac{L}{b}\right\}$	LCM of $\left\{\frac{L}{a}, \frac{L}{b}\right\}$

Please note that when we have to find out the time taken by the two persons to meet for the first time at the starting point, what we have to do is to find out the time taken by each of them to complete one full round and then take the LCM of these two timings (L/a and L/b are the timings taken by the two of them respectively to complete on full round).

Example 9

In a 200 m race, A beats B by 10 m or 2 seconds. Find B's speed and A's speed.

Solution

A beat B by 10 m or 2 seconds.

$\Rightarrow$ When A reached the finishing line B was 10 m behind the finishing line and took 2 seconds to cover it.

$$\therefore \quad B\text{'s speed} = \frac{10}{2} = 5 \text{ m/sec}$$

Time taken by B to complete the race

$$= \frac{200 \text{ m}}{5 \text{ m/s}} = 40 \text{ seconds}$$

$\therefore$ Time taken by A to complete the race

$$= 38 \text{ seconds}$$

$$A\text{'s speed} = \frac{200}{38} = \frac{100}{19} \text{ m/sec}$$

Example 10

Ramu is 50% faster than Somu. In a race, Ramu gave Somu a head start of 200 m. Both finished the race simultaneously. Find the length of the race.

Solution

Let the length of the race be x m.

$$\frac{x}{x-200} = \frac{150}{100}$$

$$\Rightarrow \quad x = 600 \text{ m.}$$

Example 11

In a 1200 m race, Ram beats Shyam by 300 m. In the same race, Shyam beats Tarun by 400 m. Find the distance by which Ram beats Tarun.

Solution

Let the speeds of Ram, Shyam, and Tarun be r m/sec, s m/sec, and t m/sec, respectively

$$\frac{r}{s} = \frac{1200}{1200-300} = \frac{4}{3}$$

$$\frac{s}{t} = \frac{1200}{1200-400} = \frac{3}{2}$$

$$\frac{r}{t} = \left(\frac{r}{s}\right)\left(\frac{s}{t}\right) = 2$$

$\Rightarrow$ By the time Ram covers 1200 $\overline{m}$, Tarun covers 600 $\overline{m}$.
$\therefore$ Ram beats Tarun by (1200 – 600), i.e. by 600 $\overline{m}$.

Exercises

Direction for questions 1 to 30: Select the correct alternative from the given choices.

1. Convert the following speeds into meters per second

(a) 36 km/hr
(A) 10 (B) 12 (C) 15 (D) 20

(b) 12.6 km/hr
(A) 3.5 (B) 4 (C) 0.35 (D) 6

(c) 252/35 km/hr
(A) 2.2 (B) 2.4 (C) 2 (D) 2.6

2. If a man runs at 6 metres per second, what distance (in km) will he cover in 3 hours and 45 minutes?
(A) 81 (B) 96 (C) 91 (D) 27

3. Travelling at 5/6th of his usual speed a man is 10 minutes late. What is the usual time he takes to cover the same distance?
(A) 50 minutes (B) 70 minutes
(C) 1 hour (D) 75 minutes

4. *X* and *Y* are 270 km apart. At 9:00 a.m, buses *A* and *B* left *X* and *Y* for *Y* and *X*, respectively. If the speeds of *A* and *B* are 50 kmph and 40 kmph, respectively, find their meeting time.
(A) 11:00 a.m (B) 12:00 p.m
(C) 1: 00 p.m (D) 2:00 p.m

5. Car A left *X* for *Y* at 9:00 a.m. Car *B* left *Y* for *X* at 10:00 a.m. *XY* = 180 km. Speeds of *A* and *B* are 30 kmph and 20 kmph, respectively. Find their meeting time.
(A) 12:36 p.m. (B) 1:36 p.m.
(C) 1:00 p.m (D) 2:00 p.m

6. Ashok left *X* and reached *Y* in 4 hours. His average speed for the journey was 90 kmph. Find the distance between *X* and *Y* (in km).
(A) 180 (B) 360 (C) 720 (D) 900

7. Alok travelled from Hyderabad to Tirupati at 60 kmph and returned at 90 kmph. Find his average speed for the journey (in kmph).
(A) 72 (B) 75 (C) 66 (D) 78

8. What is the time taken by a train 650 $\overline{m}$ long travelling at 72 km/hr to cross a 750 $\overline{m}$ long platform?
(A) 60 sec (B) 65 sec
(C) 70 sec (D) 75 sec

9. What is the time taken by a 750 $\overline{m}$ long train travelling at 99 km/hr to cross a boy running at 9 km/hr towards the train?
(A) 30 sec (B) 33 sec
(C) 36 sec (D) 25 sec

10. In a 200 $\overline{m}$ race, Eswar gives Girish a start of 10 $\overline{m}$ and beats him by 10 $\overline{m}$. Find the ratio of their speeds.
(A) 1 : 1 (B) 9 : 10 (C) 10 : 9 (D) 19 : 20

11. In a 100 $\overline{m}$ race, Ganesh beats Harish by 10 $\overline{m}$ or 2 seconds. Find Harish's speed (in m/sec).
(A) 5 (B) $5\frac{5}{9}$
(C) $4\frac{1}{2}$ (D) 6

12. In a 100 $\overline{m}$ race, Akbar gives Birbal a start of 2 seconds. Birlbal covers 10 $\overline{m}$ by the time Akbar starts. If both of them finish together, find Akbar's speed. (in m/sec)
(A) 5 (B) $5\frac{5}{9}$
(C) $4\frac{1}{2}$ (D) 4

13. In a race, *P* beats *Q* by 20 seconds. *Q* beats *R* by 30 seconds. By how many seconds did *P* beat *R*?
(A) 44 (B) 25 (C) 50 (D) 36

14. In a 100 $\overline{m}$ race, *A* beats *B* by 10 $\overline{m}$ and *B* beats *C* by 20 m. Find the distance by which *A* beats *C* (in m).
(A) 30 (B) 28 (C) 32 (D) 36

15. Anand can row a boat in still water at a speed of 5 kmph. The speed of the stream is 3 kmph. Find the time taken by him to row 40 km downstream (in hours).
(A) 5 (B) 20 (C) 8 (D) 10

16. Ram, Shyam, and Tarun started cycling from a point on a circular track 600 $\overline{m}$ long with speeds of 10 m/sec, 15 m/sec, and 20 m/sec, respectively. Find the time taken by them to meet at the starting point for the first time (in seconds).
(A) 120 (B) 60 (C) 240 (D) 600

17. Ashwin and Bhaskar started running simultaneously from a point on a 300 $\overline{m}$ long circular track. They ran in opposite directions with speeds of 6 m/sec and 4 m/sec, respectively. After meeting for the first time, they exchange their speeds. Who will reach the starting point first?
(A) Ashwin
(B) Bhaskar
(C) Both reach simultaneously
(D) Cannot be determined

18. A man reaches his destination which is 16 km away, 9 min late, if he travels at 8 kmph. What should his speed be if he wishes to reach 15 minutes ahead of the right time?
(A) 10 kmph (B) 3 m/sec
(C) 20/9 m/sec (D) 12 kmph

19. The distance between two points *P* and *Q* is 84 km. Two persons start at the same time but one travelling from *P* towards *Q* and the other travelling from *Q* towards *P*. If their respective speeds are 36 kmph and 27 kmph, where do they meet each other?
(A) 48 km from *Q* (B) 24 km from *P*
(C) 36 km from *P* (D) 48 km from *P*

20. Towns P and Q are 80 km apart. Cars A and B are stationed at towns P and Q respectively. If they start simultaneously towards each other, they would meet in an hour. If both start simultaneously in the same direction, the faster car would overtake the slower car in 4 hours. Find the speed of the faster car (in kmph).
(A) 50 (B) 55 (C) 60 (D) 65

21. A cat on seeing a dog 100 *m* away turns around and starts running away at 24 kmph. The dog spots him one minute later and starts chasing the cat at a speed of 33 kmph. After how much time, from the start of the cat's run, will the chase end?
(A) 160 s (B) 220 s
(C) 260 s (D) 280 s

22. Train A starts at 6 a.m. from city P towards city Q at a speed of 54 kmph. Another train 'B' starts at 9 a.m. from P towards Q at 72 kmph. If the distance between P and Q is 1440 km, find at what distance from Q would the two trains meet each other?
(A) 648 km (B) 792 km
(C) 486 km (D) 954 km

23. Mahesh travelled from Hyderabad to Tirupati at a certain speed and returned at a certain speed. His average speed for the entire trip was the average of his onward and return speeds. He travelled a total distance of 1200 km in 12 hours. Find his onward speed (in kmph).
(A) 100 (B) 80 (C) 60 (D) 40

24. Two cars left simultaneously from two places P and Q, and headed for Q and P, respectively. They crossed each other after x hours. After that, one of the cars took y hours to reach its destination while the other took z hours to reach its destination. Which of the following always holds true?
(A) $x = \dfrac{y+z}{2}$ (B) $x = \dfrac{2yz}{y+z}$
(C) $x = \sqrt{yz}$ (D) $x = \dfrac{y^2+z^2}{y+z}$

25. A boat travels 30 km upstream in 5 hours and 24 km downstream in 3 hours. Find the speed of the boat in still water and the speed of the water current
(A) 7 kmph, 2 kmph (B) 14 kmph, 1 kmph
(C) 7 kmph, 1 kmph (D) 8 kmph, 2 kmph

26. Amar, Akbar, and Anthony start running in the same direction and from the same point, around a circular track with speeds 7 m/sec, 11 m/sec, and 22 m/sec, respectively. If Akbar can complete 5 revolutions around the track in 40 sec, when will they meet for the first time after they start?
(A) 56 s (B) 88 s (C) 118 s (D) 79 s

27. If Ashok travelled at $4/5^{\text{th}}$ of his usual speed, he would reach his destination 15 minutes late. By how many minutes would he be early if he travelled at $6/5^{\text{th}}$ of his usual speed?
(A) 12 (B) 10 (C) 15 (D) 20

28. In a 500 ft race, Habib beats Akram by 60 ft. If Habib takes 5 paces for every 4 paces taken by Akram, what is the ratio of the length of Habib's pace to that of Akram?
(A) 10 : 11 (B) 11 : 10
(C) 25 : 22 (D) 22 : 25

29. Girish takes 1 minute to complete a round around a circular track. Harish is twice as fast as Girish, Suresh is thrice as fast as Harish. All three start at the same point. Find the time taken by them to meet at the starting point for the first time (in minutes).
(A) 1 (B) 2
(C) 6 (D) 12

30. Two cars C and D start from a junction along two perpendicular roads at 8:00 a.m. and 9:00 a.m., respectively. If at 12 noon, the cars, which travel at the same speed, are 150 km apart, then, find the speed of each car.
(A) 15 kmph
(B) 45 kmph
(C) 60 kmph
(D) 30 kmph

Answer Keys

1. (a) A	**(b)** A	**(c)** C	**2.** A	**3.** A	**4.** B	**5.** C	**6.** B	**7.** A	**8.** C

Chapter 9

Indices, Surds, and Logarithms

CHAPTER HIGHLIGHTS

- *Indices*
- *Surds*
- *Rationalization of a Surd*
- *Square Root of a Surd*
- *Comparison of Surds*
- *Logarithms*

Indices

If a number 'a' is added three times to itself, then we write it as $3a$. Instead of adding, if we multiply 'a' three times with itself, we write it as a^3.

We say that 'a' is expressed as an exponent. Here, 'a' is called the 'base' and 3 is called the 'power' or 'index' or 'exponent'.

Similarly, 'a' can be expressed to any exponent 'n' and accordingly written as a^n. This is read as 'a to the power n' or 'a raised to the power n.'

$$a^n = a \times a \times a \times a \times \cdots n \text{ times}$$

For example,

$$2^3 = 2 \times 2 \times 2 = 8 \text{ and } 3^4 = 3 \times 3 \times 3 \times 3 = 81$$

While the example taken is for a positive integer value of n, the powers can also be negative integers or positive or negative fractions. In the sections that follow, we will also see how to deal with numbers where the powers are fractions or negative integers.

If a number raised to a certain power is inside brackets and quantity is then raised to a power again {i.e. a number of the type $(a^m)^n$—read as 'a raised to the power m whole raised to the power n' or 'a raised to power m whole to the power n'}, then the number inside the brackets is evaluated first and then this number is raised to the power which is outside the brackets.

For example, to evaluate $(2^3)^2$, we first find out the value of the number inside the bracket (2^3) as 8 and now raise this to the power 2. This gives 8^2 which is equal to 64. Thus, $(2^3)^2$ is equal to 64.

If we have powers in the manner of 'steps', then such a number is evaluated by starting at the topmost of the 'steps' and coming down one 'step' in each operation.

For example, 2^{4^3} is evaluated by starting at the topmost level '3'. Thus, we first calculate 4^3 as equal to 64. Since 2 is raised to the power 4^3, we now have 2^{64}.

Similarly, 2^{3^2} is equal to '2 raised to the power 3^2' or '2 raised to the power 9' or 2^9, which is equal to 512.

There are certain basic rules/formulae for dealing with numbers having powers. These are called Laws of Indices. The important ones are listed below but you are not required to learn the proof for any of these formulae/rules. The students have to know these rules and be able to apply any of them in solving problems. Most of the problems in indices will require one or more of these formulae. These formulae should be internalized by the students to the extent that after some practice, application of these rules should come naturally and the student should not feel that he is applying some specific formula.

Table 1 Table of Rules/Laws of Indices

	Rule/Law	Example
(1)	$a^m \times a^n = a^{m+n}$	$5^2 \times 5^7 = 5^9$
(2)	$\frac{a^m}{a^n} = a^{m-n}$	$\frac{7^5}{7^3} = 7^2 = 49$
(3)	$(a^m)^n = a^{mn}$	$(4^2)^3 = 4^6$
(4)	$a^{-m} = \frac{1}{a^m}$	$2^{-3} = \frac{1}{2^3} = \frac{1}{8} = 0.125$
(5)	$\sqrt[m]{a} = a^{1/m}$	$\sqrt[3]{64} = 64^{1/3} = 4$
(6)	$(ab)^m = a^m \cdot b^m$	$(2 \times 3)^4 = 2^4 \cdot 3^4$
(7)	$\left(\frac{a}{b}\right)^n = \frac{a^n}{b^n}$	$\left(\frac{3}{4}\right)^2 = \frac{3^2}{4^2} = \frac{9}{16}$
(8)	$a^0 = 1$ (where $a \neq 0$)	$3^0 = 1$
(9)	$a^1 = a$	$4^1 = 4$

These rules/laws will help you in solving a number of problems. In addition, the student should also remember the following rules:

Rule 1: When the bases of two EQUAL numbers are equal, then their powers also will be equal. (If the bases are neither zero nor ±1.)

For example: If $2^n = 2^3$, then it means $n = 3$

Rule 2: When the powers of two equal numbers are equal (and not equal to zero), two cases arise:

1. If the power is an odd number, then the bases are equal. For example, if $a^3 = 4^3$ then $a = 4$.
2. If the powers are even numbers, then the bases are numerically equal but can have different signs. For example, if $a^4 = 3^4$ then $a = +3$ or -3.

The problems associated with indices are normally of THREE types:

Simplification: Here, the problem involves terms with different bases and powers, which have to be simplified using the rules/formulae discussed in the table earlier.

Solving for the value of an unknown: Here, the problem will have an equation where an unknown (like x or y) will appear in the base or in the power, and using Rule 1 and Rule 2 discussed, values of unknown are to be determined.

Comparison of numbers: Here, two or more quantities will be given—each being a number raised to a certain power. These numbers have to be compared in magnitude—either to find the largest or smallest of the quantities or to arrange the given quantities in ascending or descending order.

The following examples will make clear the different types of problems that you may be asked.

Solved Examples

Example 1

Simplify: $\left(\frac{729}{1728}\right)^{\frac{-2}{3}} \times \left(\frac{1024}{9}\right)^{\frac{1}{2}} \div \left(\frac{24}{324}\right)$

Solution

$$\left(\frac{729}{1728}\right)^{\frac{-2}{3}} \times \left(\frac{1024}{9}\right)^{\frac{1}{2}} \div \left(\frac{24}{324}\right)$$

$$= \left(\frac{9^2}{12^2}\right)^{-1} \times \left(\frac{32^2}{3^2}\right)^{\frac{1}{2}} \times \left(\frac{324}{24}\right)$$

$$\left(\frac{9^3}{12^3}\right)^{\frac{-2}{3}} \times \frac{32}{3} \times \frac{324}{24} = \frac{144}{81} \times \frac{32}{3} \times \frac{324}{24} = 256$$

Example 2

In the equation given below, solve for x

$$\sqrt[3]{\left(\frac{5}{7}\right)^{x+1}} = \frac{125}{343}$$

Solution

Given, $\left(\frac{5}{7}\right)^{x+1} = \left[\left(\frac{5}{7}\right)^3\right]^3 = \left(\frac{5}{7}\right)^9$.

By equating their indices.

$$x + 1 = 9$$

$$x = 8.$$

Example 3

If $\left(\frac{49}{2401}\right)^{4-x} = 49^{2x-6}$, find x.

Solution

$$\left(\frac{49}{2401}\right)^{4-x} = \left(49^{-1}\right)^{4-x} = 49^{x-4}$$

Given, $49^{x-4} = 49^{2x-6}$

$$x - 4 = 2x - 6$$

$$x = 2$$

Example 4

Arrange the following in ascending order 625^6, 125^7 and 25^{10}

Solution

$$625^6 = (5^4)^6 = 5^{24}$$
$$125^7 = (5^3)^7 = 5^{21}$$
$$25^{10} = (5^2)^{10} = 5^{20}$$
$$25^{10} < 125^7 < 625^6$$

Surds

Any number of the form p/q, where p and q are integers and $q \neq 0$ is called a rational number. Any real number which is not a rational number is an irrational number. Amongst irrational numbers, of particular interest to us are SURDS. Amongst surds, we will specifically be looking at 'quadratic surds'—surds of the type $a + \sqrt{b}$ and $a + \sqrt{b} + \sqrt{c}$, where the terms involve only square roots and not any higher roots. We do not need to go very deep into the area of surds—what is required is a basic understanding of some of the operations on surds.

If there is a surd of the form $(a + \sqrt{b})$, then a surd of the form $\pm(a - \sqrt{b})$ is called the conjugate of the surd $(a + \sqrt{b})$. The product of a surd and its conjugate will always be a rational number.

Rationalization of a Surd

When there is a surd of the form $\dfrac{1}{a + \sqrt{b}}$, it is difficult to perform arithmetic operations on it. Hence, the denominator is converted into a rational number, thereby facilitating ease of handling the surd. This process of converting the denominator into a rational number without changing the value of the surd is called rationalization.

To convert the denominator of a surd into a rational number, multiply the denominator and the numerator simultaneously with the conjugate of the surd in the denominator so that the denominator gets converted to a rational number without changing the value of the fraction. That is, if there is a surd of the type $a + \sqrt{b}$ in the denominator, then both the numerator and the denominator have to be multiplied with a surd of the form $a - \sqrt{b}$ or a surd of the type $(-a + \sqrt{b})$ to convert the denominator into a rational number.

If there is a surd of the form $(a + \sqrt{b} + \sqrt{c})$ in the denominator, then the process of multiplying the denominator with its conjugate surd has to be carried out TWICE to rationalize the denominator.

Square Root of a Surd

If there exists a square root of a surd of the type $a + \sqrt{b}$, then it will be of the form $\sqrt{x} + \sqrt{y}$. We can equate the square of $\sqrt{x} + \sqrt{y}$ to $a + \sqrt{b}$ and thus solve for x and y. Here, one point should be noted—when there is an equation with rational and irrational terms, the rational part on the left-hand side is equal to the rational part on the right-hand side and, the irrational part on the left-hand side is equal to the irrational part on the right-hand side of the equation.

However, for the problems which are expected in the entrance exams, there is no need of solving for the square root in such an elaborate manner. We will look at finding the square root of the surd in a much simpler manner. Here, first, the given surd is written in the form of $(\sqrt{x} + \sqrt{y})^2$ or $(\sqrt{x} - \sqrt{y})^2$. Then, the square root of the surd will be $(\sqrt{x} + \sqrt{y})$ or $(\sqrt{x} - \sqrt{y})$, respectively.

Comparison of Surds

Sometimes, we will need to compare two or more surds either to identify the largest one or to arrange the given surds in ascending/descending order. The surds given in such cases will be such that they will be close to each other, and, hence, we will not be able to identify the largest one by taking the approximate square root of each of the terms. In such a case, the surds can both be squared and the common rational part be subtracted. At this stage, normally,` one will be able to make out the order of the surds. If even at this stage, it is not possible to identify the larger of the two, then the numbers should be squared once more.

Example 5

Rationalize the denominator: $\dfrac{1}{1+\sqrt{6}-\sqrt{7}}$

Solution

The rationalizing factor of

$1+\sqrt{6}-\sqrt{7}$ is $1 + \sqrt{6} + \sqrt{7}$

$$\frac{1}{1+\sqrt{6}-\sqrt{7}} = \frac{(1+\sqrt{6}+\sqrt{7})}{(1+\sqrt{6}-\sqrt{7})\,(1+\sqrt{6}+\sqrt{7})}$$

$$= \frac{1+\sqrt{6}+\sqrt{7}}{(1+\sqrt{6})^2-(\sqrt{7})^2} = \frac{1+\sqrt{6}+\sqrt{7}}{2\sqrt{6}}$$

The rationalizing factor of $\sqrt{6}$ is $\sqrt{6}$

$$= \frac{\sqrt{6}+6+\sqrt{42}}{12}$$

Example 6

Find the value of $\sqrt{62+\sqrt{480}}$

Solution

Let $\sqrt{62+\sqrt{480}} = \sqrt{a}+\sqrt{b}$

Squaring both sides, $62+\sqrt{480} = a+b+2\sqrt{ab}$

$$62+\sqrt{480} = a+b+\sqrt{4ab}$$

Equating the corresponding rational and irrational parts on both sides, $a+b = 62$

$$4ab = 480 \quad \Rightarrow \quad ab = 120$$

As $a + b = 60 + 2$ and $ab = (60)$ (B) it follows that $a = 60$ and $b = 2$ or vice versa.

$\therefore \qquad \sqrt{a}+\sqrt{b}=\sqrt{60}+\sqrt{2}$

Example 7

Which of the surds given below is greater?

$$\sqrt{3}+\sqrt{23} \text{ and } \sqrt{6}+\sqrt{19}$$

Solution

$$(\sqrt{3}+\sqrt{23})^2 = 26+2\sqrt{69}$$

$$\sqrt{69} \text{ lies between } \sqrt{64} \text{ and } \sqrt{81}$$

$\therefore\ 26+2\sqrt{69}$ lies between $26 + 2(8)$ and $26 + 2(9)$ i.e., 42 and 44.

Similarly $(\sqrt{6}+\sqrt{19})^2$ lies between 45 and 47.

$\therefore \qquad (\sqrt{3}+\sqrt{23})^2 < (\sqrt{6}+\sqrt{19})^2$

$\therefore \qquad \sqrt{6}+\sqrt{19} > \sqrt{3}+\sqrt{23}$

Logarithms

In the equation $a^x = N$, we are expressing N in terms of a and x. The same equation can be re-written as, $a = N^{1/x}$. Here, we are expressing a in terms of N and x. But, among a, x, and N, by normal algebraic methods known to us, we cannot express x in terms of the other two parameters a and N. This is where logarithms come into the picture. When $a^x = N$, then we say x = logarithm of N to the base a and write it as $x = \log_a N$. The definition of logarithm is given as: 'the logarithm of any number to a given base is the index or the power to which the base must be raised in order to equal the given number'.

Thus,

$$\boxed{\textit{if } a^x = N \textit{ then } x = \log_a N}$$

This is read as 'log N to the base a'.

In the above equation, N is a **POSITIVE NUMBER** and a is a **POSITIVE NUMBER OTHER THAN 1**.

This basic definition of logarithm is very useful in solving a number of problems on logarithms.

Example of a logarithm: $216 = 6^3$ can be expressed as $\log_6 216 = 3$.

Since logarithm of a number is a value, it will have an 'integral' part and a 'decimal' part. The integral part of the logarithm of a number is called the CHARACTERISTIC and the decimal part of the logarithm is called the MANTISSA.

Logarithms can be expressed to any base (positive number other than 1). Logarithms from one base can be converted to logarithms to any other base. (One of the formulae given below will help do this conversion.) However, there are two types of logarithms that are commonly used.

(i) **Natural Logarithms or Napierian Logarithms:** These are logarithms expressed to the base of a number called 'e'.

(ii) **Common Logarithms:** These are logarithms expressed to the base 10. For most of the problems under LOGARITHMS, it is common logarithms that we deal with. In examinations also, if logarithms are given without mentioning any base, it can normally be taken to be logarithms to the base 10.

Given below are some **important rules/formulae** in logarithms:

(i) $\log_a a = 1$ (logarithm of any number to the same base is 1)

(ii) $\log_a 1 = 0$ (log of 1 to any base other than 1 is 0)

(iii) $\log_a (mn) = \log_a m + \log_a n$

(iv) $\log_a (m/n) = \log_a m - \log_a n$

(v) $\log_a m^p = p \times \log_a m$

(vi) $\log_a b = \dfrac{1}{\log_b a}$

(vii) $\log_a m = \dfrac{\log_b m}{\log_b a}$

(viii) $\log_{a^q} m^p = \dfrac{p}{q} \log_a m$

(ix) $a^{\log_a N} = N$

(x) $a^{\log b} = b^{\log a}$

You should memorize these rules/formulae because they are very helpful in solving problems.

Like in the chapter on INDICES, in LOGARITHMS also there will be problems on

(i) Simplification using the above-listed formulae/rules and

(ii) Solving for the value of an unknown given in an equation.

In solving problems of the second type earlier, in most of the cases, we take recourse to the basic definition of logarithms (which is very important and should be memorized).

The following examples will give problems of both the above types and some problems on common logarithms.

The following rules also should be remembered while solving problems on logarithms:

Given an equation $\log_a M = \log_b N$,

(i) if $M = N$, then a will be equal to b; if $M \neq 1$ and $N \neq 1$.

(ii) if $a = b$, then M will be equal to N.

The examples that follow will explain all the above types of problems. Please note that unless otherwise specified, all the logarithms are taken to the base 10).

Example 8

Solve for x : $\log_{10} 20x = 4$

Solution

Given that $\log_{10} 20x = 4$

$\Rightarrow \quad 20x = 10^4 = 10000$

$\therefore \quad x = 500$

Example 9

Solve for x : $\log (x + 3) + \log (x - 3) = \log 72$

Solution

$\log (x + 3) + \log (x - 3) = \log 72$

$$\log (x + 3)(x - 3) = \log 72$$
$$(x + 3)(x - 3) = 72$$
$$x^2 = 81$$

$x = 9$ (If $x = -9$, $\log (x - 3)$ would be undefined)

Example 10

If $\log 2 = 0.301$, find the value of $\log 1250$, $\log 0.001250$, and $\log 125000$.

Solution

$$\log 1250 = \log \frac{10000}{8}$$
$$= 4 \log 10 - 3 \log 2 = 4 - 3 (0.3010) = 3.097$$

$$\log 0.001250 = \log \frac{1250}{10^6}$$
$$= 3.097 - 6 = -2.903$$

$$\log 125000 = \log (1250)(100)$$
$$= \log 1250 + 2 = 5.097$$

Example 11

Find the number of digits in 294^{20} given that $\log 6 = 0.778$ and $\log 7 = 0.845$

Solution

$\log 294^{20} = 20 \log (7^2\, 6)$

$= 20 (2 \log 7 + \log 6)$

$= 20 (2 (0.845) + 0.778) = 20 (1.69 + 0.778)\ 49.36$

Characteristic = 49.

$\therefore\ 294^{20}$ has 50 digits

Example 12

Find the value of $\log_{\sqrt[3]{2}} 32\sqrt[3]{16}$.

Solution

$$\log_{\sqrt[3]{2}} 32\sqrt[3]{16} = \log_{2^{1/3}} 2^5 \left(2^4\right)^{\frac{1}{3}}$$
$$= \log_{2^{1/3}} \left(2^{\frac{1}{3}}\right)^{19} = 19$$

Example 13

Find the number of zeros after the decimal point in $\left(\frac{3}{4}\right)^{500}$, given that $\log 3 = 0.4771$ and $\log 2 = 0.3010$.

Solution

$$\log \left(\frac{3}{4}\right)^{500} = 500 \left(\log \frac{3}{4}\right)$$

$= 500 (\log 3 - 2 \log 2)$

$= 500 (0.4771 - 2 (0.3010) = -62.4500$

$\therefore$ Number of zeros after the decimal point is 62.

Exercises

Direction for questions 1 to 30: Select the correct alternative from the given choices.

1. Simplify the following:

$$\left(\frac{243}{1024}\right)^{-2/5} \times \left(\frac{144}{49}\right)^{-1/2} \div \left(\frac{8}{343}\right)^{-2/3}$$

(A) $2^5 \times 3^{-1} \times 7$ (B) $2^5 \times 3^{-3} \times 7^{-2}$
(C) $2^4 \times 3^{-3} \times 7^{-1}$ (D) $2^4 \times 3^{-1} \times 7^{-2}$

2. Simplify the following:

$$\left(\frac{x^2 \cdot y^{-3}}{z^4}\right)^{-2} \times \left(\frac{x^2 \cdot y}{z^{-2}}\right)^3 \div \left(\frac{x^{-12} \cdot y^7}{z^{-8}}\right)^{-1}$$

(A) $x^{10} . y^{16} . z^{-22}$ (B) $x^7 . y^{-16} . z^{-22}$
(C) $x^{-7} . y^{16} . z^{-22}$ (D) $x^{-10} . y^{16} . z^{22}$

3. Simplify the following: $\dfrac{1-[1-\{1-(1+y)^{-1}\}]}{(1-y)}$

(A) $\dfrac{y}{(1-y^2)}$ (B) $\dfrac{y}{(1-y)^2}$
(C) $\dfrac{1+y}{(1-y)^2}$ (D) $\dfrac{1+y^2}{1-y^2}$

4. $(x^{a-b})^{(a^2+ab+b^2)} \times (x^{b-c})^{(b^2+bc c^2)} \times (x^{c-a})^{(c^2+ac+a^2)}$

(A) 0
(B) 1
(C) $x^{a^3+b^3+c^3}$
(D) $x^{3(a^2+b^2+c^2+ac+bc+ca)}$

5. $343^{0.12} \times 2401^{0.08} \times 49^{0.01} \times 7^{0.1} =$
(A) 7 (B) $7^{4/5}$ (C) 7^8 (D) $7^{3/5}$

6. Solve for x: $9^{2x+1} = 27^{5x-3}$
(A) 1 (B) 2 (C) –1 (D) –2

7. If $\frac{p}{q} = \frac{r}{s}$ and $p^a = q^b = r^c = s^d$, then $\frac{1}{a} - \frac{1}{b} =$
(A) $\frac{1}{d} - \frac{1}{c}$ (B) $\frac{1}{c} + \frac{1}{d}$
(C) $\frac{1}{c} - \frac{1}{d}$ (D) $-\left(\frac{1}{c} + \frac{1}{d}\right)$

8. Which of the following is the largest in value?
(A) $6^{1/2}$ (B) $7^{1/3}$ (C) $8^{1/4}$ (D) $9^{1/5}$

9. $2\sqrt{\frac{5}{2}} - 5\sqrt{\frac{2}{5}} + \sqrt{10} + \sqrt{1000} =$
(A) $9\sqrt{10}$ (B) $8\sqrt{10}$
(C) $8\sqrt{10}$ (D) $11\sqrt{10}$

10. $\left(\frac{\sqrt{p} - \sqrt[4]{pq}}{\sqrt[4]{pq} - \sqrt{q}}\right)^{-4} =$
(A) $\frac{p}{q}$ (B) $\sqrt{\frac{p}{q}}$ (C) $\sqrt{\frac{q}{p}}$ (D) $\frac{q}{p}$

11. If $y = 12 + 2\sqrt{35}$, then $\sqrt{y} - \frac{1}{\sqrt{y}} =$
(A) $\frac{\sqrt{7}+\sqrt{5}}{2}$ (B) $\frac{3\sqrt{5}-\sqrt{7}}{2}$
(C) $\frac{2\sqrt{5}+\sqrt{7}}{2}$ (D) $\frac{3\sqrt{5}+\sqrt{7}}{2}$

12. Arrange the following in ascending order.
$a = \sqrt{2} + \sqrt{11}$, $b = \sqrt{6} + \sqrt{7}$,
$c = \sqrt{3} + \sqrt{10}$ and $d = \sqrt{5} + \sqrt{8}$
(A) *abcd* (B) *abdc*
(C) *acdb* (D) *acbd*

13. Arrange the following in descending order.
$a = \sqrt{13} + \sqrt{11}$, $b = \sqrt{15} + \sqrt{9}$, $c = \sqrt{18} + \sqrt{6}$,
$d = \sqrt{7} + \sqrt{17}$.
(A) *abdc* (B) *dcab*
(C) *adcb* (D) *acdb*

14. Solve for x and y:
$3.5^x + 2^{y+2} = 107$, $5^{x+1} + 8.2^y = 189$
(A) 3, 2 (B) 5, 7 (C) 7, 5 (D) 2, 3

15. Solve for x, if $\left(5\sqrt{7}\right)^{5x-4} = (35)^3 (25)^{3/2}$.
(A) 2 (B) 5/4 (C) 7/2 (D) 3

16. If $5^{x+3} - 5^{x-3} = 78120$, find x.
(A) 4 (B) 3 (C) 5 (D) 6

17. If $a^a \cdot b^b \cdot c^c = a^b \cdot b^c \cdot c^a = a^c \cdot b^a \cdot c^b$ and a, b, c are positive integers greater than 1, then which of the following can NOT be true for any of the possible values of a, b, c?
(A) $abc = 8$ (B) $a + b + c = 8$
(C) $abc = 27$ (D) $a + b + c = 27$

18. The ascending order of $16^{\frac{7}{12}}$, $81^{\frac{3}{8}}$, $625^{\frac{2}{3}}$ is ______.
(A) $16^{\frac{7}{12}}$, $81^{\frac{3}{8}}$, $625^{\frac{2}{3}}$ (B) $16^{\frac{7}{12}}$, $625^{\frac{2}{3}}$, $81^{\frac{3}{8}}$,
(C) $625^{\frac{2}{3}}$, $16^{\frac{7}{12}}$, $81^{\frac{3}{8}}$ (D) $81^{\frac{3}{8}}$, $16^{\frac{7}{12}}$, $625^{\frac{2}{3}}$

19. If $2\sqrt{2} + \sqrt{3} = x$, what is the value of $\frac{11+4\sqrt{6}}{2\sqrt{2}-\sqrt{3}}$ in terms of x?
(A) $\frac{x^2}{\sqrt{2}}$ (B) x^3 (C) $\frac{x^3}{8}$ (D) $\frac{x^3}{5}$

20. Simplify: $\sqrt{(a+b+c) + 2\sqrt{ac+bc}}$.
(A) $\sqrt{a} + \sqrt{b} + \sqrt{c}$ (B) $\sqrt{a+b} + \sqrt{c}$
(C) $\sqrt{ab+bc}$ (D) $\sqrt{abc}$

21. Find the value of $x^2 - y^2$, if $\log_y(x-1) + \log_y(x+1) = 2$.
(A) 2 (B) $2y$ (C) 1 (D) $2xy$

22. If $a > 1$, $\log_a a + \log_{a^{\frac{1}{2}}} a + \log_{a^{\frac{1}{3}}} a + \cdots + \log_{a^{\frac{1}{20}}} a =$
(A) 420 (B) 210 (C) 380 (D) 190

23. If $\log_7(x-7) + \log_7(x^2 + 7x + 49) = 4$, then $x =$
(A) 196 (B) 7 (C) 49 (D) 14

24. If $\frac{\log a}{5} = \frac{\log b}{6} = \frac{\log c}{7}$, then $b^2 =$
(A) ac (B) a^2 (C) bc (D) ab

25. What is the value of $\log_{(1/5)} 0.0000128$?
(A) –7 (B) –5 (C) 5 (D) 7

26. If $(\log\tan 5°)(\log\tan 10°)(\log\tan 15°)\ldots(\log\tan 60°) = x$, what is the value of x?
(A) $\log(\sin 5°)^{12}$ (B) 1
(C) 0 (D) $\log(\cos 60°)$

27. Solve for x, if $\log_x[\log_5(\sqrt{x+5} + \sqrt{x})] = 0$.
(A) 1 (B) 9 (C) 12 (D) 4

28. If a, b, c are distinct values, what is the value of abc if $(\log_b a)(\log_c a) + (\log_a b)(\log_c b) + (\log_a c)(\log_b c) - 3 = 0$?
(A) 2 (B) 1
(C) $1 - \log a - \log b - \text{loc } c$ (D) 0

29. If $\log_6 161 = a$, $\log_6 23 = b$, what is the value of $\log_7 6$ in terms of a and b?
(A) a/b (B) $a + b$
(C) $1/(a - b)$ (D) b/a

30. $x = y^2 = z^3 = w^4 = u^5$, then find the value of $\log_x xyzwu$.
(A) $1\frac{47}{60}$ (B) $\frac{111}{120}$ (C) $2\frac{17}{60}$ (D) $2\frac{13}{60}$

Quadratic Equations

'If a variable occurs in an equation with all positive integer powers and the highest power is two, then it is called a Quadratic Equation (in that variable)'.

In other words, a second degree polynomial in x equated to zero will be a quadratic equation. For such an equation to be a quadratic equation, the co-efficient of x^2 should not be zero.

The most general form of a quadratic equation is $ax^2 + bx + c = 0$, where $a \neq 0$ (and a, b, c are real).

Some examples of quadratic equations are

$$x^2 - 5x + 6 = 0 \quad (1)$$

$$x^2 - x - 6 = 0 \quad (2)$$

$$2x^2 + 3x - 2 = 0 \quad (3)$$

$$2x^2 + x - 3 = 0 \quad (4)$$

Like a first degree equation in x has one value of x satisfying the equation, a quadratic equation in x will have TWO values of x that satisfy the equation. The values of x that satisfy the equation are called the ROOTS of the equation. These roots may be real or imaginary.

For the above-given four quadratic equations, the roots are as given below:

Equation (1) : $x = 2$ and $x = 3$
Equation (2) : $x = -2$ and $x = 3$
Equation (3) : $x = 1/2$ and $x = -2$
Equation (4) : $x = 1$ and $x = -3/2$

In general, the roots of a quadratic equation can be found out in two ways.

1. By factorizing the expression on the left-hand side of the quadratic equation.
2. By using the standard formula.

All the expressions may not be easy to factorize whereas applying the formula is simple and straightforward.

Finding the Roots by Factorisation

If the quadratic equation $ax^2 + bx + c = 0$ can be written in the form $(x - \alpha)(x - \beta) = 0$, then the roots of the equation are α and β.

To find the roots of a quadratic equation, we should first write it in the form of $(x - \alpha)(x - \beta) = 0$, i.e. the left-hand side $ax^2 + bx + c$ of the quadratic equation $ax^2 + bx + c = 0$ should be factorized into two factors.

For this purpose, we should go through the following steps. We will understand these steps with the help of the equation $x^2 - 5x + 6 = 0$, which is the first of the four quadratic equations we looked at as examples earlier.

1. First write down b (the co-efficient of x) as the sum of two quantities whose product is equal to ac.

In this case, –5 has to be written as the sum of two quantities whose product is 6. We can write –5 as (–3) + (–2) so that the product of (–3) and (–2) is equal to 6.

2. Now rewrite the equation with the 'bx' term split in the aforementioned manner.
   In this case, the given equation can be written as $x^2 - 3x - 2x + 6 = 0$.
3. Take the first two terms and rewrite them together after taking out the common factor between the two of them. Similarly, the third and fourth terms should be rewritten after taking out the common factor between the two of them. In other words, you should ensure that what is left from the first and the second terms (after removing the common factor) is the same as that left from the third and the fourth terms (after removing their common factor).
   In this case, the equation can be rewritten as $x(x - 3) - 2(x - 3) = 0$; Between the first and second terms as well as the third and fourth terms, we are left with $(x - 3)$ is a common factor.
4. Rewrite the entire left-hand side to get the form $(x - \alpha)(x - \beta)$.
   In this case, if we take out $(x - 3)$ as the common factor, we can rewrite the given equation as $(x - 3)(x - 2) = 0$.
5. Now, α and β are the roots of the given quadratic equation.
   ∴ For $x^2 - 5x + 6 = 0$, the roots of the equation are 3 and 2.

For the other three quadratic equations given earlier as examples, let us see how to factorize the expression and get the roots.

For equation (2), i.e. $x^2 - x - 6 = 0$, the co-efficient of x, which is –1 can be rewritten as (–3) + (+2) so that their product is –6, which is equal to ac (1 multiplied by –6). Then, we can rewrite the equation as $(x - 3)(x + 2) = 0$ giving us the roots as 3 and –2.

For equation (3), i.e. $2x^2 + 3x - 2 = 0$, the co-efficient of x, which is 3 can be rewritten as (+4) + (–1) so that their product is –4, which is the value of ac (–2 multiplied by 2). Then, we can rewrite the equation as $(2x - 1)(x + 2) = 0$, giving the roots as 1/2 and –2. For equation (4), i.e. $2x^2 + x - 3 = 0$, the co-efficient of x which is 1 can be rewritten as (+3) + (–2) so that their product is –6 which is equal to ac (2 multiplied by –3). Then, we can rewrite the given equation as $(x - 1)(2x + 3) = 0$, giving us the roots as 1 and –3/2.

Finding the Roots by Using the Formula

If the quadratic equation is $ax^2 + bx + c = 0$, then we can use the standard formula given below to find out the roots of the equation.

$$x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$$

The roots of the four quadratic equations we took as examples can be taken and their roots found out by using the aforementioned formula. The student is advised to check it out for himself/herself that the roots can be obtained by using this formula also.

Sum and Product of Roots of a Quadratic Equation

For the quadratic equation $ax^2 + bx + c = 0$, the sum of the roots and the product of the roots can be given by the following:

Sum of the roots = $-b/a$

Product of the roots = c/a

These two rules will be very helpful in solving problems on quadratic equation.

Nature of the Roots

We mentioned already that the roots of a quadratic equation with real co-efficients can be real or complex. When the roots are real, they can be equal or unequal. All this will depend on the expression $b^2 - 4ac$. Since $b^2 - 4ac$ determines the nature of the roots of the quadratic equation, it is called the 'DISCRIMINANT' of the quadratic equation.

If $b^2 - 4ac > 0$, then the roots of the quadratic equation will be real and distinct.

If $b^2 - 4ac = 0$, the roots are real and equal.

If $b^2 - 4ac < 0$, then the roots of the quadratic equation will be complex conjugates.

Thus, we can write down the following about the nature of the roots of a quadratic equation when a, b, and c are all *rational*.

when $b^2 - 4ac < 0$	the roots are complex and unequal
when $b^2 - 4ac = 0$	the roots are rational and equal
when $b^2 - 4ac > 0$ and a perfect square	the roots are rational and unequal
when $b^2 - 4ac > 0$ but not a perfect square	the roots are irrational and unequal

Whenever the roots of the quadratic equation are irrational, (a, b, c being rational), they will be of the form $a + \sqrt{b}$ and $a - \sqrt{b}$, i.e. whenever $a + \sqrt{b}$ is one root of a quadratic equation, then $a - \sqrt{b}$ will be the second root of the quadratic equation and vice versa.

Signs of the Roots

We can comment on the signs of the roots, i.e. whether the roots are positive or negative, based on the sign of the sum of the roots and the product of the roots of the quadratic equation. The following table will make clear the relationship between the sum and the product of the roots and the signs of the roots themselves.

Sign of product of the roots	Sign of sum of the roots	Sign of the roots
+ ve	+ ve	Both the roots are positive.
+ ve	– ve	Both the roots are negative.
– ve	+ ve	The numerically larger root is positive and the other root is negative.
– ve	– ve	The numerically larger root is negative and the other root is positive.

Constructing a Quadratic Equation

We can build a quadratic equation in the following three cases:

1. When the roots of the quadratic equation are given.
2. When the sum of the roots and the product of the roots of the quadratic equation are given.
3. When the relation between the roots of the equation to be framed and the roots of another equation is given.

If the roots of the quadratic equation are given as α and β, the equation can be written as

$$(x - \alpha)(x - \beta) = 0 \quad \text{i.e., } x^2 - x(\alpha + \beta) + \alpha\beta = 0$$

If p is the sum of the roots of the quadratic equation and q is the product of the roots of the quadratic equation, then the equation can be written as $x^2 - px + q = 0$.

Maximum or Minimum Value of a Quadratic Expression

An equation of the type $ax^2 + bx + c = 0$ is called a quadratic equation. An expression of the type $ax^2 + bx + c$ is called a 'quadratic expression'. The quadratic expression $ax^2 + bx + c$ takes different values as x takes different values.

As x varies from $-\infty$ to $+\infty$, (i.e. when x is real), the quadratic expression $ax^2 + bx + c$

1. Has a minimum value whenever $a > 0$ (i.e., a is positive). The minimum value of the quadratic expression is $(4ac - b^2)/4a$ and it occurs at $x = -b/2a$.
2. Has a maximum value whenever $a < 0$ (i.e. a is negative). The maximum value of the quadratic expression is $(4ac - b^2)/4a$ and it occurs at $x = -b/2a$.

Solved Examples

Example 1

Find the roots of the equation $11x^2 - 37x + 30 = 0$.

Solution

We have to write –37 as the sum of two parts whose product should be equal to $(11) \times (30)$

$$(-22) + (-15) = -37 \text{ and } (-22)(-15) = 11 \times 30$$

Therefore, $11x^2 - 37x + 30 = 0$

$\Rightarrow \quad 11x^2 - 22x - 15x + 30 = 0$

$\Rightarrow \quad 11x(x - 2) - 15(x - 2) = 0$

$\Rightarrow \quad (11x - 15)(x - 2) = 0 \; x = \dfrac{15}{11}$ or 2.

Example 2

Discuss the nature of the roots of the equation $8x^2 - 2x - 4 = 0$.

Solution

For the quadratic equation $ax^2 + bx + c = 0$, the nature of the roots is given by the discriminant $b^2 - 4ac$.

Discriminant of $8x^2 - 2x - 4 = 0$ is

$$(-2)^2 - 4(8)(-4) = 132.$$

Since the discriminant is positive but not a perfect square, the roots of the equation are irrational and unequal.

Example 3

If the sum of the roots of the equation $Rx^2 + 5x - 24 = 0$ is 5/11, then find the product of the roots of that equation.

Solution

For a quadratic equation $ax^2 + bx + c = 0$, the sum of the roots is $(-b/a)$ and the product of the roots is (c/a).

The sum of the roots of the equation

$Rx^2 + 5x - 24 = 0$ is $\left(\dfrac{-5}{R}\right)$, which is given as $\dfrac{5}{11}$

$\therefore \; R = -11$

In the given equation, product of the roots $= \dfrac{-24}{R} = \dfrac{-24}{-11} = +\dfrac{24}{11}$.

Example 4

Find the value of k, so that the roots of $6x^2 - 12x - k = 0$ are reciprocals of each other.

Solution

If the roots of the equation are reciprocals of each other, then the product of the roots should be equal to 1.

$\Rightarrow \quad \dfrac{-k}{6} = 1.$

Therefore $k = -6$.

Example 5

If $4 + \sqrt{7}$ is one root of a quadratic equation with rational co-efficients, then find the other root of the equation.

Solution

When the co-efficients of a quadratic equation are rational and the roots are irrational, they occur only in pairs like

$p \pm \sqrt{q}$ i.e., if $p+\sqrt{q}$ is one root, then the other root of the equation will be $p-\sqrt{q}$. So, in this case, the other root of the equation will be $4-\sqrt{7}$.

Example 6

Form a quadratic equation with rational co-efficients, one of whose roots is $5+\sqrt{6}$.

Solution

If $5+\sqrt{6}$ is one root, then the other root is $5-\sqrt{6}$ (because the co-efficients are rational).

The sum of the roots $= 5+\sqrt{6}+5-\sqrt{6} = 10$.

The product of the roots $= (5+\sqrt{6})(5-\sqrt{6}) = 25-6 = 19$.

Thus the required equation is $x^2 - 10x + 19 = 0$.

Example 7

If the price of each book goes up by ₹5, then Atul can buy 20, books less for ₹1200. Find the original price and the number of books Atul could buy at the original price.

Solution

Let the original price of each book be x.

Then the new price of each book will be $x + 5$.

The number of books that can be bought at the original price $= \dfrac{1200}{x}$

The number of books that can be bought at the new price $= \dfrac{1200}{x+5}$

Given that Atul gets 20 books less at new price, i.e. $\dfrac{1200}{x} - \dfrac{1200}{x+5} = 20$

$$\Rightarrow \quad \frac{60}{x} - \frac{60}{x+5} = 1$$

$$\Rightarrow \quad \frac{60(x+5-x)}{x^2+5x} = 1$$

$$\Rightarrow \quad 300 = x^2 + 5x$$

$$\Rightarrow \quad x^2 + 5x - 300 = 0$$

$$\Rightarrow \quad (x+20)(x-15) = 0$$

$$\Rightarrow \quad x = -20 \quad \text{or} \quad 15$$

As the price cannot be negative, the original price is ₹15.

Example 8

If α and β are the roots of the equation $x^2 - 3x - 180 = 0$ such that $\alpha < \beta$, then find the values of

(i) $\alpha^2 + \beta^2$ (ii) $\dfrac{1}{\alpha} + \dfrac{1}{\beta}$ (iii) $\alpha - \beta$

Solution

From the given equation, we get $\alpha + \beta = 3$ and $\alpha\beta = -180$

(i) $\alpha^2 + \beta^2 = (\alpha+\beta)^2 - 2\alpha\beta = (3)^2 - 2(-180) = 369$

(ii) $\dfrac{1}{\alpha} + \dfrac{1}{\beta} = \dfrac{\alpha+\beta}{\alpha\beta} = \dfrac{+3}{-180} = \dfrac{-1}{60}$

(iii) $(\alpha-\beta)^2 = (\alpha+\beta)^2 - 4\alpha\beta$

$$\Rightarrow \quad \alpha - \beta = \pm\sqrt{(\alpha+\beta)^2 - 4\alpha\beta}$$

$$= \pm\sqrt{(+3)^2 - 4(-180)} = \pm\sqrt{9+720}$$

$$= \pm\sqrt{729} = \pm 27\text{; as } \alpha < \beta,\ \alpha - \beta = -27.$$

Example 9

If $\sqrt{x+4} + \sqrt{x+8} = 7$, then find the value of x.

Solution

Given $\sqrt{x+4} + \sqrt{x+8} = 7$

Squaring on both sides, we get

$$x + 4 + x + 8 + 2\left(\sqrt{x+4}\sqrt{x+8}\right) = 49$$

$$\Rightarrow \quad 2x + 12 + 2\sqrt{x^2+12x+32} = 49$$

$$\Rightarrow \quad 2x - 37 = -2\sqrt{x^2+12x+32}$$

Squaring again on both sides, we have

$$(2x-37)^2 = 4(x^2 + 12x + 32)$$

$$\Rightarrow \quad 4x^2 - 148x + 1369 = 4x^2 + 48x + 128$$

$$\Rightarrow \quad 1241 = 196x$$

$$\Rightarrow \quad x = \frac{1241}{196}.$$

Example 10

If $4^{2x+1} + 4^{x+1} = 80$, then find the value of x.

Solution

Given $4^{2x+1} + 4^{x+1} = 80$

$$\Rightarrow \quad 4^{2x} \times 4 + 4^x \times 4 = 80$$

$$4^{2x} + 4^x = 20$$

Substituting $4^x = a$,

we get $a^2 + a = 20$

$$\Rightarrow \quad a^2 + a - 20 = 0$$

$$\Rightarrow \quad (a+5)(a-4) = 0$$

$$\Rightarrow \quad a = -5 \quad \text{or} \quad 4$$

If $4^x = -5$, there is no possible value for x as no power of 4 gives negative value.

If $4^x = 4$, then $x = 1$.

Exercises

Direction for questions 1 to 25: Select the correct alternative from the given choices.

1. The roots of the quadratic equation $2x^2 - 7x + 2 = 0$ are
(A) Rational and unequal
(B) Real and equal
(C) Imaginary
(D) Irrational

2. Find the nature of the roots of the quadratic equation $2x^2 + 6x - 5 = 0$.
(A) Complex conjugates
(B) Real and equal
(C) Conjugate surds
(D) Unequal and rational

3. Construct a quadratic equation whose roots are one third of the roots of $x^2 + 6x + 10 = 0$.
(A) $x^2 + 18x + 90 = 0$ (B) $x^2 + 16x + 80 = 0$
(C) $9x^2 + 18x + 10 = 0$ (D) $x^2 + 17x + 90 = 0$

4. A quadratic equation in x has its roots as reciprocals of each other. The co-efficient of x is twice the co-efficient of x^2. Find the sum of the squares of its roots.
(A) 5 (B) 4 (C) 3 (D) 2

5. If one root of the quadratic equation $4x^2 - 8x + k = 0$, is three times the other root, find the value of k.
(A) 3 (B) 9 (C) –3 (D) –6

6. The roots of the quadratic equation $(m - k + \ell)\, x^2 - 2mx + (m - \ell + k) = 0$ are
(A) $1, \dfrac{\ell + m - k}{k + m - \ell}$ (B) $1, \dfrac{2m}{\ell + m - k}$
(C) $1, \dfrac{k + m - \ell}{\ell + m - k}$ (D) $1, \dfrac{2k}{k - m + \ell}$

7. The expression $\dfrac{4ac - b^2}{4a}$ represents the maximum/minimum value of the quadratic expression $ax^2 + bx + c$. Which of the following is true?
(A) It represents the maximum value when $a > 0$.
(B) It represents the minimum value when $a < 0$.
(C) Both (A) and (B)
(D) Neither (A) nor (B)

8. Find the signs of the roots of the equation $x^2 + x - 420 = 0$.
(A) Both are positive.
(B) Both are negative.
(C) The roots are of opposite signs with the numerically larger root being positive.
(D) The roots are of opposite signs with the numerically larger root being negative.

9. If k is a natural number and $(k^2 - 3k + 2)\,(k^2 - 7k + 12) = 120$, find k.
(A) 7 (B) 6 (C) 5 (D) 9

10. Both A and B were trying to solve a quadratic equation. A copied the co-efficient of x wrongly and got the roots of the equation as 12 and 6. B copied the constant term wrongly and got the roots as 1 and 26. Find the roots of the correct equation.
(A) 6, 16 (B) –6, –16
(C) 24, 3 (D) –3, –24

11. If the roots of the equation $(x - k_1)\,(x - k_2) + 1 = 0$, k_1 and k_2 are integers, then which of the following must be true?
(A) k_1, k_2 are two consecutive integers
(B) $k_2 - k_1 = 2$
(C) $k_1 - k_2 = 2$
(D) Either (B) or (C)

12. The roots of the equation $ax^2 + bx + c = 0$ are k less than those of the equation $px^2 + qx + r = 0$. Find the equation whose roots are k more than those of $px^2 + qx + r = 0$.
(A) $ax^2 + bx + c = 0$
(B) $a(x - 2k)^2 + b(x - 2k) + c = 0$
(C) $a(x + 2k)^2 + b(x + 2k) + c = 0$
(D) $a(x - k)^2 + b(x - k) + c = 0$

13. If one root of the equation $x^2 - 10x + 16 = 0$ is half of one of the roots of $x^2 - 4Rx + 8 = 0$. Find R such that both the equations have integral roots.
(A) 1 (B) 2/3 (C) 3/2 (D) 4

14. If $x + y = 4$, find the maximum/minimum possible value of $x^2 + y^2$.
(A) Minimum, 8 (B) Maximum, 8
(C) Maximum, 16 (D) Minimum, 16

15. Find positive integral value(s) of p such that the equation $2x^2 + 8x + p = 0$ has rational roots.
(A) 8 (B) 4
(C) 6 (D) (A) or (C)

16. Two equations have a common root which is positive. The other roots of the equations satisfy $x^2 - 9x + 18 = 0$. The product of the sums of the roots of the two equations is 40. Find the common root.
(A) 1 (B) 2 (C) 3 (D) 4

17. If one root of the equation $x^3 - 11x^2 + 37x - 35 = 0$ is $3 - \sqrt{2}$, then find the other two roots.
(A) $5, 3 - \sqrt{2}$ (B) $-5, 3 + \sqrt{2}$
(C) $5, 3 + \sqrt{2}$ (D) $-5, 3 - \sqrt{2}$

18. The roots [the values of x (and not $|x|$)] of the equation $|x|^2 + 6|x| - 55 = 0$ are α and β. One of the roots of $py^2 + qy + r = 0$ is $\alpha\beta$ times the other root. Which of the following can be concluded?
(A) $25q^2 = -576pr$ (B) $25pr = -576q^2$
(C) $25q^2 = 576pr$ (D) $25pr = 576q^2$

19. The sides of a right-angled triangle are such that the sum of the lengths of the longest and that of the shortest side is twice the length of the remaining side. Find the longest side of the triangle if the longer of the sides containing the right angle is 9 cm more than half the hypotenuse.

(A) 30 cm (B) 25 cm (C) 20 cm (D) 15 cm

20. Solve for x: $2\{3^{2(1+x)}\} - 4(3^{2+x}) + 10 = 0$

(A) $-1, \log_3\left(\frac{5}{3}\right)$ (B) $-1, \log_3 2$

(C) $-1, \frac{5}{3}$ (D) $-1, \log_3\left(\frac{3}{5}\right)$

21. If $\sqrt{x^2-2x-3}+\sqrt{x^2+5x-24}=\sqrt{x^2+7x-30}$, then find x.

(A) 2 (B) 3 (C) 4 (D) 6

22. Two software professionals Ranjan and Raman had 108 floppies between them. They sell them at different prices, but each receives the same sum. If Raman had sold his at Ranjan's price, he would have received ₹722 and if Ranjan had sold his at Raman's price, he would have received ₹578. How many floppies did Ranjan have?

(A) 51 (B) 57 (C) 68 (D) 40

23. The sum and product of the roots of a quadratic equation E are a and b, respectively. Find the equation whose roots are the product of first root of E and the square of the second root of E, and the product of the second root of E and the square of the first root of E.

(A) $x^2 - abx + b^3 = 0$ (B) $x^2 + abx + b^3 = 0$

(C) $x^2 + abx - b^3 = 0$ (D) $x^2 - abx - b^3 = 0$

24. Which of the following options represent(s) a condition for the equations $x^2 + ax + b = 0$ and $x^2 + bx + a = 0$ to have exactly one common root, given that the roots of both the equations are real?

(A) $a - b = 1$ (B) $b - a = 1$

(C) $1 + a + b = 0$ (D) Either (A) or (B)

25. If the roots of $2x^2 + (4m + 1)x + 2(2m - 1) = 0$ are reciprocals of each other, find m.

(A) -1 (B) 0 (C) 1 (D) 3/4

Chapter 11

Inequalities

CHAPTER HIGHLIGHTS

- *Inequalities and Modulus*
- *Symbols and Notations*
- *Absolute Value*
- *Properties of Modulus*

Inequalities and Modulus

If 'a' is any real number, then 'a' is either positive or negative or zero. When 'a' is positive, we write $a > 0$, which is read 'a is greater than zero'. When 'a' is negative, we write $a < 0$, which is read 'a is less than zero'. If 'a' is zero, we write $a = 0$ and in this case, 'a' is neither positive nor negative.

Symbols and Notations

'>' means 'greater than'
'<' means 'less than'
'≥' means 'greater than or equal to'
'≤' means 'less than or equal to'

For any two non-zero real numbers a and b,

1. a is said to be greater than b when $a - b$ is positive.
2. a is said to be less than b when $a - b$ is negative.

These two statements are written as

1. $a > b$ when $a - b > 0$ and
2. $a < b$ when $a - b < 0$.

For example,
3 is greater than 2 because $3 - 2 = 1$ and 1 is greater than zero. –3 is less than –2 because $-3 - (-2) = -1$ and –1 is less than zero.

Certain properties and useful results pertaining to inequalities are given below. A thorough understanding of these properties results is very essential for being able to solve the problems pertaining to inequalities.

[In the following list of properties and results, numbers like a, b, c, d, etc. are real numbers.]

1. For any two real numbers a and b, either $a > b$ or $a < b$ or $a = b$.
2. If $a > b$, then $b < a$.
3. If $a \nless b$, then $a \geq b$ and if $a > b$, then $a \leq b$.
4. If $a > b$ and $b > c$, then $a > c$.
5. If $a < b$ and $b < c$, then $a < c$.
6. If $a > b$, then $a \pm c > b \pm$ c.
7. If $a > b$ and $c > 0$, then $ac > bc$.
8. If $a < b$ and $c > 0$, then $ac < bc$.
9. If $a > b$ and $c < 0$, then $ac < bc$.
10. If $a < b$ and $c < 0$, then $ac > bc$.
11. If $a > b$ and $c > d$, then $a + c > b + d$.
12. If $a < b$ and $c < d$, then $a + c < b + d$.
13. Let A, G and H be the Arithmetic mean, Geometric mean and Harmonic mean of n positive real numbers. Then $A \geq G \geq H$, the equality occurring only when the numbers are all equal.

14. If the sum of two positive quantities is given, their product is the greatest when they are equal; if the product of two positive quantities is given, their sum is the least when they are equal.
15. If $a > b$ and $c > d$, then we cannot say anything conclusively about the relationship between $(a - b)$ and $(c - d)$; depending on the values of a, b, c, and d, it is possible to have $(a - b) > (c - d)$, $(a - b) = (c - d)$ or $(a - b) < (c - d)$.

Absolute Value

(written as $|x|$ and read as 'modulus of x')

For any real number x, the absolute value is defined as follows:

$$|x| = \begin{cases} x, & \text{if } x \geq 0 \text{ and} \\ -x, & \text{if } x < 0 \end{cases}$$

Properties of Modulus

For any real number x and y,

1. $x = 0 \Leftrightarrow |x| = 0$
2. $|x| \geq 0$ and $-|x| \leq 0$
3. $|x + y| \leq |x| + |y|$
4. $||x| - |y|| \leq |x - y|$
5. $-|x| \leq x \leq |x|$
6. $|x \cdot y| = |x| \cdot |y|$
7. $\left|\frac{x}{y}\right| = \frac{|x|}{|y|}$; $(y \neq 0)$
8. $|x|^2 = x^2$

In inequalities, the variables generally take a range of values unlike in the case of equations where the variables in general, take one value or a discrete set of values. (In some specific cases, the variables may take only one value.)

Solved Examples

Example 1

If $13x - 19 \leq 4x + 26$, find the range of x.

Solution

$13x - 4x \leq 26 + 19$

$$x \leq 5.$$

$(-\infty, 5]$ in the interval notation.

Example 2

Solve the following inequalities:

$$5x + 21 < 46 \text{ and } 4x + 18 < 54.$$

Solution

$$5x + 21 < 46 \Rightarrow x < 5 \quad (1)$$

$$4x + 18 < 54 \Rightarrow x < 9 \quad (2)$$

The common inequality satisfying (1) and (2) is $x < 5$ or $(-\infty, 5)$ in the interval notation.

Example 3

Which of the numbers 50^{51} and 51^{50} is greater?

Solution

Let $a = 50^{51}$ and $b = 51^{50}$.

$$\frac{b}{a} = \frac{51^{50}}{50^{51}} = \left(\frac{51}{50}\right)^{50}\left(\frac{1}{50}\right) = \left(1 + \frac{1}{50}\right)^{50}\left(\frac{1}{50}\right)$$

$\left(1 + \frac{1}{x}\right)^x$ where $x > 0$ always lies between 2 and 2.8.

$\therefore$ $\frac{b}{a}$ lies between

$$\frac{2}{50} = 0.04 \text{ and } \frac{2.8}{50} = 0.056$$

$\therefore \quad \frac{b}{a} < 1$

$\therefore \quad a > b.$

Example 4

Solve for x if $4x^2 - 21x + 20 > 0$

Solution

$$4x^2 - 21x + 20 > 0 \Rightarrow (4x - 5)(x - 4) > 0$$

Both factors are positive (i.e. the smaller is positive) or both are negative (i.e. the greater is negative), i.e. $x > 4$ or $x < \frac{5}{4}$ or it can be expressed in the interval notation as $(4, \infty) \cup \left(-\infty, \frac{5}{4}\right)$

Example 5

Solve for x, if $\frac{x^2 + 5x - 24}{2x^2 - 5x - 3} < 0$

Solution

$$x^2 + 5x - 24 = (x + 8)(x - 3)$$

Similarly $2x^2 - 5x - 3 = (2x + 1)(x - 3)$

Given: $\frac{x^2 + 5x - 24}{2x^2 - 5x - 3} < 0$

$$\Rightarrow \quad \frac{(x+8)(x-3)}{(2x+1)(x-3)} < 0$$

$$\Rightarrow \quad \frac{x+8}{2x+1} < 0$$

$$\frac{(x+8)(2x+1)}{(2x+1)^2} < 0$$

$$\Rightarrow \quad (x+8)\left(x+\frac{1}{2}\right)<0$$

$$\therefore \quad -8<x<-\frac{1}{2}.$$

Example 6

Solve the inequality $|3x + 6| > -12$.

Solution

The modulus of any number is always non-negative.

$\therefore \quad |3x + 6| \geq 0$.

$\therefore$ The given inequality is always satisfied.

$\therefore \quad -\infty < x < \infty$

Example 7

Solve the inequality $|2x + 4| < -6$.

Solution

The modulus of any number is always non- negative.

$\therefore \quad |2x + 4| \geq 0$

$\therefore$ The given inequality will never satisfy.
The solution is null set.

Example 8

Solve for x: $|2x - 3| = 5$

Solution

$2x - 3 = 5$ or $2x - 3 = -5$

$$(\text{If } |y| = a, y = \pm a) \quad \Rightarrow \quad x = 4 \text{ or } x = -1.$$

Example 9

Find the maximum value of

$$g(x) = 16 - |-x - 6|; x \in R.$$

Solution

$g(x)$ is maximum when $|-x - 6|$ is minimum.
The minimum value of the modulus of all numbers is 0.
$\therefore$ The maximum value of $g(x) = 16 - 0 = 16$.

Exercises

Direction for questions 1 to 25: Select the correct alternative from the given choices.

1. If $a < b$ and $c < 0$, then which of the following is true?
   (A) $ac < bc$ (B) $\frac{a}{c} < \frac{b}{c}$
   (C) $ac > bc$ (D) None of these
2. If p and q are two real numbers, then which of the following statements is always true?
   (A) $\frac{p}{q} < 1 \Rightarrow p < q$
   (B) $p > 0, q > 0$ and $\frac{p}{q} > 1 \Rightarrow p > q$
   (C) $\frac{p}{q} > 1 \Rightarrow p > q$
   (D) All the above
3. If $5x - 8 < 2x + 9$ and $4x + 7 > 7x - 8$, then the range of the values of x that satisfies the inequalities is
   (A) $(5, \infty)$ (B) $(-\infty, 5)$
   (C) $\left(5, \frac{17}{3}\right)$ (D) $\left(-\infty, \frac{17}{3}\right)$
4. Solve for real values of x; $5x^2 - 3x - 2 \geq 0$.
   (A) $\left[\frac{-2}{5}, 1\right]$ (B) $R - \left(\frac{-2}{5}, 1\right)$
   (C) $[1, \infty)$ (D) $R - (0, 1)$
5. If $x^2 - 9x - 36$ is negative, then find the range of x.
   (A) $(-3, 12)$ (B) $[-3, 12]$
   (C) $(-12, 3)$ (D) $[-12, 3]$
6. Which of the following is true?
   (A) $|x+y| \leq |x| + |y|$ (B) $\left|\frac{x}{y}\right| = \frac{|x|}{|y|}, y \neq 0$
   (C) $|x-y| \geq ||x| - |y||$ (D) All the above
7. If $6x + 8 > 7x - 9$ and $4x - 7 < 6x - 3$, then the values of x is
   (A) $(-17, 2)$ (B) $(2, 17)$
   (C) $(-2, 17)$ (D) $(-\infty, 17)$
8. The solution set of the inequality $|x - 5| < 9$ is
   (A) $(0, 14)$ (B) $(-4, 14)$ (C) $(-4, 0)$ (D) $(9, 14)$
9. The number of integral values of x that do not satisfy the inequation $\frac{x+5}{x-2} \geq 0$ is
   (A) 7 (B) 5 (C) 6 (D) 4
10. If $(x + 5)(x + 9)(x + 3)^2 < 0$, then the solution set for the inequality is
    (A) $(-9, -3)$ (B) $(-9, -5)$
    (C) $(-3, \infty)$ (D) $(-9, \infty)$
11. Find the range of the real values of x satisfying $8 - 3x \leq 5$ and $4x + 5 \leq -7$.
    (A) $[-3, 1]$ (B) $(-\infty, -3] \cup [1, \infty)$
    (C) $(-3, 1)$ (D) ϕ
12. Which of the following is true?
    (A) $30^{31} < 31^{30}$ (B) $71^{69} > 70^{70}$
    (C) $(155)^{29} < (150)^{30}$ (D) Both (B) and (C)

13. At what value of x is $-|x-3|+\frac{21}{2}$ maximum?

(A) -3 (B) $\frac{21}{2}$ (C) 0 (D) 3

14. Find the range of all real values of x if $|3x+5|<5x-11$.

(A) $(8, \infty)$ (B) $(-\infty, -5/3) \cup (8, \infty)$
(C) $(-5/3, 8)$ (D) $(-5/3, \infty)$

15. If $ac = bd = 2$, then the minimum value of $a^2 + b^2 + c^2 + d^2$ is

(A) 4 (B) 6 (C) 8 (D) 16

16. If $x, y > 0$ and $x + y = 3$ then

(A) $xy \le 0.72$ (B) $xy \le 1.8$
(C) $xy \le 2.25$ (D) $xy \le 1.25$

17. Find the complete range of values of x that satisfies $|x-16| > x^2 - 7x + 24$.

(A) $(0, 2)$ (B) $\left(\frac{3}{2}, \frac{5}{2}\right)$
(C) $(1, 3)$ (D) $(2, 4)$

18. For which of the following range of values of x is $x^2 + x$ less than $x^3 + 1$?

(A) $(-\infty, -1)$ (B) $(1, \infty)$
(C) $(-1, 1) \cup (1, \infty)$ (D) $[-1, 1]$

19. If x, y, z are positive, then the value of

$A=\frac{(4x^2+x+4)(5y^2+y+5)(7z^2+z+7)}{xyz}$ can be

(A) 400 (B) 500 (C) 1000 (D) 1500

20. The range of x for which $2x^2 - 5x - 8 \le |2x^2 + x|$ is

(A) $\left[-\frac{4}{3}, \infty\right)$ (B) $\left(-\frac{4}{3}, -1\right)$
(C) $[-1, \infty)$ (D) $[-1, 2]$

21. For how many integral values of x, is the inequation $\frac{x-5}{x+7} > 4$ satisfied?

(A) 5 (B) 4 (C) 2 (D) 3

22. If $1 \le x \le 3$ and $2 \le y \le 5$, then the minimum value of $\frac{x+y}{y}$ is

(A) $\frac{3}{5}$ (B) $\frac{1}{5}$ (C) $\frac{6}{5}$ (D) $\frac{5}{6}$

23. If $|b| \ge 5$ and $x = |a|\, b$, which of the following is true?

(A) $a - xb > 0$ (B) $a + xb < 0$
(C) $a + xb > 0$ (D) $a - xb \le 0$

24. Find the number of solutions of the equation $\left|x-|x-2|\right| = 6$.

(A) 2 (B) 1 (C) 3 (D) 4

25. If x, y and z are positive real numbers, then the minimum value of

$\frac{x^2y+y^2z+z^2x+xy^2+yz^2+zx^2}{xyz}$ is

(A) 6 (B) 9 (C) 12 (D) 14

Chapter 12

Progressions

CHAPTER HIGHLIGHTS

- *Progressions*
- *Arithmetic Progression (AP)*
- *Geometric Progression (GP)*
- *Infinite Geometric Progression*
- *Some Important Results*

PROGRESSIONS

In this chapter, we will look at the problems on sequences or progressions of numbers, where the terms of the sequence follow a particular pattern either addition of a constant (arithmetic sequence or arithmetic progression) or multiplication by a constant (geometric sequence or geometric progression). A third type of progression—harmonic progression—has also been defined later.

Arithmetic Progression (AP)

An arithmetic progression is a sequence of numbers in which any number (other than the first) is more (or less) than the immediately preceding number by a constant value. This constant value is called the common difference. In other words, any term of an arithmetic progression can be obtained by adding the common difference to the preceding term.

Let a be the first term of an arithmetic progression, d the common difference, and n the number of terms in the progression.

The n^{th} term is normally represented by T_n, and the sum to n terms of an arithmetic progression is denoted by S_n

$$T_n = n^{\text{th}} \text{ term} = a + (n - 1)\, d$$

$S_n = \text{Sum of } n \text{ terms} = \frac{n}{2} \times [2a + (n - 1)\, d]$, then the progression can be represented as a, $a + d$, $a + 2d$, …, $[a + (n - 1)\, d]$. Here, quantity d is to be added to any chosen term to get the next term of the progression.

The sum to n terms of an arithmetic progression can also be written in a different manner.

$$\text{Sum of first } n \text{ terms} = \frac{n}{2} \times [2a + (n - 1)d]$$

$$= \frac{n}{2} \times [a + \{a + (n - 1)d\}]$$

But, when there are n terms in an arithmetic progression, a is the first term and $\{a + (n - 1)\,d\}$ is the last term. Hence, $S_n = \frac{n}{2} \times [\text{first term} + \text{last term}]$.

The average of all the terms in an arithmetic progression is called their arithmetic mean (AM). Since average is equal to {sum of all the quantities/number of quantities}, arithmetic progression must be equal to the sum of the terms of the arithmetic progression divided by the number of terms in the arithmetic progression.

Arithmetic mean of n terms in arithmetic progression

$$= \frac{S_n}{n} = \frac{1}{2}\ \{2a + (n - 1)d\}$$

$$= \frac{1}{2} \times (\text{First Term} + \text{Last Term})$$

$$= \frac{(\text{First Term} + \text{Last Term})}{2}$$

i.e. AM is the average of the first and the last terms of the AP.

Arithmetic mean can also be obtained by taking the average of any two terms that are EQUIDISTANT from the two ends of the AP, i.e.

1. The average of the second term from the beginning and the second term from the end will be equal to the AM.
2. The average of the third term from the beginning and the third term from the end will also be equal to the AM and so on.

In general, the average of the k^{th} term from the beginning and the k^{th} term from the end will be equal to the AM.

Conversely, if the AM of an AP is known, the sum to n terms of the series (S_n) can be expressed as

$$S_n = n \times \text{AM}.$$

If three numbers are in arithmetical progression, the middle number is called the arithmetic mean, i.e. if a, b, c are in AP, then b is the AM of the three terms and $b = \frac{a+c}{2}$.

If a and b are in arithmetic progression (AP), then their $\text{AM} = \frac{(a+b)}{2}$.

If three numbers are in AP, we can represent the three numbers as $(a - d)$, a, and $(a + d)$.

If four numbers are in AP, we can represent the four numbers as $(a - 3d)$, $(a - d)$, $(a + d)$, and $(a + 3d)$; (in this case, $2d$ is the common difference).

If five numbers are in AP, we can represent the five numbers as $(a - 2d)$, $(a - d)$, a, $(a + d)$, and $(a + 2d)$.

Solved Examples

Example 1

The sixth and the tenth terms of an arithmetic progression are 22 and 38, respectively. Find the first term and the common difference.

Solution

Let the first term and the common difference be a and d, respectively.

$$a + 5d = 22 \tag{1}$$

$$a + 9d = 38 \tag{2}$$

Subtracting (1) from (2),

$$4d = 16,\ d = 4$$

Substituting d in (1) or (2),

we get $\quad a = 2$

Example 2

The 12^{th} term, the 14^{th} term, and the last term of an arithmetic progression are 25, 31, and 37, respectively. Find the first term, common difference, and the number of terms.

Solution

Let the first term, the common difference and the number of terms be a, d, and n, respectively.

Given that

$$a + 11d = 25 \tag{3}$$

$$a + 13d = 31 \tag{4}$$

Subtracting (3) from (4),

$$2d = 6$$

$$d = 3$$

Substituting $d = 3$ in (3) or (4),

$$a = -8$$

given, $t_n = -8 + (n - 1)3 = 37$

$$n = 16$$

Example 3

Three terms in arithmetic progression have a sum of 45 and a product of 3240. Find them.

Solution

Let the terms be $a - d$, a and $a + d$.

$$a - d + a + a + d = 45$$

$$a = 15$$

$$(a - d)\ a\ (a + d) = 3240$$

$$15^2 - d^2 = 216$$

$$d = \pm 3$$

If $d = 3$ the terms are 12, 15, and 18. If $d = -3$, the terms are same but in the descending order.

Example 4

The first term and the last term of an arithmetic progression are 9 and 69, respectively. If the sum of all the terms is 468, find the number of terms and the common difference.

Solution

Let the number of terms and the common difference be n and d, respectively,

$$S_n = \frac{n}{2}[9 + 69] = 468$$

$$\Rightarrow \quad 39n = 468$$

$$n = 12$$

$$t_n = 9 + 11d$$

$$\Rightarrow \quad 11d = 60$$

$$\Rightarrow \quad d = \frac{60}{11}$$

Example 5

The sum of three numbers which are in arithmetic progression is 24. The sum of their square is 200. Find the numbers.

Solution

Let the numbers be $a - d$, a and $a + d$.

Given, $a - d + a + a + d = 24$

$\therefore \quad a = 8$

$$(a - d)^2 + a^2 + (a + d)^2 = 200$$

$$3a^2 + 2d^2 = 200$$

$\Rightarrow \quad d^2 = 4$

$\therefore \quad d = \pm 2$

If $d = 2$, the numbers are 6, 8 and 10. If $d = -2$, the numbers are same, but in the descending order.

Geometric Progression (GP)

Numbers taken in a certain order are said to be in geometrical progression, if the ratio of any (other than the first number) to the preceding one is the same. This ratio is called the common ratio. In other words, any term of a geometric progression can be obtained by multiplying the preceding number by the common ratio.

The common ratio is normally represented by r. The first term of a geometric progression is denoted by a.

A geometric progression can be represented as a, ar, $1ar^2$, …, where a is the first term and r is the common ratio of the geometric progression.

n^{th} term of the geometric progression is ar^{n-1}.

Sum to n terms:

$$\frac{a\left(1-r^n\right)}{1-r} \text{ or } \frac{a\left(r^n-1\right)}{r-1}$$

$$= \frac{xar^{n-1}-a}{r-1} = \frac{r \times \text{Last term} - \text{First term}}{r-1}$$

Thus, the sum to n terms of a geometric progression can also be written as

$$S_n = \frac{r \times \text{Last term} - \text{First term}}{r-1}$$

If n terms $a_1, a_2, a_3, \ldots, a_n$ are in GP, then the geometric mean (GM) of these n terms is given by $= \sqrt[n]{a_1 \cdot a_2 \cdot a_3 \cdot \ldots \cdot a_n}$

If three terms are in geometric progression then the middle term is a geometric mean of the other two terms, i.e. if a, b, and c are in GP, then b is the geometric mean of the three terms and $b^2 = ac$.

If there are two terms a and b, their geometric mean (GM) is given by $\sqrt{ab}$.

For any two unequal positive numbers a and b, their arithmetic mean is always greater than their geometric mean, i.e.

For any two unequal positive numbers a and b, $\frac{a+b}{2} > \sqrt{ab}$; $(a + b) > 2\sqrt{ab}$ $b) >$

When there are three terms in geometric progression, we can represent the three terms to be a/r, a, and ar

When there are four terms in geometric progression, we can represent the four terms as $\frac{a}{r^3}$, $\frac{a}{r}$, ar. and ar^3.

(In this case r^2 is the common ratio.)

Infinite Geometric Progression

If $-1 < r < +1$ or $|r| < 1$, then the sum of a geometric progression does not increase infinitely; it 'converges' to a particular value. Such a GP is referred to as an infinite geometric progression. The sum of an infinite geometric progression is represented by S_∞ and is given by the formula $S_\infty = \frac{a}{1-r}$.

Harmonic progression: If the reciprocals of the terms of a sequence are in arithmetic progression, the sequence is said to be a harmonic progression, For example, $1, \frac{1}{2}, \frac{1}{3}, \frac{1}{4}, \ldots$ is a harmonic progression. In general, the sequence $\frac{1}{a}, \frac{1}{a+d}, \frac{1}{a+2d}, \ldots$ is a harmonic progression.

If a, b, c are in harmonic progression, b is said to be the harmonic mean of a and c. In general, if $x_1, x_2, \ldots, x_n$ are in harmonic progression, $x_2, x_3, \ldots, x_{n-1}$ are the $n - 2$ harmonic means between x_1 and x_n.

Some Important Results

The results of the sums to n terms of the following series are quite useful and, hence, should be remembered by students.

Sum of the first n natural numbers $= \sum n = \frac{n(n+1)}{2}$

Sum of squares of the first n natural numbers

$$\sum n^2 = \frac{n(n+1)(2n+1)}{6}$$

Sum of cubes of first n natural numbers

$$\sum n^3 = \left[\frac{n(n+1)}{2}\right]^2 = \frac{n^2(n+1)^2}{4} = \left[\sum n\right]^2$$

Example 6

Find the 7^{th} term of the geometric progression whose first term is 6 and common ratio is 2.

Solution

n^{th} term of a GP $= ar^{n-1}$

$$7^{\text{th}} \text{ term} = 6\,(2^6) = 384$$

Example 7

A geometric progression has its first term as 64 and its common ratio as $\frac{1}{2}$. Find the sum of its first five terms.

Solution

Sum of the first n terms of a GP $= \dfrac{a(1-r^n)}{1-r}$

$$\text{Sum of its first five terms} = \frac{64\left(1-\left(\frac{1}{2}\right)^5\right)}{1-\frac{1}{2}} = 124$$

Example 8

Find the common ratio of the geometric progression whose first and last terms are 5 and $\dfrac{1}{25}$, respectively, and the sum of its terms is $\dfrac{624}{100}$.

Solution

Sum of the terms of a geometric progression whose common ratio is r is given by $\dfrac{r(\text{last term})-(\text{first term})}{r-1}$

$$\frac{r\left(\frac{1}{25}\right)-5}{r-1} = \frac{624}{100}.$$

$$\Rightarrow \quad 4r - 500 = 624r - 624$$

$$\Rightarrow \quad r = \frac{1}{5}.$$

Example 9

Three numbers in geometric progression have a sum of 42 and a product of 512. Find the numbers.

Solution

Let the numbers be $\dfrac{a}{r}$, a and ar.

$$\frac{a}{r} + a + ar = 42$$

$$\left(\frac{a}{r}\right)(a)(ar) = 512$$

$$a = 8$$

$$\frac{8}{r} + 8 + 8r = 42$$

$$8r^2 - 34r + 8 = 0$$

$$8r^2 - 32r - 2r + 8 = 0$$

$$(r-4)(4r-1) = 0$$

$$r = 4 \quad \text{or} \quad \frac{1}{4}$$

If $r = 4$, the numbers are 2, 8 and 32. If $r = \dfrac{1}{4}$, the numbers are same, but in the descending order.

Example 10

The sum of the terms of an infinite geometric progression is 27. The sum of their squares is 364.5. Find the common ratio.

Solution

Let the first term and the common ratio be a and r, respectively.

$$\text{Given that} \quad \frac{a}{1-r} = 27 \Rightarrow \left(\frac{a}{1-r}\right)^2 = 729$$

$$\text{And} \quad \frac{a^2}{1-r^2} = 364.5$$

$$\Rightarrow \quad a^2 = 729\,(1-r)^2$$

$$= 364.5\,(1-r^2)$$

$$729\,(1-r)^2 - \frac{729}{2}(1-r)(1+r) = 0$$

$$\frac{729}{2}(1-r)[2(1-r)-(1+r)] = 0$$

$$\Rightarrow \quad (1-r)(1-3r) = 0$$

$$r \neq 1 \quad (\because |r| < 1)$$

$$\therefore \quad r = \frac{1}{3}$$

Example 11

If $|x| < 1$, find the value of $3 + 6x + 9x^2 + 12x^3 + \cdots$

Solution

Let $S = 3 + 6x + 9x^2 + 12x^3 + \cdots$ (7)

$xS = 3x + 6x^2 + 9x^3 +$ (8)

Subtracting (8) from (7)

$$S(1-x) = 3\,(1 + x + x^2 + \cdots)$$

$$\text{As} \quad |x| < 1,\; S = \frac{3\left(\frac{1}{1-x}\right)}{1-x} = \frac{3}{(1-x)^2}$$

Example 12

Evaluate $\dfrac{1}{1(2)} + \dfrac{1}{2(3)} + \dfrac{1}{3(4)} + \cdots + \dfrac{1}{99(100)}$.

Solution

$$\frac{1}{1(2)} = \frac{1}{1} - \frac{1}{2}$$

$$\frac{1}{2(3)} = \frac{1}{2} - \frac{1}{3}$$

$$\text{Finally} \quad \frac{1}{99(100)} = \frac{1}{99} - \frac{1}{100}$$

The given expression is $1 - \dfrac{1}{100} = \dfrac{99}{100}$

EXERCISES

Direction for questions 1 to 25: Select the correct alternative from the given choices.

1. The sixth term and the eleventh term of an arithmetic progression are 30 and 55, respectively. Find the twenty-first term of the series.
(A) $88\frac{1}{3}$ (B) 105 (C) 110 (D) $92\frac{1}{2}$

2. What is the 15th term of an arithmetic progression whose first term is equal to its common difference and whose 3rd term is 9?
(A) 15 (B) 30 (C) 45 (D) 60

3. If $x + 4$, $6x - 2$, and $9x - 4$ are three consecutive terms of an arithmetic progression, then find x.
(A) 2 (B) 4 (C) 6 (D) 8

4. Find the number of terms and the sum of the terms of the arithmetic progression 32, 28, … 4.
(A) 8; 144 (B) 7; 126
(C) 14; 252 (D) 15; 270

5. Find the sum of the first 31 terms of the arithmetic progression whose first term is 6 and whose common difference is $\frac{8}{3}$.
(A) 1410 (B) 1418 (C) 1426 (D) 1434

6. The sum of five terms of an arithmetic progression is 70. The product of the extreme terms is 132. Find the five terms.
(A) 4, 8, 12, 16, 20 (B) 10, 12, 14, 16, 18
(C) 6, 10, 14, 18, 22 (D) 8, 12, 16, 20, 24

7. The sum to n terms of an arithmetic progression is $5n^2 + 2n$. Find the n^{th} term of the series.
(A) $10n + 5$ (B) $10n - 3$
(C) $5n - 1$ (D) $5n - 2$

8. Which term of the geometric progression 4, $4\sqrt{2}$, 8 … is $64\sqrt{2}$?
(A) 8 (B) 9 (C) 10 (D) 12

9. Find the sixth term of the geometric progression whose first term is 2 and common ratio is 3.
(A) 96 (B) 486 (C) 1458 (D) 162

10. Find the sum of the first 4 terms of a geometric progression whose first term is 6 and whose common ratio is 2.
(A) 90 (B) 84 (C) 96 (D) 102

11. What is the sum of the first 7 terms of a geometric progression whose first term is 1 and 4th term is 8?
(A) 129 (B) 128
(C) 127 (D) None of these

12. If the sum to 37 terms of an arithmetic progression is 703, then find the middle term of the arithmetic progression.
(A) 34 (B) 17 (C) 38 (D) 19

13. Find the sum of the 20 terms of the series 1, (1 + 2), (1 + 2 + 3), (1 + 2 + 3 + 4), (1 + 2 + 3 + 4 + 5), …
(A) 1540 (B) 1435 (C) 1450 (D) 1345

14. If the real numbers a, c and b as well as $a^2 + b^2$, $a^2 + c^2$, and $b^2 + c^2$ are in geometric progression, then which of the following is necessary true?
(A) $a = b$ (B) $b = c$
(C) $a = c$ (D) $a = b = c$

15. How many numbers between 450 and 950 are divisible by both 3 and 7?
(A) 20 (B) 24 (C) 30 (D) 35

16. $S = 2 + 4x + 6x^2 + 8x^3$ … where $|x| < 1$. Which of the following is the value of S?
(A) $\frac{4}{(1-x)^2}$ (B) $\frac{3}{(1-x)^2}$
(C) $\frac{2}{(1-x)^2}$ (D) $\frac{1}{(1-x)^2}$

17. The sum of the first eight terms of a geometric progression. is 510 and the sum of the first four terms of the geometric progression. is 30. Find the first term of the geometric progression, given that it is positive.
(A) 2 (B) 4 (C) 6 (D) 8

18. Find the integer value of y, if $-x$, $2y$, and $2(y + 3)$ are in arithmetic progression and $(x + 2)$, $2(y + 1)$, and $(5y - 1)$ are in geometric progression.
(A) 2 (B) 3 (C) 4 (D) 5

19. Find the number of terms common to the progressions 2, 8, 14, 20, …, 98 and 6, 10, 14, 18, …, 102.
(A) 7 (B) 6 (C) 8 (D) 9

20. Find the sum of the series $2 + 3x + 4x^2 + 5x^3 + \cdots$ to infinity, if $|x| < 1$.
(A) $\frac{2-x}{(1-x)^2}$ (B) $\frac{2+x}{(1+x)^2}$
(C) $\frac{2-x}{(1+x)^2}$ (D) $\frac{2+x}{(1-x)^2}$

21. The mean of the sequence 3, 8, 17, 30, …, 1227 is _____.
(A) 531 (B) 431 (C) 314 (D) 315

22. Find the value of $-1^2 + 2^2 - 3^2 + 4^2 - 5^2 + 6^2 + \cdots -19^2 + 20^2$
(A) 210 (B) 420 (C) 630 (D) 720

23. Find the sum of the given terms in the following series: $\frac{1}{\sqrt{3}+1} + \frac{1}{\sqrt{3}+\sqrt{5}} + \frac{1}{\sqrt{5}+\sqrt{7}} + \cdots + \frac{1}{\sqrt{119}+\sqrt{121}}$
(A) $2\sqrt{3}+1$ (B) 5
(C) $11 - 2\sqrt{3}$ (D) 10

24. If $\log_3 x + \log_{\sqrt[3]{3}} x + \log_{\sqrt[5]{3}} x + \cdots + \log_{\sqrt[23]{3}} x = 432$, then find x.
(A) 9 (B) 27 (C) $3\sqrt{3}$ (D) 81

25. The sum of the first n terms of two arithmetic progressions S_1 and S_2 are in the ratio $11n - 17 : 5n - 21$. Find the ratio of the 16th terms of S_1 and S_2.
(A) 3 : 2 (B) 162 : 67
(C) 9 : 4 (D) 27 : 8

Permutations and Combinations

CHAPTER HIGHLIGHTS

- *Permutations*
- *Combinations*
- *Total Number of Combinations*
- *Dividing Given Items into Groups*
- *Circular Permutations*
- *Rank of a Word*
- *Arrangements*

Introduction

Permutations and combinations is one of the important areas in many exams because of two reasons. The first is that solving questions in this area is a measure of students' reasoning ability. Secondly, solving problems in areas like probability requires thorough knowledge of permutations and combinations.

Before discussing permutations and combinations, let us look at what is called as the 'fundamental rule'.

'If one operation can be performed in 'm' ways and (when, it has been performed in any one of these ways), a second operation then can be performed in 'n' ways, the number of ways of performing the two operations will be $m \times n$'.

This can be extended to any number of operations.

If there are three cities A, B, and C such that there are 3 roads connecting A and B and 4 roads connecting B and C, then the number of ways one can travel from A to C is 3×4, i.e. 12.

This is a very important principle, and we will be using it extensively in permutations and combinations. Because we use it very extensively, we do not explicitly state every time that the result is obtained by the fundamental rule but directly write down the result.

Permutations

Each of the arrangements which can be made by taking some or all of a number of items is called a permutation. Permutation implies 'arrangement' or that 'order of the items' is important.

The permutations of three items a, b, and c, taken two at a time are ab, ba, ac, ca, cb, and bc. Since the order in which the items are taken is important, ab and ba are counted as two different permutations. The words 'permutation' and 'arrangement' are synonymous and can be used interchangeably.

The number of permutations of n things taking r at time is denoted by ${}^nP_r$ (and read as '${}^nP_r$').

Combinations

Each of the groups or selections which can be made by taking some or all of a number of items is called a combination. In combinations, the order in which the items are taken is not considered as long as the specific things are included.

The combination of three items a, b, and c taken two at a time are ab, bc, and ca. Here, ab and ba are not considered separately because the order in which a and b are taken is not important but it is only required that a combination including a and b is what is to be counted. The words 'combination' and 'selection' are synonymous.

The number of combinations of n things taking r at time is denoted by ${}^nC_r$ (and read as '${}^nC_r$').

Number of linear permutations of 'n' dissimilar items taken 'r' at a time without repetition (${}^nP_r$)

Consider r boxes each of which can hold one item. When all the r boxes are filled, what we have is an arrangement of r items taken from the given n items. So, each time we fill up the r boxes with items taken from the given n items, we

have an arrangement of r items taken from the given n items without repetition. Hence, the number of ways in which we can fill up the r boxes by taking things from the given n things is equal to the number of permutations of n things taking r at a time.

Boxes □ □ □ □ .... □
1 2 3 4 r

The first box can be filled in n ways (because any one of the n items can be used to fill this box). Having filled the first box, to fill the second box, we now have only $(n - 1)$ items; any one of these items can be used to fill the second box, and, hence. the second box can be filled in $(n - 1)$ ways; similarly, the third box in $(n - 2)$ ways and so on the r^{th} box can be filled in $\{n - (r - 1)\}$ ways, i.e. $[n - r + 1]$ ways. Hence, from the Fundamental Rule, all the r boxes together be filled up in

$$n \times (n - 1) \times (n - 2) \ldots (n - r + 1) \text{ ways}$$

So, $\quad {}^nP_r = n \times (n - 1) \times (n - 2) \ldots (n - r + 1)$

This can be simplified by multiplying and dividing the right hand side by $(n - r)\ (n - r - 1) \ldots 3.2.1$ giving us ${}^nP_r = n(n - 1)\ (n - 2) \ldots [n - (r - 1)]$

$$= \frac{(n-1)(n-2)\ldots[n-(r-1).(n-r)\ldots 3.2.1]}{(n-r)\ldots\ldots\ldots 3.2.1} = \frac{n!}{(n-r)!}$$

The number of permutations of n distinct items taking r items at a time is

$$\boxed{{}^n p_r = \frac{n!}{(n-r)!}}$$

If we take n items at a time, then we get ${}^nP_n$. From a discussion similar to that we had for filling the r boxes above, we can find that ${}^nP_n$ is equal to $n!$

The first box can be filled in n ways, the second one in $(n - 1)$ ways, the third one in $(n - 2)$ ways, and so on, then the n^{th} box in 1 way; hence, all the n boxes can be filled in $n(n - 1)\ (n - 2) \ldots 3.2.1$ ways, i.e., $n!$ ways. Hence,

$$\boxed{{}^nP_n = n!}$$

But if we substitute $r = n$ in the formula for ${}^nP_r$, then we get ${}^nP_n = \frac{n!}{0!}$; since we already found that ${}^nP_n = n!$, we can conclude that $0! = 1$

Number of combinations of n dissimilar things taken r at a time.

Let the number of combinations ${}^nC_r$ be x. Consider one of these x combinations. Since this is a combination, the order of the r items is not important. If we now impose the condition that order is required for these r items, we can get $r!$ arrangements from this one combination. So, each combination can give rise to $r!$ permutations. x combinations will thus give rise to $x\,.\,r!$ permutations. But, since these are all permutations of n things taken r at a time, this must be equal to ${}^nP_r$. So,

$$x.r! = {}^nP_r = \frac{n!}{(n-r)!}$$

$$\Rightarrow \quad {}^nC_r = \frac{n!}{r!.(n-r)!}$$

The number of combinations of n dissimilar things taken all at a time is 1.

Out of n things lying on a table, if we select r things and remove them from the table, we are left with $(n - r)$ things on the table — that is, whenever r things are selected out of n things, we automatically have another selection of the $(n - r)$ things. Hence, the number of ways of making combinations taking r out of n things is the same as selecting $(n - r)$ things out of n given things, i.e.

$$\boldsymbol{{}^nC_r = {}^nC_{n-r}}$$

When we looked at ${}^nP_r$, we imposed two constraints which we will now release one by one and see how to find out the number of permutations.

Number of arrangements of n items of which p are of one type, q are of a second type, and the rest are distinct

When the items are all not distinct, then we **cannot** talk of a general formula for $\boldsymbol{{}^nP_r}$ for any r but we can talk of only ${}^nP_n$ (which is given below). If we want to find out ${}^nP_r$ for a specific value of r in a given problem, we have to work on a case to case basis (this has been explained in one of the solved examples).

The number of ways in which n things may be arranged taking them all at a time, when p of the things are exactly alike of one kind, q of them exactly alike of another kind, r of them exactly alike of a third kind, and the rest all distinct is $\frac{n!}{p!\,q!\,r!}$.

Number of arrangements of n distinct items where each item can be used any number of times (i.e. repetition allowed)

You are advised to apply the basic reasoning given while deriving the formula for ${}^nP_r$ to arrive at this result also. The first box can be filled up in n ways; the second box can be filled in again n ways (even though the first box is filled with one item, the same item can be used for filling the second box also because repetition is allowed); the third box can also be filled in n ways, and so on; the r^{th} box can be filled in n ways. Now, all the r boxes together can be filled in $\{n.n.n.n \ldots r \text{ times}\}$ ways, i.e. $\boldsymbol{n^r}$ ways.

The number of permutations of n things, taken r at a time when each item may be repeated once, twice, up to r times in any arrangement is $\boldsymbol{n^r}$.

What is important is not this formula by itself but the reasoning involved. So, even while solving problems of this type, you will be better off if you go from the basic reasoning and not just apply this formula.

Total number of combinations: Out of n given things, the number of ways of selecting **one or more** things is where

we can select 1 or 2 or 3 and so on n things at a time; hence the number of ways is ${}^nC_1 + {}^nC_2 + {}^nC_3 + \cdots + {}^nC_n$

This is called 'the total number of combinations' and is equal to $2^n - 1$ where n is the number of things.

The same can be reasoned out in the following manner also.

There are n items to select from. Let each of these be represented by a box.

	1	2	3	4		n
No. of ways of dealing	☐	☐	☐	☐	....	☐
with the boxes	2	2	2	2		2

The first box can be dealt with in two ways. In any combination that we consider, this box is **either** included **or** not included. These are the two ways of dealing with the first box. Similarly, the second box can be dealt with in two ways, the third one in two ways, and so on; the n^{th} box in two ways. By the Fundamental Rule, the number of ways of dealing with all the boxes together in $2 \times 2 \times 2 \times \cdots n$ times ways, i.e. in 2^n ways. But out of these, there is one combination where we 'do not include the first box, do not include the second box, do not include the third box and so on, do not include the n th box'. That means, no box is included. But this is not allowed because we have to select **one or more** of the items (i.e. at least one item). Hence, this combination of no box being included is to be subtracted from the 2^n ways to give the result of

Number of ways of selecting one or more items from n given items is $2^n - 1$

Dividing given items into groups: Dividing $(p + q)$ items into two groups of p and q items, respectively.

Out of $(p + q)$ items, if we select p items (which can be done in ${}^{p+q}C_p$ ways), then we will be left with q items, i.e. we have two groups of p and q items, respectively. So, the number of ways of dividing $(p + q)$ items into two groups of p and q items, respectively, is equal to ${}^{p+q}C_p$ which is equal to $\dfrac{(p+q)!}{p!\,q!}$

The number of ways of dividing $(p + q)$ items into two groups of p and q items respectively is $\dfrac{(p+q)!}{p!\cdot q!}$.

If $p = q$, i.e. if we have to divide the given items into two EQUAL groups, then two cases arise

1. When the two groups have distinct identity and
2. When the two groups do not have distinct identity.

In the first case, we just have to substitute $p = q$ in the aforementioned formula which then becomes

The number of ways of dividing 2p items into two equal groups of p each is $\dfrac{(2p)!}{(p!)^2}$ where the two groups have distinct identity.

In the second case, where the two groups do not have distinct identity, we have to divide the above result by 2!, i.e. it then becomes

The number of ways of dividing 2p items into two equal groups of p each is $\dfrac{(2p)!}{2!(p!)^2}$ where the two groups do not have distinct identity.

Dividing $(p + q + r)$ items into three groups consisting of p, q, and r items, respectively

The number of ways in which $(p + q + r)$ things can be divided into three groups containing p, q, and r things, respectively, is $\dfrac{(p+q+r)!}{p!\,q!\,r!}$.

If $p = q = r$, i.e. if we have to divide the given items into three EQUAL groups, then we have two cases where the three groups are distinct and where the groups are not distinct.

When the three groups are distinct, the number of ways is $\dfrac{(3p)!}{(p!)^3}$.

When the three groups are not distinct, then the number of ways is $\dfrac{(3p)!}{3!(p!)^3}$.

Circular Permutations

When n distinct things are arranged in a straight line taking all the n items, we get $n!$ permutations. However, if these n items are arranged in a circular manner, then the number of arrangements will not be $n!$ but it will be less than that. This is because in a straight line manner, if we have an arrangement ABCDE and if we move every item one place to the right (in cyclic order), the new arrangement that we get EABCD is not the same as ABCDE and this also is counted in the $n!$ permutations that we talked of. However, if we have an arrangement ABCDE in a circular fashion, by shifting every item by one place in the clockwise direction, we still get the same arrangement ABCDE. So, if we now take $n!$ as the number of permutations, we will be counting the same arrangement more than once.

The number of arrangements in circular fashion can be found out by first fixing the position of one item. Then the remaining $(n - 1)$ items can be arranged in $(n - 1)!$ ways. Now, even if we move these $(n - 1)$ items by one place in the clockwise direction, then the arrangement that we get will not be the same as the initial arrangement because one item is fixed and it does not move.

Hence, the number of ways in which n distinct things can be arranged in a circular arrangement is $(n - 1)!$

> *The number of **circular arrangements** of **n distinct items** is **(n – 1)!** if there is **DIFFERENCE** between clockwise and anticlockwise arrangements and **(n – 1)!/2** if there is **NO DIFFERENCE** between clockwise and anticlockwise arrangements.*

The number of diagonals in an n-sided regular polygon

An n-sided regular polygon has n vertices. Joining any two vertices, we get a line of the polygon that are ${}^nC_2$ in number. Of these ${}^nC_2$ lines, n of them are sides. Hence, diagonals are ${}^nC_2 - n = \dfrac{n(n-3)}{2}$.

Number of integral solution of the equation

$$x_1 + x_2 + \cdots + x_n = s$$

Consider the equation $x_1 + x_2 + x_3 = 10$.

If we consider all possible integral solutions of this equation, there are infinitely many. But, the number of positive (or non-negative) integral solutions is finite.

We would like the number of positive integral solutions of this equation, i.e. values of (x_1, x_2, x_3) such that each $x_i > 0$.

We imagine 10 identical objects arranged on a line. There are 9 gaps between these 10 objects. If we choose any two of these gaps, we are effectively splitting the 10 identical objects into 3 parts of distinct identity. Conversely, every split of these 10 objects corresponds to a selection of 2 gaps out of the 9 gaps.

Therefore, the number of positive integral solutions is ${}^9C_2$. In general, if $x_1 + x_2 + \cdots + x_n = s$ where $s \geq n$, the number of positive integral solutions is ${}^{s-1}C_{n-1}$.

If we need the number of non negative integral solutions, we proceed as follows. Let $a_1, a_2, \ldots$ be a non-negative integral solution. Then, $a_1 + 1$, $a_2 + 1$, …, $a_n + 1$ is a positive integral solution of the equation $x_1 + x_2 + \cdots + x_n = s + n$. Therefore, the number of non-negative integral solutions of the given equation is equal to the number of positive integral solutions of $x_1 + x_2 + \cdots + x_n = s + n$, which is ${}^{s+n-1}C_{n-1}$.

> *For $x_1 + x_2 + x_3 + \cdots + x_n = s$ where $s \geq 0$, the number of **positive integral solutions** (when $s \geq n$) is ${}^{s-1}\boldsymbol{C_{n-1}}$ and the number of **non-negative integral solutions** is ${}^{n+s-1}\boldsymbol{C_{n-1}}$*

Some additional points

1. Suppose there are n letters and n corresponding addressed envelopes. The numbers of ways of placing these letters into the envelopes such that no letter is placed in its corresponding envelope is often referred as derangements. The number of derangements of n objects is given by

$$D(n) = n!\left[1 - \frac{1}{1!} + \frac{1}{2!} - \frac{1}{3!} + \ldots + (-1)^n \frac{1}{n!}\right]$$

For example, when $n = 3$, the number of derangements is $D(3) = 3!\left[1 - \frac{1}{1!} + \frac{1}{2!} - \frac{1}{3!}\right] = 2$ and when $n = 4$,

$$D(4) = 4!\left[1 - \frac{1}{1!} + \frac{1}{2!} - \frac{1}{3!} + \frac{1}{4!}\right] = 9$$

2. The total number of ways in which a selection can be made by taking some or all out of $p + q + r + \cdots$ things where p are alike of one kind, q alike of a second kind, r alike of a third kind, and so on is

$$[\{(p + 1)(q + 1)(r + 1) \ldots\} - 1].$$

3. ${}^{n+1}C_r = {}^nC_r + {}^nC_{r-1}$ and ${}^nP_r = r.{}^{n-1}P_{r-1} + {}^{n-1}P_r$

Solved Examples

Example 1

Consider the word PRECIPITATION. Find the number of ways in which

(i) a selection
(ii) an arrangement

of 4 letters can be made from the letters of this word.

Solution

The word PRECIPITATION has 13 letters I, I, I, P, P, T, T, E, R, C, A, O, N of 9 different sorts.

In taking 4 letters, the following are the possibilities to be considered.

(a) all 4 distinct.
(b) 3 alike, 1 distinct.
(c) 2 alike of one kind, 2 alike of other kind.
(d) 2 alike, 2 other distinct.

Selections

(a) 4 distinct letters can be selected from 9 distinct letters (I, P, T, E, R, C, A, O, N) in ${}^9C_4 = 126$ ways.
(b) As 3 letters have to be alike, the only possibility is selecting all the I's. Now the 4th letter can be selected from any of the remaining 8 distinct letters in ${}^8C_1 =$ 8 ways.
(c) Two pairs of two alike letters can be selected from I's, Q's, and T's in ${}^3C_2 = 3$ ways.
(d) The two alike letters can be selected in ${}^3C_1 = 3$ ways and the two distinct letters can now be selected from the 8 distinct letters in ${}^8C_2 = 28$ ways. Hence, required number of ways are $3 \times 28 = 84$.

Hence, the total selections are $126 + 8 + 3 + 84 = 221$.

Arrangements: For arrangements, we find the arrangements for each of the aforementioned selections and add them up.

(a) As the 4 letters are distinct, there are 4! arrangements for each selection. Hence required arrangements are $126 \times 4! = 3024$.

(b) Since 3 of the 4 letters are alike, there are $\frac{4!}{3!}$ arrangements for each of the selection. Hence, required arrangements are $8 \times \frac{4!}{3!} = 32$.

(c) The required arrangements here are $3 \times \frac{4!}{2!\,2!} = 18$

(d) The required arrangements are $84 \times \frac{4!}{2!} = 1008$.

Total number of arrangements are 3024 + 32 + 18 + 1008 = 4082.

Example 2

How many four letter words can be formed using the letters of the word 'ROAMING'?

Solution

None of the letters in the word are repeated.
∴ The number of four letter words that can be formed = ${}^7P_4$
$= \frac{7!}{3!} = (7)\,(6)\,(5)\,(4) = 840.$

Example 3

In a party, each person shook hands with every other person present. The total number of hand shakes was 28. Find the number of people present in the party.

Solution

Let the number of people present in the party be n.

Method 1: The first people shakes hands with a total of $(n - 1)$ persons, the second with $(n - 2)$ other people, and so on.

The total number of hand shakes is

$$(n - 1) + (n - 2) + \cdots + 2 + 1$$

$$\frac{n(n-1)}{2} = 28 \quad \text{(given)}$$

$$\Rightarrow \quad n = 8$$

Method 2: Number of hand shakes = Number of ways of selecting 2 people out of $n = {}^nC_2$.

$${}^nC_2 = 28$$

$$\frac{n(n-1)}{2!} = 28$$

$$\Rightarrow \quad n = 8$$

Direction for examples 3 to 7: The following examples are based on the data below.

The letters of NESTLE are permuted in all possible ways.

Example 4

How many of these words begin with T?

Solution

NESTLE has 6 letters of which the letter E occurs two times. Therefore, the required number of words = Number of ways of filling N, E, S, E, and L in the second to sixth positions $= \frac{5!}{2!} = 60$.

Example 5

How many of these words begin and end with E?

Solution

The required number of words = The number of ways of filling N, S, T, and L in the second to fifth positions = 4! = 24.

Example 6

How many of these words begin with S and end with L?

Solution

The required number of words = The number of ways of filling N, E, T, and E in the second to fifth positions $= \frac{4!}{2!} = 12$.

Example 7

How many of these words neither begin with S nor end with L?

Solution

The required number of words = The total number of words which can be formed using the letters N, E, S, T, and E – (Number of words which begin with S or end with L) $= \frac{6!}{2!}$ – (Number of words beginning with S + Number of words ending with L – Number of words beginning with S and ending with L)

$$= \frac{6!}{2!} - \left(\frac{5!}{2!} + \frac{5!}{2!} - \frac{4!}{2!}\right)$$

$$= 360 - (60 + 60 - 12) = 252.$$

Example 8

How many of these words begin with T and do not end with N?

Solution

The required number of words = The number of words beginning with T – The number of words beginning with T and ending with $N = \frac{5!}{2!} - \frac{4!}{2!} = 48$.

Direction for examples 8 to 11: The following examples are based on the data below.

The letters of FAMINE are permuted in all possible ways.

Example 9

How many of these words have all the vowels occupying odd places?

Solution

FAMINE has 3 vowels and 3 consonants.

The vowels can be arranged in the odd places in 3! or 6 ways.

The consonants would have to be arranged in even places. This is possible in 3! or 6 ways as well.

$\therefore$ The required number of words = $6^2 = 36$.

Example 10

How many of these words have all the vowels together?

Solution

If all the vowels are together, the vowels can be arranged in 3! ways among themselves.

Considering the vowels as separate a unit and each of the other letters as a unit, we have a total of 4 units that can be arranged in 4! ways.

$\therefore$ The required number of words = 4! 3! = 144

Example 11

How many of these words have at least two of the vowels separated?

Solution

The required number of words = The total number of words which can be formed using the letters *F, A, M, I, N,* and *E* – The number of words with all the vowels together = 6! – 4! 3! = 576.

Example 12

How many of these words have no two vowels next to each other?

Solution

To ensure that no two vowels are together, we first arrange the 3 consonants say $-c_1 - c_2 - c_3 -$ and place the vowels in the gaps between the consonants or the initial or final position. For each arrangement of the consonants, there are 4 places where the vowels can go. The vowels can be dealt with in 4 (3) (2) ways.

$\therefore$ The total number of words is 3! 4! = 144.

Direction for examples 17 and 18: The following examples are based on the data below.

A committee of 5 is to be formed from 4 women and 6 men.

Example 18

In how many ways can it be formed if it consists of exactly 2 women?

Solution

The committee must have 2 women and 3 men.

$\therefore$ The required number of ways = ${}^4C_2\,{}^6C_3 = 120$.

Example 19

In how many ways can it be formed if it consists of more women than men?

Solution

The committee must have either 4 women and 1 man or 3 women and 2 men.

$\therefore$ The required number of ways

$$= {}^4C_4\,{}^6C_1 + {}^4C_3\,{}^6C_2 = 6 + 60 = 66.$$

Example 20

Find the number of four-digit numbers that can be formed using four of the digits 0, 1, 2, 3, and 4 without repetition.

Solution

The first digit has 4 possibilities (1, 2, 3, and 4).

The second digit has 4 possibilities (0 and any of the three digits not used as the first digit).

The third digit has 3 possibilities.

The last digit has 2 possibilities.

$\therefore$ The required number of numbers = (4) (4) 3 (2) = 96.

Example 21

The number of diagonals of a regular polygon is four times the number of its sides. How many sides does it have?

Solution

Let the number of sides in the polygon be n.

$$\frac{n(n-3)}{2} = 4n$$

$$n(n-11) = 0;\ n > 0$$

$$\therefore \quad n - 11 = 0;$$

$$\therefore \quad n = 11.$$

Exercises

Direction for questions 1 to 25: Select the correct alternative from the given choices.

1. A man has 12 blazers, 10 shirts, and 5 ties. Find the number of different possible combinations in which he can wear the blazers, shirts, and ties.
(A) 27 (B) 300 (C) 240 (D) 600

2. How many different words can be formed by using all the letters of the word INSTITUTE?
(A) $\frac{9!}{2!}$ (B) 9 ! (C) $\frac{9!}{3!}$ (D) $\frac{9!}{3!2!}$

3. In how many ways can a cricket team of 11 members be selected from 15 players, so that a particular player is included and another particular player is left out?
(A) 216 (B) 826 (C) 286 (D) 386

4. A group contains n persons. If the number of ways of selecting 6 persons is equal to the number of ways of selecting 9 persons, then the number of ways of selecting four persons from the group is
(A) 1365 (B) 273 (C) 455 (D) 285

5. The number of ways of arranging 10 books on a shelf such that two particular books are always together is
(A) 9! 2! (B) 9! (C) 10! (D) 8

6. Find the number of ways of inviting at least one among 6 people to a party.
(A) 2^6 (B) $2^6 - 1$ (C) 6^2 (D) $6^2 - 1$

7. An eight-letter word is formed by using all the letters of the word ‘EQUATION’. How many of these words begin with a consonant and end with a vowel?
(A) 3600 (B) 10800
(C) 2160 (D) 720

8. A committee of 5 members is to be formed from a group of 6 men and 4 women. In how many ways can the committee be formed such that it contains more men than women?
(A) 180 (B) 186 (C) 126 (D) 66

9. In how many ways can 10 boys and 10 girls be arranged in a row so that all the girls sit together?
(A) 10! (B) 11!
(C) 20! (D) 10! 11!

10. In how many ways can 6 boys and 5 girls be arranged in a row so that boys and girls sit alternately?
(A) $(6!)^2$ (B) $(5!)^2$
(C) 6! 5! (D) 2.5! 6!

11. There are seven letters and corresponding seven addressed envelopes. All the letters are placed randomly into the envelopes—one in each envelope. In how many ways can exactly two letters be placed into their corresponding envelopes?
(A) 44 (B) 924 (C) 308 (D) 189

12. We are given 3 different green dyes, 4 different red dyes, and 2 different yellow dyes. The number of ways in which the dyes can be chosen so that at least one green dye and one yellow dye is selected is
(A) 336 (B) 335 (C) 60 (D) 59

13. Prahaas attempts a question paper that has 3 sections with 6 questions in each section. If Prahaas has to attempt any 8 questions, choosing at least two questions from each section, then in how many ways can he attempt the paper?
(A) 18000 (B) 10125
(C) 28125 (D) 9375

14. Find the number of selections that can be made by taking 4 letters from the word INKLING.
(A) 48 (B) 38 (C) 28 (D) 18

15. A man has $(2n + 1)$ friends. The number of ways in which he can invite at least $n + 1$ friends for a dinner is 4096. Find the number of friends of the man.
(A) 11 (B) 15 (C) 17 (D) 13

16. How many four-digit numbers are there between 3200 and 7300, in which 6, 8, and 9 together or separately do not appear?
(A) 1421 (B) 1420
(C) 1422 (D) 1077

17. Raju has forgotten his six-digit ID number. He remembers the following: the first two digits are either 1, 5 or 2, 6, the number is even and 6 appears twice. If Raju uses a trial and error process to find his ID number at the most, how many trials does he need to succeed?
(A) 972 (B) 2052
(C) 729 (D) 2051

18. A matrix with four rows and three columns is to be formed with entries 0, 1, or 2. How many such distinct matrices are possible?
(A) 12 (B) 36 (C) 3^{12} (D) 2^{12}

19. In how many ways can 4 postcards be dropped into 8 letter boxes?
(A) ${}^8P_4$ (B) 4^8 (C) 8^4 (D) 24

20. In how many ways can 12 distinct pens be divided equally among 3 children?
(A) $\frac{12!}{(3!)^4}$ (B) $\frac{12!}{(4!)^3\,3!}$
(C) $\frac{12!}{3!4!}$ (D) $\frac{12!}{(4!)^3}$

21. If all possible five-digit numbers that can be formed using the digits 4, 3, 8, 6, and 9 without repetition are arranged in the ascending order, then the position of the number 89634 is
(A) 91 (B) 93 (C) 95 (D) 98

22. Manavseva, a voluntary organization, has 50 members who plan to visit 3 slums in an area. They decide to divide themselves into 3 groups of 25, 15, and 10. In how many ways can the group division be made?

(A) 25! 15! 10!
(B) $\frac{50!}{25!\,15!\,10!}$
(C) 50!
(D) 25! + 15! + 10!

23. In how many ways is it possible to choose two white squares so that they lie in the same row or same column on an 8×8 chessboard?

(A) 12 (B) 48 (C) 96 (D) 60

24. The number of four digit telephone numbers that have at least one of their digits repeated is

(A) 9000 (B) 4464 (C) 4000 (D) 3986

25. There are 4 identical oranges, 3 identical mangoes, and 2 identical apples in the basket. The number of ways in which we can select one or more fruits from the basket is

(A) 60 (B) 59 (C) 57 (D) 55

Answer Keys

Chapter 14

Data Interpretation

CHAPTER HIGHLIGHTS

- ☞ *Methods of Presenting Data*
- ☞ *Data table*
- ☞ *Pie Charts*
- ☞ *Two-Dimensional Graphs*

Introduction

Not a day passes without our coming across figures and statistics. Study and manipulation of such data leads us to an important area: Data Interpretation. Data can be organized in a number of ways so that larger volume of data can be presented in a more compact and precise form. Data thus presented have to be deciphered correctly by the user of the data. This process of deciphering the data from its compactly presented form is called Data Interpretation.

Methods of Presenting Data

Numerical data can be presented in one or more of the following ways:

1. Data Tables
2. Pie Charts
3. 2-Dimensional Graphs
4. Bar Charts
5. 3-Dimensional Graphs
6. Venn Diagrams
7. Geometrical Diagrams
8. Pert Charts
9. Others

The 'Others' category covers miscellaneous forms like descriptive case format customized for the situation. Data can also be presented by using a combination of two or more of the aforementioned forms.

While some data can be presented in many different forms, some other data may be amenable to be presented only in a few ways. In real life situations, the style of data presentation is based on the end-objective. In certain situations, data have to be presented as a combination of two or more forms of data presentation.

Let us understand each of the above forms of data presentation with an example.

Data Table

Here, data are presented in the form of simple table. While any type of data can be presented in tabular form, that too in a very accurate manner, interpreting the data in tabular form is more difficult and time consuming than the other modes, all of which are basically pictorial or graphical in presentation.

Data tables can be of a number of types. They can be of a single-table variety or combination of tables. Some examples of tables are given below.

Table 1 Movement of goods by different modes of transport

(in 000's of metric-ton-kms)

Year	Road	Rail	Air	Water	Total
1985	1000	1500	120	20	2640
1986	1600	2000	129	24	3753
1987	2907	3090	139	28	6164
1988	4625	5200	152	27	10004
1989	6346	7540	174	33	14093
1990	7920	10250	212	40	18422
1991	9540	13780	266	50	23636

From the table, we can deduce the following:

1. Rate of growth by each mode of transport in successive years as well as cumulative annual growth.
2. Rate of growth of total haulage by all modes of transport together in any year.
3. Contribution by each mode of transport to the total haulage in any given year.
4. Trends of growth over time for various modes of transport.
5. Given the cost of transportation for each mode, we can calculate the total annual cost of transportation over the years for various modes of transport as well make a cost comparison.
6. Finding out the mode of transportation in any given year that forms the largest percentage of total haulage.
7. For a given mode of transport, finding out the year in which the percentage increase in haulage over the previous year was the highest.

Pie Charts

This is probably the simplest of all pictorial forms of data presentation. Here, total quantity to be shown is distributed over one complete circle or 360 degrees. In pie-charts, data is essentially presented with respect to only one parameter (unlike in 2- and 3-dimensional graphs described later). This form essentially presents shares of various elements as proportion or percentage of the total quantity. Each element or group in the pie-chart is represented in terms of quantity (or value, as the case may be) or as the angle made by the sector representing the elements or as a proportion of the total or as a percentage of the total.

Figure 1 gives distribution of the population in different geographical zones.

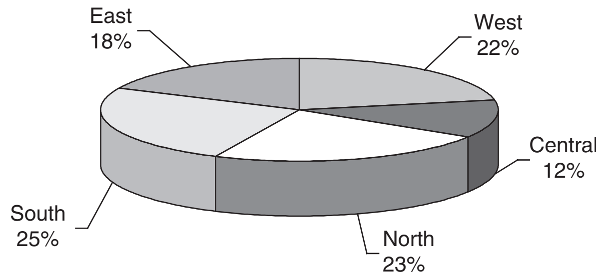

Figure 1 Distribution of population in geographical zones

From the above-mentioned pie chart, we can calculate the following:

1. Population in any zone given the total population.
2. Population of any zone as a percentage of that of another zone.
3. Percentage increase in the total population given the percentage increase in the population of one or more zones.

Pie Charts are also very frequently used in combination with other forms of data or along with other pie charts.

Two-Dimensional Graphs

This is essentially used for continuous data but can also be used for depicting discrete data provided we understand the limitation. Also known as Cartesian Graphs, they represent variation of one parameter with respect to another parameter each shown on a different axis. These types of graphs are useful in studying the rate of change or understanding the trends through extrapolations.

These graphs can be of various types, and a few of them are shown below (Figures 2 and 3):

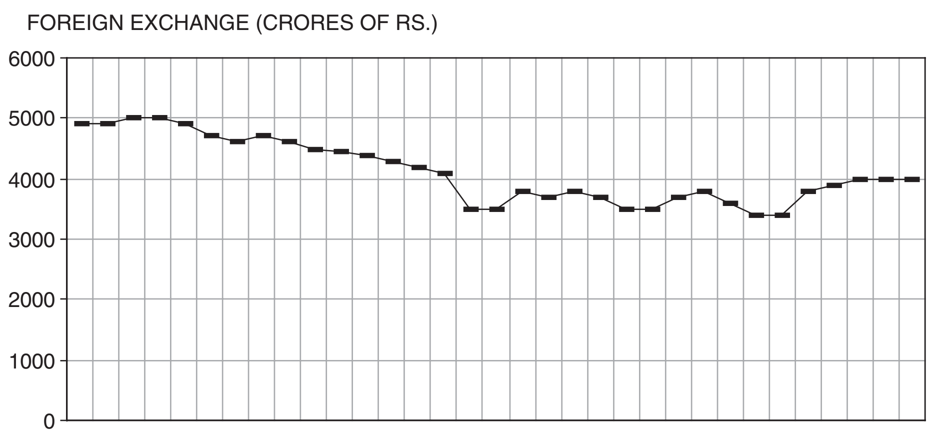

Figure 2 Foreign exchange reserves of India

The graph in Figure 2 shows the changes in the foreign exchange reserves of our country during a period of time. One can find out trends and the growth rates of foreign exchange reserves.

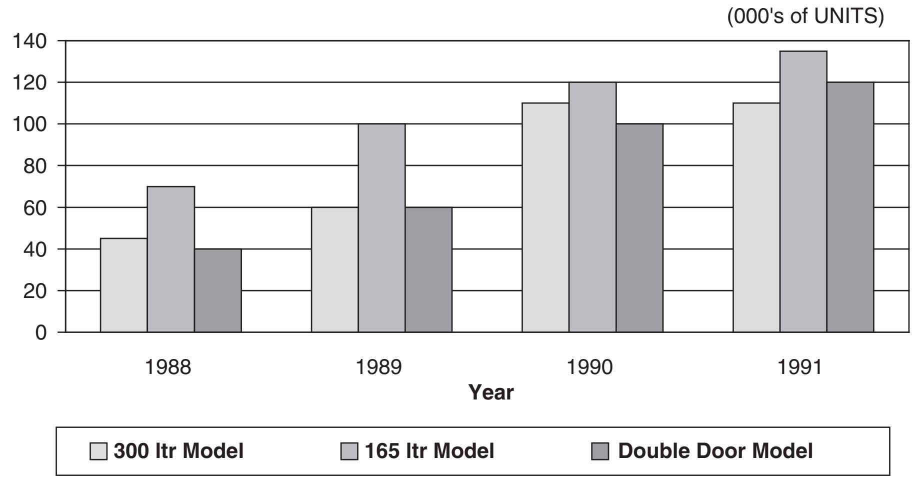

Figure 3 Refrigerator sales of company ABC

Chart 3 shows model wise sales of refrigerators during four years. From this graph, we can obtain the following:

1. Percentage contribution of each model to the company's total sales for four years.
2. Relative increase or decrease in the share of each model.
3. Sales trend of various models.

Using this bar chart, one can carry out a detailed performance evaluation of the company with respect to the sales of the four year period 1988 to 1991 for any given model. These bar charts can also be depicted horizontally. Another variation could be showing each product at one place (rather than each year at one place).

Example: These questions are based on the following table, which gives the details of the sports which students in all the classes of a school like.

The table gives the number of students in each class and the percentage of students in it who like cricket, volleyball, basketball, and football.

Class	Number of students	Cricket	Volleyball	Basketball	Football
6	120	60%	70%	50%	60%
7	140	50%	60%	60%	50%
8	160	40%	65%	55%	45%
9	180	65%	75%	65%	55%
10	240	70%	80%	75%	45%

Solved Examples

Example 1

How many students in the school like cricket?

(A) 436 (B) 432 (C) 491 (D) 511

Solution

Number of students who like cricket

$$= \frac{60}{100}(120) + \frac{50}{100}(140) + \frac{40}{100}(160) + \frac{65}{100}(180) + \frac{70}{100}(240) = 491$$

Example 2

By what percentage is the number of students who like volleyball in class 6 more/less than those who like basketball in class 10?

(A) 40% (B) 50%
(C) 53.33% (D) 56.67%

Solution

Number of students who like volleyball in class 6 $= \frac{70}{100}(120) = 84$

Number of students who like basketball in class 10 $= \frac{75}{100}(240) = 180$

84 is less than 180 by $\frac{180-84}{180}(100) = 53.33\%$.

Example 3

The number of students who like cricket in class 7 is what percentage of the number of students who like football in class 8?

(A) 88% (B) 93.5%
(C) 95.6% (D) 97.2%

Solution

Number of students who like cricket in class 7 = $\frac{50}{100}(140) = 70$

Number of students who like football in class 8 = $\frac{45}{100}(160) = 72$

Required percentage = $\frac{70}{72} \times 100 = 97.2\%$

Example 4

In how many of the given classes can more than 90 students like all the three games?

(A) 2 (B) 3 (C) 1 (D) 0

Solution

In any class, the maximum value of the number of students who like all the three games would be the number of students who like the game liked by the least number of students.

In class 6, the percentage of students who like a game is the least for basketball. Number of those who like basketball = $\frac{50}{100}(120) = 60 < 90$.

In class 7, the percentage of students who like a game is the least for cricket and football. Number of students who like cricket

$$= \frac{50}{100}(140) = 70 < 90$$

In class 8, the number of students who like a game is the least for cricket. Number of students who like cricket = $\frac{40}{100}(160) = 64 < 90$.

In class 9, the percentage of students who like a game is the least for football. Number of those who like football

$$= \frac{55}{100}(180) = 99 > 90$$

In class 10, the percentage of students who like a game is the least for football. Number of students who like football

$$= \frac{45}{100}(240) = 108 > 90$$

∴ In two classes, more than 90 students can like all the games.

Example 5

What can be the maximum percentage of students in class 6 who do not like any of the given games?

(A) 40% (B) 10% (C) 50% (D) 30%

Solution

In class 6, the maximum percentage of students who like a game = Percentage of students who like volleyball, i.e. 70%. Percentage of students who like at least one game would be minimum when all students who like other games are the ones who like volleyball.

∴ Maximum percentage required

= 100 – 70 = 30%.

Exercises

Direction for question 1: Select the correct alternative from the given choices.

1. The table shows the total marks of four students P, Q, R, and S in all their subjects for the two years 2012 and 2013.

Students	2012	2013
P	997	1295
Q	664	876
R	585	732
S	480	689

How many students had a percentage Increase in their total marks of more than 35% from 2012 to 2013?

(A) 1 (B) 2 (C) 3 (D) 4

Direction for questions 2 to 4: These questions are based on the following data which give some details of new states joining the United States of America across time.

State	Capital	Joined the union	Union rank	Population	Number of representatives in the house of representatives
Washington	Olympia	Nov 11, 1889	42	62,87,759	9
Texas	Austin	Dec 29, 1845	28	2,28,59,968	32
Delaware	Dover	Dec 7, 1781	1	8,43,524	1
Virginia	Raleigh	Nov 21, 1789	12	86,83,242	13

(Continued)

State	Capital	Joined the union	Union rank	Population	Number of representatives in the house of representatives
Minnesota	St. Paul	May 11, 1832	32	51,32,799	8
Kansas	Topeka	Jan 29, 1861	34	27,44,687	4
Illinois	Springfield	Dec 3, 1818	21	1,27,63,371	19
New Hampshire	Concord	June 21, 1788	9	13,09,940	2
Arizona	Phoenix	Feb 14, 1912	48	59,39,292	8
Hawai	Honolulu	Aug 21, 1959	50	12,75,194	2
Indiana	Indianapolis	Dec 11, 1816	19	62,71,973	9
Vermont	Montpelier	March 14, 1791	14	6,23,050	1
Nebraska	Lincoln	March 1, 1867	37	17,58,787	3
Georgia	Atlanta	Jan 2, 1788	4	9,07,256	13

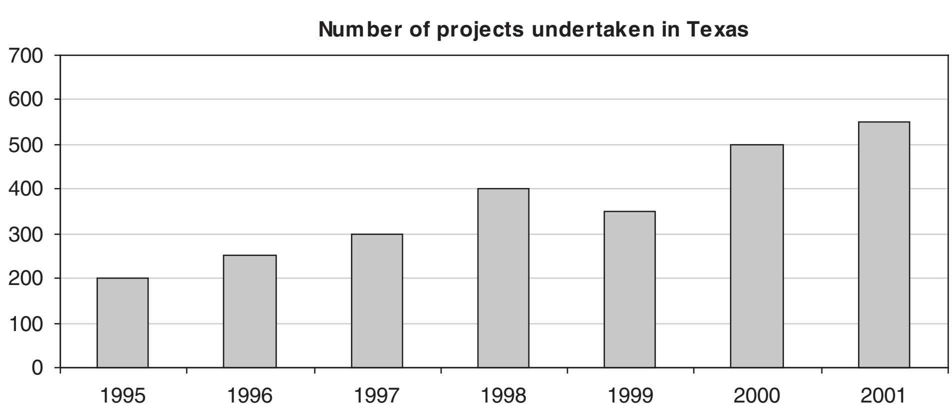
Union rank is the chronological order in which the states joined the Union.

2. How many states joined the Union from March 1, 1867, to Feb 14, 1912?
(A) 11 (B) 12
(C) 13 (D) 14

3. If it is known that the House of Representatives of USA has a strength of 535 members, then the number of representatives in the House of Representatives of the given states will form what approximate percentage of the total strength of the House of Representatives?
(A) 16 (B) 19 (C) 21 (D) 23

4. In how many of the given states is the population less than 15 million but the number of representatives is not less than six?
(A) 4 (B) 5 (C) 6 (D) 7

Direction for questions 5 to 7: These questions are based on the following graphs.



5. In how many years was the number of projects undertaken in Mexico greater than that in Texas?
(A) 3 (B) 6 (C) 5 (D) 4

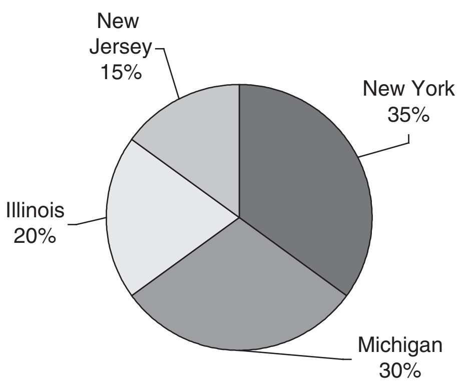
6. How many projects were undertaken in the year 1998 in both places together?
(A) 1000 (B) 900 (C) 750 (D) 500

7. In which of the following years was the average (arithmetic mean) number of projects undertaken in both places the highest?
(A) 2000 (B) 1996 (C) 1998 (D) 1999

Direction for questions 14 to 16: The table below shows the percentages of colleges offering the courses mentioned in medicine in four states, New York, New Jersey, Illinois, and Michigan, in a certain year.

Sl. No.	Course	New York	New Jersey	Illinois	Michigan
1.	Biochemistry	86	80	74	68
2.	Biophysics	74	92	88	64
3.	Biomechanics	59	82	84	68
4.	Biostatistics	56	84	86	70

The total number of colleges offering courses in medicine in the four states is 2000. The percentage-wise distribution of the number of colleges in the four states is as shown below.



8. The number of colleges offering the Biochemistry course is more than 230 in
(A) All the four states. (B) Exactly three states.
(C) Exactly two states. (D) Exactly one state.

9. What percentage of the colleges in the four states do not offer Biophysics as well as Biochemistry?
(A) 41%
(B) 36%
(C) 34%
(D) Cannot the determined

10. What is the total number of colleges offering Biostatistics in all the four states?
(A) 1392 (B) 1408 (C) 1432 (D) 1476

Direction for questions 11 and 12: Study the given table and answer the questions that follow.

Percentage break-up of the workers working in six different factories *J, K, L, M, N*, and *P*.

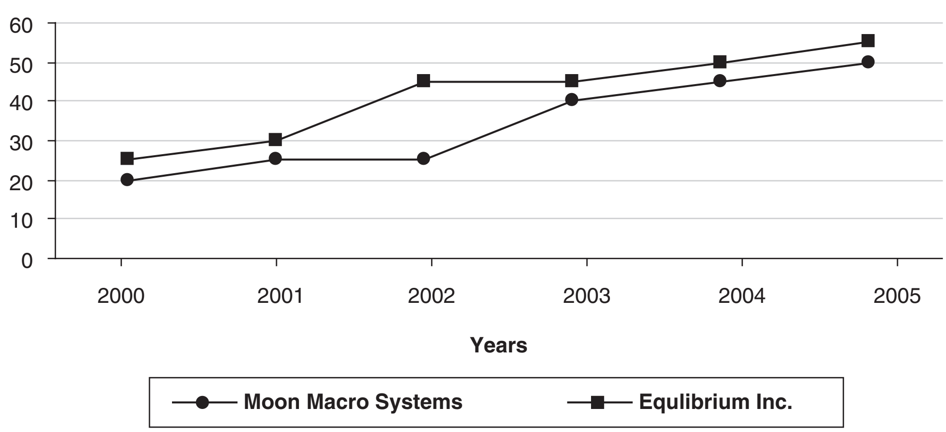
Factory	Total no. of workers	Percentage		
		Men	Women	Boys
J	4800	50	37.5	12.5
K	8750	40	36	24
L	5250	24	56	20
M	12000	35	25	40
N	8500	38	30	32
P	2700	45	40	15

11. By what percent is the number of women working in factory *P* is more than the number of boys working in factory *J*?
(A) 20% (B) $44\frac{4}{9}$%
(C) 80% (D) 180%

12. What is the ratio of the number of men working in factory *M* to the number of women working in factory *L*?
(A) 7 : 10 (B) 10 : 7 (C) 7 : 5 (D) 5 : 7

Direction for questions 13 to 15: These questions are based on the following line graph.

Numbers of employees of two companies each years over the period 2000 to 2005 (in thousands)

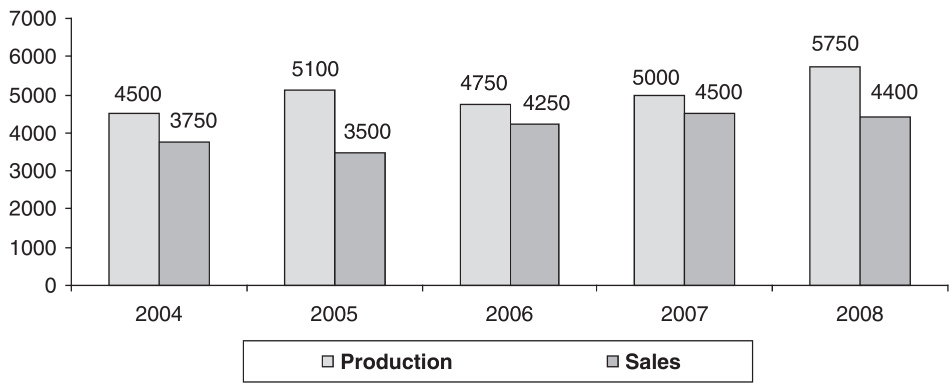


13. What is the ratio of the average number of employees of company Moon Macro Systems for the period 2001, 2002 and 2003 and the average number of employees of company Equilibrium Inc. for the same period?
(A) 2 : 5 (B) 3 : 5 (C) 3 : 4 (D) 4 : 3

14. During which of the following years was the percentage increase in the number of employees of company Equilibrium Inc. over that in the previous year the highest?
(A) 2000
(B) 2001
(C) 2002
(D) 2004

15. What is the approximate percentage increase in the total number of employees of the two companies from 2004 to 2005?
(A) 8.5% (B) 9%
(C) 9.5% (D) 10.5%

Direction for questions 16 and 17: These questions are based on the following bar graph that gives the production and sales of a company across five years from 2004 to 2008.



16. In the given period, what percentage was the average production more than the average sales?
(A) 20% (B) 23%
(C) 25% (D) 28%

17. The percentage increase/decrease in the total sales of the company in a given year with respect to that in the previous year was highest in which of the following years?
(A) 2005 (B) 2006 (C) 2007 (D) 2008

Previous Years' Questions

1. If $\left(z+\frac{1}{z}\right)^2 = 98$, compute $\left(z^2+\frac{1}{z^2}\right)$. **[GATE, 2014]**

2. The roots of $ax^2 + bx + c = 0$ are real and positive. a, b and c are real. Then $ax^2 + b\,|x| + c = 0$ has **[GATE, 2014]**
(A) no roots (B) 2 real roots
(C) 3 real roots (D) 4 real roots

3. Round–trip tickets to a tourist destination are eligible for a discount of 10% on the total fare. In addition, groups of 4 or more get a discount of 5% on the total fare. If the one way signle person fare is ₹100, a group of 5 tourists purchasing round-trip tickets will be charged ₹_______. **[GATE, 2014]**

4. In a survey, 300 respondents were asked whether they own a vehicle or not. If yes, they were further asked to mention whether they own a car or scooter or both. Their responses are tabulated below. What percent of respondents do not own a scooter? **[GATE, 2014]**

		Men	Women
	Car	40	34
Own vehicle	Scooter	30	20
	Both	60	46
Do not own vehicle		20	50

5. When a point inside of a tetrahedron (a solid with four triangular surfaces) is connected by straight lines to its corners, how many (new) internal planes are created with these lines? _______. **[GATE, 2014]**

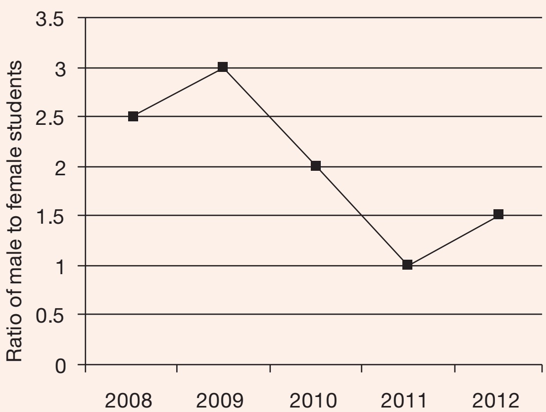
6. What is the average of all multiples of 10 from 2 to 198? **[GATE, 2014]**
(A) 90 (B) 100
(C) 110 (D) 120

7. The value of $\sqrt{12+\sqrt{12+\sqrt{12+\cdots}}}$ is **[GATE, 2014]**
(A) 3.464 (B) 3.932
(C) 4.000 (D) 4.444

8. If x is real and $|x^2 - 2x + 3| = 11$, then possible values of $|-x^3 + x^2 - x|$ include **[GATE, 2014]**

(A) 2, 4 (B) 2, 14
(C) 4, 52 (D) 14, 52

9. The ratio of male to female students in a college for five years is plotted in the following line graph. If the number of female students doubled in 2009, by what percent did the number of male students increase in 2009? **[GATE, 2014]**



(A) 1 : 1 (B) 2 : 1
(C) 1.5 : 1 (D) 2.5 : 1

10. The table below has question-wise data on the performance of students in an examination. The marks for each questions are also listed. There is no negative or partial marking in the examination.

Q.No.	Marks	Answered correctly	Answered wrongly	Not Attempted
1	2	21	17	6
2	3	15	27	2
3	2	23	18	3

What is the average of the marks obtained by the class in the examination? **[GATE, 2014]**

(A) 1.34 (B) 1.74
(C) 3.02 (D) 3.91

11. The Gross Domestic Product (GDP) in Rupees grew at 7% during 2012–2013. For international comparison, the GDP is compared in US Dollars (USD) after conversion based on the market exchange rate. During the period 2012–2013 the exchange rate for the USD increased from ₹50/USD to ₹60/USD. India's GDP in USD during the period 2012–2013 **[GATE, 2014]**

(A) Increased by 5%
(B) Decreased by 13%
(C) Decreased by 20%
(D) Decreased by 11%

12. Consider the equation: $(7256)_8 - (Y)_8 = (4364)_8$, where $(X)_N$ stands for X to the base N. Find Y. **[GATE, 2014]**

(A) 1634 (B) 1737
(C) 3142 (D) 3162

13. What will be the maximum sum of 44, 42, 40, ...? **[GATE, 2013]**

(A) 502 (B) 504
(C) 506 (D) 500

14. A tourist covers half of his journey by train at 60 km/h, half of the remainder by bus at 30 km/h and the rest by cycle at 10 km/h. The average speed of the tourist in km/h during his entire journey is **[GATE, 2013]**

(A) 36 (B) 30
(C) 24 (D) 18

15. The current erection cost of a structure is ₹13,200. If the labour wages per day increase by $\frac{1}{5}$ of the current wages and the working hours decrease by $\frac{1}{24}$ of the current period, then the new cost of erection in ₹ is **[GATE, 2013]**

(A) 16,500 (B) 15,180
(C) 11,000 (D) 10,120

16. Out of all the 2-digit integers between 1 and 100, a 2-digit number has to be selected at random. What is the probability that the selected number is not divisible by 7? **[GATE, 2013]**

(A) $\frac{13}{90}$ (B) $\frac{12}{90}$
(C) $\frac{78}{90}$ (D) $\frac{77}{90}$

17. Find the sum of the expression

$$\frac{1}{\sqrt{1}+\sqrt{2}} + \frac{1}{\sqrt{2}+\sqrt{3}} + \frac{1}{\sqrt{3}+\sqrt{4}} + \cdots + \frac{1}{\sqrt{80}+\sqrt{81}}$$

[GATE, 2013]

(A) 7 (B) 8
(C) 9 (D) 10

18. The cost function for a product in a firm is given by $5q^2$, where q is the amount of production. The firm can sell the product at a market price of ₹50 per unit. The number of units to be produced by the firm such that the profit is maximized is **[GATE, 2012]**

(A) 5 (B) 10
(C) 15 (D) 25

19. Which of the following assertions are **CORRECT**?

P: Adding 7 to each entry in a list adds 7 to the mean of the list.

Q: Adding 7 to each entry in a list adds 7 to the standard deviation of the list.

R: Doubling each entry in a list doubles the mean of the list.

S: Doubling each entry in a list leaves the standard deviation of the list unchanged. **[GATE, 2012]**

(A) P, Q (B) Q, R
(C) P, R (D) R, S

20. A political party orders an arch for the entrance to the ground in which the annual convention is being held. The profile of the arch follows the equation $y = 2x - 0.1x^2$ where y is the height of the arch in meters. The maximum possible height of the arch is **[GATE, 2012]**

(A) 8 meters
(B) 10 meters
(C) 12 meters
(D) 14 meters

21. An automobile plant contracted to buy shock absorbers from two suppliers X and Y. X supplies 60% and Y supplies 40% of the shock absorbers. All shock absorbers are subjected to a quality test. The ones that pass the quality test are considered reliable. Of X's shock absorbers, 96% are reliable. Of Y's shock absorbers, 72% are reliable.

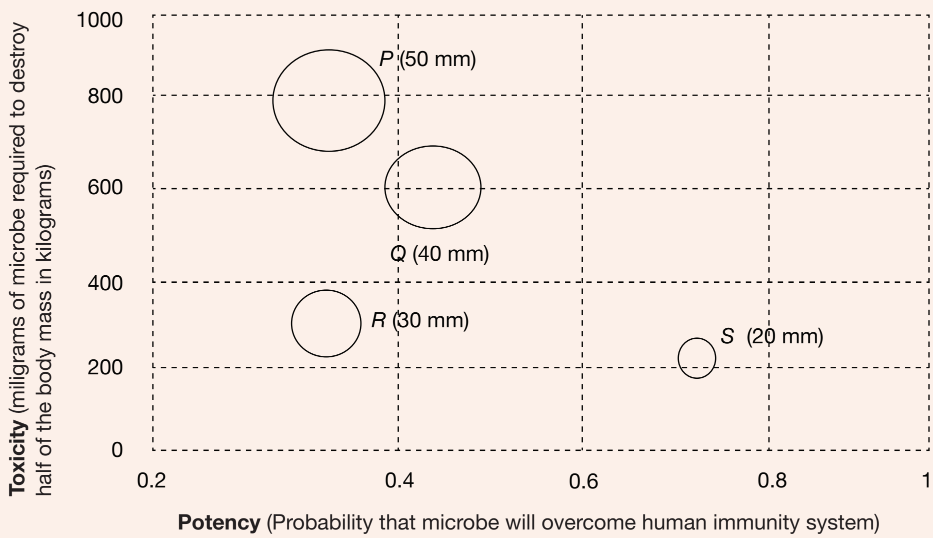
The probability that a randomly chosen shock absorber, which is found to be reliable, is made by Y is **[GATE, 2012]**

(A) 0.288 (B) 0.334
(C) 0.667 (D) 0.720

22. If $\text{Log}(P) = \left(\frac{1}{2}\right)\text{Log}(Q) - \left(\frac{1}{3}\right)\text{Log}(R)$ then which of the following options is TRUE? **[GATE, 2011]**

(A) $P^2 = Q^3R^2$ (B) $Q^2 = PR$
(C) $Q^2 = R^3P$ (D) $R = P^3Q^2$

23. P, Q, R and S are four types of dangerous microbes recently found in a human habitat. The area of each circle with its diameter printed in brackets represents the growth of a single microbe surviving human immunity system within 24 hours of entering the body. The danger to human beings varies proportionately with the toxicity, potency and growth attributed to a microbe shown in the figure below:



A pharmaceutical company is contemplating the development of a vaccine against the most dangerous microbe. Which microbe should the company target in its first attempt? **[GATE, 2011]**

(A) P (B) Q
(C) R (D) S

24. The variable cost (V) of manufacturing a product varies according to the equation $V = 4q$, where q is the quantity produced. The fixed cost (F) of production of same product reduces with q according to the equation $F = \frac{100}{q}$. How many units should be produced to minimize the total cost ($V + F$)? **[GATE, 2011]**

(A) 5 (B) 4
(C) 7 (D) 6

25. A transporter receives the same number of orders each day. Currently, he has some pending orders (backlog) to be shipped. If he uses 7 trucks, then at the end of the 4th day he can clear all the orders. Alternatively, if he uses only 3 trucks, then all the orders are cleared at the end of the 10th day. What is the minimum number of trucks required so that there will be no pending order at the end of the 5th day? **[GATE, 2011]**

(A) 4 (B) 5
(C) 6 (D) 7

26. A container originally contains 10 litres of pure spirit. From this container 1 litre of spirit is replaced with 1

litre of water. Subsequently 1 litre of the mixture is again replaced with 1 litre of water and this process is repeated one more time. How much spirit is now left in the container? **[GATE, 2011]**

(A) 7.58 litres (B) 7.84 litres
(C) 7 litres (D) 7.29 litres

27. If 137 + 276 = 435, how much is 731+672? **[GATE, 2010]**

(A) 534 (B) 1403
(C) 1623 (D) 1513

28. 5 skilled workers can build a wall in 20 days, 8 semi-skilled workers can build the wall in 25 days, 10 unskilled workers can build the wall in 30 days. If a team has 2 skilled, 6 semi-skilled and 5 unskilled workers, how long will it take to build the wall? **[GATE, 2010]**

(A) 20 (B) 18
(C) 16 (D) 15

29. From the digits 2, 2, 3, 3, 3, 4, 4, 4, 4, how many distinct 4-digit numbers greater than 3000 can be formed? **[GATE, 2010]**

(A) 50 (B) 51
(C) 52 (D) 54

Test

Quantitative Ability

Time: 30 Minutes

Direction for questions 1 to 30: Select the correct alternative from the given choices.

1. P, Q, R, and S have a total amount of ₹220 with them. P has ₹30 more than Q. S has half the amount with Q. R has ₹10 more than S. Find the amount with S (in ₹).
   (A) 20 (B) 40
   (C) 30 (D) 50

2. In a room, there are some girls and some benches. If 5 girls sit on each bench, three girls will have no bench to sit on. If there is one bench less, 6 girls can sit on each bench. Find the number of benches.
   (A) 6 (B) 8
   (C) 7 (D) 9

3. A test has 60 questions. Each correct answer fetches 1 mark. For each wrong answer and each unanswered question 1 mark is deducted. A candidate who wrote this test scored 20 marks. Find the number of questions he correctly answered.
   (A) 50 (B) 45
   (C) 35 (D) 40

4. If $\frac{a+b-c}{x} = \frac{a-b+c}{y} = \frac{c+b-a}{z}$ then $x(b-a) + y(a-c) + z(c-b) =$
   (A) 0 (B) 2
   (C) 3 (D) 1

5. The value of a diamond varies directly with the cube of its weight. It broke into two pieces whose weights are in the ratio 3 : 4. The loss due to breakage is ₹504000. Find its initial value (in ₹).
   (A) 1029000 (B) 686000
   (C) 1372000 (D) 1715000

6. The average of 25 observations is 120. By mistake one of the observations, 144, is taken as 169. Find the average of the 25 observations, after the mistake is corrected.
   (A) 120 (B) 119
   (C) 125 (D) 132

7. The average of 13 observations is 50. The average of first seven observations is 45 and the average of last seven observations is 52. Find the value of seventh observation.
   A) 41 (B) 30
   (C) 29 (D) 62

8. A container contains 100 litres of milk. 10 litres of milk is replaced by 10 litres of water. From the solution formed, 10 litres of solution is replaced by 10 litres of water, and this process is repeated one more time. Find the percentage of water in the resulting solution.
   (A) 33.3% (B) 67%
   (C) 36.5% (D) 27.1%

9. In a 729 ml of solution, the ratio of acid to water is 7 : 2. How much more water should be mixed so that the resulting mixture contains acid and water in the ratio 7 : 3 (in ml)?
   (A) 100 (B) 40
   (C) 37 (D) 81

10. A merchant buys sulphuric acid at a certain rate per gallon and after mixing it with water, sells it at the same rate. If the merchant makes a profit of 20%, how many gallons of water are there per gallon of acid?
    (A) 0.2 (B) 0.5
    (C) 0.7 (D) 0.25

11. If A travelled a certain distance at 6 km/h, he would have reached his destination 10 minutes early. If he travelled it at 4 km/h, he would have reached his destination 10 minutes late. Find the speed at which he must travel to reach his destination on time (in km/h).
    (A) 5 (B) 5.4
    (C) 4.8 (D) 4.5

12. A car travelled the first hour of its journey at 30 km/h, the next 5 hours of its journey at 50 km/h, and the remaining 4 hours of its journey at 75 km/h. Find its average speed for its journey (in km/h).
    (A) 56 (B) 60
    (C) 58 (D) 62

13. Without stoppages, a train can cover 54 km in an hour. With stoppages it can cover 36 km in an hour. Find its stoppage time per hour in a journey it covers with stoppages (in minutes).
    (A) 15 (B) 18
    (C) 20 (D) 12

14. A and B can complete a job in 40 days. B and C can complete it in 30 days. A and C can complete it in 20 days. Find the time taken by A to complete it (in days).
    (A) $\frac{180}{7}$ (B) 30
    (C) 48 (D) $\frac{240}{7}$

15. 3 men and 4 women can complete a job in 10 days. 24 men and 2 women can complete it in 2 days. Find the time taken by 5 men and 10 women to complete it (in days).
    (A) 4 (B) 5
    (C) 3 (D) 6

16. Abhilash spends 25% of his income towards rent, 20% of the remaining income towards food, 8% of the remaining towards medical expenses, and 25% of the remaining towards miscellaneous expenses. If he saves ₹82,800, what is his income?

(A) ₹2,00,000 (B) ₹2,25,000
(C) ₹2,40,000 (D) ₹2,50,000

17. By selling 30 articles, a shopkeeper gained the selling price of 10 articles. Find the profit percent.

(A) 20% (B) 30%
(C) 50% (D) 40%

18. When 1036 is divided by N, the remainder is 12 and when 1545 is divided by N, the remainder is 9. Find the greatest possible value of N.

(A) 128 (B) 512
(C) 250 (D) 64

19. Five bells toll at regular intervals of 10, 15, 20, 25, and 30 seconds, respectively. If they toll together at 8:00 am, then at what time will they toll together for the first time after 8:00 am?

(A) 8:04 am (B) 8:06 am
(C) 8:05 am (D) 8:07 am

20. Find the value of

$$\frac{3}{\sqrt{2}+\sqrt{11}}+\frac{3}{\sqrt{5}+\sqrt{8}}+\frac{3}{\sqrt{8}+\sqrt{11}}+\cdots+\frac{3}{\sqrt{26}+\sqrt{29}}.$$

(A) $\sqrt{29}-\sqrt{2}$ (B) $\sqrt{26}+\sqrt{5}$
(C) $\sqrt{29}+\sqrt{26}$ (D) $\sqrt{26}-\sqrt{8}$

21. If $a+b+c=0$, find the value of $(3^{a^8})^{\frac{1}{a^6bc}}(3^{b^8})^{\frac{1}{ab^6c}}(3c^8)^{\frac{1}{abc^6}}$

(A) 2 (B) 6
(C) 27 (D) 81

22. If $3^{x+3} - 3^{x+2} = 486$, then find x.

(A) 3 (B) 5
(C) 6 (D) 2

23. $\log_p q = \frac{5}{4}, \log_r q = \frac{5}{6}$ and $\log_r p = 3x$, then find x.

(A) $\frac{1}{9}$ (B) $\frac{2}{3}$
(C) $\frac{1}{18}$ (D) $\frac{2}{9}$

24. $\frac{5}{1+\log_p qr}+\frac{5}{1+\log_q pr}+\frac{5}{1+\log_r pq}=$

(A) 0 (B) 1
(C) 5 (D) 10

25. If $\log_{10}2 = 0.3010$ then find the number of digits in 2^{55}.

(A) 17 (B) 11
(C) 18 (D) 16

26. The maximum sum of the arithmetic progression 45, 41, 37, ... is

(A) 256 (B) 274
(C) 276 (D) 264

27. The greatest value of n such that $1 + 3 + 3^2 + 3^3 + \cdots + 3^n$, which is less than 3000 will be:

(A) 6 (B) 8
(C) 7 (D) 9

28. $3 + 33 + 333 + \cdots +$ upto n terms =

(A) $\frac{(10^n-1)}{3}-n$ (B) $\frac{10(10^n-1)}{27}-n$

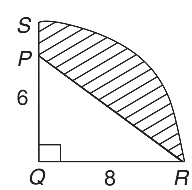
(C) $\frac{(10^n-1)}{3}-\frac{n}{9}$ (D) $\frac{10(10^n-1)}{27}-\frac{n}{3}$

29. What is the minimum value of the function $f(x) = x^2 - 15x + 9$?

(A) $\frac{289}{4}$ (B) $\frac{-200}{9}$

(C) $\frac{295}{2}$ (D) $\frac{-189}{4}$

30. Find the area of the shaded region, where PQR is a triangle and QRS is a quadrant. $PQ = 6$ cm and $QR = 8$ cm.



(A) $4\pi - 8$ sq. cm. (B) $2\pi - 3$ sq. cm.
(C) $8\pi - 16$ sq. cm. (D) $16\pi - 24$ sq. cm.

Quantitative Ability Test I

Number of Questions: 35 **Section Marks: 30**

Directions for questions 1 to 35: Select the correct alternative from the given choices.

1. What is the percentage change in the volume of a cylinder if its height increases by 20% and radius remains the same?
   (A) No change
   (B) 10% increase
   (C) 20% decrease
   (D) 20% increase

2. 30% of a number when subtracted from twice the number equals to 33 less than five times the same number. What is the number?
   (A) 15 (B) 10
   (C) 20 (D) 5

3. In the second and the third match of a series Dravid's score increases by 10% and $21^7/_{33}$% respectively over the previous match. By what percentage did his score increase in the third match as compared to the first match?
   (A) $33^1/_3$% (B) $31^7/_{33}$%
   (C) $35^{15}/_{33}$% (D) $37^9/_{33}$%

4. Two tests are given with maximum marks of 300 and 200 respectively. A student scores an overall percentage of 60%. If he has scored 40% in the second test, then how many marks did he score in the first test?
   (A) 200 (B) 180
   (C) 220 (D) 240

5. If a kerosene dealer sells kerosene at ₹8 per litre, he loses ₹400, but if he sells at ₹10 per litre he makes a profit of ₹400. Then, how many litres of kerosene did the dealer sell?
   (A) 250 (B) 200
   (C) 350 (D) 400

6. By selling 50 metres of cloth, a merchant gains the cost of 10 metres. Find the gain percentage.
   (A) 25% (B) $33^1/_3$%
   (C) 20% (D) 30%

7. By selling 60 metres of cloth, a merchant gains the selling price of 10 metres. The gain percentage is
   (A) 25% (B) 20%
   (C) 15% (D) $16^2/_3$%

8. If 3/5th of *B*'s income is 25% less than *A*'s income, then what percentage of *B*'s income is *A*'s income?
   (A) 60% (B) 80%
   (C) 120% (D) 125%

9. If a dealer gets a commission of 10% on the list price from the company, then the profit made by the company is 50% of its manufacturing cost. If the dealer's commission is increased to 25%, then what will be the profit percentage on the cost of manufacturing for the company?
   (A) 10% (B) 25%
   (C) 30% (D) 20%

10. Chetan started a cable TV service with an investment of ₹2,00,000. After a few months David joined him with an investment of ₹1,50,000. If at the end of the year David's share was ₹3,00,000 out of a total profit of ₹7,80,000 after how many months did David join Chetan?
    (A) 2 (B) 4
    (C) 8 (D) 10

11. A man sells an article at a profit of 25%. Had he bought it at 25% less and sold for ₹25 less, he would still have gained 25%. Find the cost of the article.
    (A) ₹80 (B) ₹40
    (C) ₹60 (D) ₹50

12. A man sold a Doberman and a German Shepherd for ₹5,750 each. On the Doberman he made a profit of 25%, and on the German Shepherd he made a profit of 15%. Find the approximate profit percentage on the whole transaction.
    (A) 23% (B) 16%
    (C) 18% (D) 20%

13. *A*, *B*, and *C* invested capitals in the ratio 4 : 5 : 6. At the end of the year, they received the profits in the ratio 6 : 5 : 4. Find the ratio of time periods for which they invested their capitals.
    (A) 9 : 6 : 2 (B) 9 : 8 : 6
    (C) 9 : 3 : 4 (D) 9 : 6 : 4

14. A man purchases a certain number of chocolates at 2 per rupee and the same number of pepper-mints at 5 per rupee. He mixes them together and sells them at 3 per rupee. What is his approximate profit or loss percentage?
    (A) 5% profit (B) 5% loss
    (C) 4% profit (D) 4% loss

15. A shopkeeper bought a table marked at ₹600 at successive discounts of 10% and 20% respectively. He spent ₹8 on transportation and sold the table for ₹450. Find his profit percentage.
    (A) $2^7/_{11}$% (B) $2^3/_{11}$%
    (C) $2^5/_{11}$% (D) $2^8/_{11}$%

16. A sum of money is invested at a certain rate of simple interest. Find the annual rate of interest if the sum becomes 84% more in 6 years.
    (A) 12% (B) 14%
    (C) 16% (D) 18%

17. A sum of money becomes $1^{91}/_{125}$ times itself, when invested at compound interest at 20% p.a. Find the duration of the investment.
(A) 1 year (B) 2 years
(C) 3 years (D) 4 years

18. Two sums of money in the ratio 3:4 are lent for a period of 5 years. The rates of interest on the two sums are in the ratio 1:2. The difference in the simple interest on the two sums is ₹1000. Find the total simple interest on the two sums.
(A) ₹2000 (B) ₹2200
(C) ₹2400 (D) ₹2500

19. Two litres of 20% H_2SO_4 solution, three litres of water and five litres of 10% H_2SO_4 are mixed together. How many litres of the resulting solution must be mixed with thirty litres of 18% H_2SO_4 solution so as to get a 15% H_2SO_4 solution?
(A) 30 (B) 10
(C) 15 (D) 20

20. In which of the following ratios by weight should three alloys of gold of purity 18, 20 and 22 carats be mixed to form a fourth alloy whose purity is $20^1/_3$ carats?
(A) 3 : 4 : 5 (B) 4 : 3 : 5
(C) 4 : 5 : 6 (D) 6 : 5 : 4

21. A family consists of a grandfather, a grandmother, father, mother and three children. The average age of father, mother and the 3 children is 25 years. The average age of the three children is 15 years. The average age of parents and grandparents is 50 years, then find the average age of the grand parents (in years).
(A) 70 (B) 68
(C) 58 (D) 60

22. Groundnuts contain 70% oil by weight. Oil is partially extracted and what is left behind is groundnut cake which contains 17% oil by weight. What is the weight of the groundnuts which yield 1 kilogram of cake?
(A) 3.77 kg (B) 2.67 kg
(C) 3.58 kg (D) 2.77 kg

23. One-third of a bottle full of pure listerene is replaced with water. Find the ratio of water and listerene if the above process is carried out for a total of four times.
(A) 16 : 65 (B) 16 : 89
(C) 89 : 16 (D) 65 : 16

24. The number of matches played by a cricketer in the year 2003 is one-fourth of the total number of matches played by him upto the end of 2002. His average score (*i.e.*, runs scored per match played) upto the end of the year 2003 is four-thirds of his average upto the end of the year 2002. What is the ratio of the runs scored in the year 2003 to that of the total scored upto the end of the year 2002?
(A) 2 : 3 (B) 3 : 2
(C) 3 : 4 (D) 15 : 16

25. The weighted average of the scores of all the students of three sections *X*, *Y* and *Z* of a class is $33^1/_3$% more than the average of the section *X*. The weighted average of sections *Y* and *Z* is $65^5/_{11}$. If section *X* has a strength of 40 and an average score of 45, what is the combined strength of the section *Y* and Z?
(A) 60 (B) 75
(C) 110 (D) 85

26. Find the expression for the sum of *n* terms of an arithmetic progression, if the tenth term is 40 and the 12th term is 44.
(A) $10n + 25n^2$ (B) $20n + 20n^2$
(C) $25n + 15n^2$ (D) $n^2 + 21n$

27. The first term of an arithmetic progression consisting of 30 terms is 10 and the common difference is 5. Find the ratio of the sum of the 30 terms of the arithmetic progression. to the sum of the last 20 terms of the A.P.
(A) 99 : 13 (B) 96 : 17
(C) 99 : 86 (D) 99 : 68

28. If the sum of the fifth, thirteenth and eighteenth terms of an A.P is zero, find the 12th term of the arithmetic progression.
(A) –2 (B) –1
(C) 0 (D) 1

29. Find the sum of the first 10 terms of the series: $3 (2^2) + 4 (3^2) + 5 (4^2) + \ldots\ldots..$
(A) 3009 (B) 4860
(C) 3408 (D) 3608

30. The sum of the first eight terms of a geometric progression. is 510 and the sum of the first four terms of the geometric progression. is 30. Find the first term of the geometric progression, given that it is positive.
(A) 2 (B) 4
(C) 6 (D) 8

31. The terms of an arithmetic progression are all positive. The square of fourth term equals the sum of the squares of the previous two terms. The sum of the first four terms is 14. Find the common difference.
(A) 1
(B) 2
(C) 2
(D) Cannot be determined

32. The first, second and third terms of a geometric progression are equal to the first, seventh and twelfth terms of an arithmetic progression. If the first term and common difference have opposite signs, find the 37th term of the arithmetic progression.
(A) 1 (B) 0
(C) 1 (D) 2

33. Find the sum of the terms of the series
(1) × (20), (2) × (19), (3) × (18), …(20) × (1).
(A) 1750 (B) 1645
(C) 1540 (D) 1435

34. In a geometric progression, each term is the sum of all the terms following it. The sum to infinity of the terms is 32. If all the terms are positive, then find the first term.

(A) 16 (B) $16\sqrt{2}$

(C) 64 (D) $8\sqrt{2}$

35. The sum of five numbers in geometric progression is 62. The sum of their reciprocals is $\frac{31}{32}$. Find the square of the third number.

(A) 100 (B) 121

(C) 36 (D) 64

Answers Key

1. D	**2.** B	**3.** A	**4.** C	**5.** D	**6.** C	**7.** B	**8.** B	**9.** B	**10.** A

31. A	**32.** B	**33.** C	**34.** A	**35.** D					

Hints and Explanations

1. Volume of a cylinder = $\pi r^2 h$
As π is constant and there is no change in radius, volume varies only with height. New height = (1.2) h
$\therefore$ New volume = 1.2 $\pi r^2 h$ i.e., the volume increases by 20%. Choice (D)

2. Let the number be = x
According to the problem, $2x - 0.3x = 5x - 33$
$\Rightarrow$ $3.3x = 33 \Rightarrow x = 10$ Choice (B)

3. Let Dravid's score in the first match be x.
It increases by 10% in the second to $\frac{110}{100}x = \frac{11x}{10}$.
In the third match it increases by
$$21\frac{7}{33}\% = \frac{700}{33}\% \text{ to } \left(100 + \frac{700}{33}\right)\% = \frac{4000}{33}\%$$
i.e., score in the third match is
$$\left(\frac{1}{100}\right)\left(\frac{4000}{33}\right)\left(\frac{11x}{10}\right) = \frac{4x}{3}$$
Over the two year it increases by $\frac{4x}{3} - x = \frac{x}{3}$.
Fractional increase $= \frac{\frac{x}{3}}{x} = \frac{1}{3} = 33\frac{1}{3}\%$. Choice (A)

4. The two tests together had 300 + 200 = 500 marks
The student scored an overall percentage of 60%
$\therefore$ Total marks scored by the student = 500 × 0.6 = 300
Marks scored by the student in the second test
= 200 × 0.4 = 80
Hence marks scored in the first test = 300 – 80 = 220. Choice (C)

5. Let the quantity of kerosene sold by the dealer be x litres
$\therefore$ CP – $8x$ = 400 and $10x$ – CP = 400
$\Rightarrow$ $8x + 400 = 10x - 400 \Rightarrow 5x = 400$ Choice (D)

6. Let the cost price of 1m = CP
Let the sale price of 1m = SP
Given 50SP = 50CP + 10 CP i.e., 60CP = 50SP
$\therefore$ % Profit = (60 – 50) × 100/50 = 20%. Choice (C)

7. Let the cost price of 1m = CP
Let the sale price of 1m = SP
Given 60SP = 60CP + 10SP i.e., 60CP = 50SP
$\therefore$ %Profit = (60 – 50) × 100/50 = 20%. Choice (B)

8. Let A's and B's increase be a and b
$$\frac{3b}{5} = a - \frac{25a}{100} = a\left(\frac{3}{4}\right)$$
$$\therefore a = \frac{4}{5}b = \frac{80}{100}b$$
a in 80% of b. Choice (B)

9. Let the list price be = LP
If 10% of LP is given as commission to the dealer the profit for the company is 50% $\Rightarrow$ 0.9 LP = 1.5 CP
If 25% commission is given then
0.75 LP = 0.75 × (1.5 CP / 0.9) = 1.25 CP
% of profit = 25% Choice (B)

10. Chetan's total investment = 2,00,000 X 12
David's total investment = 1,50,000 X x
(where x is the period of investment of David)
Chetan's share in total profit
= 7,80,000 – 3,00,000 = Rs.4,80,000
Now, $\frac{2,00,000 \times 12}{1,50,000 \times x} = \frac{4,80,000}{3,00,000} \Rightarrow x = 10.$
$\therefore$ David joined after 2 months. Choice (A)

11. SP = 1.25 CP
Also given SP - 25 = 1.25 × 0.75 CP
Solving the above equations CP = 80 Choice (A)

12. Total selling price = 5750 × 2 = ₹11,500
Total cost price =
$$\frac{5750}{1.25} + \frac{5750}{1.15} = 4600 + 5000 = ₹9600$$
$$\therefore \text{Overall profit percentage} = \frac{1900}{9600} \times 100 \cong 20$$
Choice (D)

13. Ratio of time is 6/4 : 5/5 : 4/6

$\frac{6 \times 60}{4} : \frac{5 \times 60}{5} : \frac{4 \times 60}{6} = 9 : 6 : 4$ Choice (D)

14. Let the number of éclairs be x

There CP = $x/2$

CP of peppermint = $x/5$

Therefore total CP = $\frac{x}{2} + \frac{x}{5} = \frac{7x}{10}$

Total SP = $\frac{2x}{3}$

P% = $\frac{\frac{2x}{3} - \frac{7x}{10}}{\frac{7x}{10}} \times 100$. Therefore loss = 5% Choice (B)

15. CP = 600 (.9) (.8) = 432

Total CP = 432 + 8 = 440

SP = 450

P% = $\frac{10}{440}$ x 100 = $2^{3}/_{11}$% Choice (B)

16. If a sum of money invested under simple interest at R% p.a. becomes N times after t years, R is given by $\frac{100(N-1)}{t}$.

As $N = 1 \times 84$ and $t = 6$ years, $R = \frac{100(1 \cdot 84 - 1)}{6} = 14$

∴ the rate is 14% p.a. Choice (B)

17. Let the sum of money be ₹ p and duration of the investment be n years.

$1\frac{91}{125}p = \frac{216}{125}p = p\left(1+\frac{20}{100}\right)^n$

$\left(\frac{6}{5}\right)^3 = \left(\frac{6}{5}\right)^n \Rightarrow n = 3.$ Choice (C)

18. Let the two sums of money be $3x$ and $4x$ and the rates of interest on the two sums be R% p.a. and $2R$% p.a. respectively. Difference in the simple interest on the two sums = $\frac{(4x)(2R)(5)}{100} - \frac{(3x)(R)(5)}{100} = 1000$

$\Rightarrow \frac{xR}{4} = 1000$

$\Rightarrow$ $xR = 4000$

Total simple interest on the two sums

$= \frac{(4x)(2R)(5)}{100} + \frac{(3x)(R)(5)}{100} = \frac{55xR}{100} = ₹2200.$

($\because$ xR = 4000) Choice (B)

19. Concentration of H_2SO_4 in the resulting solution

$= \frac{2(0.2) + 3(0) + 5(0.1)}{2 + 3 + 5} = 9\%$

Let the amount of the resulting solution that is being mixed with 30 lt of 0.18 H_2SO_4 be x.

$(0.09)x + 0.18(30) = 0.15\,(x + 30)$

$0.9 = 0.06x \Rightarrow x = 15$ Choice (C)

20. Let the weight of 18, 20 and 22 carat gold be x, y and z respectively.

$\frac{18x + 20y + 22z}{x+y+z} = \frac{61}{3}$

Only option (1) satisfies this condition. Choice (A)

21. Average age of children and parents 5 members = 25

∴ Sum of ages = 125 years.

Average age of 3 children = 15

Sum of ages of 3 children = 45

∴ Sum of ages of parents = 80

Sum of the ages of parents and grand parents = 50(4) = 200.

Sum of the ages of grand parents = 120

Average = 120/2 = 60 Choice (D)

22. Since groundnut contains 70% of oil, it means in 1kg of groundnut there is 30% of (or 0.3kg) solid material. From this 1kg of groundnut, 0.3kg is solid which translates to 83% of cake.

∴ The cake in 1kg of groundnut is $\frac{0.3}{0.83}$kg.

Groundnut cake	Groundnut
$\frac{0.3}{0.83}$kg –	1 kg
1kg –	?

$\Rightarrow \frac{1(1\text{kg})}{\left(\frac{0.3}{0.83}\right)} = 2.77\text{kg}$ Choice (D)

23. Let the capacity of the bottle be 1 litre.

The fraction of listerine left after repeating the process 4 times = $\left(\frac{3-1}{3}\right)^4 = \left(\frac{2}{3}\right)^4 = \left(\frac{16}{81}\right)$

$\Rightarrow$ For every 81 lt of mixture, listerine is 16 lt and water is 81 – 16 = 65 lt.

∴ The ratio of water and listerine is 65 : 16.

Choice (D)

24. The number of matches and average score are tabulated below.

	Upto end of 2002	In 2003	Upto end of 2003
Average	3x	—	4x
No. of matches	4n	n	5n

Score upto end of 2002 $(3x)(4n) = 12\,xn$.

Score upto end of 2003 $(4x)(5n) = 20\,xn$.

Score in 2003 = $8\,xn$.

Required ratio = $8\,xn : 12\,xn = 2 : 3$ Choice (A)

25. Let $A_{(x+y+z)}$ be the average score of the three section combined. It is given that $A_{(x+y+z)}$

= (1 + 33 1/3%) of Average of x.

= (4/3)45 = 60….. (1).

Let n be the combined strength of sections Y and Z.
Average of the two sections Y and Z together = $65^5/_{11}$
Total strength of X + Total strength of (Y and Z)
= Total score of $(X + Y + Z)$

$\Rightarrow$ $(45)(40) + n(65\frac{5}{11}) = (n + 40)(60)$

$\Rightarrow$ $1800 + \frac{720n}{11} = 60n + 2400 \Rightarrow \frac{60n}{11} = 600$

$\Rightarrow$ $n = 110.$

$\therefore$ The combined strength of section Y and Z = 110.
Choice (C)

26. If the first term of the A.P is a and the common difference is d, we have the tenth term as
$a + 9d = 40$ ….. (1)
and the twelfth term as a + 11d = 44 …. (2)
Subtracting (1) from (2), we have $2d = 44 - 40$,
$d = 2$
Substituting the value of d in (1) we get, $a = 22$.
The sum of n terms of the A.P.
$= \frac{n}{2}[2a + (n-1)d] = \frac{n}{2}[2(22) + (n-1)2]$
$= \frac{n}{2}[44 + 2n - 2] = \frac{n}{2}[42 + 2n] = 21n + n^2$ Choice (D)

27. Sum of the first 30 terms of the A.P $= \frac{30}{2}[2(10) + 29(5)]$
= 15 [20 + 145] = 15 [165] = 2475.
Sum of the first 10 terms of the A.P $= \frac{10}{2}[2(10) + 9(5)]$
= 5[20 + 45] = 5 [65] = 325. Ratio of the sum of the first 30 terms of the A.P. to the sum of the last 20 terms of the A.P = (2475) : (2475 – 325) = 2475 : 2150
= 5[495] : 5[430] = 495 : 430 = 99 : 86. Choice (C)

28. If the first term is a and the common difference is d, we have the sum of the fifth, thirteenth and eighteenth terms as
$(a + 4d) + (a + 12d) + (a + 17d) \Rightarrow 3a + 33d = 0.$
Dividing by 3, we have $a + 11d = 0$. Hence the 12th term of the A.P is 0. Choice (C)

29. $S = 3(2)^2 + 4(3)^2 + 5(4)^2 + \ldots\ldots$ 10 terms.
$= (2 + 1)2^2 + (3 + 1)3^2 + (4 + 1)4^2 + \ldots$ 10 terms
$= (2^3 + 2^2) + (3^3 + 3^2) + (4^3 + 4^2) + \ldots$ 10 terms
$= (2^3 + 3^3 + 4^3 + \ldots + 11^3) + (2^2 + 3^2 + 4^2 \ldots + 11^2)$
$= (1^3 + 2^3 + 3^3 \ldots + 11^3) + (1^2 + 2^2 + 3^2 + \ldots + 11^2) - 1^3 - 1^2$
= 4355 + 505 = 4860. Choice (B)

30. If the first term of the G.P is a and the common ratio is r, we have $\frac{a(r^8-1)}{r-1} = 510$ … (1)
and $\frac{a(r^4-1)}{r-1} = 30$ …. (2)
Dividing (1) by (2) we have $\dfrac{\frac{a(r^8-1)}{r-1}}{\frac{a(r^4-1)}{r-1}}$
$= r^4 + 1 = \frac{510}{30} = 17.$
$r^4 = 17 - 1 = 16$
$r = \pm\sqrt[4]{16} = \pm 2$
First term of the G. P, a $= \frac{510(r-1)}{r^8-1}$
As first term is positive, $r = 2$ is taken.
$a = \frac{510(2-1)}{2^8-1} = \frac{510(1)}{255} = 2.$ Choice (A)

31. Let the first term and the common difference be a and d respectively.
$(a + 3d)^2 = (a + 2d)^2 + (a + d)^2$
$a^2 + 6ad + 9d^2 = 2a^2 + 6ad + 5d^2 \Rightarrow a = \pm 2d$
As all the terms are positive, $a = 2d$
$a + a + d + a + 2d + a + 3d = 14 \Rightarrow d = 1.$
Choice(A)

32. Let the first term of either progression be a.
Let the common difference of the arithmetic progression be $d.d\,(a + 36d) = 0$
as a and d have opposite signs, $d \neq 0$.
$a + 36d = 0$
37th term = 0 Choice (B)

33. The terms of the series are in the form $x(21 - x)$
Required sum $= \sum_{x=1}^{20} x(21 - x)$
$= \frac{(21)(20)(21)}{2} - \frac{1}{6}(20)(21)(41) = 1540$ Choice (C)

34. Let the first term and the common ratio be a and r respectively
First term = sum of all the terms following it
$a = \frac{a}{1-r} - a$
$a(1 - 2r) = 0$
As all the terms are positive, $a \neq 0$.
$1 - 2r = 0$
$r = 1/2$
$\frac{a}{1-r} = 16$ Choice (A)

35. Let the first number and the common ratio be $\frac{a}{r^2}$ and r respectively.
$\frac{a}{r^2} + \frac{a}{r} + a + ar + ar^2 = 62$ …. (1)
$\frac{r^2}{a} + \frac{r}{a} + \frac{1}{a} + \frac{1}{ar} + \frac{1}{ar^2} = \frac{31}{32}$
$\Rightarrow \frac{1}{a^2}\left(ar^2 + ar + a + \frac{a}{r} + \frac{a}{r^2}\right) = \frac{31}{32}$
(1) ÷ (2) $\Rightarrow a^2 = \dfrac{62}{\frac{31}{32}} = 64$ Choice (D)

Quantitative Ability Test 2

Number of Questions: 35 **Section Marks: 30**

Directions for questions 1 to 16: Select the correct alternative from the given choices.

1. Two men, two women and six part-time workers take 12 days to complete a job. The same job can be completed by 10 men and 18 part-timers in 4 days. If two men and three women take 16 days to complete that job, find the time taken by one woman to complete that job (in days).
(A) 96 (B) 60
(C) 75 (D) 100

2. *A* can complete a job in 20 days. *B* works twice as fast as *A*. They both work together for 5 days. On the 6th day, they complete the job with the help of *C*. Find the time taken by *C* alone to complete the job (in days).
(A) 5 (B) 6
(C) 10 (D) 12

3. Four men take ten days to complete one-third of a work. How many more men are required to complete the remaining work in five days?
(A) 16 (B) 14
(C) 15 (D) 12

4. *A* and *B* working separately can do a piece of work in 5 days and 10 days respectively. They work on alternate days starting with *B* on the first day. In how many days will the work be completed?
(A) 6 (B) 7
(C) 8 (D) 9

5. A tank is fitted with three pipes *A*, *B* and *C*. The three pipes can be used as inlet or outlet pipes with the same flow rates. When one among *A*, *B* and *C* in turns works as outlet pipe and the other two as inlet pipes, it takes 30, 40 and 24 minutes to fill the tank respectively. Find the time taken by *A* to fill the empty tank (in minutes).
(A) 30 (B) 40
(C) 25 (D) 20

6. *A* and *B* take respectively 12 days and 27 days more time to complete a piece of work, working alone, than when they work together. Find the time taken by them to complete the work working together.
(A) 15 days (B) 20 days
(C) 24 days (D) 18 days

7. *A*, *B* and *C* work together to complete a job. *A* gets ₹600 out of the total share of ₹2400. If *A* works twice as fast as *B*, find the share of *C*.
(A) ₹1200 (B) ₹1500
(C) ₹1000 (D) ₹1600

8. *A*, *B* and *C* work at the same rate. *A* starts the job and after 25% of the work is completed, he leaves. *B* and *C* take over and complete the remaining work together in 18 more days. Find the time for which *A* worked (in days).
(A) 6 (B) 20
(C) 12 (D) 24

9. Six taps working together take 12 minutes to fill a tank. Find the time taken (in minutes) by 24 taps working together to fill a tank twice as big.
(A) 6 (B) 8
(C) 12 (D) 24

10. *P* can do a piece of work in 12 days working 6 hrs a day. *Q* can do the same work in 18 days working 5 hrs a day. If *P* and *Q* work together 4 hrs a day, then in how many days can they complete the work?
(A) 10 (B) 11
(C) 12 (D) 14

11. *A*, *B* and *C* can complete a piece of work in 20, 30 and 20 days respectively. They start the work together but *A* leaves after 5 days. After some more days *C* leaves. *B* completes the remaining work in 5/3 more days. For how many days does *B* work?
(A) $\frac{10}{3}$ (B) 10
(C) $\frac{14}{3}$ (D) 14

12. *A*, *B* and *C* take 20, 30 and 60 days to complete a job. *A* works along with *B* on the 1st day and with *C* on the 2nd day. If they continue in this manner, then find the time taken (in days) to complete the work.
(A) $12\frac{5}{6}$ (B) $18\frac{4}{5}$
(C) $14\frac{1}{4}$ (D) $13\frac{1}{4}$

13. Amar can complete a job in 15 days, while Bhavan can complete it in 10 days. They start working together and two days before the work was expected to be completed, Bhavan left. Find the time taken by Amar to complete the remaining work (in days).
(A) 4 (B) 5
(C) 6 (D) 8

14. A pipe can fill a 1000 litre tank in 10 minutes while another pipe can empty a 600 litre tank in 8 minutes. If they work together, then how long will they take (in minutes) to fill a 500 litre tank?
(A) 10 (B) 15
(C) 20 (D) 25

15. *A* and *B* can complete a job in 25 days and 20 days respectively, working alone. With the help of *C*, they can complete the job in $6^2/_3$ days. Find the

percentage of work completed by the fastest worker of the three.

(A) $20\frac{1}{3}\%$ (B) 25%

(C) 40% (D) $16\frac{2}{3}\%$

16. A tank has three inlet pipes I, II and III fitted to it whose flow rates are in the ratio 2 : 5 : 6. Pipe III takes 1 hour less than pipe II to fill the tank. Find the time (in hours) taken by pipe I to fill the tank.

(A) 6 (B) 10
(C) 5 (D) 15

Directions for questions 17 and 18: These questions are based on the following data.

In a city there are 5 major traffic junctions – *A*, *B*, *C*, *D* and *E*. There are no direct roads connecting *AC*,*BE* or *CE* but for every other pair of junctions, there are direct connecting roads, which all happen to be of equal length. Traffic moves at recommended uniform speeds on each road – at 20 km/hr on *BD* and *AD*, at 30 km/hr on *AE*, at 40 km/hr on *BC* and *CD*, and at 60 km /hr on *AB* and *DE* (Assume any direct connecting road is straight line).

17. A traffic inspector wants to visit any three traffic junctions in the shortest possible time, starting from *A*. What are the three points that he can visit (other than *A*) in order if he drives at the recommended speed on each road?

(A) *BCD* (B) *EDB*
(C) *BDC* (D) *BDE*

18. A new direct connecting road is constructed joining *A* and *C* with its recommended speed fixed at 50 km/hr. If *AB* = 10 km, find the time (in minutes) in which the traffic inspector can complete the round trip *ABCA*.

(A) $12 + 25\sqrt{3}$
(B) $25 + 12\sqrt{3}$
(C) $24 + 12.5\sqrt{3}$
(D) Cannot be determined

Directions for questions 19 and 20: These questions are based on the following data.

Cities *P*, *Q* and *A* are in different time zones. *P* and *Q* are located at 4500 km, east and west of *A* respectively. The table below describes the schedule of an airline operating non-stop flights between *A* and *P*, *A* and *Q*. All the times indicated are local and on the same day.

Departure		Arrival	
City	**Time**	**City**	**Time**
A	7 : 00 am	P	3 : 00 pm
A	9 : 00 am	Q	12 : 00 noon

Planes cruise at the same speed to both the cities but effective speed is influenced by a steady wind blowing from east to west at 75 kmph.

19. What is the plane's cruising speed (in kmph)?

(A) 825
(B) 900
(C) 875
(D) Cannot be determined

20. What is the time difference between cities *A* and *Q*?

(A) 1 hour
(B) $2\frac{1}{2}$ hours
(C) 2 hours
(D) Cannot be determined

Directions for questions 21 to 35: Select the correct alternative from the given choices.

21. Amar covered the first one-fourth of a certain distance at 2 km/hr, half of the remaining distance at 3 km/hr and the remaining distance at 4 km/hr. Find his average speed (in km/hr) for the entire journey.

(A) $2\frac{7}{11}$ (B) $2\frac{8}{11}$

(C) $2\frac{9}{11}$ (D) $2\frac{10}{11}$

22. A man starts from *P* at 8 a.m. and reaches *Q* by 9 : 30 a.m. At what time should he start from *Q* to reach *R* at 11 : 30 a.m., where *PQ* : *QR* = 10 : 11?

(A) 10 : 01 a.m. (B) 9 : 59 a.m.
(C) 9 : 50 a.m. (D) 9 : 51 a.m.

23. A boat covered a certain distance upstream and returned to the starting point. If the speed of the boat in still water is doubled and the speed of the stream is tripled, it would have taken the same time for the round trip. Find the ratio of the speed of the boat in still water to the speed of the stream.

(A) $\sqrt{5} : \sqrt{2}$ (B) $\sqrt{3} : \sqrt{2}$
(C) $\sqrt{7} : \sqrt{2}$ (D) 3 : 2

24. A boat started travelling downstream from a point *A* on a river. After it had travelled 12 km, a log started floating from *A*. The boat travels for 2 more hours in the same direction and then turns around and meets the log at a point 12 km from *A*. If the speed of the boat in still water is thrice the speed of the stream, find the speed of the stream (in km/hr).

(A) 1 km/hr (B) 2 km/hr
(C) $\frac{3}{2}$ km/hr (D) 4 km/hr

25. In a race, *A* gives *B* a start of 25 m and *C* a start of 50 m. If *B* runs 50% faster than *C* and all the three reach the finishing point simultaneously, then find the ratio of the speeds of *A* and *C*.

(A) 2 : 1 (B) 4 : 3
(C) 5 : 4 (D) 3 : 1

26. In a 200 m race, A gives B a start of 10 m and beats him by 10 m or 2 seconds. Find the speed of A (in m/s).

(A) $\frac{200}{17}$ (B) $\frac{150}{17}$

(C) $\frac{125}{17}$ (D) $\frac{50}{9}$

27. On a 900 m long circular track, A, B and C start running from the same point simultaneously. A runs in the clockwise direction at 2 m/s while B and C run in the anti-clockwise direction at 3 m/s and 4 m/s respectively. Find the time interval (in seconds) between A and C meeting for the first time at the starting point and B and C meeting for the first time.

(A) 600 (B) 450

(C) 750 (D) 800

28. A, B and C run along a circular track with speeds in the ratio 1 : 2 : 4 starting from the same point simultaneously. If A takes 3 minutes to complete one round of the track, find the time taken (in minutes) by the three to meet at the starting point for the first time.

(A) 6 (B) $\frac{3}{2}$

(C) 3 (D) Cannot be determined

29. Two men A and B start from two points P and Q simultaneously towards each other. They meet after two hours of their starting, B takes 3 hours less to reach P than A takes to reach Q. Find the ratio of the speeds of A and B.

(A) 3 : 2 (B) 2 : 1

(C) 1 : 2 (D) 3 : 1

30. A man travels 51 km in 61 minutes and 30 seconds with an usual speed of 50 km/hr. There are some speed breakers on the road. Each speed breaker reduces his speed to 80% of his usual speed for a distance of 50 m about the speed breaker. Find the number of speed breakers that he crossed.

(A) 20 (B) 25

(C) 30 (D) 35

31. When the speed of a train is increased by 5 m/s, it would take 40 seconds to cross a 200 m long platform. If it crosses a 300 m long platform in 50 seconds, at its original speed, then find the original speed of the train (in m/s).

(A) 35 (B) 15

(C) 20 (D) 30

32. Two trains take 80 seconds to cross each other, when travelling in the same direction. They take 60 seconds to cross each other, when travelling in opposite directions. Find the ratio of the speeds of the faster and the slower train.

(A) 4 : 1 (B) 7 : 1

(C) 3 : 1 (D) 6 : 1

33. There are two cars 80 km apart. When they travel in the same direction, they would take twice the time to meet, compared to the time they would take to meet while travelling towards each other. Find the ratio of their speeds.

(A) 3 : 1 (B) 2 : 1

(C) 4 : 3 (D) 3 : 2

34. By travelling 20% faster than his usual speed, a person reaches his office from home 10 minutes earlier than his usual time. By how many minutes would he be delayed as compared with his usual time, if he travels 25% slower than his usual speed?

(A) 10 (B) 15

(C) 20 (D) 25

35. A frog spots a snake 30 m behind it. It starts moving away from it at 12 m/s. After 5 seconds, it sees that the snake has just begun to move towards it at 20 m/s and increases its speed by 3 m/s. Find the time taken by the snake (in seconds) to catch the frog.

(A) 15 (B) 18

(C) 21 (D) 24

Answer Key

1. A	**2.** C	**3.** D	**4.** B	**5.** A	**6.** D	**7.** B	**8.** C	**9.** A	**10.** A
11. B	**12.** D	**13.** B	**14.** C	**15.** C	**16.** D	**17.** A	**18.** B	**19.** A	**20.** C

31. D	**32.** B	**33.** A	**34.** C	**35.** B					

Hints and Explanations

1. Let the work done by 1 man, 1 woman and part-timer in a day be m, w and p units respectively.

Given $(2m + 2w + 6p)\ 12 = (10m + 18p)\ 4$

$24w = 16m \Rightarrow m = \frac{3}{2}w$

Work done by 2 men and 3 women in 16 days

$= [[3\ w] + 3\ w]\ 16 = 96w$

Time taken by 1 woman to complete that job

$= \frac{96w}{w} = 96$ days

Choice (A)

2. A can do $\frac{1}{20}th$ of the job in a day. B can do $\frac{1}{10}th$ of the job in a day. In 6 days they will together complete $\frac{9}{10}th$ of the job. The balance $\frac{1}{10}th$ of the job is done by C on 6th day. Hence C would take 10 days to complete the job independently. Choice (C)

3. Four men can do one-third of the work in 10 days. In 5 days, one-third of the work can be completed by 8 men. Two-thirds of the work can be completed by 16 men. As there are 4 men, 12 men are required additionally. Choice (D)

4. A can do the work in 5 days. The part of the work done by A in one day $= \frac{1}{5}$

B can do the work in 10 days.

The part of the work done by B in one day $= \frac{1}{10}$

both A and B in two days $= \frac{1}{5} + \frac{1}{10} = \frac{3}{10}$

The part of the work done in 6 days $= 3 \times \frac{3}{10} = \frac{9}{10}$

The part of the remaining work $= 1 - \frac{9}{10} = \frac{1}{10}$

As B starts the work, $\frac{1}{10}$th of the work can be done by B on 7th day.

$\therefore$ In 7 days, the work will be completed.

Choice (B)

5. Let the time (in minutes) taken by A, B and C to either fill or empty the tank be a, b and c respectively.

$$\frac{1}{b} + \frac{1}{c} - \frac{1}{a} = \frac{1}{30} \quad \text{..... (1)}$$

$$\frac{1}{c} + \frac{1}{a} - \frac{1}{b} = \frac{1}{40} \quad \text{..... (2)}$$

$$\frac{1}{a} + \frac{1}{b} - \frac{1}{c} = \frac{1}{24} \quad \text{..... (3)}$$

Adding the above three equations, $\frac{1}{a} + \frac{1}{b} + \frac{1}{c} = \frac{1}{10}$

--- (4)

Subtracting equation (1) from equation (4),

we get $\frac{2}{a} = \frac{2}{30}$

$\Rightarrow$ $a = 30$. Choice (A)

6. Let the time taken by A and B working together to complete the work be t days. Time taken by A alone and B alone to complete the work is $(t + 12)$ days and $(t + 27)$ days respectively.

Work done by A and B working together in a day

$= \frac{1}{t+12} + \frac{1}{t+27}$ which is equal to $\frac{1}{t}$.

$$\Rightarrow \frac{1}{t+12} + \frac{1}{t+27} = \frac{1}{t}$$

$$\Rightarrow \frac{t+27+t+12}{(t+12)(t+27)} = \frac{1}{t}$$

$\Rightarrow$ $2t^2 + 39t = t^2 + 39t + 324$

$\Rightarrow$ $t^2 = 324 \Rightarrow t = 18$. Choice (D)

7. As A gets $\frac{1}{4}$th of the total share, he completes $\frac{1}{4}$th of the total work. B whose rate is half that of A, completes $\frac{1}{8}$th of the total work, for which he gets ₹300.

$\therefore$ Share of $C = 2400 - 600 - 3000$

$= ₹1500$. Choice (B)

8. The time taken by B and C together to complete $\left(\frac{3}{4}\right)$th of the work is 18 days

$\therefore$ The time taken to complete 1 unit of work

$= 18 \times \left(\frac{4}{3}\right) = 24$ days

$\therefore$ The time taken by each alone to complete the work $= (24)(2) = 48$ days.

$\Rightarrow$ The time taken by A to complete (1/4)th of the work $= \left(\frac{1}{4}\right)(48) = 12$ days Choice (C)

9. Time taken by 24 taps working together to fill the tank would be $\frac{1}{4}th$ of the time taken by 6 taps working together i.e. 3 minutes. To fill a tank twice as big, 24 taps would take 6 minutes working together

Choice (A)

10. Time taken by P to complete the work in 12×6 i.e., 72 man hours.

Time taken by Q to complete the work in 18×5 i.e., 90 man hours

The part of the work done by P and Q in

1 hr $= \frac{1}{72} + \frac{1}{90} = \frac{90+72}{72(90)} = \frac{1}{40}$

$\therefore$ They complete the work in 40 hours.

By working 4 hrs per day, they can complete in $\frac{40}{4}$ i.e., 10 days Choice (A)

11. Let the total work be 1 unit

$$\frac{5}{20}+\frac{x+5}{20}+\frac{x+5+\frac{5}{3}}{30}=1$$

$\Rightarrow$ $x = 10/3$

Time for which B worked = $x+5+\frac{5}{3}=10$ days.

Choice (B)

12. A and B complete $\frac{1}{20}+\frac{1}{30}$ *i.e.*, $\frac{1}{12}$th of the work on 1st day. A and C complete $\frac{1}{20}+\frac{1}{60}$ *i.e.*, $\frac{1}{15}$th of the work on the 2nd day. In 2 days, $\frac{3}{20}$th of the work would be completed. Working in this way, $\frac{9}{10}$th of the work would be completed in 12 days. Of the balance $\frac{1}{10}$th of the work, A and B would complete $\frac{1}{12}$th of the work the next day. A and C would complete the balance $\frac{1}{60}$th of the work in another $\frac{1}{4}$th of a day. Hence a total of $13\frac{1}{4}$ days would be taken to complete the work.

Alternate method:
Assume the work (in units) to be the LCM of the individual time taken by A, B and C to complete the job i.e., 60 units. Capacities of A, B and C would be 6 units a day. A and B would complete 5 units the first day. A and C would complete 4 units the second day. Hence 9 units would be completed in two days. In 12 days, 54 units would be completed. Of the balance 6 units, 5 units would be completed the 13th day. The balance 1 unit would be completed in $\frac{1}{4}$th of the 14th day. Hence a total of $13^1/_4$ days would be taken to complete the work. Choice (D)

13. Amar and Bhavan would have taken 6 days to complete the job working together. Bhavan left after 4 days of the start of the work. In 4 days, Bhavan would have completed $\frac{4}{10}$ *i.e.* $\frac{2}{5}$th of the work. Amar completes the remaining $\frac{3}{5}$th of the work for which he would have taken $\frac{3}{5}(15)$ i.e., 9 days. Hence Amar completes the remaining work in 5 days. Choice (B)

14. Filling rate of first pipe $=\frac{1000\,\text{lit}}{10\,\text{min}}=100\,\text{lit/min}$.

Emptying rate of second pipe $=\frac{600\,\text{lit}}{8\,\text{min}}=75\text{lit/min}$.

Working together they can fill 25 lit/min. Time taken by them working together to fill a 500 litre tank $=\frac{500}{25}$ or 20 minutes. Choice (C)

15. Let us assume that the third person takes c days to complete the work independently. Total work completed by the three in a day, working together $=\frac{1}{25}+\frac{1}{20}+\frac{1}{c}=\frac{1}{6\frac{2}{3}}$

$$\frac{1}{c}=\frac{3}{20}-\frac{1}{20}-\frac{1}{25}\Rightarrow\frac{1}{c}=\frac{3}{50}$$

As the third person completes most of the work in a day, he is the fastest.
Ratio of work completed by the three persons $=\frac{1}{25}:\frac{1}{20}:\frac{3}{50}=4:5:6$

Percentage of work done by the third person $=\frac{6}{(4+5+6)}(100\%)=40\%$. Choice (C)

16. Let the volume of the tank be V litres. Let the filling rates of pipes I, II and III be $2x$, $5x$ and $6x$ respectively (in litres/hour)

$$\frac{V}{6x}=\frac{V}{5x}-1\Rightarrow V=30x$$

Time taken by pipe I to fill the tank $=\frac{30x}{2x}=15\,\text{hours}$.

Choice (D)

If the 10 possible pairs of points, for 7 pairs, the distances between the points equal. This is possible if of the 5 points, 4 are consecutive vertices of a regular hexagon and the 5th is the centre of the circum circle. We can think of the following figure.
Now we have to final which of these 5 points in A, which is B etc., AC, BE, CE have no direct roads connecting them. In the figure 13, 25 and also 35 have no direct roads connecting them (35 is connected through 4 not directly)

$\therefore$ We get the following possibilities. For either questions that follow it does not matter, which of the two figures we use.

17. The routes and recommended speeds are shows in the figure below.
The routes and the time taken are tabulated below.
We can take
$AB = BC = CD = DB = AD = DE = EA = r$ km

Route time Route Time

(1) $ABCD$ $\frac{r}{60}+\frac{r}{40}+\frac{r}{40}$

(2) $AEDC$ $\frac{r}{30}+\frac{r}{60}+\frac{r}{40}$

(3) $AEDB$ $\frac{r}{30}+\frac{r}{60}+\frac{r}{20}$

(4) $ABDE$ $\frac{r}{60}+\frac{r}{20}+\frac{r}{60}$

Multiplying all the time by LCM (60, 40, 30, 20) or 120, we get $8r$, $12r$, $9r$, $10r$ respectively

$\therefore$ For $ABCD$ the time is the least. Choice (A)

18. If AC and BE are also connected, each dist each distance would be $\sqrt{3}\,r$. The time for the round trip $ABCD$ is

$$\frac{r}{60}+\frac{r}{40}+\frac{\sqrt{3}r}{50}=\frac{10r+15r+12\sqrt{3}r}{600}=\frac{\left(25+12\sqrt{3}\right)(10)}{600}$$

($\because$ r = 10 km) = 25 + 12$\sqrt{3}$ min. Choice (B)

Solutions for questions 19 and 20:

Let the speed of the plane be x km

Let the time difference between A and P be t hours (i.e., P is t hours ahead of A).

$\therefore$ The time difference between A and Q is t hours (Q is t hours behind A)

$\therefore$ we have the following equations.

(from A to P) $\frac{4500}{x-75}=8-t$ …… (1)

(from A to Q) $\frac{4500}{x+75}=3+t$ …… (2)

(1) + (2) $\Rightarrow 4500\left[\frac{2x}{x^2-75^2}\right]=11$

$\Rightarrow$ $11x^2 - 11(75)^2 = 9000x$

$$\therefore\quad x=\frac{9000\pm\sqrt{(9000)^2-4(11)(-11)75^2}}{2(11)}$$

$$=\frac{9000\pm(150)\sqrt{60^2+121}}{22}=\frac{9000\pm150(61)}{22}$$

As x is positive, $x=\frac{9000+9150}{22}=825$

From (1), $\frac{4500}{825-75}=8-t$

$\Rightarrow$ $6 = 8 - t \Rightarrow t = 2$

19. Choice (A)

20. Choice (C)

Solutions for questions 21 to 35:

21. Let the total distance covered by Amar be d km. Amar covered $\frac{d}{4}$ km at 2 km/hr, $\frac{3d}{8}$ km at 3 km/hr and $\frac{3d}{8}$ km at 4 km/hr.

Total travel time of Amar $=\frac{\frac{d}{4}}{2}+\frac{\frac{3d}{8}}{3}+\frac{\frac{3d}{8}}{4}=\frac{11d}{32}$ hours

Average speed of Amar

$=\frac{\text{Total distance he travelled}}{\text{His total travel time}}$

$=\frac{d}{\frac{11d}{3}11d/3}=2\frac{10}{11}$ hours

Alternative method:

It can be seen from the normal method, as d cancels finally, any value of d can be taken. Taking d = 8, total travel time of Amar $=\frac{2}{2}+\frac{3}{3}+\frac{3}{4}=\frac{11}{4}$ hours

Average speed of Amar $=\frac{8}{\frac{11}{4}}=2\frac{10}{11}$ km/hr.

Choice (D)

22. From Q to R, he has to cover $\frac{11}{10}$ of the distance from P to Q.

$\therefore$ Time taken by him to reach R from Q will be $\frac{11}{10}$ times the time taken by him to reach R from Q i.e., 90 minutes $\times\frac{11}{10}$.

$\therefore$ He needs 99 minutes.

To reach R by 11 : 30 a.m. he should start from Q at 9 : 51 a.m. Choice (D)

23. Let the distance travelled in each direction (upstream as well as downstream) be d km. Let the speed of the boat in still water be x km/hr and the speed of the stream be y km/hr. Total travel time of the boat

= upstream travel time + downstream travel time

$=\frac{d}{x+y}+\frac{d}{x-y}$

Now the speed of the boat in still water and the speed of the stream are $2x$ km/hr and $3y$ km/hr respectively,

Total travel time $=\frac{d}{2x+3y}+\frac{d}{2x-3y}$

Given, $\frac{d}{x+y}+\frac{d}{x-y}=\frac{d}{2x+3y}+\frac{d}{2x-3y}$

$\frac{2dx}{x^2-y^2}=\frac{4dx}{4x^2-9y^2}$; $dx\,(2x^2-7y^2)=0$

$dx = 0$ or $x=\pm\sqrt{\frac{7}{2}}y$

As dx cannot be 0 ($\because$ $d > 0$ and $x > 0$) and x and y are both positive,

$x=\frac{\sqrt{7}}{\sqrt{2}}y \Rightarrow \frac{x}{y}=\frac{\sqrt{7}}{\sqrt{2}}$. Choice (C)

24. Let the point 12 km from A and the point where the boat turns back be B and C respectively.
If the speed of the stream is y km/hr, speed of the boat in still water = $3y$ km/hr. It travels for 2 hrs to cover BC.
$\therefore$ $BC = (3y + y)\,2 = 8y$ km
Time taken by the boat to travel from C to B
$=\frac{8y}{3y-y}=4$ hr.
As the boat takes 6 hours to travel from B to C and back,
$\frac{12}{y}=6$ or $y = 2$ Choice (B)

25. Let the length of the race be x m.
By the time A finish the race, B and C would have run $(x - 25)$ and $(x - 50)$ m respectively.
As B is 50% faster than C, $\frac{x-25}{x-50}=\frac{3}{2} \Rightarrow x=100$
Ratio of the speeds of A and $C = x : (x - 50) = 2 : 1$.
Choice (A)

26. Speed of $B = 10/2 = 5$ m/s
Time for which B would have run when A finishes the race $=\frac{200-(10+10)}{5}=36$ seconds.
So, A takes 36 seconds to run the race.
$\therefore$ Speed of $A=\frac{200}{36}=\frac{50}{9}$ m/s. Choice (D)

27. Time taken by A and C to meet for the first time at the starting point = LCM $\left(\frac{900}{2},\frac{900}{4}\right)=450$ sec
Time taken by B and C to meet for the first time
$=\frac{900}{\text{Difference of the speeds of } B \text{ and } C}=900$ seconds
Required time interval is 450 seconds.
Choice (B)

28. Let the speeds (in m/min) of A, B and C be x, $2x$ and $4x$ respectively. Let the length of the track be L m. Given that the time taken by A to complete one round = L/X = 3 minutes. Time taken by all the three to meet for the first time = LCM$\left(\frac{L}{x},\frac{L}{2x},\frac{L}{4x}\right)=\frac{L}{x}=3$ minutes.
Choice (C)

29. Let the speeds of A and B be x km/hr and y km/hr respectively. Distance from P and Q to their first meeting point are $2x$ km and $2y$ km respectively. Times taken by A and B to reach Q and P from their first meeting point are $\frac{2y}{x}$ hours and $\frac{2x}{y}$ hours respectively.

$2\frac{y}{x}=2\frac{x}{y}+3$

Substituting the choices in the above equation, only $\frac{x}{y}=\frac{1}{2}$, satisfies the condition. Choice (C)

30. If the man covers the entire distance at the usual speed, he takes $\frac{51}{50}$ hr or 1.02 hr = 1 hr $\frac{2(60)}{100}$ min = 1 hr / min 12 s.
But he actually takes 1 hr 1 min 30 s, i.e., 18 s more. For one speed breaker, he takes a certain extra time, which is $\left(\frac{0.05}{40}-\frac{0.05}{50}\right)$hr $=\frac{0.05}{10}\left(\frac{1}{20}\right)$hr $=\frac{5(36)}{200}$s
= 0.9s
$\therefore$ He has to cross $\frac{18}{0.9}$ or 20 speed breakers.
Choice (A)

31. Let the length of the train be L m and speed of the train be s m/sec. Time taken by the train to cross a 200 m long platform at increased speed $=\frac{L+200}{s+5}=40$
$\Rightarrow$ $L = 40s$
Time taken by the train to cross a 300 m long platform (in seconds) $=\frac{L+300}{s}=50$
As $L = 40s$,
$40s + 300 = 50s$
$s = 30$. Choice (D)

32. Let the lengths of the two trains be L_1 and L_2
Let the speeds of the faster and slower trains be S_1 and S_2 respectively.

$\frac{L_1+L_2}{S_1-S_2}=80 \Rightarrow L_1+L_2=80\,(S_1-S_2)$

$\frac{L_1+L_2}{S_1-S_2}=60 \Rightarrow L_1+L_2=60\,(S_1-S_2)$

$80\,(S_1-S_2)=60\,(S_1+S_2)$

$20S_1=140S_2 \Rightarrow \frac{S_1}{S_2}=\frac{7}{1}$. Choice (B)

33. Let the speeds (in km/hr) of the faster and slower cars be x and y respectively.Time taken by the cars to meet when they travel in the same direction and in the opposite direction are $\frac{80}{x-y}$ hours and $\frac{80}{x+y}$ hours respectively.

$\frac{80}{x-y} = 2\left(\frac{80}{x+y}\right)$

$80\ (x + y) = 160\ (x - y)\ 240y = 80x$

$\frac{x}{y} = \frac{3}{1}$. Choice (A)

34. Let the usual speed of the man be S km/hr. If he travels 20% faster, he would travel at $S + \frac{20}{100}S = \frac{6}{5}S$ km/hr.

As his speed is $\frac{6}{5}th$ of his usual speed, he would take $\frac{5}{6}th$ of the usual time to travel to office. He saves one sixth of his usual time = 10 minutes

$\Rightarrow$ His usual time = 60 minutes

If he travels 25% slower than his usual speed, he would travel at $S - \frac{25}{100}S = \frac{3}{4}S$

If his speed is $\frac{3}{4}ths$ of his usual speed, he would take $\frac{4}{3}rds$ of the usual time to travel to office. He would be late by $\frac{1}{3}rd$ of the usual time i.e., 20 minutes. Choice (C)

35. In 5 seconds, the frog would move 60 m. When the snake is spotted by the frog, the frog would be 90 m ahead of the snake. Time, the snake would take to catch the frog (in seconds)

$= \frac{90}{\text{DIfference of speeds of snake and frog}}$

$= \frac{90}{20-15} = 18$. Choice (B)

QUANTITATIVE ABILITY TEST 3

(INDICES, SURDS AND LOGARITHMS)

Number of Questions: 35 **Section Marks: 30**

Directions for questions 1 to 35: Select the correct alternative from the given choices.

1. Find the value of x, if $2^x = 8^y$ and $6^{4y} = 216^{x+y-2}$.

(A) $2\frac{1}{4}$ (B) $2\frac{1}{2}$

(C) $3\frac{1}{2}$ (D) $3\frac{1}{3}$

2. If $x = \sqrt[3]{9\sqrt[3]{9\sqrt[3]{9\sqrt[3]{9\ldots\ldots\ldots\ldots\ldots}}}}$, what is the value of x?

(A) 3 (B) –3

(C) $\sqrt{3}$ (D) 9

3. If $9^{3x-4} = 6561.\sqrt{27^{x-2}}$, then find the value of x.

(A) 1 (B) 2

(C) 3 (D) None of these

4. If $p^{\ell} = q^m = r^n$ and $\frac{1}{\ell} + \frac{1}{n} = \frac{2}{m}$,then which of the following is valid? ($p > 1$, $q > 1$, $r > 1$)

I. $p\ell = q^2$ II. $pq = \ell^2$ III. $p^2 = qr$

(A) Both I and I (B) Both II and III

(C) Both III and I (D) None of these

5. Find the value of x if $(125)^{2x-3} = (25)^{3^{(-1)^{2^{3^4}}}}$.

(A) 4.5 (B) 2.5

(C) 1.5 (D) None of these

6. If $2^{2x^2+3} = 8^{2x+1}$ and x is positive, then what is the value of x?

(A) 2 (B) 3

(C) 1 (D) 4

7. If $t_1 = \sqrt{5}$, $t_2 = \sqrt{5\sqrt{5}}$, $t_3 = \sqrt{5\sqrt{5\sqrt{5}}}$ and so on, then the product of the first ten terms $(t_1)\,(t_2)\,(t_3)\,(t_4)\ldots.\,(t_{10})$ is equal to

(A) $\sqrt[512]{5^{4609}}$ (B) $\sqrt[2048]{5^{18431}}$

(C) $\sqrt[1024]{5^{9217}}$ (D) $\sqrt[512]{5^{4607}}$

8. If $x^2 \neq x$, then

$$\frac{x^{4b} + x^{2(a+b)} + x^{4a}}{\left(x^{2a} + x^{a+b} + x^{2b}\right)\left(x^{2a} - x^{a+b} + x^{2b}\right)}$$ is equal to

(A) $\frac{x^a}{x^b}$ (B) $\frac{x^{2a}}{x^{2b}}$

(C) x^{a+b} (D) None of these

9. If $3^{x+3} - 3^{x-3} = 6552$, then find x^2.

(A) 5 (B) 25

(C) 3 (D) 9

10. If x, y, z are real numbers such that $xyz = 1$, then the expression $\frac{1}{1+x+y^{-1}} + \frac{1}{1+y+z^{-1}} + \frac{1}{1+z+x^{-1}}$ is equal to

(A) 1 (B) $\frac{3}{x+y+z}$

(C) $\frac{3}{x^{-1}+y^{-1}+z^{-1}}$ (D) $\frac{x+y+z}{3}$

11. If $\frac{(81^a)^a\,(81^b)^b\,(81^c)^c}{(6561^b)^{-c}\,(6561^c)^{-a}\,(6561^a)^{-b}} = 3.$

Then $a + b + c$ could be

(A) 2 (B) $\frac{1}{3}$

(C) $-\frac{1}{2}$ (D) $-\frac{1}{3}$

12. If $x = \cfrac{1}{4+\cfrac{1}{3+\cfrac{1}{4+\cfrac{1}{3+\ldots.\infty}}}}$ find x.

(A) $\sqrt{3}+\frac{3}{2}$ (B) $\sqrt{3}-\frac{3}{2}$

(C) $\sqrt{3}+\frac{1}{2}$ (D) $\sqrt{3}-\frac{1}{2}$

13. If $A = 8^{88^8}$, $B = 8^{8^{88}}$, $C = 8^{888}$ and $D = 8^{8^{8^8}}$, which of the following represents the ascending order of the values of A, B, C, D?

(A) *CDAB* (B) *CABD*

(C) *CBAD* (D) *ACBD*

14. Solve for x: $\sqrt{x} + \sqrt{x - \sqrt{1-x}} = 1$.

(A) 1 (B) $\frac{16}{25}$

(C) $\frac{4}{5}$ (D) 0

15. The arithmetic mean of two surds is $5 + 9\sqrt{2}$, and one of the surds is $1 + 12\sqrt{2}$

What is the square root of the other surd?

(A) $6 - 21\sqrt{2}$ (B) $4 - 3\sqrt{2}$

(C) $\sqrt{3}\left(\sqrt{2}+1\right)$ (D) $\sqrt{2}\left(2-\sqrt{3}\right)$

16. $\dfrac{1}{\sqrt{6}+\sqrt{7}-\sqrt{13}}+\dfrac{1}{\sqrt{6}-\sqrt{7}-\sqrt{13}}=$

(A) $\sqrt{6}$ (B) $\dfrac{1}{\sqrt{6}}$

(C) 6 (D) $\dfrac{1}{6}$

17. Find the square root of

$$\left[1+\frac{1}{\sqrt{2}+1}+\frac{1}{\sqrt{3}+\sqrt{2}}+\frac{1}{\sqrt{4}+\sqrt{3}}+\ldots\ldots\ldots \frac{1}{\sqrt{324}+\sqrt{323}}\right]$$

(A) $3\sqrt{2}$ (B) $\dfrac{1}{\sqrt{2}}$

(C) $2\sqrt{3}$ (D) $\dfrac{\sqrt{3}-1}{2}$

18. If $x^y = y^z = z^x$ and $(x, y, z) > 0$, then

(A) $3\left[\dfrac{xy+yz+zx}{xyz}\right]$ (B) $\dfrac{xy+yz+zx}{xyz}$

(C) $\dfrac{x+y+z}{xyz}$ (D) $\dfrac{xy+yz+zx}{x+y+z}$

19. If $\log_4 3$, $\log_4 (3^m - 2)$ and $\log_4\left(3^m - \dfrac{8}{3}\right)$ are in arithmetic progression, then the number of possible values of m are

(A) 1 (B) 2

(C) 4 (D) 5

20. If $\log_x 162 = m$ and $\log_x 72 = n$, then what is the value of $\log_x 7776$ in terms of m and n?

(A) $\dfrac{m+3n}{m+5n}$ (B) $\dfrac{3m-5n}{m+2n}$

(C) $\dfrac{m+3n}{2}$ (D) $\dfrac{3m-5n}{2}$

21. Which of the following is a possible value of x if $\log_3 x^2 - \log_3 x\sqrt{x} = 8\log_x 3$?

(A) $\dfrac{1}{81}$ (B) $\dfrac{1}{243}$

(C) 243 (D) 9

22. If $a =$ $a = \log_4 31$, then ______ .

(A) $a < 2$ (B) $2 < a < 2.5$

(C) $2.5 < a < 2.8$ (D) $2.8 < a$

23. If $\log_{10}(2x + 3) - 1 = \log_{10} x$, then find x.

(A) $\dfrac{2}{7}$ (B) $\dfrac{3}{4}$

(C) $\dfrac{7}{8}$ (D) $\dfrac{3}{8}$

24. If $a^2 + 4b^2 = 12ab$, what is the value of $\log(a + 2b)$?

(A) $\log\left(\dfrac{a}{2}\right)+\log\left(\dfrac{b}{2}\right)+\log 2$

(B) $(\log a+\log b-\log 2)\dfrac{1}{2}$

(C) $\dfrac{1}{2}(\log a+\log b+4\log 2)$

(D) $\dfrac{1}{2}(\log a-\log b+4\log 2)$

25. Simplify $\dfrac{\log_m p.\log_n p}{\log_m p+\log_n p}$.

(A) 1 (B) $\log_p (m + n)$

(C) $\log_p mn$ (D) $\log_{mn} p$

26. If $a > 1$, $\log_a a + \log_{a^{\frac{1}{2}}} a + \log_{a^{\frac{1}{3}}} a + \ldots..+ \log_{a^{\frac{1}{20}}} a =$

(A) 420 (B) 210

(C) 380 (D) 190

27. If $\dfrac{\log x}{y-z}=\dfrac{\log y}{z-x}=\dfrac{\log z}{x-y}$, then find the value of

$\log\left[\left(x^{y^2+yz+z^2+z}\right)\left(y^{z^2+zx+x^2+z}\right)\left(z^{x^2+xy+y^2+z}\right)\right]$

(A) 2 (B) 0

(C) 3 (D) None of these

28. If $abc = 1$, then find the value of

$\dfrac{1}{\log_{bc} a^3}+\dfrac{1}{\log_{ac} b^3}+\dfrac{1}{\log_{ab} c^3}$

(A) $\dfrac{-1}{3}$ (B) $\dfrac{1}{3}\log abc$

(C) -1 (D) $\log_{a+b+c} abc$

29. If $\log_6 27 = t$, then find the value of $\log_{18} 4$ in terms of t.

(A) $3\left(\dfrac{2-t}{2+t}\right)$ (B) $2\left(\dfrac{3-t}{3+t}\right)$

(C) $\dfrac{6+t}{3+t}$ (D) $\dfrac{4-t}{3+t}$

30. For $a \geq b$, $b > 1$ the value of the expression $\log_a\left(\dfrac{a}{b}\right)+\log_b\left(\dfrac{b}{a}\right)$ can never be

(A) 0 (B) 1

(C) -2 (D) -0.5

31. If $\log_4(x^2+x) - \log_4(x+1) = 2$, then $\sqrt{x} =$

(A) 2 (B) 4

(C) 8 (D) 16

32. If $\log_{10} 3 = 0.4771$, then find the number of digits in $(243)^{50}$.

(A) 200 (B) 205

(C) 120 (D) 210

33. If (log 16) (log 27) = (log x) (log y) and (log 4096) [log x – log 27] = [log16 – log y] (log 512), which of the following can be the value of (x – y)?
(A) –11
(B) 73
(C) –73
(D) More than one options

34. What is the value of?

$$\log_{64}\sqrt{512\sqrt{512\sqrt{512\sqrt{512\ldots\ldots\ldots\ldots\infty}}}}.$$

(A) 2.5 (B) 3
(C) 1.5 (D) 1

35. If $\log_{bc}a = \frac{1}{p}$, $\log_{ca}b = \frac{1}{q}$ and $\log_{ab}c = \frac{1}{r}$, find the value of $\frac{1}{p+1}+\frac{1}{q+1}+\frac{1}{r+1}$
(A) 1 (B) $\frac{3}{2}$
(C) 2 (D) None of these

Hints and Explanations

1. Given $2^x = 8^y \Rightarrow 2^x = (2^3)^y$
$\Rightarrow \quad x = 3y$
Also $6^{4y} = 216^{x+y-2}$
$\Rightarrow \quad 6^{4y} = 6^{3(3y+y-2)}$
$\Rightarrow \quad 6^{4y} = 6^{12y-6}$
$\Rightarrow \quad 4y = 12y - 6$
$\Rightarrow \quad 6 = 8y \Rightarrow y = \frac{3}{4}$
$\therefore \quad x = 3y = \frac{9}{4} = 2\frac{1}{4}$
Choice (A)

2. Given $x = \sqrt[3]{9\sqrt[3]{9\sqrt[3]{9\sqrt[3]{9\ldots\ldots\ldots\ldots}}}}$

$\Rightarrow \quad x^3 = 9\sqrt[3]{9\sqrt[3]{9\sqrt[3]{9\sqrt[3]{9\ldots\ldots\ldots\ldots}}}} = 9x$

$\Rightarrow x = 0, 3, –3$. Since x is positive, $x = 3$. Choice (A)

3. $9^{3x-4} = 3^8.(27)^{\frac{(x-2)}{2}}$

$9^{3x-4} = 3^8.(3^3)^{\frac{(x-2)}{2}}$

$3^{2(3x-4)} = 3^8.3^{3\frac{(x-2)}{2}}$

$\frac{3x}{2} = 8 + 8 - 3$

$6x - 8 = 8 + \frac{(3x-6)}{2}$

$\frac{9x}{2} = 13 \Rightarrow x = \frac{26}{9}$ Choice (D)

4. Given that $p^{\ell} = q^m = r^n$
Let each be equal to k.
Hence $p^{\ell} = k$; $\log_p k = \ell$
$\log_q k = m$; $\log_r k = n$ given that
$\frac{1}{\ell} + \frac{1}{n} = \frac{2}{m}$
$\Rightarrow \quad \frac{1}{\log_p k} + \frac{1}{\log_r k} = \frac{2}{\log_q k}$
$\Rightarrow \quad \log_k p + \log_k r = 2 \cdot \log_k q$
$\Rightarrow \quad \log_k (pr) = \log_k q^2 \; pr = q^2$ Choice (D)

5. 2^{3^4} is always even, as 2 raised to any power is even.
Hence $(-1)^{2^{3^4}} = (-1)^{\text{even number}} = +1$
Hence, $(25)^{3(-1)^{2^{3^4}}} = (25)^{3^1} = 5^6$.
$(125)^{2x-3} = 5^6. \Rightarrow 5^{3(2x-3)} = 5^6. \Rightarrow 2x - 3 = 2; x = 2.5$
Choice (B)

6. By equating the index of 2 on both sides we get
$2x^2 + 3 = 6x + 3 \Rightarrow x = 3$ (as $x > 0$) Choice (B)

7. $t_1 = 5^{\frac{1}{2}} = 5^{1-\frac{1}{2}}$

$t_2 = 5^{\frac{3}{4}} = 5^{1-\frac{1}{2^2}}$

$t_3 = 5^{\frac{7}{8}} = 5^{1-\frac{1}{2^3}}$

$t_{10} = 5^{1-\frac{1}{2^{10}}}$

$= (t_1)(t_2)(t_3)\ldots\ldots(t_{10}) = \left(5^{1-\frac{1}{2}}\right)\left(5^{1-\frac{1}{2^2}}\right)\left(5^{1-\frac{1}{2^3}}\right)$

$\ldots\ldots\left(5^{1-\frac{1}{2^{10}}}\right)$

$$= 5^{10-\left(\frac{1}{2}+\frac{1}{2^2}+\frac{1}{2^3}+....+\frac{1}{2^{10}}\right)}$$

$$= 5^{10-\frac{1}{2}\left[1+\frac{1}{2}+\frac{1}{2^2}+....+\frac{1}{2^9}\right]}$$

$$= 5^{10-\frac{1}{2}\frac{\left[1-\frac{1}{2^{10}}\right]}{1-\frac{1}{2}}}$$

$$= 5^{10-1+\frac{1}{2^{10}}} = \sqrt[1024]{5^{9217}}$$

Choice (C)

8. Let $E =$ $E = \dfrac{x^{4b}+x^{2(a+b)}+x^{4a}}{\left(x^{2a}+x^{a+b}+x^{2b}\right)\left(x^{2a}-x^{a+b}+x^{2b}\right)}$.

Den (E) = $x^{2b}\left(x^{2a-2b}+x^{a-b}+1\right).\ x^{2b}\left(x^{2a-2b}-x^{a-b}+1\right)$

$$E=\frac{x^{4b}\left(1+x^{2(a\text{-}b)}+x^{4(a\text{-}b)}\right)}{x^{4b}\left[1\text{-}x^{(a\text{-}b)}+x^{2(a\text{-}b)}\right]\left[1+x^{a\text{-}b}+x^{2(a\text{-}b)}\right]}$$

Considering $x^{a\text{-}b} = t$, we get

$$\frac{1+\ t^2+t^4}{\left(1\text{-}t+t^2\right)\left(1+t+t^2\right)}=\frac{1+t^2+t^4}{1+\ t^2+t^4}=1$$

$(1 - t + t^2)\ (1 + t + t^2) = (1 + t^2 - t)\ (1 + t^2 + t)$

$=(\ (1 + t^2)^2 - t^2)$

Note: The condition $x^2 \neq x$ means $x \neq 0$, $x \neq 1$. If $x = 0$, E is not defined. If $x = 1$, $E = 1$.

∴ This condition need not be imposed. But imposing the condition does not make the statement (that $E = 1$) false. Choice (D)

9. $3^{x+3} - 3^{x-3} = 6552$

$$3^x\left[3^3-\frac{1}{3^3}\right]=6552$$

$$3^x\left[\frac{728}{27}\right]=6552$$

$3^x = 243 = 3^5$

$\Rightarrow\ \ x = 5$

∴ $x^2 = 5^2 = 25$ Choice (B)

10. Given $xyz = 1$

$\Rightarrow\ \ qxy = \dfrac{1}{z}, \dfrac{1}{xy} = z$ -- (1)

Given expression,

$$\frac{1}{1+x+y^{-1}}+\frac{1}{1+y+z^{-1}}+\frac{1}{1+z+x^{-1}}$$

$$=\frac{y}{y+xy+1}+\frac{1}{1+y+xy}+\frac{1}{1+\frac{1}{xy}+\frac{1}{x}}\ \text{(from (1))}$$

$$=\frac{y}{y+xy+1}+\frac{1}{1+y+xy}+\frac{xy}{xy+1+y}$$

$$=\frac{y+1+xy}{1+xy+y}=1$$

Choice (A)

11. $\dfrac{81^{a^2+b^2+c^2}}{81^{[-2bc-2ca-2ab]}}=81^{a^2+b^2+c^2+2ab+2bc+2ca}$

$= 81^{(a+b+c)^2} = 3 = 81^{\frac{1}{4}}$

$\Rightarrow\ \ a+b+c=\pm\ \dfrac{1}{2}$

Choice (C)

12. Given $x = \cfrac{1}{4+\cfrac{1}{3+\cfrac{1}{4+\cfrac{1}{3+......\infty}}}}$

$\Rightarrow\ \ x=\dfrac{1}{4+\dfrac{1}{3+x}}\ \Rightarrow\ x=\dfrac{3+x}{4\left(3+x\right)+1}$

$\Rightarrow\ \ x=\dfrac{3+x}{4x+13}$

$\Rightarrow\ \ 4x^2 + 12x - 3 = 0$

$\Rightarrow\ \ x=\dfrac{-12\pm\sqrt{144+48}}{8}$

$\Rightarrow\ \ x=\dfrac{4\left(-3\pm\sqrt{12}\right)}{8}$

$\Rightarrow\ \ x=\dfrac{-3\pm2\sqrt{3}}{2}$

Since $x > 0$,

$x =\ x=\dfrac{-3}{2}+\sqrt{3}$ Choice (B)

13. $A=8^{88^8}\quad B=8^{8^{88}}\ \ C=8^{888}\ \ D=8^{8^{8^8}}$

Since the base of all the numbers is 8, the number power with highest index is the greatest number. Clearly 'C' has the lowest value.

Consider $A=8^{88^8}$

and $B=8^{888}$.

Consider the indices is 88^8

and 8^{88}

$(88)^8$ and $(8^{11})^8$

Since $8^{11} > 88$

$8^{88} > 88^8$

∴ $B > A$

Also, among the four powers the greatest power is 8^{8^8}. Hence D is the largest number.

∴ the ascending order is $CABD$. Choice (B)

14. $\sqrt{x}+\sqrt{x-\sqrt{1-x}}=1$

Squaring both sides we get, $x-\sqrt{1-x}=1+x-2\sqrt{x}$

Squaring again, we get, $1 - x = 1 + 4x - 4\sqrt{x}$

$16x = 25x^2$

$x=\dfrac{16}{25}$ Choice (B)

15. Let the other surd be "a".

$a + 1 + 12\sqrt{2}$

$= 10 + 18\sqrt{2}$

$a = 9 + 6\sqrt{2}$

$= 9 + 2\sqrt{18} = \left(\sqrt{6}+\sqrt{3}\right)^2$

$\therefore \quad \sqrt{a} = \left(\sqrt{6}+\sqrt{3}\right)$ Choice (C)

16. $\dfrac{1}{\sqrt{6}+\sqrt{7}-\sqrt{13}} = \dfrac{\left(\sqrt{6}+\sqrt{7}+\sqrt{13}\right)}{\left(\sqrt{6}+\sqrt{7}+\sqrt{13}\right)} \dfrac{(1)}{\left(\sqrt{6}+\sqrt{7}-\sqrt{13}\right)}$

$= \dfrac{\sqrt{6}+\sqrt{7}+\sqrt{13}}{\left(\sqrt{6}+\sqrt{7}\right)^2-\left(\sqrt{13}\right)^2} = \dfrac{\sqrt{6}+\sqrt{7}+\sqrt{13}}{13+2\sqrt{42}-13}$

$= \dfrac{\sqrt{6}+\sqrt{7}+\sqrt{13}}{2\sqrt{42}}$

$\dfrac{1}{\sqrt{6}-\sqrt{7}-\sqrt{13}} = \dfrac{1\left(\sqrt{6}-\sqrt{7}+\sqrt{13}\right)}{\left(\sqrt{6}-\sqrt{7}-\sqrt{13}\right)\left(\sqrt{6}-\sqrt{7}+\sqrt{13}\right)}$

$= \dfrac{\sqrt{6}-\sqrt{7}+\sqrt{13}}{\left(\sqrt{6}-\sqrt{7}\right)^2-\left(\sqrt{13}\right)^2} = \dfrac{\sqrt{6}-\sqrt{7}+\sqrt{13}}{13-2\sqrt{42}-13}$

$= \dfrac{-\left(\sqrt{6}-\sqrt{7}+\sqrt{13}\right)}{2\sqrt{42}}$

Required value $= \dfrac{\sqrt{6}+\sqrt{7}+\sqrt{13}}{2\sqrt{42}} + \dfrac{-\left(\sqrt{6}-\sqrt{7}+\sqrt{13}\right)}{2\sqrt{42}}$

$= \dfrac{2\sqrt{7}}{2\sqrt{42}} = \dfrac{1}{\sqrt{6}}$ Choice (B)

17. The given function is $1 + \dfrac{1}{\sqrt{2}+1} + \dfrac{1}{\sqrt{3}+\sqrt{2}} +$

$= 1 + \dfrac{\sqrt{2}-1}{2-1} + \dfrac{\sqrt{3}-\sqrt{2}}{3-2} + \dfrac{\sqrt{4}-\sqrt{3}}{4-3} + \ldots +$

(on rationalizing the denominator of each term)

$= 1 + \sqrt{2} - 1 + \sqrt{3} - \sqrt{2} + \sqrt{4} - \sqrt{3} + \ldots + \sqrt{324} - \sqrt{323}$

$= \sqrt{324} = 18$ ($\because$ all terms cancel off except $\sqrt{324}$)

Hence, the square root of the given expression is $\sqrt{18}$

$= 3\sqrt{2}$. Choice (A)

18. Let $x^y = y^z = z^x = k$

$\Rightarrow \quad x = k^{\frac{1}{y}}, y = k^{\frac{1}{z}}, z = k^{\frac{1}{x}}$

consider $\dfrac{1}{x}\log_z xyz$

$= \dfrac{1}{x}\log_{k^{\frac{1}{x}}}\left(k^{\frac{1}{y}}.k^{\frac{1}{z}}.k^{\frac{1}{x}}\right)$

$= \dfrac{1}{x}\log_{k^{\frac{1}{x}}}\left(k^{\frac{1}{x}+\frac{1}{y}+\frac{1}{z}}\right) = \dfrac{1}{x}+\dfrac{1}{y}+\dfrac{1}{z}$

Similarly $\dfrac{1}{y}\log_x xyz = \dfrac{1}{x}+\dfrac{1}{y}+\dfrac{1}{z}$ and $\dfrac{1}{z}\log_y xyz$

$= \dfrac{1}{x}+\dfrac{1}{y}+\dfrac{1}{z}$

Hence the given expression is equal to

$3\left[\dfrac{1}{x}+\dfrac{1}{y}+\dfrac{1}{z}\right] = 3\left(\dfrac{xy+yz+zx}{xyz}\right)$ Choice (A)

19. Given $\log_4 3 + \log_4\left(3^m - \dfrac{8}{3}\right) = 2\log_4\left(3^m - 2\right)$

$\Rightarrow \quad 3\left(3^m - \dfrac{8}{3}\right) = \left(3^m - 2\right)^2$

$\Rightarrow \quad 3^{m+1} - 8 = 3^{2m} + 4 - 4(3^m)$

$\Rightarrow \quad 3^{2m} - 7(3^m) + 12 = 0$

Let $3^m = x$

$\Rightarrow \quad x^2 - 7x + 12 = 0$

$x^2 - 4x - 3x + 12 = 0$

$x(x-4) - 3(x-4) = 0$

$\Rightarrow \quad (x-4)(x-3) = 0$

$\Rightarrow \quad x = 4$ or 3

$\Rightarrow \quad 3^m = 4$ or $3^m = 3$

$\Rightarrow \quad m = \log_3 4$ (or) $m = 1$

Hence m can take two values. Choice (B)

20. Given $\log_x 162 = m$

$\Rightarrow \quad \log_x 3^4 \ (2) = m$

$\therefore \quad m = 4\log_x 3 + \log_x 2$

Given $\log_x 72 = n$

$\Rightarrow \quad \log_x 3^2\, 2^3 = n$

$\therefore \quad n = 2\log_x 3 + 3\log_x 2$

Let $\log_x 3 = 1$ and $\log_x 2 = b$

$\Rightarrow m = 4a + b$ --- (1)

$n = 2a + 3b$ --- (2)

2 (2) – (1) gives

$5b = 2n - m \Rightarrow b = \dfrac{2n-m}{5}$

similarly $a = \dfrac{3m-n}{10}$

Now consider $\log_x 7776$

$= \log_x 3^5.2^5$

$= 5[\log_x 3 + \log_x 2]$

$= 5\left[\dfrac{3m-n}{10} + \dfrac{2n-m}{5}\right]$

$= 5\left[\dfrac{m+3n}{10}\right] = \dfrac{m+3n}{2}$ Choice (C)

21. $\log_3 x^2 - \log_3 x\sqrt{x}$
$= 8\log_x 3$

$\Rightarrow \quad \log_3 \dfrac{x^2}{x\sqrt{x}} = 8\log_x 3$

$\Rightarrow \quad \log_3 \sqrt{x} = 8\log_x 3$

$\Rightarrow \quad \dfrac{1}{2}\log_3 x = \dfrac{8}{\log_3 x}$

$\Rightarrow \quad (\log_3 x)^2 = 16$

$\Rightarrow \quad \log_3 x = 4$

$\Rightarrow \quad x = 3^4 = 81$ or $x = 3^{-4} = \dfrac{1}{81}$

Choice (A)

22. $\log_4 31 = \log_{2^2} 31 = \dfrac{1}{2}\log_2 31$

$2^4 < 31 < 2^5$

$\Rightarrow \quad \log_2 2^4 < \log_2 31 < \log_2 2^5$

$\Rightarrow \quad 4\log_2 2 < \log_2 31 < 5\log_2 2$

$\Rightarrow \quad \dfrac{4}{2} < \dfrac{1}{2}\log_2 31 < \dfrac{5}{2}$

$\Rightarrow \quad 2 < \dfrac{1}{2}\log_2 31 < 2.5.$ Choice (B)

23. $\log(2x + 3) - 1 = \log x$

$\log(2x + 3) - \log 10 = \log x$

$\Rightarrow \quad \log\left(\dfrac{2x+3}{10}\right) = \log x$

$\Rightarrow \quad \dfrac{2x+3}{10} = x$

$\Rightarrow \quad 2x + 3 = 10x$

$\Rightarrow \quad x = \dfrac{3}{8}$

Choice (D)

24. $a^2 + 4b^2 = 12ab$; adding $4ab$ to both sides of the equation, we get $(a + 2b)^2 = 16ab$

$2\log(a + 2b) = 4\log 2 + \log a + \log b$

$\log(a + 2b) = \dfrac{1}{2}$

$[\log a + \log b + 4\log 2]$ Choice (C)

25. $\dfrac{\log_m p.\log_n p}{\log_m p + \log_n p}$

$= \dfrac{1}{\dfrac{\log_m p + \log_n p}{\log_m p.\log_n p}} = \dfrac{1}{\dfrac{1}{\log_n p} + \dfrac{1}{\log_m p}}$

$= \dfrac{1}{\log_p n + \log_p m} = \dfrac{1}{\log_p mn}$

$= \log_{mn} p$ Choice (D)

26. $\log_a a + \log_a \frac{1}{2} a + \log_a \frac{1}{3} a + \ldots + \log_a \frac{1}{20}$ a

$= \dfrac{\log a}{\log a} + \dfrac{\log a}{\log a^{\frac{1}{2}}} + \dfrac{\log a}{\log a^{\frac{1}{3}}} + \ldots + \dfrac{\log a}{\log a^{\frac{1}{20}}}$

$= 1 + 2 + 3 + \ldots + 20 = \dfrac{20\times21}{2} = 210$ Choice (B)

27. Let $\dfrac{\log x}{y-z} = \dfrac{\log y}{z-x} = \dfrac{\log z}{x-y} = k$

$\log x = k(y - z)$

$\log y = k(z - x)$

$\log z = k(x - y)$

$\log x^{y^2+yz+z^2+z} = (y^2 + yz + z^2 + z)(\log x)$

$= k(y-z)(y^2 + yz + z^2 + z)$

$= k(y^3 - z^3) + k(y - z)z$ --- (1)

$\log y^{z^2+xz+x^2+z} = k(z-x)(z^2 + xz + x^2 + z)$

$= k(z^3 - x^3) + k(z - x)z$ --- (2)

$\log z^{x^2+xy+y^2+2} = k(x-y)(x^2 + xy + y^2 + z)$

$= k(x^3 - y^3) + k(x\ y)z$ --- (3)

Adding (1), (2) and (3),

$\log x^{y^2-yz+z^2+z} + \log y^{z^2+xz+x^2+z} + \log z^{x^2+xy+y^2+z}$

$= k(y^3 - z^3) + kz(y - z) + k(z^3 - x^3) + kz(z - x) + k(x^3 - y^3) + kz(x - y)$

$= k(y^3 - z^3 + z^3 - x^3 + x^3 - y^3) + kz(y - z + z - x + x - y)$

$= 0 + 0 = 0$ Choice (B)

28. $\dfrac{1}{\log_{bc} a^3} + \dfrac{1}{\log_{ac} b^3} + \dfrac{1}{\log_{ab} c^3}$

$= \dfrac{1}{\log_{1/a} a^3} + \dfrac{1}{\log_{1/b} b^3} + \dfrac{1}{\log_{1/c} c^3}$

$\left[\because bc = \dfrac{1}{a}, ac = \dfrac{1}{b} \text{ and } ab = \dfrac{1}{c}\right]$

$= \dfrac{1}{\log_{a^{-1}} a^3} + \dfrac{1}{\log_{b^{-1}} b^3} + \dfrac{1}{\log_{c^{-1}} c^3}$

$= \dfrac{1}{-3} + \dfrac{1}{-3} + \dfrac{1}{-3} = -1$ Choice (C)

29. $t = \log_6 27 = \dfrac{\log_{10} 27}{\log_{10} 6} = \dfrac{3\log_{10} 3}{\log_{10} 2 + \log_{10} 3}$

Now $3 - t = 3 - \dfrac{3\log 3}{\log 2 + \log 3} = \dfrac{3\log 2}{\log 2 + \log 3}$

$3 + t = 3 + \dfrac{3\log 3}{\log 2 + \log 3} = \dfrac{3\log 2 + 6\log 3}{\log 2 + \log 3}$

$\dfrac{3-t}{3+t} = \dfrac{(3\log 2)/(\log 2 + \log 3)}{(3\log 2 + 6\log 3)/(\log 2 + \log 3)}$

$= \dfrac{\log 2}{\log 2 + 2\log 3} = \log_{18} 2$

$\therefore \quad 2\dfrac{(3-t)}{3+t} = 2\log_{18} 2 = \log_{18} 4$

Choice (B)

30. Given: $\log_a\left(\dfrac{a}{b}\right) + \log_b\left(\dfrac{b}{a}\right)$

$= \log_a a - \log_a b + \log_b b - \log_b a = 2 - (\log_a b + \log_b a)$

But $\log_a b + \log_b a$ is in the form of $x + \dfrac{1}{x}$ which is ≥ 2

$\therefore$ $\log_a b + \log_b a \geq 2$

$\therefore$ The given expression can not be positive

$\therefore$ It can not be 1

Choice (B)

31. $\log_4\left[\dfrac{(x^2+x)}{(x+1)}\right] = 2$

$\dfrac{(x^2+x)}{(x+1)} = 4^2$

$\Rightarrow \quad x^2 + x = 16x + 16$

$= x^2 - 15x - 16 = 0$

$x^2 - 16x + x - 16 = 0$

$x(x - 16) + 1(x - 16) = 0$

$\Rightarrow \quad (x + 1)(x - 16) = 0$

$x = -1$ or 16

$\sqrt{x} = \sqrt{16} = 4$

Choice (B)

32. Let $k = (243)^{50} = 3^{250}$

Taking log on both sides, we get

$\log k = 250 \log 3$

$= 250\,(0.4771)$

$= 25(4.771) = \dfrac{100}{4}(4.771) = 119.4$

The characteristic of $\log k$ is 119.

Number of digits in $(243)^{50}$ are $119 + 1 = 120$

Choice (C)

33. Given $(\log 16)(\log 27) = (\log x)(\log(y))$

let $\log x = X$ and $\log y = Y$ then $(\log 4096)(\log x - \log 27)$

$= \log 512\,(\log 16 - \log y)$

becomes

$12 \log 2\,(X - 3\log 3) = 9\log 2(4\log 2 - Y)$

$4(X - 3\log 3) = 3(4\log 2 - Y)$ ———— (1)

and $(\log 16)(\log 27) = (\log x)(\log y)$ becomes $12 \log 2 \log 3 = XY$ ———— (2)

eliminating Y using (1) and (2) we have

$4(X - 3\log 3) = 3(4\log 2 - 12(\log 2)(\log 3) \div X)$

$4X(X - 3\log 3) = 3(4X\log 2 - 12\log 2.\log 3)$

$4X^2 - 12X\log 3 = 12X\log 2 - 36\log 2.\log 3$

$X^2 - 3X\log 3 - 3X\log 2 + 9\log 2\log 3 = 0$

$(X - 3\log 3)(X - 3\log 2) = 0$

$\Rightarrow \quad X = \log 27$ or $X = \log 8$

i.e., $\log x = \log 27$ or $\log x = \log 8$

$\Rightarrow \quad x = 27$ or 8

when $x = 27$ then $y = 16$ and $x - y = 11$ and when $x = 8$, then $y = 81$ and $x - y = -73$

Choice (D)

34. Let $\sqrt{512\sqrt{512\sqrt{512\sqrt{512\ldots\ldots\ldots\infty}}}} = x$

$x^2 = 512\sqrt{512\sqrt{512\sqrt{512\ldots\ldots\infty}}}$

$x^2 = 512x, \Rightarrow x = 0$ or 512.

As x is clearly not zero, $x = 512$.

Hence the required quantity is $\log_{64} 512$.

$= \log_{8^2} 8^3 = \dfrac{3}{2} = 1.5$

Choice (C)

35. $\log_{bc} a = 1/p \Rightarrow p = \log_a bc \Rightarrow p + 1 = \log_a abc$

Similarly $\log_{ca} b = 1/q \Rightarrow q + 1 = \log_b abc$

and $\log_{ab} c = 1/r \Rightarrow r + 1 = \log_c abc$

$\therefore \quad \dfrac{1}{p+1} + \dfrac{1}{q+1} + \dfrac{1}{r+1} = \log_{abc} a + \log_{abc} b + \log_{abc} c$

$= \log_{abc} abc = 1$

Choice (A)

Quantitative Ability Test 4

(Data Interpretation)

Number of Questions: 30 **Section Marks: 30**

Directions for questions 1 to 4: These questions are based on the information given below.

Vinod Melkote, HR Manager of *XYZ* Ltd. received partial information from his subordinates about the employees for annual appraisal.

	Performance			Total
	Below Average	Average	Above Average	
Males				96
Females		30		
Total	48			

Vinod also received the following information.

(1) One-third of the total employees are above average performers.

(2) 25% of the males are below average performers.

(3) The total number of females is twice the number of average performing males.

1. How many people are above average performers?

(A) 48 (B) 60
(C) 66 (D) 54

2. How many females are there?

(A) 54 (B) 72
(C) 90 (D) 84

3. What is the difference between the total number of average performers and that of males?

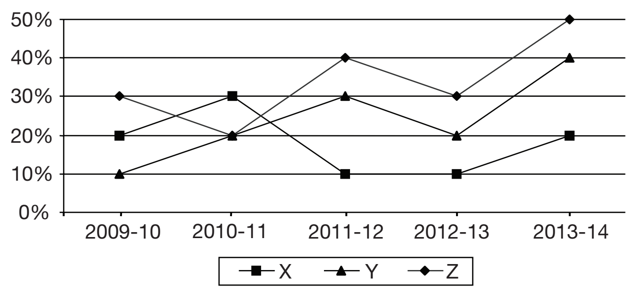
(A) 18 (B) 12
(C) 24 (D) 20

4. What is the ratio of the number of average performers and the number of females?

(A) 6 : 7 (B) 11 : 12
(C) 3 : 4 (D) 2 : 3

***Directions for questions 5 to 8*:** These questions are based on the following line graph.

Profit percentages of companies X, Y and Z from 2009-10 to 2013-14



Note: Profit = Income − Expenditure.; Profit % = $\frac{\text{Profit}}{\text{Expenditure}} \times 100$

5. If the profit of *X* in 2010-11 is ₹120 lakhs, then what is its income in 2010-11? (in ₹lakhs)

(A) 520 (B) 200
(C) 320 (D) 140

6. If the income of *Y* in 2013-14 is thrice that of *X* in 2009-10, then what is the ratio of profits of *X* and *Y* in 2013-14?

(A) 12 : 1 (B) 12 : 13
(C) 1 : 13 (D) None of these

7. If in 2009-10, the ratio of profits of *X*, *Y* and *Z* is 4 : 2 : 3, then what is the ratio of their expenditures in that year?

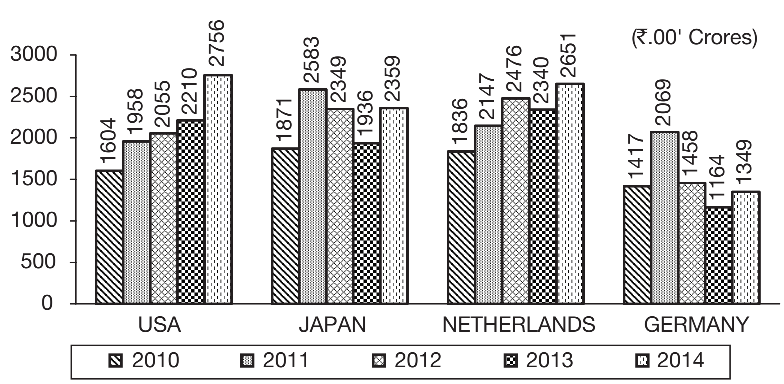
(A) 3 : 6 : 4 (B) 2 : 2 : 1
(C) 3 : 2 : 4 (D) None of these

8. If both *Y* and *Z* had the same profit in 2011-12, then what is the ratio of their incomes in that year?

(A) 4 : 3 (B) 1 : 1
(C) 26 : 21 (D) 2 : 3

Directions for questions 9 to 13: These questions are based on the following bar graph.

Trade volumes with India by four countries from 2010 through 2014



9. From the year 2010 to 2011, the trade with India by which of the following countries showed the highest percentage increase?
(A) USA (B) Japan
(C) U.K (D) Germany

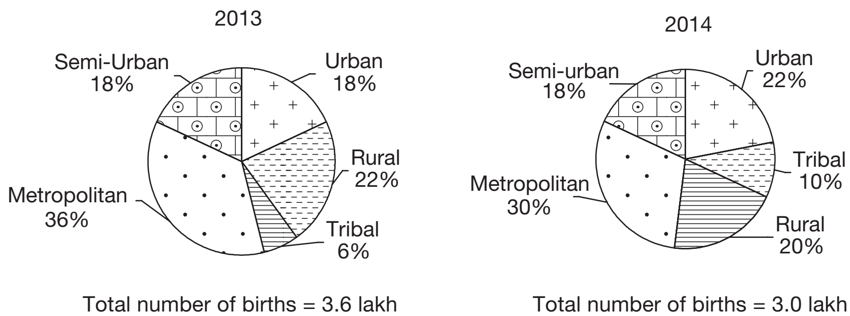
10. In the year 2013, the trade volume by the given countries constitutes 62.5% of the total trade volume of India. What is the trade volume (in ₹'00 crores) by all other countries with India in that year?
(A) 4590 (B) 5430
(C) 6140 (D) 7250

11. During which year is the total trade volume by the given countries with India the highest?
(A) 2010 (B) 2011
(C) 2012 (D) 2014

12. In how many of the given years is the trade volume of Netherlands with India greater than the average trade volume per year by the Netherlands in India in the given period?
(A) 1 (B) 2
(C) 3 (D) 4

13. For which country is the percentage increase in the trade volume with India in any year when compared to that in the previous year, the greatest?
(A) USA (B) Japan
(C) UK (D) Germany

Directions for questions 14 to 18: These questions are based on the following pie-charts which show the percentage distribution of births in different areas, during the two years 2013 and 2014.



14. What is the difference in the number of births in the year 2013 and 2014 in rural areas?
(A) 16,400 (B) 19,200
(C) 18,600 (D) 17,600

15. The percentage increase/decrease in the number of births in semi-urban areas from 2013 to 2014 is ______.
(A) 16.66% decrease
(B) 20% increase
(C) 16.66% increase
(D) 20% decrease

16. What is the ratio of the number of births in the metropolitans in 2013 to that in 2014?
(A) 36 : 25 (B) 15 : 17
(C) 3 : 7 (D) 7 : 3

17. The number of births in tribal areas in the year 2013 is what percentage of that in 2014?
(A) 56% (B) 64%
(C) 72% (D) 84%

18. If 18% of the children born in 2013 and 16% of the children born in 2014 lacked good medical facilities in the same year, then what is the total number of children (in lakhs) who doesn't lacked good medical facilities in these two years?
(A) 6.329 (B) 5.472
(C) 4.289 (D) 5.689

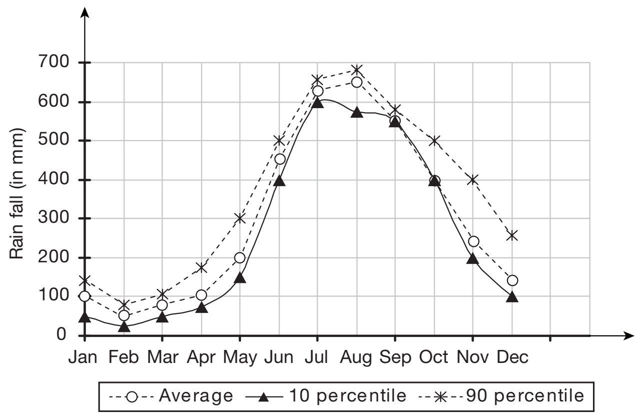
Directions for questions 19 to 20: Select the correct alternative from the given Choices.

19. A total of 600 persons participated in a survey. Each respondent was asked whether he/she owned a vehicle. Any respondent owning a vehicle was asked to mention whether he/she owned a two-wheeler or four wheeler or both.
The results of the survey are tabulated below.

		men	Women
Number of persons having own vehicle	Only Four-wheeler	80	68
	Only Two-wheeler	60	40
	Both	120	92
Number of persons not owning a vehicle		40	100

What percent of the respondents do not own a four wheeler?
(A) 60% (B) 40%
(C) 30% (D) 80%

20. The monthly rainfall chart for a certain city was prepared, based on 40 years of data. The graph below shows the x (x percentile means that for x% of the 40 years, the rainfall was less than the indicated value.



Which of following statements can be concluded?

(i) The average rainfall in December is less than that in June.

(ii) Each year, the amount of rainfall in July is more than that in February.

(iii) In May, there is at least 250mm of rainfall each year.

(iv) The rainfall in August can be estimated with better certainity than the rainfall in November.

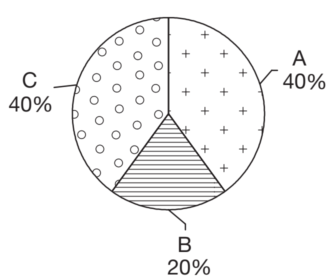
(A) (i) and (iii) (B) (i) and (iv)

(C) (ii) and (iv) (D) (ii) and (iii)

Directions for questions 21 and 22: Study the following table and pie chart carefully to the answer the questions.

Percentage of two wheelers of the total vehicles manufactured in a year by a certain company.

Type	Percentage of total vehicles	Out of which	
		100 cc	150 cc
Scooters (without gear)	25%	70%	30%
Scooter with gear	35%	40%	60%
Bikes	40%	65%	35%



The two wheelers are manufactured in three models as shown in the above pie chart.

Note: The above percentages mentioned in the table are applicable for all models. The total number of vehicles produced in that year is 70,000.

21. What is the total number of 150 cc bikes produced by the company in that year?

(A) 9000 (B) 9600

(C) 9500 (D) 9800

22. Which of the following numbers is the least?

(A) 100 cc bikes

(B) 150 cc bikes

(C) 100 cc scooters with gear

(D) 150 cc scooters without gear

Directions for questions 23 and 24: These questions are based on the following table which gives the percentage by weight of proteins, carbohydrates, minerals and fats in four formulations – *A*, *B*, *C* and *D*.

Formulation	Proteins	Carbohydrates	Minerals	Fats
A	10	20	25	45
B	25	35	20	20
C	30	10	40	20
D	15	50	30	5

	Proteins	Carbohydrates	Minerals	Fats
Cost (in ₹) per 10 g	4	3	2	1

23. What is the cost of a mixture containing 100 g each of *A*, *B*, *C* and *D*?

(A) ₹96.5 (B) ₹98

(C) ₹98.5 (D) ₹99

24. Which of the following would cost the least?

(A) 400 g of *B*

(B) 400 g of *C*

(C) 200 g of *A* and 200 g of *D*

(D) 300 g of *A* and 150 g of *D*

Directions for question 25: Select the correct alternative from the given choices.

25. The table below shows the test batting averages of 5 cricket players from 2010 to 2014. The test batting average of any batsman in any number of matches is his total score in those matches divided by the number of those matches.

Year	P	Q	R	S	T
2010	44	46	41	42	19
2011	55	52	44	48	22
2012	50	55	36	52	28
2013	46	51	40	46	34
2014	48	52	35	40	39

Who among the five players had the least percentage increase in the test batting average from 2010 to 2014?

(A) P (B) Q

(C) T (D) S

Directions for questions 26 and 27: These questions are based on the data given below.

A survey was conducted among 100 students in a hostel to find their favourite breakfast dish. Five students liked cutlet and sandwich only. 21 students liked omlette only. 25 students liked sandwich and 30 liked cutlet. There are 3 students who liked both sandwich and omlette. 48 students liked exactly one dish among the three. 2 students liked all the three dishes.

26. How many students like at least one dish?
(A) 69 (B) 100
(C) 2 (D) 21

27. How many students like cutlet or sandwich but not both?
(A) 48 (B) 41
(C) 31 (D) 62

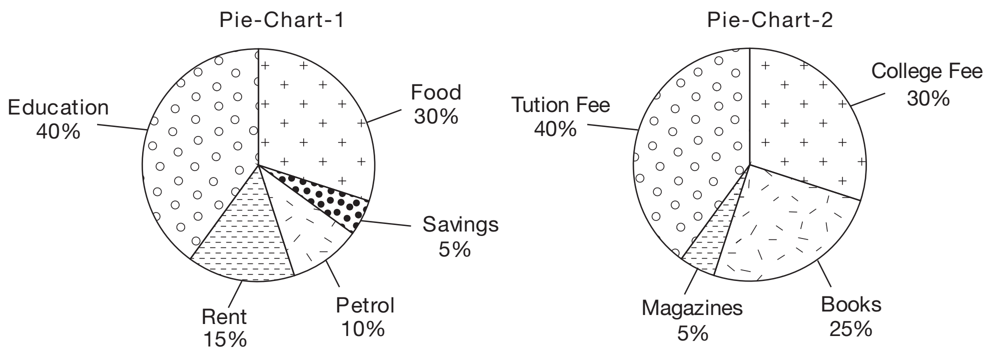
Directions for question 28: Select the correct alternative from the given choices.

28. Ten companies produce the same tool. Each of those companies rejects all the defective units of the tool produced. The table below gives the percentage of accepted units and the number of rejected units among all the units produced by the companies in month *M*.

Company	Percentage of accepted units	Number of rejected units
C1	80%	32
C2	90%	29
C3	85%	27
C4	81%	38
C5	76%	36
C6	77%	46
C7	84%	20
C8	88%	21
C9	93%	28
C10	95%	30

The company which produced the greatest total number of units in month *M* is
(A) *C*10 (B) *C*9
(C) *C*2 (D) *C*4

Directions for questions 29 and 30: These questions are based on the pie charts given below. Pie chart – 1 represents the distribution of income of Manohar and pie chart – 2 represents the split up of expenditure on education.



Note: Total income of Manohar is ₹15000

29. Which of the following statement/s is/are true?
(A) The expenditure on food is ₹2800 more than the expenditure towards college fee.
(B) The expenditure on education is ₹2,250 less than the remaining expenditure.
(C) The tuition fee is ₹2,460.
(D) Both (B) and (C).

30. The expenditure on books is how much more/less than the expenditure on food?
(A) ₹750 more (B) ₹750 less
(C) ₹3,000 more (D) ₹3,000 less

Answer Keys

1. B	**2.** D	**3.** C	**4.** A	**5.** A	**6.** D	**7.** B	**8.** C	**9.** D	**10.** A
11. D	**12.** C	**13.** D	**4.** B	**15.** A	**16.** A	**17.** C	**18.** B	**19.** B	**20.** B
21. D	**22.** D	**23.** C	**24.** C	**25.** A	**26.** A	**27.** B	**28.** A	**29.** B	**30.** D

Hints and Explanations

1. Given that 25% of the males are below average performers. Hence their number is 25% of 96 = 24.
As the total number of below average performers is 48 and 24 of them are males, remaining 24 are females.
Given, number of females = 2 (Number of male average performers)
Let the number of male average performers be x. Then, we get the following table.

	Below Average	Average	Above Average	Total
Males	24	x	72 – x	96
Females	24	30	2x – 54	2x
Total	48	30 + x	x + 18	2x + 96

Given, above average performers = $\frac{1}{3}$ (total number of employees)
i.e., $x + 18 = \frac{1}{3}(2x + 96)$
$\Rightarrow$ $3x + 54 = 2x + 96 \Rightarrow x = 42$
Number of above average performers = x + 18 i.e., 60. Choice (B)

2. Given that 25% of the males are below average performers. Hence their number is 25% of 96 = 24.
As the total number of below average performers is 48 and 24 of them are males, remaining 24 are females.
Given, number of females = 2 (Number of male average performers)
Let the number of male average performers be x. Then, we get the following table.

	Below Average	Average	Above Average	Total
Males	24	x	72 – x	96
Females	24	30	2x – 54	2x
Total	48	30 + x	x + 18	2x + 96

Given, above average performers = $\frac{1}{3}$ (total number of employees)
i.e., $x + 18 = \frac{1}{3}(2x + 96)$
$\Rightarrow$ $3x + 54 = 2x + 96$
$\Rightarrow$ $x = 42$
Number of females = $2x$
i.e., 2(42) = 84. Choice (D)

3. Given that 25% of the males are below average performers. Hence their number is 25% of 96 = 24.
As the total number of below average performers is 48 and 24 of them are males, remaining 24 are females.
Given, number of females = 2 (Number of male average performers)
Let the number of male average performers be x. Then, we get the following table.

	Below Average	Average	Above Average	Total
Males	24	x	72 – x	96
Females	24	30	2x – 54	2x
Total	48	30 + x	x + 18	2x + 96

Given, above average performers = $\frac{1}{3}$ (total number of employees)
i.e., $x + 18 = \frac{1}{3}(2x + 96)$
$\Rightarrow$ $3x + 54 = 2x + 96$
$\Rightarrow$ $x = 42$
Total number of average performers = x + 30 i.e., 72
Also as the number of males = 96,
the required difference is 96 – 72 = 24. Choice (C)

4. Given that 25% of the males are below average performers. Hence their number is 25% of 96 = 24.
As the total number of below average performers is 48 and 24 of them are males, remaining 24 are females.
Given, number of females = 2 (Number of male average performers)
Let the number of male average performers be x. Then, we get the following table.

	Below Average	Average	Above Average	Total
Males	24	x	72 – x	96
Females	24	30	2x – 54	2x
Total	48	30 + x	x + 18	2x + 96

Given, above average performers = $\frac{1}{3}$ (total number of employees)
i.e., $x + 18 = \frac{1}{3}(2x + 96)$
$\Rightarrow$ $3x + 54 = 2x + 96$
$\Rightarrow$ $x = 42$
Required ratio of above average performers : Number of females = $x + 30 : 2x$ i.e., 72 : 84 = 6 : 7. Choice (A)

5. Given profit of X in 2010-11 = ₹120 lakhs
Profit percentage of X in 2010-11 = 30%
As profit % = $\frac{\text{Profit}}{\text{Expenditure}} \times 100$
$30 = \frac{120\,\text{lakhs}}{\text{expenditure}} \times 100 =$ ₹400 lakhs.
$\therefore$ Expenditure of X in 2010–11 is ₹400 lakhs
Hence, its income in 2010–11 = ₹520 lakhs. Choice (A)

6. As the income of X in 2013–14 is not known, the required ratio cannot be determined. Choice (D)

7. Given, 20% of X; 10% of Y : 30% of Z = 4 : 2 : 3
i.e., $X : Y : Z = 20 : 20 : 10 = 2 : 2 : 1$. Choice (B)

8. Let the profit of Y and R in 2010-11 be ₹x. Then, using the graph, we have $\frac{x}{\exp Q} = 30$ and $\frac{x}{\exp R} = 40$

Let $\exp_Q = 400x$ and $\exp_R = 300x$

∴ $30(\exp_Q) = 40(\exp_R)$

⇒ Expenditures of X and Y are in the ratio 4 : 3.
Incomes ratio = $520x : 420x = 26 : 21$. Choice (C)

9. The percentage increase in the trade volume from 2010 to 2011

for USA = $\frac{354}{1604} \times 100 < 25\%$

for Japan = $\frac{711}{1871} \times 100 < 40\%$

for UK = $\frac{311}{1836} \times 100 < 20\%$

for Germany = $\frac{652}{1417} \times 100 > 40\%$

The percentage increase in trade volume is the greatest for Germany. Choice (D)

10. Total trade volume by the given countries in 2013
= 2210 + 1936 + 2340 + 1164 = 7650
Given that 62.5% of the total trade volume = 7650

Then, 37.5% of the total trade volume = $\frac{37.5}{62.5} \times 7650$

= $\frac{3}{5} \times 7650$ = ₹459,000 Crores. Choice (A)

11. By observation, we find that the total trade volume is the least in 2010 and 2013.
By comparing the total trade volume in 2011 and that in 2012, we find that the trade volume in 2012 is lower. Now, by comparing the total trade volume in 2011 and that in 2014 we find that the total trade volume in 2014 is the highest. Choice (D)

12. We can observe that the trade volume by the Netherlands in India is less than 2000 in one year and more than that in four years. By assuming the average to be 2000, we find the average of the deviations

$= \frac{-164+147+476+340+651}{5} = \frac{1450}{5} = 290$

The average = 2290. Three values are more than the average. Choice (C)

13. The trade volume from Germany registered more than 40% growth. By observation, we find that for no other country there is more than 40% growth in the trade volume in any two successive years. Choice (D)

14. No. of births in rural area in 2013 = 22% of 3.6 lakh = 79,200
No. of births in rural area in 2014 = 20% of 3 lakh = 60,000
Difference = 79,200 − 60,000 = 19,200. Choice (B)

15. The number of births in semi-urban area in 2013 = 18% of 3.6 lakh = 64,800
The number of births in semi-urban area in 2014 = 18% of 3 lakh = 54,000
Percentage decrease

$= \frac{64,800 - 54,000}{64,800} \times 100 = 16.66\%$. Choice (A)

16. The number of births in metropolitan area in 2013 = 36% of 3.6 lakh = 1,29,600
The number of births in metropolitan area in 2014 = 30% of 3 lakh = 90,000
Required ratio = 129600 : 90000 = 36 : 25. Choice (A)

17. The number of births in tribal area in 2013 = 6% of 3.6 lakh = 21,600
The number of births in tribal area in 2014 = 10% of 3 lakh = 30,000

∴ Required percentage $= \frac{21600}{30000} \times 100 = 72\%$. Choice (C)

18. The number of children lacking good medical facilities in 2013 = 82% of 3.6 lakh = 2,95,200
The number of children lacking good medical facilities in 2014 = 84% of 3 lakh = 2,52,000
∴ Total number of children who does not lack good medical facilities = 2,95,200 + 2,52,000 = 5,47,200 = 5.472 lakhs. Choice (B)

19. A total of 80 + 68 + 120 + 92, viz., 360 persons own a four wheeler.
∴ The remaining 60 + 40 + 40 + 100, viz., 240 of the respondents do not own a four wheeler, i.e., 40% of the respondents do not own a four-wheeler. Choice (B)

20. (i) The average rainfall in December is 150mm. The average rainfall in June is between 400mm and 500mm. ∴ (i) is true.
(ii) For each month, we know the average rainfall, the 10 percentile value (*i.e.*, the value below which 10 percent of the data falls) and the 90 percentile value. In a particular year, the rainfall in July may be less than that in February. (ii) cannot be concluded
(iii) This statement does not follow (From the explanation in (ii) above)
(iv) We see a narrow gap between any two of the three curves in August and a significant gap between any two of the three curves in November. ∴ (iv) follows. Only (i) and (iv) follow. Choice (B)

Solutions for questions 21 and 22:
Total number of vehicles produced = 70,000
Scooters without gear = 25% of 70,000.

$= 70,000 \times \frac{25}{100} = 17,500$

100 cc scooters without gear = $17,500 \times \frac{70}{100} = 12,250$

150 cc scooters without gear = 17,500 – 12,250 = 5,250

Number of scooters with gear = 35% of 70,000

i.e., $70,000 \times \frac{35}{100} = 24,500$

100 cc scooters with gear = $24500 \times \frac{40}{100} = 9,800$

150 cc scoters with gear = $24,500 \times \frac{60}{100} = 14,700$

Number of bikes = $70,000 \times \frac{40}{100} = 28,000$

100 cc bikes = $28,000 \times \frac{65}{100} = 18,200$

150 cc bikes = $28,000 \times \frac{35}{100} = 9,800$

21. Number of 150 cc bikes produced in that year = 9,800. Choice (D)

22. Of the four options the number of 150 cc scooters without gear is the least in number i.e., 5,250. Choice (D)

Solutions for questions 23 and 24:

The cost of 100 g of A = 4 (1) + 3 (2) + (in ₹) 2 (2.5) + (4.5) = 19.5

100 g of B (in ₹) = 26.5

100 g of C (in ₹) = 25

100 g of D (in ₹) = 27.5

23. The cost of the required mixture = 19.5 + 26.5 + 25 + 27.5 = ₹98.5. Choice (C)

24. Cost of 400 g of B = ₹106

400 g of C = ₹100

200 g of A and 200 g of D = ₹94

300 g of A and 150 g of D = ₹99.75. Choice (C)

25. Among the five players, only P, Q and T had an increase in the test batting average from 2010 to 2014. Percentage increase in the test batting average from 2010 to 2014 of

$$P = \frac{48-44}{44} \times 100\%$$

$$= \frac{100\%}{11} = 9\frac{1}{11}\%$$

$$Q = \frac{52-46}{46} \times 100\%$$

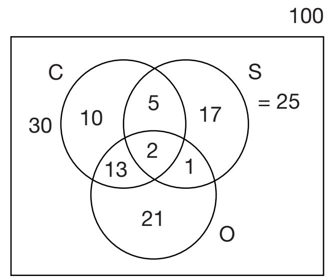
$$= \frac{300}{23}\% = 13\frac{1}{23}\%$$

$T = \frac{39-19}{19} \times 100\% = \frac{20}{19} \times 100\%$ which is > 100%.

P had the least percentage increase in the test batting average. Choice (A)

Solutions for questions 26 and 27:

From the given data we get the following diagram.



(i) Only cutlet = 10

(ii) Only omlette = 21

(iii) Only sandwich = 17

(iv) All the three = 2

(v) Exactly two dishes = 13 + 5 + 1 = 19

(vi) At least two dishes = 19 + 2 = 21

(vii) Cutlet = 10 + 5 + 2 + 13 = 30

(viii)Sandwich = 5 + 2 + 1 + 17 = 25

(ix) Omlette = 13 + 2 + 1 + 21 = 37

(x) None = 100 – (10 + 17 + 21 + 5 + 13 + 1 + 2) = 31

26. The number of students who like at least one dish = sum of the elements = 69. Choice (A)

27. The number of students who like cutlet or sandwich but not both is given by 10 + 13 + 17 + 1 = 41. Choice (B)

Solutions for question 28:

28. The number of units produced by C_1, C_2, C_3 …….C_{10}

Are $\frac{32\times100}{100-80}, \frac{29\times100}{100-90}, \frac{27\times100}{100-85}, \frac{38\times100}{100-81}, \frac{36\times100}{100-76}$

$\frac{46\times100}{100-77}, \frac{20\times100}{100-84}, \frac{21\times100}{100-88}, \frac{28\times100}{100-93}$, and

$\frac{30\times100}{100-95}$

Respectively i.e.160, 290, 180, 200, 150, 200, 125, 175, 400 and 600

∴ $C10$ produced the greatest total number of units in month M. Choice (A)

Solutions for questions 29 and 30:

29. Statement A is not true as (30% – 40% of 40%) of 15000 ≠ 2800

Statement B is true, since the expenditure on education = $\left(\frac{40}{100}\right)(15000) = 6000$.

The remaining expenditure = $\frac{(15+10+30)}{100}(15000)$ = 8250.

∴ Difference is ₹2250. Choice (B)

30. Expenditure on books = $15000\left(\frac{40}{100}\right)\left(\frac{25}{100}\right) = 1500$.

The expenditure on food = $\left(\frac{30}{100}\right)(15000) = 4500$.

Expenditure on books is less than the expenditure on food by 4500 – 1500 = ₹3000. Choice (D)

Quantitative Ability Test 5

(Permutations and Combinations)

Number of Questions: 35 **Section Marks: 30**

Directions for questions 1 to 35: Select the correct alternative from the given choices.

1. In how many ways can five boys and five girls be arranged around a circular table such that on either side of every boy, a girl must sit?

(A) 2560 (B) 2880
(C) 120 (D) 1440

2. Twelve boys have to be seated in a row such that two particular boys occupy the middle two positions. In how many ways can they be seated?

(A) $\frac{12!}{2!}$ (B) 10! 2!
(C) 12! (D) $\frac{10!}{2!}$

3. How many five letter words can be formed using the letters of the word "QUESTION" so that the word contains 2 vowels and 3 consonants?

(A) 5670 (B) 120
(C) 2880 (D) 1440

4. There are seven pairs of shoes. In how many ways can one select 4 shoes from them such that no complete pair is included among them?

(A) 840 (B) 420
(C) 13440 (D) 560

5. There are 4 apples, 3 oranges and 6 mangoes in a basket. In how many ways can one select one or more fruits from the basket?

(A) 139 (B) 140
(C) 71 (D) 72

6. There are 10 questions in a paper each with four options, of which only one is correct. In how many ways can a student get exactly 7 questions correct given that he attempted all the questions?

(A) 2400 (B) 2880
(C) 3240 (D) 3600

7. A number is formed using the digits 5, 8, 1, 4 and 3. When we arrange the numbers in ascending order find the rank of the number 58413. (Each digit occurs at most once in each number)

(A) 228 (B) 290
(C) 299 (D) 300

8. A team of 11 is to be selected from two groups *A* and *B*, which consist of 10 and 8 persons respectively. In how many ways can this team be selected such that exactly five members are selected from the first eight persons of group *A*?

(A) 11,760 (B) 10,760
(C) 12,760 (D) 11,670

9. In how many arrangements of the word MATHEMATICS, the two *A*'s are separated?

(A) $\frac{10!}{2!2!2!}$ (B) $\frac{9!}{2!2!2!}$
(C) $9 \times 10!$ (D) $\frac{9 \times 10!}{2!2!2!}$

10. Find the number of ways of arranging the letters of the word CALENDAR in such a way that exactly two letters are present in between *L* and *D*?

(A) 2640 (B) 3600
(C) 2600 (D) 7200

11. There are 12 men and 7 women. In how many ways can a team of six members be formed such that there are atmost two women?

(A) 16,683 (B) 16,386
(C) 16,863 (D) 16,638

12. Three bags *X*, *Y* and *Z* contain six, five and four marbles respectively. A person has to choose 11 marbles at random. In how many ways can this be done such that at least 3 marbles are to be chosen from each bag.

(A) 860 (B) 840
(C) 960 (D) 870

13. In a factory there are three class I employees, two class II employees, three class III employees and four class IV employees. A team of five members is to be formed. In how many ways can this be done if the team must have at least one class I and at most two class IV employees?

(A) 590 (B) 491
(C) 600 (D) 591

14. There are two groups *X* and *Y* in a colony. *X* consists of five boys and four girls, *Y* consists of four boys and five girls. They plan an educational tour of four boys and four girls such that exactly four persons are selected from each of the two groups. In how many ways can this be done?

(A) 5626 (B) 5026
(C) 15876 (D) 43758

15. There are 20 players and 6 of them are from Hyderabad. In how many ways can a team of 12 players be formed so that exactly three persons of the team are from Hyderabad?

(A) 4004 (B) 20020
(C) 40040 (D) None of these

16. In how many ways can five men and five women be seated in a row, so that all men are sitting together and all women are sitting together?

(A) $(5!)^2$ (B) $(5!)^2 2!$

(C) $\frac{(5!)^2}{2!}$ (D) $(5!)^2 4!$

17. For a company board meeting, eight directors and a chairperson have to be seated around a circle. If two particular directors are seated on either sides of the chairperson, in how many ways can they be seated?

(A) 1440 (B) 1200
(C) 10080 (D) 1080

18. In how many ways can seven persons be selected from 14 persons such that two particular persons are selected and three other particular persons are not selected?

(A) 120 (B) 126
(C) 300 (D) 240

19. There are six different consonants and three different vowels of the English alphabet. The number of words that can be formed using them such that each word contains two vowels and three consonants is

(A) 3600 (B) 1800
(C) 2400 (D) 7200

20. Find the number of sides of a regular polygon in which the number of diagonals is equal to one and half times the number of its sides.

(A) 5 (B) 6
(C) 8 (D) 10

21. Find the number of ways of arranging the letters of the word RAINBOW such that the vowels occupy odd places.

(A) 7! (B) 720
(C) 576 (D) 120

22. On Sports Day in a school, some competitions are held. Every student has to play exactly one game with every other student. It was found that in 36 games both players were girls and in 126 games one player was a boy and the other was a girl. Find the number of games played in which both players were boys.

(A) 56 (B) 72
(C) 91 (D) 45

23. A box contains coins of denominations 50 paisa, ₹1, ₹2 and ₹5. Given that there are unlimited coins of each type, find the number of ways of selecting the coins so that any such selection gives a total amount of ₹10.

(A) 49 (B) 12
(C) 48 (D) 46

24. Find the number of ways in which the letters of the word THURSDAY can be arranged such that no word starts with *T* or ends with *Y*.

(A) 9360 (B) 31680
(C) 29520 (D) 30960

25. How many natural numbers are there from 10000 to 1000000 for which the sum of the digits is 3?

(A) 16 (B) 36
(C) 27 (D) 35

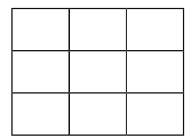
26. The number of ways of posting seven different letters into three post boxes so that at least one letter is posted in each post box is

(A) 1806 (B) 1803
(C) 2184 (D) 2059

27. A palindrome is a word, which spells the same when read from left to right or from right to left. How many palindromes of length 8 can be formed using the operative symbols +, –, ÷ and ×?

(A) 8! (B) 2^{16}
(C) 256 (D) 243

28. Six identical balls have to be placed in the square cells of the given figure such that each row contains at least one ball. In how many ways can this be done? (Given that each square can take at the most one ball)



(A) 84 (B) 76
(C) 77 (D) 81

29. The number of two digit codes that can be formed using the digits 0 to 9 with '0' not taking the tens place and an odd number taking the units place is

(A) 40 (B) 50
(C) 45 (D) 36

30. There are 5 balls of different colours and 5 boxes of colours the same as those of the balls. The number of ways in which the balls, one in each box can be placed such that a ball does not go to a box of its own colour is

(A) 40 (B) 44
(C) 42 (D) 36

31. A question paper consists of 5 problems, each problem having 3 internal choices. In how many ways can a candidate attempt one or more problems?

(A) 63 (B) 511
(C) 1023 (D) 15

32. Six points are marked on a straight line and five points marked on another line which is parallel to the first line. How many straight lines, including the first two, can be formed with these points?

(A) 29 (B) 33
(C) 55 (D) 32

33. Sixteen guests have to be seated around two circular tables, each accommodating 8 members. 3 particular guests desire to sit at one particular table and 4 others at the other table. The number of ways of arranging these guests is

(A) ${}^9C_5$ (B) $\frac{9!(7!)}{4!5!}$

(C) $\frac{9!(7!)^2}{4!5!}$ (D) $(7!)^2$

34. In how many ways can one or more of 5 letters be posted into 4 mail boxes, if any letter can be posted into any of the boxes?
(A) 5^4 (B) 4^5
(C) $5^5 - 1$ (D) $4^5 - 1$

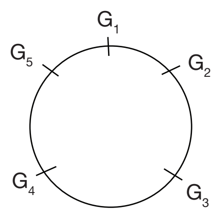
35. The number of non negative integral solutions to the equation $a + b + c = 14$ is
(A) 78 (B) 45
(C) 120 (D) 110

Answer Keys

1. B	**2.** B	**3.** C	**4.** D	**5.** A	**6.** C	**7.** D	**8.** A	**9.** D	**10.** B
11. C	**12.** D	**13.** D	**14.** A	**15.** C	**16.** B	**17.** A	**18.** B	**19.** D	**20.** B
21. C	**22.** C	**23.** A	**24.** D	**25.** B	**26.** A	**27.** C	**28.** D	**29.** C	**30.** B
31. C	**32.** D	**33.** C	**34.** C	**35.** C					

Hints and Explanations

1. First arrange the girls in the circle as shown in the diagram. They can be arranged in (5 – 1)! ways.



Then there are 5 gaps and the 5 boys can be seated in these gaps in 5! Ways.
∴ The total number of arrangements is $4! \times 5! = 2880$. Choice (B)

2. There are two middle positions (6th and 7th). The two particular boys can occupy the middle two positions in 2! ways. The remaining 10 boys can be seated in 10! ways.
∴ The total number of ways = (10!) (2!). Choice (B)

3. The word QUESTION, contains 4 vowels and 4 consonants; 2 vowels and 3 consonants can be selected from 4 vowels and 4 consonants in ${}^4C_2 \cdot {}^4C_3$ ways. $= 6 \times 4 = 24$
Again these 5 letters can be rearranged among themselves in 5! ways.
∴ The total number of 5 letter words formed = $5! \times 24 = 120 \times 24 = 2880$. Choice (C)

4. Since there are 7 pairs of shoes and 4 shoes are to be selected without any complete pair being included in it, the 4 shoes must be from 4 different pairs.
This can be done in ${}^7C_4$ ways (choosing 4 pairs from the 7 pairs)
Now from each of these 4 pairs, one can select a shoe in 2 ways
(*i.e.*, any one of the two shoes present in each pair)
Therefore the total number of ways in which one can select 4 shoes from 7 pairs of shoes such that no complete pair is included among them = ${}^7C_4(2)(2)(2)(2) = 35(16) = 560$ ways. Choice (D)

5. We can choose the apples in 5 ways i.e., either choosing 0 apples or 1 apple or 2 apples or 3 apples or 4 apples.
Similarly the oranges can be chosen in 4 ways and the mangoes can be chosen in 7 ways.
Therefore the total number of ways in which one can select one or more fruits from 4 apples, 3 oranges and 6 mangoes = $5 \times 4 \times 7 - 1 = 139$ ways.
(we subtract 1 for the case where we select 0 apples, 0 oranges and 0 mangoes i.e., no fruit at all). Choice (A)

6. In each question, there are 3 wrong options and exactly one correct option.
The number of ways in which a student gets exactly 7 questions correct = ${}^{10}C_7(3)^3$
${}^{10}C_7$ gives us the number of ways in which the student selects seven questions (in which the student marks correct option) from the given 10 questions.
3^3 gives us the number of ways in which the student answers the 3 questions which he gets wrong.
Therefore the required number of ways = 3240.
Choice (C)

7. The number of single digit numbers = 5.
Given digits are {5, 8, 1, 3, 7}.
The number of two digit numbers formed with the digits is ${}^5P_2 = 20$. The number of three digit numbers formed with the digits is ${}^5P_2 = 60$.
The number of four digit numbers formed with digits is ${}^5P_4 = 120$.
The number of five digit numbers formed which begin with either 1 or 3 or 4 is 4!
The number of five digit numbers formed which begin with 51 or 53 or 54 is 3!
The number of 5 digit numbers which begin with 581 or 583 is 21.
The next number 58413
The rank of the number 58413 is 5 + 20 + 60 + 120 + 3 (24) + 3 (6) + 2(2) + 1 = 300. Choice (D)

8. In group *A*, there are 10 persons.
From first 8 persons 5 can be selected in ${}^8C_5$ ways and remaining 6 must be selected from the remaining 2

persons of group A and 8 persons from group B.
This can be done in $^{10}C_6$.

$\therefore$ The required number of ways = $^8C_5\ ^{10}C_6$ = 11760. Choice (A)

9. The total number of words that can be formed is $\frac{11!}{2!2!2!}$

Number of arrangements in which the 2 A's are together $= \frac{10!}{2!2!}$

Total number of arrangements in which the A's are separated = Total number of words – number of words, in which the two A's together.

$= \frac{10!}{2!2!}\left(\frac{11}{2}-1\right) = \frac{9(10!)}{2!2!2!}$ Choice (D)

10. C A L E N D AR
$\overline{1}\,\overline{2}\,\overline{3}\,\overline{4}\,\overline{5}\,\overline{6}\,\overline{7}\,\overline{8}$

There are 5 positions to fix the L and D i.e., (1, 4), (2, 5), (3, 6), (4, 7) and (5, 8) and L and D can be interchanged. The remaining 6 letters can be arranged in $\frac{6!}{2!}$ ways.

$\therefore$ Required number of ways = $\frac{6!}{2!} \times 5 \times 2 = 360 \times 10$
= 3600. Choice (B)

11. The following table gives the complete possibilities of selecting the team as per the given conditions

Men (12)	Women (7)	Number of ways
4	2	$^{12}C_4 \times {}^7C_2$
5	1	$^{12}C_5 \times {}^7C_1$
6	–	$^{12}C_6$

Total number of ways of selecting the team
$= {}^{12}C_4\ {}^7C_2 + {}^{12}C_5\ {}^7C_1 + {}^{12}C_6$
= 10395 + 5544 + 924 = 16863. Choice (C)

12. The following table will give the number of marbles selected from each bag and the number of ways of selecting them.

X(6)	Y(5)	Z(4)	Number of ways of selecting them
3	4	4	$^6C_3\ ^5C_4\ ^4C_4 = 100$
3	5	5	$^6C_3\ ^5C_5\ ^4C_3 = 80$
4	3	4	$^6C_4\ ^5C_3\ ^4C_4 = 150$
4	4	3	$^6C_4\ ^5C_4\ ^4C_3 = 300$
5	3	3	$^6C_5\ ^5C_3\ ^4C_3 = 240$
			Total number of ways = 870

Choice (D)

13. The following table gives the number of persons of each category and the number of ways of selecting them as per the given conditions

Class I (3) (3)	Class II + Class III (5)	Class IV (4)	Number of ways of selecting them
1	4	0	$^3C_1\ ^5C_4\ ^4C_0 = 15$
1	3	1	$^3C_1\ ^5C_3\ ^4C_1 = 120$
1	2	2	$^3C_1\ ^5C_2\ ^4C_2 = 180$
2	3	0	$^3C_2\ ^5C_3\ ^4C_0 = 30$
2	2	1	$^3C_2\ ^5C_2\ ^4C_1 = 120$
2	1	2	$^3C_2\ ^5C_1\ ^4C_2 = 90$
3	2	0	$^3C_3\ ^5C_2\ ^4C_0 = 10$
3	1	1	$^3C_3\ ^5C_1\ ^4C_1 = 20$
3	0	2	$^3C_3\ ^5C_0\ ^4C_2 = 6$
			Total = 591

Choice (D)

14. The following table shows the number of persons and the number of ways of selecting them as per the given conditions.

Boys		Girls		Number of ways of selecting them
X(5)	Y(4)	X(4)	Y(5)	
0	4	4	0	$^5C_0{}^4C_4\ ^4C_0\ ^5C_0$ (or) = 1
1	3	3	1	$^5C_1\ ^4C_3\ ^4C_3\ ^5C_1$ (or) = 400
2	2	2	2	$^5C_2\ ^4C_2\ ^4C_2\ ^5C_2$ (or) = 3600
3	1	1	3	$^5C_3\ ^4C_1\ ^4C_1\ ^5C_3$ (or) = 1600
4	0	0	4	$^5C_4\ ^4C_0\ ^4C_0\ ^5C_1$ (or) = 25
				Total = 5626

Choice (A)

15. There are 20 players, of them 6 are from Hyderabad. Exactly 3 players can be selected from 6 players in $^6C_3$ ways and the remaining 9 players are to be selected from the remaining 14 players.
This can be done in $^{14}C_9$ ways.

$\therefore$ Total number of ways of selecting the team
$= {}^6C_3\ {}^{14}C_9 = 40040$. Choice (C)

16. There are 5 men and 5 women.
As all men and all women are to sit together, treat all men as one unit and all women as one unit.
The two units can be arranged in 2! ways.
But five men and five women can arrange among themselves in 5! 5! ways.

$\therefore$ Total number of ways they can sit is given by $(5!)^2\ 2!$. Choice (B)

17. As two particular directors are to sit on either sides of the chairperson we treat these three as one unit. The remaining six directors and this one unit of three persons can sit around a circular table in (7 – 1)! = 6! ways.

But the two directors sitting on either side of the chairperson can arrange themselves in 2! ways.

$\therefore$ The required number of arrangements possible
= 6! 2! = 1440 ways. Choice (A)

18. Total there are 14 persons, of them two particular persons are always selected.
We need to select only 5 persons from 14 – 2 = 12 persons. As three other particular persons are not to be selected, keeping them away there are only nine persons left from which we have to select any five persons.
This is possible in ${}^9C_5 = 126$ ways. Choice (B)

19. There are 6 consonants , of them 3 can be selected in ${}^6C_3$ ways. Similarly, 2 vowels can be selected in ${}^3C_2$ ways.
These 3 consonants and 2 vowels can be arranged in 5! Ways.
$\therefore$ Total number of words that can be formed
$= {}^6C_3 \times {}^3C_2 \times 5! = 7200$ Choice (D)

20. The number of diagonals of a regular polygon of n sides $= \dfrac{n(n-3)}{2}$

It is given that, $\dfrac{n(n-3)}{2} = \dfrac{3}{2}n \Rightarrow n = 6.$ Choice (B)

21. There are seven letters in the word RAINBOW, of them three are vowels and four are consonants.
There are four odd places, three vowels can occupy four places in ${}^4P_3$ ways and the remaining 4 places can be occupied by the remaining 4 consonants in 4! ways.
$\therefore$ Total number of arrangements possible in given by ${}^4P_3 \times 4! = 576$ Choice (C)

22. Let m boys and n girls participate in the competitions.
Given the number of games in which both players are girls = 36

$\Rightarrow {}^nC_2 = 36$

$\Rightarrow \dfrac{n(n-1)}{2} = 36 \Rightarrow n = 9$

$\therefore$ Number of girls = n = 9
The number of games in which one boy and one girl participated = 126
${}^mC_1\,{}^nC_1 = 126$
$m(9) = 126 \Rightarrow m = 14$
Number of boys, $m = 14$
Number of games, in which both players were boys

$= {}^mC_2 = {}^{14}C_2 = \dfrac{14(13)}{1(2)} = 91.$ Choice (C)

23. The number of ₹5 coins that can be selected is 0, 1 or 2.
Let x, y and z represent the number of 50 paise, ₹1 and ₹2 coins respectively to be selected.
Case 1 : When the number of ₹5 coins selected is zero, then

$\dfrac{x}{2} + y + 2z = 10$ i.e., $x + 2y + 4z = 20$

If $z = 0$, then $y = 0, 1, 2, \ldots 10$; the number of solutions = 11
$z = 1$, then $y = 0, 1, 2, .. 8$; the number of solutions = 9
- -
- -
$z = 5$, then $y = 0$ and $x = 0$; the number of solutions = 1
$\therefore$ The number of possible selections in this case
= 1 + 3 + 5 + 7 + 9 + 11 = 36.
Similarly, we can show that, the number of selections when one 5 rupee coin is selected = 12
The number of selections when two 5 rupee coins are selected = 1
Hence, the total number of possible selections
= 36 + 12 + 1 = 49. Choice (A)

24. The number of words that start with T and end with Y = 6!
Keeping T and Y fixed in the first and the last places, the remaining 6 letters can be arranged in the remaining 6 places in 6! or 720 ways.
The number of words starting with T = 7!
Keeping T fixed in the first place, the remaining seven letters can be arranged in the remaining seven places in 7! or 5040 ways.
$\therefore$ (5040 – 720) words start with T but do not end with Y. Similarly (5040 – 720) words end with Y but do not start with T. The total number of words that can be formed using all the letters in the given word = 8!
Therefore, the number of words that do not start with T or end with Y = 8! – 4320 – 4320 – 720 = 30960. Choice (D)

25. It could be five–a digit or a six–digit number.
Case I: It is a five digit number.

Digits used (in that order)		No of values
3, 0	3 – – – –	1
2, 1	2 – – – –	${}^4C_1 = 4$
1, 2	1 – – – –	${}^4C_1 = 4$
1, 1, 1	1 – – – –	${}^4C_2 = 6$
	Total	15

Case II: It is a six–digit number

Digits used		No. of values
3, 0	3 – – – – –	1
2, 1	2 – – – – –	${}^5C_1 = 5$
1, 2	1 – – – – –	${}^5C_1 = 5$
1, 1, 1	1 – – – – –	${}^5C_2 = 10$
	Total	21

Therefore the total number of natural numbers from 10000 to 1000000 such that the sum of the digits is 3 = 15 + 21 = 36. Choice (B)

26. The possible combinations, internal arrangements and total number of ways in case of each combination are listed below.

Combinations	Internal arrangements	Number of ways
1, 1, 5	$\frac{3!}{2!}=3$	$3\times\frac{7!}{5!}=126$
1, 2, 4	3! = 6	$6\times\frac{7!}{4!\,2!}=630$
1, 3, 3	$\frac{3!}{2!}=3$	$3\times\frac{7!}{3!\,3!}=420$
2, 2, 3	$\frac{3!}{2!}=3$	$3\times3\times\frac{7!}{2!\,2!\,3!}=630$
	Total	1806

Choice (A)

27. The first and eighth places must be filled with the same symbol. This can be done in 4 ways.
Similarly the second and seventh place must be filled with same symbol. This can be done in 4 ways.

1st	2nd	3rd	4th	5th	6th	7th	8th

Similarly, the other entries can be filled.
$\therefore$ The number of ways for forming a palindrome of length 8 symbols is $4^4 = 256$. Choice (C)

28. There are 9 boxes in total, so the 6 identical balls can be placed in these boxes in ${}^9C_6$ ways. These include 3 ways in which the balls are placed in exactly two rows.
$\therefore$ Required number of ways = ${}^9C_6 - 3$
= 84 – 3 = 81. Choice (D)

29. Units place can be filled with 1, 3, 5, 7 or 9 and the tens can be filled with any of the 9 non-zero digits.
$\therefore$ The number of two digit codes that can be formed = 9 × 5 = 45. Choice (C)

30. $\therefore$ Required number of ways

$$= n!\left(1-\frac{1}{1!}+\frac{1}{2!}-\frac{1}{3!}+----+(-1)^n\,\frac{1}{n!}\right)$$

$$= 5!\left(1-\frac{1}{1!}+\frac{1}{2!}-\frac{1}{3!}+\frac{1}{4!}-\frac{1}{5!}\right)$$

$$= 5!\left(\frac{1}{2!}-\frac{1}{3!}+\frac{1}{4!}-\frac{1}{5!}\right)$$

= 60 – 20 + 5 – 1 = 44. Choice (B)

31. Given that, the question paper consists of 5 problems. For each problem, one or two or three or none of the choices can be attempted.
$\therefore$ Hence, the required number of ways = 4^5 - 1.
= 2^{10} - 1= 1024 - 1 = 1023.

Choice (C)

32. We know that, the number of straight lines that can be formed by the '*n*' points in which *r* points are collinear and no other set of three points, except those that can be selected out of these *r* points are collinear) is ${}^nC_2$ - ${}^rC_2$ +1.
$\therefore$ Hence, the required number of straight lines
= ${}^{11}C_2$ - ${}^6C_2$ – ${}^5C_2$ + 1 + 1
= 55 - 15 - 10 + 2 = 32.

Choice (D)

33. After arranging 3 and 4 particular guests, the remaining number of people is 9.
To arrange on first table we require 5 members. They can be selected in ${}^9C_5$ ways.
To arrange on the second table, we require 4 members. They can be selected in ${}^4C_4$ ways.
$\therefore$ Hence, required arrangements is = ${}^9C_5$ (7!) (7!)
= ${}^9C_5$ $(7!)^2$.

Choice (C)

34. Let the letters be L_1, L_2, L_3, L_4 and L_5 and the mail boxes be B_1, B_2, B_3, B_4. Now L_1 can be dealt in 5 ways i.e., either post it into B_1 or B_2 or B_3 or B_4 or do not post it at all (since one or more letters have to be posted, there is a possibility of not posting L_1 at all). Similarly each of L_2, L_3, L_4 and L_5 can be dealt in 5 ways, giving us a total of 5^5 possibilities which includes the case of not posting any of the letters, which has to be ruled out. Hence the required ways are 5^5 –1.

Choice (C)

35. We know that, the number of non negative integral solutions of $a_1 + a_2 + a_3$+-------+ $a_r = n$ is ${}^{n+r-1}C_{r-1}$ here $n = 14$ $r = 3$
$\therefore$ Required answer is (14 + 3 – 1) C_{3-1} = ${}^{16}C_2$ = 120.
Choice (C)

Quantitative Aptitude Test 6

Number of Questions: 35 **Section Marks: 30**

(ERPV, Numbers)

Directions for questions 1 to 6: Select the correct alternative from the given choices.

1. A three-digit number when reversed and subtracted from the original number gives the result as 792. If the sum of the digits of the number is 18, find the tens digit of the number.

(A) 6 (B) 7
(C) 5 (D) 8

2. A sum of ₹209 was intended to be divided among *A*, *B* and *C* in the ratio 2 : 4 : 5. By mistake, it got divided in the reciprocal of the intended ratio. Find the gain of *A* due to this mistake.

(A) ₹48 (B) ₹72
(C) ₹56 (D) ₹60

3. In a fraction, the numerator exceeds the denominator by 7. If twice the numerator exceeds thrice the denominator by 2, find the fraction.

(A) $\frac{8}{15}$ (B) $\frac{19}{12}$
(C) $\frac{20}{3}$ (D) $\frac{17}{24}$

4. If $a : b = 3 : 4$, $c : b = 2 : 7$ and $c : d = 5 : 7$, find $a : b : c : d$.

(A) 105 : 140 : 50 : 70 (B) 105 : 140 : 40 : 49
(C) 105 : 140 : 40 : 56 (D) 105 : 140 : 50 : 49

5. In a parking place, there are a total of 20 vehicles (bikes and cars) are parked. If the total number of tyres of all these vehicles is 70, find the ratio of the number of bikes and cars. (No vehicle has spare tyres).

(A) 3 : 1 (B) 1 : 2
(C) 1 : 3 (D) 2 : 1

6. Ajay, Balu, Chetan and Dinesh have a total of ₹240 with them. The amount with Ajay is half of the total amount with the others. The amount with Balu is one-fourth of the total amount with the others. The amount with Chetan is one-fifth of the total amount with the others. Find the amount with Dinesh.

(A) ₹30 (B) ₹72
(C) ₹40 (D) ₹48

Directions for questions 7 and 8: These questions are based on the following information.

Siddharth has two landlines of a particular telephone service provider. For each line,he has to pay a monthly rent of ₹250. This entitles him to a certain fixed number of free calls per line. Calls over and above this allowance are charged at the rate of ₹1 per call. One month he received bills of ₹450 and ₹350 for the two lines. Had he made all his calls on a single line, his bill for that line would have been ₹700.

7. What was the total number of calls on the first line?

(A) 375 (B) 300
(C) 350 (D) 400

8. What is the number of free calls per line?

(A) 150 (B) 125
(C) 180 (D) 200

Directions for questions 9 to 35: Select the correct alternative from the given choices.

9. The cost of 2 pens, 4 erasers and 5 sharpeners is ₹36. The cost of 3 pens,7 erasers and 9 sharpeners is ₹63. Find the total cost of one pen, one eraser and one sharpener.

(A) ₹9 (B) ₹8
(C) ₹10 (D) ₹11

10. If $a + b - c : b + c - a : a + c - b = 3 : 4 : 5$, find $a : b : c$.

(A) 1 : 2 : 3 (B) 8 : 7 : 9
(C) 5 : 7 : 8 (D) 1 : 3 : 2

11. For which of the following values of *k* does the system of equations $2x + 5y = 1$ and $6x + 15y = k/2$ have infinite solutions?

(A) 6 (B) 3
(C) –6 (D) Any value except 6

12. If $a : b = 3 : 4$, find the value of $\frac{3a^2 + 4b^2}{4a^2 + 3b^2}$.

(A) $\frac{11}{12}$ (B) $\frac{12}{11}$
(C) $\frac{12}{13}$ (D) $\frac{13}{12}$

13. The distance a stone falls under free fall varies directly with the square of the time for which it falls. If a stone falls at a distance of 35 m in the fourth second, find the total distance it falls in the first 5 seconds.

(A) 100 m (B) 140 m
(C) 135 m (D) 125 m

14. A sum of ₹750 is divided among *P*, *Q* and *R*. If ₹30, ₹20 and ₹10 is added to their respective shares then the ratio of amounts of *P*, *Q* and *R* becomes 10 : 8 : 9. What is the share of *P*?

(A) 280 (B) ₹250
(C) ₹260 (D) ₹270

15. Ajay told Bharat, "I am four times as old as you were when I was as old as you are". Bharat told Ajay "Ten

years ago, I was nine years younger to you". Find the sum of present ages of Ajay and Bharat.

(A) 39 years (B) 36 years
(C) 42 years (D) 45 years

16. The ratio of the incomes of A and B is 3 : 2. The ratio of their expenditures is 5 : 4. If the savings of A is twice that of B, find the ratio of the income and expenditure of B.

(A) 3 : 16 (B) 3 : 4
(C) 3 : 2 (D) 5 : 4

17. A bag has a total of 40 coins in denominations of ₹1, ₹2 and ₹5. If the total value of the coins is ₹130, find the maximum number of ₹5 coins.

(A) 24 (B) 21
(C) 23 (D) 22

18. The age of Harish is 8 years more than twice the age of Ganesh. After how many years will the age of Harish be twice the age of Ganesh?

(A) 4
(B) 6
(C) 8
(D) Cannot be determined

19. Rohan made 13 calls from a public booth. Each was either a local call or STD call or ISD call. The average costs of his local calls, STD calls and ISD calls were ₹6, ₹11 and ₹13, respectively. The total amount spent by Ram on the calls was ₹119. Find the number of ISD calls he made

(A) 3 (B) 4
(C) 2 (D) 5

20. Ram has a certain number of notes of the denominations ₹5, ₹10 and ₹20. The total amount he has is ₹540. If he has a total of 24 currency notes in the denominations of ₹5 and ₹20, then what is the greatest number of notes of ₹10 notes he could have?

(A) 42 (B) 40
(C) 39 (D) 38

21. Three vessels are filled to their capacities with mixtures of milk and water. The ratioof their capacities is 2:3:4. The ratio of the quantities of milk and water in the first,the second and the third vessels is 1:3, 5:1 and 3:5 respectively. Find the ratio of the total quantity of milk in the vessels to the total quantity of water in the vessels.

(A) 1 : 1 (B) 2 : 3
(C) 3 : 2 (D) 3 : 4

22. a, b, c are positive integers such that $a : b = 4 : 3$ and $b : c = 4 : 3$. If the sum of the squares of c and b is less than square of the sum of b and a by 2236, then what is the value of the number which is neither the greatest nor the least?

(A) 24 (B) 32
(C) 18 (D) 36

23. What is the least value of x, if the nine-digit number $23x4567y4$ is divisible by 44?

(A) 1 (B) 0
(C) 5 (D) 7

24. A number when divided by 259 leaves a remainder of 161. If one-seventh of the same number is divided by 37, the remainder will be

(A) 14
(B) 23
(C) 7
(D) Cannot be determined

25. $(36^3 + 36^2 - 37)$ is not divisible by, which of the following?

(A) 185
(B) 37
(C) 36
(D) More than one of the above

26. Mohit has 290 toffees with him. He distributes all his toffees among his friends, such that each of his friends gets a different number of toffees, which is at least 5 and at most 29. What could be the least number of friends?

(A) 19 (B) 20
(C) 13 (D) 14

27. When the King of Patiala distributed 33,274 gold coins equally among his subjects, the Maharaja of Mysore also distributed 30,905 gold coins equally to his subjects, each giving the same number of coins to his subjects. Surprisingly, both the kings were left with the same number of gold coins.If the number of coins that each subject received is a 2-digit number, what is the difference in the number of subjects of the two kings?

(A) 309
(B) 103
(C) 23
(D) Cannot be determined

28. The units digit of $(2^{4n})(6^{7n}) + (5^{3n})(7^{9n})$, (where n is a natural number) is

(A) 3
(B) 1
(C) 5
(D) Cannot be determined

29. Three bells X, Y and Z ring at regular intervals and ring simultaneously 24 times in a day. If Y rings less frequently than X but more frequently than Z, what could be the minimum number of times for which Y rings in a day?

(A) 48 (B) 36
(C) 54 (D) 72

30. If a, b and c are three consecutive positive integers, then which of the following is not necessarily true?

I. $(4a + 5b + 3c)$ is an odd number.
II. $(2a + 3b + 4c)$ is an even number.
III. $a^2 b^3 c^4$ is an even number.

IV. $(3a + 2b + 4c)$ is an odd number.
(A) Only I (B) Only II and III
(C) Only III and IV (D) Only II and IV

31. Some students have to be seated in some rows, such that equal number of students is seated in each row. If there are 13 rows 3 students will be left out and if there are 21 rows, 11 students will be left out. How many students will be left out if there are 19 rows and less than 300 students?
(A) 7 (B) 9
(C) 11 (D) 16

32. After the division of a number successively by 4, 5 and 3 the remainders obtained are 1, 2 and 2 respectively. What will be the remainder if the least of such numbers is divided by 37?
(A) 12 (B) 14
(C) 17 (D) 31

33. The sum and the difference of the LCM and the HCF of two numbers is 784 and 756 respectively. What is the least possible difference between the two numbers?
(A) 112 (B) 70
(C) 84 (D) 98

34. A number when divided by 30 and 36 leaves a remainder of 15 and 21 respectively. When such a number is divided by 35, it leaves a remainder of 10. What is such least number?
(A) 885 (B) 895
(C) 985 (D) 15

35. What will be the remainder when $223 \times 226 \times 228$ is divided by 11?
(A) 10 (B) 7
(C) 6 (D) 1

Answer Key

31. D	**32.** A	**33.** C	**34.** A	**35.** D					

Hints and Explanations

1. Let the three-digit number be *abc*.
Its value is $1000a + 10b + c$.
On reversing it becomes *cba* whose values are
$100c + 10b + a$
$abc - cba = 99(a - c) = 792$
$\Rightarrow$ $a - c = 8$
(a, c) can be (9, 1) or (8, 0)
$a + b + c = 18$
when $a = 9$, $c = 1$, then $b = 8$
when $a = 8$, $c = 0$, then
$b = 10$, which is not possible.
Hence $b = 8$
Choice (D)

2. A should have got 2 out of the total 11 parts i.e., 2/11 (209) = ₹38
Ratio of actual division of ₹209 among A, B and C is 1/2 : 1/4 : 1/5 = 10 : 5 : 4
A actually got 10 out of 19 parts i.e.,
10/19(209) = ₹110
Gain of A is 110 – 38 = ₹72. Choice (B)

3. Let the numerator and denominator of the fraction be n and d.
$2n - 3d = 2$ ….. (1)
$n - d = 7$ ….. (2)
Solving the two equations we get $n = 19$ and $d = 12$.
Choice (B)

4. $a = \frac{3}{4}b, b = \frac{7}{2}c, c = \frac{5}{7}d$

Hence $a = \frac{3}{4}\left(\frac{7}{2}\left(\frac{5}{7}d\right)\right) = \frac{15}{8}d$

$b = \frac{7}{2}\left(\frac{5}{7}\right)d = \frac{5}{2}d$

Hence $a : b : c : d = \frac{15}{8}d : \frac{5}{2}d : \frac{5}{7}d : d$

Multiplying each term of the ratio by LCM of denominators of the coefficients of d i.e. 56,
We got, $a : b : c : d = 105 : 140 : 40 : 56$
Alternate method:
Going by the choices, $a : b = 3 : 4$, $b : c = 7 : 2$ and $c : d = 5 : 7$ is satisfied only in Choice (C).
Choice (C)

5. Let the number of bikes sand cars parked be S and C respectively.
$S + C = 20$ …… (1)
Each bike has 2 tyres and each car has 4 tyres.
Total number of tyres = $2S + 4C = 70$
$\Rightarrow$ $S + 2C = 35$ ……. (2)
Subtracting the second equation from the first equation, we get $C = 15$,
so $S = 20 - C = 5$ $S : C = 1 : 3$ Choice (C)

6. Let the amounts with Ajay, Balu, Chetan and Dinesh be a, b, c and d respectively.

$a + b + c + d = 240$ $a = \frac{1}{2}$ $(b + c + d) = \frac{1}{2}$ $(240 – a)$

$\Rightarrow$ $2a = 240 – a$

$\Rightarrow$ $3a = 240 \Rightarrow a = \frac{240}{3}$ $= ₹80$

It can be seen above that half of the total amount with Balu, Chetan and Dinesh becomes one-third of the total amount.

Similarly amounts with Balu and Chetan which are one-fourth and one-fifth of the total amount with the others become one-fifth and one-sixth of the total amounts.

Hence $b = \frac{240}{5}$ $= 48$

$c = \frac{240}{6}$ $= 40$

$d = 240 – (a + b + c) = 72$ Choice (B)

Solutions for questions 7 and 8:

On line 1, ₹250 was rent and ₹200 was call charges. On line 2, ₹250 was rent and ₹100 was call charges. The total chargeable calls was 300 ….. (1)

On a single line, ₹250 is the rent and ₹450 is the call charges, i.e. there are 450 chargeable calls ……. (2)

Comparing (1), (2) we conclude that the number of free calls is 150. The total number of calls (free + chargeable) on the first line is 150 + 200 = 350

7. 350 Choice (C)

8. 150 Choice (A)

Solutions for questions 9 to 35:

9. Let the cost of each pen, eraser and sharpener be p, e and s respectively.

$2p + 4e + 5s = 36$

$3p + 7e + 9s = 63$

Multiplying the first equation by 2 and subtracting the second equation from it, $p + e + s = 9$ Choice (A)

10. Let $a + b – c = 3x$ $\rightarrow$ (1)

$b + c – a = 4x$ $\rightarrow$ (2)

$a + c – b = 5x$ $\rightarrow$ (3)

Adding these three equations, $a + b + c = 12x$ $\rightarrow$ (4)

$2c = 9x \rightarrow (4) – (1)$

so $c = 4.5x$

$2a = 8x \rightarrow$ (4) – (2)

so $a = 4x$

$2b = 7x \rightarrow (4) – (3)$

so $b = 3.5x$

$a : b : c = 4x : 3.5x : 4.5x = 8 : 7 : 9$ Choice (B)

11. If two equations should be in the form

$a_1x + b_1y = k_1$ and

$a_2x + b_2y = k_2$ to have infinite solutions,

$a_1/a_2 = b_1/b_2 = k_1/k_2$ must be satisfied.

Hence for the given equations, $2/6 = 1/k/2$ so $k = 6$

Choice (A)

12. Given that $a : b = 3 : 4$

so $\frac{a}{b} = \frac{3}{4}$

Dividing both numerator and denominator of $\frac{3a^2 + 4b^2}{4a^2 + 3b^2}$

by b^2, it becomes

$$\frac{3\left(\frac{a}{b}\right)^2 + 4}{4\left(\frac{a}{b}\right)^2 + 3} = \frac{3\left(\frac{9}{16}\right) + 4}{4\left(\frac{9}{16}\right) + 3} = \frac{13}{12}$$

Choice (D)

13. Let the distance travelled by the stone and the time of travel of the stone be denoted by d and t respectively. $d = ct^2$ where c is a constant.

Distance travelled in the fourth second by the stone = Total distance travelled in first four seconds – the total distance it travelled in first three seconds

$= c(4^2 – 3^2) = 35.$

$7c = 35 \Rightarrow c = 5$

Total distance it falls in the first 5 seconds

$= c(5^2)$.= 125 m. Choice (D)

14. The shares of P, Q and R be ₹x, ₹y and ₹z respectively.

So $x + y + z = 750$

$(x + 30) : (y + 20) : (z + 10) = 10 : 8 : 9$

$x + y + z + 30 + 20 + 10 = 750 + 60 = 810.$

So $x + 30 = \frac{810 \times 10}{(10 + 8 + 9)} = 300$. So $x = 270$

Share of p = ₹270 Choice (D)

15. Let the present age of Ajay be x years.

Some time in the past, Bharat was $x/4$ years.

The age of Ajay at that time is Bharat's present age.

Bharat's present age is $(x – 9)$ years.

As their difference of ages is constant,

$x – (x – 9) = (x – 9) – x/4$. $x = 24$

Sum of their present ages = $2x – 9 = 39$ years

Choice (A)

16. Let the incomes of A and B be $3x$ and $2x$, respectively. Let the expenditures of A and B be $5y$ and $4y$, respectively. Savings of A and B are $3x – 5y$ and $2x – 4y$ respectively. Given that, $3x – 5y = 2(2x – 4y) \Rightarrow x = 3y$

Ratio of income and expenditure of $B = 2x : 4y$

$= 2(3y) : 4y = 3 : 2$ Choice (C)

17. Let the number of ₹1, ₹2 and ₹5 coins be x, y and z respectively.

$x + y + z = 40$ ……. (1)

$x + 2y + 5z = 130$ …… (2)

Subtracting the equation (1) from (2), $y + 4z = 90$

In order to satisfy the above equation, y must be divisible by 2.

As z must be maximum, y must be minimum.
Hence when y has the least value, then z is obtained as 22 from the above equation. Choice (D)

18. Let the present age of Ganesh be G.
Present age of Harish = $2G + 8$
Let Harish become twice the age of Ganesh k years from now. Hence, $2G + 8 + k = 2(G + k) \Rightarrow k = 8$. Choice (C)

19. Let the number of local calls, STD calls and ISD calls made by Rohan be l, s and i respectively.
$l + s + i = 13$ and $6l + 11s + 13i = 119$
$6l + 11s + 13i - 6(l + s + i) = 119 - 6(13)$
$5s + 7i = 41$
$5s$ ends with 0 or 5. Also, R.H.S ends with 1. $\therefore 7i$ must end with 1 or 6. Also $7i < 41$.
$\therefore$ $7i = 21$ ($\therefore$No value of $7i$ ends with 6)
$i = 3$ Choice (A)

20. Let Ram have f, t and w notes of denomination ₹5, ₹10 and ₹20 respectively. Given that
$5f + 10t + 20w = 540$ ------ (1) (f, t, w are integers)
and $f + w = 24$ -------------- (2)
(1) – 5 × (2) gives $10t + 15w = 420$
$\Rightarrow$ $t = \dfrac{420-15w}{10}$

As $w > 0$, $t_{max} = \dfrac{420-15\times2}{10} = 39$

Choice (C)

21. The vessels are filled to their capacities
Let the capacities of the first, the second and the third vessels be $2x$, $3x$ and $4x$ respectively
Required ratio = $\dfrac{1}{1+3}(2x) + \dfrac{5}{6}(3x) + \dfrac{3}{8}(4x) : 3/4(2x) + \dfrac{1}{6}(3x) + \dfrac{5}{8}(4x) = \dfrac{x}{2} + \dfrac{5x}{2} + \dfrac{3x}{2} : \dfrac{3x}{2} + \dfrac{x}{2} + \dfrac{5x}{2}$
= 1 : 1. Choice (A)

22. Given that $a : b = 4 : 3$ and $b : c = 4 : 3$
$\Rightarrow$ $a : b = 16 : 12$ and $b : c = 12 : 9$
$\therefore$ $a : b : c = 16 : 12 : 9$
Let $a = 16k$, $b = 12k$ and $c = 9k$
Also given $(a + b)^2 - (b^2 + c^2) = 2236$
$(28k)^2 + (144k^2 + 81k^2) = 784k^2 - 225k^2 = 2236$
$\Rightarrow$ $k^2 = 4 \Rightarrow k = 2$
$\therefore$ $b = 12k = 12 \times 2 = 24$. Choice (A)

23. The number 23x 456 7y 4 is divisible by 4 and by 11.
$\therefore$ $y = 0, 2, 4, 6$ or 8 and $(2 + x + 5 + 7 + 4) - (3 + 4 + 6 + y)$,
i.e., $(18 + x) - (13 + y)$ or $(5 + x - y)$ is also a multiple of 11.
As the least value of $5 + x - y$ is $5 + 0 - 9$ or -4 and the greatest value is $5 + 9 - 0$ or 14, it could be 0 or 11.
$\therefore$ $x = y - 5$ or $x + y + 6$. The least value of x is $6 - 5$ or 1. Choice (A)

24. Let the number be N
$\therefore$ $N = 259K + 161$.
$\Rightarrow$ $N/7 = 37K + 23$
$\therefore$ $N/7$ leaves a remainder of 23, when divided by 37. Choice (B)

25. The given number N is $36^2(36 + 1) - 37$
$= 36^2(37) - 37 = 37(36^2 - 1) = (37)(35)(37)$
$\therefore$ N is not divisible by 36. Choice (C)

26. Since the number of friends has to be the least, the number of toffees should be as great as possible. Let the toffees distributed be 29, 28, 27, 26 …..
Given that, $29 + 28 + 27 + 26 + \ldots$ up to n terms ≤ 290.
If $n = 12$, the number of toffees that can be distributed is $29 + 28 + \ldots\ldots + 19 + 18 = 6(29 + 18) = 282$
The last person gets 8 toffees. The least number of friends is 12 + 1 = 13. Choice (C)

27. Let there be m subjects in Patiala and n in Mysore. Let each subject get p coins and say the number of coins left with either king is r.
$\therefore$ $mp + r = 33, 274$ and $np + r = 30, 905$
$\therefore$ $(m - n)p = 2369 = (23)(103)$
As p is a 2–digit number $p = 23$ and $m - n = 103$. Choice (B)

28. $2^{4n} \times 6^{7n} + 5^{3n} \times 7^{9n}$ can be written as $16^n \times 6 + 5 \times 7^{9n}$.
As 16^n can be written as 6^n, the unit's digit of the sum becomes $6 \times 6 + 5 \times$ (odd number) = 6 + 5 =1. Choice (B)

29. In a day, the three bells toll together = 24 times, or once in every hour or 60 minutes. Let X, Y, Z ring once in every x, y, z minutes respectively. The maximum value of z is 60 and $y < 60$. Since y is a factor of 60, its greatest value is 30. Hence if Y rings once every 30 minutes, the number of times it tolls in a day will be the minimum, which is = $\dfrac{(24)(60)}{30} = 48$ Choice (A)

30. The numbers a, b, c are consecutive. Therefore there are only 2 possibilities for the types (odd / even) of a, b, c. Either a, b, c are o, e, o or they are e, o, e. We tabulate the expressions, and the truth values (definitely true, could be false, definitely false, i.e., dt, cf, df).

				dt	cf	df
I	4a + 5b + 3c	4(o) + 5(e) + 3(o) = o	4(e) + 5(o) + 3(e) = o	✓		
II	2a + 3b + 4c	2(o) + 5(e) + 4(o) = e	2(e) + 5(o) + 4(e) = o		✓	
III	a2 b3 c4	(o) (e) (o) = e	(e) (o) (e) = e	✓		
IV	3a + 2b + 4c	3(o) + 2(e) + 4(o) = o	3(e) + 2(o) + 4(e) = e		✓	

We see that II, IV are not definitely true

Choice (D)

31. When the students are arranged in 13 rows, let the number of students in each row be x. The total number of students is $(13x + 3)$. Similarly in the second case, the total number of students is $21y + 11$.
This is LCM model II
Number of students: = (LCM of 13 and 21) – 10 = 263
Required remainder 263 ÷ 19 = 16. Choice (D)

32. Divisors are 4, 5, 3. Remainders are 1, 2, 2.
The least number is [(2) (5) + 2] (4) + 1 = 49.
When 49 is divided by 37, the remainder is 12.
Choice (A)

33. Let the two numbers be ha and hb respectively,where a and b are co-primes. Then LCM of the two numbers is hab.
Given $hab + h = 784$ and $hab - h = 756$
$\Rightarrow$ $hab = 770$ and $h = 14$ Þ $ab = 55$.
The possible values of a, b are (1, 55) and (5, 11). When the numbers are close, the difference will bethe least, i.e., $\{a, b\} = \{5, 11\}$.
The least possible difference is 14 (6) = 84.
Choice (C)

34. The given conditions represent the problem as LCM model-2. The general form of such numbers is (LCM of 30, 36)K – [common difference i.e., 15 in this case] = $180K - 15$.
Now, when $180K - 15$ is divided by 35, ($175K$ is a already divisible by 35), the remainder is given to be 10. Hence $180K - 25$ i.e., $5K - 25$ is exactly divisible by 35. This will be possible when $K = 5$.
Hence the required number is 180(5) – 15 = 885.
Choice (A)

35. Remainder required

$$= \text{Rem}\left(\frac{(220+3)(220+6)(220+8)}{11}\right)$$

(220 + 3) (220 + 6) (220 + 8) = (A multiple of 220 + 3.6) (220 + 8) = A multiple of 220 + (3) (6) (8). As 220 is divisible by 11, reminder required = Rem$\left(\frac{(3)(6)(8)}{11}\right)$

$= \text{Rem}\left(\frac{144}{1}\right) = 1.$ Choice (D)

QUANTITATIVE APTITUDE TEST 7

Number of Questions: 35 **Section Marks: 30**

(QUADRATIC EQUATIONS AND INEQUALITIES)

Directions for questions 1 to 35: Select the correct alternative from the given choices.

1. Two students independently attempted to solve a quadratic equation in x. One of them copied the constant term wrong and obtained roots as –15 and 16. The other student copied the coefficient of x wrong and obtained his roots as –10 and 21. Find the correct roots of the quadratic equation?
(A) (–15, 14) (B) (–14, 15)
(C) (–25, 7) (D) (–7, 25)

2. $\sqrt{132+\sqrt{132+\sqrt{132+.......}}} =$ ______
(A) 11.11 (B) 12.32
(C) 11 (D) 12

3. The range of k for which the sum as wells as the product of the roots of $6x^2 - kx + 9 - k^2 = 0$ are negative is __________
(A) (–3, 3) (B) $(-\infty, 3)$
(C) $(-\infty, -3)$ (D) $(3, \infty)$

4. Find the range of k, for which $-x^2 + 4kx + 3k - 1$, is always negative.
(A) $\left(-\frac{1}{4}, 1\right)$ (B) $(1, \infty)$
(C) $\left(-\infty, -\frac{1}{4}\right)$ (D) $\left(-1, \frac{1}{4}\right)$

5. a and b are the roots of the equation $2x^2 - 15x + k = 0$. Find the value of k if $a^2 - b^2 = 45$.
(A) $5\frac{1}{16}$ (B) $10\frac{1}{8}$
(C) $13\frac{1}{2}$ (D) $12\frac{1}{2}$

6. If the sum of the roots of the quadratic equation $3x^2 + (2k + 1)x - k - 5 = 0$ is equal to the product of the roots, which of the following is true?
(A) $k^2 - 4 = 0$ (B) $k^2 - 9 = 0$
(C) $k^2 - 16 = 0$ (D) $k^2 - 25 = 0$

7. If the roots of the equation $x^2 - 7x - 12 = 0$ are diminished by one and then multiplied by two, which of the following equations is formed with those values as the roots?
(A) $x^2 - 10x + 24 = 0$ (B) $x^2 - 6x - 76 = 0$
(C) $x^2 - 2x - 48 = 0$ (D) $x^2 - 10x - 72 = 0$

8. Which of the following statements is true about the roots of the equation $k^2x^2 - kx + (1 + 2x^2) = 0$, where k is a real number?
I. Roots are equal
II. Roots are complex
III. Roots are rational
IV. Roots are real
(A) I and IV (B) III only
(C) I and II (D) II only

9. All the roots of two quadratic equations are positive integers. The sum of the squares of the roots of the first quadratic equation is equal to that of the second quadratic equation. If the sum of the roots of the two equations are 10 and 8 respectively, then what is the greatest possible root of these quadratic equations?
(A) 7 (B) 6
(C) 8 (D) 5

10. If a and b are positive numbers, what is the nature of the roots of the equation $(a + b)x^2 + 2abx + \frac{(a+b)^3}{16} = 0$?
(A) Real and distinct. (B) Real and equal.
(C) Non-real and distinct. (D) Either (B) or (C)

11. If a positive number is increased by three and then squared, the result is 23 more than the original number. Find the original number.
(A) 1 (B) 2
(C) 3 (D) 4

12. Find the value of R, so that one of the roots of $x^2 + 6Rx + 64 = 0$ is the square of the other root.
(A) $\frac{-10}{3}$ (B) $\frac{8}{3}$
(C) $\frac{5}{3}$ (D) $\frac{7}{3}$

13. If the value of p in the equation $x^2 + 2(p + 1)x + 2p = 0$, is real, the roots of the equation are
(A) rational and unequal.
(B) irrational and unequal.
(C) real and unequal.
(D) real and equal.

14. Find the equation whose roots are twice the roots of the equation $3x^2 - 7x + 4 = 0$.
(A) $3x^2 - 14x + 8 = 0$ (B) $3x^2 + 14x + 16 = 0$
(C) $3x^2 + 14x - 16 = 0$ (D) $3x^2 - 14x + 16 = 0$

15. The length of a rectangle is 1 cm more than its breadth. If its diagonal is 29 cm, what is the measure of its breadth? (in cm)
(A) 18 (B) 20
(C) 17 (D) 21

16. A is any single-digit prime number and B is any natural number. How many equations of the form $x^2 - 4\sqrt{A}\,x + 3B = 0$ have both real roots?
(A) 15 (B) 18
(C) 21 (D) 24

17. In a class, eight students play basketball. The remaining students, who represent 7 times the square root of the strength of the class, play football. Find the strength of the class.
(A) 36 (B) 16
(C) 64 (D) 100

18. If the price of a book goes down by ₹20 per dozen, a person can purchase 50 dozen books more for ₹30,000. Find the original price of each book.
(A) ₹10 (B) ₹12
(C) ₹9 (D) ₹8

19. If $-9 \le p \le -5$ and $-17 \le q \le -12$ then which of the following can be concluded?
(A) $\frac{5}{12} \le \frac{p}{q} \le \frac{9}{17}$ (B) $\frac{17}{9} \le \frac{p}{q} \le \frac{12}{5}$
(C) $\frac{5}{17} \le \frac{p}{q} \le \frac{3}{4}$ (D) $\frac{12}{9} \le \frac{p}{q} \le \frac{17}{5}$

20. If $|3x-4| = |5x-12|$, then the sum of the possible values of x is ______.
(A) 4 (B) 6
(C) –4 (D) –6

21. If $|4x-9| = 7$, then the values of $4|x| - |-x^3|$ is ______.
(A) $48, \frac{15}{8}$ (B) $-48, \frac{-15}{8}$
(C) $48, \frac{-15}{8}$ (D) $-48, \frac{15}{8}$

22. Find the range of values of x that satisfy the relation $|2x - 1| - 1 < |x - 2| + 3$.
(A) $-4 < x < 4$ (B) $-6 < x < \frac{1}{2}$
(C) $-6 < x < 4$ (D) $-5 < x < 3$

23. If $E = |x + 4| + |x + 7| + |x - 1|$, then how many integral values of x satisfy the inequality $E \le 14$?
(A) 8 (B) 10
(C) 11 (D) More than 11

24. Which of the following inequalities gives a finite range of values for x?
(A) $6x^3 - x^2 - x < 0$
(B) $x^4 + x^3 - 3x^2 - x + 2 < 0$
(C) $x^3 - x^2 - 5x - 3 < 0$
(D) $x^4 + 3x^3 + 2x^2 > 0$

25. If $\frac{x}{x+1} - \frac{x+2}{x-1} < 0$, then find the range of x.
(A) $\left(-1, -\frac{1}{2}\right) \cup (1, \infty)$ (B) $(-2, -1) \cup (0, 1)$
(C) $(-\infty, -1) \cup \left(-\frac{1}{2}, 1\right)$ (D) $\left(-\frac{1}{2}, \infty\right)$

26. Find the range of x, for which $|x + 2| - 3\,|x - 1| + 4 \ge 0$.
(A) $-2 \le x \le 1$ (B) $-2 \le x \le \frac{9}{2}$
(C) $-\frac{3}{4} \le x \le 4$ (D) None of these

27. a, b, c and d are four positive real numbers whose sum is equal to 4. If $p = \frac{abcd}{(abc + bcd + acd + abd)}$, then find the maximum value of p.
(A) 16 (B) 4
(C) $\frac{1}{2}$ (D) $\frac{1}{4}$

28. If $2 < x < 5$ and $10 < y < 30$, then $\frac{y}{x}$ lies between
(A) 5 and 6 (B) 2 and 6
(C) 2 and 15 (D) 6 and 15

29. If $|x| > 6$ and $y > -4$, then which of the following is necessarily true?
(A) $|xy| > 24$ (B) $|xy| < 24$
(C) $|x|\,|y| > 0$ (D) None of these

30. Let $f(x) = \max(3x + 5, 7 - 2x)$, where x is any real number. Then the minimum possible value of $f(x)$ is
(A) $\frac{31}{5}$ (B) $\frac{27}{5}$
(C) $\frac{21}{5}$ (D) $\frac{29}{5}$

31. If $20 \le x \le 35$ and $3y - 2x = 5$, then the minimum value of $\frac{x}{x+y}$ is
(A) 1 (B) $\frac{1}{3}$
(C) $\frac{4}{9}$ (D) $\frac{4}{7}$

32. If a, b and c are positive real numbers. Find the minimum value of $\left(1+a+\frac{1}{a}\right)\left(1+b+\frac{1}{b}\right)\left(1+c+\frac{1}{c}\right)$.
(A) 9 (B) 12
(C) 27 (D) 81

33. If $a \le 25$ and $a + b \ge 10$, then which of the following is always true?

(A) $a - b \ge 40$ (B) $b - a \ge -40$
(C) $a + b \ge 40$ (D) $ab \le 250$

34. If $1 \le x \le 3$, $4 \le y \le 10$ and $2 \le z \le 5$, what is the maximum possible value of $\frac{y}{x+y+z}$?

(A) 5 (B) $\frac{10}{3}$
(C) $\frac{10}{13}$ (D) $\frac{10}{7}$

35. Find the range of values of x for which $\left|\frac{18-2x}{4}\right| < 3$.

(A) $6 < x < 30$ (B) $-3 < x < 15$
(C) $-15 < x < 3$ (D) $3 < x < 15$

Answer Key

Hints and Explanations

1. The quadratic equation which has α and β are the roots is $x^2 - (\alpha + \beta)x + \alpha\beta = 0$

Quadratic equation taken by the first student is

$x^2 - (-15 + 16)x + (-15 \times 16) = 0$

$x^2 - x - 240 = 0$ ——————(1)

Quadratic equation taken by the second student is

$x^2 - (-10 + 21)x + (-10 \times 21) = 0$

$x^2 - 11x - 210 = 0$ ——————(2)

∴ Required correct quadratic equation is $x^2 - x - 210 = 0$

⇒ $x^2 - 15x + 14x - 210 = 0$

⇒ $x(x - 15) + 14(x - 15) = 0$

⇒ $(x - 15)(x + 14) = 0$

∴ Required roots are -14 and 15. Choice (B)

2. Let $X = \sqrt{132+\sqrt{132+\sqrt{132+......}}}$

⇒ $x = \sqrt{132+x}$

Squaring on both sides

⇒ $x^2 = 132 + x \Rightarrow x^2 - x - 132 = 0$

⇒ $x^2 - 12x + 11x - 132 = 0$

⇒ $(x - 12)(x + 11) = 0$

∴ $x = 12$ (∴ x is always positive) Choice (D)

3. Given $6x^2 - kx + 9 - k^2 = 0$

The sum of the roots = $\frac{k}{6}$

The product of the roots = $\frac{9-k^2}{6}$

$\frac{k}{6}$ and $\frac{9-k^2}{6}$ are both negative

⇒ $\frac{k}{6} < 0$ and $\frac{9-k^2}{6} < 0$

⇒ $k < 0$ and $9 < k^2$

⇒ $k < 0$ and $k > 3$ or $k < -3$

∴ $k < -3 \Rightarrow k \in (-\infty, -3)$. Choice (C)

4. It is given that $-x^2 + 4kx + 3k - 1 < 0$

⇒ $-(x^2 - 4kx) + 3k - 1 < 0$

⇒ $-[(x - 2k)^2 - 4k^2] + 3k - 1 < 0$

⇒ $-[(x - 2k)^2] + 4k^2 + 3k - 1 < 0$

Now, for the above expression to be always negative $4k^2 + 3k - 1 < 0 \Rightarrow (4k - 1)(k + 1) < 0$

This is true when $-1 < k < \frac{1}{4}$. Choice (D)

5. The given equation is $2x^2 - 15x + k = 0$

The sum of the roots, $a + b = \frac{15}{2}$ and

the product $ab = \frac{k}{2}$

It is given that $a^2 - b^2 = 45 \Rightarrow a - b = 6$

$a + b = \frac{15}{2}$, $a - b = 6$, $\Rightarrow a = \frac{27}{4}$, $b = \frac{3}{4}$

∴ The product of the roots $ab = \left(\frac{27}{4}\right)\left(\frac{3}{4}\right) = \frac{81}{16}$

Now $\frac{k}{2} = \frac{81}{16} \Rightarrow k = \frac{81}{8} = 10\frac{1}{8}$ Choice (B)

6. Sum of the roots = $\frac{-(2k+1)}{3}$

Product of the roots = $\frac{-(k+5)}{3}$

$\frac{-(2k+1)}{3} = \frac{-(k+5)}{3}$

⇒ $2k + 1 = k + 5 \Rightarrow k = 4$

Choice (C)

7. Roots are to be diminished by one and then multiplied by two. i.e., if A, B are roots of given equation, then $2(A-1) = A_1$ and $2(B-1) = B_1$, where A_1 and B_1 are the roots of the new equation. i.e.,

$\Rightarrow \quad A = 1 + \frac{A_1}{2} = \frac{A_1+2}{2}$ and $B = \frac{B_1+2}{2}$

i.e., x of the given equation is to be replaced by $\frac{x+2}{2}$, to obtain the required equation. Given equation is: $x^2 - 7x - 12 = 0$.

Required equation is $\left(\frac{x+2}{2}\right)^2 - \frac{7(x+2)}{2} - 12 = 0$

$(x+2)^2 - 7(2)(x+2) - 4(12) = 0$.

$\Rightarrow \quad x^2 + 4x + 4 - 14x - 28 - 48 = 0$.

$\Rightarrow \quad x^2 - 10x - 72 = 0$. Choice (D)

8. When rewritten, the equation becomes:
$(k^2+2)x^2 - kx + 1 = 0$
Discriminant, $D = (k)^2 - 4(1)(k^2+2)$
$= -3k^2 - 8 = -(3k^2+8)$
$3k^2$ is positive for all real values of k, and hence $(3k^2+8)$ is positive; and so $-(3k^2+8)$ is negative.
As the discriminant is negative, roots are complex.
Choice (D)

9. Let the roots of the first quadratic equation be α and β and those of the second equation be γ and δ respectively.
Given $\alpha^2 + \beta^2 = \gamma^2 + \delta^2$
Also $\alpha + \beta = 10$ and $\gamma + \delta = 8$.
The possible values of $\alpha^2 + \beta^2$ are 50, 52, 58, 68 and 82 while the possible values $\gamma^2 + \delta^2$ as are 32, 34, 40 and 50. As only 50 is a common value, $\alpha = 5$, $\beta = 5$, $\gamma = 7$ and $\delta = 1$

$\therefore$ The greatest possible root is 7. Choice (A)

10. Dividing both sides of the given equation by $a + b$,

$x^2 + \frac{2abx}{a+b} + \frac{(a+b)^2}{16} = 0$

Discriminant

$= \left(\frac{2ab}{a+b}\right)^2 - \frac{4(a+b)^2}{16} = \left(\frac{2ab}{a+b}\right)^2 - \left(\frac{a+b}{2}\right)^2$

Shown below is the proof that this is always non-positive provided a and b are positive.
$(a-b)^2 \geq 0 \Rightarrow a^2 + b^2 + 2ab \geq 4ab$

dividing both sides by $2(a+b)$ $\frac{a+b}{2} \geq \frac{2ab}{a+b}$

As the expressions on both sides of the inequality are positive, $(\frac{a+b}{2})^2 \geq (\frac{2ab}{a+b})^2$

$\therefore \quad \Delta < 0$ or $\Delta = 0$
If $\Delta = 0$, the roots are real and equal.
If $\Delta < 0$, the roots are non-real and distinct.
Choice (D)

11. Let the required original number be x.
$(x+3)^2 = 23 + x$.
Hence $x^2 + 6x + 9 = 23 + x$
$\Rightarrow \quad x^2 + 5x - 14 = 0$.
$(x+7)(x-2) = 0$
$\Rightarrow \quad x = -7$ or $x = 2$.
Since the original number is positive, $x = 2$.
Choice (B)

12. If one of the roots is α, the other root is α^2.
Hence the product of the roots $= \alpha(\alpha^2)$.
$\alpha^3 = 64 \Rightarrow \alpha = \sqrt[3]{64} = 4$ and $\alpha^2 = 4^2 = 16$

The sum of roots $= -\left(\frac{6R}{1}\right) = -6R = 4 + 16 = 20$

$R = \left(\frac{20}{-6}\right) = -\frac{10}{3}$ Choice (A)

13. For the equation $x^2 + 2(p+1)x + 2p = 0$
$b^2 - 4ac = [2(p+1)]^2 - 4(2p)] = 4p^2 + 8p + 4 - 8p$
$= 4p^2 + 4$ which is always positive.
Hence the roots of the equation are always real and unequal. Choice (C)

14. For the equation, whose roots are twice the roots of the equation A : $3x^2 - 7x + 4 = 0$, the sum of the roots is twice the sum of the roots of A and the product of the roots is 4 times the product of the roots of A.The required equation is $x^2 - \left(2\left(\frac{7}{3}\right)\right)x + 4\left(\frac{4}{3}\right) = 0$

i.e., $3x^2 - 14x + 16 = 0$ Choice (D)

15. Let ℓ and b be the length and breadth in cm.
Given that $\ell = b + 1$
Also given that diagonal = 29 cm
$\Rightarrow \quad \sqrt{\ell^2 + b^2} = 29$
By squaring on both sides, $(b+1)^2 + b^2 = 29^2$
$\Rightarrow \quad 2b^2 + 2b - 840 = 0$
$\Rightarrow \quad b^2 + b - 420 = 0$
$\Rightarrow \quad (b+21)(b-20) = 0$
$\therefore \quad b = 20$ Choice (B)

16. $(4\sqrt{A})^2 - 4(3B) \geq 0$

$\frac{4}{3}A \geq B$

As A is a single digit prime number, A can be 2, 3, 5 or if $A = 2$, B has 2 possibilities. If $A = 3$, B has 4 possibilities. If $A = 5$, B has 6 possibilities. If $A = 7$, B has 9 possibilities. A total of 21 equations are possible.
Choice (C)

17. Let the strength be x. The number of students who play basketball = 8
The number of students who play football
$= x - 8 = 7\sqrt{x}$
Substituting the choices in place of x in the equation above, only choice (C) satisfies it. Choice (C)

18. Let the initial number of books in dozens = b

Let initial price (in ₹) of books per dozen be p.

$pb = 30{,}000$. →(I)

$(50 + b)(p - 20) = 30{,}000$

$50p - 1000 + pb - 20b = 30{,}000$

or, $50p - 20b = 1000$

$5p - 2b = 100$. →(II)

From (I) and (II) $5p - \dfrac{60{,}000}{p} = 100$

$5p^2 - 100p - 60{,}000 = 0$

$5p^2 - 600p + 500p - 60{,}000 = 0$

$5p(p - 120) + 500(p - 120) = 0 \Rightarrow p = 120$

The price of each book $= \dfrac{120}{12} = 10$ Choice (A)

19. $\dfrac{p}{q} = \dfrac{-p}{-q}$

$5 \le -p \le 9$ and $12 \le -q \le 17$

$\dfrac{-p}{-q}$ is maximum when p is maximum and q is minimum

$\therefore$ $\text{Max}\left(\dfrac{-p}{-q}\right) = \dfrac{9}{12} = 3/4$

$\dfrac{-p}{-q}$ is minimum when p is minimum and q is maximum.

$\therefore$ $\text{Min}\left(\dfrac{-p}{-q}\right) = \dfrac{5}{17}$

$\dfrac{5}{17} \le \dfrac{p}{q} \le \dfrac{3}{4}$ Choice (C)

20. $|3x - 4| = |5x - 12|$

When ever $|p| = |q|$ it follows that $p = \pm q$

$3x - 4 = \pm(5x - 12)$

$\Rightarrow$ $3x - 4 = 5x - 12$ or $3x - 4 = -5x + 12$

$\Rightarrow$ $2x = 8$ or $8x = 16$

$\Rightarrow$ $x = 4$ or $x = 2$

$\therefore$ Required sum of the possible values of x is 6.

Choice (B)

21. $|a| = b \Rightarrow a = \pm b$

$|4x - 9| = 7$

$\Rightarrow$ $4x - 9 = 7$ or $4x - 9 = -7$

$\Rightarrow$ $x = 4$ or $x = 1/2$

$4|x| - |-x|^3$

$= 4(4) - (4)^3$ or $4\left(\dfrac{1}{2}\right) - \left(\dfrac{1}{2}\right)^3$

$= -48$ or $15/8$ Choice (D)

22. $|2x - 1| - 1 < |x - 2| + 3$

$\Rightarrow$ $|2x - 1| - |x - 2| < 4$

We need to consider 3 cases

(1) $x < \dfrac{1}{2}$ (2) $\dfrac{1}{2} \le x < 2$ and (3) $2 \le x$.

For $x < \dfrac{1}{2}$, we get

$-(2x - 1) + (x - 2) < 4$

$\Rightarrow$ $-x < 5 \Rightarrow x > -5$

$\therefore$ $-5 < x < \dfrac{1}{2}$

For $\dfrac{1}{2} \le x < 2$, $2x - 1 + x - 2 < 4$

$\Rightarrow$ $x < \dfrac{7}{3}$ $\therefore \dfrac{1}{2} < x < 2$

For $x \ge 2$, $(2x - 1) - (x - 2) < 4$

$\Rightarrow$ $x < 3$ $\therefore 2 \le x < 3$

Thus the range of x such that the given relation is satisfied is $-5 < x < 3$ Choice (D)

23. For $x = -9$, $E = |-9 + 4| + |-9 + 7| + |-9 - 1| = 17$

For $x = -8$, $E = |-8 + 4| + |-8 + 7| + |-8 - 1| = 14$

For $x = 1$, $E = |1 + 4| + |1 + 7| + |1 - 1| = 13$

For $x = 2$, $E = |2 + 4| + |2 + 7| + |2 - 1| = 16$

Therefore the integral values of x for which the given inequality is satisfied are $-8, -7, -6, -5, -4, -3, -2, -1$, 0 and 1 i.e. a total of 10 values. Choice (B)

24. We need to considering each option separately,

Option A:

$6x^3 - x^2 - x < 0$

$x(2x - 1)(3x + 1) < 0$

The above inequality is satisfied for

$x < -\dfrac{1}{2}$ or $0 < x < \dfrac{1}{2}$

which does not give a finite range of values for x

Option B:

$x^4 + x^3 - 3x^2 - x + 2 < 0$

$(x - 1)^2(x + 1)(x + 2) < 0$ which gives the same solution set as $(x + 1)(x + 2) < 0$ $((x - 1)^2 \ge 0]$

The above inequality is satisfied for $-2 < x < -1$ this is a finite range of values for x.

Option C:

$x^3 - x^2 - 5x - 3 < 0$

$(x + 1)^2(x - 3) < 0$ which gives the same solution set as $x - 3 < 0 \Rightarrow x < 3$

It does not give a finite range of values for x.

Option D:

$x^4 + 3x^3 + 2x^2 > 0$

$x^2(x^2 + 3x + 2) > 0$

$x^2(x + 2)(x + 1) > 0$

The above inequality gives the same solution set as $(x + 2)(x + 1) > 0$ $[x^2 \ge 0]$

The inequality is satisfied for $x < -2$ or $x > -1$ which does not give a finite range of values for x.

Note: A polynomial of odd degree can take values from $-\infty$ to ∞ but a polynomial of even degree has a finite range of values for which it has values of a particular sign. If the coefficient of the leading term (say a) is positive, $f(x) < 0$ for a finite range if $a < 0$, $f(x) > 0$ for a finite range. Choice (B)

25. $\frac{x}{x+1} - \frac{x+2}{x-1} < 0$

$\frac{x(x-1)-(x+2)(x+1)}{(x+1)(x-1)} < 0$

$\frac{x^2 - x - x^2 - 3x - 2}{(x+1)(x-1)} < 0$

$\frac{-4x-2}{(x+1)(x-1)} < 0$

$\frac{-2(2x+1)}{(x+1)(x-1)} < 0$

$\frac{(2x+1)}{(x+1)(x-1)} > 0$

Multiplying both Nr & Dr by $(x + 1)(x - 1)$ we get

$\frac{(2x+1)(x+1)(x-1)}{(x+1)^2(x-1)^2} > 0$

The solution set for the above inequality is the same as that for $(2x + 1)(x + 1)(x - 1) > 0$

Therefore the inequality holds true for $-1 < x < -\frac{1}{2}$ or $x > 1$, i.e., $x \in \left(-1, -\frac{1}{2}\right) \cup (1, \infty)$ Choice (A)

26. $|x + 2| - 3\,|x - 1| + 4 \geq 0$

For $x < -2$, $|x + 2| - 3\,|x - 1| + 4 = -(x + 2) + 3\,(x - 1) + 4$

$\therefore$ $-x - 2 + 3x - 3 + 4 \geq 0 \Rightarrow 2x \geq 1 \Rightarrow x \geq \frac{1}{2}$

But we have taken $x < -2$, thus no solution exists in this range.

For $-2 \leq x < 1$,

$|x + 2| - 3\,|x - 1| + 4 = (x + 2) + 3\,(x - 1) + 4$

$\Rightarrow$ $x + 2 - 3x + 3 + 4 \geq 0$

$\Rightarrow$ $9 - 2x \geq 0$

$\Rightarrow$ $9 \geq 2x$ $\Rightarrow$ $2x \leq 9$

$\therefore$ $x + 2 + 3x - 3 + 4 \geq 0 \Rightarrow 4x \geq -3 \Rightarrow x \geq -\frac{3}{4}$

Therefore, the range of x satisfying the given condition is $-\frac{3}{4} \leq x < 1$

For $x \geq 1$,

$|x + 2| - 3\,|x - 1| + 4 = (x + 2) - 3\,(x - 1) + 4 - 2x \leq -9$

$\therefore$ $x + 2 - 3x + 3 + 4 \geq 0$

$\Rightarrow$ $9 - 2x \geq 0$

$\Rightarrow$ $2x \leq 9$

$\Rightarrow$ $x \leq \frac{9}{2}$

$\therefore$ $1 \leq x \leq \frac{9}{2}$

Thus, the range of x satisfying the given inequality is $-\frac{3}{4} \leq x \leq \frac{9}{2}$ Choice (D)

27. $AM\,(a, b, c, d) \geq HM\,(a, b, c, d)$

$\frac{a+b+c+d}{4} \geq \frac{4}{\frac{1}{a}+\frac{1}{b}+\frac{1}{c}+\frac{1}{d}}$

$\frac{1}{a}+\frac{1}{b}+\frac{1}{c}+\frac{1}{d} \geq \frac{16}{a+b+c+d}$

$\frac{bcd+acd+abd+abc}{abcd} \geq \frac{16}{a+b+c+d}$

$\frac{abcd}{abc+bcd+acd+abd} \leq \frac{a+b+c+d}{16}$

$(\because a + b + c + d = 4)$

$\therefore$ $p \leq \frac{1}{4}$. Choice (D)

28. Given $2 < x < 5$ and $10 < y < 30$.

The value of y/x is minimum, for the minimum value of y and the maximum value of x.

$\therefore$ $y/x > \frac{10}{5}$ or $y/x > 2$

The value of y/x is maximum, for the maximum value of y and the minimum value of x.

$\therefore$ $y/x < \frac{30}{2}$ or $y/x < 15$

$\Rightarrow$ $2 < y/x < 15$ Choice (C)

29. Given $|x| > 6$, $y > -4$.

Consider $x = 7$ and $y = 2$; $xy = 14$

$\Rightarrow$ $|xy| = 14|xy| > 24$ is not necessarily true.

Consider $x = 8$ and $y = 5$; $xy = 40$; $|xy| > 40 > 24$

$\therefore$ The second option is not necessarily true.

For $y = 0$; $|x|\,|y| = 0$, hence none of the given options is necessarily true. Choice (D)

30. Given $f(x) = \max(3x + 5, 7 - 2x)$

$f(x)$ has the minimum value when the two expressions are equal.

$\therefore$ $3x + 5 = 7 - 2x$

$5x = 2 \Rightarrow x = \frac{2}{5}$

$\therefore$ The minimum value of $f(x)$ is

$$f\left(\frac{2}{5}\right) = \max\left(\frac{3(2)}{5} + 5, 7 - \frac{2(2)}{5}\right)$$

$$= \max\left(\frac{31}{5}, \frac{31}{5}\right) = \frac{31}{5}$$ Choice (A)

31. $20 \le x \le 35$

$$y = \frac{2x+5}{3}$$

$$\therefore \quad \frac{x}{x+y} = \frac{x}{x + \frac{2x+5}{3}}$$

$$= \frac{3x}{5x+5} = \frac{3}{5 + \frac{5}{x}}$$

This expression is positive for the given range of values of x and it has its minimum value when $5/x$ has its maximum value, i.e. when $x = 20$.

The corresponding value is $\frac{3(4)}{21} = \frac{4}{7}$.

Choice (D)

32. If x is a positive number, the minimum value of $x + \frac{1}{x}$ is 2.

Hence, the minimum value of $1 + x + \frac{1}{x}$ is 3 and for the given expression, it is $3(3)(3) = 27$. Choice (C)

33. Given $a \le 25$ and $a + b \ge 10$

$\Rightarrow$ $a \le 25$ and $b \ge 10 - a$

$\Rightarrow$ $a \le 25$ and $b \ge 10 - 25$

$\Rightarrow$ $a \le 25$ and $-b \ge 15$

$\Rightarrow$ $a - b \le 40$

$\Rightarrow$ $b - a \ge -40$ Choice (B)

34. $\frac{y}{x+y+z} = \frac{1}{\frac{x}{y} + 1 + \frac{z}{y}}$; to maximize the given expression, $x + z$ should take minimum and y should take maximum possible value.

$\therefore$ Maximum value $= \frac{1}{\frac{1}{10} + 1 + \frac{2}{10}} = \frac{10}{13}$ Choice (C)

35. Given $\left|\frac{18-2x}{4}\right| < 3$

$\Rightarrow$ $|18 - 2x| < 12$

$\Rightarrow$ $|x - 9| < 6$

The expression $|x - a|$ denotes the distance of the point x from the point a on the number line.

$|x - 9| < 6$ Þ x lies within a distance 6 units from the point 9. i.e., $3 < x < 15$.

Choice (D)

CHAPTER HIGHLIGHTS

- *Limit of a function*
- *Derivatives*
- *Mean value theorem*

Limit of a Function

Let $y = f(x)$ be a function of x and let 'a' be any real number.

We must first understand what a 'limit' is. A limit is the value, function approaches, as the variable within that function (usually 'x') gets nearer and nearer to a particular value. In other words, when x is very close to a certain number, what is $f(x)$ very close to?

Meaning of '$x \to a$'

Let x be a variable and 'a' be a constant. If x assumes values nearer and nearer to 'a', then we say that 'x tends to a' or 'x approaches a' and is written as '$x \to a$'. By $x \to a$, we mean that $x \neq a$ and x may approach 'a' from left or right, which is explained in the example given below.

Let us look at an example of a limit: What is the limit of the function $f(x) = x^3$ as x approaches 2? The expression 'the limit as x approaches to 2' is written as: $\lim\limits_{x\to 2}$ Let us check out some values of $\lim\limits_{x\to 2}$ as x increases and gets closer to 2, without even exactly getting there.

When $x = 1.9$, $f(x) = 6.859$
When $x = 1.99$, $f(x) = 7.88$
When $x = 1.999$, $f(x) = 7.988$
When $x = 1.9999$, $f(x) = 7.9988$

As x increases and approaches 2, $f(x)$ gets closer and closer to 8 and since x tends to 2 from left this is called 'left-hand limit' and is written as $\lim\limits_{x\to 2^-}$.

Now, let us see what happens when x is greater than 2.

When $x = 2.1$, $f(x) = 9.261$
When $x = 2.01$, $f(x) = 8.12$
When $x = 2.001$, $f(x) = 8.01$
When $x = 2.0001$, $f(x) = 8.001$

As x decreases and approaches 2, $f(x)$ still approaches 8. This is called 'right-hand limit' and is written as $\lim\limits_{x\to 2^+}$

$\overrightarrow{x}\ \underline{\qquad 2}\quad \underline{2 \qquad} \overleftarrow{x}$

We get the same answer while finding both, left and right hand limits. Hence we write that $\lim\limits_{x\to 2} x^3 = 8$.

Meaning of the Symbol: $\lim\limits_{x\to a} f(x) = l$

Let $f(x)$ be a function of x where x takes values closer and closer to 'a' ($\neq a$), then $f(x)$ will assume values nearer and nearer to l. Hence we say, $f(x)$ tends to the limit 'l' as x tends to a.

The following are some of the simple algebraic rules of limits.

1. $\lim\limits_{x\to a} kf(x) = k \lim\limits_{x\to a} f(x)$
2. $\lim\limits_{x\to a}[f(x) \pm g(x)] = \lim\limits_{x\to a} f(x) \pm \lim\limits_{x\to a} g(x)$
3. $\lim\limits_{x\to a}[f(x)\cdot g(x)] = \lim\limits_{x\to a} f(x) \cdot \lim\limits_{x\to a} g(x)$
4. $\lim\limits_{x\to a} \dfrac{f(x)}{g(x)} = \dfrac{x \to a}{\lim\limits_{x\to a} g(x)} (\lim\limits_{x\to a} g(x) \neq 0)$

NOTES

1. If the left hand limit of a function is not equal to the right hand limit of the function, then the limit does not exist.
2. A limit equal to infinity is not the same as a limit that does not exist.

Continuous Functions

Let $f: A \to B$ be any given function and let $c \in A$. We say f is continuous at c, if given $\in > 0$, there exists $\delta > 0$ such that $|f(x) - f(c)| < \in$ whenever $|x - c| < \delta$

In words, this means that, if x is very close to c in domain, then $f(x)$ is very close to $f(c)$ in range.

Equivalently f is continuous at c. If $\lim_{x\to c} f(x) = f(c)$

We observe

1. $c \in A$, i.e., $f(c)$ must exist
2. $\lim_{x\to c} f(x)$ exists
3. $f(c)$ and $\lim_{x\to c} f(x)$ are equal.

If any of these three conditions fail, then f is discontinuous at $x = c$.

Algebra of Continuous Functions

If f, g be two continuous functions at c, then $f + g$, $f - g$, fg are also continuous at $x = c$.

To solve a problem of continuous functions at a point a, you can take the following approach.

1. Find the value $f(x)$ at $x = a$. If a is in the domain of f, $f(a)$ must exist. If a is not in the domain, then $f(a)$ does not exist. In such a case, f is not continuous at $x = a$.
2. Find $\lim_{x\to a} f(x)$. For this you have to first find $\lim_{x\to\infty} f(x) = l_1$(say) and $\lim_{x\to a^+} f(x) = l_2$(say). If $l_1 \neq l_2$ then $\lim_{x\to a} f(x)$ does not exist and so f is not continuous at $x = a$. If $l_1 = l_2$, then $\lim_{x\to a} f(x)$ exists.
3. If $\lim_{x\to a} f(x)$ exists and also $f(a)$ exists.

Then verify whether $\lim_{x\to a} f(x) = f(a)$.

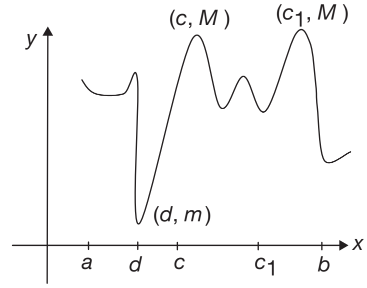
If $\lim_{x\to a} f(x) = f(a)$. Then f is continuous, otherwise it is not continuous at $x = a$.

Problems on continuous functions can be grouped into the following categories.

1. Using $\in$, δ notation.
2. Using existence of right and left hand limits.
3. To find the value of the unknown in $f(x)$ when f is given to be continuous at a point.
4. To find $f(a)$ when f is given to be continuous at $x = a$.

For functions that are continuous on (a, b) the following holds:

f is bounded and attains its bounds at least once on $[a, b]$, i.e., for some $c, d \in [a, b]$,
M = supremum of $f = f(c)$ and m = Infimum of $f = f(d)$



NOTE

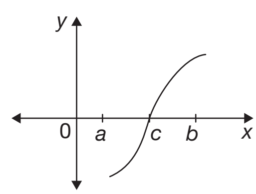
The converse may not be true as $f(x) = \begin{cases} 1; & 0 < x \le 1 \\ -1; & 1 < x \le 2 \end{cases}$ is bounded on [1, 2] but it is not continuous at $x = 1$.

Intermediate-value Theorem

If f is continuous on $[a, b]$ and $f(a) \neq f(b)$ then f takes every value between $f(a)$ and $f(b)$.

Equivalently, if f is continuous on $[a, b]$ and $f(a) < k < f(b)$ or $f(b) < k < f(a)$, then there exists $c \in (a, b)$ such that $f(c) = k$.

Equivalently, If $f(a)$ and $f(b)$ are of opposite signs then there exists $c \in (a, b)$ such that $f(c) = 0$.



$f(a) < 0$ and $f(b) > 0$, clearly $f(c) = 0$.

NOTES

1. If $f(x)$ is continuous in $[a, b]$ then f takes all values between m and M at least once as x moves from a to b, where M = Supremum of f on $[a, b]$ and m = infimum of f on $[a, b]$.
2. If $f(x)$ is continuous in $[a, b]$, then $|f|$ is also continuous on $[a, b]$, where $|f|(x) = |f(x)|\ x \in [a, b]$.
3. Converse may not be true

For instance, $f(x) = \begin{cases} 1; & 0 < x \le 3 \\ -1; & 3 < x \le 5 \end{cases}$

is not continuous at $x = 3$, but $|f|(x) = 1x \in [0, 5]$, being a constant function is continuous [0, 5].

Inverse-function Theorem

If f is a continuous one-to-one function on $[a, b]$ then f^{-1} is also continuous on $[a, b]$.

Uniform Continuity A function f defined on an interval I is said to be uniformly continuous on I if given $\in > 0$ there exists a $\delta > 0$ such that if x, y are in I and $|x - y| < \delta$ then $|f(x) - f(y)| < \in$.

NOTE

Continuity on $[a, b]$ implies uniform continuity whereas continuity on (a, b) does not mean uniform continuity.

Types of Discontinuity If f is a function defined on an interval I, it is said to have

(TD1) **a removable discontinuity** at $p \in I$, if $\lim_{x\to p} f(x)$ exists, but is not equal to $f(p)$.

(TD2) **a discontinuity of first kind from the left** at p if $\lim_{x\to p^-} f(x)$ exists but is not equal to $f(p)$.

(TD3) **a discontinuity of first kind from the right** at p if $\lim_{x\to p^+} f(x)$ exists but is not equal to $f(p)$.

(TD4) **a discontinuity of first kind** at p if $\lim_{x\to\infty} f(x)$ and $\lim_{x\to p^+} f(x)$ exists but they are unequal.

(TD5) **a discontinuity of second kind from the left** at p if $\lim_{x\to p-} f(x)$ does not exist.

(TD6) **a discontinuity of second kind from the right** at p if $\lim_{x\to p^+} f(x)$ does not exist.

(TD7) **a discontinuity of second kind** at p if neither $\lim_{x\to p^-} f(x)$ nor $\lim_{x\to p^+} f(x)$ exist.

Examples for each type are presented in the following table:

Type	Example	Point of Discontinuity
TD1	$f(x) = \dfrac{x^2-1}{x-1}, x \neq$ $f(1) = 3$	$x = $ i
TD2	$f(x) = x + 3$ for $0 < x < 1$ $f(x) = 5$ for $x \geq 1$	$x = 1$
TD3	$f(x) = x + 3$, for $x > 2$ $f(x) = 8$ for $x \leq 2$	$x = 2$
TD4	$f(x) = \begin{cases} x+3; & x > 2 \\ 7; & x = 2 \\ x-3; & x < 2 \end{cases}$	$x = 2$
TD5	$f(x) = \tan x$ for $x < \pi/2$ $f(x) = 1$, for $x \geq \pi/2$	$x = \dfrac{\pi}{2}$
TD6	$f(x) = 1$, for $x \leq \pi/2$ $f(x) = \tan x$ for $x > \pi/2$	$x = \dfrac{\pi}{2}$
TD7	$f(x) = 1/x$ at $x \neq 0$ $f(0)$ $= 3$ at $x = 0$	$x = 0$

NOTES

1. Every differentiable function is continuous, but the converse is not true.
   The example of a function which is continuous but not differentiable at a point $f(x) = |x - 3|$ for $x \in R$ is continuous at $x = 3$, but it is not differentiable at $x = 3$.
2. The function may have a derivative at a point, but the derivative may not be continuous.
   For example the function
   $$f(x) = \begin{cases} x^3 \sin\dfrac{1}{x}; & x \neq 0 \\ 0; & x = 0 \end{cases}$$ has the derivative function
   as
   $$f'(x) = \begin{cases} 3x^2 \sin\dfrac{1}{x} - x\cos\dfrac{1}{x}; & x \neq 0 \\ 0; & x = 0 \end{cases}$$
   However $\lim_{x\to 0} f'(x)$ doesn't exist.

SOLVED EXAMPLES

Example 1

Discuss the continuity of the function at $x = 1$ where $f(x)$ is defined by

$$f(x) = \frac{3x-2}{x} \text{ for } 0 < x \leq 1$$
$$= \frac{\sin(x-1)}{(x-1)} \text{ for } x > 1$$

Solution

Consider the left and right handed limits

$$\lim_{x\to 1^-} f(x) = \lim_{x\to 1} \frac{3x-2}{x} = 1$$

$$\lim_{x\to 1^+} f(x) = \lim_{x\to 1} \frac{\sin(x-1)}{x-1}$$

$$= \lim_{(x-1)\to 0} \frac{\sin(x-1)}{(x-1)} = 1 \text{ and } f(1)$$

$$= \frac{3(1)-2}{1} = 1$$

$$\therefore \lim_{x\to 1^-} f(x) = \lim_{x\to 1^+} f(x) = f(1)$$

$\therefore f$ is continuous at $x = 1$.

Example 2

If $f(x) = \dfrac{(2^x-1)^2}{(\sin 2x)\log(1+x)}$ for $x \neq 0$ and $f(x) = \log 2$ for $x = 0$, discuss the continuity at $x = 0$.

Solution

$$\lim_{x\to 0} f(x) = \lim_{x\to 0}\frac{(2^x-1)}{(\sin 2x)\log(1+x)}$$

$$= \lim_{x\to 0}\frac{\left(\frac{2^x-1}{x}\right)^2}{\frac{\sin 2x}{2x}(2)\frac{\log(1+x)}{x}}$$

$$= \lim_{x\to 0}\frac{\left(\frac{2^x-1}{x}\right)^2}{2\left(\frac{\sin 2x}{2x}\right)\log(1+x)^{\frac{1}{x}}}$$

$$= \frac{1}{2}\frac{\lim\limits_{x\to 0}\left(\frac{2^x-1}{x}\right)^2}{\left(\lim\limits_{x\to 0}\frac{\sin 2x}{2x}\right)\left(\log\lim\limits_{x\to 0}(1+x)^{\frac{1}{x}}\right)}$$

$$= \frac{1}{2}(\log 2)^2.$$

But given $f(x) = 2\log 2$ at $x = 0$

$\therefore \lim\limits_{x\to 0} f(x) \neq f(0)$

$\therefore f(x)$ is not continuous at $x = 0$.

Example 3

Find the value of k if

$$f(x) = \frac{2x^3-5x^2+4x+11}{x+1},\ \text{for } x \neq -1$$

And $f(-1) = k$ is continuous at $x = -1$.

Solution

Given $f(x)$ is continuous at $x = -1$

$$\Rightarrow \lim_{x\to -1} f(x) = f(-1) = k.$$

$$\Rightarrow \lim_{x\to -1} f(x) \lim_{x\to -1}\left[\frac{2x^3-5x^2+4x+11}{x+1}\right]$$

$$= \lim_{x\to -1}\frac{(x+1)(2x^2-7x+11)}{x+1}$$

$$= 2(-1)^2 - 7(-1) + 11$$

$$= 2 + 7 + 11 = 20$$

$$\therefore k = 20$$

Example 4

If $f(x) = \frac{x-4}{|x-4|}+a,$ for $x < 4$, $= a+b$ for $x = 4$, $= \frac{x-4}{|x-4|}+b,$ for $x > 4$

And $f(x)$ is continuous at $x = 4$, then find the values of a and b.

Solution

$$\lim_{x\to 4^-} f(x) = \lim_{x\to 4^-}\frac{x-4}{|x-4|}+a$$

$$= \lim_{x\to 4^-}\frac{(x-4)}{-(x-4)}+a = -1+a$$

$$\lim_{x\to 4^+} f(x) = \lim_{x\to 4^+}\frac{x-4}{|x-4|}+b$$

$$= \lim_{x\to 4^+}\frac{x-4}{(x-4)}+b = 1+b$$

Since given $f(x)$ is continuous at $x = 4$

$$\lim_{x\to 4^-} f(x) = f(4) = \lim_{x\to 4^+} f(x)$$

$\Rightarrow -1 + a = a + b = 1 + b \Rightarrow a = 1, b = -1$

Example 5

Examine the continuity of the given function at origin where,

$$f(x) = \begin{cases} \dfrac{xe^{\frac{1}{x}}}{1+e^{\frac{1}{x}}}, & x \neq 0 \\ 0, & x = 0 \end{cases}$$

Solution

$$\lim_{x\to 0^-} f(x) = \lim_{x\to 0^-}\frac{xe^{\frac{1}{x}}}{1+e^{\frac{1}{x}}} = 0$$

$$\lim_{x\to 0+} f(x) = \lim_{x\to 0^+}\frac{x}{e^{-1/x}+1} = 0$$

Then,

$$\lim_{x\to 0^-} f(x) = \lim_{x\to 0^+} f(x) = \lim_{x\to 0} f(x) = 0$$

Thus the function is continuous at the origin.

Derivatives

In this section we will look at the simplistic form of the definition of a derivative, the derivatives of certain standard functions and application of derivatives.

For a function $f(x)$, the ratio $\frac{[f(a+h)-f(a)]}{h}$ is the rate of change of $f(x)$ in the interval $[a, (a + h)]$.

The limit of this ratio as h tends to zero is called the derivative of $f(x)$. This is represented as $f'(x)$, i.e.,

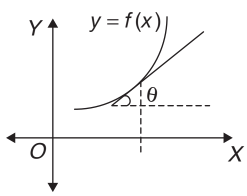
$$\lim_{h\to 0}\frac{f(a+h)-f(a)}{h} = f'(x)$$

The derivative $f'(x)$ is also represented as $\frac{d\{f(x)\}}{dx}$ or $\frac{d}{dx}\{f(x)\}$

Hence, if $y = f(x)$, i.e., y is a function of x, then $\frac{dy}{dx}$ is the derivative of y with respect to x.

NOTES

1. $\frac{dy}{dx}$ is the rate of change of y with respect to x.
2. If the function y can be represented as a general curve, and a tangent is drawn at any point where the tangent makes an angle θ with the horizontal (as shown in the figure), then $\frac{dy}{dx} = \tan\theta$, In other words, derivative of a function at a given point is the slope of the curve at that point, i.e., tans of the angle, the tangent drawn to the curve at that point, makes with the horizontal.



Standard Results

If $f(x)$ and $g(x)$ are two functions of x and k is a constant, then

1. $\frac{d}{dx}(c) = 0$ (c is a constant)

2. $\frac{d}{dx}k \cdot f(x) = k\frac{d}{dx}f(x)$ (k is a constant)

3. $\frac{d}{dx}(f(x) \pm g(x))$

$$= \frac{d}{dx}f(x) \pm \frac{d}{dx}g(x)$$

Product Rule

4. $\frac{d}{dx}\{f(x)\cdot g(x)\} = f'(x)\cdot g(x) + f(x)\cdot g'(x)$

Quotient Rule

5. $\frac{d}{dx}\left\{\frac{f(x)}{g(x)}\right\} = \frac{g(x)\cdot f'(x) - f(x)\cdot g'(x)}{(g(x))^2}$

Chain Rule

6. If $y = f(u)$ and $u = g(x)$ be two functions, then $\frac{dy}{dx} = \left(\frac{dy}{du}\right)\times\left(\frac{du}{dx}\right)$

Derivatives of Some Important Functions

1. (a) $\frac{d}{dx}(x^n) = n \cdot x^{n-1}$

   (b) $\frac{d}{dx}\left[\frac{1}{x^n}\right] = \frac{-n}{x^{n+1}}$

   (c) $\frac{d}{dx}(\sqrt{x}) = \frac{1}{2\sqrt{x}}$; $x \neq 0$

2. $\frac{d}{dx}[ax^n + b] = an \cdot x^{n-1}$

3. $\frac{d}{dx}[ax + b]^n = n\,a\,(ax + b)^{n-1}$

4. $\frac{d}{dx}[e^{ax}] = a \cdot e^{ax}$

5. $\frac{d}{dx}[\log x] = \frac{1}{x}$; $x > 0$

6. $\frac{d}{dx}[a^x] = a^x \log a$; $a > 0$

7. (a) $\frac{d}{dx}[\sin x] = \cos x$

   (b) $\frac{d}{dx}[\cos x] = -\sin x$

   (c) $\frac{d}{dx}[\tan x] = \sec^2 x$

   (d) $\frac{d}{dx}[\cot x] = -\text{cosec}^2 x$

   (e) $\frac{d}{dx}[\sec x] = \sec x \cdot \tan x$

   (f) $\frac{d}{dx}[\text{cosec } x] = -\text{cosec } x \cdot \cot x$

Inverse Rule

If $y = f(x)$ and its inverse $x = f^{-1}(y)$ is also defined, then $\frac{dy}{dx} = \frac{1}{\frac{dx}{dy}}$.

Second Derivative

If $y = f(x)$, then the derivative of derivative of y is called as second derivative of y and is represented by $\frac{d^2y}{dx^2}$.

$\frac{d^2y}{dx^2} = f''(x) = \frac{d}{dx}\left(\frac{dy}{dx}\right)$ where $\frac{dy}{dx}$ is the first derivative of y.

8. (a) $\frac{d}{dx}\sin^{-1} x = \frac{1}{\sqrt{1-x^2}}$

   (b) $\frac{d}{dx}\text{cosec}^{-1} x = \frac{-1}{|x|\sqrt{x^2-1}}$

   (c) $\frac{d}{dx}\cos^{-1} x = \frac{-1}{\sqrt{1-x^2}}$

   (d) $\frac{d}{dx}\sec^{-1} x = \frac{1}{|x|\sqrt{x^2-1}}$

(e) $\dfrac{d}{dx}\tan^{-1}x = \dfrac{1}{1+x^2}$

(f) $\dfrac{d}{dx}\cot^{-1}x = \dfrac{-1}{1+x^2}$

9. (a) $\dfrac{d}{dx}\sinh x = \cosh x$

(b) $\dfrac{d}{dx}\cosh x = \sinh x$

(c) $\dfrac{d}{dx}\tanh x = \text{sech}^2\, x$

(d) $\dfrac{d}{dx}\coth x = -\text{cosech}^2 x$

(e) $\dfrac{d}{dx}\text{sech}\, x = -\text{sech}\, x \tanh x$

(f) $\dfrac{d}{dx}\text{cosech}x = -\text{cosech}x \coth x$

10. (a) $\dfrac{d}{dx}\sinh^{-1}x = \dfrac{1}{\sqrt{1+x^2}}$

(b) $\dfrac{d}{dx}\cosh^{-1}x = \dfrac{1}{\sqrt{x^2-1}}$

(c) $\dfrac{d}{dx}\tanh^{-1}x = \dfrac{1}{1-x^2}$

(d) $\dfrac{d}{dx}\coth^{-1}x = \dfrac{-1}{x^2-1}$

(e) $\dfrac{d}{dx}\text{sech}^{-1}x = \dfrac{-1}{x\sqrt{1-x^2}}$

(f) $\dfrac{d}{dx}\text{cosech}^{-1}x = \dfrac{-1}{x\sqrt{x^2+1}}$

Successive Differentiation

If f is differentiable function of x and the derivative f' is also a differentiable function of x, then f'' is called the second derivative of f. Similarly 3rd, 4th ... nth derivative of f may be defined and are denoted by f''', f'''', ... f^n or $y_3, y_4 \dots y_n$.

11. The n^{th} derivatives of some special functions:

(a) $\dfrac{d^n}{dx^n}x^n = n\,!$

(b) $\dfrac{d^n}{dx^n}x^m = \dfrac{m!}{(m-n)}x^{m-n}$ s(m being a positive integer more than n)

(c) $\dfrac{d^n}{dx^n}e^{ax} = a^n\, e^{ax}$

(d) $\dfrac{d^n}{dx^n}\left(\dfrac{1}{x-a}\right) = \dfrac{(-1)^n n!}{(x+a)^{n+1}}; x \neq -a$

(e) $\dfrac{d^n}{dx^n}\log(x+a) = \dfrac{(-1)^{n-1}(n-1)!}{(x+a)}$; $(x+a) > 0$

(f) $\dfrac{d^n}{dx^n}\sin(ax+b) = a^n \sin\left(\dfrac{n\pi}{2}+ax+b\right)$

(g) $\dfrac{d^n}{dx^n}\cos(ax+b) = a^n \cos\left(\dfrac{n\pi}{2}+ax+b\right)$

(h) $\dfrac{d^n}{dx^n}(e^{ax}\sin bx)$

$= (a^2+b^2)^{n/2}\, e^{ax} \sin\left(bx + n\tan^{-1}\dfrac{b}{a}\right)$

(i) $\dfrac{d^n}{dx^n}(e^{ax}\cos bx)$

$= (a^2+b^2)^{n/2}\, e^{ax} \cos\left(bx + n\tan^{-1}\dfrac{b}{a}\right)$

(j) $\dfrac{d^n}{dx^n}\left(\dfrac{1}{x^2+a^2}\right) = \dfrac{(-1)^n n}{a^{n+2}}\sin^{n+1}\theta \sin(n+1)\theta$

where $\theta = \tan^{-1}\left(\dfrac{x}{a}\right)$

(k) $\dfrac{d^n}{dx^n}(\tan^{-1}x) = (-1)^{n-1}(n-1)!\, \sin^n\theta \cdot \sin n\theta$

where $\theta = \cot^{-1}x$.

Application of Derivatives

Errors in Measurement

Problems relating to errors in measurement can be solved using the concept of derivatives. For example, if we know the error in measurement of the radius of a sphere, we can find out the consequent error in the measurement of the volume of the sphere. Without going into further details of theory, we can say dx = error in measurement of x and dy = consequent error in measurement of y, Where $y = f(x)$. Hence, we can rewrite $\dfrac{dy}{dx} = f'(x)$ as $dy = f'(x) \cdot dx$.

Thus, if we know the function $y = f(x)$ and dx, error in measurement of x, we can find out dy, the error in measurement of y.

NOTES

1. An error is taken to be positive when the measured value is greater than the actual value and negative when it is less.
2. Percentage error in y is given by $\left(\dfrac{dy}{y}\right)\times 100$.

Rate of Change

While defining the derivative, we have seen that derivative is the 'rate of change'. This can be applied to motion of bodies to determine their velocity and acceleration.

Velocity If we have s, the distance covered by a body expressed as a function of t, i.e., $s = f(t)$, then rate of change of s is called velocity (v). $v = \dfrac{ds}{dt} = f'(t)$.

Acceleration Rate of change of velocity is defined as acceleration. Since $v = f'(t)$ itself is a function of t, we can write $v = f'(t)$.

$a = \frac{dv}{dt} = \frac{d^2s}{dt^2}$, i.e., acceleration is the second derivative of the function $s = f(t)$.

Maxima and Minima

A function takes a maximum value or a minimum value when the slope of the tangent of the curve at that point is zero, i.e., when the first derivative of the function is zero. If $y = f(x)$, then y is maximum or minimum at the point $x = x_1$ if $\left(\frac{dy}{dx}\right)_{x=x_1} = 0$.

Thus we can find the value of x_1 by equating $\frac{dy}{dx} = 0$.

As mentioned above that y can have a maximum or a minimum value at $x = x_1$. Whether y is a maximum value or minimum is governed by the sign of the second derivative. The function y has a minimum value if the second derivative is positive. In other words, y is maximum at $x = x_1$ if $\frac{d^2y}{dx^2} < 0$ at $x = x_1 \cdot y$ is minimum at $x = x_1$ if $\frac{d^2y}{dx^2} > 0$ at $x = x_1 \cdot \left(\frac{dy}{dx}\right)_{x=x_1} = 0.$ in both the cases discussed above.

The above discussion can be summerized as follows:

1. If $f'(c) = 0$ and $f''(c)$ is negative, then $f(x)$ is maximum for $x = c$
2. If $f'(c) = 0$ and $f''(c)$ is positive, then $f(x)$ is minimum for $x = c$
3. If $f'(c) = f''(c) = \cdots = f^{r-1}(c) = 0$ and $f^r(c) \neq 0$, then
   (a) If r is even, then $f(x)$ is maximum or minimum for $x = c$ according as $f^r(c)$ is negative or positive.
   (b) If r is odd, then there is neither maximum nor a minimum for $f(x)$ at $x = c$.

Mean Value Theorems

Rolle's Theorem Let f be a function defined on $[a, b]$ such that

1. f is continuous on $[a, b]$;
2. f is differentiable on (a, b) and
3. $f(a) = f(b)$, then there exists $c \in (a, b)$ such that $f'(c) = 0$

Lagrange's Mean Value Theorem Let f be a function defined on $[a, b]$ such that

1. f is continuous on $[a, b]$,
2. f is differentiable on (a, b) then there exists $c \in (a, b)$ such that $f'(c) = \frac{f(b) - f(a)}{b - a}$.

Another Form If f is defined on $[a, a + h]$ such that

1. f is continuous on $[a, a + h]$.
2. f is differentiable on $(a, a + h)$ then there exists atleast one $\theta \in (0, 1)$ such that $f(a + h) = f(a) + hf'(a + \theta h)$.

Meaning of the sign of the derivative

SIGN OF $f'(x)$ on [a, b]	Meaning
$f'(x) \geq 0$	f is non-decreasing
$f'(x) > 0$	f is increasing
$f'(x) < 0$	f is non-increasing
$f'(x) < 0$	f is decreasing
$f'(x) = 0$	f is constant

Example: The function f, defined on R by $f(x) = x^3 - 15x^2 + 75x - 125$ is non-decreasing in every interval as $f'(x) = 3(x^2 - 10x + 15) = 3(x - 5)^2 \geq 0$

Thus f is non-decreasing on R.

Cauchy's Mean Value Theorem Let f and g be two functions defined on $[a, b]$ such that

1. f and g are continuous on $[a, b]$
2. f and g are differentiable on (a, b)
3. $g'(x) \neq 0$ for any $x \in (a, b)$ then there exists at least one real number $c \in (a, b)$ such that

$$\frac{f(b) - f(a)}{g(b) - g(a)} = \frac{f'(c)}{g'(c)}.$$

Taylor's Theorem

Let f be a real-valued function defined on $[a, a + h]$ such that

1. f^{n-1} is continuous on $[a, a + h]$
2. f^{n-1} is derivable on $(a, a + h)$, then there exists a number $\theta \in (0, 1)$ such that

$$f(a + h) = f(a) + hf'(a) + \frac{h^2}{2!} f''(a) + \cdots$$

$$+ \frac{h^{n-1}}{(n-1)} f^{n-1}(a) + R_n.$$

Where

$$R_n = \frac{h^n f^n(a + \theta h)}{n!}$$

(Lagranges' form of remainder)

$$R_n = \frac{h^n (1 - \theta)^{n-1} f^n(a + \theta h)}{(n-1)!}$$

(Cauchy's form of remainder)

Maclaurin's Theorem Let $f \cdot [0, x] \to R$ such that

1. f^{n-1} is continuous on $[0, x]$,
2. f^{n-1} is derivable on $(0, x)$

Then there exists a real number $\theta \in (0, 1)$ such that

$$f(x) = f(0) + xf'(0) + \frac{x^2}{n!} f''(0) + \cdots$$

$$+ \frac{x^{n-1}}{(n-1)!} f^{(n-1)}(0) + R_n.$$

Where

$$R_n = \frac{x^n}{n!} f^n(\theta x)$$

(Lagranges form of remainder)

$$R_n = \frac{x^n (1-\theta)^{n-1} f^n(\theta x)}{(n-1)!}$$

(Cauchy's form of remainder)

Maclaurin's Series Let $f(x)$ be a function which posses derivatives of all orders in the interval $[0, x]$, then

$$f(x) = f(0) + xf'(0) + \frac{x^2}{2!} f''(0) + \cdots + \frac{x^{n-1}}{(n-1)} f^{(n-1)}(0)$$

$$+ \frac{x^n}{n!} f^n(0) + \cdots \text{ is known as}$$

Maclaurin's infinite series.

Series expansions of some standard functions

1. $e^x = 1 + x + \dfrac{x^2}{2!} + \dfrac{x^3}{3!} + \cdots + \dfrac{x^n}{n!} + \cdots$
2. $\sin x = x - \dfrac{x^3}{3!} + \dfrac{x^5}{5!} - \cdots + \dfrac{(-1)^n x^{2n+1}}{(2n+1)!} + \cdots$
3. $\cos x = 1 - \dfrac{x^2}{2!} + \dfrac{x^4}{4!} - \cdots + \dfrac{(-1)^n x^{2n}}{(2n)!} + \cdots$
4. $\sinh x = x + \dfrac{x^3}{3!} + \dfrac{x^5}{5!} + \cdots + \dfrac{x^{2n+1}}{(2n+1)!} + \cdots$
5. $\cosh x = 1 + \dfrac{x^2}{2!} + \dfrac{x^4}{4!} + \cdots + \dfrac{x^{2n}}{(2n)!} + \cdots$
6. $\log(1+x) = x - \dfrac{x^2}{2} + \dfrac{x^3}{3} - \dfrac{x^4}{4} - \cdots + \dfrac{(-1)^{n-1} x^n}{n}$
7. $(1 + x)^{-1} = 1 - x + x^2 - x^3 + \cdots$
8. $(1 - x)^{-1} = 1 + x + x^2 + x^3 + \cdots$
9. $(1 + x)^{-2} = 1 - 2x + 3x^2 - 4x^3 + \cdots$
10. $(1-x)^{-\frac{1}{2}} = 1 + \dfrac{x}{2} + \dfrac{1 \cdot 3}{2 \cdot 3} x^2 + \dfrac{1 \cdot 3 \cdot 5}{2 \cdot 4 \cdot 6} \cdot x^3 + \cdots$
11. $\tan^{-1} x = x - \dfrac{x^3}{3} + \dfrac{x^5}{5} - \cdots + \dfrac{(-1)^{n-1}}{(2n-1)} x^{2n-1} + \cdots$
12. $\sin^{-1} x = x + \dfrac{1}{2} \cdot \dfrac{x^3}{3} + \dfrac{1 \cdot 3}{2 \cdot 4} \cdot \dfrac{x^5}{5} + \cdots$

Example 6

For the function $f(x) = x(x^2 - 1)$ test for the applicability of Rolle's theorem in the interval $[-1, 1]$ and hence find c such that $-1 < c < 1$.

Solution

Given $f(x) = x(x^2 - 1)$

1. f is continuous in $[-1, 1]$
2. f is differentiable in $(-1, 1)$
3. $f(-1) = f(1) = 0$

$\therefore$ $f(x)$ satisfies the hypothesis of Rolle's theorems
$\therefore$ We can find a number c such that $f'(c) = 0$, i.e., $f'(x) = 3x^2 - 1$

$$f'(c) = 0 \quad \Rightarrow \quad 3c^2 - 1 = 0 \quad \Rightarrow \quad c = \pm\sqrt{\frac{1}{3}}$$

$$\Rightarrow \quad c = \sqrt{\frac{1}{3}}$$

Example 7

If $f(x) = 2x^2 + 3x + 4$, then find the value of θ in the mean value theorem.

Solution

$f(a) = 2a^2 + 3a + 4$

$f(a + h) = 2(a^2 + 2ah + h^2) + 3a + 3h + 4$

$f(a + h) - f(a) = 4ah + 2h^2 + 3h = 2(2ah + h^2) + 3h$

$$\frac{f(a+h) - f(a)}{h} = 2(2a + h) + 3$$

$$= 4\left(a + \frac{h}{2}\right) + 3 \qquad (1)$$

Now $f'(x) = 4x + 3$, $f^1(a + \theta h)$

$= 4a + 4h\theta + 3$ (2)

Comparing Eqs. (1) and (2) we have $4\left(a + \dfrac{h}{2}\right) + 3$

$$= 4a + 4h\theta + 3 \quad \Rightarrow \quad a + h\theta = a + \frac{h}{2}$$

$$\Rightarrow \quad \theta = \frac{1}{2}$$

Partial Differentiation

Let u be a function of two variables x and y. Let us assume the functional relation as $u = f(x, y)$. Here x alone or y alone

or both x and y simultaneously may be varied and in each case a change in the value of u will result. Generally the change in the value of u will be different in each of these three cases. Since x and y are independent, x may be supposed to vary when y remains constant or the reverse.

The derivative of u wrt x when x varies and y remains constant is called the partial derivative of u wrt x and is denoted by $\frac{\partial u}{\partial x}$

$$\frac{\partial^2 u}{\partial x^2} = \frac{\partial}{\partial x}\left(\frac{\partial u}{\partial x}\right), \quad \frac{\partial^2 u}{\partial x \partial y} = \frac{\partial}{\partial x}\left(\frac{\partial u}{\partial y}\right).$$

Total Differential Co-efficient

If u be a continuous function of x and y and if x and y receive small increments Δx and Δy, u will receive, in turn, a small increment Δu. This Δu is called total increment of u.

$\Delta u = f(x + \Delta x, y + \Delta y) - f(x, y)$

In the differential form, this can be written as

$$du = \frac{\partial u}{\partial x}dx + \frac{\partial u}{\partial y}dy.$$

du is called the total differential of u. If $u = f(x, y, z)$ then

$$\frac{du}{dt} = \frac{\partial u}{\partial x}\cdot\frac{dx}{dt} + \frac{\partial u}{\partial y}\cdot\frac{dy}{dt} + \cdot\frac{\partial u}{\partial z}\cdot\frac{dz}{dt}$$

Implicit Function

If the relation between x and y be given in the form $f(x, y) = c$ where c is a constant, then the total differential co-efficient wrt x is zero.

Homogeneous Functions

Let us consider the function $f(x, y) = a_0x^n + a_1x^{n-1}y + a_2x^{n-2}y^2 + \cdots + a_ny^n$. In this expression the sum of the indices of the variable x and y in each term is n. Such an expression is called a homogeneous function of degree n.

Euler's Theorem

If $f(x, y)$ is a homogeneous function of degree n, then $x\frac{\partial f}{\partial x} + y\frac{\partial f}{\partial y} = nf.$

This is known as Euler's theorem on homogeneous function.

Maxima and Minima for Function of Two Variables

A function $f(x, y)$ is said to have a local maximum at a point (a, b), if $f(a + h, b + k) \le f(a, b)$ for all small values of h and k, i.e., $f(x, y)$ has a local maximum at (a, b), if $f(a, b)$ has a highest value in a neighbourhood of (a, b).

Similarly, $f(x, y)$ is said to have a local minimum at a point (a, b), if $f(x, y)$ has least value at (a, b) in a neighbourhood of (a, b).

Procedure to Obtain Maxima and Minima

Let $f(x, y)$ be a function of two variables for which we need to find maxima and minima.

1. Find $f_x = \frac{\partial f}{\partial x}$ and $f_y = \frac{\partial f}{\partial y}$

2. Take $f_x = 0$ and $f_y = 0$ and solve them as simultaneous equations to get pairs of values for x and y, which are called stationary points.

3. Find $r = f_{xx} = \frac{\partial^2 f}{\partial x^2}$, $\quad s = f_{xy} = \frac{\partial^2 f}{\partial x \partial y}$ and

$t = f_{yy} = \frac{\partial^2 f}{\partial y^2}$ and find $rt - s^2$.

4. At a stationary point, say (a, b)

(a) If $rt - s^2 > 0$, then (a, b) is called an extreme point of $f(x, y)$ at which $f(x, y)$ has either maximum or minimum which can be found as follows.

Case 1: If $r < 0$, then $f(x, y)$ has a local maximum at $a, b)$

Case 2: If $r > 0$, then $f(x, y)$ has a local minimum at (a, b).

(b) If $rt - s^2 < 0$, then (a, b) is called as saddle point of $f(x, y)$ where $f(x, y)$ has neither maximum nor minimum at (a, b).

Example 8

Find the stationary points of the function $f(x, y) = x^2y + 3xy - 7$ and classify them into extreme and saddle points.

Solution

Given $f(x, y) = x^2y + 3xy - 7$

$\therefore f_x = \frac{\partial f}{\partial x} = 2xy + 3y$ and $f_y = \frac{\partial f}{\partial y} = x^2 + 3x$

Now $f_x = 0 \Rightarrow 2xy + 3y = 0$ and $f_y = 0$

$\Rightarrow x^2 + 3x = 0$

$\Rightarrow \quad y = 0$ and $x = \frac{-3}{2}$; $x(x + 3)x = 0$ and $x = -3$

But for $x = \frac{3}{2}$, $f_y \ne 0$

$\therefore$ The stationary points of $f(x, y)$ are $(0, 0)$ and $(-3, 0)$

Now $r = f_{xx} = 2y$; $s = f_{xy} = 2x + 3$ and $t = f_{yy} = 0$

And $rt - s^2 = 2y \times 0 - (2x + 3)^2 = -(2x + 3)^2$

$\therefore rt - s^2 < 0$ at $(0, 0)$ as well as $(-3, 0)$

Hence the two stationary points $(0, 0)$ and $(-3, 0)$ are saddle points where $f(x, y)$ has neither maximum nor minimum.

Example 9

Find the maximum value of the function $f(x, y, z) = z - 2x^2 - 3y^2$ where $3xy - z + 7 = 0$.

Solution

Given $f(x, y, z) = z - 2x^2 - 3y^2$ (1)

Where $3xy - z + 7 = 0$ (2)

$\Rightarrow z = 3xy + 7$ (3)

Substituting the value of z in (1), we have $f = 3xy + 7 - 2x^2 - 3y^2$

$$\therefore f_x = \frac{\partial f}{\partial x} = 3y - 4x \text{ and } f_y = \frac{\partial f}{\partial y} = 3x - 6y$$

$f_x = 0 \Rightarrow 3y - 4x = 0$ and $f_y = 0 \Rightarrow 3x - 6y = 0$

$f_x = 0$ and $f_y = 0$ only when $x = 0$ and $y = 0$

$\therefore$ The stationary point is (0, 0)

Now $r = f_{xx} = \dfrac{\partial^2 f}{\partial x^2} = -4;\ s = f_{xy} = \dfrac{\partial^2 f}{\partial x \partial y} = 3$ and

$t = f_{yy} = \dfrac{\partial^2 f}{\partial y^2} = -6$

$\therefore rt - s^2 = (-4)(-6) - 3^2 = 24 - 9 = 15 > 0$ and $r = -4 < 0$

$\therefore f$ has a maximum value at (0, 0)

For $x = 0, y = 0$, from (3), $z = 3 \times 0 \times 0 + 7 \Rightarrow z = 7$

$\therefore$ The maximum value exists for $f(x, y, z)$ at (0, 0, 7) and that maximum value is $f(x, y, z)_{at\ (0,0,7)} = 7 - 2 \times 0^2 - 3 \times 0^2 = 7$.

Indefinite Integrals

If $f(x)$ and $g(x)$ are two functions of x such that $g'(x) = f(x)$, then the integral of $f(x)$ is $g(x)$. Further, $g(x)$ is called the antiderivative of $f(x)$.

The process of computing an integral of a function is called Integration and the function to be integrated is called integrand.

An integral of a function is not unique. If $g(x)$ is any one integral of $f(x)$, then $g(x) + c$ is also its integral, where C is any constant termed as constant of integration.

Some Standard Formulae

1. $\int x^n dx = \dfrac{x^{n+1}}{n+1} + c\ (n \neq -1)$
2. $\int (ax+b)^n dx = \dfrac{(ax+b)^{n+1}}{(n+1)a} + c\ (n \neq -1)$
3. $\int \dfrac{1}{x} dx = \log x + c$
4. $\int \dfrac{1}{ax+b} dx = \dfrac{\log(ax+b)}{a} + c$
5. $\int a^x dx = \dfrac{a^x}{\log a} + c$
6. $\int e^x dx = e^x + c$
7. $\int \sin x\, dx = -\cos x + c$
8. $\int \cos x\, dx = \sin x + c$
9. $\int \sec^2 x\, dx = \tan x + c$
10. $\int \operatorname{cosec}^2 x\, dx = -\cot x + c$
11. $\int \sec x \tan x\, dx = \sec x + c$
12. $\int \operatorname{cosec} x \cot x\, dx = \operatorname{cosec} x + c$
13. $\int \tan x\, dx = \log(\sec x) + c$
14. $\int \cot x\, dx = \log(\sin x) + c$
15. $\int \sec x\, dx = \log(\sec x + \tan x) + c$

    $= \log\tan\left[\dfrac{\pi}{4} + \dfrac{x}{2}\right] + c$
16. $\int \operatorname{cosec} x\, dx = \log(\operatorname{cosec} x + \cot x) + c$

    $= \log\tan\dfrac{x}{2} + c$
17. $\int \dfrac{1}{\sqrt{1-x^2}} dx = \sin^{-1} x + c$ or $-\cos^{-1} x + c$
18. $\int \dfrac{1}{1+x^2} dx = \tan^{-1} x + c$ or $-\cot^{-1} x + c$
19. $\int \dfrac{1}{x\sqrt{x^2-1}} dx = \sec^{-1} x + c$ or $-\operatorname{cosec}^{-1} x + c$
20. $\int \sinh x\, dx = \cosh x + c$
21. $\int \cosh x\, dx = \sinh x + c$
22. $\int \operatorname{sech}^2 x\, dx = \tanh x + c$
23. $\int \operatorname{cosech}^2 x\, dx = -\coth x + c$
24. $\int \operatorname{sech} x \tanh x\, dx = -\operatorname{sech} x + c$
25. $\int \operatorname{sech} x \coth x\, dx = -\operatorname{cosech} x + c$
26. $\int K f(x) dx = K \int f(x) dx + c$
27. $\int (f(x) \pm g(x))\, dx = \int f(x)\, dx \pm \int g(x)\, dx + c$
28. $\int \dfrac{f'(x)}{f(x)} dx = \log[f(x)] + c$
29. $\int f(x)^n \cdot f'(x) dx = \dfrac{[f(x)]^{n+1}}{n+1} + c$

30. $\int \frac{dx}{\sqrt{a^2-x^2}} = \sin^{-1}\frac{x}{a}+c$

31. $\int \frac{dx}{\sqrt{a^2+x^2}} = \sinh^{-1}\frac{x}{a}+c$ or

$\log|x+\sqrt{a^2+x^2}|+c$

32. $\int \frac{dx}{\sqrt{x^2-a^2}} = \cosh^{-1}\frac{x}{a}+c$ or

$\log|x+\sqrt{x^2+a^2}|+c$

33. $\int \frac{1}{x^2+a^2}dx = \frac{1}{a}\tan^{-1}\left(\frac{x}{a}\right)+c$

34. $\int \frac{1}{x^2-a^2}dx = \frac{1}{2a}\log\left|\frac{x-a}{x+a}\right|+c$

35. $\int \frac{1}{a^2-x^2}dx = \frac{1}{2a}\log\left|\frac{a+x}{a-x}\right|+c$

36. $\int \sqrt{a^2-x^2}\,dx = \frac{x\sqrt{a^2+x^2}}{2}+\frac{a^2}{2}\sin^{-1}\frac{x}{a}+c$

37. $\int \sqrt{a^2+x^2}\,dx = \frac{x\sqrt{a^2-x^2}}{2}+\frac{a^2}{2}\sin h^{-1}\frac{x}{a}+c$

38. $\int \sqrt{x^2-a^2}\,dx = \frac{x\sqrt{x^2-a^2}}{2}-\frac{a^2}{2}\cos h^{-1}\frac{x}{a}+c$

39. $\int \log x\,dx = x(\log x-1) = x\log\left(\frac{x}{e}\right)+c$

40. $\int e^x[f(x)+f'(x)]\,dx = e^x f(x)+c$

Definite Integrals

The difference in the values of an integral of a function $f(x)$ for two assigned values say a, b of the independent variable x, is called the Definite Integral of $f(x)$ over the interval $[a, b]$ and is denoted by $\int_a^b f(x)dx$.

The number 'a' is called the lower limit and the number 'b' is the upper limit of integration.

Fundamental Theorem of Integral Calculus

If $f(x)$ is a function of x continuous in $[a, b]$, then $\int_a^b f(x)dx = g(b)-g(a)$ where $g(x)$ is a function such that $\frac{d}{dx}g(x) = f(x)$.

Properties of definite integrals

1. If $f(x)$ is a continuous function of x over $[a, b]$, and c belongs to $[a,b]$, then $\int_a^b f(x)dx = \int_a^c f(x)dx + \int_c^b f(x)dx$.
2. If $f(x)$ is continuous function of x over $[a, b]$, then $\int_a^b Kf(x)dx = K\int_a^b f(x)dx$.
3. If $f(x)$ is continuous function of x over $[a, b]$, then $\int_b^a f(x)dx = -\int_a^b f(x)dx$.
4. If $f(x)$ is continuous in some neighbourhood of a, then $\int_a^a f(x)dx = 0$.
5. If $f(x)$ and $g(x)$ are continuous in $[a, b]$, then $\int_a^b [f(x)+g(x)]dx = \int_a^b f(x)dx + \int_a^b g(x)dx$.
6. $\int_a^b f(x)dx = \int_a^b f(z)dz = \int_a^b f(t)dt$
7. $\int_0^a f(x)dx = \int_0^a f(a-x)dx$
8. $\int_{-a}^a f(x) = 0$, if $f(x)$ is odd
9. $\int_{-a}^a f(x)dx = 2\int_0^a f(x)dx$ if $f(x)$ is even
10. $\int_0^{2a} f(x)dx = 2\int_0^a f(x)dx$, if $f(2a-x) = f(x)$

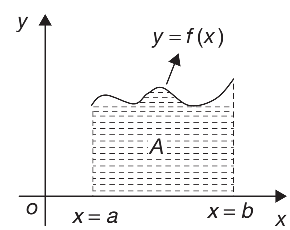
    $= 0$ if $f(2a-x) = -f(x)$
11. $\int_0^{na} f(x)dx = n\int_0^a f(x)dx$, if $f(a+x) = f(x)$

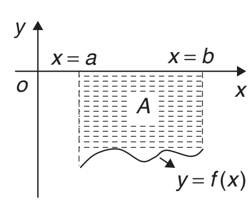
Applications of Integration

Area as a Definite Integral

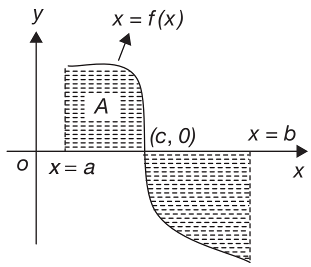
1. The area enclosed by a curve $y = f(x)$, the lines $x = a$ and $x = b$ and the x-axis is given by:

$$A = \int_a^b |f(x)|dx = \begin{cases} \int_a^b f(x)dx, & \text{if } f(x) \geq 0,\ a \leq x \leq b \\ -\int_a^b f(x)dx, & \text{if } f(x) \leq 0,\ a \leq x \leq b \end{cases}$$

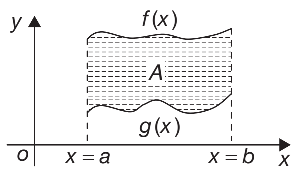


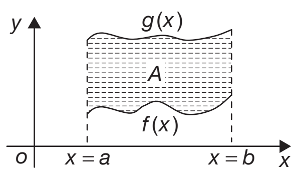


2. Similarly, the area enclosed by the curve $x = g(y)$, the lines $y = c$ and $y = d$ and the y-axis is $A = \int_c^d |g(y)|dy$
3. When $f(x) \geq 0$ for $a \leq x \leq c$ and $f(x) \leq 0$ for $c \leq x \leq b$, then the area enclosed by the curve $y = f(x)$, the lines $x = a$ and $x = b$ and the x-axis is $A = \int_a^c f(x)\,dx - \int_c^b f(x)\,dx$



4. The area enclosed by the curves $y = f(x)$ and $y = g(x)$ and the lines $x = a$ and $x = b$ is given by,





$$A = \int_a^b |f(x) - g(x)|dx = \begin{cases} \int_a^b (f(x) - g(x))dx, \ \text{if } f(x) \geq g(x), \\ \quad a \leq x \leq b \\ \int_a^b (g(x) - f(x))dx, \ \text{if } f(x) \leq g(x); \\ \quad a \leq x \leq b \end{cases}$$

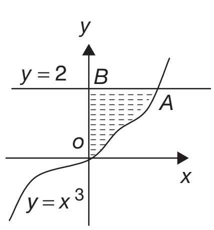
Example 10

Find the area enclosed by the curve $y = x^3$, the line $y = 2$ and the y-axis in first quadrant?

Solution

The area bounded by $y = x^3$, $y = 2$ and the y-axis is the area OAB as shown in the figure.

So, the region OAB is bounded by the curve $x = y^{\frac{1}{3}}$, the lines $y = 0$ and $y = 2$ and the y-axis and $x = y^{\frac{1}{3}} \geq 0,\ y \in [0,\ 2]$



$\therefore$ The required area

$$= \left[\int_{y=0}^{2} y^{\frac{1}{3}} dy = \frac{3}{4} y^{\frac{4}{3}} \right]_0^2$$

$$= \frac{3}{4} \times 2^{\frac{4}{3}}$$

$$= \frac{3}{2^{\frac{2}{3}}}$$

$$= \frac{3}{\sqrt[3]{4}}$$

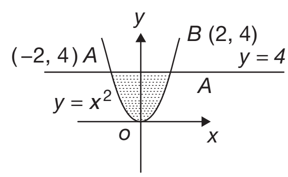
Example 11

Find the area enclosed by the curve $y = x^2$ and line $y = 4$?

Solution

The area enclosed by the curve $y = x^2$ and the line $y = 4$ is the region OAB.

$\therefore$ The region OAB is bounded by line $y = 4$ and the curve $y = x^2$ from $x = -2$ to $x = 2$ and $4 \geq x^2$ for all $x \in [-2, 2]$



$\therefore$ The required area $= \int_{x=-2}^{2} (4 - x^2)\,dx$

$$= 2\int_0^2 (4 - x^2)dx \ (\because \quad 4 - x^2 \text{as even})$$

$$= 2\left[4x - \frac{x^3}{3}\right]_0^2 = \frac{32}{3}$$

Rectification

The process of determining the length of arcs of plane curves is called Rectification. The length of the arc can be calculated by any one of the methods given below.

Cartesian Equations Let $y = f(x)$ be a function of x. The length of arc between the points with x-coordinates 'a' and 'b' is given by $S = \int_a^b \sqrt{1 + \left(\frac{dy}{dx}\right)^2}\, dx$, provided $\frac{dy}{dx}$ is continuous on $[a, b]$.

NOTE

If the equation of the curve is given in the form $x = f(y)$, then the length of the arc between the points with y-coordinates 'c' and 'd' is given by

$$S = \int_c^d \sqrt{1 + \left(\frac{dx}{dy}\right)^2}\ dy \text{ provided } \frac{dx}{dy} \text{ is continuous on } [c, d]$$

Parametric Equations Let $x = f(t)$ and $y = g(t)$ be parametric functions of 't'.The length of the arc between the points $\{f(t_1), g(t_1)\}$ and $\{f(t_2), g(t_2)\}$ is given by

$\int_{t_1}^{t_2} \sqrt{\left[\left(\frac{dx}{dt}\right)^2 + \left(\frac{dy}{dt}\right)^2\right]}\, dt$ provided $\frac{dx}{dt}$ and $\frac{dy}{dt}$ are both continuous on $[t_1, t_2]$.

Polar Equations Let $r = f(\theta)$ be a function of θ, the length of the arc between the points $\{f(\theta_1), \theta_1\}$ and $\{f(\theta_2), \theta_2\}$ is given by $S = \int_{\theta_1}^{\theta_2} \sqrt{r^2 + \left(\frac{dr}{d\theta}\right)^2}\, d\theta$ provided $\frac{dr}{d\theta}$ is continuous along the arc.

If the equation of the curve is given in the form $\theta = f(r)$, then the length of the arc between the points $(r_1, f(r_1))$, $(r_2, f(r_2))$ is given by

$S = \int_{r_1}^{r_2} \sqrt{1 + r^2\left(\frac{d\theta}{dr}\right)^2}\, dr$ provided $\frac{d\theta}{dr}$ is continuous along the arc.

Theorems on Integration

1. If f is a continuous function on $[a, b]$ then there exists $c \in (a, b)$ such that $\int_a^b f(x)\,dx = f(c)(b-a)$
2. If $f, g \in R\,[a, b]$ and g keeps the same sign on $[a, b]$ then there exists $\mu \in R$ lying between the infimum and the suprimum of f such that $\int_a^b f(x)g(x) = \mu \int_a^b g(x)dx$

NOTE

This is called the first mean value theorem.

3. If $f, g \in R\,[a, b]$, g is positive and decreasing on $[a, b]$ Then there exists $\mu \in [a, b]$ such that

$$\int_a^b f(x)g(x)\,dx = g(a)\int_a^\mu f(x)dx$$

NOTE

This is known as Bonnet mean value theorem.

4. If $f, g \in R\,[a, b]$ and is monotonic on $[a, b]$ then there exists $\mu \in (a, b)$ such that $\int_a^b f(x)g(x)\,dx = g(x)\int_a^\mu f(x)\,dx + g(x)\int_\mu^b f(x)\,dx$

NOTE

This is known as second mean value theorem or weierstrars theorem.

Example 12

Prove that these exists $\mu \in \left(0, \frac{\pi}{2}\right)$ such that

$$\int_0^{\frac{\pi}{2}} x\cos x\,dx = \mu$$

Solution

Take $f(x) = x$ and $g(x) = \cos x$

$\therefore$ f is continuous on $\left[0, \frac{\pi}{2}\right]$ and g is integrable on $\left[0, \frac{\pi}{2}\right]$ also

$$g(x) \geq 0 \text{ in } \left[0, \frac{\pi}{2}\right]$$

$\therefore$ By first mean value theorem,

$$\int_0^{\frac{\pi}{2}} x\cos dx = \mu\int_0^{\pi} \cos x\,dx = \mu$$

$\therefore$ There exists is $\mu \in \left(0, \frac{\pi}{2}\right)$ such that $\int_0^{\frac{\pi}{2}} \cos x\,dx = \mu$

Example 13

Verify second mean value theorem for $f(x) = x^2$ and $g(x) = x^2$ on $[-1, 1]$.

Solution

Given $f(x) = x^2$ and $g(x) = x^2$ on $[-1, 1]$ both f and g are continuous and integrable on $[-1, 1]$ but g is a decreasing function on $[-1, 0]$ and increasing function on $[0, 1]$ $\therefore$ g is not monotonic.

$$\therefore \int_{-1}^1 f(x)g(x)dx = \int_{-1}^1 x^2 \cdot x^2 dx$$

$$= \left[\frac{x^5}{5}\right]_{-1}^1 = \frac{1}{5} + \frac{1}{5} = \frac{2}{5} \quad (1)$$

But by second mean value theorem,

$$\int_a^b f(x)g(x)\,dx = g(a)\int_a^\mu f(x)dx + g(b)\int_\mu^b f(x)\,dx$$

$$\therefore \int_{-1}^1 x^4 dx = g(-1)\int_{-1}^\mu x^2 dx + g(1)\int_\mu^1 x^2 dx$$

$$= \int_{-1}^\mu x^2 dx + \int_\mu^1 x^2 dx = \int x^2 dx = \frac{2}{3} \quad (2)$$

Since (1) and (2) are not equal the mean value theorem does not hold.

Improper Integrals

Consider definite integral $\int_a^b f(x)dx$ (1)

If $f(x)$ is a function defined in a finite interval $[a, b]$ and $f(x)$ is continuous for all x which belongs to $[a, b]$

Then (1) is called proper integral.

If $f(x)$ is violated, at least one of these conditions then the integral is known as improper integral. These improper integrals are classified into three kinds.

Improper Integral of the First Kind In a definite integral if one or both limits of integration are infinite then it is an improper integral of first kind.

1. $\int_a^\infty f(x)dx = \lim_{b\to\infty}\int_a^b f(x)dx.$

   (Singularity at upper limit)

2. $\int_{-\infty}^b f(x)dx = \lim_{a\to-\infty}\int_a^b f(x)dx.$

3. $\int_{-\infty}^\infty f(x)dx = \lim_{\substack{b\to\infty \\ a\to-\infty}} \int_a^b f(x)dx.$ Or

4. $\int_{-\infty}^{\infty} f(x)dx = \lim_{a\to-\infty}\int_a^0 f(x)dx + \lim_{b\to\infty}\int_0^b f(x)dx.$

Or $= \lim_{r\to\infty}\int_{-r}^{r} f(x)dx.$

Convergent: If the limits of the above integral exists or finite then the integral is said to be converge.

Divergent: If the limits do not exist then they are said to be Divergent.

NOTES

1. Geometrically for $f(x) \ge 0$, the improper integral $\int_a^{\infty} f(x)dx$ denotes the area of an unbounded region lying between the curve $y = f(x)$ the ordinate $x = a$ and x-axis.
2. Let $f(x)$ and $g(x)$ be non-negative functions and $0 \le f(x) \le g(x)$ for $x \ge a$. If $\int_a^{\infty} g(x)dx$ converges then $\int_a^{\infty} f(x)dx$ is also converges and $\int_a^{\infty} f(x)dx \le \int_a^{\infty} g(x)dx.$

   Similarly let $0 \le g(x) \le f(x)$. If $\int_a^{\infty} g(x)dx$ diverges then $\int_a^{\infty} f(x)dx$ also diverges.

   That is the convergent or divergent of an improper integral by comparing it with a simple integral.

Improper Integral of the Second Kind

Consider $$\int_a^b f(x)dx \qquad (1)$$

If both the limits of Eq. (1) are finite and $f(x)$ is undefined or discontinuous at a point in between a and b, then Eq. (1) is known as Improper integral of second kind.

This can be evaluated as follows.

Let $f(x)$ be undefined at a point c which belongs to (a, b) then

$$\int_a^b f(x)dx = \lim_{\epsilon\to 0}\int_a^{c-\epsilon} f(x)dx + \lim_{\epsilon\to 0}\int_{c+\epsilon}^{b} f(x)dx.$$

If these limits exist then it is convergent otherwise it is divergent.

Improper Integral of Third Kind If the limits of the integral are infinite or $f(x)$ may be discontinuous or both then the improper integral is known as third kind.

NOTES

1. $\int_1^{\infty} \frac{1}{x^p}dx$ is convergent when $p > 1$ and it is divergent when $p \le 1$. This result is used in comparison test for testing the convergence or divergence of the integral of first kind.
2. $\int_a^{c} \frac{1}{(x-c)^p}dx$ is convergent for $p < 1$ and is divergent for $p \le 1$. This is used for convergence or divergence of an improper integral of second kind.

Example 14

Examine $\int_1^{\infty} \frac{dx}{x^p}$ for convergence/divergence.

Solution

Consider $\int_1^k \frac{dx}{x^p} = \int_1^k x^{-p}dx = \left[\frac{x^{-p+1}}{-p+1}\right]_1^k$ if $p \ne 1$

And $\Rightarrow$ $[\log x]_1^k$ if $p = 1$

Case 1: If $p = 1$, $\int_1^k \frac{dx}{x} = \log k - \log 1 = \log k \to \infty$ when $k \to \infty$ it does not tend to a finite limit.

$\therefore$ It is divergent.

Case 2: If $p \ne 1 \int_1^k \frac{dx}{x^p} = \frac{1}{1-p}[k^{1-p}]$ it converges

If $p > 1$ and diverges if $p \le 1$.

Multiple integrals

Double Integrals: Integration of $f(x, y)$ over a region R in xy-plane is called a double integral.

$$\iint_R f(x, y)dR = \int_{x=x_1}^{x_2}\int_{y=y_1}^{y_2} f(x, y)dxdy$$

Order of Integration in a Double Integral Order of integration depends on the nature of limits of the variables.

Case 1: If the limits of y are function of x, say $y_1 = f_1(x)$ and $y_2 = f_2(x)$ and the limits of x are constants, say $x_1 = a$ and $x_2 = b$, where a and b are constants, then integrate wrt y first treating x as constant and then integrate wrt x.

$$\text{That is, } \iint_R f(x, y)dR = \int_{x_1=a}^{x_2=b}\left(\int_{y_1=f_1(x)}^{y_2=f_2(x)} f(x, y)dy\right)dx$$

Case 2: If the limits of x are function of y, say $x_1 = g_1(y)$ and $x_2 = g_2(y)$ and the limits of y are constants, say $y_1 = c$ and $y_2 = d$, then integrate wrt x first treating y as constant and then integrate wrt y.

$$\text{That is, } \iint_R f(x, y)dR = \int_{y_1=c}^{y_2=d}\left(\int_{x_1=g_1(y)}^{x_2=g_2(y)} f(x, y)dx\right)dy$$

Case 3: If both the variables x and y have constant limits, then one can follow any order of integration.

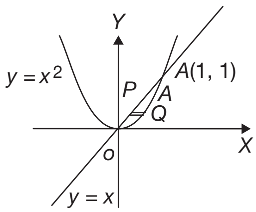
Change of Order of Integration Evaluation of some of the double integrals can be made simple by changing the order of integration. In change of order of integration, we take the limits of the variables for the given region of integration in such a way that the order of integration reverses.

Example 15

Evaluate $\int_{x=0}^{1}\int_{y=x^2}^{x}\frac{x}{y}e^{-\frac{x^2}{y}}\,dy\,dx$

Solution

Let $I = \int_{x=0}^{1}\int_{y=x^2}^{x}\frac{x}{y}e^{-\frac{x^2}{y}}\,dy\,dx$ (1)



Evaluation of this integral can be made simple by changing the order of integration.

From the limits of x and y given, the region of integration is the region bounded by the line $y = x$ and the parabola $y = x^2$ as shown in figure.

Now by changing the order of integration, we first integrate wrt x, along the horizontal strip PQ from $P(x = y)$ to $Q(x = \sqrt{y})$ and then

We integrate wrt y from $0(y = 0)$ to $A(y = 1)$

$$\therefore\ I = \int_{y=0}^{1}\left(\int_{x=y}^{\sqrt{y}}\frac{x}{y}e^{-\frac{x^2}{y}}\,dx\right)dy \qquad (2)$$

Put $\frac{x^2}{y} = t \quad\Rightarrow\quad \frac{2x}{y}dx = dt$

$$\Rightarrow\quad \frac{x}{y}dx = \frac{1}{2}dt$$

$$x = y \quad\Rightarrow\quad t = \frac{y^2}{y} = y \text{ and } x = \sqrt{y} \quad\Rightarrow\quad t\frac{(\sqrt{y})^2}{y} = 1$$

$\therefore$ Eq. (2) Becomes

$$I = \int_{y=0}^{1}\left(\int_{t=y}^{1}e^{-1}\frac{1}{2}dt\right)dy$$

$$= \int_{y=0}^{1}(-e^{-t})\Big]_{t=y}^{1}dy = \int_{y=0}^{1}[-e^{-1}+e^{-y}]dy$$

$$= -ye^{-1} - e^{-y}\Big]_0^1$$

$$= (-e^{-1} - e^{-1}) - (0 - e^{-0})$$

$$= 1 - 2e^{-1} = \frac{e-2}{e}$$

Triple Integrals Integration of a function $f(x, y, z)$ over a 3-dimensional region V is called the triple integral.

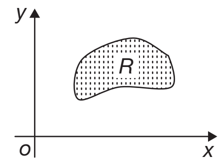
$$\iint_V\int f(x, yx, z)dv = \int_{x=x_1}^{x_2}\int_{y=y_1}^{y_2}\int_{z=z_1}^{z_2} f(x, y, z)dxdydz$$

Like double integrals, in triple integrals also the order of integration depends on the nature of the limits of the variables.

Applications of Double and Triple Integrals

1. Area of the region R in xy-plane is given by

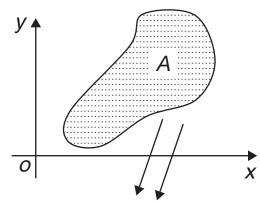
Area of $R = \int_R\int dxdy$



2. Volume of the solid of revolution:

(a) The volume of the solid of revolution obtained by revolving the area A about x-axis is

$$\text{Volume} = V = \int_A\int 2\pi y\,dx\,dy$$

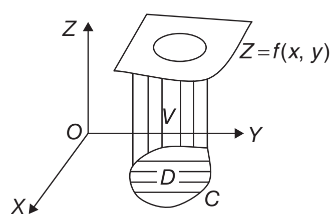


(b) The volume of the solid of revolution obtained by revolving the area A about y-axis is

$$\text{Volume} = V = \iint_A 2\pi x\,dx\,dy$$

(c) Volume under the surface as a double integral: The volume V of the solid under the surface $z = f(x, y)$ and above the xy-plane with the projection of $z = f(x, y)$ on xy plane as its base is

$$\text{Volume} = \int\int_D f(x, y)dx\,dy$$



(d) Volumes as a triple integral: The volume of the 3-dimensional region V is given by $\int_V\iint dx\,dy\,dz$

Example 16

Find the volume under the surface $x + 2y + z = 4$ and above the circle $x^2 + y^2 = 4$ in the xy-plane.

Solution

Given surface is $x + 2y + z = 4$

$\Rightarrow z = 4 - x - 2y$ (1)

Let D be the region bounded by the circle $x^2 + y^2 = 4$ in xy-plane

$\therefore$ In D, y varies from $y = -\sqrt{4-x^2}$ to $y = \sqrt{4-x^2}$ and x varies from $x = -2$ to $x = +2$.

$\therefore$ The volume under the surface $x + 2y + z = 4$ and above the circle $x^2 + y^2 = 4$ in xy-plane is

$$V = \int_D \int z dxdy = \int_{x=-2}^{2} \int_{y=-2\sqrt{4-x^2}}^{\sqrt{4-x^2}} (4-x-2y)dxdy \qquad (2)$$

Evaluation of this double integral can be made simple by changing it into polar coordinates.

In polar coordinates, $x = r\cos\theta$, $y = r\sin\theta$ and

$$J = \frac{\partial(x, y)}{\partial(r, \theta)} = \begin{vmatrix} \frac{\partial x}{\partial r} & \frac{\partial x}{\partial \theta} \\ \frac{\partial y}{\partial r} & \frac{\partial y}{\partial \theta} \end{vmatrix} = \begin{vmatrix} \cos\theta & -r\sin\theta \\ \sin\theta & r\cos\theta \end{vmatrix}$$

$\therefore$ $J = r$. Also, in the circle $x^2 + y^2 = 4$, r varies from $r = 0$ to $r = 2$ and θ varies from $\theta = 0$ to $\theta = 2\pi$

$\therefore$ From (2),

$$V = \iint_D (4-x-2y)dx\,dy$$

$$= \int_{\theta=0}^{2\pi} \int_{r=0}^{2} (4 - r\cos\theta - 2r\sin\theta)\,|J|\,drd\theta$$

$$= \int_{\theta=0}^{2\pi} \int_{r=0}^{2} (4 - r\cos\theta - 2r\sin\theta) rdr\,d\theta$$

$$= \int_{\theta=0}^{2\pi} \left(\int_{r=0}^{2} (4r - r^2\cos\theta - 2r^2\sin\theta)dr \right) d\theta$$

$$= \int_{\theta=0}^{2\pi} \left[2r^2 - \frac{r^3}{3}\cos\theta - \frac{2r^3}{3}\sin\theta \right]_{r=0}^{2} d\theta$$

$$= \int_{\theta=0}^{2\pi} \left[8 - \frac{8}{3}\cos\theta - \frac{16}{3}\sin\theta \right] d\theta$$

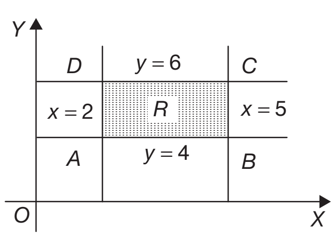
$$= 8\theta - \frac{8}{3}\sin\theta + \frac{16}{3}\cos\theta \Big]_{\theta=0}^{2\pi} = 16\pi$$

Example 17

Find the volume generated by the revolution of the rectangle formed by the lines $x = 2$, $x = 5$, $y = 4$ and $y = 6$ about x-axis.

Solution

The volume of the solid generated by revolving the rectangle $ABCD$ about x-axis $= V = \int_R \int 2\pi\, ydxdy$



$$= \int_{x=2}^{5} \int_{y=4}^{6} 2\pi\, ydxdy = \left(\int_{x=2}^{5} dx \right) \left(\int_{y=4}^{6} 2\pi\, y\, dy \right)$$

$$= \left(x \right]_{x=2}^{5} \left(\pi y^2 \right]_{y=4}^{6} = 3 \times 20\pi = 60\pi$$

Change of Variables Evaluation of some of the double (or) triple integrals can be made simple by changing the variables.

1. **In a double integral:** Let a double integral $\int_{R_{xy}} \iint f(x, y)dxdy$ in x and y is to be converted into the variables u and ϑ where $x = \phi(u, \vartheta)$ and $y = \Psi(u, \vartheta)$. Then

$$\int_{R_{xy}} \int f(x, y)dxdy = \int_{R^1_{u\vartheta}} \int f(\phi(u, \vartheta), \psi(u, \vartheta))\,|J|\,dud\vartheta$$

Where $J = \frac{\partial(x, y)}{\partial(u, \vartheta)} = \begin{vmatrix} \frac{\partial x}{\partial u} & \frac{\partial x}{\partial \vartheta} \\ \frac{\partial y}{\partial u} & \frac{\partial y}{\partial \vartheta} \end{vmatrix}$

Is the Jacobian of x and y wrt u and ϑ and $R'_{u\vartheta}$ is the region of integration in u, ϑ-plane corresponding to R_{xy} in xy-plane.

2. **In a triple integral:** Let a triple integral $\int_{R_{xyz}} \iint f(x, y, z)\, dxdydz$ in x, y and z is to be converted into the variables u, ϑ and w, where $x = \phi(u, \vartheta, \omega)$, $y = \Psi(u, \vartheta, \omega)$ and $z = h(u, \vartheta, \omega)$

Then $\int_{R_{xyz}} \iint f(x, y, z)dxdydz = \int_{R^1_{u\vartheta\omega}} \iint f(\phi(u, \vartheta, \omega),$

$$\psi(u, \vartheta, \omega),\ h(u, \vartheta, \omega))\,|J|\,dud\vartheta d\omega$$

where $J = \frac{\partial(x, y, z)}{\partial(u, \vartheta, \omega)} = \begin{vmatrix} \frac{\partial x}{\partial u} & \frac{\partial x}{\partial \vartheta} & \frac{\partial x}{\partial \omega} \\ \frac{\partial y}{\partial u} & \frac{\partial y}{\partial \vartheta} & \frac{\partial y}{\partial \omega} \\ \frac{\partial z}{\partial u} & \frac{\partial z}{\partial \vartheta} & \frac{\partial z}{\partial \omega} \end{vmatrix}$ is the jacobian of x, y and z wrt u, ϑ and ω and $R'_{u\vartheta\omega}$ is the region of integration in u, ϑ, ω, coordinate system corresponding to the region R_{xyz} in xyz co-ordinate system.

Vector Calculus

If $\bar{r}$ is the position vector of a point P, having co-ordinates (x, y, z), then $\bar{r} = x\bar{i} + y\bar{j} + z\bar{k}$, where $\bar{i}, \bar{j}, \bar{k}$ are unit vectors along OX, OY, OZ respectively, and

$$|\bar{r}| = |x\bar{i} + y\bar{j} + z\bar{k}| = \sqrt{x^2 + y^2 + z^2}.$$

Given any vector $\bar{v} = a\bar{i} + b\bar{j} + c\bar{k}$ its direction ratios are a, b, c and its direction cosines are given by:

$$l = \frac{a}{|\bar{v}|},\ m = \frac{b}{|\bar{v}|},\ n = \frac{c}{|\bar{v}|} \text{ and } l^2 + m^2 + n^2 = 1$$

Linear Combinations

A vector $\bar{r}$ is said to be a linear combination of the vectors $\bar{a}, \bar{b}, \bar{c}\ldots$ etc. if there exist scalars $x, y, z, \ldots$ such that

$\bar{r} = x\bar{a} + y\bar{b} + z\bar{c} + \cdots$

Test of Collinearity

Three points A, B, C with position vectors $\bar{a}, \bar{b}, \bar{c}$ respectively are collinear if *f* there exist scalars x, y, z not all zero such that $x\bar{a} + y\bar{b} + z\bar{c} = 0$, where $x + y + z = 0$

Test of Coplanarity

Four points A, B, C and D with position vectors $\bar{a}, \bar{b}, \bar{c}, \bar{d}$ are coplanar if there exist scalars x, y, z and u (not all zero) such that $x\bar{a} + y\bar{b} + z\bar{c} + u\bar{d} = 0$, where $x + y + z + u = 0$

Linear Dependence and Independence

A system of vectors $\bar{a}, \bar{b}, \bar{c}\ldots$ is said to be linearly independent (L.I.) if $x\bar{a} + y\bar{b} + z\bar{c} + \cdots = 0$

$\Rightarrow x = y = z \cdots = 0$

If $\bar{a}, \bar{b}, \bar{c}\ldots$ is a system of vectors which is not LI, then they are linearly dependent (L.D) and for such system of vectors there exist scalars $x, y, z \cdots$ (not all zeros) such that

$x\bar{a} + y\bar{b} + z\bar{c} + \cdots = 0$

NOTE

Every non-zero vector is LI.
Every pair of non-zero non-collinear vectors is LI.
Every pair of collinear vectors is LD.
Three non-coplanar vectors are LI.
Three coplanar vectors are LD.

Multiplication of Vectors

Scalar or Dot Product If $\bar{a}$ and $\bar{b}$ are two non-zero vectors and θ is the angle between them $(0 \le \theta \le \pi)$, then their dot or scalar product is given by $\bar{a}\cdot\bar{b} = |\bar{a}||\bar{b}|\cos\theta \cdot \bar{a}\cdot\bar{b}$ is a scalar.

NOTES

1. If one or both of $\bar{a}, \bar{b}$, are $\bar{0}$, then $\bar{a}\cdot\bar{b} = 0$
2. $\bar{a}\cdot\bar{b} = |\bar{a}|\cdot$(scalar component of $\bar{b}$ along $\bar{a}$)
   $= |\bar{b}|$ (scalar component of $\bar{a}$ along $\bar{b}$),
3. $\bar{a}\cdot\bar{b} = \bar{b}\cdot\bar{a}$
4. If $\bar{a}, \bar{b}, \bar{c}$ are any three vectors, then $\bar{a}\cdot(\bar{b}+\bar{c}) = \bar{a}\cdot\bar{b} + \bar{a}\cdot\bar{c}$
5. Two non-zero vectors $\bar{a}$ and $\bar{b}$ are perpendicular if $\bar{a}\cdot\bar{b} = 0$
6. $\bar{i}\cdot\bar{j} = \bar{j}\cdot\bar{i} = \bar{j}\cdot\bar{k} = \bar{k}\cdot\bar{j} = \bar{j}\cdot\bar{k} = \bar{k}\cdot\bar{i} = 0$
7. $\bar{a}\cdot\bar{b}$ is positive, negative or zero according as $0 \le \theta < 90°$, $90° < \theta \le 180°$ or $\theta = 90°$
8. The square of a vector is the square of its modulus, i.e., $(\bar{a})^2 = |\bar{a}|^2$
   $\bar{i}^2 = \bar{k}^2 = \bar{j}^2 = 1$
9. m is a scalar, then
   $m(\bar{a}\cdot\bar{b}) = (m\bar{a})\cdot\bar{b} = \bar{a}\cdot(m\bar{b})$
10. If $\bar{a} = a_1\bar{i} + a_2\bar{j} + a_3\bar{k}$ and $\bar{b} = b_1\bar{i} + b_2\bar{j} + b_3\bar{k}$, then $\bar{a}\cdot\bar{b} = a_1b_1 + a_2b_2 + a_3b_3$ and angle between the vectors is
    $$\cos\theta = \frac{\bar{a}\cdot\bar{b}}{|\bar{a}||b|} = \frac{a_1\cdot b_1 + a_2\cdot b_2 + a_3\cdot b_3}{\sqrt{a_1^2 + a_2^2 + a_3^3}\cdot\sqrt{b_1^2 + b_2^2 + b_3^2}}$$
11. Work done $= \bar{F}\cdot\bar{S}$

Vector or Cross Product

$\bar{a}\times\bar{b} = |\bar{a}||\bar{b}|\sin\theta\cdot\hat{n}$ where θ $(0 \le \theta \le 180)$ is the angle between $\bar{a}$ and $\bar{b}$, and $\hat{n}$ is a unit vector such that it is perpendicular to both $\bar{a}$ and $\bar{b}$.

$\bar{a}, \bar{b}$ and $\hat{n}$ (in the same order) are in the right handed orientation (i.e., the rotation of a right handed screw from $\bar{a}$ to $\bar{b}$ advances it in the direction of $\hat{n}$).

NOTES

1. $\bar{a}\times\bar{b} \ne \bar{b}\times\bar{a}$ but $\bar{a}\times\bar{b} = -\bar{b}\times\bar{a}$
2. If $\bar{a}$ and $\bar{b}$ are parallel, then $\bar{a}\times\bar{b} = \bar{0}$
3. $\bar{i}\times\bar{j} = \bar{k}, \bar{j}\times\bar{k} = \bar{i}, \bar{k}\times\bar{i} = \bar{j}$ and
   $\bar{j}\times\bar{i} = -\bar{k}, \bar{k}\times\bar{j} = -\bar{i}, \bar{i}\times\bar{k} = -\bar{j}$
   $\bar{i}\times\bar{i} = \bar{j}\times\bar{j} = \bar{k}\times\bar{k} = 0$? [In particular $\bar{a}\times\bar{a} = 0$]
4. The angle between two vectors: $\sin\theta = \dfrac{|\bar{a}\times\bar{b}|}{|\bar{a}||b|}$
5. A unit vector perpendicular to the plane of $\bar{a}$ and $\bar{b}$ is given by $\hat{n}$ where $\hat{n} = \dfrac{\bar{a}\times\bar{b}}{|\bar{a}\times\bar{b}|}$
6. Area of parallelogram whose adjacent sides are $\bar{a}$ and $\bar{b}$ is given by $|\bar{a}\times\bar{b}|$
7. When the diagonals are given, the vector area of parallelogram $ABCD$ is $\dfrac{1}{2}(\overline{AB}\times\overline{AC})$
8. The vector area of the triangle $ABC = \dfrac{1}{2}(\overline{AB}\times\overline{AC})$
9. If $\bar{a} = a_1\bar{i} + a_2\bar{j} + a_3\bar{k}$ and $\bar{b} = b_1\bar{i} + b_2\bar{j} + b_3\bar{k}$,
   $$\text{Then } \bar{a}\times\bar{b} = \begin{vmatrix} \bar{i} & \bar{j} & \bar{k} \\ a_1 & a_2 & a_3 \\ b_1 & b_2 & b_3 \end{vmatrix}$$
10. Vector product is distributive with respect to vector addition $\bar{a}\times(\bar{b}+\bar{c}) = \bar{a}\times\bar{b} + \bar{a}\times\bar{c}$

Triple Products

Scalar Triple Product The Scalar triple product of three vectors $\bar{a}$, $\bar{b}$, $\bar{c}$ is $(\bar{a}\times\bar{b})\cdot\bar{c}$ denoted by $[\bar{a}\bar{b}\bar{c}]$

The Scalar triple product of orthonormal right handed vector triad $\bar{i}$, $\bar{j}$, $\bar{k}$ is equal to unity

That is, $[\bar{i}\ \bar{j}\ \bar{k}]=[\bar{j}\ \bar{k}\ \bar{i}]=[\bar{k}\ \bar{i}\ \bar{j}]=1.$

1. The volume of a parallelepiped having $\bar{a}$, $\bar{b}$, $\bar{c}$ as co-terminus edges $=[\bar{a}\bar{b}\bar{c}]$.
2. If three vectors are coplanar then $[\bar{a}\bar{b}\bar{c}]=0$
3. If two of the three vectors are equal, then their scalar triple product is zero, i.e., $[\bar{a}\ \bar{b}\ \bar{c}]=0$
4. If $\bar{a}=a_1\bar{i}+a_2\bar{j}+a_3\bar{k}$, $\bar{b}=b_1\bar{i}+b_2\bar{j}+b_3\bar{k}$,
   $\bar{c}=c_1\bar{i}+c_2\bar{j}+c_3\bar{k}$, then $\lfloor \bar{a}\bar{b}\bar{c}\rfloor=\begin{vmatrix} a_1 & a_2 & a_3 \\ b_1 & b_2 & b_3 \\ c_1 & c_2 & c_3 \end{vmatrix}$
5. The volume of a tetrahedron with co-terminus edges $\bar{a}$, $\bar{b}$, $\bar{c}$ is $\frac{1}{6}[\bar{a}\bar{b}\bar{c}]$ cubic units.
6. $[\bar{a}\bar{b}\bar{c}]=(\bar{a}\times\bar{b})\cdot\bar{c}=\bar{a}\cdot(\bar{b}\times\bar{c})$

Vector Triple Product If $\bar{a}$, $\bar{b}$, $\bar{c}$ are three vectors, then the triple product $\bar{a}\times(\bar{b}\times\bar{c})$ is called the vector triple product.

If $\bar{a}$, $\bar{b}$, $\bar{c}$ are any three vectors, then $\bar{a}\times(\bar{b}\times\bar{c}) =(\bar{a}\cdot\bar{c})\bar{b}-(\bar{a}\cdot\bar{b})\bar{c}$

Vector Variable

A variable of the form $\bar{r}=x\hat{i}+y\hat{j}+z\hat{k}$ is called a vector variable and x, y, z are scalar variables.

Scalar Function If t is a scalar variable on a range $a\le t\le b$ and a function f defined as $f=f(t)$ for $t\in[a, b]$ is called a scalar function of t.

Example: $f(t)=9t^3+4t^2+7$,
$f(t)=\sin t+5\cos t+e^t$, etc.

Vector Function If t is a scalar variable defined on a domain $[a, b]$, and a function $\bar{F}(t)=x(t)\hat{i}+y(t)\hat{j}+z(t)\hat{k}$ is called a vector function of the scalar variable t.

NOTE

t is generally taken as 'time'.

Differentiation If $\bar{F}(t)$ is a continuous single valued vector function of the variable t, then the derivative of $\bar{F}(t)$ is defined as $\frac{d\bar{F}}{dt}=\lim_{\Delta t\to 0}\frac{F(t+\Delta t)-F(t)}{\Delta t}$ where Δt is a small increment in t.

One can also look at second and higher order derivatives in a similar way.

Differentiation Formula

1. The derivative of a constant vector with respect to any scalar variable is 0.
2. $\frac{d}{dt}[\bar{F}(t)\pm\bar{G}(t)]=\frac{d\bar{F}}{dt}\pm\frac{d\bar{G}}{dt}$.
3. $\frac{d}{dt}[s(t)\bar{F}(t)]=s(t)\cdot\frac{d\bar{F}}{dt}+\frac{ds}{dt}\cdot\bar{F}$
4. Chain rule: $\frac{d\bar{F}}{dt}=\frac{d\bar{F}}{du}\times\frac{du}{dt}$, where $\bar{F}=\bar{F}(u)$ and u is a function of t.
5. Dot and cross products:
   $$\frac{d}{dt}(\bar{F}\cdot\bar{G})=\bar{F}\cdot\frac{d\bar{G}}{dt}+\frac{d\bar{F}}{dt}\cdot\bar{G},$$
   $$\frac{d}{dt}(\bar{F}\times\bar{G})=\bar{F}\times\frac{d\bar{G}}{dt}+\frac{d\bar{F}}{dt}\times\bar{G}.$$
6. Partial derivatives: If $\bar{F}$ is vector function dependent on x, y and z, say $\bar{F}=\bar{F}(x, y, z)$, then partial derivative of $\bar{F}$ with respect to x is defined as $\frac{\partial\bar{F}}{\partial x}=\lim_{\Delta x\to 0}\frac{\bar{F}(x+\Delta x, y, z)-\bar{F}(x, y, z)}{\Delta x}$.

Likewise, one can also define $\frac{\partial\bar{F}}{\partial y}$ and $\frac{\partial\bar{F}}{\partial z}$.

It is also possible to define higher order partial derivatives as:

$$\frac{\partial^2\bar{F}}{\partial x^2}=\frac{\partial}{\partial x}\left(\frac{\partial\bar{F}}{\partial x}\right),\ \frac{\partial^2\bar{F}}{\partial y^2}=\frac{\partial}{\partial y}\left(\frac{\partial\bar{F}}{\partial y}\right).$$

$$\frac{\partial^2\bar{F}}{\partial x\partial z}=\frac{\partial}{\partial x}\left(\frac{\partial\bar{F}}{\partial z}\right),\ \text{etc}$$

Differential Vectors

1. If $\bar{G}=\bar{G}(x, y, z)$ then
   $$d\bar{G}=\frac{\partial\bar{G}}{\partial x}dx+\frac{\partial\bar{G}}{\partial y}dy+\frac{\partial\bar{G}}{\partial z}dz$$
2. If $\bar{F}=F_1\hat{i}+F_2\hat{j}+F_3\hat{k}$, then
   $$d\bar{F}=dF_1\hat{i}+dF_2\hat{j}+dF_3\hat{k}$$
3. $d(\bar{F}\cdot\bar{G})=\bar{F}\cdot d\bar{G}+d\bar{F}\cdot\bar{G}$
4. $d(\bar{F}\times\bar{G})=\bar{F}\times d\bar{G}+d\bar{F}\times\bar{G}$

Vector Differential Operators ∇ is to be read as del or nabla

$$\nabla=\hat{i}\frac{\partial}{\partial x}+\hat{j}\frac{\partial}{\partial y}+\hat{k}\frac{\partial}{\partial z}$$

$$\nabla^2=\frac{\partial^2}{\partial x^2}+\frac{\partial^2}{\partial y^2}+\frac{\partial^2}{\partial z^2}\ \text{is called Laplacian.}$$

Gradient of a Scalar Function

If $\phi\,(x, y, z)$ is a scalar function, then $\hat{i}\dfrac{\partial\phi}{\partial x}+\hat{j}\dfrac{\partial\phi}{\partial y}+\hat{k}\dfrac{\partial\phi}{\partial z}$ is known as the gradient of ϕ and is denoted by grad ϕ. One can also write the gradient of ϕ using the ∇ operator as grad

$$\phi=\hat{i}\frac{\partial\phi}{\partial x}+\hat{j}\frac{\partial\phi}{\partial y}+\hat{k}\frac{\partial\phi}{\partial z}=\nabla\phi$$

Now $\nabla\,\phi$ denotes a vector field.

NOTES

1. If ϕ is a constant, then $\nabla\,\phi=\bar{0}$
2. If a vector $\bar{G}(x, y, z)$ is defined at all points in a region we say $\bar{G}$ is a vector field. A vector field is said to be irrotational if $\bar{G}=$ grad ϕ for some scalar function ϕ.
3. Gradient can be used in finding directional derivative. (An example is discussed in worked examples section)
4. $\nabla\,\phi$ also gives the normal to the surface $\phi\,(x, y, z)=C$.
5. If $\nabla^2\phi = 0$, the function is called the harmonic function.
6. The directional derivative of $\phi\,(x, y, z)$ in the direction of a vector $\bar{a}$ is $\nabla\phi\cdot\hat{n}$, where $\hat{n}=\dfrac{\bar{a}}{|\bar{a}|}$.

Divergence of Vector

$\bar{F}(x, y, z)$ be a vector field which is differentiable at each point (x, y, z) in some region of space, i.e., $\bar{F}$ is differentiable vector field. The scalar product of the vector operator ∇ and $\bar{F}$ gives a scalar which is termed as divergence.

$$\nabla\cdot\bar{F}=\hat{i}\cdot\frac{\partial\bar{F}}{\partial x}+\hat{j}\cdot\frac{\partial\bar{F}}{\partial y}+k\cdot\frac{\partial\bar{F}}{\partial z}$$

NOTE

If div $(\bar{F})$ or $\nabla\cdot\bar{F}=0$, then $\bar{F}$ is called 'solenoidal'

Curl of a Vector

Let $\bar{F}(x, y, z)$ is a vector field defined for all (x, y, z) in a certain region of space and is differentiable, i.e., $\bar{F}$ is a differentiable vector field. The cross product of the vector operator ∇ with the vector $\bar{F}$ is termed as curl $\bar{F}$.

$$\text{curl } F=\begin{vmatrix}\hat{i} & \hat{j} & \hat{k}\\ \dfrac{\partial}{\partial x} & \dfrac{\partial}{\partial y} & \dfrac{\partial}{\partial z}\\ F_1 & F_2 & F_3\end{vmatrix};\ \bar{F}=F_1\hat{i}+F_2\hat{j}+F_3\hat{k}$$

NOTE

If curl $\bar{F}=\bar{0}$, then $\bar{F}$ is said to be irrotational.

Standard Results

1. div $(\phi\bar{F})=\phi$ div $\bar{F}+\bar{F}\cdot$grad ϕ or $\nabla\cdot\phi\bar{F}=\phi\,\nabla\cdot\bar{F}+\bar{F}\cdot\nabla\,\phi$
2. curl $(\phi\bar{F})=\nabla\phi\times\bar{F}+\phi$ curl $\bar{F}$
3. div $(\bar{F}\times\bar{G})=\bar{F}\cdot$ curl $\bar{G}-\bar{G}\cdot$ curl $\bar{F}$
4. $\nabla\cdot\nabla\phi=$ div (grad ϕ) or $\nabla\cdot\nabla\phi=\nabla^2\phi$
5. curl (grad ϕ) $=\bar{0}$ or $\nabla\times(\nabla\,\phi)=\bar{0}$, i.e., curl of a gradient equals $\bar{0}$.
6. div (curl $\bar{F}$) $=0$ or $\nabla\cdot(\nabla\times\bar{F})=0$
7. curl (curl $\bar{F}$) $=$ grad (div $\bar{F}$) $-\nabla^2\bar{F}$(or) $\nabla\times(\nabla\times\bar{F})=\nabla(\nabla\cdot\bar{F})-\nabla^2\bar{F}$

Integration

Line Integral

Let $\bar{F}(x, y, z)$ be a vector function defined on a region of space and let C be curve in that region, then the integral $\int_c\bar{F}\cdot d\bar{r}$ is called the line integral.

For Riemann Integration,

$\int_{x=a}^{x=b}fdx$ the limits of integration are along the line segment joining $(a, 0)$, $(b, 0)$, where $a<b$.

Here instead of line, we integrate along the curve C.

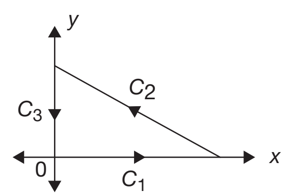
Circulation

The line integral around a closed curve C denoted by $\oint F\cdot dr$ is called circulation of F around C.

Example 18

Evaluate $\int_C\bar{F}\cdot d\hat{r}$, where $\bar{F}=xy\hat{i}+y^2\hat{j}$ along the triangle $x=0$, $y=0$ and $x+y=1$ in the first quadrant.

Solution



$$\int_c F\cdot dr=\int_{C_1}(xydx+y^2dy)+\int_{C_2}(xydx+y^2dy)+\int_{C_3}(xydx+y^2dy)$$

C_1	C_2	C_3
$y=0$	$y=1-x$	$x=0$
$0<x<1$	$1<x<0$	$dx=0$
$dy=0$	$dy=-dx$	$1<y<0$

$$=\int_{x=0}^{1}[x(0)dx+0+\int_{x=1}^{0}x(1-x)dx+(1-x)^2(-dx)+\int_1^0 y^2dy$$

$$=\int_1^0(x-x^2-1-x^2+2x)dx+\int_1^0 y^2dy$$

$$=\int_1^0(-2x^2+3x-1)dx-\int_0^1 y^2dy$$

$$=\left(\frac{2}{3}-\frac{3}{2}+1\right)-\frac{1}{3}=\frac{-1}{6}$$

Surface Integral Let S be a closed surface, then the normal surface integral $\int_s FN\,ds$ is called the flux of F over S.

Cartesian Form Let $F(r) = F_1\hat{i} + F_2\hat{j} + F_3\hat{k}$, where, F_1, F_2, F_3, are continuous and differentiable functions of x, y, z. If $\cos\alpha$, $\cos\beta$ and $\cos\gamma$ be the direction cosines of the unit normal N, then

$$N = \hat{i}\cos\alpha + \hat{j}\cos\beta + \hat{k}\cos\gamma.$$

$$\therefore \int_S F\cdot N\,ds = \int_S (F_1\cos\alpha + F_2\cos\beta + F_3\cos\gamma)ds$$

But then $ds\cos\alpha$, $ds\cos\beta$ and $ds\cos\gamma$ are the projections of ds on yz, zx and xy planes. If dx, dy, dz are the differentials along the areas then

$ds\cos\alpha = dy\,dz$; $ds\cos\beta = dz\,dx$; $ds\cos\gamma = dx\,dy$.

$$\therefore \int_S F\cdot N\,ds = \iint_S (F_1 dy\,dz + F_2 dz\,dx + F_3 dx\,dy)$$

NOTE

If R_1 is the projection of S on xy-plane, then

$$\int_S F\cdot N ds = \int_{R_1}\int F\cdot N\frac{dxdy}{\cos\gamma}$$

$$= \iint_S F\cdot N\cdot\frac{dxdy}{|N\cdot\hat{k}|}(|N\cdot\hat{k}| = \cos\gamma)$$

Equivalently,

$$\iint_S F\cdot N ds = \iint_{R_2} F\cdot N\frac{dydz}{|N\cdot\hat{i}|} = \iint_{R_3} F\cdot N\frac{dzdx}{|N\cdot\hat{j}|}$$

Volume Integral

$$\int_{x_1}^{x^2}\int_{y_1}^{y^2}\int_{z_1}^{z^2} f(x,\ y,\ z)dz\,dy\,dx$$

$$= \boxed{\int_{x_1}^{x_2}\boxed{\int_{y_1}^{y_2}\boxed{\int_{z_1}^{z_2} f(x, y, z)\,dz}\,dy}\,dx}$$

Gauss' Divergence Theorem

If $\bar{F}$ is continuously differentiable vector function in the region bounded by a surface S, then $\iint_S \bar{F}\cdot\bar{N}\,ds = \iiint_V \text{div }\bar{F}dv$ where $\bar{N}$ is the unit normal to the surface.

Green's Theorem If P and Q are scalar point functions, possessing continuous derivatives of the first order, in a region S of the xy plane bounded by a closed curve C then $\int_C Pdx + Qdy = \iint_S\left(\frac{\partial Q}{\partial x} - \frac{\partial P}{\partial y}\right)dxdy.$

Stoke's Theorem If S is an open surface bounded by a closed curve C and $\bar{F}$ is a continuously differentiable vector point function, then $\int_C \bar{F}\cdot d\bar{r} = \int_S \text{curl }\bar{F}\cdot Nds$, where N is unit outward drawn normal at any point on the surface.

Example 19

If $A = x^3\hat{i} + x^2\hat{j} + x\hat{k}$ and $B = -x\hat{i} + x^2\hat{j} + x^3\hat{k}$, then find the values of

(i) $\frac{d}{dx}(A\cdot B)$ and (ii) $\frac{d}{dx}(A\times B)$.

Solution

(i) $$\frac{d}{dx}(A\cdot B) = A\cdot\frac{d}{dx}(B) + B\cdot\frac{d}{dx}(A)$$

$$= (x^3\hat{i} + x^2\hat{j} + x\hat{k})\cdot\frac{d}{dx}(-x\hat{i} + x^2\hat{j} + x^3\hat{k})$$
$$+(-x\hat{i} + x^2\hat{j} + x^3\hat{k})\cdot\frac{d}{dx}(x^3\hat{i} + x^2\hat{j} + x\hat{k})$$
$$= (x^3\hat{i} + x^2\hat{j} + x\hat{k})\cdot(-\hat{i} + 2x\hat{j} + 3x^2\hat{k})$$
$$+(-x\hat{i} + x^2\hat{j} + x^3\hat{k})\cdot(3x^2\hat{i} + 2x\hat{j} + \hat{k})$$
$$= -x^3 + 2x^3 + 3x^3 - 3x^3 + 2x^3 + x^3 = 4x^3.$$

(ii) $$\frac{d}{dx}(A\times B) = A\times\frac{dB}{dx} + \frac{dA}{dx}\times B$$

$$= (x^3\hat{i} + x^2\hat{j} + x\hat{k})\times\frac{d}{dx}(-x\hat{i} + x^2\hat{j} + x^3\hat{k})$$
$$+\frac{d}{dx}(x^3\hat{i} + x^2\hat{j} + x\hat{k})\times(-x\hat{i} + x^2\hat{j} + x^3\hat{k})$$
$$= (x^3\hat{i} + x^2\hat{j} + x\hat{k})\times(-\hat{i} + 2x\hat{j} + 3x^2\hat{k})$$
$$+(3x^2\hat{i} + 2x\hat{j} + \hat{k})\times(-x\hat{i} + x^2\hat{j} + x^3\hat{k})$$
$$= \begin{vmatrix}\hat{i} & \hat{j} & \hat{k}\\ x^3 & x^2 & x\\ -1 & 2x & 3x^2\end{vmatrix} + \begin{vmatrix}\hat{i} & \hat{j} & \hat{k}\\ 3x^2 & 2x & 1\\ -x & x^2 & x^3\end{vmatrix}$$
$$= \hat{i}(5x^4 - 3x^2) - \hat{j}(6x^5 + 2x) + \hat{k}(5x^4 + 3x^2)$$

Example 20

If $f = x^3 - 6xy^2 - 9xyz$ is a scalar function, then find $\frac{\partial^2 f}{\partial x^2}$, $\frac{\partial^2 f}{\partial x\partial y}$.

Solution

$f = x^3 - 6xy^2 - 9xyz$

$$\therefore \frac{\partial f}{\partial x} = 3x^2 - 6y^2 - 9yz$$

$$\therefore \frac{\partial^2 f}{\partial x^2} = 6x - 0 = 6x$$

$$\frac{\partial f}{\partial y} = -12xy - 9xz$$

$$\frac{\partial^2 f}{\partial x\partial y} = \frac{\partial}{\partial x}\left(\frac{\partial f}{\partial y}\right) = \frac{\partial}{\partial x}(-12xy - 9xz)$$
$$= -12y - 9z.$$

Example 21

If $\phi \equiv x^3 + y^3 + z^3 - 3xyz$, then find the value of grad ϕ at (2, 1, 1).

Solution

$$\text{Grad } \phi = \hat{i}\frac{\partial \phi}{\partial x} + \hat{j}\frac{\partial \phi}{\partial y} + \hat{k}\frac{\partial \phi}{\partial z} \quad \text{(by definition)}$$

$$= \hat{i}\frac{\partial}{\partial x}(x^3+y^3+z^3-3xyz) + \hat{j}\frac{\partial}{\partial y}(x^3+y^3+z^3-3xyz)$$

$$+\hat{k}\frac{\partial}{\partial z}(x^3+y^3+z^3-3xyz).$$

$$= 3[\hat{i}(x^2-yz)+\hat{j}(y^2-xz)+\hat{k}(z^2-xy)]$$

$\therefore$ grad ϕ at (2, 1, 1)

$$= 3[\hat{i}(4-1)+\hat{j}(1-2)+\hat{k}(1-2)]$$

$$= 9\hat{i}-3\hat{j}-3\hat{k}\,.$$

Example 22

If $\bar{P} = x^2y\hat{i} - x^3\hat{j} + xyz^2\hat{k}$, then find div p and curl p.

Solution

(i) div $\bar{P} = \nabla \cdot \bar{P}$

$$= \frac{\partial}{\partial x}(x^2y) - \frac{\partial}{\partial y}(-x^3) + \frac{\partial}{\partial z}(xyz^2)$$

$$= 2xy - 0 + 2xyz = 2xy\,(1 + z)$$

(ii) curl $\bar{P} = \nabla \times \bar{P} = \begin{vmatrix} \hat{i} & \hat{j} & \hat{k} \\ \frac{\partial}{\partial x} & \frac{\partial}{\partial y} & \frac{\partial}{\partial z} \\ x^2y & -x^3 & xyz^2 \end{vmatrix}$

$$= \hat{i}\left(\frac{\partial}{\partial y}(xyz)^2 - \frac{\partial}{\partial z}(-x^3)\right) - \left(\hat{j}\frac{\partial}{\partial x}(xyz^2) - \frac{\partial}{\partial Z}(x^2y)\right)$$

$$+\hat{k}\left(\frac{\partial}{\partial x}(-x^3) - \frac{\partial}{\partial y}(x^2y)\right)$$

$$= xz^2\hat{i} - yz^2\hat{j} + \hat{k}(-3x^2 - x^2)$$

$$= xz^2\hat{i} - yz^2\hat{j} - 4x^2\hat{k}.$$

Example 23

Find the value of r if,

$p = xy^2\hat{i} + xyz^2\hat{j} + (r-2)xyz^3\hat{k}$ is solenoidal at (1, – 1, 1).

Solution

p is solenoidal $\Rightarrow$ div $p = 0 \Rightarrow \nabla \cdot p = 0$

$$\Rightarrow \quad \frac{\partial p_1}{\partial x} + \frac{\partial p_2}{\partial y} + \frac{\partial p_3}{\partial z} = 0$$

$$\Rightarrow \quad \frac{\partial}{\partial x}xy^2 + \frac{\partial}{\partial y}(xyz^2) + \frac{\partial}{\partial z}[(r-2)xyz^3] = 0$$

$\Rightarrow y^2 + xz^2 + (r-2)\,3xyz^2 = 0$ at $(1, -1, 1)$, div $p = 0$

$\Rightarrow (-1)^2 + (1)^2 + (r-2)\,3\,(1)\,(-1)\,(1)^2 = 0$

$$\Rightarrow \quad 1+1-3r+6=0 \quad \Rightarrow \quad r = \frac{8}{3}.$$

Example 24

Find the value of a, if $P = (y^2+2xz)\hat{i} + (z^2+2xy)\hat{j} + (x^2+ayz)\hat{k}$ is irrotational.

Solution

The vector P is irrotational

$\Rightarrow$ curl $P = \bar{0} \Rightarrow \nabla \times P = \bar{0}$

$$\Rightarrow \begin{vmatrix} \hat{i} & \hat{j} & \hat{k} \\ \frac{\partial}{\partial x} & \frac{\partial}{\partial y} & \frac{\partial}{\partial z} \\ y^2+2xz & z^2+2xy & ayz+x^2 \end{vmatrix} = \bar{0}$$

$$\Rightarrow \hat{i}\left(\frac{\partial}{\partial y}(x^2+ayz) - \frac{\partial}{\partial z}(2xy+z^2)\right)$$

$$-\hat{j}\left(\frac{\partial}{\partial x}(x^2+ayz) - \frac{\partial}{\partial z}(y^2+2xz)\right)$$

$$+\hat{k}\left(\frac{\partial}{\partial x}(z^2+2xy) - \frac{\partial}{\partial y}(y^2+2xz)\right) = \bar{0}$$

$$\Rightarrow \quad \hat{i}(az-2z) + \hat{j}(2x-2x) + \hat{k}(2y-2y) = \bar{0}$$

$$\Rightarrow \quad \hat{i}\,z(a-2) = 0 = 0\,\hat{i} \quad \Rightarrow \quad z(a-2) = 0$$

$$\Rightarrow \quad a - 2 = 0 \Rightarrow a = 2$$

Example 25

Find the angle between the surfaces $xy^2z = 3x + z^2$ and $3x^2 - y^2 + 2z = 1$ at $(1, -2, 1)$.

Solution

Let $f = xy^2z - 3x - z^2 = 0$ and

$g = 3x^2 - y^2 + 2z - 1 = 0.$

$\therefore$ grad $f = \hat{i}(y^2z-3) + \hat{j}(2xyz) + \hat{k}(xy^2-2z)$

grad $g = \hat{i}(6x) + \hat{j}(-2y) + \hat{k}(2)$

But, angle between two surfaces at a point is equal to angle between the normals to the surfaces at that point.

$\therefore$ Let $\bar{n}_1 =$ grad f at $(1, -2, 1)$ and $\bar{n}_2 =$ grad g at $(1, -2, 1)$ respectively

$\therefore \quad \bar{n}_1 = (\text{grad} f)$ at $(1, -2, 1)$

$$= \hat{i}[(-2)^2 1 - 3] + \hat{j}[2(1)(-2)1]$$

$$+\hat{k}[1(-2)^2 - 2(1)] = \hat{i} - 4\hat{j} + 2\hat{k}$$

$\bar{n}_2 = (\text{grad } g)$ at $(1, -2, 1)$

$$= \hat{i}[6\ (A)] + \hat{j}[-2(-2)] + \hat{k}(2) = 6\hat{i} + 4\hat{j} + 2\hat{k}$$

Let the angle between the normals $\bar{n}_1$ and $\bar{n}_2$ be θ.

So, $\bar{n}_1 \cdot \bar{n}_2 = |n_1||n_2|\cos\theta \;\Rightarrow\; 6-16+4$

$$= (\sqrt{1+16+4})(\sqrt{36+16+4})\cos\theta$$

$$\therefore \cos\theta = \left|\frac{-6}{\sqrt{21}\sqrt{56}}\right| = \left|\frac{-3}{7\sqrt{6}}\right| = \frac{3}{7\sqrt{6}}$$

$$\therefore \theta = \cos^{-1}\left(\frac{3}{7\sqrt{6}}\right)$$

Example 26

If $\bar{F} = (x^2+y^2)\hat{i} - 2xy\hat{j}$ evaluate $\oint \bar{F}\cdot d\bar{r}$ along the straight line C from (0, 0, 0) to (1, 2, 3).

Solution

The equation of the line joining (0, 0, 0) and (1, 2, 3) is $\frac{x}{1} = \frac{y}{2} = \frac{z}{3} = (t)$.

Then along the line C, $x = t$, $y = 2t$, $z = 3t$.

$$\therefore \quad \bar{r} = x\hat{i} + y\hat{j} + z\hat{k} = t\,\hat{i} + 2t\,\hat{j} + 3t\,\hat{k}$$

$$d\bar{r} = \hat{i} + 2\hat{j} + 3\hat{k}$$

Given $\bar{F} = (x^2+y^2)\hat{i} - 2xy\hat{j}$

And along C, $\bar{F} = [t^2 + (2t)^2]\hat{i} - 2t(2t)\hat{j} = 5t^2\hat{i} - 4t^2\hat{j}$

$\therefore \; \bar{F}\cdot d\bar{r} = (5t^2 - 8t^2 + 0)\,dt = -3t^2\,dt$

at (0, 0, 0), $t = 0$ and at (1, 2, 3), $t = 1$.

$$\therefore \int_c \bar{F}\cdot d\bar{r} = \int_{t=0}^{1} -3t^2 dt = \left(\frac{-3t^3}{3}\right)_0^1 = -1.$$

Example 27

If $F = 3x\hat{i} - z^2\hat{k}$, , evaluate $\oint F\cdot dr$, where the curve C is the rectangle in the xz bounded by $z = 0$, $z = 2$, $x = 0$, $x = 3$.

Solution

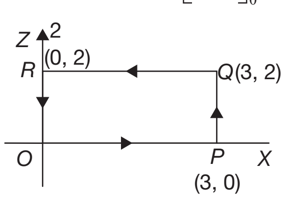
Since the integration takes place in xz-plane ($y = 0$)

$$\therefore \int_0 F\cdot dr = \int_0 f_1 dx + f_2 dz = \int_0 3x\,dx - z^2 dz$$

$$\oint_C \bar{F}\cdot d\bar{r} = \int_{OP} \bar{F}\cdot d\bar{r} + \int_{PQ} \bar{F}\cdot d\bar{r} + \int_{QR} \bar{F}\cdot d\bar{r} + \int_{RO} \bar{F}\cdot d\bar{r}$$

(i) Along OP:
z = 0, $dz = 0$ and x varies from 0 to 3

$$\int F\cdot dr = \int_0^3 3x\,dx = \left[\frac{3x^2}{2}\right]_0^3 = \frac{27}{2}$$



(ii) Along PQ:
$x = 3$, $dx = 0$ and z changes from 0 to 2.

$$\therefore \int_{PQ} \bar{F}\cdot dr = \int_0^2 -z^2 dz = \left[\frac{-Z^3}{3}\right]_0^2 = \frac{-8}{3}$$

(3) Along QR:
$y = 2$, $dy = 0$ and x changes from 3 to 0

$$\therefore \int_{QR} F\cdot dr = \int_3^0 3x\,dx = \left(3\frac{x^2}{2}\right)_3^0 = \frac{-27}{2}$$

(4) Along RO:
$x = 0$,
$dx = 0$ and y varies from 2 to 0.

$$\therefore \int_{RO} F\cdot dr = \int_2^0 -z^2 dz = -\left(\frac{z^3}{3}\right)_2^0 = \frac{8}{3}$$

$$\text{Thus } \oint_C F\cdot dr = \frac{27}{2} - \frac{8}{3} - \frac{27}{2} + \frac{8}{3} = 0$$

Example 28

Evaluate by Green's theorem $(\oint)$ $(xy + y^2)\,dx + x^2\,dy$, where C is the closed curve of the region bounded by $y = x$ and $y = x^2$.

Solution

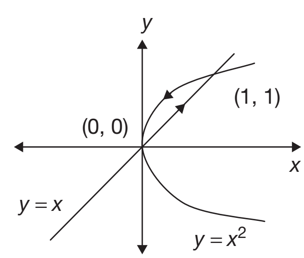
$$\text{Here } P = xy + y^2 \quad \therefore \quad \frac{\partial P}{\partial y} = x + 2y$$

$$Q = x^2 \quad \therefore \quad \frac{\partial Q}{\partial x} = 2x$$

Hence by Green's theorem,

$$\int_C (xy+y^2)dx + x^2 dy = \iint_S (2x - x - 2y)dx\,dy$$

$$= \iint_S (x-2y)dx\,dy = \int_{x-0}^{1}\left[\int_{y-x}^{x}(x-2y)dy\right]dx$$



$$= \int_{x=0}^{1}[xy - y^2]_{y=x}^{x^2} dx = \int_{x=0}^{1}(x^3 - x^4)dx$$

$$= \left(\frac{x^4}{4} - \frac{x^5}{5}\right)_0^1 = \frac{1}{4} - \frac{1}{5} = \frac{1}{20}$$

Example 29

By applying Gauss theorem, evaluate $\iint_S (x^3 dy\,dz + x^2 y dz\,dx + x^2 z dx\,dz)$, where S is the closed surface consisting of the cylinder $x^2 + y^2 = a^2$ and the circular discs $z = 0$ and $z = b$.

Solution

We have

$F_1 = x^3; F_2 = x^2y; F^3 = x^2z$

$$\therefore \frac{\partial F_1}{\partial x} = 3x^2, \frac{\partial F_2}{\partial y} = x^2, \frac{\partial F_3}{\partial z} = x^2$$

$$\therefore \frac{\partial F_1}{\partial x} + \frac{\partial F_2}{\partial y} + \frac{\partial F_3}{\partial z} = 3x^2 + x^2 + x^2 = 5x^2$$

$\therefore$ Using Gauss theorem,

$$\iint_S F_1 dy\, dz + F_2 dz\, dx + F_3 dx\, dy$$

$$= \iint_V \int \left(\frac{\partial F_1}{\partial x} + \frac{\partial F_2}{\partial y} + \frac{\partial F_3}{\partial z}\right) dx\, dy\, dz$$

$$\therefore \iint_S x^3 dy\, dz + x^2 ydz\, dx + x^2 zdx\, dy$$

$$= \iint_V \int 5x^2 dx\, dy\, dz = 20 \int_{x=0}^{a} \int_{y=0}^{\sqrt{a^2-x^2}} \int_{z=0}^{b} x^2 dx\, dy\, dz$$

$$= 20 \int_{x=0}^{a} \int_{y=0}^{\sqrt{a^2-x^2}} x^2 b\, dx\, dy.$$

$$= 20b \int_0^a x^2 \sqrt{a^2 - x^2}\, dx$$

[Let $x = a \sin \theta$; $dx = a \cos \theta\, d\theta$

Upper limit: $x = a \Rightarrow a \sin \theta = a \Rightarrow \theta = \dfrac{\pi}{2}$

Lower limit: $x = 0 \Rightarrow a \sin\theta = 0 \Rightarrow \theta = 0$]

$$= 20b \int_0^{\frac{\pi}{2}} a^2 \sin^2 \theta \sqrt{a^2(1 - \sin^2 \theta)}\, a \cos\theta d\theta$$

$$= 20a^4 b \int_0^{\frac{\pi}{2}} \sin^2 \theta \cos^2 \theta d\theta$$

$$= 20a^4 b \int_0^{\frac{\pi}{2}} \frac{1}{4} \sin^2 2\theta\, d\theta$$

$$= 5a^4 b \int_0^{\frac{\pi}{2}} \left(\frac{1 - \cos 4\theta}{2}\right) d\theta$$

$$= \frac{5a^4 b}{2}\left[\theta - \frac{\sin 4\theta}{4}\right]_0^{\frac{\pi}{2}}$$

$$= \frac{5a^4 b}{2}\left[\frac{\pi}{2} - 0\right] = \frac{5\pi}{4} a^4 b$$

Example 30

Evaluate $\int_c F \cdot dr$ by Stokes theorem,

If $F = (x^2 + y^2)\hat{i} - 2xy\hat{j}$, where c is the rectangle formed by the lines $x = \pm a$, $y = 0$ and $y = b$.

Solution

$\bar{F} = (x^2 + y^2)\hat{i} - 2xyj$

By Stoke's theorem,

$$\int (\nabla \times \bar{F}) \cdot \bar{N}\, ds = \int_c \bar{F} \cdot d\bar{r}$$

$$\nabla \times F = \begin{vmatrix} \hat{i} & \hat{j} & \hat{k} \\ \dfrac{\partial}{\partial x} & \dfrac{\partial}{\partial y} & \dfrac{\partial}{\partial z} \\ x^2 + y^2 & -2xy & 0 \end{vmatrix} = -4y\hat{k}$$

$$\therefore \int (\nabla \times \bar{F}) \cdot (N \cdot k) ds$$

$$= \int (-4ky) \cdot N\, ds = \int -4y\, (N \cdot k)\, ds \int_R \int -4y\, dx\, dy$$

Since N $\cdot$ $k\, ds = dx\, dy$

And R is the region bounded by the rectangle.

$$= \int_{x=-a}^{a} \int_{y=0}^{b} (-4y) dy\, dx = \int_{-a}^{a} \left[\frac{-4y^2}{2}\right]_0^b dx$$

$$= -2\int_{-a}^{a} (b^2 - 0) dx = -2b^2 [x]_{-a}^{a} = -4ab^2.$$

EXERCISES

1. $\lim\limits_{x \to \infty} \{3x - \sqrt{9x^2 - x}\} =$ ______.

(A) $\dfrac{1}{6}$ (B) 3

(C) 6 (D) None of these

2. $\lim\limits_{x \to 0} \left[\dfrac{24 \cos x - 24 + 12x^2 - x^4}{24x^6}\right] =$

(A) $\dfrac{1}{720}$ (B) $\dfrac{-1}{120}$

(C) $\dfrac{1}{120}$ (D) $\dfrac{-1}{720}$

3. Evaluate $\lim\limits_{x \to 2.7} (x - [x])$, where $[x]$ is the greatest integer less than equal to x.

(A) -0.3 (B) 0.7

(C) 4.7 (D) 2

4. Evaluate $\lim\limits_{x \to 0} \dfrac{1}{x^{189}}$.

(A) 0 (B) ∞

(C) $-\infty$ (D) None of these

5. $\lim\limits_{x \to 0} \left(\dfrac{2^x + 3^x}{2}\right)^{1/x} =$

(A) 1 (B) $\sqrt{3}$

(C) $\sqrt{6}$ (D) $\sqrt{2}$

6. $\lim_{x\to 2} |x-2| + [x-2] =$
(A) 0.
(B) only left limit exists.
(C) only right limit exists.
(D) limit does not exist.

7. Let the function $f(x) = [x]$. Where $[x]$ is the greatest integer less than or equal to x. Which of the following is/are true?
(A) $f(x)$ has jump discontinuity at all $x \in Z$.
(B) $f(x)$ has removable discontinuity at all $x \in Z$.
(C) $f(x)$ is continuous at all irrational values.
(D) both (A) and (C).

8. $f(x) = \begin{cases} 5x-4 & 0 < x \leq \\ 4x^2 - 3x & 1 < x < 2 \end{cases}$ at $x = 1$
(A) Left hand continuous at $x = 1$.
(B) Right hand continuous at $x = 1$.
(C) continuous at $x = 1$.
(D) None of these

9. The function $f(x) = \dfrac{x \sin x}{(x^2+2)}$ is
(A) continuous for all x.
(B) discontinuous for all x.
(C) constant function.
(D) discontinuous only at $x = \pm 2$.

10. Check the continuity of the following function

$$f(x) = \begin{cases} \dfrac{\sin^2 ax}{x^2}, & \text{when } x \neq 0 \\ a^2 & \text{when } x=0 \end{cases} \quad \text{at } x = 0$$

(A) continuous at $x = 0$
(B) discontinuous at $x = 0$
(C) discontinuous of first kind
(D) None of these

11. If $f(x) = \begin{cases} 7 & x < 5, \\ ax+b & 5 < x < 7, \\ 11 & x > 7 \text{ is } c \text{ continuous on } R \end{cases}$
then the values of a and b are
(A) $a = 2, b = 3$ (B) $a = -2, b = 3$
(C) $a = 3, b = -2$ (D) $a = 2, b = -3$

12. Let $f(x) = \max(1-x, x^2-1)$. Then f is
(A) not continuous at $x = 1, -2$.
(B) continuous and differentiable everywhere.
(C) not differentiable at $x = -2, 1$.
(D) continuous but not differentiable at $x = 1, -1$.

13. Consider the function $f(x) = \dfrac{1}{x-1} + \dfrac{1}{3-x}$ defined in the interval [1, 3]
P. f is continuous on [1, 3]
Q. f is differentiable on (1, 3)
R. there exists $c \in (1, 3)$ such that $f'(c) = 0$ which of the above statements are true?
(A) P, Q only (B) Q, R only
(C) P, R only (D) P, Q, R

14. A function $f: R \to R$ is such that $f(x+y) = f(x) \cdot f(y)$ for all x, y in R and $f(x) \neq 0$ for any x in R. If $f(x)$ is differentiable and $f'(0) = 2$, then
(A) $f'(x) = 2f(x)$ (B) $f(x) = 2f'(x)$
(C) $f(x) = f'(x)$ (D) $f'(x) = -f(x)$

15. Which of the following statement(s) is/are true?
(A) $y = x^2$ has a minimum value at $x = 0$
(B) $y = |x-3|$ has a minimum value at $x = 3$
(C) The maximum value of the function $y = \dfrac{1}{1+x^2}$ is 1
(D) All of these

16. The maximum and minimum values of $f(x) = 3\sin^2 x + 4\cos^2 x$ is
(A) $\{-4, -3\}$ (B) $\{7, 3\}$
(C) $\{4, -3\}$ (D) $\{4, 3\}$

17. If the function $f(x) = 2x^3 - 9ax^2 + 12a^2x + 1$, where $a > 0$, attains its maximum and minimum at $x = p$ and $x = q$ respectively such that $p^2 = q$, then the value of 'a' is
(A) 2 (B) $\dfrac{1}{4}$
(C) $\dfrac{1}{8}$ (D) 4

Direction for questions 18 and 19:

The sum of the hypotenuse and one side of a right angled triangle is given as a units.

18. When the area is maximum the ratio of the side and the hypotenuse is ______.
(A) 2 : 1 (B) 1 : 3
(C) 1 : 2 (D) 2 : 3

19. When the area is maximum, find the angle between the hypotenuse and the other side is ______.
(A) 60° (B) 30°
(C) 45° (D) None of these

20. Consider $f(x) = |x^2 - 3|$, $0 \leq x \leq \sqrt{6}$ and $g(x) = \begin{cases} 3^x, & 0 \leq x \leq 1 \\ 4-x, & 1 < x \leq 3 \end{cases}$. Then Rolle's theorem can be applied in the respective intervals
(A) to both $f(x)$ and $g(x)$.
(B) only to $f(x)$.
(C) only to $g(x)$.
(D) neither to $f(x)$ nor to $g(x)$.

21. If the function $f(x) = px^2 + qx^2 + rx + s$ on [0, 1], satisfies the mean value theorem, then the value of c in the interval (0, 1) is
(A) $\dfrac{1}{2}$ (B) $\dfrac{1}{3}$
(C) $\dfrac{2}{3}$ (D) $\dfrac{2}{3\sqrt{3}}$

22. $f(x)=\dfrac{x^2}{x+1}$ increases in

(A) $(-2, 0)$

(B) $[-4, -2]$

(C) $(-\infty, -2] \cup [0, \infty)$

(D) $(-\infty, -2) \cup (0, \infty)$

23. Let $f(x) = e^{ax}$ and $g(x) = e^{-ax}$ be two functions defined in $[p, q]$, If the functions satisfies Cauchy mean value theorem then the value of 'c' is _______.

(A) $p+q$ (B) $\dfrac{p+q}{2}$

(C) $2(p+q)$ (D) None of these

24. If $x = \cos(z + y^2)$, then $\dfrac{\partial z}{\partial y} =$

(A) 1 (B) y

(C) $2y$ (D) $-2y$

25. If $u=\left[\dfrac{\sqrt[4]{x}+\sqrt[4]{y}}{\sqrt[6]{x}+\sqrt[6]{y}}\right]^6$, then $x\dfrac{\partial u}{\partial x}+y\dfrac{\partial u}{\partial x}=$

(A) $\dfrac{u}{2}$ (B) $\dfrac{4}{u}$

(C) $4u$ (D) $6u$

26. The stationary points of the function $f(x, y) = x^3 + y^4 - 27x + 32y + 100$ is/are

(A) $(3, 2), (3, -2)$

(B) $(-3, 2), (-3, -2)$

(C) $(3, 2), (-3, -2)$

(D) $(3, -2), (-3, -2)$

27. For the function $f(x, y) = 2x^2 + 4y^2 + 4xy + 2x + 10y + 7$.

(A) Local maximum exists, but no local minimum.

(B) Local minimum exists, but no local maximum.

(C) Neither local minimum nor local maximum exists.

(D) Both local minimum and local maximum exists.

28. For the function xyz, if $x + y + z = 3$, then the local maximum occurs for xyz at the point _______.

(A) $\left(4,\dfrac{1}{2},\dfrac{1}{2}\right)$

(B) $(5, -1, -1)$

(C) $(1, 1, 1)$

(D) $(7, -3, -1)$

29. The ratio of the dimensions of a rectangular box of volume 64 cubic units and open at the top that requires least material for its construction is

(A) 2 : 2 : 1 (B) 2 : 4 : 5

(C) 2 : 3 : 4 (D) 1 : 2 : 3

30. Which of the following function/s is/are integrable but not continuous on (0, 10)?

(A) $f(x) = [x]$ (greatest integer function)

(B) $f(x) = |x - 3|$

(C) $f(x) = |x - 5| + |x - 2|$

(D) $f(x) = x^2 + 5x + 9$

31. $\int \sec^3 x \; dx =$ _______.

(A) $\dfrac{\sec x\tan x}{3}+\log\left(\sec x+\text{an } x\right)$

(B) $\dfrac{\sec^2 x\tan x}{3}+\dfrac{1}{3}\log\tan\left(\dfrac{\pi}{4}+x\right)$

(C) $\dfrac{\sec x\tan x}{2}+\dfrac{1}{2}\log\tan\left(\dfrac{\pi}{4}+\dfrac{x}{2}\right)$

(D) None of these

32. $\int_0^{\pi/2} \sin^4 x\cos^6 x dx =$ _______.

(A) $\dfrac{3\pi}{128}$ (B) $\dfrac{2\pi}{425}$

(C) $\dfrac{3\pi}{2560}$ (D) $\dfrac{3\pi}{512}$

33. Area bounded by the curve $y = -3x^2$, $x = 2$ and the two coordinate axes is _______ sq units

(A) 2 (B) 3

(C) 6 (D) 8

34. The volume of the solid obtained by revolving the area bounded by the parabola $y^2 = x - 4$, x-axis and the lines $x = 4$ and $x = 7$, about x-axis is _______ cubic unit

(A) $\dfrac{9}{2}\pi$ (B) $\dfrac{11}{2}\pi$

(C) $\dfrac{13}{2}\pi$ (D) $\dfrac{15}{2}\pi$

35. The length of arc of the curve $y = \ln(\cos x)$ from $x = 0$ to $x=\dfrac{\pi}{4}$ is _____.

(A) $\ln(1+\sqrt{2})$ (B) $\ln(\sqrt{2}-1)$

(C) $\ln(2+\sqrt{3})$ (D) $\ln(2-\sqrt{3})$

36. Evaluate $\int_0^{\pi/4}\int_0^{\pi/4}(3\cos\theta+4\sin\theta)d\theta d\phi$ _______.

(A) $\left(\dfrac{\sqrt{2}-1}{\sqrt{2}}\right)\pi$ (B) $\dfrac{(4\sqrt{2}-1)\pi}{4\sqrt{2}}$

(C) $\dfrac{(4\sqrt{2}-1)\pi}{\sqrt{2}}$ (D) $\dfrac{(4\sqrt{2}-1)\pi}{4\sqrt{2}}$

37. Evaluate $\int_0^1 \int_0^{\sqrt{1-x^2}} \frac{dxdy}{\sqrt{1-x^2-y^2}}$

(A) $\frac{\pi}{4}$ (B) 0

(C) $\frac{\pi}{2}$ (D) 1

38. By changing the order of integration, the integral $\int_2^{\infty}\int_0^{x-2} f(x,y)dxdy$ becomes ______.

(A) $\int_0^{\infty}\int_2^{y+2} f(x,y)dxdy$ (B) $\int_0^{\infty}\int_{y+2}^{\infty} f(x,y)\,dxdy$

(C) $\int_0^{\infty}\int_0^{\infty} f(x,y)dxdy$ (D) $\int_1^{\infty}\int_{y+2}^{1} f(x,y)dxdy$

39. By changing the variables in the double integral $\iint_R \frac{dxdy}{xy}$, where $x = e^{u+v}$ and $y = uv$, it changes to $\iint_R \phi(uv)dudv$ then $\phi(u, v)$ is

(A) $\frac{R}{(e^{u+v})(uv)}$ (B) $\frac{e^{u+v}}{uv}$

(C) $\frac{1}{v}+\frac{1}{u}$ (D) $\frac{1}{v}-\frac{1}{u}$

40. By changing the variables from x, y to u, v where $x = u + 2v$ and $y = 4u + 3v$, the given integral $\iint_R f(x,y)dxdy$ changes to $\iint_R f(u+2v, 4u+3v)\psi(u,v)dud\,v$ then $\Psi(u, v)$ is ______.

(A) 5 (B) −5

(C) $\frac{1}{5}$ (D) $-\frac{1}{5}$

41. The area bounded by the circle $x^2 + y^2 = 6$ and the parabola $y = x^2$ is given by:

(A) $\int_{x=-2}^{2}\int_{y=\sqrt{x}}^{\sqrt{x^2-6}} dydx$

(B) $\int_{x=-\sqrt{2}}^{\sqrt{2}}\int_{y=\sqrt{x}}^{\sqrt{6-x^2}} dydx$

(C) $\int_{x=-2}^{2}\int_{y=\sqrt{x}}^{\sqrt{x^2-6}} (x^2+y^2)dydx$

(D) $\int_{x=-\sqrt{2}}^{\sqrt{2}}\int_{y=\sqrt{x}}^{\sqrt{6-x^2}} (y-x^2)dxdy$

42. The volume of the solid bounded by the planes $x = 0$, $y = 0$, $z = 0$ and $x + y + z = 4$ is ______ cubic units.

(A) $\frac{32}{3}$ (B) $\frac{64}{3}$

(C) 32 (D) 64

43. The acute angle between the vectors $3i + j + 2k$ and $i - j + k$ is θ, then the value of $\cos\theta$ is

(A) $\frac{8}{21}$ (B) $\frac{8}{\sqrt{21}}$

(C) $21\sqrt{8}$ (D) $\sqrt{\frac{8}{21}}$

44. If $\bar{r}$ is the position vector of a particle which passes along the curve $x = 3 \sin 4t$, $y = 3 \cos 4t$, and $z = 5t$ $(t > 0)$. The magnitude of its velocity and acceleration respectively are

(A) 13, 45 (B) 12, 48

(C) 13, 48 (D) 12, 45

45. $\bar{f}(t)$ be a vector function and $\bar{f}\times\frac{d\bar{f}}{dt}=0$ implies

(A) f is a vector function with constant magnitude.

(B) f is a vector function both in direction and magnitude.

(C) f is a vector function of constant direction.

(D) Either A or C.

46. The directional derivative of $f = x^3 y + y^3 z + z^3 x$ in the direction of $i + 2j + 2k$ at (0, 1, −1) is

(A) $\frac{5}{3}$ (B) $\frac{4}{3}$

(C) $\frac{-4}{3}$ (D) $\frac{-5}{3}$

47. If $\bar{r} = x\,\hat{i} + y\,\hat{j} + z\,\hat{k}$ and $|r| = r$, then $\nabla r^n =$

(A) $n(n-1)r^{n-1}\,\bar{r}$ (B) $n(n-2)r^{n-2}\,\bar{r}$

(C) $n \cdot r^{n-2} \times \bar{r}$ (D) $n(n-1)\bar{r}$

Direction for questions 48 and 49:

Two equations $f = x\,y^2\,z - 2y + z^2$ and $g = x^2 + yz - x - 2$ represents two surfaces

48. Find normal vector to 'g' at (1, −1, 2)

(A) $i + 2j + 2k$ (B) $i + 2j - k$

(C) $2\,i - j - k$ (D) $i - j - 2k$

49. The acute angle between the surfaces f and g at (1, −1, 2) is

(A) $\cos^{-1}\left(\frac{15}{\sqrt{390}}\right)$ (B) $\cos^{-1}\left(\sqrt{\frac{15}{390}}\right)$

(C) 60° (D) 30°

50. The magnitude of maximum directional derivative of $\phi = 2xy^2 - xyz + y^2 z$ in the direction from the point $(1, -1, 1)$ is

(A) 62 (B) $\sqrt{52}$

(C) $\sqrt{62}$ (D) $\sqrt{56}$

51. The directional derivative of a scalar point function is a function of

(A) only direction (B) only position

(C) either A or B (D) both A and B

52. The values of div $\bar{r}$ and curl $\bar{r}$ respectively when $\bar{r} = 2x\hat{i} - y\hat{j} + 3z\bar{k}$ is

(A) $4; \hat{i}$ (B) $0, \bar{0}$

(C) $4, 4\bar{k}$ (D) $4, \bar{0}$

53. The necessary and sufficient condition that the force field $\bar{F}(x, y, z)$ is conservative is

(A) (curl $\bar{F}$) $= -\bar{F}$ (B) div $\bar{F} = \bar{0}$

(C) curl $\bar{F} = \bar{F}$ (D) curl $\bar{F} = \bar{0}$

54. Which of the following is/are true?

(A) $\nabla(\bar{r} \times \bar{a}) = 0$

(B) Grad $(\bar{r} \cdot \bar{a}) = \bar{a}$

(C) $\nabla \times (\bar{r} \times \bar{a}) = -2\bar{a}$

(D) All of these

55. Compute the value of div$(\nabla\phi \times \nabla f)$.

(A) ∇f curl $(\nabla\phi)$ (B) $\nabla\phi$ curl (∇f)

(C) curl $(\nabla\phi \times \nabla f)$ (D) 0

56. For what value of p the vector $f = (2x + 3y)i + (z + 2y)j + (x - pz)k$ is solenoidal?

(A) 4 (B) -4

(C) 2 (D) 0

57. For what values of p, q and r the vector $\bar{f} = (x + ry - z)i + (3x - y + qz)j + (px + y - z)k$ is irrotational?

(A) $p = 1, q = -1, r = 3$

(B) $p = -1, q = 1, r = 3$

(C) $p = -1, q = 1, r = -3$

(D) $p = 1, q = 1, r = -3$

58. If $\nabla\phi = yz\hat{i} + zx\hat{j} + xy\hat{k}$, then $\phi(x, y, z) =$

(A) $xyz + f(y, z)$; $f \neq$ constant

(B) $xyz + g(x, z)$; $g \neq$ constant

(C) $xyz + h(x, y)$; $h \neq$ constant

(D) $xyz + k$; k is a constant

59. If $\bar{F} = (5xy - 6x^2)\hat{i} + (2y - 4x)\hat{j}$, compute the line integral $\int_C \bar{F}\,d\bar{r}$ where $C \equiv y = x^3$ in the xy-plane joining $(1, 1)$ and $(2, 8)$.

(A) 35 (B) -32

(C) 12 (D) 18

60. Compute $\int_S x^2 y^2 ds$ around the circle $x = \cos t$ and $y = \sin t$.

(A) $\frac{\pi}{4}$ (B) 0

(C) $\frac{\pi}{2}$ (D) π

61. If $\bar{F} = y^2\hat{i} - 2xy\hat{j}$, compute the circulation $\int_C \bar{F}\,d\bar{r}$ where C is the rectangle bounded by $y = 0, y = 1, x = 0$ and $x = 2$.

(A) 3 (B) 4

(C) -4 (5) -3

62. A particle in the force field $\bar{F} = 2x^2 i + (y - 3xz)j + 2z\,k$ is moving along a space curve defined by $x = 2t, y = t^2, z = 3t^2 - 2$. Find the work done by $\bar{F}$ in moving a particle along the straight line from $A(0, 0, 0)$ to $B(2, 1, 1)$.

(A) $\frac{107}{30}$ (B) $\frac{121}{30}$

(C) $\frac{113}{30}$ (D) $\frac{109}{30}$

63. Evaluate $\oint_C (x^2 y dx + xy^2 dy)$ using greens theorem where C is the triangle with vertices (0, 0), (2, 0) and (2, 1).

(A) $\frac{11}{24}$ (B) $\frac{11}{12}$

(C) $\frac{-11}{6}$ (D) $\frac{11}{4}$

64. Find the area of the region in the first quadrant bounded by the curves $y = 4x$, $y = \frac{1}{x}$ and $y = \frac{x}{4}$ using green's theorem.

(A) log 2 (B) $\frac{1}{2}$ log 2

(C) log 4 (D) log 16

65. Evaluate $\iint_s F\, nds$ where $F = 2xz\hat{i} - yz\hat{j} + yx\bar{k}$ where S is the cube bounded by $x = 0, x = 3, y = 0, y = 3$ and $z = 0, z = 3$.

(A) $\frac{27}{2}$ (B) $\frac{81}{4}$

(C) $\frac{27}{4}$ (D) $\frac{81}{2}$

66. For the force field $\bar{F} = x^2 i + xyj$ in the square region in the xy-plane bounded by the lines $x = 0, y = 0, x = 2, y = 2$. Using stokes theorem, find the value of $\int_C F, dr$.

(A) 4 (B) 6

(C) 8 (D) 2

67. Evaluate the volume integral $\int_V div\,\bar{N}\,dv$, where N is the outward drawn normal to the surface described by $x^2 + (y-5)^2 + (z-8)^2 = 12$.

(A) 8π (B) 12π
(C) 48π (D) 24π

68. If S is a closed surface and n is unit normal to the surface 'S' then $\iint_S \bar{r}\, nds =$ ______.

(A) 4V (B) 3V
(C) 2V (D) V

69. $\int_{1x}^{\infty} \frac{1}{1.0001} dx =$ ______.

(A) 1000 (B) 100000
(C) 10000 (D) 1000000

70. $\int_0^3 \frac{1}{(x-2)^{4/5}} dx =$ ______.

(A) $5 - 2^{1/5}$ (B) $5 + 2^{1/5}$
(C) $5(1-2)^{1/5}$ (D) $5\left[1+2^{1/2}\right]$

Previous Years' Questions

1. Evaluate $\int_0^{\infty} \frac{\sin t}{t} dt$ **[GATE, 2007]**

(A) π (B) $\frac{\pi}{2}$
(B) $\frac{\pi}{4}$ (D) $\frac{\pi}{8}$

2. A velocity vector is given as $\bar{v} = 5xy\bar{i} + 2y^2\bar{j} + 3yz^2\bar{k}$. The divergence of the this velocity vector at (1, 1, 1) is **[GATE, 2007]**

(A) 9 (B) 10
(C) 14 (D) 15

3. The value of $\int_0^3\int_0^x (6-x-y)dx\,dy$ is **[GATE, 2008]**

(A) 13.5 (B) 27.0
(C) 40.5 (D) 54.0

4. The inner (dot) product of two vectors $\bar{P}$ and $\bar{Q}$ is zero. The angle (degrees) between the two vectors is **[GATE, 2008]**

(A) 0 (B) 30
(C) 90 (D) 120

5. For a scalar function $f(x, y, z) = x^2 + 3y^2 + 2z^2$, the gradient at the point $P(1, 2, -1)$ is **[GATE, 2009]**

(A) $2\vec{i} + 6\vec{j} + 4\vec{k}$ (B) $2\vec{i} + 12\vec{j} - 4\vec{k}$
(C) $2\vec{i} + 12\vec{j} + 4\vec{k}$ (D) $\sqrt{56}$

6. The $\lim\limits_{x\to 0} \frac{\sin\left[\frac{2}{3}\right]x}{x}$ is **[GATE, 2010]**

(A) $\frac{2}{3}$ (B) 1
(C) $\frac{3}{2}$ (D) ∞

7. Given function
$F(x, y) = 4x^2 + 6y^2 - 8x - 4y + 8$. The optimal value of $f(x, y)$ **[GATE, 2010]**

(A) is a minimum equal to $\frac{10}{3}$

(B) is a maximum equal to $\frac{10}{3}$

(C) is a minimum equal to $\frac{8}{3}$

(D) is a maximum equal to $\frac{8}{3}$

8. What is the value of the definite integral, $\int_0^a \frac{\sqrt{x}}{\sqrt{x}+\sqrt{a-x}} dx$? **[GATE, 2011]**

(A) 0 (B) $\frac{a}{2}$
(C) a (D) $2a$

9. If $\bar{a}$ and $\bar{b}$ are two arbitrary vectors with magnitudes a and b, respectively, $\left|\bar{a}\times\bar{b}\right|^2$ will be equal to **[GATE, 2011]**

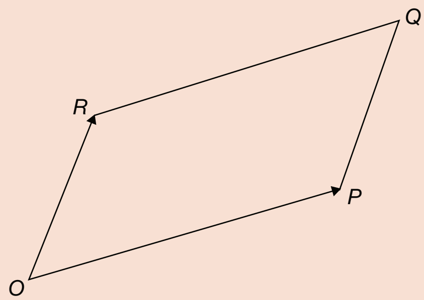
(A) $a^2b^2 - (\vec{a}\cdot\vec{b})^2$

(B) $ab - \vec{a}\cdot\vec{b}$

(C) $a^2b^2 + (\vec{a}\cdot\vec{b})^2$

(D) $ab + \vec{a}\cdot\vec{b}$

10. For the parallelogram $OPQR$ shown in the sketch, $\overrightarrow{OP} = a\bar{i} + bj$ and $\overrightarrow{OR} = ci + dj$. The area of the parallelogram is



[GATE, 2012]

(A) $ad - bc$
(B) $ac + bd$
(C) $ad + bc$
(D) $ab - cd$

11. There is no value of x that can simultaneously satisfy both the given equations. Therefore, find the least square error solution to the two equations, i.e., find the value of x that minimizes the sum of squares of the errors in the two equations
$2x = 3$
$4x = 1$ **[GATE, 2013]**

12. The solution for $\int_0^{\pi/6} \cos^4 3\theta \sin^3 6\theta \, d\theta$ is **[GATE, 2013]**

(A) 0 (B) $\frac{1}{15}$
(C) 1 (D) $\frac{8}{3}$

13. $\lim_{x\to\infty}\left(\frac{x+\sin x}{x}\right)$ equals is **[GATE, 2014]**

(A) $-\infty$ (B) 0
(C) 1 (D) ∞

14. The expression $\lim_{x\to 0}\frac{x^\alpha - 1}{\alpha}$ is equal to **[GATE, 2014]**

(A) $\ln x$ (B) 0
(C) $x\ln x$ (D) ∞

15. With reference to the conventional cartesian (x, y) coordinate system, the vertices of a triangles have the following coordinates: $(x_1, y_1) = (1, 0)$: $(x_2, y_2) = (2, 2)$: and (x_3, y_3), $= (4, 3)$. The area of the triangle is equal to **[GATE, 2014]**

(A) $\frac{3}{2}$ (B) $\frac{3}{4}$
(C) $\frac{4}{5}$ (D) $\frac{5}{2}$

16. $\lim_{x\to\infty}\left(1+\frac{1}{x}\right)^{2x}$ is equal to **[GATE, 2015]**

(A) e^{-2} (B) e
(C) 1 (D) e^2

17. While minimizing the function $f(x)$, necessary and sufficient conditions for a point, x_0 to be a minima are: **[GATE, 2015]**

(A) $f'(x_0) > 0$ and $f''(x_0) = 0$
(B) $f'(x_0) < 0$ and $f''(x_0) = 0$
(C) $f'(x_0) = 0$ and $f''(x_0) < 0$
(D) $f'(x_0) = 0$ and $f''(x_0) > 0$

18. The directional derivative of the field $u(x, y, z) = x^2 - 3yz$ in the direction for the vector $(\hat{i} + \hat{j} - 2\hat{k})$ at point $(2, -1, 4)$ is ________. **[GATE, 2015]**

19. The optimum value of the function $f(x) = x^2 - 4x + 2$ is **[GATE, 2016]**

(A) 2 (maximum) (B) 2 (minimum)
(C) -2 (maximum) (D) -2 (minimum)

20. The quadratic approximation of $f(x) = x^3 - 3x^2 - 5$ at the point $x = 0$ is **[GATE, 2016]**

(A) $3x^2 - 6x - 5$ (B) $-3x^2 - 5$
(C) $-3x^2 + 6x - 5$ (D) $3x^2 - 5$

21. What is the value of $\lim_{\substack{x\to 0\\ y\to 0}}\frac{xy}{x^2+y^2}$? **[GATE, 2016]**

(A) 1 (B) -1
(C) 0 (D) Limit does not exist

22. The area between the parabola $x^2 = 8y$ and the straight line $y = 8$ is ________. **[GATE, 2016]**

23. The area of the region bounded by the parabola $y = x^2 + 1$ and the straight line $x + y = 3$ is **[GATE, 2016]**

(A) $\frac{59}{6}$ (B) $\frac{9}{2}$
(C) $\frac{10}{3}$ (D) $\frac{7}{6}$

24. The angle of intersection of the curves $x^2 = 4y$ and $y^2 = 4x$ at point $(0, 0)$ is **[GATE, 2016]**

(A) 0° (B) 30°
(C) 45° (D) 90°

25. The value of $\int_0^\infty \frac{1}{1+x^2}dx + \int_0^\infty \frac{\sin x}{x}dx$ is **[GATE, 2016]**

(A) $\frac{\pi}{2}$ (B) π
(C) $\frac{3\pi}{2}$ (D) 1

Chapter 2

Ordinary Differential Equations

CHAPTER HIGHLIGHTS

- *Introduction*
- *Differential equations*
- *Laplace transforms*

Introduction

Familiarity with various methods used in evaluating indefinite integrals or finding anti-derivatives of functions [or, in other words, evaluating $\int f(x)\,dx$] is a pre-requisite.

Differential Equations

An equation involving derivatives of a dependent variable with respect to one or more independent variables is called a differential equation. The equation may also contain the variables and/or their functions and constants. If there is only one independent variable, the corresponding equation is called an ordinary differential equation. If the number of independent variables is more than one, the corresponding equation is called a partial differential equation.

Examples:

1. $\dfrac{dy}{dx} = x^4 + e^{-x} + y$

2. $x^2 \dfrac{d^2y}{dx^2} + 3\left(\dfrac{dy}{dx}\right)^2 + 3y^4x = \sin x + 6$

3. $\dfrac{dy}{dx} + 5y = x^3 - \tan x$

4. $\dfrac{d^2y}{dx^2} + 4y = 0$

5. $\left(\dfrac{d^3y}{dx^3}\right)^2 + 5\left(\dfrac{dy}{dx}\right)^4 + e^{2xy} = 6$

6. $\dfrac{d^3y}{dx^3} + 8\dfrac{d^2y}{dx^2} + \dfrac{dy}{dx} + 9y = 16x^2$

7. $x\dfrac{\partial u}{\partial x} + y\dfrac{\partial u}{\partial y} = 8u$

8. $\dfrac{\partial^2 u}{\partial y^2} + \dfrac{\partial^2 u}{\partial x^2} = 10$

9. $\dfrac{\partial^2 u}{\partial y^2} = 25\dfrac{\partial^2 u}{\partial x^2}$

10. $\dfrac{\partial^4 u}{\partial x^4} + 6\dfrac{\partial^2 u}{\partial x^2 \partial y^2} + \dfrac{\partial^4 u}{\partial y^4} = e^{3xy}$

We note that in the given examples, Eqs. (1) to (6) are ordinary differential equations while Eqs. (7) to (10) are partial differential equations. We refer to these examples later on in next chapter.

Certain Geometrical Results may also be Expressed as Differential Equations

Illustration 1 Consider a family of parallel lines. All these lines have the same slope. If k represents the slope, we may interpret the family of parallel lines as curves having the same slope. As $\dfrac{dy}{dx}$ represents the slope of the tangent to a curve at any point (x, y), we may say that the differential equation $\dfrac{dy}{dx} = k$ represents a family of parallel lines.

Illustration 2 The differential equation $y\frac{dy}{dx} = k$ (a constant) may be said to represent the family of curves having the length of subnormal equal k at every point (x, y) on the curve. (We may note that the family of curves is the family of parabolas). Our study is confined to ordinary differential equations. In what follows, differential equation means ordinary differential equations.

Order of a Differential Equation

It is defined as the order of the highest derivative present in the equation. Examples (1), (3) are of first order; (2), (4) are of second order and (5), (6) are of third.

Degree of a Differential Equation

The degree of a differential equation is defined as the degree of the highest order derivative present in the equation. (It is assumed that the various order differential co-efficients or derivatives present in the equation are made free from fractional powers).

Examples (1), (2), (3), (4), (6) are of first degree while Example (5) is of second degree.

Consider the differential equation,

$$\left[1+\left(\frac{dy}{dx}\right)^2\right]^{5/2} = 4\frac{d^3y}{dx^3}.$$

Taking the square on both sides (to free it from fractional powers), the differential equation is

$$\left[1+\left(\frac{dy}{dx}\right)^2\right]^{5} = 16\left(\frac{d^3y}{dx^3}\right)^2.$$

This is a third order second degree differential equation.

Linear Differential Equation

If, in a differential equation, the dependent variable and the derivatives appear only in the first degree and there is no term involving products of the above or containing functions of the dependent variable, it is called **linear differential equation.**

1. $\frac{dy}{dx} + Py = Q$ (where P and Q are functions of only x) is an example of a first order linear differential equation.
2. $\frac{d^2y}{dx^2} + P\frac{dy}{dx} + Qy = R$, where P, Q, R are functions of only x; $\frac{d^2y}{dx^2} + a_1\frac{dy}{dx} + a_2y = f(x)$, where a_1, a_2 are constants and $f(x)$ is a function of x are examples of second order linear differential equations.

Similarly, we can have nth order linear differential equation.

$$P_0\frac{d^ny}{dx^n} + P_1\frac{d^{n-1}y}{dx^{n-1}} + P_2\frac{d^{n-2}y}{dx^{n-2}} + \cdots + P_{n-1}\frac{dy}{dx} + P_ny = Q$$

where $P_0, P_1, P_2, \ldots, P_n, Q$ are functions of x or constants. If an equation is not linear, it is called a non-linear differential equation. In examples, 1, 3, 4, 6 are linear differential equations, while examples 2 and 5 are non-linear differential equations.

Solution of a Differential Equation

A function $y = f(x)$ or $F(x, y) = 0$ is called a solution of a given differential equation if it is defined and differentiable (as many times as the order of the given differential equation) throughout the interval where the equation is valid, and is such that the equation becomes an identity when $y, \frac{dy}{dx}, \frac{d^2y}{dx^2}, \ldots$ are replaced by $f(x)$, $f'(x)$, $f''(x), \ldots$ respectively.

[In the case of $F(x, y) = 0$ one has to get $\frac{dy}{dx}, \frac{d^2y}{dx^2}, \ldots$ by successive differentiation of $F(x, y) = 0$ with respect to x].

Examples:

1. $y = e^{7x}$ is a solution of $\frac{dy}{dx} = 7y$, since on substitution of $y = e^{7x}$, both left and right sides of the differential equation become identical. We find that $y = e^{7x}, 3e^{7x}, \frac{-1}{2}e^{7x}$ or, in general, $y = Ce^{7x}$, where C is an arbitrary constant represents solutions of $\frac{dy}{dx} = 7y$.
2. $y^2 - x^2 = 4$ is a solution of the differential equation $\frac{dy}{dx} = \frac{x}{y}$. Also, $y^2 - x^2 = 5$, $y^2 - x^2 = -10, \ldots$ or, in general, $y^2 - x^2 = C$ where C is an arbitrary constant represents solutions of $\frac{dy}{dx} = \frac{x}{y}$.

In both the above examples, we could represent the solutions of the differential equations which involve an arbitrary constant denoted by C. We now define the general solution of a first order differential equation.

The ***general solution*** of a first order differential equation is a relation between x and y involving one arbitrary constant such that the differential equation is satisfied by this relation or, the general solution of a first order differential equation is a one parameter family of curves where the parameter is the arbitrary constant. By assigning particular values to the arbitrary constant, we generate ***particular solutions*** of the equation.

In Example (1) $y = Ce^{7x}$ represents the general solution of the differential equation $\frac{dy}{dx} = 7y$ and the solutions

$y = e^{7x}, y = 3e^{7x}, \ldots$ are its particular solutions. The general solution represents a family of exponential curves.

In Example (2) $y^2 - x^2 = C$ represents the general solution of the differential equation $\frac{dy}{dx} = \frac{x}{y}$ and the solutions $y^2 - x^2 = 4$, $y^2 - x^2 = 5$, … are its particular solutions. The general solution in this case represents a family of rectangular hyperbolas.

3. $y = 2e^{-3x} + 5e^{6x}$ is a solution of the second order differential equation $\frac{d^2y}{dx^2} - 3\frac{dy}{dx} - 18y = 0$. (which can be verified by actual substitution). Also, $y = 4e^{-3x} - 10e^{6x}$, $e^{-3x} + e^{6x}, \ldots$ or, in general, $y = Ae^{-3x} + Be^{6x}$ where A and B are arbitrary constants represents solution of $\frac{d^2y}{dx^2} - 3\frac{dy}{dx} - 18y = 0$.
4. $y = 2 \cos 4x + 3 \sin 4x$ or, in general, $y = A \cos 4x + B \sin 4x$ where A and B are arbitrary constants represents solutions of $\frac{d^2y}{dx^2} + 16y = 0$.

In Example (3), the general solution is $y = Ae^{-3x} + Be^{6x}$ and in Example (4), the general solution is $y = A \cos 4x + B \sin 4x$.

By assigning particular values to the arbitrary constants one can generate particular solutions.

From Examples (3) and (4), we infer that the general solution of a second order differential equation is a relation between x and y involving two arbitrary constants such that the differential equation is satisfied by this relation or the general solution of a second order differential equation is a two-parameter family of curves where the parameters are the arbitrary constants.

To sum up, the general solution of an nth order differential equation is a relation between x and y involving n arbitrary constants, such that the differential equation is satisfied by this relation or the general solution of an nth order differential equation is an n-parameter family of curves where the parameters are the arbitrary constants. For the first and second order differential equations, we have

First Order Equation

One parameter family of curves:

Representation: Relation between x and y involving one arbitrary constant, say C.

Eliminate: Eliminate C to obtain a DE representing the given curve.

Second Order Equation

Two-parameter family of curves:

Representation: Relation between x and y involving two arbitrary constants, say A and B

Elimination: Eliminate A and B to obtain a DE representing the two-parameter family of curves.

We shall work out a few examples to illustrate the formation of differential equations.

SOLVED EXAMPLES

Example 1

Form the differential equation representing the one-parameter family of curves

$$x^3 - Ay = 0.$$

Solution

Given, $x^3 - Ay = 0$ (1)

$$Ay = x^3$$

$$A\frac{dy}{dx} = 3x^2 \quad \Rightarrow \quad A = \frac{3x^2}{\frac{dy}{dx}} \tag{2}$$

Substituting A in the Eq. (1),
we have

$$x^3 - \frac{3x^2}{\frac{dy}{dx}} \cdot y = 0 \quad \Rightarrow \quad x\frac{dy}{dx} - 3y = 0.$$

Example 2

Obtain the differential equation of all the circles in the first quadrant, which touch the co-ordinate axes.

Solution

The equation of any circle in the first quadrant, which touches the co-ordinate axes may be represented as $(x - h)^2 + (y - h)^2 = h^2$.

Differentiating with respect to x,

$$2(x-h) + 2(y-h)\frac{dy}{dx} = 0$$

or

$$h = \frac{x + y\frac{dy}{dx}}{\left(1 + \frac{dy}{dx}\right)}$$

Substituting the above expression for h in the equation of the circle

$$\left(x - \frac{x + y\frac{dy}{dx}}{1 + \frac{dy}{dx}}\right)^2 + \left(y - \frac{x + y\frac{dy}{dx}}{1 + \frac{dy}{dx}}\right)^2 = \left(\frac{x + y\frac{dy}{dx}}{1 + \frac{dy}{dx}}\right)^2$$

or

$$(x-y)^2\left(\frac{dy}{dx}\right)^2 + (x-y)^2 = \left(x + y\frac{dy}{dx}\right)^2$$

or

$$(x-y)^2\left[1 + \left(\frac{dy}{dx}\right)^2\right] = \left[x + y\left(\frac{dy}{dx}\right)\right]^2.$$

Initial Value Problems A first order differential equation with a condition that $y = y_0$ when $x = x_0$ [written as $y(x_0) = y_0$] is known as an initial value problem. For example,

1. $\dfrac{dy}{dx} = \dfrac{x}{y}$; $y(0) = 1$

2. $\dfrac{dy}{dx} + 2xy = x^3$; $y(1) = 6$

3. $\dfrac{dy}{dx} + \dfrac{3y}{x} = e^x$; $y(0) = 4$

To solve such problems, we first obtain the general solution and find that particular value of the arbitrary constant in the general solution which satisfies the condition $y(x_0) = y_0$. This means that the solution of an initial value problem is a particular solution of the given differential equation.

First Order First Degree Equations The general form of the equation will be $\dfrac{dy}{dx} = f(x, y)$.

Separable Equations (or Variables Separable Type) Here, the given differential equation can be reduced to the form $f(y)dy = g(x)dx$. [Recall that $\dfrac{dy}{dx}$ may be thought as the ratio of the differential of y to the differential of x]. Direct integration of the relation with respect to the variable on each side gives general solution or, in other words, the general solution of the differential equation above may be written as $\int f(y)\,dy = \int g(x)\,dx + C$, where C is an arbitrary constant.

Example 3

Solve: $\dfrac{dy}{dx} = \sqrt{\dfrac{1+y^2}{1+x^2}}$.

Solution

$$\frac{dy}{dx} = \sqrt{\frac{1+y^2}{1+x^2}}$$

$$\frac{1}{\sqrt{1+y^2}}dy = \frac{1}{\sqrt{1+x^2}}dx$$

Integrating on both sides,

$$\int \frac{1}{\sqrt{1+y^2}}dy = \int \frac{1}{\sqrt{1+x^2}}dx.$$

$$\sinh^{-1} y = \sinh^{-1} x + c.$$

Example 4

Solve: $(x - xy^2)\dfrac{dy}{dx} + (y + x^2 y) = 0$.

Solution

$$(x - xy^2)\frac{dy}{dx} + (y + x^2 y) = 0$$

$$(x - xy^2)\,dy + (y + x^2y)\,dx = 0$$

$$x(1 - y^2)\,dy + y(1 + x^2)\,dx = 0$$

$$\frac{1-y^2}{y}dy + \frac{1+x^2}{x}dx = 0$$

Integrating on both sides,

$$\int\left(\frac{1}{y} - y\right)dy + \int\left(\frac{1}{x} + x\right)dx = 0$$

$$\log y - \frac{y^2}{2} + \log x + \frac{x^2}{2} = \log C$$

$$\log_e \frac{xy}{C} = \frac{y^2 - x^2}{2} \quad \Rightarrow \quad \frac{xy}{C} = e^{\left(\frac{y^2-x^2}{2}\right)}$$

$$\Rightarrow \quad xy = Ce^{\left(\frac{y^2-x^2}{2}\right)}$$

Example 5

Solve the initial value problem

$$y^2\frac{dy}{dx} = x^2 e^{y^3}, \quad y(1) = (0)$$

Solution

Given: $y^2 \dfrac{dy}{dx} = x^2 e^{y^3}$

$$y^2 e^{-y^3}\,dy = x^2 dx.$$

$$\int y^2 e^{-y^3}\,dy = \int x^2 dx$$

Let $e^{-y^3} = t \quad \Rightarrow \quad e^{-y^3} \cdot -3y^2 dy = dt$

$$-\frac{1}{3}\int dt = \int x^2 dx$$

$$\frac{-1}{3}t = \frac{x^3}{3} + c$$

$$-\frac{1}{3}e^{-y^3} = \frac{x^3}{3} + c.$$

Given: When $x = 1$, $y = 0$;

$$-\frac{1}{3}e^{\circ} = \frac{1}{3} + c$$

$$c = -\frac{2}{3}$$

$\therefore$ The solution is $-\dfrac{1}{3}e^{-y^3} = \dfrac{x^3}{3} - \dfrac{2}{3}$.

$$x^3 + e^{-y3} - 2 = 0.$$

Homogeneous Differential Equations

Homogeneous differential equation will be of the form $f(x, y)dy = g(x, y)dx$, where $f(x, y)$ and $g(x, y)$ are homogeneous functions in x and y of the same degree.

Definition

A function $F(x, y)$ in x and y is a homogeneous function in x and y of degree n(n, a rational number), if $F(x, y)$ can be expressed as $x^n\phi\left(\dfrac{y}{x}\right)$ or $y^n\psi\left(\dfrac{x}{y}\right)$.

1. $x^3+4x^2y-y^3=x^3\left(1+\frac{4y}{x}-\frac{y^3}{x^3}\right)$ is a homogeneous function in x and y of degree 3.
2. $x^3\tan\left(\frac{y}{x}\right)$ is a homogeneous function in x and y of degree 3.
3. $\frac{x+y}{2x-3y}$ is a homogeneous function in x and y of degree 0. We change the dependent variable y to v by the substitution $y=vx$. Then, $\frac{dy}{dx}=v+x\frac{dv}{dx}$.

On substitution y and $\frac{dy}{dx}$ in the given homogeneous equation, it reduces to the variables separable form.

Example 6

Solve: $x^2\frac{dy}{dx}=x^2+7xy+9y^2$.

Solution

$$x^2\frac{dy}{dx}=x^2+7xy+9y^2$$

$$\frac{dy}{dx}=1+\frac{7y}{x}+9\left(\frac{y}{x}\right)^2$$

Put $y=xv \quad\Rightarrow\quad \frac{dy}{dx}=v+\frac{dv}{dx}$

$$v+\frac{dv}{dx}=1+7v+9v^2$$

$$x\frac{dv}{dx}=9v^2+6v+1$$

$$\frac{1}{9v^2+6v+1}dv=\frac{1}{x}dx$$

Integrating on both sides,

$$\int\frac{1}{9v^2+6v+1}dv=\int\frac{1}{x}dx$$

$$\int\frac{1}{(3v+1)^2}dv=\int\frac{1}{x}dx \quad -\frac{1}{3(3v+1)}=\log x+\log c$$

$$=-\frac{1}{3\left(\frac{3y}{x}+1\right)}=\log_e cx=\frac{-x}{9y+3x}=\log_e cx$$

where C is an arbitrary constant.

Example 7

Solve $x\frac{dy}{dx}=y+x\sin\left(\frac{y}{x}\right)$

Solution

Given: $x\frac{dy}{dx}=y+x\sin\left(\frac{y}{x}\right)$

$$\frac{dy}{dx}=\frac{y}{x}+\sin\left(\frac{y}{x}\right) \tag{1}$$

Put $y=vx,\ \frac{dy}{dx}=v+x\frac{dv}{dx}$.

Substituting in (1) we get,

$$v+x\frac{dv}{dx}=v+\sin v$$

$$\Rightarrow\quad \frac{xdv}{dx}=\sin v \quad\Rightarrow\quad \frac{1}{\sin v}dv=\frac{1}{x}dx$$

$$=\int\operatorname{cosec} v\,dv=\int\frac{1}{x}dx$$

$\Rightarrow\quad \log(\operatorname{cosec} v-\cot v)=\log x+\log c$

$\Rightarrow\quad \operatorname{cosec} v-\cot v=cx$

$$\operatorname{cosec}\left(\frac{y}{x}\right)-\cot\left(\frac{y}{x}\right)=cx.$$

Example 8

Solve $3y^2\,dx+(2xy+3x^2)\,dy=0$.

Solution

$3y^2\,dx+(2xy+3x^2)\,dy=0$.

$$\frac{dy}{dx}=\frac{-3y^2}{2xy+3x^2}$$

Put $y=vx \quad\Rightarrow\quad \frac{dy}{dx}=v+x\frac{dv}{dx}$

$$v+x\frac{dv}{dx}=\frac{-3v^2}{2v+3}$$

$$x\frac{dv}{dx}=\frac{-3v^2}{2v+3}-v$$

$$x\frac{dv}{dx}=\frac{-3v^2-2v^2-3v}{2v+3}$$

$$\frac{2v+3}{-5v^2-3v}dv=\frac{1}{x}dx$$

$$\Rightarrow\quad \frac{2v+3}{v(5v+3)}dv+\frac{1}{x}dx=0$$

Integrating on both sides,

$$\Rightarrow\quad \int\left[\frac{1}{v}-\frac{3}{5v+3}\right]dv+\int\frac{1}{x}dx=0$$

$$\Rightarrow\quad \log v-\frac{3}{5}\log(5v+3)+\log x=\log c.$$

$$\Rightarrow\quad 5\log v-3\log(5v+3)+5\log x=5\log c.$$

$$\Rightarrow \quad \log \frac{v^5}{(5v+3)^3} x^5 = \log c^5$$

$$\Rightarrow \quad \frac{y^5}{\left(5\frac{y}{x}+3\right)^3} = c_1, \text{ where } c_1 = c^5$$

$$\Rightarrow \quad \frac{y^5x^3}{(5y+3x)^3} = c_1 \quad \Rightarrow \quad x^3y^5 = c_1(5y+3x)^3$$

Exact Differential Equations

If M, as well as N, is a function in x and y, then the equation $Mdx + Ndy = 0$ is said to be an exact differential equation if there exists a function $f(x, y)$ such that

$$d(f(x, y)) = Mdx + Ndy.$$

That is, $$\frac{\partial f}{\partial x}dx + \frac{\partial f}{\partial y}dy = Mdx + Ndy$$

Example: $3x^2ydx + x^3dy = 0$ is an exact differential equation since there exists a function x^3y such that

$$d(x^3 y) = 3x^2ydx + x^3dy$$

The necessary and sufficient condition for an equation of the form $Mdx + Ndy = 0$ to be an exact equation is $\frac{\partial M}{\partial y} = \frac{\partial N}{\partial x}$.

The solution of the exact differential equation

$$Mdx + Ndy = 0 \text{ is } U + \int \phi(y)\, dy = C$$

where $U = \int Mdx$ and $\phi(y) = N - \frac{\partial u}{\partial y}$

Or $\int^x Mdx + \int (\text{terms of } N \text{ not containing } x)dy = C$

Here $\int^x Mdx$ denotes integration of M with respect to x treating y as a constant.

Example 9

Find the solution of

$$(3x - 2y + 5)\, dx + (3y - 2x + 7)dy = 0.$$

Solution

$M = 3x - 2y + 5$, $N = 3y - 2x + 7$

$$\frac{\partial M}{\partial y} = -2\frac{\partial N}{\partial x} = -2.\ \frac{\partial M}{\partial y} = \frac{\partial N}{\partial x}$$

$\therefore$ The given equation is exact.

The solution is

$$\int^x Mdx + \int (\text{the terms of } N \text{ not containing } x)\, dy = C$$

$$\int^x (3x-2y+5)\, dx + \int (3y+7)\, dy = C$$

$$\frac{3x^2}{2} - 2yx + 5x + \frac{3y^2}{2} + 7y = C$$

Example 10

Find the solution of $(e^y + 1)\cot x\, dx + e^y \log(\sin x)\, dy = 0$.

Solution

Given $(e^y + 1)\cot x\, dx + e^y \log(\sin x)dy = 0$

Let $M = (e^y + 1)\cot x$ and $N = e^y \log(\sin x)$

$$\frac{\partial M}{\partial y} = e^y \cot x \text{ and } \frac{\partial N}{\partial x} = e^y \cot x$$

$$\therefore \quad \frac{\partial M}{\partial y} = \frac{\partial N}{\partial x}$$

$\therefore$ The given equation is exact.

The solution is

$$\int^x Mdx + \int (\text{the terms of } N \text{ not containing } x)dy = C$$

$$\therefore \quad \int^x (e^y+1)\cot x\, dx + \int 0\, dy = C$$

$$(e^y + 1)\log(\sin x) = C$$

Integrating factors: Let us say $M(x, y)dx + N(x, y)dy = 0$ be a non-exact differential equation. If it can be made exact by multiplying it by a suitable function $\mu(x, y)$, then $\mu(x, y)$ is called an integrating factor.

Methods to Find the Integrating Factors

Method I

If $Mdx + Ndy = 0$ is a homogeneous differential equation and $Mx + Ny \neq 0$, then $\frac{1}{Mx+Ny}$ is an integrating factor of $Mdx + Ndy = 0$

Example 11

Find the solution of $(x + 2y)dx + (y - 2x)dy = 0$.

Solution

Here $M = x + 2y$ and $N = y - 2x$

$$\frac{\partial M}{\partial y} = 2\ \frac{\partial N}{\partial x} = -2$$

$$\frac{\partial M}{\partial y} \neq \frac{\partial N}{\partial x}$$

The above equation is not an exact equation.

But M and N are homogeneous functions

$\therefore$ The integrating factor $= \frac{1}{Mx+Ny}$

$$(x + 2y)x + (y - 2x)y = x^2 + y^2 \tag{1}$$

Now by multiplying Eq. (1) by $\frac{1}{x^2+y^2}$, it become an exact equation.

$$\left(\frac{x+2y}{x^2+y^2}\right)dx+\left(\frac{y-2x}{x^2+y^2}\right)dy=0$$

The solution is $U+\int\phi(y)\,dy=C$

$$U=\int^x M_1dx,\ \text{where } M_1=\frac{x+2y}{x^2+y^2}$$

$$=\int^x\frac{x+2y}{x^2+y^2}\,dx$$

$$=\int\frac{x}{x^2+y^2}dx+2y\int\frac{1}{x^2+y^2}dx$$

$$=\frac{1}{2}\log(x^2+y^2)+2y\frac{1}{y}\tan^{-1}\left(\frac{x}{y}\right)$$

$$=\frac{1}{2}\log(x^2+y^2)+2\tan^{-1}\left(\frac{x}{y}\right)$$

Since in $N_1=\dfrac{y-2x}{x^2+y^2}$ there is no term independent of x, the solution is

$$\frac{1}{2}\log(x^2+y^2)+2\tan^{-1}\left(\frac{x}{y}\right)=C$$

Method 2

If the differential equation $Mdx+Ndy=0$ is of the form $y,f(xy)dx+x\,g(xy)dy=0$ and $Mx-Ny\neq 0$, then $\dfrac{1}{Mx-Ny}$ is an integrating factor of $Mdx+Ndy=0$.

Method 3

In the equation $Mdx+Ndy=0$,

if $\dfrac{1}{N}\left[\dfrac{\partial M}{\partial y}-\dfrac{\partial N}{\partial x}\right]=f(x)$, then $e^{\int f(x)\,dx}$ is an integrating factor of the given equation.

Similarly if $\dfrac{1}{M}\left[\dfrac{\partial N}{\partial x}-\dfrac{\partial M}{\partial y}\right]=g(y)$ then $e^{\int g(y)\,dy}$ is an integrating factor of the given equation.

Example 12

Find the solution $(x^2-y^2)dx+2xy\,dy=0$.

Solution

Given $(x^2-y^2)dx+2xy\,dy=0$ (1)

$$M=x^2-y^2 \text{ and } N=2xy$$

$$\frac{\partial M}{\partial y}=-2y \text{ and } \frac{\partial N}{\partial x}=2y$$

$$\frac{\partial M}{\partial y}\neq\frac{\partial N}{\partial x}$$

$$\frac{1}{N}\left[\frac{\partial M}{\partial y}-\frac{\partial N}{\partial x}\right]=\frac{1}{2xy}[-2y-2y]$$

$$=\frac{-2}{x}=f(x)$$

Integrating factor (IF)

$$=e^{\int f(x)\,dx}$$

$$=e^{\int\frac{-2}{x}dx}=e^{\int-2\log x}=e^{\log\frac{1}{x^2}}=\frac{1}{x^2}$$

∴ Multiplying the given equation with $\dfrac{1}{x^2}$, we get

$$\left(\frac{x^2-y^2}{x^2}\right)dx+\frac{2xy}{x^2}dy=0$$

$$\left(\frac{x^2-y^2}{x^2}\right)dx+2\frac{y}{x}dy=0 \qquad (2)$$

$$M_1=\frac{x^2-y^2}{x^2} \text{ and } N_1=\frac{2y}{x}$$

$$\frac{\partial M_1}{\partial y}=\frac{-2y}{x^2},\ \text{and } \frac{\partial N_1}{\partial x}=\frac{-2y}{x^2}$$

$$\frac{\partial M_1}{\partial y}=\frac{\partial N_1}{\partial x}$$

∴ Eq. (2) is an exact equation and its solution is

$$\int^x M_1dx+\int(\text{the terms of } N_1 \text{ not containing } x)dy=C$$

$$\int^x\frac{x^2-y^2}{x^2}dx+\int 0dy=C$$

$$\Rightarrow\int^x 1-\frac{y^2}{x^2}dx=C\ \Rightarrow\ x+\frac{y^2}{x}=C.$$

Example 13

Find the solution of $xy^2dx+(y+y^2)dy=0$.

Solution

Given $xy^2dx+(y+y^2)dy=0$ (1)

$$Mdx+Ndy=0$$

$$M=xy^2;\quad N=y+y^2$$

$$\frac{\partial M}{\partial y}=2xy \text{ and } \frac{\partial N}{\partial x}=0$$

$$\frac{\partial M}{\partial y}\neq\frac{\partial N}{\partial x}$$

$$\frac{1}{M}\left[\frac{\partial N}{\partial x}-\frac{\partial M}{\partial y}\right]=\frac{1}{xy^2}[-2xy]$$

$$=\frac{-2}{y}=g(y)$$

Integrating factor is $e^{\int g(y)dy}$

$$=e^{\int\frac{-2}{y}dy}=e^{-2\log y\,dy}=e^{\log\frac{1}{y^2}}=\frac{1}{y^2}$$

Multiplying Eq. (1) by $\dfrac{1}{y^2}$, we get $\dfrac{xy^2dx}{y^2}+\left(\dfrac{y+y^2}{y^2}\right)dy=0$

$$xdx + \left(\frac{1}{y} + 1\right)dy = 0$$

Integrating on both sides we get $\dfrac{x^2}{2} + \log y + y = C$

Linear Equations

Consider the linear differential equation $\dfrac{dy}{dx} + Py = Q$ (1)

where P and Q are functions of only x. We explain below, how such equations can be solved. Consider the equation

$$\frac{dy}{dx} + Py = 0 \tag{2}$$

The Eq. (2) is called the homogeneous linear equation corresponding to Eq. (1). We find the general solution of Eq. (2).

Eq. (2) is a variables separable type. We write it as

$$\frac{dy}{y} = -Pdx.$$

Integrating the above equation given.

$$\log y = -\int Pdx + \log C \text{ or } y = Ce^{-\int Pdx} \tag{3}$$

This represents the general solution of Eq. (2).

Eq. (3) may also be written as $ye^{\int Pdx} = c$.

Now, $\dfrac{d}{dx}(ye^{\int Pdx}) = 0$

That is, $e^{\int Pdx}\dfrac{dy}{dx} + ye^{\int Pdx} \times P = 0$ or $e^{\int Pdx}\left[\dfrac{dy}{dx} + Py\right] = 0.$

This means that if we multiply both sides of Eq. (2) by $e^{\int Pdx}$, the product

$e^{\int Pdx}\left[\dfrac{dy}{dx} + Py\right]$ is $\dfrac{d}{dx}\{ye^{\int Pdx}\}$. The factor $e^{\int Pdx}$ is called an integrating factor of Eq. (2).

Suppose we multiply both sides of Eq. (1) by $e^{\int Pdx}$, it is reduced to $\dfrac{d}{dx}(ye^{\int Pdx}) = \dfrac{d}{dx}\left(\int Qe^{\int Pdx}dx\right)$, $\left[\text{since } \dfrac{d}{dx}\left(\int Qe^{\int Pdx} dx\right) = Qe^{\int Pdx}\right]$. Hence, we get the general solution of Eq. (1) as

$$ye^{\int Pdx} = C + \int Qe^{\int Pdx} dx.$$

Example 14

Solve $\sin x \dfrac{dy}{dx} + y \cos x = 1$.

Solution

$$\sin x \frac{dy}{dx} + y\cos x = 1$$

$$\frac{dy}{dx} + (\cot x)y = \operatorname{cosec} x.$$

This is a linear equation in y

Here, $P = \cot x$, $Q = \operatorname{cosec} x$.

$$\int Pdx = \int \cot x\, dx = \log(\sin x)$$

$$\text{IF} = e^{\int Pdx} = e^{\log \sin x} = \sin x.$$

$\therefore$ The general solution is $y \cdot \text{IF} = \int \text{QIF}\, dx + c$

$$y \sin x = \int \operatorname{cosec} x \cdot \sin x\, dx + c$$

$$y \sin x = \int dx + c$$

$$y \sin x = x + c.$$

Example 15

Solve $(1 + x^4)\dfrac{dy}{dx} + 4x^3 y = \sin^3 x$.

Solution

Given: $(1 + x^4)\dfrac{dy}{dx} + 4x^3 y = \sin^3 x$

$$\frac{dy}{dx} + \frac{4x^3}{1+x^4}y = \frac{\sin^3 x}{1+x^4}$$

It is a linear differential equation in y.

Here, $P = \dfrac{4x^3}{1+x^4}$ and $Q = \dfrac{\sin^3 x}{1+x^4}$

$$\int Pdx = \int \frac{4x^3}{1+x^4}dx = \log(1+x^4)$$

$$\text{IF} = e^{\int pdx} = e^{\log(1+x^4)} = 1 + x$$

General solution

$y \cdot \text{IF} = \int Q \cdot \text{IF}\, dx + c.$

$$y(1+x^4) = \int \frac{\sin^3 x}{1+x^4}(1+x^4)\, dx + c$$

$$= \int \sin^3 x\, dx + C = \int \frac{3\sin x - \sin 3x}{4} dx + c$$

$$y(1+x^4) = \frac{\cos 3x}{12} - \frac{3}{4}\cos x + c$$

$$12y(1 + x^4) = \cos 3x - 9 \cos x + c$$

Example 16

Solve $x^2\left(\dfrac{dy}{dx} + y\right) = 4x^2 + 8 - 2y$.

Solution

Given: $x^2\left(\dfrac{dy}{dx} + y\right) = 4x^2 + 8 - 2y$

$$\frac{dy}{dx} + y = 4 + \frac{8}{x^2} - \frac{2y}{x^2}$$

$$\frac{dy}{dx} + y\left(1 + \frac{2}{x^2}\right) = 4 + \frac{8}{x^2}$$

Here, $P = 1 + \dfrac{2}{x^2}$ and $Q = 4 + \dfrac{8}{x^2}$

$$\int Pdx = \int 1 + \frac{2}{x^2}\, dx = x - \frac{2}{x}$$

$$\text{IF} = e^{\int P dx} = e^{\left(x-\frac{2}{x}\right)}$$

General solution is $y \cdot \text{IF} = \int Q \cdot \text{IF} dx + c$

$$ye^{x-\frac{2}{x}} = \int\left(4+\frac{8}{x^2}\right)e^{x-\frac{2}{x}}dx + c$$

$$= 4\int\left(1+\frac{2}{x^2}\right)e^{x-\frac{2}{x}}dx + c$$

(Put $e^{x-\frac{2}{x}} = t$

$$\Rightarrow \quad e^{x-\frac{2}{x}}\left(1+\frac{2}{x^2}\right)dx = dt)$$

$$= 4\int dt + c = 4t + c$$

The general solution is

$$ye^{x-\frac{2}{x}} = 4e^{x-\frac{2}{x}} + c$$

Bernoulli's Linear Equations

An equation of the form $\frac{dy}{dx} + Py = Qy^n$ is called Bernoulli's linear equation, where P, Q are continuous functions in x.

Example 17

Solve $\frac{dy}{dx} + xy = -(3xy^2)$.

Solution

Given $\frac{dy}{dx} + xy = -(3xy^2)$

Throughout the equation dividing with y^2 we get

$$y^{-2}\frac{dy}{dx} + xy^{-1} = -3x \tag{1}$$

$$\text{Let } y^{-1} = u \quad \Rightarrow \quad -y^{-2}\frac{dy}{dx} = \frac{du}{dx}$$

The Eq. (1) becomes $\frac{-du}{dx} + xu = -3x$

$$\frac{du}{dx} - xu = 3x$$

The above equation is a linear differential equation in u.

$$\therefore \quad \text{IF} = e^{\int P dx} = e^{-\int x dx} = e^{\frac{-x^2}{2}}$$

$\therefore$ Solution is $u \cdot \text{IF} = \int \text{QIF}\, dx$

$$u \cdot e^{\frac{-x^2}{2}} = \int 3xe^{\frac{-x^2}{2}}dx.$$

$$= -\int 3e^{-t}dt \text{ when } t = \frac{-x^2}{2}$$

$$= \frac{-3e^{-t}}{-1} = 3e^{-t}$$

$$u \cdot e^{\frac{-x^2}{2}} = 3e^{\frac{-x^2}{2}} + C$$

$$\frac{1}{y} = 3 + Ce^{\frac{x^2}{2}}$$

$$y = \frac{1}{3 + Ce^{\frac{x^2}{2}}}$$

Example 18

Solve $\frac{dy}{dx} + \frac{y}{x}\log y = \frac{y}{x^3}(\log y)^2$.

Solution

Given $\frac{dy}{dx} + \frac{y\log y}{x} = \frac{y(\log y)^2}{x^3}$

$$\Rightarrow \quad \frac{1}{y(\log y)^2}\frac{dy}{dx} + \frac{1}{x}\cdot\frac{1}{(\log y)} = \frac{1}{x^3} \tag{1}$$

Let $\frac{1}{\log y} = u$,

Differenting wrt x

$$\frac{-1}{(\log y)^2}\cdot\frac{1}{y}\frac{dy}{dx} = \frac{du}{dx}$$

$\therefore$ Eq. (1) becomes

$$\Rightarrow \quad \frac{-du}{dx} + \frac{1}{x}u = \frac{1}{x^3} \quad \Rightarrow \quad \frac{du}{dx} - \frac{1}{x}u = \frac{-1}{x^3}$$

It is a linear equation in u.

Here $P = \frac{-1}{x}$ and $Q = \frac{-1}{x^3}$

$$\text{IF} = e^{\int P dx} = e^{-\int \frac{1}{x}dx} = e^{-\log x} = \frac{1}{x}$$

$\therefore$ Solution is $u \cdot \text{IF} = \int \text{QIF} dx + c$

$$\frac{1}{x}u = \int \frac{-1}{x^3}\cdot\frac{1}{x}dx + c$$

$$\frac{1}{x}u = -\int x^{-4}dx + c$$

$$\frac{1}{(\log y)x} = \frac{1}{3x^3} + c$$

Second Order Linear Differential Equations with Constant Co-efficients

The standard form of a second order linear differential equation with constant co-efficients is

$$a_0\frac{d^2y}{dx^2} + a_1\frac{dy}{dx} + a_2 y = F(x) \tag{1}$$

where a_0, a_1, a_2 are real constants and $F(x)$ is a function of only x. The second order equation,

$$a_0\frac{d^2y}{dx^2} + a_1\frac{dy}{dx} + a_2 y = 0 \tag{2}$$

represents the corresponding homogeneous equation.

Let $y = u(x)$ represent the general solution of Eq. (2) [$u(x)$ will contain two arbitrary constants]. This means that

$$a_0 \frac{d^2u}{dx^2} + a_1 \frac{du}{dx} + a_2 u = 0 \qquad (3)$$

Let $y = v(x)$ represent a particular solution of the given equation of Eq. (1). We have, then,

$$a_0 \frac{d^2v}{dx^2} + a_1 \frac{dv}{dx} + a_2 v = F(x) \qquad (4)$$

Substituting $y = u(x) + v(x)$ in Eq. (1),

$$a_0 \frac{d^2}{dx^2}(u+v) + a_1 \frac{d}{dx}(u+v) + a_2(u+v)$$

$$= \left(a_0 \frac{d^2u}{dx^2} + a_1 \frac{du}{dx} + a_2 u\right) + \left(a_0 \frac{d^2v}{dx^2} + a_1 \frac{dv}{dx} + a_2 v\right)$$

$= 0 + F(x)$ (by Eqs. (3) and (4))

$= F(x)$.

We infer that $y = u(x) + v(x)$ is the general solution of the Eq. (1). Thus, the general solution of Eq. (2) is the sum of the general solution of the corresponding homogeneous equation (2) and a particular solution of the given equation (1). $y = u(x)$ is called the *complementary function* of Eq. (2) and $y = v(x)$ is called a particular integral of Eq. (1). The general solution of Eq. (1) is given by $y = u(x) + v(x)$.

= [Complementary function] + [Particular integral]

= CF + PI (in short).

To find the complementary function of Eq. (1) or to obtain the general solution of the homogeneous equation (2): As $y = e^{mx}$ is a solution of $\frac{dy}{dx} - my = 0$, we assume $y = e^{mx}$ (for some value of m) to be a solution of Eq. (2).

Then, $a_0 \frac{d^2}{dx^2}(e^{mx}) + a_1 \frac{d}{dx}(e^{mx}) + a_2 e^{mx}$ must be equal to zero (or) $e^{mx}\{a_0 m^2 + a_1 m + a_2\} = 0$.

Since e^{mx} cannot be equal to zero, $a_0 m^2 + a_1 m + a_2 = 0$ (5)

Eq. (5) is called the auxiliary equation corresponding to (1) [or (2)]. Eq. (5) is quadratic in m and gives two values for m, which may be real or complex.

Case 1: Let the roots of Eq. (5) be real and distinct, say m_1 and m_2 ($m_1 \neq m_2$). Then, $y = e^{m_1 x}$ and $y = e^{m_2 x}$ are two distinct solutions of (2) or $y = C_1 e^{m_1 x} + C_2 e^{m_2 x}$ (6)

(C_1 and C_2 are arbitrary constants) is the general solution of (2) or the complementary function of (1).

Case 2: Let the roots of (5) be real and equal and each equals to m_1.

$$\text{Let } \frac{d}{dx} \equiv D, \quad \frac{d^2}{dx^2} \equiv D^2.$$

Then Eq. (2) may be expressed as $(a_0 D^2 + a_1 D + a_2)y = 0$.

Since the roots of the auxiliary equation are equal and each equal to m_1, this reduces to

$$a_0(D - m_1)^2 y = 0 \text{ or } (D - m_1)^2 y = 0 \qquad (7)$$

(since $a_0 \neq 0$)

Let $(D - m_1)y = Y_1$ (8)

Then, Eq. (7) becomes $(D - m_1)Y_1 = 0$. (9)

Now, Eq. (9) is reduced to $\frac{dY_1}{dx} - m_1 Y_1 = 0$, giving $Y_1 = C_1 e^{m_1 x}$ as the solution.

Substituting in Eq. (8), $\frac{dy}{dx} - m_1 y = c_1 e^{m_1 x}$ is a linear equation. The general solution is given by $ye^{-m_1 x} = c_2 + \int c_1 e^{m_1 x} \times e^{-m_1 x} dx = c_2 + c_1 x$

or $$y = c_2 e^{m_1 x} + c_1 x e^{m_1 x} = e^{m_1 x}(c_2 + c_1 x)$$

where c_1 and c_2 are arbitrary constants.

Case 3: Let the roots of (V) be complex. Let us assume the roots as the conjugate pairs $\alpha \pm i\beta$. (The co-efficients a_0, a_1, a_2 being real, roots occur in conjugate pairs).

The general solution is $y = c_1 e^{(\alpha + i\beta)x} + c_2 e^{(\alpha - i\beta)x}$

$$= c_1 e^{\alpha x}(\cos \beta x + i \sin \beta x) + c_2 e^{\alpha x}(\cos \beta x - i \sin \beta x)$$

$$= e^{\alpha x}\{(c_1 + c_2) \cos \beta x + i(c_1 - c_2) \sin \beta x\}$$

$$= e^{\alpha x}\{A_1 \cos \beta x + A_2 \sin \beta x).$$

where A and B are arbitrary constants. We may now summarize the nature of the complementary function of Eq. (1) as follows:

Roots of the Auxiliary Equation $a_0 m^2 + a_1 m + a_2 = 0$	Complementary Function of (1), or General Solution of (2)
Roots, real and distinct, say m_1, m_2	$y = c_1 e^{m_1 x} + c_2 e^{m_2 x}$
Roots, real and equal, say each equals m_1	$y = (c_1 + c_2 x)e^{m_1 x}$
Roots, complex, say $\alpha \pm i\beta$	$y = e^{\alpha x}\{c_1 \cos \beta x + c_2 \sin \beta x\}$
Roots, complex and repeated, say $m_1 = m_2 = \alpha + i\beta$ and $m_3 = m_4 = \alpha - i\beta$	$y = e^{\alpha x}[(c_1 + c_2 x) \cos \beta x + (c_3 + c_4 x) \sin \beta x$

Example 23

Obtain the complementary function of the equation $\frac{d^2y}{dx^2} - \frac{7dy}{dx} + 6y = x^4$.

Solution

$$\frac{d^2y}{dx^2} - 7\frac{dy}{dx} + 6y = x^4$$

$\Rightarrow \quad (D^2 - 7D + 6)y = x^4$

Auxiliary equation is $m^2 - 7m + 6 = 0$

$$m = 1, 6.$$

$\therefore$ The complementary function of the given equation.

$$y = c_1 e^x + c_2 e^{6x}.$$

Example 24

Obtain the general solution of the equation $\frac{d^2y}{dx^2}-10\cdot\frac{dy}{dx}+25y=0.$

Solution

Given: $\frac{d^2y}{dx^2}-10\frac{dy}{dx}+25y=0$

$$\Rightarrow \quad (D^2-10D+25)y=0$$

Auxiliary equation is $m^2-10m+25=0$

The roots are $(m)=5, 5$

$\therefore$ The general solution of the equation is $(c_1+c_2x)e^{5x}$.

Example 25

Obtain the complementary function of the equation $\frac{d^2y}{dx^2}-6\cdot\frac{dy}{dx}+10y=e^{3x}.$

Solution

Given: $\frac{d^2y}{dx^2}-6\cdot\frac{dy}{dx}+10y=e^{3x}$

$\Rightarrow \quad (D^2-6D+10)y=e^{3x}$

Auxiliary equation is $m^2-6m+10=0$

$$m=\frac{6\pm\sqrt{36-40}}{2}=\frac{6\pm 2i}{2}=3\pm i$$

$\therefore$ The complementary function is given by $y_c=e^{3x}(c_1\cos x+c_2\sin x)$.

To find a particular integral of Eq. (1) or to find a particular solution of the Eq. (1):

$$a_0\frac{d^2y}{dx^2}+a_1\frac{dy}{dx}+a_2y=F(x)$$

We may write the above as $(a_0D^2+a_1D+a_2)y=F(x)$ or $f(D)\,y=F(x)$ where $f(D)$ stands for $(a_0D^2+a_1D+a_2)$. Particular integral y is that function of x independent of arbitrary constants such that $f(D)$ on y or $f(D)\,y$ yields $F(x)$.

This is symbolically represented as $y=\frac{1}{f(D)}\{F(x)\}$.

Case 1: $F(x)=e^{kx}$ where k is a constant.

We have $D(e^{kx})=ke^{kx}$, $D^2(e^{kx})=k^2e^{kx}$ … or, in general, $g(D)\,(e^{kx})=g(k)\,e^{kx}$ where $g(D)$ is a polynomial in D, in particular, $f(D)\,\{e^{kx}\}=f(k)\,e^{kx}$.

Since $\frac{1}{f(D)}e^{kx}$ is that function of x which when operated by $f(D)$ gives e^{kx}, it is clear that $\frac{1}{f(D)}e^{kx}=\frac{1}{f(k)}e^{kx}$ provided $f(k)\neq 0$. $f(k)$ reduces to zero when one or both the roots of the auxiliary equation $a_0m^2+a_1m+a_2=0$, is k.

1. Suppose one of the roots is k. Then, $f(D)=a_0(D-k)(D-m_0)$, where $m_0\neq k$. Particular integral

$$=\frac{1}{a_0(D-k)(D-m_0)}e^{kx}$$

$$=\frac{1}{D-k}\left\{\frac{1}{a_0(D-m_0)}e^{kx}\right\}$$

$$=\frac{1}{a_0(k-m_0)}\frac{1}{(D-k)}e^{kx}$$

Let $\frac{1}{(D-k)}e^{kx}=X_1$

Then $(D-k)X_1=e^{kx}$ or $\frac{dX_1}{dx}-kX_1=e^{kx}$

This is a linear equation and the particular solution of the above equation is xe^{kx}. Therefore, particular integral $=\frac{1}{a_0(k-m_0)}xe^{kx}$.

2. Suppose both the roots of the auxiliary equation are k. Then, particular integral

$$=\frac{1}{a_0(D-k)^2}[e^{kx}]$$

$$=\frac{1}{a_0(D-k)}\left[\frac{1}{(D-k)}e^{kx}\right]$$

$$=\frac{1}{a_0(D-k)}[xe^{kx}],$$

Use the result in (1). Now, let $\frac{1}{D-k}(xe^{kx})=X_2$

We have, therefore, $(D-k)X_2=xe^{kx}$ or $\frac{dX_2}{dx}-kX_2=xe^{kx}$ which is a linear equation.

Particular solution is $X_2=\frac{x^2}{2}e^{kx}$ or, particular integral in this case is given by $y=\frac{x^2}{2}e^{kx}$.

Example 26

Solve the differential equation:

$$(D^2+5D+6)y=e^{-4x}$$

Solution

$(D^2+5D+6)y=e^{-4x}$

Auxiliary equation is $m^2+5m+6=0$.

$$(m+3)(m+2)=0.$$

$\therefore$ Roots are $m=-3,-2$.

Complementary function is $c_1e^{-3x} + c_2e^{-2x}$.

$$\text{Particular integral } = \frac{1}{D^2+5D+6}\cdot e^{-4x}$$

$$= \frac{1}{(-4)^2+5(-4)+6}e^{-4x} = \frac{e^{-4x}}{2}$$

∴ General solution is

$$y = c_1e^{-3x} + c_2e^{-2x} + \frac{e^{-4x}}{2}.$$

Example 27

Solve $(3D^2 - D - 10)y = 6e^{2x}$

Solution

Given $(3D^2 - D - 10)y = 6e^{2x}$

Auxiliary equation $3m^2 - m - 10 = 0$

$$m = 2, \frac{-5}{3}.$$

∴ Complementary function is

$$\text{CF} = c_1e^{2x} + c_2e^{\frac{-5}{3}x}$$

$$\text{PI} = \frac{1}{3D^2-D-10}6e^{2x}$$

$$= \frac{1}{(D-2)(3D+5)}6e^{2x}$$

$$= 6\frac{1}{D-2}\left[\frac{1}{3D+5}e^{2x}\right] = 6\frac{1}{(D-2)}\frac{1}{11}e^{2x}1$$

$$= \frac{6}{11}\frac{1}{(D-2)}e^{2x} = \frac{6}{11}xe^{2x}$$

∴ General solution is

$$y = c_1e^{2x} + c_2e^{-\frac{5}{3}x} + \frac{6}{11}xe^{2x}.$$

Example 28

Solve $(D^2 - 12D + 36)y = e^{6x}$

Solution

Given: $(D^2 - 12D + 36)y = e^{6x}$

Auxiliary equation is $m^2 - 12m + 36 = 0$.

$$m^2 - 12m + 36 = 0.$$

$$m = 6, 6$$

Complementary function (CF) $= (c_1 + c_2x)e^{6x}$

$$\text{PI} = \frac{1}{D^2-12D+36}e^{6x} = \frac{1}{(D-6)^2}e^{6x}$$

$$= \frac{x^2}{2!}e^{6x}$$

∴ General solution is $y = \text{CF} + \text{PI}$

$$= (c_1+c_2x)e^{6x} + \frac{x^2}{2!}e^{6x0}$$

Case 2: $F(x) = \sin kx$ or $\cos kx$ where k is a constant.

We have $D\{\sin kx\} = k\cos kx$

$$D^2\{\sin kx\} = -k^2 \sin kx$$

Similarly, $D^2\{\cos kx\} = -k^2\cos kx$

If $g(D^2)$ is a polynomial in D^2,

$$g(D^2)\ \{\sin kx \text{ or } \cos kx\} = g(-k^2)\sin kx \text{ or } g(-k^2)\cos kx.$$

Hence, $\frac{1}{g(D^2)}\sin kx = \frac{1}{g(-k^2)}\sin kx$ and $\frac{1}{g(D^2)}\cos kx$

$= \frac{1}{g(-k^2)}\cos kx$, provided $g(-k^2) \neq 0$.

We shall illustrate the above technique by considering two examples.

Example 29

Find the particular integral of the equation $(D^2 + 16)y = \cos 3x$.

Solution

$$\text{PI} = \frac{1}{D^2+16}\cos 3x = \frac{1}{-(3)^2+16}\cos 3x = \frac{\cos 3x}{7}$$

Example 30

Find the particular integral of the equation $(D^2 - 5D + 6)y = \sin 3x$.

Solution

$$\text{PI} = \frac{1}{D^2-5D+6}\sin 3x$$

$$= \frac{1}{-3^2-5D+6}\sin 3x$$

$$\frac{1}{-5D-3}\sin 3x$$

$$= -\frac{5D-3}{(5D+3)(5D-3)}\sin 3x$$

$$= \frac{(5D-3)}{-(25D^2-9)}\sin 3x = \frac{3-5D}{25\times(-9)-9}\sin 3x$$

$$= \frac{1}{-234}[(3-5D)\sin 3x]$$

$$= \frac{-1}{234}[3\sin 3x - 5D(\sin 3x)]$$

$$= \frac{-1}{234}[3\sin 3x - 15\cos 3x]$$

$$\text{PI} = \frac{15\cos 3x}{234} - \frac{3\sin 3x}{234}$$

NOTE

Suppose $g(-k^2) = 0$.

Let us discuss the technique of finding particular integral in this case.

Suppose we have to find $\frac{1}{D^2+k^2}[\sin kx]$.

By Euler's formula, $e^{ikx} = \cos kx + i \sin kx$ or $\sin kx$ = imaginary part of e^{ikx}.

$$\text{Particular integral} = \frac{1}{D^2+k^2}[\sin kx].$$

$$= \text{Imaginary part of } \frac{1}{D^2+k^2}(e^{ikx})$$

$$= \text{Imaginary part of } \frac{1}{(D-ik)(D+ik)}e^{ikx}$$

$$= \text{Imaginary part of } \frac{1}{D-ik}\left[\frac{e^{ikx}}{2ik}\right]$$

$$= \text{Imaginary part of } \frac{xe^{ikx}}{2ik}$$

$$= \text{Imaginary part of } \frac{x}{2ki}(\cos kx + i\sin kx)$$

$$= \text{Imaginary part of } \frac{x}{2k}(-i\cos kx + \sin kx)$$

$$= \frac{-x\cos kx}{2k}.$$

Similarly, if we have to find $\frac{1}{D^2+k^2}[\cos kx]$.

We write it as the real part of $\frac{1}{D^2+k^2}(e^{ikx})$

$$= \text{Real part of } \frac{1}{(D-ik)(D+ik)}(e^{ikx})$$

$$= \text{Real part of } \frac{x}{2k}(-i\cos kx + \sin kx)$$

$$= \frac{x\sin kx}{2k}.$$

$$\boxed{\begin{aligned} \frac{1}{D^2+k^2}\sin kx &= \frac{-x}{2k}\cos kx \\ \frac{1}{D^2+k^2}\cos kx &= \frac{x}{2k}\sin kx \end{aligned}}$$

Example 31

Solve the equation $(D^2 + 16)y = \sin 4x$.

Solution

Given: $(D^2 + 16)y = \sin 4x$

Auxiliary equation is $m^2 + 16 = 0$

$$m = \pm 4i$$

$\therefore$ CF $= c_1 \cos 4x + c_2 \sin 4x$

$$PI = \frac{1}{D^2+16}\sin 4x.$$

$$= -\frac{x}{2 \cdot 4}\cos 4x$$

$$\left(\because \frac{1}{D^2+k^2}\sin kx = -\frac{x}{2kx}\cos kx\right)$$

$$= -\frac{x}{8}\cos 4x$$

General solution is $y =$ CF + PI

$$= c_1\cos 4x + c_2\sin 4x - \frac{x}{8}\cos 4x.$$

Cauchy's Homogeneous Linear Equations

An equation of the form

$$x^n\frac{d^ny}{dx^n} + p_1x^{n-1}\frac{d^{n-1}y}{dx^{n-1}} + \cdots p_ny = Q(x) \qquad (1)$$

where $p_1, p_2, \ldots, p_n$ are constants is called Cauchy's linear equation. To convert the above equation into linear differential equation with constant co-efficients, we substitute $x = e^z$ or $z = \log x$.

$\therefore \quad z = \log x,$

$$\Rightarrow \quad \frac{dz}{dx} = \frac{1}{x}$$

$$\frac{dy}{dx} = \frac{dy}{dz}\cdot\frac{dz}{dx}$$

$$\frac{dy}{dx} = \frac{dy}{dz}\cdot\frac{1}{x}$$

$$\frac{dy}{dz} = x\frac{dy}{dx}$$

$$\frac{d^2y}{dx^2} = \frac{d}{dx}\left(\frac{dy}{dx}\right) = \frac{d}{dx}\left(\frac{1}{x}\cdot\frac{dy}{dz}\right)$$

$$= \frac{-1}{x^2}\frac{dy}{dz} + \frac{1}{x}\frac{d}{dx}\left(\frac{dy}{dx}\right)$$

$$= \frac{-1}{x^2}\frac{dy}{dz} + \frac{1}{x}\frac{d}{dz}\left(\frac{dy}{dz}\right)\frac{dz}{dx}$$

$$\frac{d^2y}{dx^2} = \frac{-1}{x^2}\frac{dy}{dz} + \frac{1}{x^2}\frac{d^2y}{dz^2}$$

$$x^2\frac{d^2y}{dx^2} = \frac{d^2y}{dz^2} - \frac{dy}{dz} = \frac{d}{dz}\left[\frac{dy}{dz} - y\right]$$

$$\text{Let } \frac{dy}{dz} = \theta y \quad \Rightarrow \quad x\frac{dy}{dx} = \theta y,\ x^2\frac{d^2y}{dx^2} = \theta(\theta-1)y$$

Similarly $x^3 \dfrac{d^3y}{dx^3} = \theta(\theta-1)(\theta-2)y$, and so on.

Then Eq. (1) is changed into a linear differential equation.

We solve this by methods discussed earlier.

Example 32

Solve $x^2 \dfrac{d^2y}{dx^2} + 3x\dfrac{dy}{dx} - 3y = 0$

Solution

Let $x = e^z$ or $z = \log x$

Then $x\dfrac{dy}{dx} = \theta y;\ x^2\dfrac{d^2y}{dx^2} = \theta(\theta-1)y$

The above equation becomes

$$[\theta(\theta-1)+3\theta-3]\,y = 0$$

$$\left\lfloor \theta^2+2\theta-3 \right\rfloor y = 0$$

Auxiliary equation is $m^2 + 2m - 3 = 0$

$\Rightarrow \quad (m+3)(m-1) = 0$

$\Rightarrow \quad m = -3, 1$

$\therefore \quad y = c_1e^{-3z} + c_2e^z$

$\quad\quad = c_1x^{-3} + c_2x.$

Example 33

Solve $x^3\dfrac{d^3y}{dx^3} + 6x^2\dfrac{d^2y}{dx^2} + 8\dfrac{dy}{dx} + 2y = x^2\log x.$

Solution

Put $x = e^z$ or $z = \log x$. Then

$$x\frac{dy}{dx} = \theta y,\ x^2\frac{d^2y}{dx^2} = \theta(\theta-1)y,$$

$$x^3\frac{d^3y}{dx^3} = \theta(\theta-1)(\theta-2)y$$

The given equation becomes

$$[\theta(\theta-1)(\theta-2) + 6\theta(\theta-1) + 8\theta + 2]y = e^{2z}\cdot z$$

$$(\theta^3 + 3\theta^2 + 4\theta + 2)y = e^{2z}\cdot z$$

$$\text{AE} = m^3 + 3m^2 + 4m + 2 = 0$$

$$(m+1)(m^2+2m+2) = 0$$

$$m = -1 \text{ or } m = -1 \pm i$$

$$\text{CF} = C_1e^{-z} + e^{-z}(C_2\cos z + C_3\sin z)$$

$$\text{PI} = \frac{1}{\theta^3+3\theta^2+4\theta+2}\cdot e^{2z}z$$

$$= e^{2z}\frac{1}{(\theta+2)^3+3(\theta+2)^2+4(\theta+2)+2}z$$

$$= e^{2z}\frac{1}{\theta^3+9\theta^2+28\theta+30}\cdot z$$

$$\frac{e^{2z}}{30}\left[1+\frac{\theta^3+9\theta^2+28\theta}{30}\right]^{-1}z$$

$$= \frac{e^{2z}}{30}\left[1-\frac{\theta^3+9\theta^2+28\theta}{30}\right]z$$

$$= \frac{e^{2z}}{30}z - \frac{28}{(30)^2}e^{2z}$$

$$y = \text{CF} + \text{PI}$$

$$= C_1e^{-z} + e^{-z}(C_2\cos z + C_3\sin z) + \frac{e^{2z}}{30}z - \frac{28}{(30)^2}e^{2z}$$

$$= \frac{C_1}{x} + \frac{1}{x}(C_2\cos(\log x) + C_3\sin(\log x)) + \frac{x^2\log x}{30} - \frac{28}{900}x^2$$

Example 34

Solve $(2x-1)\dfrac{d^2y}{dx^2} + 2(2x-1)\dfrac{dy}{dx} - 100y = 32(2x-1)^2$

Solution

Let $2x - 1 = u$

$$2 = \frac{du}{dx}$$

$$\frac{dy}{dx} = \frac{dy}{du}\cdot\frac{du}{dx} = 2\frac{dy}{du}$$

$$\frac{d^2y}{dx^2} = \frac{d}{dx}\left(\frac{dy}{dx}\right) = \frac{d}{dx}\left(2\frac{dy}{du}\right)$$

$$= 2\frac{d}{du}\left(\frac{dy}{du}\right)\cdot\frac{du}{dx} = 2^2\frac{d^2y}{du^2}$$

$\therefore$ The given equation becomes

$$2^2u^2\frac{d^2y}{du^2} + 2\cdot 2u\frac{dy}{du} - 100y = 32u^2$$

$$u^2\frac{d^2y}{du^2} + u\frac{dy}{du} - 25y = 8u^2$$

Let $u = e^z,\ u\dfrac{dy}{dx} = 0;\ x^2\dfrac{d^2y}{dx^2} = \theta(\theta-1)$

$$[\theta(\theta-1)+\theta-25]y = 8e^{2z}$$

$$\left\lfloor \theta^2-25 \right\rfloor y = 8e^{2z}$$

$$\text{AE} = m^2 - 25 = 0 \quad \Rightarrow \quad m = \pm 5$$

$$\text{CF} = C_1e^{-5z} + C_2e^{5z}$$

$$\text{PI} = \frac{1}{\theta^2-25}\cdot 8e^{2z} = 8.e^{2z}\frac{1}{2^2-25} = \frac{-8}{21}e^{2z}$$

$$y = \text{CF} + \text{PI} = C_1e^{5z} + C_2e^{5z} - \frac{8}{21}e^{2z}$$

$$= C_1u^{-5} + C_2u^5 - \frac{8}{21}u \text{ where } u = (2x-1).$$

Method of Variation of Parameters

An equation of the form $\frac{d^2y}{dx^2}+P(x)\frac{dy}{dx}+Q(x)y=R(x)$, where $P(x)$, $Q(x)$ and $R(x)$ are real valued functions of x, is called the linear equation of the second order with variable co-efficients.

The above equation is solved by the method of variation of parameters.

The method is explained below:

1. Find the solution of $\frac{d^2y}{dx^2}+P\frac{dy}{dx}+Qy=0$ and let the solution be $y_c = C_1U(x) + C_2V(x)$
2. Write particular solution as follows:

   $y_p = AU(x) + BV(x)$

   where $A=\int\frac{-VR}{W}dx$

   and $B=\int\frac{UR}{W}dx$

   where $W=\begin{vmatrix} U & V \\ \frac{dU}{dx} & \frac{dV}{dx}\end{vmatrix}=U\frac{dV}{dx}-V\frac{dU}{dx}$ is called the Wronskian of U and V.
3. Then the solution is $y_c + y_p$

   i.e., $y = C_1U(x) + C_2V(x) + AU(x) + BV(x)$

Example 35

Solve the differential equation $(D^2 + 4)y = \sec 2x$ by variation of parameters.

Solution

Given $(D^2 + 4)y = \sec 2x$

$$\text{AE} = m^2 + 4 = 0 \quad \Rightarrow \quad m = \pm 2i$$

$$\text{CF} = y_c = C_1\cos 2x + C_2\sin 2x$$

$$\therefore\ U(x) = \cos 2x;\ V(x) = \sin 2x$$

$$y_p = AU(x) + BV(x)$$

$$W=U\frac{dV}{dx}-V\frac{dU}{dx}$$

$$=\cos 2x\frac{d}{dx}(\sin 2x)-\sin 2x\cdot\frac{d}{dx}(\cos 2x)$$

$$= 2\cos^2 2x + 2\sin^2 2x = 2$$

$$A=-\int\frac{VR}{W}dx=-\int\frac{\sin 2x\cdot\sec 2x}{2}dx$$

$$=-\int\frac{\tan 2x}{2}dx=\frac{1}{4}\log(\cos 2x)$$

$$B=\int\frac{UR}{W}dx=\int\frac{\cos 2x\cdot\sec 2x}{2}dx=\frac{1}{2}x$$

$$\therefore\quad y_p=\frac{1}{4}[\log(\cos 2x)]\cdot\cos 2x+\frac{1}{2}x\sin 2x$$

$$\therefore\quad y=y_c+y_p=C_1\cos 2x+C_2\sin 2x+\frac{1}{4}[\log(\cos 2x)]\cos 2x+\frac{1}{2}x\sin 2x.$$

Example 36

Solve the differential equation $y'' + 4y' + 4y = x^3e^{2x}$

Solution

Given equation

$$(D^2 + 4D + 4)y = x^3 e^{2x}$$

The auxiliary equation is

$$m^2 + 4m + 4 = 0$$

$$(m + 2)^2 = 0 \quad \Rightarrow \quad m = -2$$

$$y_C = C_1 e^{-2x} + C_2xe^{-2x}$$

Let $U(x) = e^{-2x}$ and $V(x) = xe^{-2x}$

$$y_p = AU(x) + BV(x)$$

$$A=-\int\frac{VR}{W}dx,\ B=\int\frac{UR}{W}dx$$

$$W=u\frac{dv}{dx}-v\frac{du}{dx}=e^{-2x}\frac{d}{dx}(xe^{-2x})-xe^{-2x}\frac{d}{dx}(e^{-2x})$$

$$=e^{-2x}\left[e^{-2x}-2xe^{-2x}\right]+2xe^{-2x}e^{-2x}=e^{-4x}$$

$$A=-\int\frac{UR}{\frac{udv}{dx}-\frac{vdu}{dx}}dx=-\int\frac{xe^{-2x}x^3\cdot e^{2x}}{e^{-4x}}dx$$

$$=-\int x^4e^{4x}dx$$

$$=-x^4\frac{e^{4x}}{4}+\frac{x^3e^{4x}}{4}-3\frac{x^2e^{4x}}{16}+6\frac{xe^{4x}}{16\times 4}-6\frac{e^{4x}}{16\times 16}$$

$$B=\int\frac{UR}{W}dx=\int\frac{e^{-2x}x^3e^{2x}}{e^{-4x}}dx=\int x^3e^{4x}dx$$

$$=x^3\frac{e^{4x}}{4}-\frac{3}{4}\left[x^2\frac{e^{4x}}{4}-2\frac{xe^{4x}}{16}+\frac{e^{4x}}{32}\right]$$

$$y = y_c + y_p = AU(X) + BV(x) + C_1e^{-2x} + C_2xe^{-2x}$$

$$=C_1e^{-2x}+C_2xe^{-2x}-x^4\frac{e^{2x}}{4}+\frac{x^3e^{2x}}{4}-\frac{3x^2e^{2x}}{16}$$

$$+\frac{6xe^{2x}}{64}-\frac{3e^{2x}}{3128}+\frac{x^4e^{2x}}{4}-\frac{3x^3e^{2x}}{16}+\frac{3}{32}x^2e^{2x}-\frac{3}{128}xe^{2x}$$

$$=C_1e^{-2x}+C_2xe^{-2x}-\frac{1}{16}x^3e^{2x}-\frac{3}{32}x^2e^{2x}\frac{9}{128}-\frac{xe^{2x}}{128}+\frac{9}{128}e^{2x}$$

Laplace Transforms

Let $f(t)$ be a given function defined for all $t \geq 0$. The Laplace transform of $F(t)$ is denoted by $L\{f(t)\}$ or $L\{f\}$ and is defined as $L\{f(t)\}=\int_0^\infty e^{-st}f(t)dt=F(s)$.

Here L is Laplace transform operator. $f(t)$ is the determining function depends on it. $F(s)$ is the function to be

determined called generating function. e^{-st} is called kernel of the transform.

Some standard results of Laplace transforms are given below.

1. $L\left\{e^{at}\right\}=\dfrac{1}{s-a},\ s>a$

2. $L\left\{e^{-at}\right\}=\dfrac{1}{s+a},$

3. (a) Let k be a constant $L\{k\}=\dfrac{k}{s}$

   (b) $L\{1\}=\dfrac{1}{s},\ s>0$

4. $L\left\{t^n\right\}=\dfrac{n!}{s^{n+1}},\ s>0$

5. $L\{\cos at\}=\dfrac{s}{s^2+a^2},\ s>0$

6. $L\{\sin at\}=\dfrac{a}{s^2+a^2},\ s>0$

7. $L\{\cosh at\}=\dfrac{s}{s^2-a^2},\ s>|a|$

8. $L\{\sinh at\}=\dfrac{a}{s^2-a^2},\ s>|a|$

9. $L\{t^n\cdot e^{at}\}=\dfrac{n!}{(s-a)^{n+1}},\ n\in Z^+$

10. $L\left\{\dfrac{1}{t}f(t)\right\}=\displaystyle\int_s^\infty F(s)\,ds$

Example 37

Find the Laplace transform of the function

$$f(x)=5e^{2x}+7e^{-3x}$$

Solution

$$L\{f(x)\}=L(5e^{2x}+7e^{-3x})$$
$$=5L(e^{2x})+7L(e^{-3x})$$
$$L\{f(t)\}=5\cdot\frac{1}{s-2}+7\cdot\frac{1}{s+3}$$
$$=\frac{5}{s-2}+\frac{7}{s+3}.$$

Example 37

Find $L\{f(t)\}$ where

$$f(t)=0,\ 0<t<1$$
$$=1,\ 1<t<2$$
$$=t,\ t>2.$$

Solution

As the given function is not defined at $t=0$, 1 and 2

$$L\{f(t)\}=\int_0^\infty e^{-st}\cdot F(t)dt$$
$$=\int_0^1 e^{-st}\cdot 0dt+\int_1^2 e^{-st}\cdot 1dt+\int_2^\infty e^{-st}\cdot tdt$$
$$=\int_1^2 e^{-st}dt+\int_2^\infty e^{-st}\cdot tdt$$
$$=\frac{e^{-st}}{-s}]\int_1^2+t\cdot\frac{e^{-st}}{-s}]\int_2^\infty-\int_2^\infty\frac{e^{-st}}{-s}\cdot dt$$
$$=-\frac{e^{-2s}}{s}+\frac{e^{-s}}{s}+\frac{2e^{-2s}}{s}+\frac{1}{s}\frac{e^{-st}}{-s}\Bigg]_2^\infty$$
$$=\frac{-e^{-2s}}{s}+\frac{e^{-s}}{s}+2\frac{e^{-2s}}{s}+\frac{1}{s^2}e^{-2s}$$
$$=\frac{e^{-2s}}{s}\left(1+\frac{1}{s}\right)+\frac{e^{-s}}{s}.$$

Example 39

Find the Laplace transform of the function

$$f(t)=\sin 2t,\ 0<t<\pi\ =\frac{e^{-st}}{-s}\Bigg]_1^2\int+t\cdot\frac{e^{-st}}{-s}\Bigg]_2^\infty\int-\int_2^\infty\frac{e^{-st}}{-s}\cdot dt$$
$$=0,\ t>\pi$$

Solution

$$L\{f(t)\}=\int_0^\infty e^{-st}f(t)dt$$
$$=\int_0^\pi e^{-st}\cdot\sin 2tdt+\int_\pi^\infty e^{-st}\cdot 0dt$$
$$=\int_0^\pi e^{-st}\sin 2tdt$$
$$=\frac{e^{-st}}{s^2+4}[-s\sin 2t-2\cos 2t]]_0^\pi$$
$$=\frac{2(1-e^{-\pi s})}{s^2+4}.$$

Example 40

Find the Laplace transform of the function $f(t)=(\sin t+\cos t)^2$

Solution

$L\{(\sin t+\cos t)^2\}=L\{1+\sin 2t\}=L\{1\}+L\{\sin 2t\}=$
$\dfrac{1}{s}+\dfrac{2}{s^2+4}$

Some important (theorems) properties of Laplace transforms:

1. **Linear property:** Let f and g be any two functions of t and a_1, a_2 are constants, then $L\{a_1f(t) + a_2g(t)\} = a_1L\{f(t)\} + a_2L\{g(t)\}$
2. **First shifting property:** If $L\{f(t)\} = F(s)$ then $L\{e^{at}f(t) = F(s-a)$

   Example: $L\{e^{at}\cos ct\} = \dfrac{s-a}{(s-a)^2+c^2}$
3. **Change of scale property:** If $L\{f(t)\} = F(s)$ then $L\{f(at)\} = \left|\dfrac{1}{a}\right| F\left(\dfrac{s}{a}\right)$

   Example: We know

   $$L\{e^{at}\} = \frac{1}{s-a} = F(s)$$

   Then $L\{be^{at}\} = \dfrac{1}{|b|}F\left(\dfrac{s}{b}\right) = \dfrac{1}{|b|}\dfrac{1}{\frac{s}{b}-a} = \dfrac{1}{|b|}\cdot\dfrac{b}{s-ab}$
4. **Differentiation theorem:** If derivatives of $f(t)$ are continuous and $L\{f(t)\} = F(s)$ then $L\{f'(t)\} = sF(s) - f(0)$ and

   $L\{f^n(t)\} = s^nF(s) - s^{n-1}f(0) - s^{n-3}f''(0)\ldots . f^{n-1}(0) = s^nF(s) - \sum_{r=0}^{n-1} s^{n-1-r}\cdot f^r(0)$ (f^r represents rth derivative of f)
5. **Multiplication theorem:** If $L\{f(t)\} = F(s)$ then $L\{t\cdot f(t)\} = -F'(s)$

   and $L\{t^n\cdot f(t)\} = (-1)^n \dfrac{d^n}{ds^n}[F(s)]$
6. **Division theorem:** If $L\{f(t)\} = F(s)$, then $L\left\{\dfrac{1}{t}f(t)\right\} = \displaystyle\int_s^\infty F(s)ds$
7. **Transforms of integrals (theorem)**

   If $L\{f(t)\} = F(s)$, then $L\{\displaystyle\int_0^t f(u)du\} = \dfrac{1}{s}F(s)$

Example 41

Find the Laplace transform of $te^{-2t}\sin^2 t$.

Solution

$$L\{\sin^2 t\} = \frac{1}{2}L\{1-\cos 2t\} = \frac{1}{2}\left\{\frac{1}{s} - \frac{s}{s^2+4}\right\}$$

$$\therefore \quad L\{t\cdot\sin^2 t\} = (-1)\frac{d}{ds}\left(\frac{1}{2}\left\{\frac{1}{s} - \frac{s}{s^2+4}\right\}\right)$$

(using multiplication theorem)

$$L\{t\sin^2 t\} = \frac{-1}{2}\left(\frac{-1}{s^2} - \frac{(s^2+4)-s(2s)}{(s^2+4)}\right)$$

$$= \frac{1}{2s^2} + \frac{4-s^2}{2(s^2+4)^2}$$

$$L\{e^{-2t}\cdot t\sin^2 t\} = \frac{1}{2(s+2)^2} + \frac{4-(s+2)^2}{2[(s+2)^2+4]^2}$$

(using shifting property)

$$= \frac{1}{2(s+2)^2} - \frac{4s+s^2}{2(s^2+4s+8)^2}.$$

Example 42

Find the Laplace transform of $\dfrac{\sin 2t - \cos 2t}{t}$.

Solution

$$L\{\sin 2t - \cos 2t\} = \frac{2}{s^2+4} - \frac{s}{s^2+4}$$

$$L\{\frac{\sin 2t - \cos 2t}{t}\} = \int_s^\infty \left(\frac{2}{s^2+4} - \frac{s}{s^2+4}\right)ds$$

(using division property)

$$= \frac{2}{2}\left(\tan^{-1}\frac{s}{2}\right)_s^\infty - \frac{1}{2}[\log(s^2+4)]_s^\infty$$

$$= \frac{\pi}{2} - \tan^{-1}\frac{s}{2} + \frac{1}{2}\log(s^2+4)$$

$$= \cot^{-1}\frac{s}{2} + \frac{1}{2}\log(s^2+4).$$

Example 43

Find the Laplace transform of $\displaystyle\int_0^t \frac{\sin 2u}{u}du$.

Solution

$$L\{\sin 2u\} = \frac{2}{s^2+4}$$

and $\left\{\dfrac{\sin 2u}{u}\right\} = \displaystyle\int_s^\infty \frac{2}{s^2+4}ds$

(using division theorem)

$$\frac{2}{2}\tan^{-1}\frac{s}{2}\Big]_s^\infty = \frac{\pi}{2} - \tan^{-1}\frac{s}{2} = \cot^{-1}\frac{s}{2}$$

$$\therefore \quad L\left\{\int_0^t \frac{\sin 2u}{u}du\right\} = \frac{1}{s}\cot^{-1}\frac{s}{2}$$

(using transform of integral theorem).

Inverse Laplace Transforms

If $F(s)$ is the Laplace transform of the function $f(t)$ i.e., $L\{f(t)\} = F(s)$ then $f(t)$ is called the inverse Laplace transform of the function $F(s)$ and is written as $f(t) = L^{-1}\{F(s)\}$. Here L^{-1} is called inverse Laplace transformation operator.

Some important standard results for inverse Laplace transform.

1. $L^{-1}\left(\frac{1}{s}\right) = 1$
2. $L^{-1}\left(\frac{1}{s^{n+1}}\right) = \frac{t^n}{n!}$ where n is a positive integer

   or $L^{-1}\left(\frac{1}{s^n}\right) = \frac{t^{n-1}}{(n-1)!}$
3. $L^{-1}\left(\frac{1}{s-a}\right) = e^{at}$
4. $L^{-1}\left(\frac{1}{(s-a)^n}\right) = \frac{e^{at}t^{n-1}}{(n-1)!}$
5. $L^{-1}\left(\frac{1}{s^2+a^2}\right) = \frac{1}{a}\sin at$
6. $L^{-1}\left(\frac{s}{s^2+a^2}\right) = \cos at$
7. $L^{-1}\left(\frac{s}{s^2-a^2}\right) = \cos hat$
8. $L^{-1}\left(\frac{1}{s^2-a^2}\right) = \frac{1}{a}\sin hat$
9. $L^{-1}\left[\frac{1}{(s-a)^2+b^2}\right] = \frac{1}{b}e^{at}\sin bt$
10. $L^{-1}\left\{\frac{s-a}{(s-a)^2+b^2}\right\} = e^{at}\cos bt$
11. $L^{-1}\left\{\frac{1}{(s^2+a^2)^2}\right\} = \frac{1}{2a^3}$ (sin $at - at$ cos at)
12. $L^{-1}\left\{\frac{s}{(s^2+a^2)^2}\right\} = \frac{1}{2a}t\sin at$

To find the inverse Laplace transform we use the following methods.

1. Using the following properties

   (a) If $L^{-1}\{F(s)\} = f(t)$, than $L^{-1}\{F(s-a)\} = e^{at}f(t)$

   (b) If $L^{-1}\{F(s)\} = f(t)$ and $f(0) = 0$; then

   (i) $L^{-1}\{sF(s)\} = \frac{d}{dt}(f(t))$

   (ii) $L^{-1}\{s^nF(s)\} = \frac{d^n}{dt^n}(f(t))$ if $f(0) = f^1(0) = f^{(n-1)}(0) = 0$

   (c) If $L^{-1}\{F(s)\} = f(t)$, then

   (i) $L^{-1}\left\{\frac{F(s)}{s}\right\} = \int_0^t f(t)dt$

   (ii) $L^{-1}\left\{\frac{F(S)}{s^2}\right\} = \int_0^t\left\{\int_0^t f(t)dt\right\}dt$

2. **Convolution theorem:** Let $f(t)$ and $g(t)$ be two functions and

   $L^{-1}\{F(s)\} = f(t)$ and $L^{-1}\{G(s)\} = f(t)$, then

   $$L^{-1}\{F(s)\cdot G(s)\} = \int_0^t f(x)g(t-x)dx$$

   It is denoted by $f(t) * g(t)$ here $*$ represents convolution.

3. **Unit step function:** This function is defined as $u(t-a) = H(t-a) = \begin{cases} 0 & t < a \\ 1 & t \geq a \end{cases}$ the Laplace transform of $H(t-a) = L\{H(t-a)\}$

   $$= \int_0^\infty e^{-st}u(t-a)dt = \frac{e^{-as}}{s}$$

   NOTE

   This is also called as Heavisides unit function

4. **Periodic function:** If $f(t)$ is a periodic function with period a i.e., $f(t+a) = f(t)$, then

   $$L\{f(t)\} = \frac{\int_0^a e^{-st}f(t)dt}{1-e^{-sa}}$$

5. **Using partial fractions:** If $F(s)$ is of the from $\frac{G(s)}{H(s)}$ where G and H are polynomials in S then break $F(s)$ into partial fractions and manipulate term by term.

6. **Heavisides expansion formula:** Let $F(s)$ and $G(s)$ be two polynomials in 's' where $F(s)$ has degree less than that of $G(s)$. If $G(s)$ has n distinct zeros a_r, $r = 1, 2, 3, \ldots, n$

   i.e., $G(s) = (s-\alpha_1)(s-\alpha_2)\ldots(s-\alpha_n)$, then

   $$L^{-1}\left[\frac{F(S)}{G(S)}\right] = \sum_{r=1}^{n}\frac{F(\alpha_r)}{G'(\alpha_r)}e^{\alpha_r t}$$

Transform of Special Functions

7. **Bessel function:**

   $$J_0(x) = 1 - \frac{x^2}{2} + \frac{x^4}{2^2\cdot 4^2} - \frac{x^6}{2^2\cdot 4^2\cdot 6^2} + \cdots$$

   then $L\{J_0(x)\} = \frac{1}{\sqrt{s^2+1}}$

8. Error function: Error function is denoted as $erf(t)$

$$erf(\sqrt{x}) = \frac{2}{\sqrt{\pi}}\int_0^{\sqrt{x}} e^{-t^2}dt,$$

then $L\{erf(\sqrt{x}) = \frac{1}{s\sqrt{s+1}}$

9. Complex inversion (theorem) formula: If $f(t)$ has a continuous derivative and is of exponential order and $L\{f(t)\} = F(s)$ then $L^{-1}\{F(s)\}$ is given by

$$f(t) = \frac{1}{2\pi i}\int_{r-i\infty}^{r+i\infty} e^{st}F(s)ds, \quad t>0 \text{ and } f(t)=0 \text{ for } t<0$$

NOTES

1. The above result is also known as Bromwich's integral formula
2. The integration is to be performed along a line $s=r$ in the complex plane where $s=x+iy$. The real number r is chosen so that $p=r$ lies to the right of all the singularities.

10. The Gamma function: If $n > 0$, then the gamma function is defined by $\Gamma(n) = \int_0^{\infty} u^{n-1}e^{u}du$

11. Exponential Integral: The exponential integral is denoted by

$$E_i(t) = = \int_t^{\infty}\frac{e^{-u}}{u}du$$

Example 44

Evaluate $L^{-1}\left\{\frac{e^{2-3s}}{(s+2)^{5/2}}\right\}$

Solution

We have

$$L^{-1}\left\{\frac{1}{(s+2)^{5/2}}\right\} = e^{-2t}L^{-1}\left\{\frac{1}{s^{5/2}}\right\}$$

$$= e^{-2t}\frac{t^{\frac{5}{2}-1}}{\Gamma\left(\frac{5}{2}\right)} = \frac{4t^{\frac{3}{2}}e^{-2t}}{3\sqrt{\pi}}$$

$$\therefore \quad L^{-1}\left\{\frac{e^{2-3s}}{(s+2)^{5/2}}\right\} = e^2L^{-1}\left\{\frac{e^{-3s}}{(s+2)^{5/2}}\right\}$$

$$= \frac{4}{3\sqrt{\pi}}(t-3)^{3/2}e^{-2(t-4)}\cdot H(t-3)$$

(when expressed in terms of Heaviside's unit step function)

Example 45

Evaluate $L^{-1}\left\{\frac{3s+7}{s^2-2s-3}\right\}$

Solution

$$L^{-1}\left\{\frac{3(s-1)+10}{(s-1)^2-4}\right\}$$

$$= L^{-1}\left\{\frac{3(s-1)}{(s-1)^2-4} + \frac{10}{(s-1)^2-4}\right\}$$

$$= 3L^{-1}\left(\frac{s-1}{(s-1)^2-4}\right) + 10L^{-1}\left\{\frac{1}{(s-1)^2-4}\right\}$$

$$= 3e^tL^{-1}\left\{\frac{s}{s^2-2^2}\right\} + 10e^tL^{-1}\left\{\frac{1}{s^2-2^2}\right\}.$$

$$= 3e^t\cosh 2t + 5e^t\sinh 2t = 4e^{3t} - e^{-t}$$

Example 46

Evaluate $L^{-1}\left\{\frac{1}{s(s^2+4)^2}\right\}$

Solution

$$L^{-1}\left\{\frac{1}{s^2}\cdot\frac{s}{(s^2+4)^2}\right\}$$

Let $F_1(s) = \frac{1}{s^2}$ and $F_2(s) = \frac{s}{(s^2+4)^2}$ so that

$$L^{-1}\{F_1(s)\} = L^{-1}\left\{\frac{1}{s^2}\right\} = t = f_1(t)$$

and $$L^{-1}\{F_2(s)\} = L^{-1}\left\{\frac{s}{\left(s^2+4\right)^2}\right\}$$

$$= = \frac{t\cdot\sin 2t}{4} = f_2(t) \text{ (say)}$$

$\therefore$ By convolution theorem, we have

$$L^{-1}\left\{\frac{1}{s^2}\cdot\frac{s}{(s^2+4)^2}\right\} = L^{-1}\{F_1(s)\cdot F_2(s)\}$$

$$= \int_0^t f_2(x)f_1(t-x)dx = \int_0^t\left(\frac{x}{4}\sin 2x\right)(t-x)dx$$

$$= \frac{t}{4}\int_0^t x\sin 2x dx - \frac{1}{4}\int_0^t x^2\sin 2x dx$$

$$= \frac{t}{4}\left(-\frac{x}{2}\cos 2x + \frac{1}{4}\sin 2x\right)_0^t$$

$$-\frac{1}{4}\left(-\frac{x^2}{2}\cos 2x + \frac{x}{2}\sin 2x + \frac{1}{4}\cos 2x\right)_0^t$$

$$= \frac{1}{16}(1 - t\sin 2t - \cos 2t)$$

Application of Laplace transforms to solutions of differential equations: Solution of ordinary differential equations with constant co-efficients:

Consider a linear differential equation with constant co-efficients

$(D^n + C_1D^{n-1} + C_2D^{n-2} + \cdots + (C_n)y = F(t)$ (1)

where $F(t)$ is a function of the independednt variable t

Let $y(0) = A_1, y^1(0) = A_2, \ldots, y^{n-1}(0) = A_{n-1}$ (2)

be the given initial or boundary conditions where $A_1, A_2 \ldots A_{n-1}$ are constants.

By taking the Lapalce transform on both sides of (1) and using the conditions (2), we obtain an algebraic equation known as subsidiary equation from which $y(s) = L\{y(t)\}$ is determined. The required solution is obtained by finding the inverse Laplace transform of $y(s)$.

Example 47

Solve $(D + 3)^2 y = 9e^{-3t}$, $y(0) = -1$ and $y'(0) = 9$.

Solution

The given equation can be written as

$$(D^2 + 6D + 9)y = 9e^{-3t}$$

applying Laplace transform we get

$\therefore L\{y''\} + 6L\{y'\} + 9L\{y\} = 9L\{e^{-3t}\}$

or $s^2L\{y\} - sy(0) - y'(0) + 6[sL\{y\} - y(0)] + 9L\{y\} = \dfrac{9}{s+3}$

or $s^2L\{y\} + s - 9 + 6s\,L\{y\} + 6 + 9L\{y\} = \dfrac{9}{s+3}$

$\Rightarrow \quad (s^2 + 6s + 9)\,L\{y\} = \dfrac{9}{s+3} - s + 3$

$$(s+3)^2 L\{y\} = \frac{18-s^2}{s+3}$$

$$L\{y\} = \frac{18-s^2}{(s+3)^3}$$

$$\therefore \quad y = L^{-1}\left\{\frac{9-(s+3)^2+6(s+3)}{(s+3)^3}\right\}$$

$$= e^{-3t}L^{-1}\left\{\frac{9-s^2+6s}{s^3}\right\}$$

$$= e^{-t}\left[L^{-1}\left\{\frac{9}{s^3}\right\} - L^{-1}\left\{\frac{1}{s}\right\} + 6L^{-1}\left\{\frac{1}{s^2}\right\}\right]$$

$$y = e^{-3t}\left(9\cdot\frac{t^2}{2!} - 1 + 6t\right)$$

$\therefore$ The required solution is

$$y = \frac{e^{-3t}}{2}(9t^2 + 12t - 2).$$

Exercises

1. The order and degree of the DE $\dfrac{d^2y}{dx^2} = n^2y$ respectively are

(A) 1, 2 (B) 1, 1
(C) 2, 2 (D) 2, 1

2. The differential equation whose solution is $y = mx + \dfrac{4}{m}$, where 'm' is parameter is

(A) $x\left(\dfrac{dy}{dx}\right)^2 - y\dfrac{dy}{dx} + 4\dfrac{dy}{dx} = 0.$

(B) $\left(\dfrac{dy}{dx}\right)^2 - \dfrac{dy}{dx} + 4 = 0.$

(C) $x\dfrac{dy}{dx} - y + 4 = 0.$

(D) $x\left(\dfrac{dy}{dx}\right)^2 + \dfrac{dy}{dx} + 4 = 0.$

3. If $y = c_1 \log x + c_2 \log c_3 + c_4 e^x + c_5$ is the general solution of a homogeneous linear differential equation, then the order of the equation is

(A) 2 (B) 3
(C) 4 (D) 5

4. Find the solution of $\tan y \sec^2 x\, dx + \tan x \sec^2 y dy = 0$ when $x = y = \dfrac{\pi}{4}$.

(A) $\tan x \tan y = 1$
(B) $\cot x \tan y = 1$
(C) $\tan x \cot y = 1$
(D) $\cot x \cot y = 1$

5. The general solution of the DE, $(e^x + 1)ydy = (y + 1)e^x dx$ is

(A) $\log(e^x + 1) - \log(y + 1) + c = 0$
(B) $\log(e^x + 1) = y - \log(y + 1) + c$
(C) $\log(e^x - 1) + \log(y + 1) + c = 0$
(D) $\log\left(\dfrac{e^x}{y+1}\right) = c$

6. Solve $\dfrac{dy}{dx} = |x|$

(A) $y = \dfrac{x^2}{2} + c$ (B) $y = \dfrac{x^2}{2} + x + c$

(C) $y = \dfrac{-x|x|}{2} + c$ (D) $y = \dfrac{x|x|}{2} + c$

7. Solve $(x+y)^2 \dfrac{dy}{dx} = k^2$.

(A) $y = \tan^{-1}(x+y)$

(B) $y = \sin^{-1}\left(\dfrac{x+y}{k}\right) + c$

(C) $y = k\tan^{-1}\left(\dfrac{x+y}{k}\right) + c$

(D) $y = \cot^{-1}\left(\dfrac{x+y}{k}\right) + c$

8. The general solution of the DE, $\dfrac{dy}{dx} = (3x+y+1)^2$ is

(A) $\sec^{-1}(3x+y+1) = x+c$

(B) $\dfrac{1}{\sqrt{3}}\tan^{-1}\left(\dfrac{3x+y+1}{\sqrt{3}}\right) = x+c$

(C) $\tan^{-1}(3x+y+1) = x+c$

(D) $\dfrac{2}{\sqrt{3}}\tan^{-1}\left(\dfrac{2x-y+1}{\sqrt{3}}\right) = x+c$

9. The general solution of $\dfrac{dy}{dx} = \dfrac{x-y}{x+y}$ is

(A) $x^2 + xy + y^2 = k$ (B) $x^2 - y^2 = k$

(C) $x^2 - 2xy - y^2 = k$ (D) $x^2y^2 = k$

10. The general solution of $\dfrac{dy}{dx} = \dfrac{x-2y+1}{2x-4y+3}$ is

(A) $x^2 - 4xy - 6y = c$

(B) $x^2 - 4xy + 4y^2 + 2x - 6y = c$

(C) $x^2 + 4xy + 4y^2 + 2x - 6y = c$

(D) $x^2 + 4xy - x + 6y = c$

11. The solution of the differential equation $2xy\,dy + (x^2 + y^2 + 1)dx = 0$ is

(A) $x^3 + xy^2 + 3x = c$

(B) $x^3 + 3xy^2 + x = c$

(C) $\dfrac{x^3}{3} + xy^2 + x = c$

(D) $3x^2 + y^2 + 2x = c$

12. The general solution of $ye^{xy}dx + (xe^{xy} + 2y)dy = 0$ is

(A) $e^x + y^2 = c$ (B) $e^{xy} + y^2 = c$

(C) $e^{y^2} + xy = c$ (D) $e^y + xy = c$

13. The solution of the differential equation $(3xy + 2y^2)dx + (x^2 + 2xy)dy = 0$ is

(A) $x^3y + x^2y = c$ (B) $x^3y + x^2y^2 = c$

(C) $x^2y + xy^2 = c$ (D) $2xy(x+y) = c$

14. The integrating factor of the equation $(x^2 + xy - y^2)dx + (xy - x^2)dy = 0$ is

(A) $\dfrac{1}{x^2}$ (B) $\dfrac{1}{x^3}$

(C) x^2 (D) x^3

15. The solution of $(1+x)\dfrac{dy}{dx} - xy = 1 - x$ satisfying the initial conditions at $x = 0$ and $y = 1$ is

(A) $1 + x = y + e^x$ (B) $y(1+x) = x + e^x$

(C) $x + y = e^x$ (D) $x(1+y) = ce^x$

Direction for questions 16 to 17:

Consider the differential equation $\dfrac{dy}{dx} + y\cot x = y^2 \sin x$

16. The integrating factor of the above equation is

(A) $\operatorname{cosec} x$ (B) $\sin x$

(C) $\cos x$ (D) $\sec x$

17. The solution of the above equation when $x = \dfrac{\pi}{2}$, $y = 1$ is

(A) $y\operatorname{cosec} x - x = \dfrac{\pi+2}{2}$

(B) $\dfrac{\operatorname{cosec} x}{y} + x = \dfrac{\pi+2}{2}$

(C) $y\operatorname{cosec} x + x = \dfrac{\pi-2}{2}$

(D) $\dfrac{\operatorname{cosec} x}{y} - x = \dfrac{\pi+2}{2}$

18. The general solution of $x\dfrac{dy}{dx} + y = y^2\log x$ is

(A) $y = \log x + cx$ (B) $y = x + c\log x$

(C) $\dfrac{1}{y} = 1 + cx$ (D) $\dfrac{1}{y} = 1 + cx + \log x$

19. Consider the differential equation $\cos y\dfrac{dy}{dx} + 3x^2 \sin y = x^2$.

To convert the above equation into linear form the substituted variable is

(A) $z = \cos y$ (B) $z = \operatorname{cosec} y$

(C) $z = \sin y$ (D) $z = \sec y$

20. The solution of $(aD^2 + bD + c)\,y = 0$ whose auxiliary equation has its discriminant as zero and has 5 as one of its roots is

(A) $y = c_1e^{5x} + c_2e^{5x}$ (B) $y = c_1e^x + c_2e^x$

(C) $y = (c_1 + c_2x)e^{5x}$ (D) $y = c_1 + c_2x$

21. Find the general solution of $\dfrac{d^3y}{dx^3} + 3\dfrac{d^2y}{dx^2} - 4y = 0$.

(A) $y = (c_1 + c_2x)e^x + c_3e^{-2x}$

(B) $y = (c_1 + c_2x)e^{-2x} + c_3e^x$

(C) $y = (c_1 + c_2x)e^{2x} + c_3e^{-x}$

(D) $y = (c_1 + c_2x)e^{-x} + c_3e^{2x}$

22. The general solution of the differential equation $\frac{d^4x}{dt^4}+13\frac{d^2x}{dt^2}+36x=0$ is ______.

(A) $x=(c_1+c_2t)\cos 2t+(c_3+c_4t)\sin 3t$
(B) $x=c_1e^{2t}+c_2e^{-2t}+c_3e^{3t}+c_4e^{-3t}$
(C) $x=(c_1+c_2t)e^{2t}+(c_3+c_4t)e^{3t}$
(D) $x=c_1\cos 2t+c_2\sin 2t+c_3\cos 3t+c_4\sin 3t$

23. The particular integral of $(D^2-4D+3)y=e^{3x}$ is

(A) $\frac{xe^{3x}}{2}$ (B) e^{3x}
(C) $\frac{1}{2}e^{3x}$ (D) xe^{2x}

24. The particular integral of $(D^3-4D^2)y=6$ is

(A) x^2 (B) $\frac{3}{4}x^2$
(C) $-\frac{3}{4}x^2$ (D) $\frac{-x^2}{4}$

25. The particular of integral of $(D^2+3D+2)y=\cos 2x$ is

(A) $3\sin 2x-\cos 2x$ (B) $\frac{3\sin 2x-\cos 2x}{20}$
(C) $\frac{\cos 2x-3\sin 2x}{10}$ (D) $\frac{\cos x-\sin 2x}{40}$

26. The particular integral of $(D^2-D)\,y=x^2-2x+4$ is

(A) x^3-8x+4 (B) $-x^3+4x-4$
(C) $\frac{x^3}{3}+8x-4$ (D) $\frac{-x^3}{3}-4x-4$

27. If $y_1=e^{2x}$ and $y_2=xe^{2x}$ are two solutions of a second order linear differential equation, then the Wronskian W of y_1 and y_2 is ______.

(A) e^{4x} (B) xe^{4x}
(C) $2e^{4x}$ (D) $2xe^{4x}$

28. The complementary function of the differential equation $\frac{d^2y}{dx^2}+5\frac{dy}{dx}+6y=5e^{3x}$ is $y_c=c_1e^{-2x}+c_2e^{-3x}$ using the method of variation of parameters, its particular is found to be $y_p=A(x)\,e^{-2x}+B(x)\,e^{-3x}$. Then $A(x)=$

(A) $5e^{5x}$ (B) e^{5x}
(C) $\frac{1}{5}e^{-5x}$ (D) e^{-5x}

29. The solution of the DE $(D^2+1)y=0$ given $x=0$, $y=2$ and $x=\frac{\pi}{2}$, $y=-2$ is

(A) $y=\sin x-\cos x$ (B) $y=2(\cos x-\sin x)$
(C) $y=2\cos x\sin x$ (D) $y=2(e^x+e^{-x})$

30. Solve the equation

$$3x^2\frac{d^2}{dx^2}+x\frac{dy}{dx}-y=x^2.$$

(A) $y=C_1x^{-3}+C_2x^{-1}+x^3/7$
(B) $y=C_1x^3+C_2x+x^2/7$
(C) $y=C_1x^{1/3}+C_2x^{-1}+x/7$
(D) $y=C_1x^{-1/3}+C_2x+x^2/7$

31. Laplace transform of $2\sin^2 2t=$ ______.

(A) $\frac{1}{s}+\frac{1}{s^2+16}$ (B) $\frac{s}{s^2+16}$
(C) $\frac{1}{s}-\frac{1}{s^2+16}$ (D) $\frac{1}{s}+\frac{1}{s^2+16}$

32. The Laplace transform of $(t+1)^3$ is ______.

(A) $\frac{6-6s+3s^2-s^3}{s^3}$ (B) $\frac{6+6s+3s^2+s^3}{s}$
(C) $\frac{6(1+s+s^2+s^3)}{s^4}$ (D) $\frac{6+6s+3s^2+s^3}{s^4}$

33. The value of $L\,\{\sinh 3t\cos 3t\}$ ______.

(A) $\frac{s^2+18}{s^4+81}$ (B) $\frac{s^2+18}{s^4+324}$
(C) $\frac{3(s^2-18)}{s^4+324}$ (D) $\frac{3(s^2+18)}{s^4-324}$

34. The value of $L\{t^2\cos 3t\}$ is ______.

(A) $\frac{s^2-27}{(s^2+9)^4}$ (B) $\frac{2s(s^2-27)}{(s^2+9)^3}$
(C) $\frac{s^3-27}{(s^2+9)^4}$ (D) $\frac{s(s^3-27)}{(s^2+9)^3}$

35. Laplace transform of $\frac{\cos 4t}{t}$ ______.

(A) $\frac{64}{s^2+16}$ (B) $\frac{16}{(s^2+16)^2}$
(C) $\frac{8}{(s^2+16)^2}$ (D) Does not exist

36. The Laplace transform of the function defined by $f(t)=\begin{matrix}2, & 0<t<1\\ 1, & t>1\end{matrix}$ is ______.

(A) $\frac{2-e^{-s}}{s}$ (B) $\frac{2-e^{-s}}{2}$
(C) $\frac{2+e^{-s}}{s}$ (D) $\frac{2+e^{-s}}{2}$

37. If $f(t) = t;\ 0 < t < 3$ and $f(t+3) = f(t)$, then $L\{f(t)\}$ is

(A) $\dfrac{1}{s^2(1-e^{-3s})}[1+e^{3s}+e^{-3s}]$

(B) $\dfrac{1}{s(1-e^{-3s})}[1-e^{-3s}+se^{-3s}]$

(C) $\dfrac{1}{s^2(1-e^{-3s})}[1-e^{-3s}-3se^{-3s}]$

(D) $\dfrac{1}{s(1-e^{-3s})}[1-e^{-3s}-se^{-3s}]$

38. The value of $\int_0^\infty \dfrac{e^{-4t}-e^{-8t}}{t}\,dts$ is _______.

(A) log 2 (B) log 4
(C) log 8 (D) log 6

39. $\int_0^\infty t\cdot e^{-2t}\sin 3t dt$ = _______.

(A) $\dfrac{5}{169}$ (B) $\dfrac{10}{169}$

(C) $\dfrac{6}{169}$ (D) $\dfrac{12}{169}$

40. The inverse Laplace transform of $\left(\dfrac{1}{S^{9/2}}\right)$ is _______.

(A) $\dfrac{16}{105}\sqrt{\dfrac{t^7}{\pi}}$ (B) $\dfrac{8}{15}\sqrt{\dfrac{t^5}{\pi}}$

(C) $\dfrac{16}{35}\sqrt{\dfrac{t}{\pi}}$ (D) $\dfrac{8}{105}\sqrt{\dfrac{t^7}{\pi}}$

41. The value of $L^{-1}\left\{\dfrac{8}{3s-2}-\dfrac{4+2s}{16s^2-25}\right\}$ is _______.

(A) $\dfrac{8}{3}\sin h\dfrac{5t}{4}-\cos h\dfrac{5t}{4}$

(B) $\dfrac{8}{3}e^{2/3t}-\sin h\dfrac{5t}{4}-\cos h\dfrac{5t}{4}$

(C) $\dfrac{8}{3}e^{2/3t}-\dfrac{1}{5}\sin h\dfrac{5t}{4}-\dfrac{1}{8}\cos h\dfrac{5t}{4}$

(D) None of these

42. The inverse Laplace transform of $\dfrac{1}{s^2-8s+20}$ is _______.

(A) $\dfrac{e^{2t}}{2}\sin 2t$ (B) $\dfrac{e^{4t}}{2}\sin 2t$

(C) $e^{4t}\sin 2t$ (D) $e^{4t}\sin 4t$

43. The inverse Laplace transform of $\dfrac{1}{s^3(s^2+4)}$ is

(A) $\dfrac{1}{16}(2t^2+\cos 2t-1)$ (B) $2t^2-\cos 2t-1$

(C) $\dfrac{1}{16}(1-\cos 2t-4t^2)$ (D) $\dfrac{1}{8}(2+\cos 2t-4t^2)$

44. The inverse Laplace transform of $\dfrac{e^{-3s}}{(s-4)^5}$ when expressed in terms of Heaviside unit step function is _______.

(A) $\dfrac{1}{16}t^4e^{4(t-3)}H(t-3)$

(B) $\dfrac{1}{24}(t-3)^4e^{4t}H(t-3)$

(C) $\dfrac{1}{24}(t-3)^4e^{4(t-3)}H(t-3)$

(D) $\dfrac{1}{24}t^4e^{4t}H(t-3)$

45. The value of $L^{-1}\left\{\log\dfrac{s-4}{s+3}\right\}$ is

(A) $e^{4t}-e^{-3t}$ (B) $\dfrac{1}{t}(e^{4t}-e^{-3t})$

(C) $\dfrac{1}{t}(e^{-3t}-e^{4t})$ (D) $t(e^{-3t}-e^{4t})$

46. Using convolution theorem, the value of $\int_0^t \sin x\cos(t-x)dx$ is _______.

(A) $\dfrac{1}{2}\cos t$ (B) $\dfrac{t}{2}\sin t$

(C) $t\sin\dfrac{t}{2}$ (D) $t\cos\dfrac{t}{2}$

47. Solve $(D^4-16)y = 1,\ y = y' = y'' = y''' = 0$.

(A) $y=\dfrac{-1}{16}-[\cos h\,2t+\sin h\,2t]$

(B) $y=\dfrac{1}{32}(1-\cos h\,2t+\cos 2t)$

(C) $y=\dfrac{-1}{16}+\dfrac{1}{32}(\cos h\,2t-\sin t)$

(D) $y=\dfrac{-1}{16}+\dfrac{1}{32}(\cos h\,2t+\cos 2t)$

48. Solve $(D^2 - 5D + 6)y = 1 - e^{-2t}$, $y = 1$, $y' = 0$ when $t = 0$.

(A) $y = \frac{1}{20}e^{-2t} + \frac{11}{4}e^{2t} - \frac{59}{30}e^{3t}$

(B) $y = \frac{1}{6} - \frac{1}{20}e^{-2t} + \frac{11}{4}e^{2t} - \frac{28}{15}e^{3t}$

(C) $y = \frac{1}{6} - \frac{1}{20}e^{2t} + \frac{11}{4}e^{-2t} + \frac{59}{30}e^{3t}$

(D) $y = \frac{1}{6} - \frac{1}{20}e^{2t} - \frac{11}{4}e^{-2t} + \frac{59}{30}e^{3t}$

Previous Years' Questions

1. The solution for the differential equation $\frac{dy}{dx} = x^2 y$ with the condition that $y = 1$ at $x = 0$ is **[GATE, 2007]**

(A) $y = e^{\frac{1}{2x}}$ (B) $\ln(y) = \frac{x^3}{3} + 4$

(C) $\ln(y) = \frac{x^2}{2}$ (D) $y = e^{\frac{x^3}{3}}$

2. The general solution of $\frac{d^2y}{dx^2} + y = 0$ is **[GATE, 2008]**

(A) $y = P\cos x + Q\sin x$

(B) $y = P\cos x$

(C) $y = P\sin x$

(D) $y = P\sin^2 x$

3. Solution of $\frac{dy}{dx} = -\frac{x}{y}$ at $x = 1$ and $y = \sqrt{3}$ is **[GATE, 2008]**

(A) $x - y^2 = -2$ (B) $x + y^2 = 4$

(C) $x^2 - y^2 = -2$ (D) $x^2 + y^2 = 4$

4. Solution of the differential equation $3y\frac{dy}{dx} + 2x = 0$ represents a family of **[GATE, 2009]**

(A) ellipses (B) circles

(C) parabolas (D) hyperbolas

5. Laplace transform for the function $f(x) = \cosh(ax)$ is **[GATE, 2009]**

(A) $\frac{a}{s^2 - a^2}$ (B) $\frac{s}{s^2 - a^2}$

(C) $\frac{a}{s^2 + a^2}$ (D) $\frac{s}{s^2 + a^2}$

6. The order and degree of the differential equation $\frac{d^3y}{dx^3} + 4\sqrt{\left(\frac{dy}{dx}\right)^3 + y^2} = 0$ are respectively **[GATE, 2010]**

(A) 3 and 2 (B) 2 and 3

(C) 3 and 3 (D) 3 and 1

7. The solution to the ordinary differential equation $\frac{d^2y}{dx^2} + \frac{dy}{dx} - 6y = 0$ is **[GATE, 2010]**

(A) $y = c_1e^{x} + c_2e^{-2x}$

(B) $y = c_1e^{3x} + c_2e^{2x}$

(C) $y = c_1e^{-3x} + c_2e^{2x}$

(D) $y = c_1e^{-3x} + c_2e^{-2x}$

8. The solution of the differential equation $\frac{dy}{dx} + \frac{y}{x} = x$, with the condition that $y = 1$ at $x = 1$, is **[GATE, 2011]**

(A) $y = \frac{2}{3x^2} + \frac{x}{3}$ (B) $y = \frac{x}{2} + \frac{1}{2x}$

(C) $y = \frac{2}{3} + \frac{x}{3}$ (D) $y = \frac{2}{3x} + \frac{x^2}{3}$

9. The solution of the ordinary differential equation $\frac{dy}{dx} + 2y = 0$ for the boundary condition, $y = 5$ at $x = 1$ is **[GATE, 2012]**

(A) $y = e^{-2x}$

(B) $y = 2e^{-2x}$

(C) $y = 10.95e^{-2x}$

(D) $y = 36.95e^{-2x}$

10. The integrating factor for the differential equation $\frac{dp}{dt} + k_2P = k_1L_0e^{kt}$ is **[GATE, 2014]**

(A) e^{-k_1t} (B) e^{-k_2t}

(C) e^{-k_1t} (D) e^{k_2t}

11. Consider the following differential equation:

$$x(ydx + xdy)\cos\frac{y}{x} = y(xdy - ydx)\sin\frac{y}{x}$$

Which of the following is the solution of the above equation (c is an arbitrary constant)? **[GATE, 2015]**

(A) $\frac{x}{y}\cos\frac{y}{x} = C$ (B) $\frac{x}{y}\sin\frac{y}{x} = C$

(C) $xy\cos\frac{y}{x} = C$ (D) $xy\sin\frac{y}{x} = C$

12. Consider the following second order linear differential equation $\frac{d^2y}{dx^2} = -12x^2 + 24x - 20$.

The boundary conditions are: at $x = 0$, $y = 5$ and at $x = 2$, $y = 21$

The value of y at $x = 1$ is ________. **[GATE, 2015]**

13. The respective expressions for complimentary function and particular integral part of the solution of the differential equation are **[GATE, 2016]**

(A) $\left[c_1 + c_2x + c_3\sin\sqrt{3x} + c_4\cos\sqrt{3x}\right]$ and $\left[3x^4 - 12x^2 + c\right]$

(B) $\left[c_2x + c_3\sin\sqrt{3x} + c_4\cos\sqrt{3x}\right]$ and $\left[5x^4 - 12x^2 + c\right]$

(C) $\left[c_1 + c_3\sin\sqrt{3x} + c_4\cos\sqrt{3x}\right]$ and $\left[3x^4 - 12x^2 + c\right]$

(D) $\left[c_1 + c_2x + c_3\sin\sqrt{3x} + c_4\cos\sqrt{3x}\right]$ and $\left[5x^4 - 12x^2 + c\right]$

Chapter 3

Partial Differential Equations

CHAPTER HIGHLIGHTS

- *Fourier series*
- *Heat equation*

Fourier Series

Periodic Function A function $f(x)$ is said to be periodic if $f(x + a) = f(x)$ for all x. The least value of a is called the period of $f(x)$.

Example: $\sin x$, $\cos x$ are periodic functions with period 2π.

NOTES

1. $f(x)$ and $g(x)$ are periodic functions with period k then $af(x) + bg(x)$ is also a periodic function with period k.
2. If $f(x)$ is a periodic function with period k, then the period of $f(ax)$ is $\dfrac{k}{a}$.
3. If the periods of functions $f(x)$, $g(x)$ and $h(x)$ are a, b, c, respectively, then the period of $f(x) + g(x) + h(x)$ is the lcm of a, b and c.

Euler's Formula for the Fourier Coefficients

Let $f(x)$ is a periodic function whose period is 2π and is integrable over a period. Then $f(x)$ can be represented by trigonometric series.

$$f(x) = \frac{a_0}{2} + \int_{n=1}^{\infty} (a_n \cos nx + b_n \sin nx)$$

where a_0 a_n, b_n are called Fourier coefficients and these are obtained by

$$a_0 = \frac{1}{\pi}\int_{-\pi}^{\pi} f(x)dx,$$

$$a_n = \frac{1}{\pi}\int_{-\pi}^{\pi} f(x)\cos nx dx \text{ for } n = 1, 2, 3, \ldots$$

$$b_n = \frac{1}{\pi}\int_{-\pi}^{\pi} f(x)\sin nx dx \text{ for } n = 1, 2, 3, \ldots$$

SOLVED EXAMPLES

Example 1

Obtain the Fourier series expansion of $f(x) = e^x$ in $(0, 2\pi)$.

Solution

$$a_0 = \frac{1}{\pi}\int_{0}^{2\pi} f(x)dx$$

$$= \frac{1}{\pi}\int_{0}^{2\pi} e^x dx$$

$$= \frac{1}{\pi} e^x \Big]_0^{2\pi} = \frac{1}{\pi}(e^{2\pi} - 1) \quad (1)$$

$$a_n = \frac{1}{\pi}\int_0^{2\pi} f(x)\cos nx dx$$
$$= \frac{1}{\pi}\int_0^{2\pi} e^x \cos nx dx$$

we know that $\int e^{ax}\cos bx dx$

$$= \frac{e^{ax}}{a^2+b^2}[a\cos bx + b\sin bx]$$

$$\therefore a_n = \frac{1}{\pi}\left[\frac{e^x}{1+n^2}(\cos nx + n\sin nx)\right]_0^{2\pi}$$
$$= \frac{1}{\pi}\left[\frac{e^{2\pi}}{1+n^2}(\cos 2\pi n) - \frac{1}{1+n^2}\right]$$

$$b_n = \frac{1}{\pi}\int_0^{2\pi} f(x)\sin nx dx = \frac{1}{\pi}\int_0^{2\pi} e^x \sin nx dx$$
$$= \frac{1}{\pi}\frac{e^x(\sin nx - n\cos nx]_0^{2\pi}}{1+n^2}$$
$$\left(\because \int e^{ax}\sin bx dx = \frac{e^{ax}}{a^2+b^2}\right)(a\sin bx - b\cos bx))$$
$$= \frac{1}{\pi}\frac{1}{1+n^2}(n - e^{2\pi} n\cos 2\pi n)$$
$$= \frac{n}{\pi(1+n^2)}(1-e^{2\pi}\cos 2\pi n)$$

$$\therefore f(x) = \frac{a_0}{2} + \sum_{n=1}^{\infty}(a_n\cos nx + b_n \sin nx)$$
$$= \frac{1}{2\pi}(e^{2\pi}-1) + \sum_{n=1}^{\infty}$$
$$\left[\frac{1}{\pi}\frac{1}{1+n^2}(e^{2\pi}\cos 2\pi n - 1) + \frac{n}{\pi(1+n^2)}(1-e^{2\pi}\cos 2\pi n)\right]$$

Even and Odd Functions

Even function: A function $f(x)$ is said to be even if $f(-x) = f(x)$ for all x.

Example: x^2, $\cos x$

Odd function: A function $f(x)$ is said to be odd if $f(-x) = -f(x)$ for all x

Example: x^3, $\sin x$

NOTES

1. The sum of two odd functions is odd.
2. The product of an odd function and an even function is odd.
3. Product of two odd functions is even.

Fourier Series for Odd Function and Even Function

Case 1: Let $f(x)$ is an even function in $(-\pi, \pi)$. Then the Fourier series of the even function contains only cosine terms and is known as Fourier cosine series and it is

$$f(x) = \frac{a_0}{2} + \sum_{n=1}^{\infty} a_n\cos nx, \quad \text{where}$$
$$a_0 = \frac{2}{\pi}\int_0^{\pi} f(x)dx, a_n = \frac{2}{\pi}\int_0^{\pi} f(x)\cos nx dx$$

Case 2: If $f(x)$ is an odd function, then the Fourier series of an odd function contains only sine terms, and is known as Fourier sine series.

$$f(x) = \sum_{n=1}^{\infty} b_n \sin nx,$$

where $$b_n = \frac{2}{\pi}\int_0^{\pi} f(x)\sin nx dx$$

Example 2

Expand the function $f(x) = \frac{\pi^2}{24} - \frac{x^2}{8}$ in Fourier series in the interval $(-\pi, \pi)$.

Solution

$$f(x) = \frac{\pi^2}{24} - \frac{x^2}{8}$$
$$f(-x) = \frac{\pi^2}{24} - \frac{(-x)^2}{8} = \frac{\pi^2}{24} - \frac{x^2}{8} = f(x)$$

$\therefore f(x)$ is an even function.

$$f(x) = \frac{a_0}{2} + \sum_{n=1}^{\infty} a_n\cos nx$$
$$a_0 = \frac{2}{\pi}\int_0^{\pi} f(x)dx = \frac{2}{2\pi}\int_0^{\pi}\frac{\pi^2}{24} - \frac{x^2}{8}dx$$
$$= \frac{1}{\pi}\left(\frac{\pi^2 x}{24} - \frac{x^3}{24}\right)\Big]_0^{\pi} = 0$$
$$a_n = \frac{2}{\pi}\int_0^{\pi} f(x)\cos nx dx\, s$$
$$= \frac{2}{\pi}\int_0^{\pi}\left(\frac{\pi^2}{24} - \frac{x^2}{8}\right)\cos nx dx$$
$$= \frac{2}{\pi}\left\{\begin{array}{l}\left(\frac{\pi^2}{24} - \frac{x^2}{8}\right) - \left(\frac{\sin nx}{n}\right)\Big]_0^{\pi} \\ -\frac{1}{8}\int_0^{\pi}\left(\frac{-(-2x)\sin nx}{n}\right)dx\end{array}\right\}$$

$$= -\frac{2}{\pi}\int_0^{\pi}\frac{2x}{8}\frac{\sin nx}{n}dx$$

$$= \frac{2}{\pi}\left[\frac{2}{8n}\left\{\left[\frac{-x\cos nx}{n}\right]_0^{\pi} - \int_0^{\pi}\frac{\cos nx}{n}dx\right\}\right]$$

$$= \frac{-4}{8\pi n^2}(\pi\cos n\pi)$$

$$= \frac{-1}{2n^2}(\text{con}\, n\pi), n = 1, 2, 3, \ldots$$

$$= \frac{(-1)^{n+1}}{2n^2}$$

$$\therefore f(x) = \sum_{n=1}^{\infty}\frac{(-1)^{n+1}}{2n^2}\cos nx$$

$$= \frac{1}{2}\left[\cos x - \frac{\cos 2x}{2^2} + \frac{\cos 3x}{3^2} - \cdots\right].$$

Function of Any Period (P = 2L)

If the function $f(x)$ is of period $P = 2L$ has a Fourier series, then $f(x)$ can be expressed as,

$$f(x) = \frac{a_0}{2} + \sum_{n=1}^{\infty}\left(a_n\cos\frac{n\pi}{L}x + b_n\sin\frac{n\pi}{L}x\right)$$

where the Fourier coefficients are as follows:

$$a_0 = \frac{1}{L}\int_{-L}^{L}f(x)dx$$

$$a_n = \frac{1}{L}\int_{-L}^{L}f(x)\cos\frac{n\pi}{L}xdx$$

$$b_n = \frac{1}{L}\int_{-L}^{L}f(x)\sin\frac{n\pi}{L}xdx$$

Fourier Series of Even and Odd Functions Let $f(x)$ be an even function in (–L, L), then the Fourier series is

$$f(x) = \frac{a_0}{2} + \sum_{n=1}^{\infty}a_n\cos\frac{n\pi x}{L}$$

Where $$a_0 = \frac{1}{L}\int_{-L}^{L}f(x)dx = \frac{2}{L}\int_0^{L}f(x)dx$$

$$a_n = \frac{2}{L}\int_{-L}^{L}f(x)\cos\frac{n\pi x}{L}dx$$

Let $f(x)$ be an odd function in (–L, L) then Fourier series is

$$f(x) = \sum_{n=1}^{\infty}b_n\sin\frac{n\pi x}{L}$$

where $b_n = \frac{2}{L}\int_0^{L}f(x)\sin\frac{n\pi}{L}dx.$

Half Range Expansion

In the pervious examples we define the function $f(x)$ with the period $2L$.

Suppose $f(x)$ is not periodic function and defined in half the interval say (0, L) of lengths L. such expansions are known as half range expansions or half range Fourier series. In particular a half range expansion containing only cosine series of $f(x)$ in the interval (0, L) in a similar way half range Fourier sine series contains only sine terms. To find the Fourier series of $f(x)$ which is neither periodic nor even nor odd we obtain Fourier cosine series and Fourier sine series of $f(x)$ as follows. We define a function $g(x)$ such that $g(x) = f(x)$ in the interval from (0, L) and $g(x)$ is an even function in (–L, L) and is periodic with period $2L$ and g(x) is obtained by previous methods which are discussed earlier. Similarly we can obtain a fourier sine series as follows. Assume $f(x) = h(x)$ in (0, L) and $h(x)$ is an odd function in the interval (–L, L) with period $2L$ and evaluate $h(x)$ by pervious methods which are discussed earlier.

Example 3

If $f(x) = 1 - x$ in $0 < x < 1$ find Fourier cosine series and Fourier sine series.

Solution

Given $f(x) = 1 - x$ in $0 < x < 1$ since $f(x)$ is neither periodic nor even nor odd function.

Let us assume $g(x) = f(x) = 1 - x$ in $0 < x < 1$

$= 1 + x$ in $-1 < x < 0$

$\therefore g(x)$ is even function in (–1, 1)

$$\therefore g(x) = \frac{a_0}{2} + \sum_{n=1}^{\infty}a_n\cos\frac{n\pi x}{L}$$

$$a_0 = \frac{2}{L}\int_0^{L}f(x)dx = 2\int_0^{1}f(x)dx \text{ (here } L = 1)$$

$$= 2\int_0^{1}(1-x)dx = 2\left[x - \frac{x^2}{2}\right]_0^1 = \frac{1}{2}\times 2 = 1$$

$$a_n = \frac{2}{L}\int_0^{L}f(x)\cos\frac{n\pi x}{L}dx$$

$$= 2\int_0^{1}(1-x)\cos n\pi x dx$$

$$= 2\left[(1-x)\frac{\sin n\pi x}{n\pi}\bigg|_0^1 - \int_0^{1}(-1)\frac{\sin n\pi xx}{n\pi}\right]$$

$$= 2\left[(1-x)\frac{\sin n\pi x}{n\pi}\Big|_0^1 - \int_0^1 (-1)\frac{\sin n\pi x}{n\pi}\,dx \right]$$

$$= -2\frac{\cos n\pi x}{n^2\pi^2}\Big]_0^1 = 2\left(\frac{1}{n^2\pi^2} - \frac{\cos n\pi}{n^2\pi^2}\right)$$

$$= \frac{2}{n^2\pi^2}(1-(-1)^n).$$

∴ Fourier cosine series is

$$g(x) = \frac{1}{2} + \frac{2}{\pi^2}\sum_{n=1}^{\infty}\frac{1-(-1)^2}{n^2}\cos n\pi x$$

Fourier sine series in (0, 1)

$$\therefore\ h(x) = f(x) = 1 - x;\ 0 < x < 1$$
$$= -(1 + x);\ -1 < x < 0$$

$h(x)$ is an odd function

$$\therefore h(x) = \sum_{n=1}^{\infty} b_n \sin\frac{n\pi x}{L}$$

$$b_n = \frac{2}{L}\int_0^L f(x)\sin\frac{n\pi x}{L}\,dx$$

$$= 2\int_0^1 (1-x)\sin n\pi x dx$$

$$= 2(1-x)\frac{\cos n\pi x}{-n\pi}\Big]_0^1 - 2\int_0^1 \frac{\cos n\pi x}{n\pi}\,dx = 2/n\pi$$

$$\therefore h(x) = 2/\pi \int_{n=1}^{\infty}\frac{1}{n}\sin(n\pi x)$$

Partial Differential Equations (PDE)

An equation involving two or more independent variables and a dependent variable and its partial derivatives is called a partial differential equation.

$$\therefore\quad f\left(x, y, z, \frac{\partial z}{\partial z}, \frac{\partial z}{\partial y}\ldots\right) = 0.$$

Standard Notation

$$\frac{\partial z}{\partial x} = p = z_x,\quad \frac{\partial z}{\partial y} = q = z_y$$

$$\frac{\partial^2 z}{\partial x^2} = r = z_{xx},\quad \frac{\partial^2 z}{\partial y^2} = t = z_{yy}$$

$$\frac{\partial^2 z}{\partial x \partial y} = z_{xy} = s$$

Formation of Partial Differential Equations

Partial differential equation can be formed by two ways.

1. By eliminating arbitrary constants.
2. By eliminating arbitrary functions.

Formation of PDE by Eliminating Arbitrary Constants

Consider a function $f(x, y, z, a, b) = 0$
where a, b, are arbitrary constants.

Differentiating this partially wrt, x and y eliminate a, b from these equations we get an equation $f(x, y, z, p, q) = 0$, which is partial differential equation of first order.

Example 4

$z = ax^2 - by^2$, a, b are arbitrary constants.

Solution

Given

$$z = ax^2 - by^2 \tag{1}$$

Differentiating z partially wrt x,

$$\frac{\partial z}{\partial x} = 2ax \quad\Rightarrow\quad p = 2ax \quad\Rightarrow\quad a = \frac{p}{2x}$$

Differentiate z partially wrt y,

$$\frac{\partial z}{\partial y} = 2by\text{, i.e., } q = -2by$$

$$\Rightarrow\quad b = \frac{-q}{2y}$$

Substituting the values of a and b in Eq. (1), we get

$$z = \frac{p}{2x}x^2 + \frac{q}{2y},\ y^2$$

$2z = px + qy$ which is a partial differential equation of order 1.

Formation of PDE by Eliminating Arbitrary Function

Consider $z = f(u)$ (1)

f is an arbitrary function in u and u is function in x, y, z.

Now differentiate Eq. (1) wrt x, y partially by chain rule we get

$$\frac{\partial z}{\partial x} = \frac{\partial f}{\partial u}\cdot\frac{\partial u}{\partial x} + \frac{\partial f}{\partial u}\cdot\frac{\partial u}{\partial z}\cdot\frac{\partial z}{\partial x} \tag{2}$$

$$\frac{\partial z}{\partial y} = \frac{\partial f}{\partial u}\cdot\frac{\partial u}{\partial y} + \frac{\partial f}{\partial u}\cdot\frac{\partial u}{\partial z}\cdot\frac{\partial z}{\partial y} \tag{3}$$

by eliminating the arbitrary functions from Eqs. (1), (2), (3) we get a PDE of first order.

Formation of PDE when Two Arbitrary Functions are Involved

When two arbitrary functions are involved, we differentiate the given equation two times and eliminate the two arbitrary functions from the equation obtained.

Example 5

Form the partial differential equation of

$$z = \frac{f(x)}{g(y)}$$

Solution

Given $$z = \frac{f(x)}{g(y)}$$

$$p = z_x = \frac{f'(x)}{g(y)} \tag{1}$$

$$q = z_y = \frac{-f(x)}{[g(y)]^2} \cdot g'(y) \tag{2}$$

$$s = \frac{\partial^2 z}{\partial x \partial y} = \frac{-f'(x)}{[g(y)]^2} \cdot g'(y) \tag{3}$$

$$\text{Eq.(1)} \times \text{Eq.(2)} = pq = \frac{f'(x)}{g(y)} \cdot \left(\frac{-f(x) \cdot g'(y)}{[g(y)]^2} \right) = -s \cdot z$$

$$\because \quad pq + sz = 0$$

Forming PDE by the Elimination of Arbitrary Function of Specific Functions

Consider $f(u, v) = 0$

Where u, v are the functions in x, y, z.

Differentiate the above equation wrt x and y by chain rule and eliminate the $\frac{\partial F}{\partial u}$, $\frac{\partial F}{\partial v}$ and convert them in the form $Pp + Qq = R$, which is a first order linear PDE where P, Q, R are functions of x, y, z.

Linear Equation of First Order

Linear equation of first order is $Pp + Qq = R$. This is also called Lagrange's equation, where P, Q, R are the functions in x, y, and z.

Procedure For solving Lagrange's Equations

Take the auxiliary equation as

$$\frac{dx}{P} = \frac{dy}{Q} = \frac{dz}{R}.$$

Solve any two equations and take the solutions as u and v. The complete solution is $\phi(u, v) = 0$ or $u = f(v)$.

Example 6

Solve $(z - y)p + (x - z)q = y - x$.

Solution

Auxiliary equation is

$$\frac{dx}{z-y} = \frac{dy}{x-z} = \frac{dz}{y-x}.$$

Using the multipliers as x, y, z we get

$$\frac{x\,dx + y\,dy + z\,dz}{x(z-y) + y(x-z) + z(y-x)}$$

$$= xdx + ydy + zdz = 0$$

$$\therefore \quad x^2 + y^2 + z^2 = 0$$

and also $\frac{dx + dy + dz}{z - y + x - z + y - z} = 0$

$$dx + dy + dz = 0, x + y + z = 0.$$

$\therefore$ The required solution is $x^2 + y^2 + z^2 = f(x + y + z)$.

Non-linear Equations of First Order

There are four types of non linear equations of first order.

Type 1:

$$f(p, q) = 0.$$

If the given equation contains only p and q then the solution is taken as $z = ax + by + c$. Where a, b and c are arbitrary, such that $f(a, b) = 0$.

Example 7

Solve $2p + 3q = 5$

Solution

Given $2p + 3q = 5$

$z = ax + by + c$.

Where $$2a + 3b = 5,$$

$$b = \frac{5 - 2a}{3}$$

$\therefore$ The solution is $z = ax + \left(\frac{5-2a}{3}\right) y + c$.

Type 2:

$$f(z, p, q) = 0$$

When the equation is not containing x and y then to solve the equation assume $u = x + ay$ and substitute $p = \frac{dz}{du}$, $q = a\frac{dz}{du}$.

Solve the resulting equation and replace u by $x + ay$.

Type 3:

$$f(x, p) = g(y, q).$$

The equation is not containing z.

Assume $f(x, p) = a$ and $g(y, q) = a$.

Solve the equations for p and q and then write the solution.

Example 8

Solve $p^2 - q^2 = x^2 - y^2$.

Solution

$$p^2 - q^2 = x^2 - y^2$$

$$p^2 - x^2 = -y^2 + q^2$$

Let $$p^2 - x^2 = a^2 = -y^2 + q^2$$

$$p^2 = a^2 + x^2 \qquad q^2 = y^2 + a^2$$

$$p = \sqrt{a^2 + x^2} \qquad q = \sqrt{a^2 + y^2}$$

$\therefore$ Take $dz = pdx + qdy$

Integrating on both sides, $\int dz = \int pdx + \int qdy$

$$z = \int\sqrt{a^2 + x^2 dx} + \int\sqrt{a^2 + y^2 dy}$$

$$= \frac{x}{2}\sqrt{a^2 + x^2} + \frac{a^2}{2}\sinh^{-1}\frac{x}{a} + \frac{y}{2}\sqrt{a^2 + y^2}$$

$$+ \frac{a^2}{2}\sinh^{-1}\frac{y}{a} + b.$$

Type 4:

$$z = px + qy + f(p, q)$$

The equation in the above form is Clairaut's equation. The solution is $z = ax + by + f(a, b)$.

Classification of Second Order Homogeneous Linear Equations

A second order linear homogeneous PDE of the form

$$A\frac{\partial^2\phi}{\partial x^2} + B\frac{\partial^2\phi}{\partial x\partial y} + C\frac{\partial^2\phi}{\partial y^2} + D\frac{\partial\phi}{\partial x} + E\frac{\partial\phi}{\partial y} + F\phi(x, y) = 0 \quad (1)$$

Where A, B, C, D, E and F are either functions of x and y only or constants, is called

1. a parabolic equation, if $B^2 - 4AC = 0$
2. an elliptic equation, if $B^2 - 4AC < 0$
3. a hyperbolic equation, if $B^2 - 4AC > 0$

Examples:

1. Consider the one-dimensional heat equation:

$$\frac{\partial u}{\partial t} = c^2\frac{\partial^2 u}{\partial x^2}$$

$$\Rightarrow \quad c^2\frac{\partial^2 u}{\partial x^2} - \frac{\partial u}{\partial t} = 0$$

Comparing it with Eq. (1), we have

$A = c^2$, $B = 0$ and $C = 0$

$\therefore$ $B^2 - 4AC = 0^2 - 4 \times c^2 \times 0 = 0$

$\therefore$ One dimensional heat equation is parabolic.

Similarly, it can be easily observed that

2. One-dimensional wave equation:

$\frac{\partial^2 y}{\partial t^2} = c^2\frac{\partial^2 y}{\partial x^2}$ is hyperbolic ($B^2 - 4AC > 0$) and

3. The Laplace equation:

$\frac{\partial^2 u}{\partial x^2} + \frac{\partial^2 u}{\partial y^2} = 0$ is elliptic ($B^2 - 4AC < 0$)

Method of Separation of Variables

Consider a PDE involving a dependent variable u and two independent variables x and y. In the method of separation of variables, we find a solution of the PDE in the form of a product of a function of x and a function of y, i.e., we write

$$u(x, y) = X(x) \cdot Y(y) \qquad (1)$$

Then $\quad \frac{\partial u}{\partial x} = \frac{\partial}{\partial x}(XY) = X'Y; \frac{\partial u}{\partial y} = \frac{\partial}{\partial y}(XY) = XY'$

$\frac{\partial^2 u}{\partial x^2} = X''Y, \frac{\partial^2 u}{\partial x\partial y} = X'Y', \frac{\partial^2 u}{\partial y^2} = XY''$ and so on

Here $\quad X' = \frac{dX}{dx}; Y' = \frac{dY}{dy}; X'' = \frac{d^2X}{dx^2}; Y'' = \frac{d^2Y}{dy^2}.$

Substituting these in the given PDE, separating X and its derivatives from Y and its derivatives, finding solutions for x and y and substituting them in Eq. (1), we get the solution of the given PDE

This is best explained through the examples given below:

Example 9

Solve $xp + yq = 0$ by the method of separation of variables.

Solution

For the PDE,

$$xp + yq = 0 \qquad (1)$$

Let $\quad z = X(x) \cdot Y(y) \qquad (2)$

be the solution

$$\therefore \quad p = \frac{\partial z}{\partial x} = X'Y \text{ and } q = \frac{\partial z}{\partial y} = XY'$$

Substituting these in Eq. (1)

$$x X' Y + y XY' = 0$$

$$\Rightarrow xX'Y = -y XY'$$

$$\Rightarrow \quad x\frac{X'}{X} = -y\frac{Y'}{Y} \qquad (3)$$

In Eq. (3), as LHS is a function of x alone and RHS is a function of y alone, they are equal only if each of them is equal to some constant

$$\therefore \quad x\frac{X'}{X} = -y\frac{Y'}{Y} = k\,(\text{say}) \qquad (4)$$

Where k is a constant

From Eq. (4), $x\frac{X'}{X} = k \quad \Rightarrow \quad xX' = kX$

$$\Rightarrow \quad x\frac{dX}{dx} = kx$$

$$\Rightarrow \quad \frac{dX}{X} = k\cdot\frac{dx}{x}$$

Integrating on both sides we have,

$$\int \frac{dx}{X} = k \int \frac{dx}{x}$$

$$\Rightarrow \quad \log X = k \log x + \log C_1$$

$$\Rightarrow \quad \log X = \log x^k C$$

$$\Rightarrow \quad X = C_1 x^k \qquad (5)$$

Again from Eq. (4), $-y\dfrac{Y'}{Y} = k$

$$\Rightarrow \quad -yY' = kY$$

$$\Rightarrow \quad y\frac{dY}{dy} = -kY$$

$$\Rightarrow \quad \frac{dY}{Y} = -k\frac{dy}{y}$$

Integrating on both sides,

$$\int \frac{dY}{Y} = -k \int \frac{dy}{y}$$

$$\Rightarrow \quad \log Y = -k \log y + \log C_2$$

$$\Rightarrow \quad \log Y = \log y^{-k} C_2$$

$$\Rightarrow \quad Y = C_2 y^{-k} \qquad (6)$$

Substituting Eqs. (5) and (6) in Eq. (2), we get the solution of Eq. (1) as,

$$z = (C_1 x^k)(C_2 y^{-k})$$

$$= C_1 C_2 x^k y^{-k}$$

$$\therefore \quad z = C\left(\frac{x}{y}\right)^k \text{ where } C = C_1 C_2.$$

Example 10

Solve the PDE $u_x + u_t = 3u$; $u(0, t) = 4e^t$ by the method of separation of variables.

Solution

Let $u = X(x).\ T(t)$ (1)

be the solution of the PDE

$$u_x + u_t = 3u \qquad (2)$$

$$u = XT \quad \Rightarrow \quad u_x = \frac{\partial u}{\partial x} = X'T \text{ and } u_t$$

$$= \frac{\partial u}{\partial t} = XT'$$

Substituting these in Eq. (2), we get

$$X'T + XT' = 3XT$$

Dividing throughout by XT, we have

$$\frac{X'}{X} + \frac{T'}{T} = 3$$

$$\Rightarrow \quad \frac{X'}{X} = \frac{-T'}{T} + 3 = k \qquad (3), \text{(say)}$$

From Eq. (3), $\dfrac{X'}{X} = k \quad \Rightarrow \quad X' = kX$

$$\Rightarrow \quad X' - kX = 0 \qquad (4)$$

Which is a linear equation with its auxiliary equation being

$$m - k = 0 \quad \Rightarrow \quad m = k$$

Hence its solution is $X = C_1 e^{kx}$ (5)

Again from Eq. (3), $\dfrac{-T'}{T} + 3 = k$

$$\Rightarrow \quad \frac{T'}{T} = 3 - k$$

$$\Rightarrow \quad T' = (3 - k)T$$

$$\Rightarrow \quad T' - (3 - k)\,T = 0 \qquad (6)$$

Which is a linear equation with its auxiliary equation being $m - (3 - k) = 0$

$$\Rightarrow \quad m = 3 - k$$

$\therefore$ The solution of Eq. (6) is $T = C_2 e^{(3-k)t}$ (7)

Substituting Eqs. (5) and (7) in Eq. (1), we get the general solution of given PDE (2) as

$$u = X \cdot T = (C_1 e^{kx})(C_2 e^{(3-k)t})$$

$$= C_1 C_2 e^{kx+(3-k)t}$$

$$\therefore\ u = ce^{kx+(3-k)t}; \text{ where } c = c_1 c_2$$

$$\therefore \quad u(x, t) = ce^{kx+(3-k)t} \qquad (8)$$

Given $u(0, t) = 4e^t$

$\therefore$ From Eq. (8), $u(0, t) = ce^{(3-k)t} = 4e^t$

Comparing on both sides, we get

$$C = 4,\ 3 - k = 1$$

$$\Rightarrow \quad C = 4;\ k = 2$$

Substituting these in Eq. (8), we get the required solution of Eq. (2) as

$$u(x, t) = 4e^{2x+t}$$

One Dimensional Diffusion Equation The diffusion equation is a partial differential equation that describes density fluctuations in a material undergoing diffusion. The partial differential equation representing the one dimensional diffusion equation is

$$\frac{\partial u}{\partial t} = D\frac{\partial^2 u}{\partial x^2}$$

where $u(x, t)$ is the density of the diffusing material at time t and D is diffusion coefficient

Example 11

Find the solution of the one dimensional diffusion equation $\dfrac{\partial u}{\partial t} = D\dfrac{\partial^2 u}{\partial x^2}$ on the interval $x \in [0, L]$ with initial condition

$$u\,(x, 0) = f(x), \forall x \in [0, L]$$

and Dirichlet's boundary conditions

$$u(0, t) = u(L, t) = 0 \quad \forall t > 0$$

Solution

We will solve the one-dimensional diffusion equation

$$\frac{\partial u}{\partial t} = D\frac{\partial^2 u}{\partial x^2} \qquad (1)$$

by the method of separation of variables.

Let $u(x, t) = X(x)\,T(t)$ (2)

be the solution of Eq. (1)

$$\therefore \frac{\partial u}{\partial x} = X'T \quad \text{and} \quad \frac{\partial^2 u}{\partial x^2} = X''T \quad \text{and} \quad \frac{\partial u}{\partial t} = XT'$$

Substituting these in Eq. (1),

$$XT' = DX''\,T$$

$$\Rightarrow \frac{1}{D}\frac{T'}{T} = \frac{X''}{X} \tag{3}$$

As the left hand side depends only on the variable t and the right hand side depends only on the variable x, both sides are equal to some constant say $-\lambda$

(Negative sign is taken for convenience reason)

From Eq. (3), $\dfrac{1}{D}\dfrac{T'}{T} = \dfrac{X''}{X} = -\lambda$

$$\Rightarrow \frac{1}{D}\frac{T'}{T} = -\lambda \text{ and } \frac{X''}{X} = -\lambda$$

$$\Rightarrow T' + DT = 0 \tag{4}$$

and
$$X'' + \lambda X = 0 \tag{5}$$

Clearly Eqs. (4) and (5) are linear ordinary differential equations involving the variables t and x respectively.

Solving (4), we get

$$T(t) = Ce^{-\lambda Dt} \tag{6}$$

Solving Eq. (5), we get different possible solutions depending on the value of λ as given below.

$$X(x) = \begin{cases} A\sin(\sqrt{\lambda}x) + B\cos(\sqrt{\lambda}x);\ \text{for } \lambda > 0 \\ A'e^{\sqrt{-\lambda}x} + B'e^{\sqrt{-\lambda}x};\ \text{for } \lambda < 0 \\ A''x + B'';\ \text{for } \lambda = 0 \end{cases}$$

Given boundary conditions are

$$u(0, t) = 0 \text{ and } u(L, t) = 0$$

From Eq. (2), $u\,(0, t) = X(0)\,T(t) = 0$

$$\Rightarrow X(0) = 0$$

and
$$u(L, t) = X(L)\,T(t) = 0 \Rightarrow X(L) = 0$$

Taking into account, the boundary conditions $X(0) = 0$ and $X(L) = 0$, the values of $X(x)$ for $\lambda = 0$ and $\lambda < 0$ leads to only the trivial solutions and hence we take the value $X(x)$ given for $\lambda > 0$, which on application of the boundary conditions becomes,

$$X(x) = C_n \sin\left(\frac{n\pi x}{L}\right); \quad n = 1, 2, 3\ldots$$

and Eq. (6) becomes,

$$T(t) = B_n \exp\left(-D\left(\frac{n\pi}{L}\right)^2 t\right), \quad n = 1, 2, 3\ldots$$

where B_n is a constant

$\therefore$ Substituting the values of $X(x)$ and $T(t)$ in Eq. (2),

We get

$$u(x, t)$$

$$= \sum_{n=1}^{\infty} A_n \sin\left(\frac{n\pi}{L}x\right)\exp\left(-D\left(\frac{n\pi}{L}\right)^2 t\right) \tag{7}$$

where $A_n = \text{Constant } (= B_n C_n)$

Given initial condition is

$$u(x, 0) = f(x)$$

i.e.,
$$\sum_{n=1}^{\infty} A_n \sin\left(\frac{n\pi}{L}x\right) = f(x) \text{ (From Eq. (7))} \tag{8}$$

By writing $f(x)$ as a half range Fourier sine series in $[0, L]$ we have

$$f(x) = \sum_{n=1}^{\infty} F_n \sin\left(\frac{n\pi}{L}x\right)$$

where $F_n = \dfrac{2}{L}\displaystyle\int_0^L f(\xi)\sin\left(\frac{n\pi}{L}\xi\right)d\xi$

$\therefore$ Eq. (8) becomes,

$$\sum_{n=1}^{\infty} A_n \sin\left(\frac{n\pi}{L}x\right) = \sum_{n=1}^{\infty} F_n \sin\left(\frac{n\pi}{L}x\right)$$

$$\Rightarrow A_n = F_n = \frac{2}{L}\int_0^L f(\xi)\sin\left(\frac{n\pi}{L}\xi\right)d\xi$$

Substituting the value of A_n in Eq. (7), we get the solution of Eq. (1) as

$$u\,(x, t)$$

$$= \sum_{n=1}^{\infty}\left(\left(\frac{2}{L}\int_0^L f(\xi)\sin\left(\frac{n\pi}{L}\xi\right)d\xi\right)\sin\left(\frac{n\pi x}{L}\right)\right)$$

$$\exp\left(-D\left(\frac{n\pi}{L}\right)^2 t\right)$$

Heat Equation

The heat flow in a body of homogeneous material is governed by the heat equation $\dfrac{\partial u}{\partial t} = c^2\left(\dfrac{\partial^2 u}{\partial x^2} + \dfrac{\partial^u}{\partial y^2} + \dfrac{\partial^2 u}{\partial z^2}\right)$ where $c^2 = \dfrac{k}{\sigma\rho}$ and $u\ (x, y, z, t)$ is the temperature in a body, k is the thermal conductivity, σ is specific heat of the body, ρ is the density of the material and c^2 the constant is called the diffusivity of the body. If the heat flow is in x-direction only then u depends on x and t, then the heat equation becomes $\dfrac{\partial u}{\partial t} = c^2\left(\dfrac{\partial^2 u}{\partial x^2}\right)$, which is known as one-dimensional heat equation.

Wave Equation

The one-dimensional wave equation of a vibrating elastic string is given by,

$$\frac{\partial^2 u}{\partial t^2} = c^2\frac{\partial^2 u}{\partial t^2} = c^2\frac{\partial^2 u}{\partial x^2} \text{ where } c^2 = \frac{T}{\rho}$$

Laplace Equation

When the temperature in a homogeneous material is in steady state and the temperature does not vary with time then the heat conduction equation becomes $\frac{\partial^2 u}{\partial x^2}+\frac{\partial^2 u}{\partial y^2}+\frac{\partial^2 u}{\partial z^2}=0$ and this is known as

Laplace's equation in cartesian system While solving the boundary value problems the following results may be used

If $u(x, t)$ is a function of x and t

1. $L\left\{\frac{\partial u}{\partial t}\right\}=s\bar{u}(x,s)-u(x,0)$
2. $L\left\{\frac{\partial^2 u}{\partial t^2}\right\}=s^2\bar{u}(x,s)-su(x,0)-u_t(x,0)$
3. $L\left\{\frac{\partial u}{\partial x}\right\}=\frac{d\bar{u}}{dx}$
4. $L\frac{\partial^2 u}{\partial x^2}=\frac{d^2\bar{u}}{dx^2}$ where $L\{u(x,t)\}=\bar{u}\ (x,s)$

Example 49

Solve the one dimensional heat equation $\frac{\partial u}{\partial t}=2\frac{\partial^2 u}{\partial x^2}$ satisfying the boundary conditions $u(0,t)=0=u(4,t)$ and $u(x,0)=8\sin 2\pi x$.

Solution

Taking Laplace transform on both sides of the equation $\frac{\partial u}{\partial t}=2\frac{\partial^2 u}{\partial x^2}$

$$L\left\{\frac{\partial u}{\partial t}\right\}=2L\left\{\frac{\partial^2 u}{\partial x^2}\right\}$$

$$s\bar{u}-u(x,0)=2\cdot\frac{d^2\bar{u}}{dx^2}$$

or $\frac{\partial^2\bar{u}}{\partial x^2}-\frac{s}{2}\bar{u}=-4\sin 2\pi x$ as $u(x,0)=8\sin 2\pi x$

The general solution of the above equation is $\bar{u}$

$$=Ae^{(\sqrt{S/2})X}+Be^{-(\sqrt{S/2})X}-\frac{4\sin 2\pi x}{-(2\pi)^2-\frac{s}{2}}$$

or

$$\bar{u}=Ae^{\sqrt{S/2}X}+Be^{-\sqrt{S/2}X}+\frac{8\sin 2\pi x}{8\pi^2+s} \qquad (1)$$

But $u(0,t)=0=u(4,t)$

$$\therefore \qquad \bar{u}(0,s)=0,\ \bar{u}(4,s)=0$$

$\therefore$ From Eq. (1), we have $A+B=0$

$$\text{and } 0=Ae^{4\sqrt{s/2}}+Be^{-4\sqrt{s/2}}+\frac{8\sin 8\pi}{8\pi^2+s}$$

$$\Rightarrow Ae^{4\sqrt{s/2}}+Be^{-4\sqrt{s/2}}=0$$

Solving we get $A=B=0$

$$\therefore \text{ From (1) we have } \bar{u}=\frac{8\sin 2\pi x}{8\pi^2+s}$$

$$\therefore y=L^{-1}\left\{\frac{8}{8\pi^2+s}\sin 2\pi x\right\}$$

i.e.,
$$y=8e^{-8\pi^2 t}\sin 2\pi x.$$

Example 50

Solve the wave equation of a stretched string given by $\frac{\partial^2 u}{\partial t^2}=9\frac{\partial^2 u}{\partial x^2}$ satisfying the boundary conditions $u(x,0)=0$, $u_t(x,0)=0, x>0$ and $\bar{u}(0,t)=F(t)$, $\lim_{x\to\infty}u(x,t)=0, t\geq 0$.

Solution

Given $\frac{\partial^2 u}{\partial t^2}=9\frac{\partial^2 u}{\partial x^2}$.

Taking Laplace transform on both sides of the equation with the boundary conditions we have

$$L\left\{\frac{\partial^2 u}{\partial t^2}\right\}=9L\left\{\frac{\partial^2 u}{\partial x^2}\right\}$$

$$\text{or } s^{2\bar{u}}(x,s)-su(x,0)-u_t(x,0)=9\cdot\frac{d^2\bar{u}}{dx^2} \text{ or } \frac{d^2\bar{u}}{dx^2}-\frac{s^2}{9}\bar{u}=0 \qquad (1)$$

Also $\bar{u}(0,s)=\int_0^\infty F(t)e^{-st}dt=\bar{F}$ and $u(x,s)=0$ as $x\to\infty$

$\therefore$ The general solution Eq. of (1) is $\bar{u}\ (x,s)$

$$=c_1e^{\frac{s}{3}x}+c_2e^{\frac{-s}{3}x}$$

and $\bar{u}(x,s)=0$ as $x\to\infty\Rightarrow c_1=0$

and $\bar{u}(0,s)=\bar{F}(s)=c_2$

Hence, $\bar{u}(x,s)=\bar{F}(s)\ e^{-\frac{sx}{3}}$

$$\therefore u(x,t)=L^{-1}\left\{e^{-\frac{sx}{3}}\bar{F}(s)\right\}$$

$$=\begin{cases}F\left(t-\frac{x}{3}\right), t>\frac{x}{3} \\ 0, t<\frac{x}{3}\end{cases} \text{ as } L^{-}\{\bar{F}(s)=F(t)\},$$

when expressed in terms of Heaviside's unit step function. $u(x,t)$

$$=F\left(t-\frac{x}{3}\right)\cdot H\left(t-\frac{x}{3}\right).$$

Exercises

1. Let $f(x) = \begin{cases} 0 & \text{if} \quad -\pi \le x \le 0 \\ x^3 & \text{if} \quad 0 < x \le \pi \end{cases}$

Which is a periodic function with period $2p$, then $a_0 =$ ______.

(A) $\frac{\pi^3}{4}$ (B) $\frac{\pi^3}{8}$

(C) $\frac{\pi^3}{12}$ (D) $\frac{\pi^3}{16}$

2. The value of the fourier coefficient a_n for $n \ge 2$ for $f(x) = x \sin x$ in $(-\pi, \pi)$ is ______.

(A) $\cos \frac{(n-1)\pi}{n-1} \cos nx$

(B) $\cos \frac{2(n-1)\pi}{n-1} \cos nx$

(C) $\frac{1}{2} + \sum_{n=1}^{\infty} \cos nx$

(D) $\left[\cos \frac{(n-1)\pi}{n-1} - \cos \frac{(n+1)}{n+1}\right]$

3. If $f(x) = x^3$ in $(-\pi, \pi)$ then the value of b_n is ______.

(A) $\frac{2}{n^3}[6 + n^2\pi^2]$

(B) $\frac{2\cos n\pi}{n^3}[6 - n^2\pi^2]$

(C) $\frac{2}{n^3}[6 - n^2\pi^2]$

(D) $\frac{\cos n\pi}{n^3}[6 + n^2\pi^2]$

4. Find the Fourier series of $f(x)$ which is defined as follows:

$f(x) = 2 \qquad 0 < x < 1$

$\quad = 3 \qquad 1 < x < 2$

(A) $\sum_{n=1}^{\infty} \sin \frac{\pi x}{2}$

(B) $\frac{5}{2} - \frac{2}{\pi} \sum_{n=1}^{\infty} \frac{1}{2n-1} \sin \frac{(2n-1)\pi x}{2}$

(C) $\frac{2}{\pi} \sum_{n=1}^{\infty} \frac{1}{2n-1} \sin \frac{\pi x}{2}$

(D) None of these

Direction for questions 5 and 6:

Let $f(x) = \frac{\pi - x}{2}$ in the interval $(0, 2\pi)$

5. The Fourier series of $f(x)$ is ______.

(A) $\cos x + \frac{\cos 2x}{2} + \frac{\cos 3x}{2} + \cdots$

(B) $\sin x - \frac{\sin 2x}{2} + \frac{\sin 3x}{3} - \frac{\sin 4x}{4} +$

(C) $\sin x + \frac{\sin 2x}{2} + \frac{\sin 3x}{3} + \cdots$

(D) None of these

6. The value of $\frac{\pi}{4}$ is ______.

(A) $1 + \frac{1}{2} + \frac{1}{4} + \frac{1}{6} + \cdots$

(B) $1 - \frac{1}{2} + \frac{1}{4} - \frac{1}{6} + \cdots$

(C) $1 + \frac{1}{3} + \frac{1}{5} + \frac{1}{7} + \frac{1}{9}$

(D) $1 - \frac{1}{3} + \frac{1}{5} - \frac{1}{7} + \frac{1}{9} \cdots$

Direction for questions 7 and 8:

Let $f(x) = x^2$ in the interval $(-\pi, \pi)$.

7. The Fourier series of $f(x)$ is ______.

(A) $-\frac{\pi^2}{3}$

(B) $\frac{\pi^2}{3} + \sum_{n=1}^{\infty} \cos nx$

(C) $\sum_{n=1}^{\infty} \cos nx$

(D) $\frac{\pi^2}{3} + \sum_{n=1}^{\infty} 4\frac{(-1)^n}{n^2} \cos nx$

8. The value of $\frac{\pi^2}{12}$ is

(A) $1 + \frac{1}{2} + \frac{1}{3} - \frac{1}{4} + \cdots$

(B) $1 + \frac{1}{2^2} + \frac{1}{3^2} + \frac{1}{4^2} + \cdots$

(C) $1 + \frac{1}{2} + \frac{1}{3} + \frac{1}{4} + \cdots$

(D) $1 - \frac{1}{2^2} + \frac{1}{3^2} - \frac{1}{4^2} + \cdots$

9. The value of $\dfrac{\pi^2}{6}$ is

(A) $1-\dfrac{1}{2^2}+\dfrac{1}{3^2}-\dfrac{1}{4^2}$

(B) $1+\dfrac{1}{2^2}+\dfrac{1}{3^2}+\dfrac{1}{4^2}\cdots$

(C) $1+\dfrac{1}{3^2}+\dfrac{1}{5^2}+\dfrac{1}{7^2}$

(D) None of these

10. The half-range sine series of $f(x) = e^x$ in $0 < x < l$ is _____.

(A) $\sum_{n=1}^{\infty}\dfrac{1}{1+n^2\pi^2}\,(1 - e(-1)^n)\sin n\pi x$

(B) $2\pi\sum_{n=1}^{\infty}\dfrac{n}{1+n^2\pi^2}\,(1 - e(-1)^n)\sin n\pi x$

(C) $\sum_{n=1}^{\infty}\dfrac{1}{1+n^2\pi^2}\,(1 - e(-1)^n)\sin n\pi x$

(D) None of these

11. The order and degree of the $\dfrac{\partial^2 z}{\partial x^2}+3xy\left(\dfrac{\partial z}{\partial x}\right)^2+5\dfrac{\partial z}{\partial y}$ $= 8$ are

(A) 1, 1 (B) 1, 2
(C) 2, 1 (D) 2, 2

12. The differential equation whose solution is $z = (x - a)(y - b)$ is _______.

(A) $pq = 2z$ (B) $pq = z$
(C) $p = 2zq$ (D) $p = zq$

13. Form a PDE of $z = (x - y)\,\phi\,(x^2 - y^2)$

(A) $py - xq = z$ (B) $py + xq = z$
(C) $px + yq = z$ (D) $px - yq = z$

14. The solution of $x^2p + y^2q = (x + y)z$ is ________.

(A) $f(xy, x - y) = 0.$ (B) $f\left(\dfrac{xy}{z},\dfrac{x-y}{z}\right)=0$
(C) $f(zx, z - x) = 0$ (D) None of these

15. Solve $(2p + 1)\,q = pz$

(A) $a\log(z - a) = x - ay + b$
(B) $2a\log(z + a) = ay + b$
(C) $2a\log(z - a) = x + ay + b$
(D) $a\log(z + a) = 3x + ay + b$

16. The solution of $q^2x\,(1 + y^2) = py^2$ is _______.

(A) $z = a\,(1 + y^2)$

(B) $z=\dfrac{ax^2}{2} - a\,(1 + y^2) + b$

(C) $z=\dfrac{ax^2}{2}+\sqrt{a(1+y^2)}+b$

(D) $z=\dfrac{ax}{2}+\sqrt{a(1+y^2)}+b$

17. Solve $pqz = q^2(yp + q^2) + p^2(xq + p^2)$.

(A) $z = ax + by + \dfrac{a^3}{b} + \dfrac{b^3}{a}$

(B) $z = ax - by$

(C) $z = ax + by + \dfrac{a}{a^3} + \dfrac{b}{b^3}$

(D) None of these

18. In the process of solving the partial differential equation $\dfrac{\partial^2 u}{\partial x^2}+5\dfrac{\partial^2 u}{dy^2}=0$ by the method of separation of variables, the linear differential equation involving the independent variable 'X' is _____. (Here k is a constant)

(A) $\dfrac{d^2X}{dx^2} + kX(x) = 0$

(B) $\dfrac{d^2X}{dx^2} - kX(x) = 0$

(C) $\dfrac{d^2X}{dx^2}+k\dfrac{dx}{dx}+k^2X(x)=0$

(D) $\dfrac{d^2X}{dx^2}-k\dfrac{dx}{dx}+2k\,X(x)=0$

19. The second order partial differential equation $3x^2\dfrac{\partial^2 u}{\partial x^2}$ $-6xy\dfrac{\partial^2 u}{\partial x\partial y}+3y^2\dfrac{\partial^2 u}{\partial y^2}-5\dfrac{\partial u}{\partial x}+7\dfrac{\partial u}{\partial y}=6x^2y$ is _______.

(A) elliptic equation
(B) parabolic equation
(C) hyperbolic equation
(D) depends on the value of x and y

20. Which of the following partial differential equations represents the one-dimensional diffusion equation?

(A) $\dfrac{\partial^2 u}{\partial t^2}=c^2\dfrac{\partial^2 u}{\partial x^2}$

(B) $\dfrac{\partial^2 u}{\partial x^2}+\dfrac{\partial^2 u}{\partial y^2}=0$

(C) $\dfrac{\partial u}{\partial t}=D\dfrac{\partial^2 u}{\partial x^2}$

(D) $\dfrac{\partial^2 u}{\partial x^2}=c^2\dfrac{\partial^2 u}{\partial y^2}+\dfrac{\partial u}{\partial x}$

21. In the one-dimensional diffusion equation, $\dfrac{\partial u}{\partial t}=D\dfrac{\partial^2 u}{\partial x^2}$, $u(x, t)$ and D represent respectively

(A) density of and diffusion coefficient.
(B) diffusion and density coefficient.
(C) viscosity and diffusion coefficient.
(D) diffusion and viscosity coefficient.

22. Which of the following pair can be represented by the same partial differential equation? (Except possibly a change in the constant multiplying the partial derivatives)
(A) The one-dimensional wave equation and the one -dimensional heat equation.
(B) The one-dimensional wave equation and the two -dimensional Laplace equation.
(C) The one-dimensional heat equation and the two-dimensional Laplace equation.
(D) The one-dimensional heat equation and the one-dimensional diffusion equation.

23. Solution of the one dimensional heat equation $\frac{\partial u}{\partial t} = \frac{\partial^2 u}{\partial x^2}$ $x > 0$, $t > 0$ satisfying the boundary condition $u(0, t) = 1$, $u(x, 0) = 0$ is ______.

(A) $erf\left(\frac{x}{2\sqrt{t}}\right)$ (B) $erf\left(\frac{\sqrt{x}}{2\sqrt{t}}\right)$

(C) $erf\left(\frac{1}{2\sqrt{t}}\right)$ (D) $erf\left(\frac{x}{\sqrt{t}}\right)$

24. A string is stretched between two fixed points follows the equation $\frac{\partial^2 y}{\partial t^2} = a^2 \frac{\partial^2 y}{\partial x^2}$ $(t > 0, x > 0)$ satisfying the boundary conditions $y(x, 0) = 0$, $x > 0$ and $y(0, t) = t$ $\underset{x\to\infty}{\text{Lt}}\ y(x, t) = 0, t \geq 0$, Find $y(x, t)$ in terms of Heaviside's unit step function.

(A) $(t - x)\, H(t - x)$

(B) $\left(t - \frac{x}{a}\right) H\left(t - \frac{x}{a}\right)$

(C) $(t - xa)\, H(t - xa)$

(D) None of these

25. The one dimensional wave equation is ______.

(A) $\frac{\partial u}{\partial t} = c\frac{\partial u}{\partial x}$

(B) $\frac{\partial^2 u}{\partial t^2} = c^2 \frac{\partial^2 u}{\partial x^2}$

(C) $\frac{\partial^2 u}{\partial x^2} = c^2 \frac{\partial^2 u}{\partial t^2}$

(D) $\frac{\partial^2 u}{\partial t^2} = c^2 \frac{\partial u}{\partial x}$

Previous Years' Questions

1. The equation $K_x \frac{\partial^2 h}{\partial x^2} + K_z \frac{\partial^2 h}{\partial z^2} = 0$ can be transformed to $\frac{\partial^2 h}{\partial x_t^2} + \frac{\partial^2 h}{\partial z^2} = 0$ by substituting **[GATE, 2008]**

(A) $x_t = x\frac{K_z}{K_x}$ (B) $x_t = x\frac{K_x}{K_z}$

(C) $x_t = x\sqrt{\frac{K_x}{K_z}}$ (D) $x_t = x\sqrt{\frac{K_z}{K_x}}$

2. The partial differential equation that can be formed from $z = ax + by + ab$ has the form (with $p = \frac{\partial z}{\partial x}$ and $q = \frac{\partial z}{\partial y}$) **[GATE, 2010]**

(A) $z = px + qy$
(B) $z = px + pq$
(C) $z = px + qy + pq$
(D) $z = qy + pq$

3. The Fourier series of the function,
$$f(x) = 0, \quad -\pi < x \leq 0$$
$$= \pi - x. \quad 0 < x < \pi$$
In the interval $[-\pi, \pi]$ is
$$f(x) = \frac{\pi}{4} + \frac{2}{\pi}\left[\frac{\cos x}{1^2} + \frac{\cos 3x}{3^2} + \cdots\right] +$$
$$\left[\frac{\sin x}{1} + \frac{\sin 2x}{2} + \frac{\sin 3x}{3} + \cdots\right]$$
The convergence of the above Fourier series at $x = 0$ gives **[GATE, 2016]**

(A) $\sum_{n=1}^{\infty} \frac{1}{n^2} = \frac{\pi^2}{6}$ (B) $\sum_{n=1}^{\infty} \frac{(-1)^{n+1}}{n^2} = \frac{\pi^2}{12}$

(C) $\sum_{n=1}^{\infty} \frac{1}{(2n-1)^2} = \frac{\pi^2}{8}$ (D) $\sum_{n=1}^{\infty} \frac{(-1)^{n+1}}{2n-1} = \frac{\pi^2}{4}$

4. The type of partial differential equation $\frac{\partial^2 p}{\partial x^2} + \frac{\partial^2 p}{\partial y^2} + 3\frac{\partial^2 p}{\partial x \partial y} + 2\frac{\partial p}{\partial x} - \frac{\partial p}{\partial y} = 0$ is **[GATE, 2016]**

(A) elliptic
(B) parabolic
(C) hyperbolic
(D) None of these

5. The solution of the partial differential equation $\frac{\partial u}{\partial t} = \alpha \frac{\partial^2 u}{\partial x^2}$ is of the form **[GATE, 2016]**

(A) $C\cos(kt)[C_1 e^{(\sqrt{k/\alpha})x} + C_2 e^{-(\sqrt{k/\alpha})x}]$

(B) $Ce^{kt}[C_1 e^{(\sqrt{k/\alpha})x} + C_2 e^{-(\sqrt{k/\alpha})x}]$

(C) $Ce^{kt}\left[C_1 \cos\left(\sqrt{\frac{k}{\alpha}}\right)x + C_2 \cos\left(-\sqrt{\frac{k}{\alpha}}\right)x\right]$

(D) $C\sin(kt)\left[C_1 \cos\left(\sqrt{\frac{k}{\alpha}}\right)x + C_2 \cos\left(-\sqrt{\frac{k}{\alpha}}\right)x\right]$

Chapter 4

Linear Algebra

CHAPTER HIGHLIGHTS

- *Introduction*
- *Determinants*
- *Systems of linear equations*

Introduction

A set of 'mn' elements arranged in the form of rectangular array having 'm' rows and 'n' columns is called an $m \times n$ matrix (read as 'm by n matrix') and is denoted by $A = [a_{ij}]$ where $1 \le i \le m$; $1 \le j \le n$

or
$$A = \begin{pmatrix} a_{11} & a_{12} & a_{13} \cdots & a_{1n} \\ a_{21} & a_{22} & a_{23} \cdots & a_{2n} \\ \vdots & \vdots & \vdots \cdots & \vdots \\ a_{m1} & a_{m2} & a_{m3} \cdots & a_{mn} \end{pmatrix}$$

The element a_{ij} lies in the ith row and jth column.

Type of Matrices

Square Matrix A matrix $A = [a_{ij}]_{m \times n}$ is said to be a square matrix, if $m = n$ (i.e., Number of rows of A = Number of columns of A)

The elements $a_{11}, a_{22}, a_{33}, \ldots, a_{nn}$ are called 'DIAGONAL ELEMENTS'.

The line containing the diagonal elements is the 'PRINCIPAL DIAGONAL'.

The sum of the diagonal elements of 'A' is the 'TRACE' of A.

Row Matrix A matrix $A = [a_{ij}]_{m \times n}$ is said to be row matrix, if $m = 1$ (i.e., the matrix has only one row)

General form is $A = [a_1, a_2, \ldots, a_n]$ or $[a_{ij}]_{1 \times n}$

Column Matrix A matrix which has only one column

$$A = \begin{pmatrix} a_1 \\ a_2 \\ \vdots \\ a_n \end{pmatrix} \text{ or } [a_{ij}]_{n \times 1}$$

Diagonal Matrix A square matrix is said to be a diagonal matrix if all its elements except those in the principal diagonal are zeros. That is, if

1. $m = n$ (A is a square matrix) and
2. $a_{ij} = 0$ if $i \ne j$ (The non-diagonal elements are zeros)

A diagonal matrix of order 'n' with diagonal elements d_1, $d_2, \ldots, d_n$ is denoted by Diag $[d_1\ d_2 \ldots d_n]$.

Scalar Matrix A diagonal matrix whose diagonal elements are all equal is called a scalar matrix. That is, if

1. $m = n$
2. $a_{ij} = 0$ if $i \ne j$
3. $a_{ij} = k$ if $i = j$ for some constant 'k'.

Unit or Identity Matrix A scalar matrix of order 'n' in which each diagonal element is '1' (unity) is called a unit matrix or identity matrix of order 'n' and is denoted by I_n. That is,

1. $m = n$
2. $a_{ij} = 0$ if $i \neq j$
3. $a_{ij} = 1$ if $i = j$

Example: $I_1 = [1],\ I_2 = \begin{pmatrix} 1 & 0 \\ 0 & 1 \end{pmatrix},\ I_3 = \begin{pmatrix} 1 & 0 & 0 \\ 0 & 1 & 0 \\ 0 & 0 & 1 \end{pmatrix}$

Null Matrix or Zero Matrix A matrix is a 'null matrix' or zero matrix if all its elements are zeros.

Upper Triangular Matrix A square matrix is said to be an upper triangular matrix, if each element below the principal diagonal is zero. That is,

1. $m = n$
2. $a_{ij} = 0$ if $i > j$

For example, $\begin{pmatrix} 1 & 4 & 3 & 2 \\ 0 & -1 & 6 & 1 \\ 0 & 0 & 3 & 2 \\ 0 & 0 & 0 & 9 \end{pmatrix}_{4\times 4}$

Lower Triangular Matrix A square matrix is said to be a lower triangular matrix, if each element above the principal diagonal is zero, i.e., if

1. $m = n$
2. $a_{ij} = 0$ if $i < j$

For example, $\begin{pmatrix} 1 & 0 & 0 & 0 \\ -2 & 1 & 0 & 0 \\ 0 & 7 & 8 & 0 \\ 5 & 4 & 2 & 1 \end{pmatrix}$

Horizontal Matrix If the number of rows of a matrix is less than the number of columns, i.e., $m < n$, then the matrix is called horizontal matrix.

Vertical Matrix If the number of columns in a matrix is less than the number of rows, i.e., if $m > n$, then the matrix is called a vertical matrix.

Comparable Matrices Two matrices $A = [a_{ij}]_{m\times n}$ and $B = [b_{ij}]_{p\times q}$ are said to be comparable, if they are of same order, i.e., $m = p$; $n = q$.

Equal Matrices Two comparable matrices are said to be 'equal', if the corresponding elements are equal, i.e., $A = [a_{ij}]_{m\times n}$ and $B = [b_{ij}]_{p\times q}$ are equal if

1. $m = p$; $n = q$ (i.e., they are of the same order)
2. $a_{ij} = b_{ij}\ \forall\ i, j$ (i.e., the corresponding elements are equal)

Transpose of a Matrix

The matrix obtained by interchanging the rows and the columns of a given matrix 'A' is called the 'transpose' of A and is denoted by A^T or A'. If A is an $(m \times n)$ matrix, A^T will be an $(n \times m)$ matrix. Thus if $A = [a_{ij}]_{m\times n}$ then $A^T = [u_{ij}]_{n\times m}$, where $u_{ij} = a_{ji}$.

Properties of Transpose

$T-1$: $(A')' = A$, for any matrix A

$T-2$: $(A + B)' = A' + B'$, for any two matrices A, B of same order

$T-3$: $(KA)' = KA'$, for any matrix A

$T-4$: $(AB)' = B'A'$, for any matrices A, B such that number of columns of A = number of rows of B (REVERSAL LAW)

$T-5$: $(A^n)' = (A')^n$, for any square matrix A

Trace of a Matrix

Let 'A' be a square matrix. The trace of A is defined as the sum of elements of 'A' lying in the principal diagonal.

Thus if $A = [a_{ij}]_{n\times n}$ then trace of 'A' denoted by $t_r A = a_{11} + a_{22} + \cdots + a_{nn}$.

Properties of Trace of a Matrix Let A and B be any two square matrices and K any scalar then,

1. $t_r(A + B) = t_r A + t_r B$
2. $t_r(KA) = Kt_r A$
3. $t_r(AB) = t_r(BA)$

Conjugate of a Matrix

A matrix obtained by replacing each element of a matrix 'A' by its complex conjugate is called the 'conjugate matrix' of A and is denoted by $\bar{A}$. If $A = [a_{ij}]_{m\times n,}$ then $\bar{A} = \left[\overline{a_{ij}}\right]$ where $\bar{a}_{ij}$ is the conjugate of 'a_{ij}'.

Properties of Conjugate of a Matrix

$C-1$: $\overline{(\overline{(A)})} = A$for any matrix '$A$'

$C-2$: $\overline{(A+B)} = \bar{A} + \bar{B}$ for any matrices A, B of same order.

$C-3$: $\overline{(KA)} = \bar{K}\ \bar{A}$ for any matrix 'A' and any Scalar K.

$C-4$: $\overline{(AB)} = (\bar{A}) \cdot \bar{I}$for any matrices A and B with the condition that number of columns of A = number of rows of B.

$C-5$: $(\bar{A})^n = \left(\overline{A^n}\right)$for any square matrix '$A$'.

Tranjugate or Transposed Conjugate of a Matrix

Tranjugate of a matrix 'A' is obtained by transposing the conjugate of A and is denoted by A^θ. Thus $A^\theta = (\bar{A})^T$.

Properties of Tranjugate of a Matrix

TC – 1: $(A^\theta)^\theta = A$ for any matrix A

TC – 2: $(A + B)^\theta = A^\theta + B^\theta$ for any matrices A, B of the same order.

TC – 3: $(KA)^\theta = KA^\theta$ for any matrix A and any scalar K.

TC – 4: $(BA)^\theta = B^\theta A^\theta$ for any matrix A, B with the condition that number of columns of A = number of rows of B.

TC – 5: $(A^n)^\theta = (A^\theta)^n$ for any square matrix 'A'.

Symmetric Matrix A matrix A is said to be symmetric, if $A^T = A$ (i.e., transpose of $A = A$).

NOTE

A symmetric matrix must be a square matrix.

Skew-symmetric Matrix A matrix 'A' is said to be skew-symmetric matrix, if $A^T = (-A)$, i.e., $A = [a_{ij}]_{m\times n}$ is skew symmetric if

1. $m = n$
2. $a_{jI} = -a_{ij} \forall i, j$

NOTE

In a skew-symmetric matrix, all the elements of the principal diagonal are zero.

Orthogonal Matrix A square matrix 'A' of order $n \times n$ is said to be an orthogonal matrix, if $AA^T = A^TA = I_n$.

Involutory Matrix A square matrix 'A' is said to be involutory matrix, if $A^2 = I$ (where I is identity matrix).

Idempotent Matrix A square matrix 'A' is said to be an idempotent matrix, if $A^2 = A$.

Nilpotent Matrix A square matrix 'A' is said to be nilpotent matrix, if there exists a natural number 'n' such that $A^n = O$. If 'n' is the least natural number such that $A^n = O$, then 'n' is called the index of the nilpotent matrix 'A'. (Where O is the null matrix).

Unitary Matrix A square matrix 'A' is said to be a unitary matrix if, $AA^\theta = A^\theta A = I$. (Where A^θ is the transposed conjugate of A.)

Hermitian Matrix A matrix 'A' is said to be a hermitian matrix, if $A^\theta = A$, i.e., $A = [a_{ij}]_{m\times n}$ is hermitian if

1. $m = n$
2. $a_{ij} = \bar{a}_{ij} \forall i, j$

NOTE

The diagonal elements in a hermitian matrix are real numbers.

Skew-hermitian Matrix A matrix 'A' is said to be a skew-hermitian matrix, if $A^\theta = -A$.

Operations on Matrices

Scalar Multiplication of Matrices

If A is a matrix of order $m \times n$ and 'K' be any scalar (a real or complex number), then KA is defined to be a $m \times n$ matrix whose elements are obtained by multiplying each element of 'A' by K, i.e., if $A = [a_{ij}]_{m\times n}$ then $KA = [Ka_{ij}]_{m\times n}$ in particular if $K = -1$; then $KA = -A$ is called the negative of A and is such that,

$A + (-A) = [a_{ij}] + [-a_{ij}] = [a_{ij} - a_{ij}] = [0] = O$ (zero matrix)
$(-A) + A = [-a_{ij}] + [a_{ij}] = [-a_{ij} + a_{ij}] = [0] = O$
That is, $A + (-A) = (-A) + A = O$.

Properties of Scalar Multiplication

Let A, B are two matrices of same order and α, β are any scalars, then

$S-1$: $\alpha(A + B) = \alpha A + \alpha B$
$S-2$: $(\alpha + \beta)A = \alpha A + \beta A$
$S-3$: $\alpha(\beta A) = (\alpha\beta)A$
$S-4$: $1A = A$

Addition of Matrices

If A and B are two matrices of the same order, then they are 'conformable' for addition and their sum '$A + B$' is obtained by adding the corresponding elements of A and B, i.e., if $A = [a_{ij}]_{m\times n}$; $B = [b_{ij}]_{m\times n}$, then $A + B = [a_{ij} + b_{ij}]_{m\times n}$.

Properties of Addition Let A, B and C be three matrices of same order say $m \times n$, then

$A-1$: $A + B$ is also a $m \times n$ matrix (CLOSURE)
$A-2$: $(A + B) + C = A + (B + C)$ (ASSOCIATIVITY)
$A-3$: If 'O' is the $m \times n$ zero (null) matrix, then $A + O = O + A = A$ ('O' is the ADDITIVE IDENTITY)
$A-4$: $A + (-A) = (-A) + A = O$ ($-A$ is the ADDITIVE INVERSE)
$A-5$: $A + B = B + A$ (COMMUTATIVITY)

NOTE

The set of matrices of same order form an 'Abelian Group' under addition.

Multiplication of Matrices

Let A and B be two matrices. A and B are conformable for multiplication, only if the number of columns of A is equal to the number of rows of B.

Let $A = [a_{ij}]$ be an $m \times n$ matrix, $B = [b_{jk}]$ be an $n \times p$ matrix. Then the product 'AB' is defined as the matrix $C = [c_{ik}]$ of order $m \times p$ where $c_{ik} = a_{i1}b_{1k} + a_{i2}b_{2k} + \cdots + a_{in}b_{nk}$

$$= \sum_{j=1}^{n} a_{ij}b_{jk}.$$

c_{ij} calculated for $i = 1, 2, \ldots m$ and $k = 1, 2, \ldots, p$ will give all the elements of the matrix C.

Properties of Multiplication

$M-1$: If A, B, C be $m \times n$, $n \times p$, $p \times q$ matrices respectively, then $(AB)C = A(BC)$ (ASSOCIATIVITY).
$M-2$: If A is a $m \times n$ matrix, then $A\,I_n = A$ and $I_m\,A = A$ and if A is a square matrix, i.e., $m = n$, then $AI = IA = A$ (I is the MULTIPLICATIVE IDENTITY).
$M-3$: If A, B, C be $m \times n, n \times p, p \times q$ matrices respectively, then $A(B + C) = AB + AC$ (DISTRIBUTIVE LAW).
$M-4$: Matrix multiplication is NOT COMMUTATIVE in general.
$M-5$: The INVERSE of a given matrix may not always exist.

Determinants

Let $A = [a_{ij}]$ be a square matrix of order 'n'. Then the determinant of order 'n' associated with 'A' is denoted by $|A|$ or $|a_{ij}|$ or Det(A) or Δ.

NOTES

1. Determinant of a matrix exists, only if it is a square matrix.
2. The value of a determinant is a single number.

Determinant of Order 1 (or First Order Determinant)

If 'a' be any number, then determinant of 'a' is of order '1' and is denoted by $|a|$. The value of $|a| = a$.

Determinant of Order 2 (or Second Order Determinant)

If 'A' is a square matrix of order 2 given by

$A = \begin{pmatrix} a_1 & b_1 \\ a_2 & b_2 \end{pmatrix}$ then $\text{Det}(A) = \begin{vmatrix} a_1 & b_1 \\ a_2 & b_2 \end{vmatrix}$ is determinant of order 2 and its value is $\Delta = a_1b_2 - a_2b_1$

Minor and Cofactor of a Matrix

Let $A = \begin{pmatrix} a_1 & b_1 & c_1 \\ a_2 & b_2 & c_2 \\ a_3 & b_3 & c_3 \end{pmatrix}$ be a 3×3 matrix

Then the minor of an element a_{ij} of 'A' is the determinant of the 2×2 matrix obtained after deleting the i-th row and j-th column of A and is denoted by M_{ij}.

The cofactor of a_{ij} is denoted by A_{ij} and is defined as $(-1)^{i+j} M_{ij}$, i.e., $A_{ij} = (-1)^{i+j} M_{ij}$

Determinant of Order 3 (Third Order Determinant)

If A is a square matrix of order '3', given by $A = \begin{pmatrix} a_1 & b_1 & c_1 \\ a_2 & b_2 & c_2 \\ a_3 & b_3 & c_3 \end{pmatrix}$. Then the determinant of 'A' is given by

$\Delta = \text{Det } A = \begin{vmatrix} a_1 & b_1 & c_1 \\ a_2 & b_2 & c_2 \\ a_3 & b_3 & c_3 \end{vmatrix}$ is a determinant of order 3 and the value is obtained by taking the sum of the products of the elements of any row (or column) by their corresponding cofactors.

Thus for A, $\Delta = a_1A_1 + b_1B_1 + c_1C_1$

$$= a_1 \begin{vmatrix} b_2 & c_2 \\ b_3 & c_3 \end{vmatrix} - b_1 \begin{vmatrix} a_2 & c_2 \\ a_3 & c_3 \end{vmatrix} + c_1 \begin{vmatrix} a_2 & b_2 \\ a_3 & b_3 \end{vmatrix}$$

or also $\Delta = a_1A_1 + a_2A_2 + a_3A_3$

$$= a_1 \begin{vmatrix} b_2 & c_2 \\ b_3 & c_3 \end{vmatrix} - a_2 \begin{vmatrix} b_1 & c_1 \\ b_3 & c_3 \end{vmatrix} + a_3 \begin{vmatrix} b_1 & c_1 \\ b_2 & c_2 \end{vmatrix}$$

(This is by expanding by C_1) and so on.

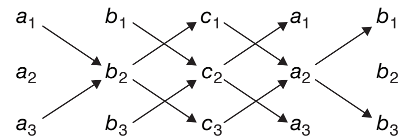
The sign to be used before a particular element can be judged by using the following rule:

$$\begin{matrix} + & - & + \\ - & + & - \\ + & - & + \end{matrix}$$

The value of the determinants of order 3 can also be evaluated by using 'Sarrus' method given as follows:

Let $\Delta = \begin{vmatrix} a_1 & b_1 & c_1 \\ a_2 & b_2 & c_2 \\ a_3 & b_3 & c_3 \end{vmatrix}$

Enter the first column and then the second column after the third column and take the product of numbers as shown by the arrows, taking care of signs indicated



Then

$$\Delta = a_1b_2c_3 + b_1c_2a_3 + c_1a_2b_3 - a_3b_2c_1 - b_3c_2a_1 - c_3a_2b_1$$

We can now define the cofactor of an element a_{ij} in a 4×4 matrix as $(-1)^{i+j} \times$ (Determinant of the 3×3 matrix obtained by deleting the i-th row and j-th column) and determinant of a 4×4 matrix to be the sum of products of elements of any row (or column) by their corresponding cofactors. We can similarly define determinant of a square matrix of any order.

Properties of Determinant

1. If two rows (or columns) of a determinant are interchanged, the value of the determinant is multiplied by (-1).
2. If the rows and columns of a determinant are interchanged, the value of the determinant remains unchanged, i.e., $\text{Det}(A) = \text{Det}(A^T)$.
3. If all the elements of a row (or column) of a determinant are multiplied by a scalar (say 'K'), the value of the new determinant is equal to 'K' times the value of the original determinant.
4. If two rows (or columns) of a determinant are identical, then the value of the determinant is zero.
5. If the elements of a row (or a column) in a determinant are proportional to the elements of any other row (or column), then the determinant is '0'.
6. If every element of any row (or column) is zero, then determinant is '0'.
7. If each element in a row (or column) of a determinant is the sum of two terms, then its determinant can be expressed as the sum of two determinants of the same order.
8. (The theorem of 'false cofactor') The sum of products of elements of a row (or column) with the cofactors of any other row (or column) is zero.

   Thus in $A = \begin{pmatrix} a_1 & b_1 & c_1 \\ a_2 & b_2 & c_2 \\ a_3 & b_3 & c_3 \end{pmatrix}$

   $a_1A_2 + b_1B_2 + c_1C_2 = 0$

   $a_2A_1 + b_2B_1 + c_2C_1 = 0$ and so on in general

   $a_rA_s + b_rB_s + c_rC_s = 0$ if $r \neq s$

9. If the elements of a determinant are polynomials in x and the determinant vanishes for $x = a$, then $x - a$ is a factor of the determinant.

Singular and Non-singular Matrices

A square matrix 'A' is said to be singular, if $\text{Det}(A) = 0$ and is non-singular, if $\text{Det}(A) \neq 0$.

NOTES

1. A unit matrix is non-singular (since its Det = 1)
2. If A and B are non-singular matrices of the same 'type', then AB is non-singular of the same 'type'.

Inverse of a Matrix

Let 'A' be a square matrix. A matrix 'B' is said to be an inverse of 'A', if $AB = BA = I$.

NOTE

If B is the inverse of 'A', then 'A' is the inverse of 'B'.

Some Results of Inverse

1. Inverse of a square matrix, when it exists, is unique.
2. The inverse of a square matrix exists, if and only if it is non-singular.
3. If 'A' and 'B' are square matrices of the same order, then 'AB' is invertible (i.e., inverse of AB exists) if 'A' and 'B' are both invertible.
4. If 'A' and 'B' are invertible matrices of the same order, then $(AB)^{-1} = B^{-1} A^{-1}$.
5. If A is invertible, then so is A^T and $(A^T)^{-1} = (A^{-1})^T$.
6. If A is invertible, then so is A^θ and $(A^\theta)^{-1} = (A^{-1})^\theta$.

Adjoint of a Matrix

The adjoint of a square matrix 'A' is the transpose of the matrix obtained by replacing the elements of 'A' by their corresponding cofactors.

NOTE

The adjoint is defined only for square matrices and the adjoint of a matrix 'A' is denoted by Adj(A). If

$$A = \begin{pmatrix} a_1 & a_2 & \cdots & a_n \\ b_1 & b_2 & \cdots & b_n \\ \vdots & \vdots & \vdots & \vdots \\ l_1 & l_2 & \cdots & l_n \end{pmatrix}$$

$$\text{Adj } A = \begin{pmatrix} A_1 & A_2 & \cdots & A_n \\ B_1 & B_2 & \cdots & B_n \\ \vdots & \vdots & \vdots & \vdots \\ L_1 & L_2 & \cdots & L_n \end{pmatrix}^T = \begin{pmatrix} A_1 & B_1 & \cdots & L_1 \\ A_2 & B_2 & \cdots & L_2 \\ \vdots & \vdots & \vdots & \vdots \\ A_n & B_n & \cdots & L_n \end{pmatrix}$$

Results

1. If 'A' is of order 3×3 and K is any number, then $\text{Adj}(KA) = K^2(\text{Adj } A)$.
2. $A(\text{Adj } A) = (\text{Adj } A)A = |A|\, I$ for any square matrix 'A'.
3. Adj $I = I$; Adj $O = O$ where I is the identity matrix and O is the null matrix.
4. $\text{Adj}(AB) = (\text{Adj } B)\,(\text{Adj } A)$ if A, B are non-singular and are of same type.
5. If $A = A_{n\times n}$, then
   $\det(\text{Adj } A) = (\det A)^{n-1}$.
   $\text{Adj}(\text{Adj } A) = (\det A)^{n-2}(A)$.
   $|\text{Adj}(\text{Adj } A)| = (\det A)^{(n-1)^2}$

Evaluating Inverse of a Square Matrix

If A is a square matrix, then $A^{-1} = \dfrac{1}{|A|}(\text{Adj } A)$

NOTES

1. The inverse of an identity matrix is itself.
2. $(\text{Adj } A)^{-1} = \dfrac{1}{|A|} A$
3. If A is a non-singular square matrix (say of order 3) and K is any non-zero number, then
$$(KA)^{-1} = \frac{1}{K} A^{-1}$$

Rank and Nullity of a Matrix

Rank of a Matrix The Matrix 'A' is said to be of rank 'r', if and only if it has at least one non-singular square sub-matrix of order 'r' and all square sub-matrices of order $(r + 1)$ and higher orders are singular. The rank of a matrix A is denoted by rank (A) or $\rho(A)$.

Nullity of a Matrix If A is a square matrix of order 'n', then $n - \rho(A)$, i.e., n – rank (A) is defined as nullity of matrix 'A' and is denoted by $N(A)$.

Remark 1: If there is a non-singular square sub-matrix of order 'K', then $\rho(A) \geq K$.

Remark 2: If there is no non-singular square sub-matrix of order 'K', then $\rho(A) < K$.

Remark 3: If A' is the transpose of A, then $\rho(A) = \rho(A')$.

Remark 4: The rank of a null matrix is '0'.

Remark 5: The rank of a non-singular square matrix of order 'n' is 'n' and its nullity is '0'.

Remark 6: Elementary operations do not change the rank of a matrix.

Remark 7: If the product of two matrices A and B is defined, then $\rho(AB) \leq \rho(A)$ and $\rho(AB) \leq \rho(B)$. That is, the rank of product of two matrices cannot exceed the rank of either of them.

Elementary Operations or Elementary Transformations

1. Elementary row operations
   (a) $R_i \leftrightarrow R_j$: Interchanging of ith and jth rows
   (b) $R_i \to KR_i$: Multiplication of every element of ith row with a non-zero scalar K
   (c) $R_i \to R_i + kR_j$: Addition of k times the elements of jth row to the corresponding elements of ith row.
2. Elementary column operations
   (a) $C_i \leftrightarrow C_j$: Interchanging of ith and jth columns
   (b) $C_i \to KC_i$: Multiplication of every element of ith column with a non-zero scalar K.
   (c) $C_i \to C_i + KC_j$: Addition of K times the elements of jth column to the corresponding elements of ith column.

Example: Consider the matrix $A = \begin{bmatrix} 2 & 3 & -4 & 1 \\ 3 & 0 & 1 & 5 \\ 4 & 7 & 1 & 2 \end{bmatrix}$

$$R_2 \to 2R_2 \sim \begin{bmatrix} 2 & 3 & -4 & 1 \\ 6 & 0 & 2 & 10 \\ 4 & 7 & 1 & 2 \end{bmatrix}$$

$$C_2 \leftrightarrow C_3 \sim \begin{bmatrix} 2 & -4 & 3 & 1 \\ 3 & 1 & 0 & 5 \\ 4 & 1 & 7 & 2 \end{bmatrix}$$

$$C_1 \to C_1 - 2C_4 \sim \begin{bmatrix} 0 & -4 & 3 & 1 \\ -7 & 1 & 0 & 5 \\ 0 & 1 & 7 & 2 \end{bmatrix}$$

NOTE

The rank of a matrix is invariant under elementary operations

Row and Column Equivalence Matrices

Row Equivalence Matrix If B is a matrix obtained by applying a finite number of elementary row operations successively on matrix A, then matrix B is said to be row equivalent to A (or a row equivalent matrix of A).

Column Equivalence Matrix If B is obtained by applying a finite number of elementary column operations successively on matrix A, then matrix B is said to be column equivalent to A (or a column equivalent matrix of A).

Example: $A = \begin{bmatrix} 1 & 3 & 4 \\ 2 & 5 & -2 \\ 1 & 4 & -3 \end{bmatrix}$

$$R_2 - 2R_1, R_3 - R_1 \sim \begin{bmatrix} 1 & 3 & 4 \\ 0 & -1 & -10 \\ 0 & 1 & -7 \end{bmatrix} = B \text{ (say)}$$

B is a row equivalent matrix of A.

Example: $B = \begin{bmatrix} 1 & 3 & 2 \\ 3 & 4 & -4 \\ 1 & 1 & 6 \end{bmatrix}$

$$C_2 - 3C_1, \frac{1}{2}C_3 \sim \begin{bmatrix} 1 & 0 & 1 \\ 3 & -5 & -2 \\ 1 & -2 & 6 \end{bmatrix} = C \text{ (say)}$$

C is a column equivalent to B.

Row Reduced Matrix A matrix A of order $m \times n$ is said to be row reduced if,

1. The first non-zero element of a non-zero row is 1.
2. Every other element in the column in which such 1's occur is 0.

$$A = \begin{pmatrix} 1 & 0 & 2 \\ 0 & 1 & 3 \\ 0 & 0 & 0 \end{pmatrix} \text{ is a row reduced matrix}$$

$$B = \begin{pmatrix} 1 & 0 & 4 \\ 0 & 5 & 0 \\ 0 & 0 & 0 \end{pmatrix} \text{ is not a row reduced matrix.}$$

Row Reduced Echelon Matrix A matrix 'X' is said to be row reduced echelon matrix if,

1. X is row reduced.
2. There exists integer $\underline{P}(0 \le p \le m)$ such that first 'p' rows of X are non-zero and all the remaining rows are zero rows.
3. For the ith non-zero row, if the first non-zero element of the row (i.e., 1) occurs in the jth column then, $j_1 < j_2 < j_3 < \cdots < j_p$.

Example: $P = \begin{pmatrix} 1 & 0 & 0 & 2 \\ 0 & 1 & 0 & 3 \\ 0 & 0 & 1 & 4 \\ 0 & 0 & 0 & 0 \end{pmatrix}; Q = \begin{pmatrix} 0 & 1 & 2 & 0 \\ 0 & 0 & 0 & 1 \\ 0 & 0 & 0 & 0 \end{pmatrix}$

are echelon matrices. The number of non-zero rows (i.e., value of P and Q) are 3 and 2 respectively. The value of i and j are tabulated below

P:	i	1	2	3
	j	1	2	3

Q:	i	1	2
	j	2	4

Normal form of a Matrix

By means of elementary transformations, every matrix 'A' of order $m \times n$ and rank r (> 0) can be reduced to one of the following forms.

1. $\begin{pmatrix} I_r & 0 \\ 0 & 0 \end{pmatrix}$ **2.** $[I_r/0]$ **3.** $[\underline{I_r}]$ **4.** $\begin{bmatrix} I_r \\ 0 \end{bmatrix}$

and these are called the normal forms. I_r is the unit matrix of order 'r'.

NOTE

If a $m \times n$ matrix 'A' has been reduced to the normal form say $\begin{pmatrix} I_r & 0 \\ 0 & 0 \end{pmatrix}$ then 'r' is the rank of A.

Systems of Linear Equations

Let
$$\left.\begin{matrix} a_{11}x_1 + a_{12}x_2 + \cdots + a_{1n}X_n = b_1 \\ a_{21}x_1 + a_{22}x_2 + \cdots + a_{2n}X_n = b_2 \\ \cdot \quad \cdot \quad \cdot \\ \cdot \quad \cdot \quad \cdot \\ \cdot \quad \cdot \quad \cdot \\ a_{n1}x_1 + a_{n2}x_2 + \cdots \ a_{nn}x_n = b_n \end{matrix}\right\} \tag{1}$$

be a system of 'n' linear equations in 'n' variables $x_1, x_2, \ldots, x_n$. The above system of equations can be written as

$$\begin{pmatrix} a_{11} & a_{12} \cdots & a_{1n} \\ a_{21} & a_{22} \cdots & a_{2n} \\ \vdots & \vdots & \vdots \\ a_{n1} & a_{n2} \cdots & a_{nn} \end{pmatrix} \begin{pmatrix} x_1 \\ x_2 \\ \vdots \\ x_n \end{pmatrix} = \begin{pmatrix} b_1 \\ b_2 \\ \vdots \\ b_n \end{pmatrix} \quad \text{or} \quad AX = B$$

where

$$A = \begin{pmatrix} a_{11} & a_{12} \cdots & a_{1n} \\ a_{21} & a_{22} \cdots & a_{2n} \\ \vdots & \vdots & \vdots \\ a_{n1} & a_{n2} \cdots & a_{nn} \end{pmatrix}, X = \begin{pmatrix} x_1 \\ x_2 \\ \vdots \\ x_n \end{pmatrix}, B = \begin{pmatrix} b_1 \\ b_2 \\ \vdots \\ b_n \end{pmatrix}$$

A is called the co-efficient matrix.

Any set of values of $x_1, x_2, x_3, \ldots$ which simultaneously satisfy these equations is called a solution of the system. When the system of equations has one or more solutions, the equations are said to be CONSISTENT and the system of equations are said to be INCONSISTENT if it does not admit any solution. The system of equations (1) is said to be

HOMOGENEOUS, if $B = 0$

NON-HOMOGENEOUS, if $B \neq 0$

Let the system of equations be

$$\begin{aligned} a_{11}x_1 + a_{12}x_2 + \cdots + a_{1n}x_n &= b_1 \\ a_{12}x_1 + a_{22}x_2 + \cdots + a_{2n}x_n &= b_2 \\ &\ldots\ldots\ldots\ldots \\ &\ldots\ldots\ldots\ldots \\ a_{m1}x_1 + a_{m2}x_2 + \cdots + a_{mn}x_n &= b_m \end{aligned}$$

This is a system of 'm' equations in 'n' variables $x_1, x_2, \ldots, x_n$. The system of equations can be written as $AX = B$ where

$$A = \begin{pmatrix} a_{11} & a_{12} \cdots & a_{1n} \\ a_{21} & a_{22} \cdots & a_{2n} \\ \vdots & \vdots & \vdots \\ a_{m1} & a_{m2} & a_{mn} \end{pmatrix}, X = \begin{pmatrix} x_1 \\ x_2 \\ \vdots \\ x_n \end{pmatrix}, B = \begin{pmatrix} b_1 \\ b_2 \\ \vdots \\ b_m \end{pmatrix}$$

The matrix $\begin{pmatrix} a_{11} & a_{12} \cdots & a_{1n} & b_1 \\ a_{21} & a_{22} \cdots & a_{2n} & b_2 \\ \vdots & \vdots & \vdots & \\ a_{m1} & a_{m2} \cdots & a_{mn} & b_m \end{pmatrix}$ is called the augmented matrix of the system of equations and is denoted by $[A : B]$.

Let $AX = B$ represents 'm' linear equations with 'n' variables. Let rank of $A = r$ and rank $(A, B) = r_1$ [where (A, B) is an augmented matrix]. If $r_1 \neq r$, then the system of equations are inconsistent.

If $r_1 = r$, the table follows:

	$m = n$		$m > n$		$m < n$	
	$r = n$	$r < n$	$r = n$	$r < n$	$r = m$	$r < m$
Homo-geneous	Only trivial solution	Infinite solutions	Only trivial solution	Infinite solutions	Infinite solutions	Infinite solutions
Non-homo geneous	Unique solution	Infinite solutions	Unique solution	Infinite solutions	Infinite solutions	Infinite solutions

Solving System of Linear Equations

The following methods of solving system of linear equations (1) is applicable only when the co-efficient matrix 'A' is non singular, i.e., $|A| \neq 0$.

Cramers Method

Let $AX = B$ represent the system of equations (1) where A, X and B are as defined earlier.

Let Δ be $|A|$ and $\Delta_1, \Delta_2, \ldots, \Delta_n$ be the determinants obtained by replacing the elements of 1st, 2nd, $\ldots$, nth column of A by the elements of B. Then if $\Delta \neq 0$, we have

$$x_1 = \Delta_1/\Delta;\ x_2 = \Delta_2/\Delta;\ x_3 = \Delta_3/\Delta;\ \ldots;\ x_n = \Delta_n/\Delta.$$

Inverse Method

Let the system of linear equations be $AX = B$, where A, X, B are as defined earlier.

If $|A| \neq 0$ then pre-multiplying with A^{-1}, we get $A^{-1}(AX) = A^{-1}B$.

$\Rightarrow \quad X = A^{-1}B$ which gives the values of the variables.

Gauss–Jordan Method

Consider the augmented matrix $[A : B]$ of the system of 'n' non-homogeneous equations (1) in n-variables

$$\begin{bmatrix} a_{11} & a_{12} & \cdots & a_{1n} & b_1 \\ a_{21} & a_{22} & \cdots & a_{2n} & b_2 \\ \vdots & \vdots & & \vdots & \\ a_{n1} & a_{n2} & \cdots & a_{nn} & b_n \end{bmatrix}$$

Reduce this augmented matrix to the standard form

$$\begin{bmatrix} 1 & 0 & \cdots & 0 & d_1 \\ 0 & 1 & \cdots & 0 & d_2 \\ \vdots & \vdots & & \vdots & \\ 0 & 0 & \cdots & 1 & d_n \end{bmatrix}$$

By applying the elementary operations, the solution of the equations is $x_1 = d_1, x_2 = d_2, \ldots, x_n = d_n$.

Gauss Elimination Method

Let the system of linear equations given by

$$\left.\begin{aligned} a_{11}x_1 + a_{12}x_2 + \cdots + a_{1n}x_n &= c_1 \\ a_{21}x_1 + a_{22}x_2 + \cdots + a_{2n}x_n &= c_2 \\ a_{31}x_1 + a_{32}x_2 + \cdots + a_{3n}x_n &= c_3 \\ \cdot \quad \cdot \quad \cdot \quad & \cdot \\ \cdot \quad \cdot \quad \cdot \quad & \cdot \\ \cdot \quad \cdot \quad \cdot \quad & \cdot \\ a_{n1}x_1 + a_{n2}x_2 + \cdots + a_{nn}x_n &= c_n \end{aligned}\right\} \quad (1)$$

Let $a_{11} \neq 0$ write the above equations in the matrix form $AX = B$

Write the augmented matrix $[A\ B]$.

Using elementary row operations, eliminate the unknown x_1 from all the equations except the first. Eliminate the unknown x_2 from all the equations except from first and second rows, continuing in this way we finally get the following equivalent system of equations at the $(n-1)$th step.

$$\begin{aligned} a'_{11}x_1 + a'_{12}x_2 + a'_{13}x_3 + \cdots + a'_{1n}x_n &= c'_1 \\ a'_{22}x_2 + \cdots + a'_{2n}x_n &= c'_2 \\ a'_{33}x_3 + \cdots + a'_{3n}x_n &= c'_3 \\ a'_{nn}x_n &= c'_n \end{aligned}$$

From the above system of equations we can find the values of the unknowns.

Linear Dependence

A set of vectors of n dimensions is said to be linearly dependent if one of these vectors can be expressed as a linear combination of some other vectors in the set.

If no vector can be expressed as a linear combination of the others, then the set of vectors is said to be linearly independent.

NOTE

The maximum number of linearly independent rows or columns of a matrix is called the rank of the matrix.

LU Decomposition Method of Factorisation or Method of Triangularization

Consider the system of equations

$$\left.\begin{aligned} a_{11}x_1 + a_{12}x_2 + a_{13}x_3 &= b_1 \\ a_{21}x_1 + a_{22}x_2 + a_{23}x_3 &= b_2 \\ a_{31}x_1 + a_{32}x_2 + a_{33}x_3 &= b_3 \end{aligned}\right\} \quad (1)$$

In matrix notation, Eq. (1) can be written as $AX = B$ (2)

where $A = \begin{bmatrix} a_{11} & a_{12} & a_{13} \\ a_{21} & a_{22} & a_{23} \\ a_{31} & a_{32} & a_{33} \end{bmatrix}$, $X = \begin{bmatrix} x_1 \\ x_2 \\ x_3 \end{bmatrix}$ and $B = \begin{bmatrix} b_1 \\ b_2 \\ b_3 \end{bmatrix}$

Step 1: Write $A = LU$, where $L \to$ Lower triangular matrix with principal diagonal elements being equal to 1 and $U \to$ Upper triangular matrix.

That is, $L = \begin{bmatrix} 1 & 0 & 0 \\ l_{21} & 1 & 0 \\ l_{31} & l_{32} & 1 \end{bmatrix}$ and $U = \begin{bmatrix} u_{11} & u_{12} & u_{13} \\ 0 & u_{22} & u_{23} \\ 0 & 0 & u_{33} \end{bmatrix}$

Step 2: Now Eq. (2) becomes $LUX = B$ (3)

Step 3: Let $UX = Y$ (4)

where $Y = \begin{bmatrix} y_1 \\ y_2 \\ y_3 \end{bmatrix}$

Step 4: Combining Eqs. (3) and (4), we get $LY = B$ (5)
On solving Eq. (5) we get y_1, y_2, y_3.

Step 5: Substituting Y in Eq. (4), we get $UX = Y$
On solving, we get X, i.e., x_1, x_2, x_3.

The Characteristic Equation of a Matrix

Characteristic Matrix If A is any square matrix, the matrix $A - \lambda I$ where λ is a scalar, is called the characteristic matrix of A.

Characteristic Polynomial If A is any square matrix of order n, then the determinant $|A - \lambda I|$ yields a polynomial $\phi(\lambda)$ of degree n in λ which is known as the characteristic polynomial of the matrix A.

Characteristic Equation If $\phi(\lambda)$ is the characteristic polynomial of a matrix A, then $\phi(\lambda) = 0$, is called the characteristic equation of A.

And the roots of this equation, say $\lambda_1, \lambda_2, \ldots, \lambda_n$ are called the characteristic roots or latent roots or **eigen values**. If λ is a characteristic root of ordert, then t is called the algebraic multiplicity of λ.

Characteristic Vectors Corresponding to each characteristic root λ, there is a non-zero vector which satisfies the characteristic equation $|A - \lambda I| = 0$. These non-zero vectors are called the characteristic vectors or **eigen vectors** or latent vectors.

NOTES

1. The characteristic roots of a matrix and its transpose are the same.
2. 0 is a characteristic roots of a matrix, if the matrix is singular.
3. The characteristic roots of a triangular matrix are just the diagonal elements of the matrix.
4. If K is any scalar, the characteristic roots of matrix KA are K times the characteristic roots of matrix A.
5. If $a_1, a_2, a_3, \ldots, a_n$ are characteristic roots of matrix A and K is a scalar, then the characteristic roots of matrix $A - KI$ are $a_1 - K, a_2 - K, \ldots, a_n - K$.
6. If λ is a characteristic root of a non-singular matrix, then λ^{-1} is a characteristic root of A^{-1}.
7. If the eigen values of A are $\lambda_1, \lambda_2, \ldots, \lambda_n$ then the eigen values of A^2 are $\lambda_1^2, \lambda_2^2, \ldots, \lambda_n^2$.

Cayley–Hamilton Theorem

Every square matrix satisfies its characteristic equation.

Inverse by Cayley–Hamilton Theorem

Let A be non-singular square matrix of order n

Let the characteristic equation of A be

$$|A - \lambda I| = (-1)^n \lambda^n + C_1\lambda^{n-1} + C_2\lambda^{n-2} + \cdots + C_{n-1}\lambda + C_n = 0$$

Where $C_1, C_2, \ldots, C_n$ are all scalar constants

Then by Cayley–Hamilton theorem

$$(-1)^n A^n + C_1 A^{n-1} + C_2 A^{n-2} + \cdots + C_{n-1}A + C_n I = O \qquad (1)$$

Multiplying Eq. (1) throughout by A^{-1}, we have

$$A^{-1}[(-1)^n A^{n-1} + C_1 A^{n-1} + C_2 A^{n-2} + \cdots + C_{n-1} A + C_n I] = A^{-1} \cdot 0$$

$$\Rightarrow \quad (-1)^n A^{n-1} + C_1 A^{n-2} + C_2 A^{n-3} + \cdots + C_{n-1} I + C_n A^{-1}$$

$$\Rightarrow \quad A^{-1} = \frac{-1}{C_n}[(-1)^n A^{n-1} + C_1 A^{n-2} + C_2 A^{n-3} + \cdots + C_{n-1} I]$$

NOTE

Similarly, we can find $A^{-2}, A^{-3}, \ldots$ for the matrix A_x provided A is non-singular.

Power of a Matrix by Cayley–Hamilton Theorem

Cayley–Hamilton theorem is also helpful in finding higher powers of a square matrix with least possible number of matrix multiplications. This is explained in Examples 11 and 12.

Reduction to Diagonal Form

If A is a square matrix of order n with n linearly independent eigen vectors, then A can be reduced to a diagonal matrix, called diagonal form of A.

Procedure to Reduce a Square Matrix into Diagonal Form

Let A be a square matrix of order n that can be reduced to diagonal form

1. Find the eigen values and their corresponding eigen vectors of A. Let $\lambda_1, \lambda_2, \lambda_3, \ldots, \lambda_n$ be the eigen values and let $X_1, X_2, X_3, \ldots, X_n$ be their corresponding eigen vectors that are linearly independent.
2. Form the matrix P with $X_1, X_2, X_3, \ldots, X_n$ as its columns i.e., $P = [X_1\, X_2\, X_3 \ldots X_n]$ it can be easily observed that P is invertible.
3. Find the inverse of P (i.e., find P^{-1})
4. The diagonal form of A is given by $D = P^{-1}$ AP.

Where $D = \begin{bmatrix} \lambda_1 & 0 & 0 & \cdots & 0 \\ 0 & \lambda_2 & 0 & \cdots & 0 \\ \vdots & \vdots & \vdots & \vdots & \vdots \\ 0 & 0 & 0 & \cdots & \lambda_n \end{bmatrix}$ is a diagonal matrix

with eigen values of A as its principal diagonal elements.

NOTE

Here P is called the modal matrix and D is the spectral matrix of the matrix A

Power of a Matrix by Using its Diagonal Form

If D is the diagonal form of a square matrix A, then for any positive integer n, we have $A^n = P D^n P^{-1}$.

Where P is the modal matrix of A.

SOLVED EXAMPLES

Example 1

Find the value of

$$\begin{vmatrix} a+b+2c & a & b \\ c & b+c+2a & b \\ c & a & c+a+2b \end{vmatrix}.$$

Solution

$c_1 \to c_1 + c_2 + c_3$

$$\begin{vmatrix} 2(a+b+c) & a & b \\ 2(a+b+c) & b+c+2a & b \\ 2(a+b+c) & a & c+a+2b \end{vmatrix}$$

$$= 2(a+b+c)\begin{vmatrix} 1 & a & b \\ 1 & b+c+2a & b \\ 1 & a & c+a+2b \end{vmatrix}$$

$R_2 \to R_2 - R_1 \qquad R_3 \to R_3 - R_1$

$$2(a+b+c)\begin{vmatrix} 1 & a & b \\ 0 & a+b+c & 0 \\ 0 & 0 & a+b+c \end{vmatrix}$$

$$= 2(a+b+c)^3\begin{vmatrix} 1 & a & b \\ 0 & 1 & 0 \\ 0 & 0 & 1 \end{vmatrix} = 2(a+b+c)^3.$$

Example 2

Find the rank of the matrix $\begin{bmatrix} 3 & 1 & -2 \\ 2 & 0 & -1 \\ 1 & 4 & 1 \end{bmatrix}$.

Solution

Given

$$\begin{bmatrix} 3 & 1 & -2 \\ 2 & 0 & -1 \\ 1 & 4 & 1 \end{bmatrix} R_1 \leftrightarrow R_3 \begin{bmatrix} 1 & 4 & 1 \\ 2 & 0 & -1 \\ 3 & 1 & -2 \end{bmatrix}$$

$R_2 \to R_2 - 2R_1$ and $R_3 \to R_3 - 3R_1$

$$\sim \begin{bmatrix} 1 & 4 & 1 \\ 0 & -8 & -3 \\ 0 & -11 & -5 \end{bmatrix}$$

$$R_3 \to R_3 + \frac{-11}{8} R_2 \sim \begin{bmatrix} 1 & 4 & 1 \\ 0 & -8 & -3 \\ 0 & 0 & \frac{-7}{8} \end{bmatrix}$$

which is a row echelon form. The number of non zero rows = 3.

The rank of the matrix = The number of non-zero rows in it = 3

∴ Rank of the matrix = 3.

Example 3

Find whether the vectors given below are linearly dependent or independent {(1, 3, 2), (1, –4, 1), (–1, 2, 5)}.

Solution

Let $x, y, z \in R$ such that $x(1, 3, 2) + y(1, -4, 1) + z(-1, 2, 5) = (0, 0, 0)$

$$\Rightarrow \left.\begin{aligned} x + y - z &= 0 \\ 3x - 4y + 2z &= 0 \\ 2x + y + 5z &= 0 \end{aligned}\right\} \qquad (1)$$

The above system of equations when expressed in determinant form, we have

$$\begin{vmatrix} 1 & 1 & -1 \\ 3 & -4 & 2 \\ 2 & 1 & 5 \end{vmatrix} \xrightarrow{R_2 - 3R_1,\ R_3 - 2R_1} \begin{vmatrix} 1 & 1 & -1 \\ 0 & -7 & 5 \\ 0 & -1 & 7 \end{vmatrix}$$

$$\xrightarrow{R_3 - \frac{1}{7}R_2} \begin{vmatrix} 1 & 1 & -1 \\ 0 & -7 & 5 \\ 0 & 0 & \frac{44}{7} \end{vmatrix}$$

∴ Rank = 3 = number of unknowns

∴ There exists a unique solution $x = 0, y = 0$ and $z = 0$

$\Rightarrow \quad x(1, 3, 2) + y(1, -4, 1) + z(-1, 2, 5)$
$= (0, 0, 0)$ only when $x = 0, y = 0, z = 0$.

∴ The set of vectors are linearly independent.

Example 4

Show that the set of vectors {(2, 3, 9), (3, –2, –6), (–1, 5, 15)} are linearly dependent.

Solution

Let $x, y, z \,\varepsilon\, R$ such that

$x(2, 3, 9) + y(3, -2, -6) + z(-1, 5, 15) = (0, 0, 0)$

$$\begin{aligned} 2x + 3y - z &= 0 \\ \Rightarrow \quad 3x - 2y + 5z &= 0 \\ 9x - 6y + 15z &= 0 \end{aligned}$$

The above system when expressed in matrix form we have the coefficient matrix

$$A = \begin{bmatrix} 2 & 3 & -1 \\ 3 & -2 & 5 \\ 9 & -6 & 15 \end{bmatrix}$$

$$\begin{vmatrix} 2 & 3 & -1 \\ 3 & -2 & 5 \\ 9 & -6 & 15 \end{vmatrix} = 0$$

as $\quad R_3 = 3R_2$ and $\begin{vmatrix} 2 & 3 \\ 3 & -2 \end{vmatrix} \neq 0$

∴ Rank of $A = 2 <$ the number of variables which is 3.

∴ The system will possess a non-zero solution, i.e.,

$$\begin{aligned} 2x + 3y - z &= 0 \\ 3x - 2y + 5z &= 0 \end{aligned}$$

$$\frac{x}{15-2} = \frac{y}{-3-10} = \frac{z}{-4-9} = k \text{ (say)}$$

$\Rightarrow \quad x = 13k, y = -13k$ and $z = -13k$

Let $k = 1 \Rightarrow x = 13, y = -13, z = -13$

∴ There exists a non-zero solution such that $x, y, z \,\varepsilon\, R$

$x(2, 3, 9) + y(3, -2, -6) + z(-1, 5, 15) = (0, 0, 0)$

∴ The set of given vectors are linearly dependent.

Example 5

How many solutions are there for the system of linear equations $x + 2y + z = 0$, $3x + 2y - z = 0$ and $4x + y - 3z = 0$?

Solution

Determinant of the co-efficient matrix of the given equations

is $\begin{vmatrix} 1 & 2 & 1 \\ 3 & 2 & -1 \\ 4 & 1 & -3 \end{vmatrix}$

$$= 1(-6 + 1) - 2(-9 + 4) + 1(3 - 8) = 0$$

∴ The system has infinite number of solutions.

Example 6

Solve the system of equations

$x_1 + x_2 + x_3 = 1$, $3x_1 + x_2 - 3x_3 = 5$ and $x_1 - 2x_2 - 5x_3 = 10$ by LU decomposition method.

Solution

$$AX = B \Rightarrow \begin{bmatrix} 1 & 1 & 1 \\ 3 & 1 & -3 \\ 1 & -2 & -5 \end{bmatrix}\begin{bmatrix} x_1 \\ x_2 \\ x_3 \end{bmatrix} = \begin{bmatrix} 1 \\ 5 \\ 10 \end{bmatrix}$$

Step 1: $LU = A$

$$\Rightarrow \begin{bmatrix} 1 & 0 & 0 \\ l_{21} & 1 & 0 \\ l_{31} & l_{32} & 1 \end{bmatrix}\begin{bmatrix} u_{11} & u_{12} & u_{13} \\ 0 & u_{22} & u_{23} \\ 0 & 0 & u_{33} \end{bmatrix} = \begin{bmatrix} 1 & 1 & 1 \\ 3 & 1 & -3 \\ 1 & -2 & -5 \end{bmatrix}$$

Expanding and on solving we get, $u_{11} = 1$, $u_{12} = 1$, $u_{13} = 1$,

$u_{22} = -2$, $u_{23} = -6$, $u_{33} = 3$, $l_{21} = 3$, $l_{31} = 1$, $l_{32} = \dfrac{3}{2}$

Step 2: Now $LUX = B$

Step 3: Let $UX = Y$

Step 4: $\therefore$ $LY = B$

$$\Rightarrow \begin{bmatrix} 1 & 0 & 0 \\ 3 & 1 & 0 \\ 1 & \frac{3}{2} & 1 \end{bmatrix}\begin{bmatrix} y_1 \\ y_2 \\ y_3 \end{bmatrix} = \begin{bmatrix} 1 \\ 5 \\ 10 \end{bmatrix}$$

On solving, $y_1 = 1$, $y_2 = 2$ and $y_3 = 6$.

Step 5: $UX = Y$

$$\Rightarrow \begin{bmatrix} 1 & 1 & 1 \\ 0 & -2 & -6 \\ 0 & 0 & 3 \end{bmatrix}\begin{bmatrix} x_1 \\ x_2 \\ x_3 \end{bmatrix} = \begin{bmatrix} 1 \\ 2 \\ 6 \end{bmatrix}$$

On solving we get $x_1 = 6$, $x_2 = -7$ and $x_3 = 2$

$\therefore$ The solution is (6, –7, 2).

Example 7

Solve: $x + y + z = 6$, $3x - 2y - z = -4$ and $2x + 3y - 2z = 2$.

Solution

$$|A| = \begin{vmatrix} 1 & 1 & 1 \\ 3 & -2 & -1 \\ 2 & 3 & -2 \end{vmatrix} = 1(7) - 1(-4) + 1(9+4) \neq 0$$

$\therefore$ The set of given equations are non-homogeneous and the number of equations is equal to the number of variables.

$\therefore$ The given system of equations is consistent and has a unique solution.

Augmented matrix,

$$[AB] \text{ is } \begin{bmatrix} 1 & 1 & 1 & 6 \\ 3 & -2 & -1 & -4 \\ 2 & 3 & -2 & 2 \end{bmatrix}$$

$R_2 \to R_2 - 3R_1$, and $R_3 \to R_3 - 2R_1$

$$\sim \begin{bmatrix} 1 & 1 & 1 & 6 \\ 0 & -5 & -4 & -22 \\ 0 & 1 & -4 & -10 \end{bmatrix}$$

$R_1 \to R_1 + \dfrac{1}{5}R_2$ and $R_3 \to R_3 + \dfrac{1}{5}R_2$

$$\sim \begin{bmatrix} 1 & 0 & \frac{1}{5} & \frac{8}{5} \\ 0 & -5 & -4 & -22 \\ 0 & 0 & -\frac{24}{5} & -\frac{72}{5} \end{bmatrix}$$

$$R_2 \to \frac{-5}{6}R_3 + R_2;\ R_3 \to \frac{-5}{24}R_3$$

$$\sim \begin{bmatrix} 1 & 0 & \frac{1}{5} & \frac{8}{5} \\ 0 & -5 & 0 & -10 \\ 0 & 0 & 1 & 3 \end{bmatrix}$$

$$R_1 \to -\frac{1}{5}R_3 \text{ and } R_2 \to \frac{-1}{5}R_2$$

$$R_2 \to -\frac{1}{5}R_2 \sim \begin{bmatrix} 1 & 0 & 0 & 1 \\ 0 & 1 & 0 & 2 \\ 0 & 0 & 1 & 3 \end{bmatrix}$$

$\therefore$ Solution is $x = 1$, $y = 2$ and $z = 3$.

Example 8

Solve $3x + 2y - z = 0$, $4x + y + 2z = 0$ and $x - 5y + 7z = 0$.

Solution

Determinant of the co-efficient matrix of the equations when written in matrix form is $\begin{vmatrix} 3 & 2 & -1 \\ 4 & 1 & 2 \\ 1 & -5 & 7 \end{vmatrix}$

$$= 3(7 + 10) - 2(28 - 2) - 1(-20 - 1)$$
$$= 51 - 52 + 21 = 20$$

$\therefore$ The given system of equations have only one solution, i.e., $x = y = z = 0$.

Example 9

Determine the eigen values and eigen vectors of $A = \begin{pmatrix} 2 & 4 \\ 3 & 3 \end{pmatrix}$.

Solution

Characteristic equation of the given matrix is $|A - \lambda| = 0$

$$\Rightarrow \begin{vmatrix} 2-\lambda & 4 \\ 3 & 3-\lambda \end{vmatrix} = 0$$

$$\Rightarrow \quad \lambda^2 - 5\lambda - 6 = 0$$
$$(\lambda - 6)(\lambda + 1) = 0$$

$\Rightarrow$ $\lambda = -1$ and $\lambda = 6$ are the eigen values. Eigen vector corresponding to $\lambda = -1$ is obtained as follows:

$$\left[\begin{pmatrix} 2 & 4 \\ 3 & 3 \end{pmatrix} + 1\begin{pmatrix} 1 & 0 \\ 0 & 1 \end{pmatrix}\right]\begin{pmatrix} x_1 \\ x_2 \end{pmatrix} = \begin{pmatrix} 0 \\ 0 \end{pmatrix}$$

$$\Rightarrow \begin{pmatrix} 3 & 4 \\ 3 & 4 \end{pmatrix}\begin{pmatrix} x_1 \\ x_2 \end{pmatrix} = \begin{pmatrix} 0 \\ 0 \end{pmatrix}$$

$$\Rightarrow \quad 3x_1 + 4x_2 = 0$$

$$3x_1 + 4x_2 = 0 \Rightarrow x_1 = -\frac{4}{3}x_2$$

$\therefore$ Eigen vector corresponding to $\lambda = -1$ is,

$$X = \begin{pmatrix} x_1 \\ x_2 \end{pmatrix} = \begin{pmatrix} \dfrac{-4}{3}x_2 \\ x_2 \end{pmatrix} = x_2\begin{pmatrix} \dfrac{-4}{3} \\ 1 \end{pmatrix}$$

Similarly eigen vector corresponding to $\lambda = 6$ is obtained as follows:

$$\left[\begin{pmatrix} 2 & 4 \\ 3 & 3 \end{pmatrix} - 6\begin{pmatrix} 1 & 0 \\ 0 & 1 \end{pmatrix}\right]\begin{pmatrix} x_1 \\ x_2 \end{pmatrix} = \begin{pmatrix} 0 \\ 0 \end{pmatrix}$$

$$\Rightarrow \begin{pmatrix} -4 & 4 \\ 3 & -3 \end{pmatrix}\begin{pmatrix} x_1 \\ x_2 \end{pmatrix} = \begin{pmatrix} 0 \\ 0 \end{pmatrix}$$

$$\Rightarrow \quad -4x_1 + 4x_2 = 0 \text{ and } 3x_1 - 3x_2 = 0$$
$$\Rightarrow \quad x_1 = x_2$$

Eigen vector corresponding to $\lambda = 6$ is,

$$X = \begin{pmatrix} x_1 \\ x_2 \end{pmatrix} = \begin{pmatrix} x_2 \\ x_2 \end{pmatrix} = x_2\begin{pmatrix} 1 \\ 1 \end{pmatrix}.$$

Example 10

Find the eigen values of the matrix

$$A = \begin{pmatrix} 6 & 2 & 2 \\ 2 & 3 & 1 \\ 2 & 1 & 3 \end{pmatrix}.$$

Solution

Characteristic equation of the given matrix is $|A - \lambda| = 0$

$$\Rightarrow \begin{vmatrix} 6-\lambda & 2 & 2 \\ 2 & 3-\lambda & 1 \\ 2 & 1 & 3-\lambda \end{vmatrix} = 0$$

$$\Rightarrow \quad \lambda^3 - 12\lambda^2 + 36\lambda - 32 = 0$$
$$\lambda = 2, 2, 8$$

$\therefore$ Eigen values are 2, 2, 8.

Example 11

If $A = \begin{bmatrix} 4 & 2 \\ -7 & -4 \end{bmatrix}$, then find A^{16} by using Cayley–Hamilton theorem.

Solution

The characteristic equation of

$$A = \begin{bmatrix} 4 & 2 \\ -7 & -4 \end{bmatrix} \text{ is } |A - \lambda I| = 0$$

$$\Rightarrow \begin{bmatrix} 4-\lambda & 2 \\ -7 & -4-\lambda \end{bmatrix} = 0$$

$$\Rightarrow \quad (4 - \lambda)(-4 - \lambda) + 14 = 0$$
$$\Rightarrow \quad -16 - 4\lambda + 4\lambda + \lambda^2 + 14 = 0$$
$$\Rightarrow \quad \lambda^2 - 2 = 0 \tag{1}$$

By Cayley–Hamilton theorem, the matrix A satisfies its characteristic equation (1).

$\therefore A^2 - 2I = O$

where $I = \begin{bmatrix} 1 & 0 \\ 0 & 1 \end{bmatrix}$ and $O = \begin{bmatrix} 0 & 0 \\ 0 & 0 \end{bmatrix}$

$$\Rightarrow \quad A^2 = 2I \tag{2}$$

Now $A^{16} = (A^2)^8 = (2I)^8$ (From Eq. (2))

$$= 2^8 I^8 = 256I = 256\begin{bmatrix} 1 & 0 \\ 0 & 1 \end{bmatrix}$$

$$\therefore \quad A^{16} = \begin{bmatrix} 256 & 0 \\ 0 & 256 \end{bmatrix}$$

Example 12

If $A = \begin{bmatrix} 2 & 0 & 3 \\ 0 & 4 & -5 \\ 0 & 1 & 0 \end{bmatrix}$; then find the value of the matrix polynomial $3A^9 - 18A^8 + 39A^7 - 32A^6 + 12A^5 - 26A^4 + 16A^3 + 24A^2 - 50A + 40I$.

Solution

The characteristic equation of

$$A = \begin{bmatrix} 2 & 0 & 3 \\ 0 & 4 & -5 \\ 0 & 1 & 0 \end{bmatrix} \text{ is } |A - \lambda I| = 0$$

$$\Rightarrow \begin{vmatrix} 2-\lambda & 0 & 3 \\ 0 & 4-\lambda & -5 \\ 0 & 1 & -\lambda \end{vmatrix} = 0$$

$\Rightarrow \quad (2-\lambda)\{(4-\lambda)(-\lambda)+5\}=0$

$\Rightarrow \quad (2-\lambda)\{(\lambda^2-4\lambda+5)\}=0$

$\Rightarrow 2\lambda^2-8\lambda+10-\lambda^3+4\lambda^2-5\lambda=0.$

$\Rightarrow \quad -\lambda^3+6\lambda^2-13\lambda+10=0$

$\Rightarrow \quad \lambda^3-6\lambda^2+13\lambda-10=0 \qquad (1)$

By Cayley–Hamilton theorem, the matrix A will satisfy its characteristic Eq. (1)

$\therefore A^3-6A^2+13A-10I=O,$

where $I=\begin{bmatrix}1&0&0\\0&1&0\\0&0&1\end{bmatrix}$ and $O=\begin{bmatrix}0&0&0\\0&0&0\\0&0&0\end{bmatrix}$

$\therefore \quad A^3-6A^2+13A-10I=0 \qquad (2)$

Now consider the given matrix polynomial

$3A^9-18A^8+39A^7-32A^6+12A^5-26A^4+16A^3+24A^2-50A+40I$

$=3A^9-18A^8+39A^7-30A^6-2A^6+12A^5-26A^4+20A^3-4A^3+24A^2-52A+2A+40I$

$=3A^6(A^3-6A^2+13A-10I)-2A^3(A^3-6A^2+13A-10I)-4(A^3-6A^2+13A-10I)+2A$

$=3A^6\times 0-2A^3\times 0-4\times 0+2A$

(From Eq. (2))

$$=2A=2\begin{bmatrix}2&0&3\\0&4&-5\\0&1&0\end{bmatrix}=\begin{bmatrix}4&0&6\\0&8&-10\\0&2&0\end{bmatrix}.$$

Exercises

1. Which of the following is false?
(A) Every diagonal matrix is a square matrix.
(B) Every unit matrix is a scalar matrix.
(C) Every square matrix is a diagonal matrix.
(D) Every scalar matrix is a diagonal matrix.

2. If the trace of the matrix $\begin{pmatrix}1&a_{12}&\cdots&a_{1n}\\a_{21}&2&\cdots&a_{2n}\\\vdots&\vdots&\vdots&\vdots\\a_{n1}&a_{n2}&\cdots&n\end{pmatrix}$ is 55 then the value of n is
(A) 10 (B) 11
(C) 9 (D) Cannot be determined

3. Which of the following statement is/are false?
(A) $A^T\cdot B^T$ always defined for square matrices of same order.
(B) $A^T\cdot B$ is defined for matrices of the same order.
(C) $t_r(A^T)+t_r(B^T)$ is always defined for matrices A, B of same order.
(D) A^T+B^T is always defined for matrices A, B of same order.

4. Consider the following statements about two square matrices A and B of the same order:
P: $(A+B)^2=A^2+2AB+B^2$
Q: $(A+B)(A-B)=A^2-B^2$
Then,
(A) both P and Q are true.
(B) both P and Q are false
(C) both P and Q are true if A and B commute
(D) P is true but Q is false.

5. If $\begin{pmatrix}2&1&2\\1&0&1\\2&2&1\end{pmatrix}\begin{pmatrix}-2x&3&x\\x&-2&0\\2&-2x&-x\end{pmatrix}=I_{3\times3}$, then $x=$
(A) -1 (B) 1
(C) $\frac{1}{2}$ (D) 2

6. If $\Delta=\begin{vmatrix}a_{11}&a_{12}&a_{13}\\a_{21}&a_{22}&a_{23}\\a_{31}&a_{32}&a_{33}\end{vmatrix}$, then which of the following is true? (Here, A_{ij} is the cofactor of the element a_{ij})
(A) $a_{11}A_{11}+a_{21}A_{12}+a_{23}A_{32}=\Delta$
(B) $a_{11}A_{11}+a_{12}A_{12}+a_{13}A_{13}=\Delta$
(C) $a_{21}A_{12}+a_{23}A_{32}+a_{12}A_{21}=\Delta$
(D) $a_{12}A_{21}+a_{21}A_{12}+a_{31}A_{13}=\Delta$

7. The determinant value of $\begin{pmatrix}2&3&-3\\1&-2&2\\7&4&-4\end{pmatrix}$ is
(A) 0 (B) 10
(C) -10 (D) 15

8. The value of $\begin{vmatrix}n!&(n+1)!&(n+2)!\\(n+1)!&(n+2)!&(n+3)!\\(n+2)!&(n+3)!&(n+4)!\end{vmatrix}$ is
(A) $2n!\,(n+1)!$
(B) $2n!\,(n+1)!\,(n+2)!$
(C) $(2n)!\,(n+1)!\,(n+2)!$
(D) $2n!\,(n+3)!$

9. If $f(x)=\begin{vmatrix}{}^xC_0&{}^xC_1&{}^{x+1}C_1\\2{}^xC_1&2{}^xC_2&2{}^{(x+1)}C_2\\6{}^xC_2&6{}^xC_3&6{}^{(x+1)}C_3\end{vmatrix}$, then $f(200)$ is
(A) 200 (B) -200
(C) 0 (D) -2001

10. The determinant $\begin{vmatrix}2&3+i&-1\\3-i&0&-1+i\\-1&-1-i&1\end{vmatrix}$ is
(A) purely imaginary (B) zero
(C) real (D) 10

11. If $A = \begin{pmatrix} x & y & z \\ 2x & y & 3z \\ \frac{x}{2} & \frac{y}{2} & \frac{z}{2} \end{pmatrix}$, then $|A| =$ ______.

(A) $10xyz$ (B) 1

(C) 0 (D) $\frac{1}{2}(x^3 + y^3 + z^3 - 3xyz)$

12. If the elements of a row or column of a given square matrix is multiplied by 2, then the value of determinant is ______ times the original determinant.

(A) $\frac{1}{2}$ (B) 1

(C) 2 (D) 4

13. If A is a square matrix of order k and det(kA) = 27 det(A), then $k =$ ______.

(A) 9 (B) 1

(C) 2 (D) 3

14. If A and B are two square matrices of order 4 such that $|A| = -2$ and $|B| = 5$, then $|4AB|$ is

(A) -80 (B) -160

(C) -2560 (D) -256

15. I. $(a - b)$, $(b - c)$, $(c - a)$ are factors of the determinant $\begin{vmatrix} 1 & 1 & 1 \\ a & b & c \\ a^2 & b^2 & c^2 \end{vmatrix}$.

II. If the elements of a determinant are functions of x and its two rows or columns become identical (i.e., determinant equals zero,) when we substitute $x = k$, then $(x - k)$ is a factor of the determinant.

Which of the following is correct?

(A) Both I and II true. (B) Both I and II false.

(C) I is true, II is false (D) I is false, II is true

16. A lower triangular matrix $A = (a_{ij})_{n \times n}$ is singular if and only if

(A) $a_{ii} = 0$ for all $i = 1, 2, \ldots n$

(B) $a_{ii} = 0$ for atleast one $i = 1, 2, \ldots n$

(C) $a_{ii} \neq 0$ for all $i = 1, 2, \ldots n$

(D) $a_{ii} \neq 0$ for atleast one i, $i = 1, 2, \ldots n$

17. Inverse of the matrix $\begin{pmatrix} 2 & -1 & 0 \\ 1 & 2 & 3 \\ -4 & 1 & -1 \end{pmatrix}$ is

(A) $\begin{pmatrix} -5 & -11 & 9 \\ -1 & -2 & 2 \\ -3 & -6 & 5 \end{pmatrix}$ (B) $\begin{pmatrix} -5 & -1 & -3 \\ -11 & -2 & -6 \\ 9 & 2 & 5 \end{pmatrix}$

(C) $\begin{pmatrix} 5 & 11 & 9 \\ 1 & 2 & -2 \\ 3 & 6 & -5 \end{pmatrix}$ (D) $\begin{pmatrix} 5 & 1 & 3 \\ 11 & 2 & 6 \\ 9 & -2 & -5 \end{pmatrix}$

18. I. If $A = \begin{bmatrix} 1 & 2 & 3 & 4 & 5 \\ 2 & 3 & 4 & 5 & 6 \\ 3 & 4 & 5 & 6 & 7 \\ 4 & 5 & 6 & 7 & 8 \\ 5 & 6 & 7 & 8 & 9 \end{bmatrix}$, then A^{-1} is symmetric.

II. If a non-singular matrix A is symmetric, then A^{-1} is also symmetric.

Which of the following is correct?

(A) Both I and II true. (B) Both I and II false.

(C) I is true, II is false. (D) I is false, II is true.

19. A is a third order matrix. If the value of the square of the determinant of the matrix of co-factors of A is 28561, then $|A|$ equals

(A) 25 (B) ± 13

(C) 120 (D) ± 169

20. If A is a square matrix of order 3, then the product of A and its transpose is

(A) unit matrix. (B) zero matrix.

(C) identity matrix. (D) symmetric matrix.

21. If A and B are two skew symmetric matrices of the same order then AB is skew symmetric if and only if

(A) $AB + BA = O$ (B) $AB - BA = O$

(C) $AB + BA = I$ (D) $AB - BA = I$

22. Rank of the matrix $A = \begin{pmatrix} 1 & 2 & 3 \\ 4 & 5 & 6 \end{pmatrix}$ is

(A) 1 (B) 2

(C) 3 (D) 4

23. The rank of the matrix $\begin{pmatrix} 2 & -1 & -3 \\ -4 & 2 & 6 \\ -10 & 5 & 15 \end{pmatrix}$ is

(A) 0 (B) 1

(C) 2 (D) 3

24. If $A = (1 \;\; 2 \;\; 3)$ and $B = \begin{pmatrix} 1 \\ 2 \\ 3 \end{pmatrix}$ then $\rho(AB)$ is

(A) 0 (B) 1

(C) 2 (D) 4

25. Which of the following matrix is row echelon form?

(A) $\begin{bmatrix} 1 & 0 & -1 & 2 \\ 0 & 1 & 0 & 3 \\ 0 & 0 & 1 & -2 \\ 0 & 0 & 0 & 0 \end{bmatrix}$ (B) $\begin{bmatrix} 0 & 1 & 2 \\ 1 & 0 & -1 \\ 0 & 1 & 0 \end{bmatrix}$

(C) $\begin{bmatrix} 1 & 0 & 0 & 0 \\ 0 & 2 & -1 & 3 \\ 0 & 0 & -1 & 4 \\ 0 & 0 & 0 & 0 \end{bmatrix}$ (D) $\begin{bmatrix} 0 & 0 & 0 & 1 \\ 0 & 0 & 1 & 0 \\ 0 & 1 & 0 & 0 \\ 1 & 0 & 0 & 2 \end{bmatrix}$

26. Which of the following set of vectors are linearly dependent?

(A) (2, 3, 3), (3, −1, 3), (4, −2, 5)
(B) (3, 4, −1), (−1, 3, 1), (−2, −7, −2)
(C) (2, 1, 4), (1, −2, 2), (−3, 1, −6)
(D) (1, 3, −5), (−5, −1, 3), (4, −2, −2)

27. The system of equations $2x - y + 3z = 9$, $x + y + z = 0$ and $x - y + z = 0$ has/is

(A) unique solution.
(B) infinite solutions.
(C) only zero solution.
(D) inconsistent.

28. The system of equations $6x + 7y + 8z = 1$, $13x + 14y + 15z = 2$ and $x + 2y + 3z = 2$ is

(A) consistent with unique solution.
(B) consistent with infinite solutions.
(C) inconsistent.
(D) None of these

29. The value of λ for which the following system of equation does not have a solution is

$x + y + z = 6$
$4x + \lambda y - \lambda z = 0$
$3x + 2y - 4z = -8$

(A) 3 (B) −3
(C) 0 (D) 1

30. If the number of variables in the linear homogeneous system $AX = O$ is n, then the system will have exactly one solution $X = O$, if the rank of the matrix A is

(A) 1 (B) $< n$
(C) $\leq n$ (D) n

31. If the equations $2x - y - z = 0$, $kx - 3y + 2z = 0$ and $-3x + 2y + kz = 0$ have a non-zero solution, then the value of k is

(A) 2 (B) 1
(C) 7 (D) Both 1 and 7

32. The system of equations $\alpha + 3y + 5z = 0$, $2x - 4\alpha y + \alpha z = 0$, $-4x + 18y + 7z = 0$ has only trivial solution if α is

(A) −1 or −3 (B) 1 or −3
(C) not equal to 1, −3 (D) not equal to −1 and 3

33. The eigen values of $\begin{pmatrix} 2 & -1 & 0 \\ 0 & 1 & -1 \\ 0 & 0 & 3 \end{pmatrix}$ is

(A) 0, 0, 0 (B) 0, 1, 0
(C) 2, 1, 3 (D) −2, −1, −3

34. The characteristic roots of the inverse of the matrix $\begin{pmatrix} 2 & 2 & 1 \\ 1 & 3 & 1 \\ 1 & 2 & 2 \end{pmatrix}$ are

(A) −1, −1, 5 (B) 1, 1, 5
(C) $1, 1, \frac{1}{5}$ (D) $-1, -1, \frac{1}{5}$

35. The sum and product of the eigen values of the matrix $\begin{bmatrix} 2 & 0 & -1 \\ 0 & 4 & -2 \\ 1 & 3 & -5 \end{bmatrix}$ is respectively

(A) 0, 24 (B) 1, −24
(C) 2, 20 (D) 4, −24

36. The eigen values of a matrix $A = \begin{bmatrix} 2 & 0 & 1 \\ 0 & 2 & p \\ 1 & 0 & q \end{bmatrix}$ are 1, 2, and 3. Then the values of p and q are _______.

(A) $p = 0, q = 0$
(B) $p =$ any real number, $q = 2$
(C) $p = 2, q = 0$
(D) $p = 2, q = 2$

37. The eigen values of the matrix $\begin{bmatrix} 0 & -1 & 2 & -3 \\ 1 & 0 & 4 & 6 \\ -2 & -4 & 0 & 5 \\ 3 & -6 & -5 & 0 \end{bmatrix}$ is

(A) real only (B) imaginary
(C) zero only (D) imaginary or zero

38. The number of linearly independent eigen vectors of $\begin{bmatrix} 5 & 2 \\ -2 & 1 \end{bmatrix}$ is _______.

(A) 0 (B) 1 (C) 2 (D) infinite

39. Which of the following is an eigen vector for the matrix $\begin{pmatrix} 1 & 4 \\ 2 & -1 \end{pmatrix}$?

(A) $\begin{pmatrix} 1 \\ 3 \end{pmatrix}$ (B) $\begin{pmatrix} -1 \\ 1 \end{pmatrix}$

(C) $\begin{pmatrix} 3 \\ 1 \end{pmatrix}$ (D) $\begin{pmatrix} -2 \\ -2 \end{pmatrix}$

40. For a matrix $A = \begin{bmatrix} 6 & -6 & 2 \\ -6 & 5 & -4 \\ 2 & -4 & 1 \end{bmatrix}$, $X = \begin{bmatrix} -2 \\ 2 \\ -1 \end{bmatrix}$ is an eigen vector. The corresponding eigen value is _______.

(A) −2 (B) 1
(C) 2 (D) 13

41. Let A be a 2×2 square matrix with $\lambda_1 = -2$ and $\lambda_2 = -3$ as its eigen values and $x_1 = \begin{bmatrix} -4 \\ -4 \end{bmatrix}$, $x^2 = \begin{bmatrix} 6 \\ 7 \end{bmatrix}$ as its eigen vectors then A is given by

(A) $\begin{bmatrix} 0 & 2 \\ 4 & -5 \end{bmatrix}$ (B) $\begin{bmatrix} 4 & -6 \\ 7 & -9 \end{bmatrix}$

(C) $\begin{bmatrix} -2 & 6 \\ 7 & -3 \end{bmatrix}$ (D) $\begin{bmatrix} 2 & 6 \\ -4 & 3 \end{bmatrix}$

42. Consider the matrix $A = \begin{bmatrix} 2 & 5 & 4 \\ 0 & 1 & 0 \\ 0 & -3 & -2 \end{bmatrix}$ let $B = A^{-1}$, then $B =$ ______

(A) $\frac{-1}{4}[A^2 - A - 4I]$ (B) $\frac{1}{4}[A^2 - A - 4I]$

(C) $\frac{1}{4}[A^2 + A - 4I]$ (D) $\frac{-1}{4}[A^2 - A + 4I]$

43. If $A = \begin{bmatrix} 2 & 3 \\ 4 & 6 \end{bmatrix}$, then $A^{15} =$

(A) $8^{14}A$ (B) $8^{15}A$

(C) $8^{16}A$ (D) $15A$

44. If $A = \begin{bmatrix} 2 & 0 & 0 \\ 3 & 6 & 7 \\ 9 & 0 & 1 \end{bmatrix}$, then the value of the matrix polynomial $2A^{10} - 18A^9 + 40A^8 - 25A^7 + 9A^6 - 20A^5 + 13A^4 - 9A^3 + 20A^2 - 10A$ is ______.

(A) $\begin{bmatrix} 2 & 0 & 0 \\ 3 & 6 & 7 \\ 9 & 7 & 1 \end{bmatrix}$ (B) $\begin{bmatrix} 4 & 0 & 0 \\ 6 & 12 & 14 \\ 18 & 0 & 2 \end{bmatrix}$

(C) $\begin{bmatrix} 1 & 0 & 0 \\ 0 & 1 & 0 \\ 0 & 0 & 1 \end{bmatrix}$ (D) $\begin{bmatrix} 0 & 0 & 0 \\ 0 & 0 & 0 \\ 0 & 0 & 0 \end{bmatrix}$

45. For the matrix $A = \begin{bmatrix} 3 & -1 & -1 \\ -1 & 3 & -1 \\ 1 & 1 & -1 \end{bmatrix}$, consider the following statements

(P) The characteristic equation of A is $\lambda^3 - 5\lambda^2 + 4\lambda = 0$

(Q) A^{-1} exists

(R) The matrix A is diagonalizable

Which of the above statements are TRUE?

(A) P, Q and R

(B) P and R but not Q

(C) P and Q but not R

(D) Q and R but not P

46. If P is a modal matrix and D is a spectral matrix of a diagonalizable matrix A, then which of the following relations is NOT TRUE among A, P and D?

(A) $PD = AP$ (B) $DP^{-1} = P^{-1}A$

(C) $A^2P = PD^2$ (D) $DP = PA$

47. If A is a 3×3 square matrix with eigen values 0, 2, 3 with P as its modal matrix, then the eigen values of the matrix $P^{-1}AP$ are ______.

(A) 0, 2, 3

(B) 0, 4, 6

(C) $0, \frac{1}{2}, \frac{1}{3}$

(D) $1, \frac{1}{2}, \frac{1}{3}$

Previous Years' Questions

1. For what value of α and β, the following simultaneous equations have an infinite number of solutions?
$x + y + z = 5$; $x + 3y + 3z = 9$; $x + zy + az = b$
[GATE, 2007]

(A) 2, 7 (B) 3, 8

(C) 8, 3 (D) 7, 2

2. The product of matrices $(PQ)^{-1}P$ is **[GATE, 2008]**

(A) P^{-1} (B) Q^{-1}

(C) $P^{-1}Q^{-1}P$ (D) PQP^{-1}

3. The following simultaneous equations

$x + y + z = 3$

$x + 2y + 3z = 4$

$x + 4y + kz = 6$

will NOT have a unique solution for k equal to
[GATE, 2008]

(A) 0 (B) 5

(C) 6 (D) 7

4. A square matrix B is skew-symmetric if
[GATE, 2009]

(A) $B^T = -B$ (B) $B^T = B$

(C) $B^{-1} = B$ (D) $B^{-1} = BT$

5. The inverse of the matrix $\begin{bmatrix} 3+2i & i \\ -i & 3-2i \end{bmatrix}$ is
[GATE, 2010]

(A) $\frac{1}{12}\begin{bmatrix} 3+2i & -i \\ -i & 3-2i \end{bmatrix}$

(B) $\frac{1}{12}\begin{bmatrix} 3-2i & -i \\ i & 3+2i \end{bmatrix}$

(C) $\frac{1}{14}\begin{bmatrix} 3+2i & -i \\ i & 3-2i \end{bmatrix}$

(D) $\frac{1}{14}\begin{bmatrix} 3-2i & -i \\ i & 3+2i \end{bmatrix}$

6. $[A]$ is a square matrix which is neither symmetric nor skew-symmetric and $[A]^T$ is its transpose. The sum and difference of these matrices are defined as $[S] = [A] + [A]^T$ and $[D] = [A] - [A]^T$, respectively. Which of the following statements is TRUE? **[GATE, 2011]**

(A) Both [S] and [D] are symmetric.
(B) Both [S] and [D] are skew-symmetric.
(C) [S] is skew-symmetric and [D] is symmetric.
(D) [S] is symmetric and [D] is skew-symmetric.

7. The eigen vales of matrix $\begin{bmatrix} 9 & 5 \\ 5 & 8 \end{bmatrix}$ are **[GATE, 2012]**

(A) –2.42 and 6.86 (B) 3.48 and 13.53
(C) 4.70 and 6.86 (D) 6.86 and 9.50

8. What is the minimum number of multiplications involved in computing the matrix product PQR? Matrix P has 4 rows and 2 columns, matrix Q has 2 rows and 4 columns, a matrix R has 4 rows and 1 column? **[GATE, 2013]**

9. Given the matrices $J = \begin{bmatrix} 3 & 2 & 1 \\ 2 & 4 & 2 \\ 1 & 2 & 6 \end{bmatrix}$ and $K = \begin{bmatrix} 1 \\ 2 \\ -1 \end{bmatrix}$ the product $K^T JK$ is. **[GATE, 2014]**

10. The determinant of matrix $\begin{bmatrix} 0 & 1 & 2 & 3 \\ 1 & 0 & 3 & 0 \\ 2 & 3 & 0 & 1 \\ 3 & 0 & 1 & 2 \end{bmatrix}$ is. **[GATE, 2014]**

11. The rank of the matrix $\begin{bmatrix} 6 & 0 & 4 & 4 \\ -2 & 14 & 8 & 18 \\ 14 & -14 & 0 & -10 \end{bmatrix}$ is. **[GATE, 2014]**

12. The sum of Eigen values of the matrix [M] is.

Where $[M] = \begin{bmatrix} 215 & 650 & 795 \\ 655 & 150 & 835 \\ 485 & 355 & 550 \end{bmatrix}$ **[GATE, 2014]**

(A) 915 (B) 1355
(C) 1640 (D) 2180

13. Let $A = [a_{ij}]$, $1 \le i, j \le n$ with $n \ge 3$ and $a_{ij} = i \cdot j$. The rank of A is **[GATE, 2015]**

(A) 0 (B) 1
(C) $n - 1$ (D) n

14. For what value of p the following set of equations will have no solution?
$2x + 3y = 5$
$3x + py = 10$
[GATE, 2015]

15. The smallest and largest eigen values of the following matrix are: $\begin{bmatrix} 3 & -2 & 2 \\ 4 & -4 & 6 \\ 2 & -3 & 5 \end{bmatrix}$ **[GATE, 2015]**

(A) 1.5 and 2.5 (B) 0.5 and 2.5
(C) 1.0 and 3.0 (D) 1.0 and 2.0

16. The two eigen values of the matrix $\begin{bmatrix} 2 & 1 \\ 1 & p \end{bmatrix}$ have a ratio of 3 : 1 for $p = 2$. What is another value of p for which the eigen values have the same ratio of 3 : 1? **[GATE, 2015]**

(A) –2 (B) 1
(C) $\frac{7}{3}$ (D) $\frac{14}{3}$

17. Consider the following linear systems:
$x + 2y - 3z = a$
$2x + 3y + 3z = b$
$5x + 9y - 6z = c$
This system is consistent if a, b and c satisfy the equation **[GATE, 2016]**

(A) $7a - b - c = 0$ (B) $3a + b - c = 0$
(C) $3a - b + c = 0$ (D) $7a - b + c = 0$

18. If the entries in each column of a square matrix M add up to 1, then an eigen value of M is **[GATE, 2016]**

(A) 4 (B) 3
(C) 2 (D) 1

Chapter 5

Probability and Statistics

CHAPTER HIGHLIGHTS

- *Probability*
- *Some special continuous distributions*
- *Statistics*
- *Hypothesis testing*

Probability

The word PROBABILITY is used, in a general sense, to indicate a vague possibility that something might happen. It is also used synonymously with chance.

Random Experiment

If the result of an experiment conducted any number of times under essentially identical conditions, is not certain but is any one of the several possible outcomes, the experiment is called a trial or a random experiment. Each of the out comes is known as an event.

Examples:

1. Drawing 3 cards from a well shuffled pack is a random experiment while getting an Ace or a King are events.
2. Throwing a fair die is a random experiment while getting the score as '2' or an odd number' are events.

Mutually Exclusive Events If the happening of any one of the events in a trial excludes or prevents the happening of all others, then such events are said to be mutually exclusive.

Example: The events of getting a head and that of getting a tail when a fair coin is tossed are mutually exclusive.

Equally Likely Events Two events are said to be equally likely when chance of occurrence of one event is equal to that of the other.

Example: When a die is thrown, any number from 1 to 6 may be got. In this trial, getting any one of these events are equally likely.

Independent Events Two events E_1 and E_2 are said to be independent, if the occurrence of the event E_2 is not affected by the occurrence or non-occurrence of the event E_1.

Example: Two drawings of one ball each time are made from a bag containing balls.

Here, we have two events drawing a ball first time (E_1) and drawing a ball second time (E_2). If the ball of the first draw is replaced in the bag before the second draw is made, then the outcome of E_2 does not depend on the outcome of E_1. In this case E_1 and E_2 are Independent events.

If the ball of the first draw is not replaced in the bag before the second draw is made, then the outcome of E_2 depends on the outcome of E_1. In this case, events E_1 and E_2 are Dependent events.

Compound Events When two or more events are in relation with each other, they are known as compound events.

Example: When a die is thrown two times, the event of getting 3 in the first throw and 5 in the second throw is a compound event.

Definition of Probability

If an event E can happen in m ways and fail in k ways out of a total of n ways and each of them is equally likely, then the probability of happening E is $\dfrac{m}{(m+k)} = \dfrac{m}{n}$ where $n = (m+k)$.

In other words, if a random experiment is conducted n times and m of them are favourable to event E, then the

probability of happening of E is $P(E) = \frac{m}{n}$. Since the event does not occur $(n - m)$ times, the probability of non-occurrence of E is $P(\bar{E})$.

$$P(\bar{E}) = \frac{n-m}{n} = -\frac{m}{n}n = 1 - P(E)$$

Therefore, $P(E) + P(\bar{E}) = 1$.

NOTES

1. Probability $[P(E)]$ of the happening of an event E is known as the probability of success and the probability $[P(\bar{E})]$ of the non-happening of the event is the probability of failure.
2. If $P(E) = 1$, the event is called a certain event and if $P(E) = 0$ the event is called an impossible event.
3. Instead of saying that the chance of happening of an event is $\frac{m}{n}$, we can also say that the odds in favour of the event are m to $(n - m)$ or the odds against the event are $(n - m)$ to m.

Addition Theorem of Probability

If A and B are two events, then

$$P(A \cup B) = P(A) + P(B) - P(A \cap \mathrm{B})$$

This result follows from the corresponding result in set theory. If $n(X)$ represents the number of elements in set X, $n(X \cup Y) = n(X) + n(Y) - n(X \cap Y)$.

Example: If a die is rolled, what is the probability that the number that comes up is either even or prime?

A = The event of getting an even number = $\{2, 4, 6\}$

B = The event of getting a prime = $\{2, 3, 5\}$

$A \cup B = \{2, 3, 4, 5, 6\}$

$A \cap B = \{2\}$

$P(A) = \frac{3}{6}$, $P(B) = \frac{3}{6}$, $P(A \cup B) = \frac{5}{6}$ and $P(A \cap B) = \frac{1}{6}$. We can verify that $P(A \cup B) = P(A) + P(B) - P(A \cap B)$.

SOLVED EXAMPLES

Example 1

When a cubical dice is rolled, find the probability of getting an even integer.

Solution

When a dice is rolled, the number of possible out comes is 6. The number of favourable outcomes of getting an even integer is 3.

The required probability $= \frac{3}{6} = \frac{1}{2}$.

Example 2

If a card is drawn from a pack of cards, find the probability of getting a queen.

Solution

When a card is drawn, the number of possible outcomes is 52. The number of favourable outcomes of getting a queen card is 4.

The required probability $= \frac{4}{52} = \frac{1}{13}$.

Example 3

A bag contains 5 green balls and 4 red balls. If 3 balls are picked from it at random, then find the odds against the three balls being red.

Solution

The total number of balls in the bag = 9. Three balls can be selected from 9 balls in ${}^9C_3$ ways.

Three red balls can be selected from 4 red balls in ${}^4C_3$ ways.

Probability of picking three red balls

$$= \frac{{}^4C_3}{{}^9C_3} = \frac{4}{84} = \frac{1}{21};\ P(\bar{E}) = \frac{20}{21}$$

Odds against the three balls being red are $= P(\bar{E}) : P(E) = \frac{20}{21} : \frac{1}{21} = 20:1$.

Example 4

When two dice are rolled together, find the probability of getting at least one 4.

Solution

Let E be the event that at least one dice shows 4. $\bar{E}$ be the event that no dice shows 4. The number of favourable outcomes of $\bar{E}$ is $5 \times 5 = 25 \cdot P(\bar{E}) = \frac{25}{36}$

$$\therefore\ P(E) = 1 - P(\bar{E}) = 1 - \frac{25}{36} = \frac{11}{36}.$$

Example 5

When two dice are rolled together find the probability that total score on the two dice will be 8 or 9.

Solution

When two dice are rolled, the total number of outcomes $= 6 \times 6 = 36$.

Favourable outcomes for getting the sum 8 or 9 are {(2, 6), (6, 2), (3, 5), (5, 3), (4, 4), (3, 6), (6, 3), (4, 5), (5, 4)}, i.e., the total number of favourable outcomes = 9.

The required probability $= \frac{9}{36} = \frac{1}{4}$.

Example 6

If two cards are drawn simultaneously from a pack of cards, what is the probability that both will be jacks or both are queens?

Solution

Here two events are mutually exclusive, $P(J \cup Q) = P(J) + P(Q)$. Probability of drawing two jacks is $P(J) = \frac{{}^4C_2}{{}^{52}C_2}$

Probability of drawing two queens is $P(Q) = \frac{{}^4C_2}{{}^{52}C_2}$

$$P(J \cup Q) = P(J) + P(Q)$$

$$= \frac{{}^4C_2}{{}^{52}C_2} + \frac{{}^4C_2}{{}^{52}C_2} = 2 \cdot \frac{{}^4C_2}{{}^{52}C_2} = \frac{2}{221}.$$

Example 7

When two cards are drawn from a pack of cards, find the probability that the two cards will be kings or blacks.

Solution

The probability of drawing two kings $= \frac{{}^4C_2}{{}^{52}C_2}$

The probability of drawing two black cards is $= \frac{{}^{26}C_2}{{}^{52}C_2}$

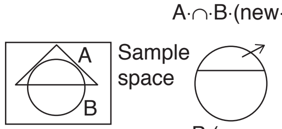
The probability of drawing two black kings is $\frac{{}^2C_2}{{}^{52}C_2}$

$\therefore$ The required probability

$$= \frac{{}^4C_2}{{}^{52}C_2} + \frac{{}^{26}C_2}{{}^{52}C_2} - \frac{{}^2C_2}{{}^{52}C_2} = \frac{55}{221}.$$

Conditional Probability

Let S be a finite sample space of a random experiment and A, B are events, such that $P(A) > 0$, $P(B) > 0$. If it is known that the event B has occurred, in light of this we wish to compute the probability of A, we mean conditional probability of A given B. The occurrence of event B would reduce the sample space to B, and the favourable cases would now be $A \cap B$.



Notation The conditional probability of A given B is denoted by $P\left(\frac{A}{B}\right)$.

$$\therefore \quad P\left(\frac{A}{B}\right) = \frac{n(A \cap B)}{n(B)} = \frac{\frac{n(A \cap B)}{n(S)}}{\frac{n(B)}{n(S)}} = \frac{P(A \cap B)}{P(B)}.$$

NOTES

1. This definition is also valid for infinite sample spaces.
2. The conditional probability of B given A is denoted by $P\left(\frac{B}{A}\right)$ and $P\left(\frac{B}{A}\right) = \frac{P(A \cap B)}{P(A)}$.

Multiplication Theorem

Let A and B be two events of certain random experiment such that A occurs only when B has already occurred. Then, for the conditional event $\frac{A}{B}$, the total possible outcomes are the outcomes favourable to the event B and its favourable outcomes are the outcomes favourable to both A and B.

So, $P\left(\frac{A}{B}\right) = \frac{n(A \cap B)}{n(B)}$

$$= \frac{n(A \cap B)}{n(S)} \times \frac{n(S)}{n(B)} = P(A \cap B) \times \frac{1}{P(B)}$$

That is, $P\left(\frac{A}{B}\right) \cdot P(B) = P(A \cap B)$

This is called the multiplication theorem on probability.

Example 8

A letter is selected at random from the set of English alphabet and it is found to be a vowel. What is the probability that it is 'e'?

Solution

Let A be the event that the letter selected is 'e' and B be the event that the letter is a vowel. Then, $A \cap B = \{e\}$ and $B = \{a, e, i\ o, u\}$

So, $P\left(\frac{A}{B}\right) = \frac{P(A \cap B)}{P(B)} = \frac{\left(\frac{1}{26}\right)}{\left(\frac{5}{26}\right)} = \frac{1}{5}.$

Independent Events In a random experiment, if A, B are events such that $P(A) > 0$, $P(B) > 0$ and if $P\left(\frac{A}{B}\right) = P(A)$ or $P\left(\frac{B}{A}\right) = P(B)$ (conditional probability equals to unconditional probability) then we say A, B are independent events. If A, B are independent, $P(A \cap B) = P(A)\,P(B)$.

Example 9

Two coins are tossed one after the other and let A be the event of getting tail on second coin and B be the event of getting head on first coin, then find $P\left(\frac{A}{B}\right)$.

Solution

Sample space = {HH, HT, TH, TT}, A = {HT, TT} and B = {HH, HT}, $(A \cap B)$ = {HT}

$$\therefore\ P(A) = \frac{2}{4} = \frac{1}{2} \quad \text{and} \quad P\left(\frac{A}{B}\right) = \frac{P(A \cap B)}{P(B)} = \frac{\frac{1}{4}}{\frac{1}{2}} = \frac{1}{2}$$

Thus $P\left(\frac{A}{B}\right) = P(A)$

$\therefore$ Logically too we understand that occurrence or non-occurrence of tail in 2nd coin.

Baye's Rule

Suppose $A_1, A_2, \ldots, A_n$ are n mutually exclusive and exhaustive events such that $P(A_i) \neq 0$. Then for $i = 1, 2, 3, \ldots, n$,

$$P\left(\frac{A_i}{A}\right) = \frac{P(A_i) \cdot P\left(\frac{A}{A_i}\right)}{\sum_{k=1}^{n} P(A_K) P\left(\frac{A}{A_K}\right)}$$

Where A is an arbitrary event of S.

Example 10

Akshay speaks the truth in 45% of the cases, In a rainy season, on each day there is a 75% chance of raining. On a certain day in the rainy season, Akshay tells his mother that it is raining outside. What is the probability that it is actually raining?

Solution

Let E denote the event that it is raining and A denote the event that Akshay tells his mother that it is raining outside.

Then, $P(E) = \frac{3}{4}$, $P(\bar{E}) = \frac{1}{4}$

$$P\left(\frac{A}{E}\right) = \frac{45}{100} = \frac{9}{20} \text{ and } P\left(\frac{A}{\bar{E}}\right) = \frac{11}{20}$$

By Baye's Rule, we have

$$P\left(\frac{E}{A}\right) = \frac{P(E)P\left(\frac{A}{E}\right)}{P(E)P\left(\frac{A}{E}\right) + P(\bar{E})P\left(\frac{A}{\bar{E}}\right)}$$

$$= \frac{\frac{3}{4} \times \frac{9}{20}}{\frac{3}{4} \times \frac{9}{20} + \frac{1}{4} \times \frac{11}{20}} = \frac{27}{38}.$$

Advanced Probability

Random Variable

A random variable is a real valued function defined over the sample space (discrete or continuous).

A **discrete random variable** takes the values that are finite or countable. For example when we consider the experiment of tossing of 3 coins, the number of heads can be appreciated as a discrete random variable (X). X would take 0, 1, 2 and 3 as possible values.

A continuous random variable takes values in the form of intervals. Also, in the case of a **continuous random variable** $P(X = c) = 0$, where c is a specified point. Heights and weights of people, area of land held by individuals, etc., are examples of continuous random variables.

Probability Mass Function (PMF)

If X is a discrete random variable, which can take the values $x_1, x_2, \ldots$ and $f(x)$ denote the probability that X takes the value x_i, then $p(x)$ is called the Probability Man Function (pmf) of X.

$p(x_i) = P(x = x_i)$. The values that X can take and the corresponding probabilities determine the probability distribution of X. We also have

1. $p(x) \geq 0$;
2. $\sum p(x) = 1$.

Probability Density Function (PDF)

If X is a continuous random variable then a function $f(x)$, $x \in I$ (interval) is called a Probability Density Function. The probability statements are made as $P(x \in I) = \int_I f(x)dx$.

We also have,

1. $f(x) \geq 0$
2. $\int_{-\infty}^{\infty} f(x)dx = 1$

The probability $P(X \leq x)$ is called the cumulative distribution function (CDF) of X and is denoted by $F(X)$. It is a point function. It is defined for discrete and continuous random variables.

The following are the properties of probability distribution function $F(x)$,

1. $F(x) \geq 0$
2. $F(x)$ is non-decreasing i.e., for $x > y$, $F(x) \geq F(y)$
3. $F(x)$ is right continuous
4. $F(-\infty) = 0$ and $F(+\infty) = 1$

Also,

5. $P(a < x \leq b) = F(b) - F(a)$.

For a continuous random variable:

6. $Pr\{x < X \leq x + dx\} = F(x + dx) - F(x) = f(x)\, dx$; where dx is very small
7. $f(x) = \frac{d}{dx}[F(x)]$ where;

   (a) $f(x) \geq 0\ \forall\ x \in R$.

   (b) $\int_R f(x)dx = 1$.

Mathematical Expectation [$E(X)$]

Mathematical Expectation is the weighted mean of values of a variable.

If X is a random variable which can assume any one of the values $x_1, x_2, \ldots, x_n$ with the respective probabilities $p_1, p_2, \ldots, p_n$, then the mathematical expectation of X is given by $E(X) = p_1x_1 + p_2x_2 + \cdots + p_n x_n$

For a continuous random variable,

$$E(X) = \int_{-\infty}^{+\infty} xf(x)dx \text{ where } f(x) \text{ is the PDF of } X.$$

Some Special Discrete Distributions

Discrete Uniform Distribution

A discrete random variable defined for values of x from 1 to n is said to have a uniform distribution if its probability mass function is given by

$$f(x) = \begin{cases} \frac{1}{n}; \text{ for } x = 1, 2, 3, \ldots, n \\ 0, \text{ otherwise} \end{cases}$$

- The cumulative distribution function $F(x)$ of the discrete uniform random variable x is given by
$$F(x) = \begin{cases} 0, \text{ for } x < 1 \\ \frac{x}{n}; \text{ for } 1 \le x \le n \\ 1; \text{ for } x > 1 \end{cases}$$
- Mean of $X = \mu = \dfrac{n+1}{2}$
- Variance of $X = \sigma^2 = \dfrac{n^2-1}{12}$

Binomial Distribution

An experiment which is made of n independent trials, each of which resulting in either 'success' with probability 'p' or 'failure' with probability 'q' ($q = 1 - p$), then the probability distribution for the random variable X when represents the number of success is called a binomial distribution. The probability mass function,

$$p(x) = b(x; n, p) = {}^nC_x\, p^x q^{n-x}; x = 0, 1, 2, \ldots, n$$

Example: Hitting a target in 5 trials. Here the random variable (X) represents the number of trials made for hitting the target, i.e., $x = 0$ or 1 or 2 or 3 or 4 or 5.

We have a set of 5 trials $n = 5$

Each trial may hit the target termed to be success (p) or not termed to be failure (q), which are independent.

$\therefore$ This is an example for Binomial distribution.

Properties of Binomial Distribution

1. $E(X) = np$ (mean)
2. $V(X) = E(X^2) - (E(X))^2 = npq$; (variance)
   (mean > variance)
3. SD $(X) = \sqrt{npq}$
4. Mode of a binomial distribution lies between $(n + 1)p - 1 \le x \le (n + 1)p$
5. If $X_1 \sim b(n_1, p)$ and $X_2 \sim b(n_2, p)$ and if X_1 and X_2 are independent, then . $X_1 + X_2 \sim b(n_1 + n_2, p)$ where (n, p) is the pmf of binomial distribution.

Poisson Distribution A random variable X is said to follow a **Poisson distribution** with parameter λ, $\lambda > 0$, if it assumes only non-negative values and its probability mass function is given by

$$p(x) = p(x; \lambda) = \begin{cases} \dfrac{e^{-\lambda}\lambda^x}{x!} & : x = 0, 1, 2, \ldots \\ & \lambda > 0 \\ 0 & \text{otherwise} \end{cases}$$

In a binomial distribution if n is large compared to p, then np approaches a fixed constant say λ. Such a distribution is called poisson distribution (limiting case of binomial distribution)

Properties of Poisson Distribution

1. $E(X) = \sum_x x \cdot \dfrac{e^{-\lambda}\lambda^x}{x!} = \lambda$
2. $V(X) = E(X^2) - (E(X))^2 = \lambda$
   SD $(X) = \sqrt{\lambda}$
   $\therefore$ Mean $= \lambda =$ Variance
3. Mode of a Poisson distribution lies between $\lambda - 1$ and λ
4. If $X_1 \sim P(\lambda_1)$ and $X_2 \sim P(\lambda_2)$, and X_1, X_2 independent then $X_1 + X_2 \sim P(\lambda_1 + \lambda_2)$.

Some Special Continuous Distributions

Continuous Uniform Distribution or Rectangular Distribution

A continuous random variable x defined on $[a, b]$ is said to have a uniform distribution, if its probability density function is given by

$$F(x) = \begin{cases} \dfrac{1}{b-a}; \text{ for } x \in [a, b] \\ 0; \text{ otherwise} \end{cases}$$

- The cumulative distribution function of the continuous uniform random variable X is given by

$$F(x) = \begin{cases} 0; \text{ if } x \le a \\ \dfrac{x-a}{b-a}; \text{ if } a < x < b \\ 1; \text{ if } x \ge b \end{cases}$$

- Mean of $X = \mu = \dfrac{a+b}{2}$
- Variance of $X = \sigma^2 = \dfrac{(b-a)^2}{12}$.

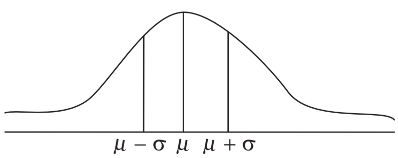
Normal Distribution

A continuous random variable X is said to have **a normal distribution** with parameters μ and σ^2 if its density function is given by the probability density function,

$$f(x) = \begin{cases} \dfrac{1}{\sigma\sqrt{2\pi}} e^{-\frac{(x-\mu)^2}{2\sigma^2}} & \begin{matrix} -\infty < x < \infty \\ -\infty < \mu < \infty \\ \sigma > 0 \end{matrix} \\ 0 & \text{otherwise} \end{cases}$$

It is denoted as $X \sim N(\mu, \sigma^2)$.

The graphical representation of normal distribution is as given below.



Properties of Normal Distribution

1. The function is symmetrical about the value μ.
2. It has a maximum at $x = \mu$
3. The area under the curve within the interval $(\mu \pm \sigma)$ is 68%.

   That is, $P(\mu - \sigma \le X \le \mu + \sigma) = 0.68$.
4. A fairly large number of samples taken from a 'Normal' population will have average, median and mode nearly the same, and within the limits of average $\pm 2 \times$ SD, there will be 95% of the values.
5. $E(X) = \int_{-\infty}^{+\infty} x \cdot f(x)dx = \mu$.
6. $V(X) = \sigma^2$; S.D $(X) = \sigma$
7. For a normal distribution,

   Mean = Median = Mode
8. All odd order moments about mean vanish for a normal distribution.

   That is, $\mu_{2n+1} = 0 \forall = n = 0, 1, 2, \ldots$
9. If $X_1 \sim N(\mu_1, \sigma_1^2)$ and $X_2 \sim N(\mu_2, \sigma_2^2)$, X_1, X_2 independent, then,

   $X_1 + X_2 \sim N(\mu_1 + \mu_2, \sigma_1^2 + \sigma_2^2)$

   Also, $X_1 - X_2 \sim N(\mu_1 - \mu_2, \sigma_1^2 + \sigma_2^2)$
10. If $\mu = 0$ and $\sigma^2 = 1$, we call it as standard normal distribution. The standardization can be obtained by the transformation,

$$z = \frac{x-\mu}{\sigma}. \quad \text{Also, } \frac{X-\mu}{\sigma} \sim N(0, 1).$$

Exponential Distribution

A continuous random variable X is said to have an exponential distribution if its probability density function $f(x)$ is given by,

$$f(x) = \begin{cases} \lambda e^{-\lambda x}; \text{ for } x > 0 \\ 0; \text{ otherwise} \end{cases}$$

Here λ is the parameter of the exponential distribution and $\lambda > 0$.

The cumulative distribution function $F(x)$ of an exponential distribution with λ as parameter is

$$F(x) = \begin{cases} 1 - e^{-\lambda x}; \text{ if } x > 0 \\ 0, \text{ otherwise} \end{cases}$$

Mean $= \mu = \dfrac{1}{\lambda}$,

Variance $= \sigma^2 = \dfrac{1}{\lambda^2}$.

Example 11

An unbiased die is thrown at random. What is the expectation of the number on it?

Solution

Let X denotes the number on the die, which can take the values 1, 2, 3, 4, 5 or 6;

Probability of each will be equal to $\dfrac{1}{6}$

X	1	2	3	4	5	6
***P*(*X* = *x*)**	$\frac{1}{6}$	$\frac{1}{6}$	$\frac{1}{6}$	$\frac{1}{6}$	$\frac{1}{6}$	$\frac{1}{6}$

$$E(X) = \sum_x xP(X = x)$$

$$= 1 \times \frac{1}{6} + 2 \times \frac{1}{6} + 3 \times \frac{1}{6} + 4 \times \frac{1}{6} + 5 \times \frac{1}{6} + 6 \times \frac{1}{6}$$

$$= \frac{1}{6}(1+2+3+4+5+6) = \frac{6 \times 7}{6 \times 2} = \frac{7}{2}$$

$$= 3.5.$$

Example 12

In a city 5 accidents take place in a span of 25 days. Assuming that the number of accidents follows the Poisson distribution, what is the probability that there will be 3 or more accidents in a day? (Given $e^{-0.2} = 0.8187$)

Solution

Average number of accidents per day $= \frac{5}{25} = 0.2$; $\therefore\ \lambda = 0.2$.

Probability (3 or more accidents per day)

$= 1 - P$ (2 or less accidents)

$= 1 - [P(X=0) + P(X=1) + P(X=2)]$

$= 1 - [e^{-0.2} + 0.2e^{-0.2} + 0.02e^{-0.2}]$

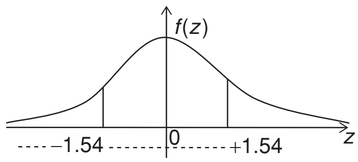
$= 1 - e^{-0.2}[1.22] = 1 - 0.99814 = 0.001186.$

Example 13

What is the area under the normal curve to the left of $Z = -1.54$ (given area between 0 and $-1.54 = 0.4382$)?

Solution

Required area $= 0.5 - 0.4382 = 0.0618$



Example 14

A family consists of five children. If the random variable (X) represents the number of boys in that family then,

1. Find the expected value $E(X)$ of X.
2. Find the variance of X.

Solution

This situation can be modelled as binomial distribution.

$$X \sim b\left(5, \frac{1}{2}\right);\ E(X) = np = 5\times\frac{1}{2} = 2.5$$

$$V(X) = npq = 5\times\frac{1}{2}\times\frac{1}{2} = 1.25$$

Example 15

Ram and Shyam play a game in which their chances of winning are in the ratio 2 : 3. Find Shyam's chance of winning at least 3 games out of five games played.

Solution

$$P(\text{Shyam wins}) = \frac{3}{5};$$

$$P(\text{Shyam loses}) = \frac{2}{5}$$

Let X denote the number of games won by Shyam.

P(Shyam wins at least 3 games) $= P(X \geq 3)$

$$= \sum_{x=3}^{5} {}^5C_x \left(\frac{3}{5}\right)^x \left(\frac{2}{5}\right)^{5-x} = \sum_{x=3}^{5} {}^5C_x \frac{3^x 2^{5-x}}{5^5}$$

$$= \frac{3^3}{5^5}[{}^5C_3 2^2 + {}^5C_4 \times 3\times 2 + 1\times 3^2\times 1]$$

$$= \frac{27\times 79}{3125} = 0.68.$$

Example 16

The PDF of a random variable X is

$$f(x) = \begin{cases} \left(\frac{1}{10}\right)e^{\left(-\frac{x}{10}\right)}; & x > 0 \\ 0 & \text{otherwise} \end{cases}$$

What is $P(X \leq 10)$? (given $e^{-1} = 0.3679$)

Solution

$$P(X \leq 10) = \int_0^{10} f(x)\,dx = \int_0^{10} \frac{1}{10} e^{-\frac{x}{10}}\,dx$$

$$= \frac{1}{10}\left(\frac{e^{-\frac{x}{10}}}{-\frac{1}{10}}\right)_0^{10} = 1 - e^{-1} = 0.6321.$$

Joint Distribution of Random Variables Joint Probability Mass Function

Let X and Y be two discrete random variables on the same sample space S with the range space of X as $R_x = \{x_1, x_2, \ldots, x_m\}$ and the range space of y as, $R_y = \{y_1, y_2, \ldots, y_n\}$ and $P_X(x)$ and $P_y(y)$ as the probability mass functions of x and y. Then the joint probability mass function $P_{xy}(x, y)$ of the two dimensional random variable (x, y) on the range space $R_x \times R_y$ is defined as,

$$P_{XY}(x_i, y_j) = \begin{cases} P(X = x_i,\ Y = y_j), \text{ for } (x_i, y_j) \in R_X \times R_Y \\ 0, \text{ otherwise} \end{cases}$$

This joint probability mass function can be represented in the form of a table as follows:

X \ Y	y_1	y_2	y_3	…	y_n	$\sum_{j=1}^{n} P_{xy}(x_i, y_j)$
x_1	$P_{xy}(x_1, y_1)$	$P_{xy}(x_1, y_2)$	$P_{xy}(x_1, y_3)$	…	$P_{xy}(x_1, y_n)$	$P_x(x_1)$
x_2	$P_{xy}(x_2, y_1)$	$P_{xy}(x_2, y_2)$	$P_{xy}(x_3, y_3)$	…	$P_{xy}(x_3, y_n)$	$P_x(x_2)$
x_3	$P_{xy}(x_3, y_1)$	$P_{xy}(x_3, y_2)$	$P_{xy}(x_3, y_3)$	…	$P_{xy}(x_3, y_n)$	$P_x(x_3)$
⋮	⋮	⋮	⋮		⋮	⋮
x_m	$P_{xy}(x_m, y_1)$	$P_{xy}(x_m, y_2)$	$P_{xy}(x_m, y_3)$	…	$P_{xy}(x_m, y_n)$	$P_x(x_m)$
$\sum_{i=1}^{m} P_{xy}(x_i, y_j)$	$P_y(y_1)$	$P_y(y_2)$	$P_y(y_3)$	…	$P_y(y_n)$	

From the above table, it can be easily observed that the marginal probability mass functions of X and Y namely $P_x(x)$ and $P_Y(y)$ respectively can be obtained from the joint probability mass function $P_{xy}(x, y)$ as

$$P_x(x_i) = \sum_{j=1}^{n} P_{xy}(x_i, y_j), \text{ for } i = 1, 2, \ldots, m$$

And

$$P_y(y_j) = \sum_{j=1}^{m} P_{xy}(x_i, y_j) \text{ for } j = 1, 2, 3, \ldots, n$$

- $P_{xy}(x_i, y_j) \geq 0 \ \forall \ i, j$
- $\sum_{i=1}^{m} \sum_{j=1}^{n} P_{xy}(x_i, y_j) = 1$
- The cumulative joint distribution function of the two dimensional random variable (X, Y) is given by $F_{xy}(x, y) = P(X \leq x, Y \leq y)$.

Joint Probability Density Function

Let X and Y are two continuous random variables on the same sample space S with $f_x(x)$ and $f_y(y)$ as the probability density functions respectively. Then a function $f_{xy}(x, y)$ is called the joint probability density function of the two dimensional random variable (X, Y) if the probability that the point (x, y) will lie in the infinitesimal rectangular region of area $dx\,dy$ is $f_{xy}(x, y)\,dx\,dy$,

That is,

$$P\left(x - \frac{1}{2}dx \leq X \leq x + \frac{1}{2}dx,\ y - \frac{1}{2}dy \leq Y \leq y + \frac{1}{2}dy\right)$$

$= f_{XY}(x, y)\,dx\,dy$

- $\int_{-\infty}^{\infty} \int_{-\infty}^{\infty} f_{XY}(x, y)dxdy = 1$
- The marginal probability density functions $f_X(x)$ and $f_Y(y)$ of the two continuous random variables X and Y are given by,

  $$f_x(x) = \int_{-\infty}^{\infty} f_{XY}(x, y)dy \text{ and } f_y(y) = \int_{-\infty}^{\infty} f_{XY}(x, y)dx$$

- The cumulative joint distribution function $F_{XY}(x, y)$ of the two-dimensional random variable (X, Y) (where X and Y are any two continuous random variables defined on the same sample space) is given by,

  $$F_{XY}(x, y) = \int_{-\infty}^{x} \int_{-\infty}^{y} f_{XY}(x, y)dxdy.$$

Conditional Probability Functions of Random Variables

Let X and Y be two discrete (continuous) random variables defined on the same sample space with joint probability mass (density) function $f_{XY}(x, y)$, then

1. The conditional probability mass (density) function $f_{\frac{X}{Y}}\left(\frac{x}{y}\right)$ of X, given $Y = y$ is defined as

   $$F_{\frac{X}{Y}}\left(\frac{x}{y}\right) = \frac{f_{XY}(x, y)}{f_Y(y)}, \text{ where } f_Y(y) \neq 0 \text{ and}$$

2. The conditional probability mass (density) function $f_{\frac{Y}{X}}\left(\frac{y}{x}\right)$ of Y, given $X = x$ is defined as $f_{\frac{Y}{X}}\left(\frac{y}{x}\right)$

   $$= \frac{f_{XY}(x, y)}{f_X(x)} \text{ where } f_X(x) \neq 0.$$

Independent Random Variables

Two discrete (continuous) random variables X and Y defined on the same sample space with joint probability mass (density) function $P_{XY}(x, y)$ are said to be independent, if and only if,

$$P_{XY}(x, y) = P_X(x)\,P_Y(y)$$

Where $P_X(x)$ and $P_Y(y)$ are the marginal probability mass (density) functions of the random variables X and Y respectively.

NOTE

If the random variables X and Y are independent then

$$P_{xy}(a \leq X \leq b, c \leq Y \leq d) = P_x(a \leq X \leq b)\,P_y(c \leq Y \leq d)$$

Statistics

Statistics is basically the study of numeric data. It includes methods of collection, classification, presentation, analysis and inference of data. Data as such is qualitative or quantitative in nature. If one speaks of honesty, beauty, colour, etc., the data is qualitative while height, weight, distance, marks, etc are quantitative.

The present course aims to systematically study statistics of quantitative data. The quantitative data can be divided into three categories

1. Individual series
2. Discrete series and
3. Continuous series

Individual Series

Examples:

1. Heights of 8 students

   5.0, 4.9, 4.5, 5.1, 5.3, 4.8, 5.1, 5.3 (in feet)

2. The weight of 10 students

   46, 48, 52, 53.4, 47, 56.8, 52, 59, 55, 52 (in kgs)

Discrete Series

Example:

x : Number of children in a family

f : Number of families

Total number of families = 50

x	0	1	2	3	4
f	8	10	19	8	5

Continuous Series

Example: Total number of students = 50

Class Interval (CI)	Frequency (*f*)
0–10	8
10–20	12
20–30	13
30–40	10
40–50	7

In order to analyze and get insight into the data some mathematical constants are devised. These constants concisely describe any given series of data. Basically we deal with two of these constants,

1. Averages or measures of central tendencies
2. Measures of spread or dispersion

Measures of Central Tendencies These tell us about how the data is clustered or concentrated. They give the central idea about the data. The measures are

1. Arithmetic mean or mean
2. Geometric mean
3. Harmonic mean
4. Median
5. Mode

The first three are mathematical averages and the last two are averages of position.

Measures of Dispersion It is possible that two sets of data may have the same central value, yet they may differ in spread. So there is a need to study about the spread of the data.

The measures we deal with are,

1. Range
2. Quartile deviation or semi inter-quartile range
3. Mean deviation
4. Standard deviation (including variance)

The formulae for each of the above mentioned measures is listed for each of the series in what follows.

Measures of Central Tendencies

Arithmetic Mean (AM or $\bar{x}$)

1. Individual series:

$$\bar{x} = \frac{x_1 + x_2 + \cdots + x_n}{n} = \frac{\Sigma x_i}{n}$$

2. Discrete series:

$$\bar{x} = \frac{f_1 x_1 + f_2 x_2 + \cdots + f_n x_n}{f_1 + f_2 + \cdots + f_n} = \frac{\Sigma f_i x_i}{\Sigma f_i}$$

where $x_1, x_2, \ldots, x_n$ are n distinct values with frequencies $f_1, f_2, f_3, \ldots, f_n$ respectively.

3. Continuous series:

$$\bar{x} = \frac{f_1 m_1 + f_2 m_2 + \cdots + f_n m_n}{f_1 + f_2 + \cdots + f_n} = \frac{\Sigma f_i m_i}{\Sigma f_i}$$

where $f_1, f_2, f_3, \ldots, f_n$ are the frequencies of the classes whose mid-values are $m_1, m_2, \ldots, m_n$ respectively.

Some Important Results Based on AM

1. The algebraic sum of deviations taken about mean is zero.
2. Its value is based on all items.
3. Mean of first n natural numbers is $\frac{(n+1)}{2}$.
4. Arithmetic mean of two numbers a and b is $\frac{(a+b)}{2}$.
5. If b is AM of a and c then a, b, c are in arithmetic progression.

Combined Mean If x_1 and x_2 are the arithmetic means of two series with n_1 and n_2 observations respectively, the combined mean, $\bar{x}_c = \frac{n_1\bar{x}_1 + n_2\bar{x}_2}{n_1 + n_2}$.

Median

If for a value the total frequency above (or below) it is half of the overall total frequency the value is termed as median. Median is the middle-most item.

Individual Series If $x_1, x_2, \ldots, x_n$ are arranged in ascending order of magnitude then the median is the size of $\left(\frac{n+1}{2}\right)$th item.

Some Results Based on Median

1. Median does not take into consideration all the items.
2. The sum of absolute deviations taken about median is least.
3. Median is the abscissa of the point of intersection of the cumulative frequency curves.
4. Median is the best suited measure for open end classes.

Mode The most frequently found item is called mode. Being so, it is easy and straight forward to find for individual and discrete series.

Empirical Formula

- For moderately symmetrical distribution,
- Mode = 3 median – 2 mean
- For a symmetric distribution, Mode = Mean = Median. This formula is to be applied in the absence of sufficient data. Given any two, of the mean, median or mode the third can be found.

Measures of Dispersion

Range

The range of a distribution is the difference between the greatest and the least values observed.

Some Important Results Based on Range

1. Range is a crude measure of dispersion as it is based only on the value of extreme observations.
2. It is also very easy to calculate.
3. It does not depend on the frequency of items.

Quartile Deviation (QD)

$$\text{QD} = \frac{Q_3 - Q_1}{2}$$

Individual Series The numbers are first arranged in ascending or descending order, then we find the quartiles Q_1 and Q_3 as

$Q_1 \rightarrow$ size of $[(n + 1)/4]$th item

$Q_3 \rightarrow$ size of $[3(n + 1)/4]$th item

The first quartile (or the lower quartile) Q_1 is that value of the variable, which is such that one-quarter of the observations lies below it. The third quartile Q_3 is that value of the variable, which is such that three-quarters of the observations lie below it.

Mean Deviation (MD)

It is defined as the arithmetic mean of the deviation from origin, which may be either mean or median or mode.

Individual Series

$$\text{MD} = \frac{|x_1 - A| + |x_2 - A| + \cdots + |x_n - A|}{n}$$

where $x_1, x_2, \ldots, x_n$ are the n observations and A is the mean or median or mode.

Some Results Based on MD

1. Mean deviation depends on all items.
2. By default, mean deviation is to be computed about mean.
3. Mean deviation about the median is the least.
4. Mean deviation of two numbers a and b is $\dfrac{|a-b|}{2}$.

Standard Deviation (SD)

Standard deviation is referred to as root mean squared deviation about the mean.

Individual Series

$$SD(\sigma) = \sqrt{\frac{(x_1 - \bar{x})^2 + (x_2 - \bar{x})^2 + \cdots + (x_n - \bar{x})^2}{n}}$$

where $x_1, x_2, \ldots, x_n$ are n observations with mean as $\bar{x}$.

Alternatively $\sigma = \sqrt{\dfrac{\Sigma x_i^2}{n} - \left(\dfrac{\Sigma x_i}{n}\right)^2}$ is a useful formula for computational purpose.

Some Results Based on SD

1. The square of standard deviation is termed as variance.
2. SD is the least mean square deviation.
3. If each item is increased by a fixed constant the SD does not alter or SD is independent of change of origin.
4. Standard deviation depends on each and every data item.
5. For a discrete series in the form $a, a+d, a+2d, \ldots$ (AP), the standard deviation is given by $\text{SD} = d\sqrt{\dfrac{n^2-1}{12}}$, where n is number of terms in the series.

Co-efficient of Variation (CV)

Co-efficient of variation (CV) is defined as, $\text{CV} = \dfrac{\text{SD}}{\text{AM}} \times 100$.

This is a relative measure, which helps in measuring the consistency. Smaller the co-efficient of variation, greater is the consistency.

Example 17

For the individual series, compute the mean, median and mode 8, 11, 14, 17, 20, 23, 26, 29.

Solution

$$\text{Mean } = \bar{x} = \frac{\Sigma x_i}{n} = \frac{8 + 11 + \cdots + 29}{8} = 18.5$$

Median: As the numbers are in ascending order and the number 17 and 20 being middle terms.

$$\text{Median } = \frac{17+20}{2} = \frac{37}{2} = 18.5$$

Mode: As no term can be regarded as 'most often found', mode is not-defined. However using empirical formula,

Mode = 3 median − 2 mean

= 3(18.5) − 2(18.5) = 18.5.

Example 18

The arithmetic mean of 8, 14, x, 20 and 24 is 16; then find x.

Solution

$$\bar{x} = \frac{8 + 14 + x + 20 + 24}{5} = 16$$

$$\Rightarrow \quad \bar{x} = 80 - 66 = 14.$$

Example 19

Calculate standard deviation of first five prime numbers.

Solution

Given set of observations {2, 3, 5, 7, 11}

$$\frac{\Sigma x^2}{n} = \frac{208}{5}$$

$$\frac{\Sigma x}{n} = \frac{28}{5}$$

$$\therefore \text{ SD} = \sqrt{\frac{\Sigma x^2}{n} - \left(\frac{\Sigma x}{n}\right)^2}$$

$$= \sqrt{\frac{208}{5} - \left(\frac{28}{5}\right)^2} = 3.2.$$

Example 19

In a series of observations, co-efficient of variation is 25 and mean is 50. Find the variance.

Solution

Co-efficient of variation: $\text{CV} = \frac{\text{SD}}{\bar{x}} \times 100$

$$\Rightarrow \quad \text{SD} = \frac{\text{CV}}{100} \cdot \bar{x}$$

$$= 50 \times \frac{25}{100} = 12.5$$

Variance = $(12.5)^2$ = 156.25.

Hypothesis Testing

Introduction

In probability theory, we set up mathematical models of processes and systems that are affected by 'chance'. In statistics, we check these models against the reality, to determine whether they are faithful and accurate enough for practical purposes. The process of checking models is called statistical inference.

Methods of statistical inference are based on drawing samples (or sampling). One of the most important methods of statistical inference is 'Hypothesis Testing'.

Some Basic Definitions

Population

Population is the set of individuals or objects, animate or inanimate, actual or hypothetical under study.

Size of the Population The number of individuals or objects or observations in the population.

- The size of the population is denoted by N.
- N can be finite or infinite (i.e., population can be finite or infinite)

Sample: Any subset of the population is called as sample.

- The size (i.e., the number of elements) of the sample is denoted by n.
- n is always finite.

Examples:

1. All the GATE applicants—Population

   GATE applicants form a city—Sample
2. Cars manufactured by Tata Motors—Population

   Nano cars manufactured by Tata Motors—Sample
3. All possible outcomes of 10 roles of a die—Population

   12 possible outcomes of 10 roles of a die—Sample
4. Number of units of electricity consumed by the residents of a colony in a city—Population

   Number of units of electricity consumed by the residents of 5 houses of that colony—Sample
5. Diameters of screws produced by a company—Population

   Diameters of screws produced on one machine of that company—Sample

Sampling

The process of drawing samples from the population is called sampling.

Random Sampling A sampling in which each member of the population has the same chance of being included in the sample is called random sampling.

Simple Sampling A random sampling in which the chance of being included in the sample for different members of the population is independent of whether included or not in the previous trails is called simple sampling.

Large and Small Samples If the size of the sample is greater than or equal to 30 (i.e., $n \geq 30$), then the sample is called a large sample. Otherwise it is called a small sample.

Parameter A statistical measure or constant of the population is called a parameter.

Examples:

1. Population mean (denoted by μ)
2. Population standard deviation (denoted by σ)

Statistic A statistical measure or constant of the sample drawn from the population is called a statistic. (statistic–singular, statistics–plural)

Examples:

1. Sample mean (denoted by $\bar{x}$)
2. Sample standard deviation (denoted by s)

NOTE

In general, the population parameters are not known and their estimates given by the corresponding sample statistics are used.

Sampling Distribution Consider samples of size n drawn from a given population. Compute some statistic S, say mean ($\bar{x}$) or variance (s^2) for each of the samples. The values of the statistics can be given in the form of a frequency table. The frequency table so formed is known as a sampling distribution of the statistic.

Example: Consider the set of numbers {1, 2, 3, 4, 5, 6} as population.

Consider the following 15 samples each of size 3 drawn from the above population.
(1, 2, 3), (3, 5, 5), (2, 4, 6), (5, 5, 5), (1, 2, 6)
(1, 3, 5), (6, 6, 6), (4, 4, 5), (2, 3, 4), (1, 1, 4)
(2, 5, 5), (2, 2, 5), (3, 4, 6), (2, 4, 5), (4, 5, 6)

Then the sampling distribution of means for these samples is

Sample Mean ($\bar{x}$)	2	3	3.67	4	4.33	5	6
Frequency	2	4	1	2	3	2	1

Standard Error The standard deviation of the sampling distribution of a statistic is called the standard error (SE) of that statistic.

- The standard deviation of the sampling distribution of means is called the standard error of means where as the standard deviation of the sampling distribution of variances is called the standard error of variances.

Precision: The reciprocal of the standard error is called precision.

NOTE

If the sample size n is large, (i.e., $n \geq 30$), then the sampling distribution of a statistic is approximately normal. (Irrespective of the population distribution being normal or not)

Testing of Hypothesis

We have some information about a characteristic of the population which may or may not be true. This information is called statistical hypothesis or briefly hypothesis. We wish to know, whether this information can be accepted or to be rejected. We choose a random sample and obtain information about this characteristic. Based on this information, a process that decides whether the hypothesis to be accepted or rejected is called testing of hypothesis. i.e., In brief, the test of hypothesis or the test of significance is a procedure to determine whether observed samples differ significantly from expected results.

Null Hypothesis and Alternative Hypothesis

Null Hypothesis A statistical hypothesis which is to be actually tested for acceptance or rejection is called a null hypothesis.

(According to RA Fisher, Null hypothesis is the hypothesis which is tested for possible rejection under the assumption that it is true)

- Null hypothesis is denoted by H_0

Alternative Hypothesis Any hypothesis other than the null hypothesis is called an alternative hypothesis.

- Alternative hypothesis is denoted by H_1
- Let θ be a population parameter and θ_0 be the specified value of θ. Then we define null and alternative hypotheses as follows.

Null hypothesis $H_0 : \theta = \theta_0$
Alternative Hypothesis $H_1 : \theta \neq \theta_0$ (two tailed alternative)
(OR) $H_1 : \theta > \theta_0$ (right tailed alternative)
(OR) $H_1 : \theta < \theta_0$ (left tailed alternative)

Type I and Type II Errors

Type I Error Rejecting the null hypothesis (H_0), when it should be accepted is called type I error.

Type II Error Accepting the null hypothesis (H_0) when it should be rejected is called type II error.

	Accept H_0	Reject H_0
H_0 is true	Correct decision	Type I error
H_0 is false	Type II error	Correct decision

Level of Significance

The probability level, below which, we reject the null hypothesis is called the level of significance.

(OR)

The probability of committing type I error is known as the level of significance.

- The level of significance is denoted by 'α'.
- It is customary to fix α, before sample information is collected.
- In most of the cases, we choose α as 0.05 or 0.01.
- $\alpha = 0.05$ is used for moderate precision and $\alpha = 0.01$ is used for high precision.
- Level of significance can also be expressed as percentage. $\alpha = 5\%$ means there are 5 chances in 100 that the null hypothesis H_0 is rejected when it is true or one is 95% confident that a right decision is made.
- The probability of committing type II error is denoted by β.
  $\therefore\ \beta = P$ (accept H_0 when H_0 is false)
- Level of significance (α) is also known as the size of the test.
- $1 - \beta$ is known as the power of the test.

Critical Region and Critical Value

Consider the area under the probability curve of the sampling distribution of the test statistic which follows some known distribution. The area under the probability curve is divided into two regions, namely the region of rejection where null hypothesis is rejected and the region of acceptance where null hypothesis is accepted.

Critical Region (or) the Region of Rejection (or) the Significant Region

The region under the probability curve of the sampling distribution of the test statistic, where the null hypothesis (H_0) is rejected is called the critical region.

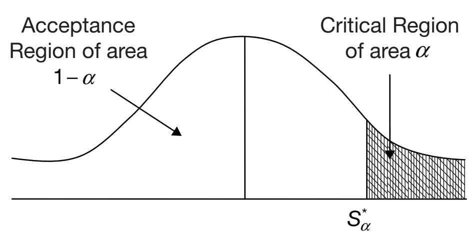
- The area of the critical region is equal to the level of significance α.

Critical Value (OR) Significant Value

The value of the test statistic (for given level of significance α) which separates the area under the probability curve into critical and non-critical regions.

One Tailed and Two Tailed Tests

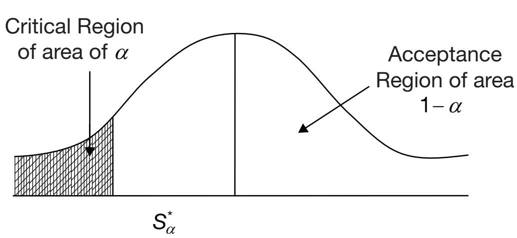
1. **Right one-tailed test:** If the alternative hypothesis H_1 is of greater than type (For example, $H_1 : \mu > \mu_0$ or $H_1 : \sigma_1^2 > \sigma_2^2$) then the entire critical region of area α lies on the right side tail of the probability curve of the test statistic S^* as shown in the figure. In this case, the test of hypothesis is known as right one-tailed test.



Right one-tailed test

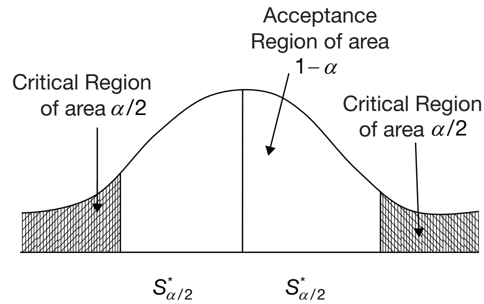
2. **Left one-tailed test:** If the alternative hypothesis H_1 is of less than type (For example, $H_1 : \mu_1 - \mu_2 < 0$ or $H_1 : \sigma^2 < \sigma_1^2$) then the entire critical region of area α lies on the left side tail of the probability curve of the test statistic S^* as shown in the figure.

   In this case, the test of hypothesis is known as left one-tailed test.



Left one-tailed test

3. **Two tailed test:** If the alternative hypothesis H_1 is of not equal to type (For example, $H_1 : \mu \neq \mu_0$ or $H_1 : \sigma_1^2 \neq \sigma_2^2$), then the critical region lies on both sides (right and left tails) of the probability curve of the test statistic S^* such that the critical region of area $\frac{\alpha}{2}$ lies on the right tail and the critical region of area $\frac{\alpha}{2}$ lies on the left tail as shown in the figure.



Two-tailed test

In this case, the test of hypothesis is known as two-tailed test.

Procedure for Test of Hypothesis

Step 1: Formulate null hypothesis H_0

Step 2: Formulate alternative hypothesis H_1

Step 3: Choose the level of significance α

Step 4: Identify the critical region based on the critical value S_α^* and the alternative hypothesis.

Step 5: Compute the test statistic S^* using the sample data (Formulae for finding the values of the test statistics under different tests of hypothesis were given while describing those tests).

Step 6: If the value of S^* comes under the critical region, then reject the null hypothesis H_0 and if the value of S^* comes under the non-critical (acceptance) region, then accept the null hypothesis H_0.

Central Limit Theorem If $\overline{x}$ is the mean of a sample of size n drawn from a population with mean μ and finite variance σ^2, then the limiting distribution of $Z = \dfrac{\overline{x} - \mu}{\dfrac{\sigma}{\sqrt{n}}}$ as $n \to \infty$ is the standard normal distribution (i.e., mean zero and standard deviation 1)

NOTES

1. If the sample size is large, then whether the population is normally distributed or not, the sampling distribution of means always follow a normal distribution.
2. If the sample size is small and the population from which the samples are drawn follows a normal distribution, then the sampling distribution of means also follows a normal distribution.

Tests of Hypothesis for Large Samples

If the sample size is large, then the standard error (SE) forms the basis for the testing of hypothesis. Also, we know that if sample size is large, then the sampling distribution of any statistic S is normal. So, in large sampling, we can relate the value of the test statistic S^* with the standard normal random variable Z as:

$$Z = \frac{S^* - E(S^*)}{SE(S^*)}$$

Where

S^* = Value of the test statistic

$E(S^*)$ = Expected Value (value of the corresponding population parameter)

$SE(S^*)$ = Standard error of the test statistic.

Following table gives the information about the standard errors and test statistics for various cases in testing of hypothesis for large samples.

Test of Hypothesis (significance)		Standard Error = SE = σ^*	Test Statistic = Z	Expansions for Notations
Difference between	Sample mean ($\bar{x}$) and population mean (μ)	$\frac{\sigma}{\sqrt{n}}$	$\frac{\bar{x}-\mu}{\sigma^*}$	μ = Population mean $\bar{x}$ = Sample mean
	Means of two samples ($\bar{x}_1$ and $\bar{x}_2$)	$\sqrt{\frac{\sigma_1^2}{n_1}+\frac{\sigma_2^2}{n_2}}$	$\frac{\overline{x_1}-\overline{x_2}}{\sigma^*}$	σ = Population standard deviation
	Sample standard deviation (s) and population standard deviation (σ)	$\frac{\sigma}{\sqrt{2n}}$	$\frac{s-\sigma}{\sigma^*}$	n = Sample size s = Sample standard deviation
	Sample standard deviations (s_1 and s_2)	$\sqrt{\frac{\sigma_1^2}{2n_1}+\frac{\sigma_2^2}{2n_2}}$	$\frac{s_1-s_2}{\sigma^*}$	P = Population proportion $Q = 1 - P$
	Sample proportion (p) and population proportion (P)	$\sqrt{\frac{PQ}{n}}$	$\frac{p-P}{\sigma^*}$	p = Sample proportion
	Two sample proportions (P_1, P_2)	$\sqrt{\frac{P_1Q_1}{n_1}+\frac{P_2Q_2}{n_2}}$	$\frac{P_1-P_2}{\sigma^*}$	

Example 21

The dean of an engineering college claims that the average attendance of students in the final semester of B.Tech is 72.5% with a standard deviation of 5.7%. To test this claim, the attendance of a random sample of 49 students of final semester of B.Tech were examined, which showed the average as 74.4%. Can the claim be accepted or not at 1% level of significance?

Solution

Here population mean = $\mu_0 = 72.5$

Simple mean = $\bar{x} = 74.4$

Population standard deviation = σ

= 5.7

Level of significance $= \alpha = \frac{1}{100} = 0.01$

Sample size = $n = 49$

Null hypothesis H_0: $\mu = \mu_0 = 72.5$

Alternative hypothesis H_1: $\mu \neq \mu_0$ (= 72.5)

Level of significance, $\alpha = 0.01$

Test statistic,

$$Z = \frac{\bar{x}-\mu_0}{\frac{\sigma}{\sqrt{n}}} = \frac{74.4-72.5}{\frac{5.7}{\sqrt{49}}}$$

$$= \frac{1.9}{5.7} \times 7 = 2.333$$

Critical region: As the alternative hypothesis is of ≠ type, the test should be a two tailed test, where the critical region lies on both sides of the curve as shown in the figure.

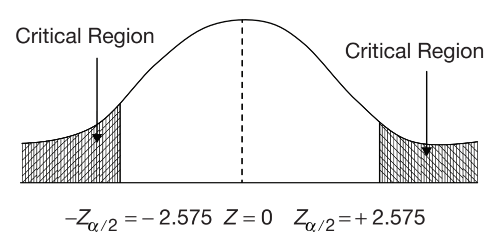
$\alpha = 0.01$

$\Rightarrow \frac{\alpha}{2} = 0.005$

$\therefore P(Z \leq -Z_{\alpha/2}) = 0.05$

$\Rightarrow -Z_{\alpha/2} = -2.575$

$\Rightarrow Z_{\alpha/2} = 2.575$



Decision: It can be easily observed that the value of the test statistic lies between $-Z_{\alpha/2}$ and $Z_{\alpha/2}$ i.e., The test statistic is not in the critical region.

Hence we accept the null hypothesis H_0

$\therefore$ The claim of the dean can be accepted.

Example 22

Can it be concluded that the average life span of an electric bulb is more than 200 hours, if a random sample of 100 electric bulbs has an average life span of 202 hours with a standard deviation of 8 hours with level of significance 0.05

Solution

Here population mean $\mu_0 = 200$

Sample mean $= \bar{x} = 202$

Sample standard deviation $= s = 8$

Sample size $= n = 100$

Null hypothesis H_0: $\mu = \mu_0 = 200$

Alternative hypothesis H_1: $\mu > \mu_0$ (= 202)

Level of significance, $\alpha = 0.05$

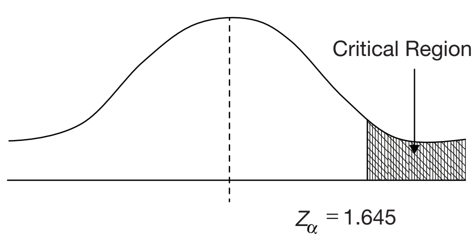
Test statistic, $Z = \dfrac{\bar{x} - \mu_0}{\dfrac{\sigma}{\sqrt{n}}} = \dfrac{\bar{x} - \mu_0}{\dfrac{s}{\sqrt{n}}}$

($\because$ As the population standard deviation σ is not given and the sample size is large, we can consider the sample standard deviation s as the population standard deviation)

$$\therefore Z = \frac{202 - 200}{\dfrac{8}{\sqrt{100}}}$$

$$Z = 2.5$$

Critical region: As the alternative hypothesis H_1 is of > type, the test should be a right one tailed test, where the critical region lies on the right tail of the standard normal curve as shown in the figure.



Here $\alpha = 0.05$

$\therefore P(Z \geq Z_\alpha) = 0.05$

$\Rightarrow P(Z \leq -Z_\alpha) = 0.05$

$\Rightarrow -Z_\alpha = -1.645$

$\Rightarrow Z_\alpha = 1.645$

$\therefore$ The critical region is to the right of Z_α

(i.e., to the right of $Z = 1.645$) under the standard normal curve.

Decision: As the value of the test statistic $Z = 2.5$ is greater than that of $Z_\alpha = 1.645$, the test statistic lies in the critical region.

$\therefore$ Reject the null hypothesis $H_0 : \mu = 200$

Hence accept the alternative hypothesis $H_1 : \mu > 200$

$\therefore$ We can conclude that the average life span of an electric bulb is more than 200 hours.

NOTE

In the process of testing of hypothesis for large samples, if the population standard deviation σ is not given, then the sample standard deviation s can be assumed as the population standard deviation.

Example 23

In a city, a random sample of 36 men has an average life span of 71 years with a standard deviation of 9 years, while a random sample of 49 women has an average life span of 76 years with a standard deviation of 14 years. Does this substantiate the claim that the life span of men is less than that of women in that city with 1% level of significance?

Solution

Let $\bar{x}_1$ = Average life span of men = 71 years

And $\bar{x}_2$ = Average life span of women

= 76 years

$s_1 = 9$ and $s_2 = 14$

$n_1 = 36$ and $n_2 = 49$

Level of significance $= \alpha = 0.01$

Null hypothesis H_0: $\mu_1 = \mu_2$ (i.e., The average life span of men and women in the city is same)

Alternative hypothesis H_1: $\mu_1 < \mu_2$ (i.e., The average life span of men is less than that of women in the city)

Level of significance: $\alpha = 0.01$

Test statistic,

$$Z = \frac{\bar{x}_1 - \bar{x}_2}{\sqrt{\dfrac{\sigma_1^2}{n_1} + \dfrac{\sigma_2^2}{n_2}}}$$

i.e., $Z = \dfrac{\bar{x}_1 - \bar{x}_2}{\sqrt{\dfrac{s_1^2}{n_1} + \dfrac{s_2^2}{n_2}}}$

($\because$ The standard deviations s_1 and s_2 are given and the standard deviations of populations are unknown)

$$= \frac{(71 - 76)}{\sqrt{\dfrac{9^2}{36} + \dfrac{14^2}{49}}} = \frac{-5}{\sqrt{\left(\dfrac{9}{4} + 4\right)}}$$

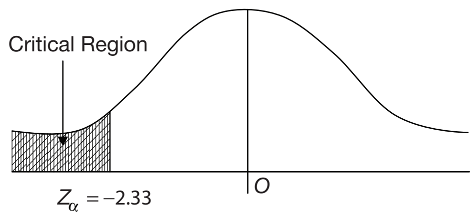
$Z = -2$

Critical region: As the alternative hypothesis H_1 is of < type, the critical region should be in the left tail of the standard normal curve as shown in the figure.

Here $\alpha = 0.01$

$\therefore P(Z \le Z_\alpha) = \alpha = 0.01$

$\Rightarrow Z_\alpha = -2.33$



$\therefore$ The critical region is to the left of $Z_\alpha = -2.33$ under the standard normal curve.

Decision: As the value of the test statistic $Z = -2$ is greater than that of $Z_\alpha = -2.33$, the test statistic does not lie in the critical region.

$\therefore$ Accept the null hypothesis H_0

Hence reject the alternative hypothesis H_1

$\therefore$ The given information does not substantiate the claim that the life span of men is less than that of women in that city.

Example 24

The manufacturer of electronic weighing machines finds that in a random sample of 120 machines, 15 machines are defective. Find the standard error of the proportion of defective machines in the sample.

Solution

Total number of machines = Sample size = $n = 120$

$\therefore$ The number of defective machines = 15 = x (say)

$\therefore$ Proportion of defective machines

$$= p = \frac{x}{n} = \frac{15}{120} = \frac{1}{8}$$

$$\therefore q = 1 - p = 1 - \frac{1}{8} = \frac{7}{8}$$

As the population proportion P (and hence $Q = 1 - P$) is unknown, we take p and q as P and Q respectively.

$\therefore$ Standard error of he proportion of defective machines

$$= SE = \sqrt{\frac{PQ}{n}}$$

$$= \sqrt{\frac{pq}{n}} = \sqrt{\frac{\frac{1}{8} \times \frac{7}{8}}{120}}$$

$\therefore SE = 0.0302$

Example 25

A home appliances company claims that the life of its geysers has a standard deviation of 16 hours. The life of a sample of 98 geysers of that company was found to have a standard deviation of 18 hours. Find the test statistic Z that is used in the process of testing whether the claim of the company be accepted or not.

Solution

Population standard deviation = $\sigma = 16$

Sample standard deviation = $s = 18$

Sample size = $n = 98$

As the situation is a testing of hypothesis of difference between population and sample standard deviations, we have

$$\text{Test statistic } = Z = \frac{(s - \sigma)}{\frac{\sigma}{\sqrt{2n}}}$$

$$= \frac{(18 - 16)}{\frac{16}{\sqrt{2 \times 98}}} = \frac{2 \times 14}{16}$$

$\therefore Z = 1.75.$

Tests of Hypothesis for Small Samples

In case of large samples, we often made use of the fact that the sampling distribution of many statistics are approximately normal and values of sample statistics are considered best estimates of the parameters of a population. However, in case of small samples, the sampling distributions of many statistics are not normal and the approximations of population parameters by the corresponding sample statistics are not valid. So, we shall discuss different tests of hypothesis which are applicable to small sampling. Note that these tests of hypothesis for small samples can also be applied to the cases of large samples. First we will discuss three important distributions that are used in testing of hypothesis for small samples namely, t-distribution, F-distribution and χ^2-distribution. These distributions require the knowledge of the concept of 'Degrees of freedom'.

Degrees of Freedom

The number of degrees of freedom is defined as the number of values in a set, which may be assigned arbitrarily.

For example, if $x_1 + x_2 + x_3 + x_4 + x_5 = 18$, then assign any values for four of the five variables arbitrarily (say, x_1, x_2, x_3 and x_4 were given arbitrary values). Then the value of the fifth variable (x_5) has to be taken based on the values of x_1, x_2, x_3 and x_4. So, in this case, the degrees of freedom is 4.

With reference to statistics, if n is the number of observations in the small sample and k is the number of constraints

on them (or k values are already available), then the number of degrees of freedom can be obtained by $n - k$.

The number of degrees of freedom is denoted by ν.

Example: If $x_1, x_2, \ldots x_n$ are the observations given, then the number of degrees of freedom for the mean $\bar{x}$ is n

($\because$ we use all values to find $\bar{x}$)

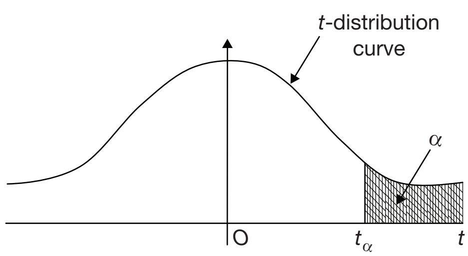
The number of degrees of freedom for the variance is $n - 1$ ($\because$ The variance depends on the mean)

Student's t-Distribution (or) t-Distribution

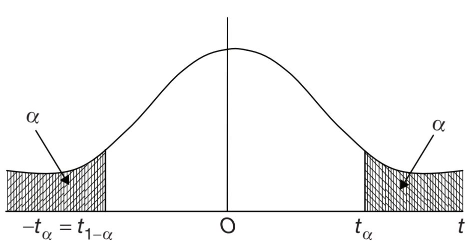
A random variable t is said to follow the t-distribution with $\nu = n - 1$ degrees of freedom, n being the sample size, if its probability density function is given by

$$f(t) = \frac{1}{\sqrt{\upsilon\beta\left(\frac{1}{2},\frac{\upsilon}{2}\right)}}\left(1+\frac{t^2}{\upsilon}\right)^{-(\upsilon+1)/2} \quad ; -\infty < t < \infty$$

The t-distribution curve is as shown in the figure, which is symmetric about the mean 0 and bell shaped. The total area under the t-distribution curve is unity.



- The t-distribution curve is similar to normal curve.
- The variance of t-distribution is greater than 1 and depends on the degrees of freedom ν.
- As the sample size n (i.e., the degrees of freedom $n - 1$) becomes large, the variance of corresponding t-distribution approaches 1 and hence for large samples, t-distribution can be approximated by the standard normal distribution.
- Critical values of t-distribution (see the t-distribution tables) are denoted by t_α, which is such that the area under the curve to the right of t_α equals to α.
- As the t-distribution is symmetric, it follows that $t_{1-\alpha} = -t_\alpha$.

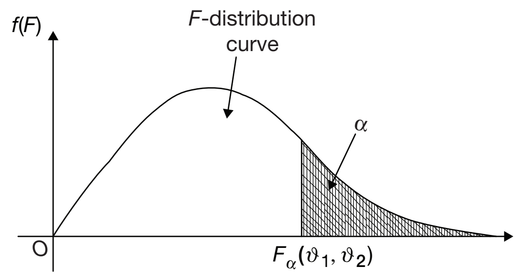


F-Distribution

A random variable F is said to follow the F-distribution with (ν_1, ν_2) degrees of freedom, if its probability density function $f(F)$ is given by

$$f(F) = \frac{\left(\frac{\nu_1}{\nu_2}\right)^{\frac{\nu_1}{2}} F^{\left(\frac{\nu_1}{2}\right)-1}}{\beta\left(\frac{\nu_1}{2},\frac{\nu_2}{2}\right)\left[1+\left(\frac{\nu_1}{\nu_2}\right)F\right]^{(\nu_1+\nu_2)/2}}, F > 0$$

The graph of F-distribution is given below.



- The F-distribution curve entirely lies in the first quadrant.
- F-distribution is not symmetric.
- $F_\alpha(\nu_1, \nu_2)$ is the value of F with ν_1 and ν_2 degrees of freedom such that the area under the F-distribution curve to the right of $F_\alpha(\nu_1, \nu_2)$ is α.
- The value of $F_\alpha(\nu_1, \nu_2)$ not only depends on the values of the degrees of freedom ν_1 and ν_2, but also the order in which they were taken.
- $F_{1-\alpha}(\nu_1, \nu_2) = \dfrac{1}{F_\alpha(\nu_2, \nu_1)}$
- F-distribution is also known as variance ratio distribution.
- The values of F_a for $\alpha = 0.05$ and $\alpha = 0.01$ for various combinations of the degrees of freedom ν_1 and ν_2 were presented in the tables.
- For large values of ϑ_1 and ϑ_2, F-distribution can be approximated by a normal distribution $N\left[1, 2\left(\frac{1}{\partial_1}+\frac{1}{\partial_2}\right)\right]$ with mean 1 and variance $2\left(\frac{1}{\partial_1}+\frac{1}{\partial_2}\right)$.
- F-distribution and t-distribution can be related as follows. If a statistic t follows t-distribution with ν degrees of freedom, then t^2 follows F-distribution with degrees of freedom $\nu_1 = 1$ and $\nu_2 = \nu$.

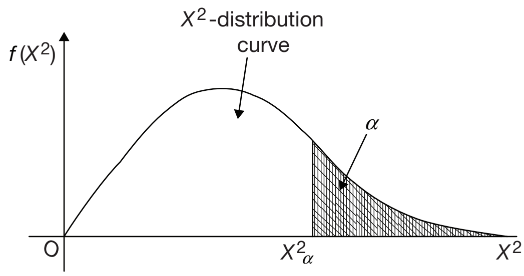
Chi-square Distribution

If a random variable X follows chi-square distribution (denoted as χ^2-distribution or $\chi^2(\nu)$), then the probability density function of X is given by

$$f(\chi^2)=\frac{1}{2\frac{v}{2\Gamma}\left(\frac{v}{2}\right)}e^{-\chi^2/2}(\chi^2)^{\left(\frac{v1}{2}\right)^{-1}},0\le\chi^2<\infty$$

where v is the degrees of freedom

The graph of chi-square distribution is given below.



- The chi-square distribution curve entirely lies in the first quadrant.
- Chi-square distribution is not symmetric.
- χ^2-distribution depends only on ϑ, the degrees of freedom.
- If χ_1^2 and χ_2^2 are two independent distributions with v_1 and v_2 degrees of freedom respectively, then $\chi_1^2+\chi_2^2$ will follow chi-square distribution with (v_1+v_2) degrees of freedom.
- χ_α^2 represents the value of χ^2 such that the area under the chi-square curve to the right of χ_α^2 is α
- The value of χ_α^2 for various combinations of α and ϑ were presented in the table.
- As the number of degrees of freedom $\vartheta\to\infty$, the χ^2-distribution tends to the normal distribution.

Identifying the Values of t_α, F_α and χ_α^2 from the Tables

1. The value of t_α for a given degrees of freedom ϑ is the value in the t-table at the intersection point of the column headed by α and the row headed by the degrees of freedom ϑ.

Example 26

Find the values of

(i) $t_{0.1}$ with degrees of freedom $\vartheta = 12$

(ii) $t_{0.05}$ with degrees of freedom $\vartheta = 17$

(iii) $t_{0.98}$ with degrees of freedom $\vartheta = 23$

Solution

(i) $t_{0.1}$ with degrees of freedom $\vartheta = 12$ = The value in the t-table at the intersection point of the column headed by $\alpha = 0.1$ and the row headed by $\vartheta = 12$ $= 1.356$

(ii) $t_{0.05}$ with degrees of freedom $\vartheta = 17$ = The value in the t-table at the intersection point of the column headed by $\alpha = 0.05$ and the row headed by $\vartheta = 17$ $= 1.740$.

(iii) $t_{0.98}$ with degrees of freedom $\vartheta = 23$. In the given t-table, there is no column corresponding to $\alpha = 0.98$

But we know that

$t_{1-\alpha} = -t_\alpha$

i.e., $t_\alpha = -t_{1-\alpha}$

$\therefore\ t_{0.98} = -t_{1-0.98}$

$\Rightarrow t_{0.98} = -t_{0.02}$ (1)

Now $t_{0.02}$ with degrees of freedom $\vartheta = 23$

$= 2.177$

$\therefore$ From (1), $t_{0.98}$ with degrees of freedom $\vartheta = 23$

$= -2.177$.

2. Two tables were given for F-distribution, one each for the values of $\alpha = 0.05$ and $\alpha = 0.01$ for various combinations of degrees of freedom ϑ_1 and ϑ_2.
   - The value of F_α for a given pair of values of degrees of freedom ϑ_1 and ϑ_2 is the value in the respective F_α-table at the intersection point of column headed by ϑ_1 and the row headed by ϑ_2.
3. The value of χ_α^2 for a given degrees of freedom ϑ is the value in the χ^2-table at the intersection point of the column headed by α and the row headed by the degrees of freedom ϑ.

Example 27

Find the values of

(i) $F_{0.05}$ (6, 13);

(ii) $F_{0.01}$(12, 17) and

(iii) $F_{0.95}$(15, 24)

Solution

(i) $F_{0.05}$(6, 13) = The value in the F-table corresponding to $\alpha = 0.05$ at the intersection point of the column headed by $\vartheta_1 = 6$ and the row headed by $\vartheta_2 = 13$ $= 2.92$

(ii) $F_{0.01}$(12, 17) = The value in the F-table corresponding to $\alpha = 0.01$ at the intersection point of the column headed by $\vartheta_1 = 12$ and the row headed by $\vartheta_2 = 17$ $= 3.46$

(iii) $F_{0.95}$(15, 24)

e know that $F_\alpha(\vartheta_1, \vartheta_2)$

$$= \frac{1}{F_{1-\alpha}(\vartheta_2,\vartheta_1)}$$

$\therefore\ F_{0.95}$(15, 24)

$$= \frac{1}{F_{1-0.95}(24,15)}$$

$$= \frac{1}{F_{0.05}(24,15)}$$

$$= \frac{1}{2.29} = 0.4367.$$

Example 28

Find the values of

(i) $\chi^2_{0.05}$ with degrees of freedom $\vartheta = 16$

(ii) $\chi^2_{0.01}$ with degrees of freedom $\vartheta = 21$

(iii) $\chi^2_{0.10}$ with degrees of freedom $\vartheta = 4$

Solution

(i) $\chi^2_{0.05}$ with degrees of freedom $\vartheta = 16$

= The value in the χ^2 – table at the intersection point of the column headed by $\alpha = 0.05$ and the row headed by $\vartheta = 16$

= 26.296

(ii) $\chi^2_{0.01}$ with degrees of freedom $\vartheta = 21$

= The value in the χ^2 – table at the intersection point of the column headed by $\alpha = 0.01$ and the row headed by $\vartheta = 21$

= 38.932

Similarly, we have

(iii) $\chi^2_{0.10}$ with degrees of freedom $\vartheta = 4$

= 7.779.

Test of Hypothesis	Test Statistic	Distribution with Degrees of Freedom	Expansions for Notations
Difference between means of population and sample (σ unknown)	$t = \dfrac{\bar{x} - \mu_0}{\dfrac{s}{\sqrt{n-1}}}$	t-distribution with $v = n - 1$	$\bar{x}$ = Sample mean
Difference between means of two samples (σ unknown) (a) If $n_1 \neq n_2$	$t = \dfrac{(\bar{x}_1 - \bar{x}_2)}{\sqrt{\left(\dfrac{n_1 s_1^2 + n_2 s_2^2}{n_1 + n_2 - 2}\right)\left(\dfrac{1}{n_1} + \dfrac{1}{n_2}\right)}}$	t-distribution with $v = n_1 + n_2 - 2$	μ_0 = Population mean
(b) If $n_1 = n_2 = n$	$t = \dfrac{(\overline{x_1} - \overline{x_2})}{\sqrt{\dfrac{(s_1^2 + s_2^2)}{(n-1)}}}$	t-distribution with $v = 2n - 2$	s = Sample standard deviation n = Sample size ϑ = Degrees of freedom
(c) $n_1 = n_2 = n$ and the two samples are not independent i.e., they are related in some way (This implies that the pairs of observations (x_i, y_i) belong to same sample unit	$t = \dfrac{\bar{d}}{\dfrac{s}{\sqrt{n-1}}}$ where $\bar{d} = \overline{x_i} - \overline{y_i}$ $d_i = x_i - y_i$ and $s_2 = \dfrac{1}{n}\sum_i (d_i - \bar{d})^2$	t-distribution with $v = n - 1$	
Equality of the population variances **Note:** Take the larger of the estimates of variances of the samples as $\hat{\sigma}_1^2$ and the corresponding degrees of freedom as ϑ_1	$F = \dfrac{\hat{\sigma}_1^2}{\hat{\sigma}_2^2}$ where $\hat{\sigma}_1^2 = \left(\dfrac{n_1}{n_1 - 1}\right)s_1^2$ and $\hat{\sigma}_2^2 = \left(\dfrac{n_2}{n_2 - 1}\right)s_2^2$	F-distribution with $v_1 = n_1 - 1$ $v_2 = n_2 - 1$	
Population variance	$\chi^2 = \dfrac{ns^2}{\sigma^2}$ 0 where $s^2 = \sum_{i=1}^{n} \dfrac{(x_i - \bar{x})^2}{n}$	χ^2-distribution with $v = n - 1$	

Example 29

The highest temperature in the month of June at a certain place is normally distributed with mean 40°C. The highest temperatures in June during the last five years are 43°C, 37°C, 35°C, 39°C and 38°C. From this data, can we conclude that the average highest temperature in June during the last five years is less than the normal highest temperature? (Test at 0.05 level of significance)

Solution

Population mean = $\mu_0 = 40$

Sample mean $= \bar{x} = \dfrac{43+37+35+39+38}{5}$

$\therefore \bar{x} = \dfrac{192}{5} = 38.4$

Sample size v $n = 5$

$\therefore$ Number of degrees of freedom $= \vartheta = n - 1 = 5 - 1 = 4$

Sample variance $= s^2 = \left(\frac{1}{n}\sum_i x_i^2\right) - \overline{x^2}$

$= \frac{43^2 + 37^2 + 35^2 + 39^2 + 38^2}{5} - (38.4)^2$

$= 1,481.6 - 1,474.56$

$\therefore s^2 = 7.04$

$\Rightarrow s = 2.6533$

Null hypothesis H_0: $\mu = \mu_0 = 40$

Alternative hypothesis: H_1: $\mu < \mu_0$ (=40)

Level of significance: $\alpha = 0.05$

Test statistic:

$$t = \frac{\overline{x} - \mu_0}{\frac{s}{\sqrt{n-1}}}$$

$$= \frac{38.4 - 40}{\frac{2.6533}{\sqrt{5-1}}} = \frac{-1.6}{\frac{2.6533}{2}}$$

$\therefore t = -1.2060$

Critical region: As the alternative hypothesis is < type, the critical region is in the left tail of the *t*-distribution curve as shown in the figure.

As $\alpha = 0.05$ with $\vartheta = 4$, we have

t_α with $\vartheta = 4$

= The area under the *t*-distribution curve to the right of $\alpha = 0.05$ with $\vartheta = 4$

= 2.132

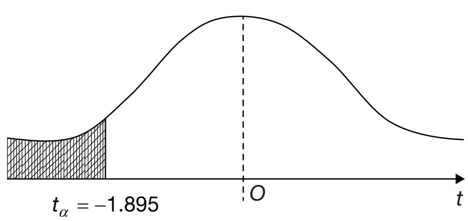
$\therefore$ The critical region is the region (area = 0.05) in the left tail of the *t*-distribution curve.

$= -t_\alpha$ with $\vartheta = 4$

($\because$ *t*-distribution is symmetric)

$\therefore$ The critical value is

$\therefore -t_\alpha = -2.132$



Decision: As the test statistic $t = -1.2060$ is greater than the critical value -2.132, it lies in the acceptance region.

$\therefore$ Accept the null hypothesis.

Hence there is no significant difference between the normal temperature and the average temperature of the last five years in the month of June.

Example 30

In a CBSE school marks scored in Mathematics by 10 students of section-A of *X* standard has a mean of 68 and a variance of 109 where as that of 8 students of Section-B has a mean of 57 with a variance of 128. Test of 2% level of significance whether there is a significant difference between the means of marks scored by the students of sections-A and B or not. Assume that the marks of the students of sections-A and B follow normal distribution with same variance.

Solution

Let μ_1 and μ_2 be the means of the marks of students of the sections A and B respectively.

Mean of first sample $= \overline{x}_1 = 68$

Mean of second sample $= \overline{x}_2 = 57$

Variance of first sample $= s_1^2 = 109$

Variance of second sample

$= s_2^2 = 128$

$n_1 = 10$ and $n_2 = 8$

Null hypothesis: H_0: $\mu_1 = \mu_2$

Alternative hypothesis: H_1: $\mu_1 \neq \mu_2$

Level of significance: $\alpha = 0.02$

Test statistic:

$$t = \frac{(\overline{x_1} - \overline{x_2})}{\sqrt{\left(\frac{n_1 s_1{}^2 + n_2 s_2{}^2}{n_1 + n_2 - 2}\right)\left(\frac{1}{n_1} + \frac{1}{n_2}\right)}}$$

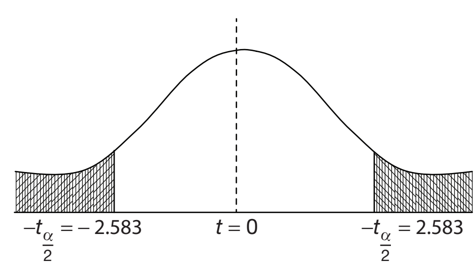
$$= \frac{(68 - 57)}{\sqrt{\left(\frac{10 \times 109 + 8 \times 128}{10 + 8 - 2}\right)\left(\frac{1}{10} + \frac{1}{8}\right)}}$$

$$= \frac{11}{5.4523}$$

$= 2.0175$

$\therefore$ The test statistic is $t = 2.0175$

Critical region: As the alternative hypothesis is of the ≠ type, the critical region lies on both sides of the *t*-distribution curve as shown in the figure.



Here $\alpha = 0.02$ and υ = degrees of freedom $= n_1 + n_2 - 2 = 10 + 8 - 2$

$\upsilon = 16$

$\frac{t_\alpha}{2}$ with $\upsilon = 16$

$= t_{0.01}$ at $\upsilon = 16$

$= 2.583$

∴ The critical region is to the left of $-\frac{t_\alpha}{2} = -2.583$ and to the right of $\frac{t_\alpha}{2} = 2.583$.

Decision: As the test statistic $t = 2.0175$ lies between $-\frac{t_\alpha}{2}$ and $\frac{t_\alpha}{2}$, we accept the null hypothesis.

∴ There is no significant difference between the means of marks scored by the students of sections A and B.

Example 31

The variances of two samples of sizes 9 and 13 are 15.778 and 19.175 respectively. Test whether the two samples be regarded as drawn from normal populations with the same variance at 5% level of significance.

Solution

Always the sample having higher variance will be taken as the first sample in this test of hypothesis.

∴ Variance of first sample $= s_1^2$

$= 19.175$

Variance of second sample $= s_2^2$

$= 15.778$

Sample size of first sample $= n_1 = 13$

Sample size of second sample $= n_2 = 9$

$$\hat{\sigma}_1^2 = \left(\frac{n_1}{n_1 - 1}\right) s_1^2 = \frac{13}{(13-1)} \times 19.175$$

$$\hat{\sigma}_1^2 = 20.7729$$

$$\hat{\sigma}_2^2 = \left(\frac{n_2}{n_2 - 1}\right) s_2^2 = \frac{9}{(9-1)} \times 15.778$$

$$\hat{\sigma}_2^2 = 17.7520$$

Null hypothesis: H_0: $\hat{\sigma}_1^2 = \hat{\sigma}_2^2$

Alternative hypothesis: H_1: $\hat{\sigma}_1^2 \neq \hat{\sigma}_2^2$

Level of significance: $\propto = 0.05$

Test statistic:

The test statistic is

$$F = \frac{\hat{\sigma}_1^2}{\hat{\sigma}_{21}^2}$$

$$= \frac{20.7729}{17.7502}$$

$F = 1.1703$

Critical region:

Here $\upsilon_1 = n_1 - 1 = 13 - 1 = 12$

And $\upsilon_2 = n_2 - 1 = 9 - 1 = 8$

∴ The critical value is

$F_\alpha(\upsilon_1, \upsilon_2) = F_{0.05}(12, 8) = 3.28$

And the critical region is to the right of 3.28

As $F = 1.1703 < F_\alpha(\upsilon_1, \upsilon_2) = 3.28$,

we conclude that the two random samples are drawn from two normal populations with the same variance.

Non-Parametric Tests

Goodness of Fit Test

To determine, if a population follows a specified theoretical distribution such as binomial, Poisson or normal distribution, χ^2 test can be used. χ^2 test, which is based on how good a fit is there between the observed frequencies (O_i from the sample) and the expected frequencies (E_i from the theoretical distribution) is known as 'goodness of fit test'.

Let a distribution be given. Let O_i and E_i ($I = 1, 2, 3... n$) be the observed and expected frequencies of the ith class (or cell) such that $\sum_{i=1}^{n} O_i = \sum_{i=1}^{n} E_i = N =$ Total Frequency.

Test statistic (OR) Statistic for test of 'goodness of fit'

$$= \chi^2 = \sum_{i=1}^{n} \frac{(O_i - E_i)^2}{E_i}$$

where n is the number of class intervals or cells, in the given frequency distribution and χ^2 is a random variable which is very closely approximated with χ^2-distribution with degrees of freedom v.

Degrees of Freedom for Goodness of Fit Test Based on the theoretical distribution given, the degrees of freedom are as given below.

1. For uniform distribution, $v = n - 1$
2. For binomial and Poison distribution, $v = n - 2$
3. For normal distribution, $v = n - 3$

NOTES

Given data should satisfy the following conditions.

1. Sample size (OR) the number of sample observations, N should be more than 50($N \geq 50$)
2. If individual frequencies (O_i and/or E_i) is/are small say less than 10, then combine neighbouring frequencies in such a way that, they will be ≥ 10.
3. The number of class or cells n should be neither too small nor too large. Generally, $4 \leq n \leq 16$.

Example 32

Fitting a Poisson distribution to the following data:

x_i	0	1	2	3	4
Observed Frequencies (O_i)	30	62	46	10	2

The following respective expected frequencies are obtained.

Expected Frequencies (E_i): 42 54 34 15 5

Test the goodness of fit of a Poisson distribution to the above data with 1% level of significance.

Solution

We have

Observed Frequencies (O_i)	30	62	46	10	2
Expected Frequencies (E_i)	42	54	34	15	5

Grouping the classes so that each class frequency is ≥10,

We have

O_i	30	62	46	12
E_i	42	54	34	20
$O_i - E_i$	−12	8	12	−8

Null hypothesis: H_0: Good fit exists between the theoretical (Poisson) distribution and given data (observed frequencies)

Alternative hypothesis: H_1: No good fit exists between the theoretical (Poisson) distribution and given data (observed frequencies).

Level of Significance: $-\alpha = 0.01$

Test Statistic:

$$\chi^2 = \sum_{i=1}^{n} \frac{(O_i - E_i)^2}{E_i}$$

$$= \frac{(-12)^2}{42} + \frac{8^2}{54} + \frac{12^2}{34} + \frac{(-8)^2}{20}$$

$= 3.4286 + 1.1852 + 4.2353 + 3.2$

$\therefore \chi^2 = 12.0491$

Critical region: As we are testing the fitting of Poisson distribution,

Degrees of Freedom = $\upsilon = n - 2$
$= 4 - 2 = 2$

$\therefore \chi^2\ \alpha = \chi^2_{0.01}$ With $\upsilon = 2$

$= 9.210$

$\therefore$ The critical region is to the right of 9.210 under χ^2 distribution curve.

Decision: As the value of the test statistic

$\chi^2 = 12.0491 > \chi^2_\alpha (= 9.210)$

We reject the null hypothesis.

$\therefore$ Accept the alternative hypothesis.

Hence no good fit exists between the theoretical (Poisson) distribution and given data (observed frequencies).

Analysis of rXc Contingency Tables

Consider two attributes A and B of the given population. Let each of these attributes are classified into different classes (categories), say the attribute A is divided into r classes $A_1, A_2, \ldots, A_r$ and the attribute B is divided into c classes $B_1, B_2, \ldots, B_c$. Let a table (matrix) be formed with the classed of attribute A as heading rows and the classes of attribute B as heading columns as shown below. In the table, the values $O_{i*}(i = 1, 2, \ldots, r$ and $j = 1, 2, \ldots,$ (C) are known as observed frequencies which denote the number of items belonging to both A_i and B_j; O_{i*} denote the number of items belonging to the class A_i and O_{*j} denote the number of items belonging to the class B_j. This table is known as *rxc* contingency table.

***rXc* Contingency Table**

A \ B	B_1	B_2	…	B_j	…	B_c	Row Total
A_1	O_{11}	O_{12}	…	O_{ij}	…	O_{1c}	O_{1*}
A_2	O_{21}	O_{22}	…	O_{2j}	…	O_{2c}	O_{2*}
⋮	⋮	⋮		⋮		⋮	⋮
A_i	O_{i1}	O_{i2}	…	O_{ij}		O_{ic}	O_{i*}
⋮	⋮	⋮		⋮		⋮	⋮
A_r	O_{r1}	O_{r2}	…	O_{rj}	…	O_{rc}	O_{r*}
Column Total	O_{*1}	O_{*2}	…	O_{*j}	…	O_{*c}	$\sum_{i=i}^{r} O_{i*} = \sum_{j=1}^{c} O_{*j} = N$

In general, these tables arise in two kinds of problems.

1. Test for Independence.
2. Test for Homogeneity.

Various requirements for testing of hypothesis in these two types of problems were described in the following table.

	Test for Independence	Test for Homogeneity
(A) Description	To test whether the given two attributes of the population are independent or not.	To test whether different classes of the attributes are homogeneous or not
(B) Expected frequency (E_{ij})	$\frac{(\text{Total observed frequency in } i\text{th row}) \times (\text{Total observed frequency in } j\text{th column})}{\text{Total frequency}}$ i.e., $\frac{(O_{i*})(O_{*j})}{N}$	
(C) Test Statistic	$\chi^2 = \sum_{i-1}^{r}\sum_{j=1}^{c}\left[\frac{(O_{ij}-E_{ij})^2}{E_{ij}}\right]$	
(D) Degrees of Freedom (υ)	$v = (r-1)\times(c-1)$	
(E) Decision	1. If $\chi^2 < \chi^2_\alpha$ with v degrees of freedom, then accept the null hypothesis H_0. 2. If $\chi^2 > \chi^2_\alpha$ with v degrees of freedom, then accept the alternative hypothesis H_1.	

Example 33

Test the hypothesis with 1% level of significance that the heart problem is independent of drinking (alcoholic drinks) habits from the following experimental data on 200 persons.

	Non Drinkers	Moderate Drinkers	Heavy Drinkers
Heart problem	25	40	35
No Heart problem	50	30	20

Solution

Given contingency table is

	Non Drinkers	Moderate Drinkers	Heavy Drinkers	Row Total
Heart Problem	25	40	35	100
No Heart problem	50	30	20	100
Column Total	75	70	55	

Total number of persons $= N = 200$

The expected frequency E_{ij} is given by

$$E_{ij} = \frac{(i\text{th row total})\times(j\text{th column total})}{\text{Total number of persons }(N)}$$

$$E_{11} = \frac{100\times 75}{200} = 37.5,$$

$$E_{12} = \frac{100\times 70}{200} = 35,$$

$$E_{13} = \frac{100\times 55}{200} = 27.5,$$

$$E_{21} = \frac{100\times 75}{200} = 37.5,$$

$$E_{22} = \frac{100\times 70}{200} = 35,$$

$$E_{23} = \frac{100\times 55}{200} = 27.5$$

Null hypothesis: H_0: Heart problem and the drinking habits are independent.

Alternative hypothesis: H_1: Heart problem and the drinking habits are not independent.

Level of significance: $\alpha = 0.01$

Test statistic:

$$X^2 = \sum_{i=1}^{r}\sum_{j=1}^{c}\left[\frac{(O_{ij}-E_{ij})^2}{E_{ij}}\right]$$

$$= \sum_{i=1}^{2}\sum_{j=1}^{3}\left[\frac{(O_{ij}-E_{ij})^2}{E_{ij}}\right]$$

$$= \frac{(25-37.5)^2}{37.5} + \frac{(40-35)^2}{35} + \frac{(35-27.5)^2}{27.5}$$

$$= \frac{(50-37.5)^2}{37.5} + \frac{(30-35)^2}{35} + \frac{(20-27.5)^2}{27.5}$$

$= 4.1667 + 0.7143 + 2.0454 + 4.1667 + 0.7143 + 2.0454$

$\therefore \chi^2 = 13.8528$

Critical region:

Here $\alpha = 0.01$

r = Number of rows in the table = 2

c = Number of columns in the table = 3

$\therefore$ Degrees of freedom $= v = (r-1)(c-1)$

$= (2-1)(3-1) = 2$

$v = 2$

$\therefore \chi^2_\alpha$ with υ degrees of freedom.

$= \chi^2_{0.01}$ with 2 degrees of freedom

$= 9.210.$

Decision: As the test statistic $= \chi^2 = 13.8528 > \chi^2_\alpha$ $(= 9.210)$, reject the null hypothesis.

i.e., accept the alternative hypothesis.

$\therefore$ Heart problem and the drinking habits are not independent.

Example 34

Following table shows the opinions of 300 persons about 'Love Marriages'.

	Married Persons	Unmarried Persons
Good	40	50
Not good	20	60
Undecided	60	70

Test whether the opinions of married and unmarried persons are homogeneous (same) with respect to 'Love Marriages' at 0.01 level of significance.

Solution

Given contingency table is

	Married Persons	Unmarried Persons	Row Total
Good	40	50	90
Not Good	20	60	80
Undecided	60	70	130
Column total	120	180	

The expected frequencies are given by,

$$E_{11} = \frac{90\times 120}{300} = 36,$$

$$E_{12} = \frac{90\times 180}{300} = 54,$$

$$E_{21} = \frac{80\times 120}{300} = 32,$$

$$E_{22} = \frac{80\times 180}{300} = 48,$$

$$E_{31} = \frac{30\times 120}{300} = 52,$$

$$E_{32} = \frac{130\times 180}{300} = 78$$

Null hypothesis: H_0: The opinion of married and unmarried persons about 'Love Marriages' is homogeneous (same).

Alternative hypothesis: H_1: The opinion of married and unmarried persons about 'Love Marriages' is not homogeneous.

Level of significance: $\alpha = 0.01$

Test statistic:

$$\chi^2 = \sum_{i=1}^{r}\sum_{j=1}^{c}\left[\frac{(O_{ij}-E_{ij})^2}{E_{ij}}\right]$$

$$\sum_{i=1}^{3}\sum_{j=1}^{2}\left[\frac{(O_{ij}-E_{ij})^2}{E_{ij}}\right]$$

$$= \frac{(40-36)^2}{36} + \frac{(50-54)^2}{54} + \frac{(20-32)^2}{32} + \frac{(60-48)^2}{48}$$

$$+ \frac{(60-52)^2}{52} + \frac{(70-78)^2}{78}$$

$\therefore\ \chi^2 = 10.292$

Critical region:

Here $\alpha = 0.01$

r = Number of rows in the table = 3

c = Number of columns in the table = 2

$\therefore$ Degrees of freedom $= \upsilon = (r-1)(c-1)$

$= (3-1)(2-1) = 2$

$\upsilon = 2$

$\therefore\ \chi^2_\alpha$ with υ degrees of freedom.

$= \chi^2_{0.01}$ with 2 degrees of freedom

$= 9.210$

Decision:

As the test statistic $= \chi^2$

$= 10.292 > \chi^2_\alpha$ $(= 9.210)$, reject the null hypothesis.

i.e., Accept the alternative hypothesis.

$\therefore$ The opinion of married and unmarried persons about 'Love Marriages' is not homogeneous (not same).

Exercises

1. If eight unbiased coins are tossed together, then the probability that the number of heads exceeds the number of tails is

(A) $\frac{31}{128}$ (B) $\frac{1}{2}$

(C) $\frac{93}{256}$ (D) $\frac{57}{256}$

2. If A and B are two mutually exclusive and exhaustive events and the probability that the non-occurrence of A is $\frac{3}{4}$, then the probability of occurrence of B is

(A) $\frac{1}{4}$ (B) $\frac{1}{2}$

(C) $\frac{3}{4}$ (D) $\frac{1}{16}$

3. A bag contains five red balls, three black balls and a white ball. If three balls are drawn from the bag, the probability that the three balls are of different colours is

(A) $\frac{23}{28}$ (B) $\frac{5}{28}$

(C) $\frac{3}{28}$ (D) None of these

4. From a box containing 18 bulbs, of which exactly $\frac{1}{3}$ rd are defective, five bulbs are chosen at random to fit into the five bulb holders in a room. The probability that the room gets lighted is

(A) $1-\frac{^6C_5}{^{18}C_5}$ (B) $\frac{^6C_5}{^{18}C_5}$

(C) $\frac{^{12}C_5}{^{18}C_5}$ (D) $1-\frac{^{12}C_5}{^{18}C_5}$

5. On a biased dice, any even number appears four times as frequently as any odd number. If the dice is rolled thrice what is the probability that the sum of the scores on them is more than 16?

(A) $\frac{26}{375}$ (B) $\frac{112}{375}$

(C) $\frac{26}{3375}$ (D) $\frac{112}{3375}$

6. A five digit number is formed using the digits 0, 1, 2, 3, 4 and 5 at random but without repetition. The probability that the number so formed is divisible by 5 is

(A) $\frac{1}{5}$ (B) $\frac{2}{5}$

(C) $\frac{4}{25}$ (D) $\frac{9}{25}$

7. If six people sit around a circular table, the probability that two specified persons always sit side by side is

(A) $\frac{14}{15}$ (B) $\frac{11}{15}$

(C) $\frac{2}{5}$ (D) $\frac{4}{15}$

8. Eight letters are to be placed in eight addressed envelopes. If the letters are placed at random into the envelopes, the probability that exactly one letter is placed in a wrong addressed envelopes is

(A) $\frac{1}{6}$ (B) $\frac{1}{8!}$

(C) $\frac{1}{7!}$ (D) None of these

9. A puzzle in logic was given to three students A, B and C whose chances of solving it are $\frac{1}{2}, \frac{3}{4}$ and $\frac{1}{4}$ respectively. The probability that the problem being solved is

(A) $\frac{29}{32}$ (B) $\frac{31}{32}$

(C) $\frac{1}{8}$ (D) $\frac{7}{8}$

10. If A and B are two events of an experiment such that $P(A \cup B) = \frac{3}{4}$, $P(A) = \frac{7}{20}$, then find $P(B)$ given that

(i) A and B are mutually exclusive

(A) $\frac{1}{4}$ (B) $\frac{1}{5}$

(C) $\frac{3}{5}$ (D) $\frac{2}{5}$

(ii) A and B are equally likely

(A) $\frac{7}{20}$ (B) $\frac{3}{4}$

(C) $\frac{2}{5}$ (D) $\frac{13}{20}$

(iii) A and B are independent events

(A) $\frac{7}{13}$ (B) $\frac{8}{13}$

(C) $\frac{6}{13}$ (D) $\frac{2}{5}$

11. The probability that a square selected at random from *a* 8×8 chessboard is of size 3×3 is

(A) $\frac{8}{51}$ (B) $\frac{14}{17}$

(C) $\frac{3}{17}$ (D) $\frac{25}{204}$

12. A dice has two of its sides painted pink, two blue and two green. If the dice is rolled twice the probability that same colour appears both the times is

(A) $\frac{1}{3}$ (B) $\frac{2}{3}$

(C) $\frac{7}{9}$ (D) $\frac{8}{9}$

13. X and Y are independent events. The probability that both X and Y occur is $\frac{1}{8}$ and the probability that neither of these occur is $\frac{3}{8}$. The probability of occurrence of X can be

(A) $\frac{2}{3}$ (B) $\frac{1}{4}$

(C) $\frac{1}{3}$ (D) $\frac{3}{4}$

14. A bag contains 12 cards. 5 of these cards have the letter 'M' printed on them, 3 cards have the letter 'A' printed

on them and the remaining cards have the letter 'N' printed on them. If three cards are picked up one after the other at random, and placed on a table in that order, then what is the probability that the word formed will be 'MAN'?

(A) $\frac{5}{44}$ (B) $\frac{1}{22}$

(C) $\frac{3}{22}$ (D) $\frac{3}{44}$

15. A and B pick a card at random from a well shuffled pack of cards, one after the other replacing it every time till one of them gets a spade. The person who picks a spade is declared the winner. If A begins the game, then the probability that B wins the game is

(A) $\frac{5}{9}$ (B) $\frac{4}{9}$

(C) $\frac{3}{7}$ (D) $\frac{4}{7}$

16. A number is randomly chosen from the numbers 10 to 99. It is observed that the sum of the digits of the number is ten. Find the probability that it is divisible by five.

(A) $\frac{1}{9}$ (B) $\frac{1}{3}$

(C) $\frac{1}{2}$ (D) $\frac{2}{9}$

17. An unbiased coin is tossed a person gets ₹30 if the coin shows head, and he loses ₹15 if the coin shows tail. If three coins are tossed, the probability that the person gets ₹45 is

(A) $\frac{3}{8}$ (B) $\frac{1}{2}$

(C) $\frac{1}{10}$ (D) $\frac{1}{25}$

18. What is the probability of getting at least 6 heads when a coin is tossed 7 times if it is known that there are at least 5 heads?

(A) $\frac{5}{29}$ (B) $\frac{8}{29}$

(C) $\frac{9}{29}$ (D) None of these

19. If $P(A) = \frac{3}{5}$, $P(B^C) = \frac{6}{7}$ and $P(A \cap B) = \frac{1}{4}$, then find $P\left(\frac{A^c}{B^c}\right)$.

(A) $\frac{17}{60}$ (B) $\frac{71}{120}$

(C) $\frac{19}{60}$ (D) $\frac{29}{60}$

20. If two events A and B are such that $P(\bar{A}) = 0.4$, $P(B) = 0.7$ and $P(A \cap B) = 0.2$, then $P\left(\frac{B}{A \cup \bar{B}}\right)$ is

(A) $\frac{3}{5}$ (B) $\frac{2}{5}$

(C) $\frac{1}{4}$ (D) $\frac{4}{5}$

21. A cinema historian noted that for a brief period, all movies released were either directed by Nolan or starred Bale. Also no movie directed by Nolan starred Bale. The probability that a movie was directed by Nolan is 0.5, and the probability that a movie starred Bale is 0.5. The probability that a movie is a hit if directed by Nolan is 0.6, while the probability that a movie is a hit given that Bale acted in it is 0.4. Given that a movie is a hit, find the probability that it is directed by Nolan.

(A) 0.4 (B) 0.5

(C) 0.6 (D) 0.7

22. Probability mass function of a variate x is as follows:

x	0	1	2	3	4
$P(X = x)$	k	$2k$	$3k$	$4k$	$5k$

then $P(x \geq 3) =$

(A) $\frac{1}{3}$ (B) $\frac{4}{15}$

(C) $\frac{3}{5}$ (D) $\frac{5}{7}$

23. The expected number of trials required to open a door using a bunch of n keys of which only one is the correct key is

(A) $\frac{n}{2}$ (B) $\frac{n-1}{2}$

(C) $\frac{n+1}{2}$ (D) n

Direction for questions 24 and 25:

A variate x has the probability distribution as

x	4	8	12
$P(X = x)$	$\frac{1}{3}$	$\frac{3}{5}$	$\frac{1}{15}$

24. Values of $E(x)$ and $E(x^2)$ respectively are

(A) $\frac{104}{15}, \frac{160}{3}$ (B) $\frac{102}{15}, \frac{150}{3}$

(C) $\frac{21}{3}, \frac{160}{5}$ (D) $\frac{104}{15}, \frac{151}{3}$

25. The value of $E[(3x + 2)^2]$ is ________.

(A) 675.2 (B) 560.2

(C) 134.56 (D) 567.2

26. In the random experiment of drawing a card from 15 cards numbered 1 to 15, if x is the random variable defined by the number appeared on the card, then the expectation of x is

(A) 8 (B) 7
(C) 6 (D) 5

27. For a binominal distribution, mean is 6 and variance is 2. The number of Bernouli trials is

(A) 8 (B) 9
(C) 10 (D) 11

28. If $X(n, p)$ follows a binominal distribution with $n = 6$ such that $9P[X = 4] = P[X = 2]$, then $p =$

(A) $\frac{1}{3}$ (B) $\frac{1}{2}$
(C) 1 (D) $\frac{1}{4}$

29. The variance of a Poisson variate is given to be 1. Then, $P(X = 3)$ is

(A) $\frac{1}{e}$ (B) $\frac{1}{2e}$
(C) $\frac{1}{3e}$ (D) $\frac{1}{6e}$

30. A random variable X follows a Poisson distribution such that $P[X = 1] = P[X = 2]$. Its mean and variance are, respectively,

(A) 1, 1 (B) 2, 2
(C) $\sqrt{3}, 2$ (D) $\sqrt{2}, \sqrt{2}$

31. The probability that a person hits a target is 0.003. What is the probability of hitting the target with 2 or more bullets if the number of shots is 2000?

(A) $1 - e^{-6}$ (B) $1 - e^{6}$
(C) $1 - 7e^{6}$ (D) $1 - 7e^{-6}$

32. The expected value of a random variable with uniform distribution over the interval (2, 5) is

(A) 2 (B) $2\frac{1}{2}$
(C) $3\frac{1}{2}$ (D) $4\frac{1}{2}$

33. If X is a continuous random variable with PDF $f(x) = \frac{1}{4}$ if $-2 \leq x \leq 2$ and $f(x) = 0$ elsewhere, the mean of X is ______.

(A) 1 (B) 1.5
(C) 2 (D) 0

34. If X is a uniformly distributed random variable in [1, 4] then $P\left(x > \frac{3}{2}\right)$ is

(A) $\frac{1}{6}$ (B) $\frac{1}{2}$
(C) $\frac{5}{6}$ (D) $\frac{1}{4}$

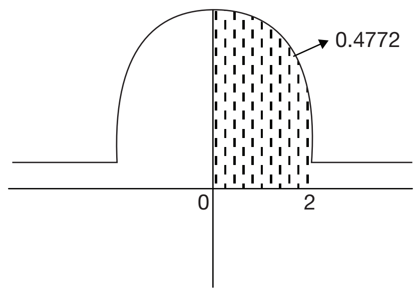
35. If X is a uniformly distributed random variable in [2, 5] then $E(X^2)$ is

(A) 2 (B) 8
(C) 13 (D) 15

36. If the life time of bulbs (in months) is exponential with mean 5 months, then the probability that the bulb lasts for atleast 7 months is

(A) 0.2466 (B) 0.7534
(C) 0.4932 (D) 0.5068

37. x is a normal variate with mean 35 and variance 25 probability of $31 \leq x < 45$ is $(-0.8 \leq z < 0 = 0.2881)$



(A) 0.6735 (B) 0.7563
(C) 0.7653 (D) 0.5736

38. Let X_1 and Y_1 be two discrete random variables with joint probability mass function as given below

X_1 \ Y_1	2	3	$P(X_1 = x_i)$
1	$\frac{1}{15}$	$\frac{2}{15}$	$\frac{1}{5}$
4	$\frac{4}{15}$	$\frac{8}{15}$	$\frac{4}{5}$
$P(Y_1 = y_j)$	$\frac{1}{3}$	$\frac{2}{3}$	

Let X_2 and Y_2 be two discrete random variables with joint probability mass function given as follows:

X_2 \ Y_2	0	4	7	$P(X_2 = x_i)$
–1	$\frac{1}{7}$	$\frac{3}{14}$	$\frac{1}{14}$	$\frac{3}{7}$
3	$\frac{4}{21}$	$\frac{2}{7}$	$\frac{2}{21}$	$\frac{4}{7}$
$P(Y_2 = y_j)$	$\frac{1}{3}$	$\frac{1}{2}$	$\frac{1}{6}$	

Which of the following statements is TRUE about the random variables X_1, X_2, Y_1 and Y_2?

(A) Only X_1 and Y_1 are independent.
(B) Only X_2 and Y_2 are independent.
(C) X_1 and Y_1 are independent as well as X_2 and Y_2 are independent.
(D) Neither X_1 and Y_1 are independent nor X_2 and Y_2 are independent.

39. If X and Y are two independent random variables with expectations 3 and 4 respectively. Then the expectation of X Y is
(A) 1 (B) 7
(C) 12 (D) 16

40. If X and Y are two independent random variables that are uniformly distributed over the same interval [2, 5] then $P\left(X \le \frac{11}{4}, Y \ge \frac{11}{3}\right)$ is
(A) $\frac{1}{9}$ (B) $\frac{2}{9}$
(C) $\frac{1}{3}$ (D) $\frac{4}{7}$

41. The mean of cubes of first 10 natural numbers is
(A) 305 (B) 300
(C) 302.5 (D) 310

42. The mean of 25 observations was found to be 38. It was later discovered that 23 and 38 were misread as 25 and 36, then the mean is
(A) 32 (B) 36
(C) 38 (D) None of these

43. If 3, 2 and 9 occur with frequencies 2, 5 and 3 respectively, then their arithmetic mean is
(A) 4.3 (B) 5
(C) 6 (D) 4.8

44. The median of first ten prime numbers is
(A) 11 (B) 13
(C) 12 (D) 10

45. If the mean of a set of 12 observations is 10 and another set of 8 observations is 12, then the mean of combined set is
(A) 12.6 (B) 10.8
(C) 12.8 (D) 10.6

46. The mode of a distribution of 13 and its mean is 4 then its median is
(A) 7 (B) 9
(C) 8 (D) 11

47. Consider the non-decreasing series of the numbers, 1, 8, 8, 13, 14, 14, x, y, 18, 20, 31, 34, 38 and 40. If the median of the series is 15, then the mode of the series is
(A) 14 (B) 16
(C) 18 (D) Cannot be determined

48. The standard deviation of 5, 5, 5, 5, 5, 5, 5, 13 is
(A) $2\sqrt{2}$ (B) $\sqrt{6}$
(C) 5 (D) $\sqrt{7}$

49. If the standard deviation of 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11 is M, then the standard deviation of 101, 102, 103, 104, … and 111 is
(A) M (B) $100 + M$
(C) $100 - M$ (D) $M - 100$

50. If the standard deviation of 10, 20, 30, 40 and 50 is S, then the standard deviation of 20, 30, 40, 50 and 60 is
(A) S (B) $S + 10$
(C) $S - 10$ (D) $10S$

51. The arithmetic mean of five observations is 6.4 and the variance is 8.24. If three of the observations are 3, 4, 8, then find the other two observations.
(A) 6, 11 (B) 10, 7
(C) 8, 9 (D) 5, 12

52. The director of a sports academy claims that the average height of sports persons in their academy is more than 170 cms. A random sample of 40 sports persons of that academy has an average height of 174 cm with a standard deviation of 15 cm. Then the claim of the director can be accepted with ______.
(A) both 1% as well as 5% levels of significance
(B) 5% level of significance but not with 1% level of significance
(C) neither 5% nor 1% levels of significance
(D) no level of significance

53. In a survey conducted on the increase in pay packages of male and female managers across IT industry by taking a random sample of 32 male managers and another random sample of 36 female managers, the following information was derived.

	Sample Size	Average Increases in Pay Package/ Annum	Standard Deviation of Increase in Pay Package/Annum
Male Managers	32	20%	4%
Female Managers	36	17%	3%

The standard error of the difference between the average increase in pay packages is ______
(A) $\frac{\sqrt{3}}{2}$ (B) $\frac{3}{\sqrt{2}}$
(C) $\frac{3}{2}$ (D) $\frac{3}{4}$

54. Match the following:

	List I		List II
P.	Standard error	**1.**	Level of significance
Q.	Type I error	**2.**	Standard deviation of the sampling distribution of a statistic
R.	Type II error	**3.**	Accepting the null hypothesis when it should be rejected
S.	Size of a test	**4.**	Rejecting the null hypothesis when it should be accepted

Codes:

(A) P – 1, Q – 2, R – 3, S – 4
(B) P – 2, Q – 4, R – 3, S – 1
(C) P – 2, Q – 3, R – 4, S – 1
(D) P – 1, Q – 3, R – 2, S – 4

55. If the population distribution is not normal, then for which of the following sample sizes, the sampling distribution of a statistic will always be normal?

(A) 4 (B) 8
(C) 16 (D) 32

56. One can reduce both type I and type II errors by

(A) reducing the sample size.
(B) increasing the sample size.
(C) changing the null hypothesis.
(D) changing the alternative hypothesis.

57. Assume that the marks obtained in GATE by the students of Civil Engineering follow normal distribution. The mean and standard deviation of marks of two groups with 10 students in each group are as given below.

	Mean	Standard Deviation
Group 1	57	3.36
Group 2	53	5.44

Then the test statistic that is to be used to test whether the difference in means of marks is significant or not is _______.

(A) 1.8768 (B) 2.3541
(C) 3.6172 (D) 4.5376

58. To test whether there is any significant difference in the marks scored by 13 students in a test before and after a yoga course using the t-distribution, the degrees of freedom to be taken is _______.

(A) 12 (B) 13
(C) 24 (D) 26

59. If $F_{0.01}$ with the degrees of freedom $\upsilon_1 = 8$ and $\upsilon_2 = 24$, is 3.36, then the value of $F_{0.99}$ with the degrees of freedom $\upsilon_1 = 24$ and $\upsilon_2 = 8$ is _______.

(A) 0.64 (B) 6.33
(C) 4.95 (D) 0.2976

60. Fitting a normal distribution to the following data:

Class	5–9	10–14	15–19	20–24	25–29	30–34	35–39
Observed frequencies (O_i)	1	10	37	36	13	2	1

The respective expected frequencies when the data is fitted to normal distribution are:

Expected Frequencies (E_i): 2, 12, 32, 36, 15, 3 and 0

The critical value to test the goodness of fit of normal distribution to the above data with 5% level of significance is _______.

(A) 14.067 (B) 9.488
(C) 3.841 (D) 2.706

61. For the contingency table given below, the test stastic (chi-square value) is _______.

A \ B		
	10	20
	30	40

(A) 0.7936 (B) 7.8361
(C) 4.8312 (D) 3.8142

PREVIOUS YEARS' QUESTIONS

1. If the standard deviation of the spot speed of vehicles in a highway is 8.8 km/h and the mean speed of the vehicles is 33 km/h, the coefficient of variation in speed is **[GATE, 2007]**

(A) 0.1517 (B) 0.1867
(C) 0.2666 (D) 0.3646

2. A person on a trip has a choice between private car and public transport. The probability of using a private car is 0.45. while using the public transport, further choices available are bus and metro, out of which the probability of commuting by a bus is 0.55. In such a situation, the probability (rounded up to two decimals) of using a car, bus and metro, respectively would be **[GATE, 2008]**

(A) 0.45, 0.30 and 0.25
(B) 0.45, 0.25 and 0.30
(C) 0.45, 0.55, and 0.00
(D) 0.45, 0.35 and 0.20

3. If probability density function of a random variable x is $F(x) = x^2$ for $-1 \le x \le 1$ and $= 0$ for other value of x then, the percentage probability $P\left(-\frac{1}{3} \le x \le \frac{1}{3}\right)$ is **[GATE, 2008]**

(A) 0.247 (B) 2.47
(C) 24.7 (D) 247

4. Two coins are simultaneously tossed. The probability of two heads simultaneously appearing is **[GATE, 2010]**

(A) $\frac{1}{8}$ (B) $\frac{1}{6}$

(C) $\frac{1}{4}$ (D) $\frac{1}{2}$

5. There are two containers, with one containing 4 Red and 3 Green balls and the other containing 3 Blue and 4 Green balls. One ball is drawn at random from

each container. The probability that one of the ball is Red and the other is Blue will be **[GATE, 2011]**

(A) $\frac{1}{7}$ (B) $\frac{9}{49}$

(C) $\frac{12}{49}$ (D) $\frac{3}{7}$

6. In an experiment, positive and negative values are equally likely to occur. The probability of obtaining at most one negative value in five trials is **[GATE, 2012]**

(A) $\frac{1}{32}$ (B) $\frac{2}{32}$

(C) $\frac{3}{32}$ (D) $\frac{6}{32}$

7. The annual precipitation data of a city is normally distributed with mean and standard deviation as 1000 mm and 200 mm, respectively. The probability that the annual precipitation will be more than 1200 mm is **[GATE, 2012]**

(A) <50% (B) 50%
(C) 75% (D) 100%

8. Find the value of λ such that the function $f(x)$ is a valid probability density function

$F(x) = \lambda(x - 1)(2 - x)$ for $1 \le x \le 2$

$= 0$ otherwise **[GATE, 2013]**

9. A fair (unbiased) coin was tossed four times in succession and resulted in the following outcomes; (i) Head, (ii) Head (iii) Head (iv) Head. The probability of obtaining a 'Tail' when the coin is tossed again is **[GATE, 2014]**

(A) 0 (B) $\frac{1}{2}$

(C) $\frac{4}{5}$ (D) $\frac{1}{5}$

10. The probability density function of evaporation E on any day during a year in a watershed is given by

$$F(E) = \begin{cases} \frac{1}{5} & 0 \le E \le 5 \text{ mm/day} \\ 0, & \text{otherwis} \end{cases}$$

The probability the E lies in between 2 and 4 mm/day in a day in the watershed is (in decimal). **[GATE, 2014]**

11. A traffic office imposes on an average 5 number of penalties daily on traffic violators. Assume that the number of penalties on different days is independent and follows a Poisson distribution. The probability that there will be less than 4 penalties in a day is ______. **[GATE, 2014]**

12. If $\{x\}$ is a continuous, real valued random variable defined over the interval $(-\infty, +\infty)$ and its occurrence is defined by the density function given as $f(x) = \frac{1}{\sqrt{2\pi} * b} e^{\frac{1}{2}\left(\frac{x-a}{b}\right)^2}$ where 'a' and 'b' are the statistical attributes of the random variable $\{x\}$. The value of the integral $\int_{-\infty}^{a} \frac{1}{\sqrt{2\pi} * b} e^{\frac{1}{2}\left(\frac{x-a}{b}\right)^2} dx$ is **[GATE, 2014]**

(A) 1 (B) 0.5

(C) π (D) $\frac{\pi}{2}$

13. Consider the following probability mass function (pmf) of a random variable X:

$$p(x, q) = \begin{cases} q & \text{if } X = 0 \\ 1 - q & \text{if } X = 1 \\ 0 & \text{othewise} \end{cases}$$

If $q = 0.4$, the variance of X is ________. **[GATE, 2015]**

14. The probability density function of a random variable, x is

$f(x) = \frac{x}{4}(4 - x^2)$ for $0 \le x \le 2$

$= 0$ otherwise

The mean, μ_x of the random variable is ______. **[GATE, 2015]**

15. X and Y are two random independent events. It is known that $P(X) = 0.40$ and $P(X \cup Y^C) = 0.7$. Which one of the following is the value of $P(X \cup Y)$? **[GATE, 2016]**

(A) 0.7 (B) 0.5
(C) 0.4 (D) 0.3

16. Probability density function of a random variable X is given below

$$f(x) = \begin{cases} 0.25 \text{ if } 1 \le x \le 5 \\ 0 \quad \text{otherwise} \end{cases}$$

$P(x \le 4)$ is **[GATE, 2016]**

(A) $\frac{3}{4}$ (B) $\frac{1}{2}$

(C) $\frac{1}{4}$ (D) $\frac{1}{8}$

17. If $f(x)$ and $g(x)$ are two probability density functions,

$$f(x) = \begin{cases} \frac{x}{a}+1 & : -a \le x < 0 \\ -\frac{x}{a}+1 & : 0 \le x \le a \\ 0 & : \text{otherwise} \end{cases}$$

$$g(x) = \begin{cases} -\frac{x}{a} & : -a \le x < 0 \\ \frac{x}{a} & : 0 \le x \le a \\ 0 & : \text{otherwise} \end{cases}$$

Which one of the following statement is true?

[GATE, 2016]

(A) Mean of $f(x)$ and $g(x)$ are same; Variance of $f(x)$ and $g(x)$ are same.
(B) Mean of $f(x)$ and $g(x)$ are same; Variance of $f(x)$ and $g(x)$ are different.
(C) Mean of $f(x)$ and $g(x)$ are different; Variance of $f(x)$ and $g(x)$ are same.
(D) Mean of $f(x)$ and $g(x)$ are different; Variance of $f(x)$ and $g(x)$ are different.

18. The spot speeds (expressed in km/h) observed at a road section are 66, 62, 45, 79, 32, 51, 56, 60, 53 and 49. The median speed (expressed in km/h) is ______. (Note: answer with one decimal accuracy)

[GATE, 2016]

19. Type II error in hypothesis testing is **[GATE, 2016]**
(A) acceptance of the null hypothesis when it is false and should be rejected.
(B) rejection of the null hypothesis when it is true and should be accepted.
(C) rejection of the null hypothesis when it is false and should be rejected.
(D) acceptance of the null hypothesis when it is true and should be accepted.

Chapter 6

Numerical Methods

CHAPTER HIGHLIGHTS

- *Numerical methods*
- *Accuracy and precision*
- *Curve fitting*
- *Numerical integration*
- *Numerical solutions of ordinary differential equations*
- *Multi-step methods*
- *Runge–Kutta methods*
- *Predictor-corrector methods*

Numerical Methods

We encounter problems in Engineering mathematics for which analytical methods are not available to find solutions. Further, it may be sufficient in engineering applications to find approximate solutions. The numerical methods offer us approximate solutions.

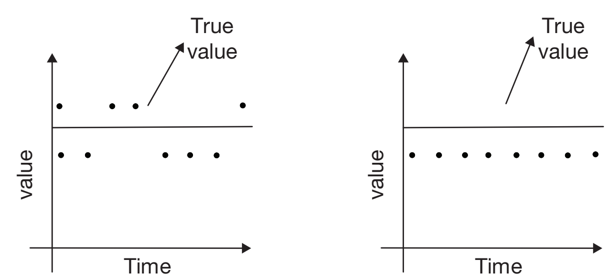
1. Methods for finding roots of algebraic or transdental equations
2. Solutions to system of linear equation
3. Numerical Integration
4. Numerical solutions of ordinary differential equation.

Accuracy and Precision

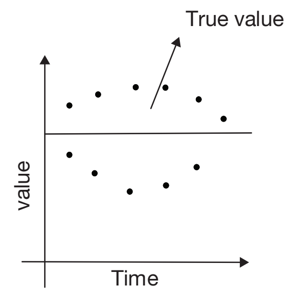
Solutions of problems computed by numerical methods are approximate. Errors associated with calculations can be characterized with reference to accuracy and precision.

Accuracy: Accuracy refers to how closely a computed value agrees with the true value.

Precision: Precision refers to how closely computed values agree with each other after repeated iterations. The following figures illustrate the difference between accuracy and precision where the horizontal line denote the true value (or) actual value of the solution where as the dots denote the values computed by a numerical method.



Accurate but not precise **Precise but not accurate**



Neither accurate nor precise

Errors in the solutions obtained by numerical methods: As the numerical methods give approximate solutions, these solutions contain errors.

Let x denote the actual value (or) true value and let $\bar{x}$ denote an approximate value of the solution obtained by a numerical method.

Error $= \in = x - \bar{x}$

Absolute error $= |\in| = |x - \bar{x}|$

Relative error $= \in_r = \dfrac{|\in|}{|x|} = \dfrac{|x - \bar{x}|}{|x|}$

Percentage error $= \in_p = \in_r \times 100 = \dfrac{|x - \bar{x}|}{x} \times 100.$

Types of Errors

Inherent Error

The error which is already present in the statement of the problem before its solution, is called the inherent error.

This type of errors arise due to any one or more of the following reasons.

- Wrong formulation of the problem
- Unsuitable solution procedure
- Invalid assumptions in the formulation
- Inaccurate data

Round off Error

Real numbers such as $\dfrac{5}{6}, \sqrt{2}, \pi$, etc., contain an infinite number of digits when expressed in decimal form. In general, in scientific and engineering computations, a real number x is represented as $x = \pm\, 0.\, d_1 d_2 d_3 \ldots d_n \ldots \times 10^k$, known as floating point form of x.

(where $d_1, d_2, \ldots d_n \ldots$ are all digits from 0 to 9 and k is a non zero integer). Each digit $d_1, d_2 \ldots$ other than the leading zeros (the zeros that occur before the first non-zero digit) is called a significant digit. As its not possible to retain infinite number of digits in a number, we round off the number to, say n significant digits.

To round off a number to n significant digits, proceed as follows:

Possibility	Procedure to Follow
The $(n + 1)$th digit is less than 5 (OR) The $(n + 1)$th digit is equal to 5 and the nth digit is even	Discard all the digits to the right of nth digit and leave the nth digit as it is
The $(n + 1)$th digit is greater than 5 (OR) The $(n + 1)$th digit is equal to 5 and the nth digit is odd.	Discard all the digits to the right of nth digit and increase the nth digit by 1.

For example,

Consider the number 25.31465.

When written in floating point form

$25.31465 = 0.2531465 \times 10^2$

$\approx 0.253146 \times 10^2$ (Rounded off to six significant digits)

$\approx 0.25315 \times 10^2$ (Rounded off to five significant digits)

$\approx 0.2532 \times 10^2$ (Rounded off to four significant digits)

$\approx 0.253 \times 10^2$ (Rounded off to three significant digits)

Definition The difference between the true value and its rounded off value is called the rounded off error.

- If x is the true value and x^* is its rounded off value such that $|x - x^*| \le 0.5 \times 10^{-m}$ (OR) $|x - x^*| \le 5 \times 10^{-(m+1)}$ then x^* is said to denote x correct to m significant digits.

Truncation Error The error in a method, which occurred because some series (finite or infinite) is truncated to a fewer (and finite) number of terms is called the truncation error.

For instance,

$$\text{Let } f(x) = f(x_0) + (x - x_0) f'(x_0) + \frac{(x - x_0)^2}{2!} f''(x_0) + \cdots + \frac{(x - x_0)^{m-1}}{(m-1)} f(m-1)(x_0) + \frac{(x - x_0)^m}{m} f^{(m)}(x_0) + \cdots \infty \tag{1}$$

denote the Taylor's series expansion of $f(x)$ about $x = x_0$.

If we retain the first m terms, we get

$$f(x) \approx f(x_0) + (x - x_0) f'(x_0) + \frac{(x - x_0)^2}{2!} f''(x_0) + \cdots + \frac{(x - x_0)^{m-1}}{(m-1)!} f^{(m-1)}(x_0) \tag{2}$$

where the series of infinite terms $\dfrac{(x - x_0)^m}{m!}$

$$f^{(m)}(x_0) + \frac{(x - x_0)^{m-1}}{(m+1)!} f^{(m+1)}(x_0) + \cdots \infty \tag{3}$$

is neglected.

The first term in this neglected part of the series is called the principal part of the truncation error or simply the truncation error.

$$\therefore \text{Truncation error} = TE = \frac{(x - x_0)^m}{m!} f^{(m)}(\xi);\ x_0 < \xi < x$$

As ξ is an unknown function of x, we have

$$|TE| \le \frac{1}{m!} \max[|(x - x_0)^m| \, M_m]$$

where $M_m = [a, b] \max|f^{(m)}(x)|$

SOLVED EXAMPLES

Example 1

If the number $\frac{\pi}{4} = 0.785398163$ is approximated by $\frac{11}{14}$, then

(i) Find the number of digits upto which, this approximation is accurate.

(ii) Find the absolute and the percentage errors.

Solution

Given $\frac{\pi}{4} = 0.785398163$

Let $x = \frac{\pi}{4} = 0.785398163$ (Exact value) and $\bar{x} = \frac{11}{14}$

$= 0.785714285 \left(\text{Approximate value of } \frac{\pi}{4}\right)$

(i) $|x - \bar{x}| = \left|\frac{\pi}{4} - \frac{11}{14}\right|$

$$= |0.785398163 - 0.785714285|$$
$$= 3.16122 \times 10^{-4}$$
$$\leq 5 \times 10^{-4}$$

$\therefore$ The approximation $\frac{11}{14}$ to $\frac{\pi}{4}$ is accurate upto three significant digits

(ii) Absolute error $= |x - \bar{x}|$

$$= \frac{11}{14} - \frac{\pi}{4} = 3.16122 \times 10^{-4}$$

Percentage error $= \frac{|x - \bar{x}|}{x} \times 100 = 0.04\%$.

Example 2

Using the Taylor's series expansion about $x = 0$, find a second degree polynomial approximation to $f(x) = \sqrt{1+3x}$. Also find the maximum error for this approximation when $x \in [0, 1]$.

Solution

We know that the Taylor's series expansion of $f(x)$ about $x = 0$ is

$$f(x) = f(0) + xf'(0) + \frac{x^2}{2!} f''(0) + \frac{x^3}{3!} f'''(0) + \cdots + \cdots \infty \quad (1)$$

$\therefore$ Considering the terms upto second degree, we have

$$f(x) \approx f(0) + x f'(0) + \frac{x^2}{2!} f''(0) \quad (2)$$

Here $f(x) = \sqrt{1+3x} \Rightarrow f(0) = 1$

$$f'(x) = \frac{3}{2\sqrt{1+3x}} \Rightarrow f'(0) = \frac{3}{2}$$

$$f''(x) = \frac{-9}{4(1-3x)^{\frac{3}{2}}} \Rightarrow f''(0) = \frac{-9}{4}$$

and $f'''(x) = \frac{27}{8} \times \frac{1}{(1+3x)^{\frac{5}{2}}}$

$\therefore$ Substituting these in (2), we get

$$f(x) = \sqrt{1+3x} \approx 1 + \frac{3}{2} \times - \frac{9}{4}\frac{x^2}{2!}$$

$$= 1 + \frac{3}{2} \times - \frac{9}{8} x^2$$

Truncation error $= \frac{x^3}{3!} f'''(0)$

$$\leq \frac{1}{3!}\left(\underset{0 \leq x \leq 1}{\text{Max}} \quad x^3\right)$$

$$\left(\underset{0\leq x\leq 1}{\text{Max}} \frac{27}{8(1+3x)^{5/2}}\right)$$

$$= \frac{1}{3!}(1)\left(\frac{27}{8}\right)$$

$= 0.5625$.

Methods for Finding the Real Roots (Zeros) of $f(x) = 0$

The equation of the form $f(x) = 0$ is called an Algebraic or Transcendental according as $f(x)$ is purely a polynomial in x or contains some other functions such as exponential, logarithmic and trigonometric functions etc.

Examples:

1. $x^9 + 8x^5 - 4x^3 - 11x + 3 = 0 \rightarrow$ Algebraic equation
2. $10x^4 - \log(x^2 - 3) + e^{-x}\sin x + \tan^2 x = 0 \rightarrow$ Transcendental equation

In this chapter, we obtain the solution of an equation $f(x) = 0$, i.e., we mean to find the zeros of $f(x)$.

We shall now discuss few methods to find the real roots of both algebraic (with numerical coefficients) and transcendental equations.

We first find an approximate value of the root of the given equation and then successively improve it to some desired degree of accuracy.

We start with an initial approximate value, say x_0, and then find the better approximations successively $x_1, x_2, x_3 \ldots, x_n$ by repeating the same method.

If the successive approximations at each step of a method approach the root more and more closely, we say that the method converges.

The Intermediate Value Theorem

If a function $f(x)$ is continuous between a and b and $f(a)$ and $f(b)$ are of opposite signs, then there exists at least one root say α between a and b of the equation

$f(x) = 0$, i.e., $f(\alpha) = 0$

NOTE

Root 'α' of $f(x) = 0$, will be unique in (a, b) if $f'(x)$ has the same sign in (a, b) (i.e., $f'(x) > 0$ or $f'(x) < 0$ in $a < x < b$)

Relations between Roots and Coefficients

An nth order equation has n roots. Corresponding to every root, there is a factor. If α is a root of $f(x) = 0$, then $x - \alpha$ is a factor of $f(x)$. Sometimes $(x - \alpha)^2$ may also be a factor. In such a case, α is said to be a double root. Similarly equations can have triple roots, quadruple roots and roots of multiplicity m. If m is the greatest value of k, for which $(x - \alpha)^k$ is a factor of $f(a)$, then α is said to be a root of multiplicity m. If all the roots are counted by taking their multiplicity into account, the number of roots is equal to n, the degree of the equation.

If $\alpha_1, \alpha_2, \ldots, \alpha_n$ (not necessarily distinct) are the roots of $f(x) = 0$, then

$$\begin{aligned} f(x) &= a_n(x - \alpha_1)(x - \alpha_2) \ldots (x - \alpha_n) \\ &= a_n [x^n - S_1 x^{n-1} + S_2 x^{n-2} + \cdots + (-1)^n S_n] \end{aligned}$$

Where

S_1 = The sum of the roots

S_2 = The sum of the products of the roots taken 2 at a time

S_3 = The sum of the product of the roots taken 3 at a time and so on.

S_n = The 'sum' of the product of the roots taken n (or all) at a time. Thus, S_n is a single term.

$S_n = \alpha_1 \alpha_2 \ldots \alpha_n$

Let us write down the polynomial $f(x)$ in two forms:

The standard form

$$f(x) = a_n x^n + a_{n-1} x^{n-1} + a_{n-2} x^{n-2} + \cdots + a_1 x + a_0$$

In terms of the roots of the corresponding equation.

$$f(x) = a_n [x_n - S_1 x^{n-1} + S_2 x^{n-2} + \cdots + (-1)^{x-1} S_{n-1} x + (-1)^{nS_n}]$$

These polynomials are identically equal, i.e., equal for all values of x. Therefore the corresponding coefficients are equal. The sum of the roots $S_1 = -\dfrac{a_{n-1}}{a_n}$.

The sum of the products of the roots, taken two at a time, $S_2 = \dfrac{a_{n-2}}{a_n}$.

The sum of the products of the roots, taken three at a time, $S_3 = -\dfrac{a_{n-3}}{a_n}$ and so on.

The 'sum' of the 'products' of the roots taken $m (m \le n)$ at a time $S_m = \Sigma \alpha_1 \alpha_2 \alpha_3 \ldots \alpha_m = (-1)^m \dfrac{a_{n-m}}{a_n}$.

$$\therefore \quad S_n = \alpha_1 \alpha_2 \alpha_3 \ldots \alpha_n = (-1)^n \frac{a_0}{a_n}$$

For example, consider the polynomial equation

$$(x - 1)(x - 2)(x - 3) = x^3 - 6x^2 + 11x - 6 = 0$$

(We can see immediately that the roots are 1, 2, 3)

The sum of roots $= (1 + 2 + 3) = -\dfrac{(-6)}{1}$

The sum of the products of the roots, taken two at a time

$S_2 = 1(2) + 1(3) + 2(3) = 11 = \dfrac{11}{1}$

We can drop the word 'sum' and 'products' for the last relation, because there is only one term (only one product).

The product $= 1(2)(3) = 6 = -\dfrac{(-6)}{1}$.

Roots of Equations and Descartes' Rule

If the coefficients are all real and the complex number z_1, is a root of $f(x) = 0$, then the conjugate of z_1, viz, $\bar{z}_1$ is also a root of $f(x) = 0$. Thus, for equations with real, coefficients, complex roots occur in pairs.

A consequence of this is that any equation of an odd degree must have at least one real root.

The number of roots is related to very simple properties of the equation as illustrated below.

Let α_1 be a positive root, i.e., $x - \alpha_1$, is a factor.

Let α_2 be another positive root, i.e., $x^2 - (\alpha_1 + \alpha_2)x + \alpha_1 \alpha_2$ is a factor.

Let α_3 be another positive root i.e., $x^3 - (\alpha_1 + \alpha_2 + \alpha_3)x_2 + (\alpha_1 \alpha_2 + \alpha_2 \alpha_3 + \alpha_3 \alpha_1)x - \alpha_1 \alpha_2 \alpha_3$ is a factor.

We note that every positive root introduces a sign change in the polynomial. For 1 root, there is 1 sign change (the coefficient of x is positive and $-\alpha_1$ is negative)

The second root results in a second sign change [$x^2 - (\alpha_1 + \alpha_2)x + \alpha_1 \alpha_2$ has 2 sign changes] and so on.

But every sign change need not correspond to a real positive root. (For example, $x^2 - 2x + 4$ has two sign changes but the corresponding equation $x^2 - 2x + 4 = 0$ has no real roots.

The number of positive roots is at the most equal to the number of sign changes. It could also be less than that by 2, 4…, i.e., if there are k sign changes in $f(x)$, the number of positive roots could be $k, k - 2, k - 4, \ldots$

This is called **Descartes' Rule of Signs**. This rule can be extended to negative roots as follows. The number of negative roots of $f(x) = 0$ is equal to the number of positive roots of $g(x) = f(-x) = 0$

For example, consider $f(x) = x^5 - 3x^3 + 6x^2 - 28x + 24$. There are 4 sign changes in $f(x)$

$\therefore$ The number of positive roots could be 4, 2 or 0.

$$\begin{aligned} \text{Consider } g(x) &= f(-x)(-x)^5 - 3(-x)^3 + 6(-x)^2 - 28(-x) + 24 \\ &= -x^5 + 3x^3 + 6x^2 + 28x + 24 \end{aligned}$$

There is only one sign change in $f(-x)$.

$\therefore$ The number of negative roots of $f(x) = 0$ is 1. (It can't be –1, –3, …).

The following table shows the various possibilities for the roots.

Negative	Positive	Complex
1	4	0
1	2	2
1	0	4

We have considered one specific equation and this specific equation has 5 specific roots. We can use more advanced techniques to find the actual roots. But even without that, using only Descartes rule, we expect exactly one of the 3 situations shown in the table above.

Example 3

Find the nature of roots of the equation, $f(x) = x^3 + x - 2 = 0$.

Solution

There is only 1 change of sign in $f(x)$.

We know that when $f(x)$ has r changes of sign then $f(x)$ has $r, r-2, r-4, \ldots$ positive roots.

$\therefore$ $f(x) = 0$ has one positive root.

Now $f(-x) \equiv -x^3 - x - 2 = 0$. $q = 0$

Since there is no change of sign in $f(-x)$, $f(x)$ has no negative roots. The number of complex roots is even.

$\therefore$ The equation has one positive root, and two complex roots.

Hence $f(x) = 0$ has 1 real root and two complex roots.

Example 4

How many non real-roots does the equation $x^4 - 2x^2 + 3x - 2 = 0$ have?

Solution

Let $f(x) = x^4 - 2x^2 + 3x - 2$

$f(x) = 0$ has 3 sign changes

$\therefore$ $f(x)$ has 3 or 1 positive roots.

$f(-x) = x^4 - 2x^2 - 3x - 2$

$\therefore$ $f(-x)$ has one sign change

$\therefore$ $f(x)$ has exactly one negative root.

As the sum of the co-efficient of $f(x)$ is zero,

$x = 1$ is a root of $f(x) = 0$

$\therefore$ $f(x) = (x-1)(x^3 + x^2 - x + 2) = (x-1)\,f_1(x)$. By trial, $f_1(-2) = 0$

$\therefore$ $f_1(x) = (x+2)(x^2 - x + 1)$

We can see that $x^2 - x + 1 = 0$ has two non-real roots.

$\therefore$ $f(x)$ has one positive, one negative and two non-real roots.

Example 3

If $p-q, p, p+q$ are the roots of the equation $x^3 - 18x^2 + 99x - 162 = 0$, then find the values of p and q.

Solution

Given $p-q, p, p+q$ are the roots of the equation.

$\therefore$ The sum of the roots is $(p-q) + p + (p+q) = 18$

$\Rightarrow \quad 3p = 18 \quad \Rightarrow \quad p = 6$

and the product of the roots is $(p-q)\,p(p+q) = 162$

$$p^2 - q^2 = \frac{162}{6} = 27 \quad \Rightarrow \quad 36 - q^2 = 27$$

$\Rightarrow q = \pm 3 \quad \therefore \quad p = 6$ and $q = \pm 3$.

Bisection Method (Bolzano Method) or (Halving Method)

Consider the equation $f(x) = 0$ (1)

If $f(x)$ is continuous between a and b and $f(a)\,f(b) > 0$, then there exists one root between a and b. Let $f(a)$ be negative and $f(b)$ be positive. The bisection method isolates the root in $[a, b]$ by halving process, approximately dividing the given interval $[a, b]$ into two, four, eight, etc. equal parts.

Thus, the first approximation to the root is given by:

$$x_0 = \frac{a+b}{2}$$

$$a \text{ — — —}\underset{\frac{a+b}{2}}{\bullet}\text{— — — } b$$

If $f(x_0) = 0$, then x_0 is a root, otherwise the root lies either between a and x_0 or x_0 and b depending on whether $f(x_0)$ is positive or negative. We again bisect the interval and repeat the process until the root is obtained to desired accuracy.

Example 4

Find a real root of the equation $f(x) = x^3 - 2x^2 + 3x - 1$ on the interval (0, 1) using bisection method with four iterations.

Solution

We have $f(0) = -1 < 0$ and

$$f(1) = 1 - 2 + 3 - 1 = 1 > 0$$

$\therefore$ A root lies between 0 and 1

$\therefore$ The first approximation to the root is $\dfrac{0+1}{2} = 0.5$. Now $f(0.5) = (0.5)^3 - 2(0.5)^2 + 3(0.5) - 1 = 0.125 > 0$ and $f(0) < 0$

$\therefore$ The root lies between 0 and 0.5. The second approximation to the root is $\dfrac{0+0.5}{2} = 0.25$.

Now $f(0.25) = (0.25)^3 - 2(0.25)^2 + 3(0.25) - 1$
$= -0.359 < 0$ and $f(0.5) > 0$

$\therefore$ The root lies between 0.25 and 0.5.

$\therefore$ The third approximation to the root is $\dfrac{0.25+0.5}{2} = \dfrac{0.75}{2} = 0.375$.

Now $f(0.375) = (0.375)^3 - 2(0.375)^2 + 3(0.375) - 1$

$= -0.103 < 0$ and $f(0.5) > 0$

∴ The root lies between 0.375 and 0.5.

∴ The fourth approximation to the root is $\frac{0.375+0.5}{2}$

$$= \frac{0.875}{2} = 0.4375.$$

Convergence of Bisection Method

If $x_1, x_2, x_3, \ldots, x_n$ is the sequence of midpoints obtained by bisection method, then $|c - x_n| \le \frac{b-a}{2^n}$, $n = 1, 2, 3 \ldots$ where 'c' is between a and b.

NOTE

In bisection method, the convergence is very slow but definite. The order of convergence is linear or of first order.

Regula Falsi Method or (The Method of False Position)

In this method, to find the real root of the equation $f(x) = 0$, we consider a sufficiently small interval (a, b), $a < b$ such that $f(a)$ and $f(b)$ will have opposite signs. This implies a root lies between a and b according to intermediate value theorem. Also the curve $y = f(x)$ will meet the X-axis at some point between $A\,[a, f(a)]$ and $B\,[b, f(b)]$. The equation of the chord joining $A\,[a, f(a)]$ and $B\,[b, f(b)]$ is given by:

$$y - f(a) = \frac{f(b) - f(a)}{b - a}(x - a) \qquad (1)$$

The point of intersection of the chord (1) with X-axis is given by $y = 0$ in Eq. (1)

$$-f(a) = \frac{f(b) - f(a)}{b - a}(x - a),$$

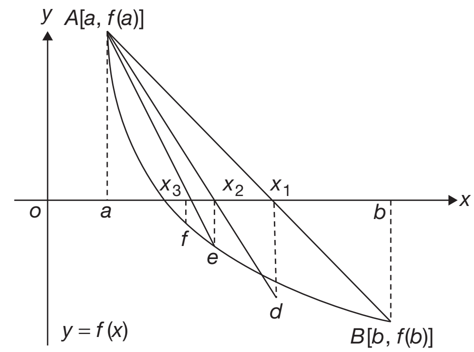
$$\Rightarrow \quad x = \frac{af(b) - bf(a)}{f(b) - f(a)}$$

∴ The first approximation $x_1 = \dfrac{af(b) - bf(a)}{f(b) - f(a)}$ (2)

If $f(x_1) = 0$, then x_1 is the root. If $f(x_1) \ne 0$ and if $f(x_1)$ and $f(a)$ have opposite signs, the second approximation

$$x_2 = \frac{af(x_1) - x_1 f(a)}{f(x_1) - f(a)} \qquad (3)$$

Proceeding in the same way, we get x_3, x_4 and so on. Geometrically, the required root is shown in the figure below.



NOTE

This method is faster than the first order fixed point iteration.

Convergence of Regula Falsi Method

The order of convergence of the method of false position is greater than 1.

The Secant Method

This method is quite similar to that of Regula–Falsi method except for the condition $f(a)\,f(b) < 0$. The interval at each iteration may not contain the root. Let the initial limits of the interval be 'a' and 'b'.

The formula for successive approximation general form is

$$x_{n+1} = x_n + \frac{(x_n - x_{n-1})f(x_n)}{f(x_{n-1}) - f(x_n)}$$

In case at any stage $f(x_n) = f(x_{n-1})$ the method fails.

NOTES

1. This method does not converge always, but Regula–Falsi method always converges.
2. If it converges, it converges with order 1.62 approximately, which is more rapidly than the Regula–Falsi method.

Example 7

Find a root for $2e^x \sin x = 3$ using Regula–Falsi method and correct to three decimal places with three iterations.

Solution

Let $f(x) = 2e^x \sin x - 3$

$f(0) = -3 < 0$, $f(1) = 2e' \sin 1 - 3$

$= 1.5747 > 0$

∴ A root lies between 0 and 1.

Here $a = 0$ and $b = 1$

∴ The first approximation

$$x_1 = \frac{af(b) - bf(a)}{f(b) - f(a)} = \frac{0(1.5747) - 1(-3)}{1.5747 - (-3)}$$

$$= \frac{3}{4.5747} = 0.6557.$$

Now $f(0.6557) = 2e^{0.6557}\sin(0.6557) - 3$
$= -0.6507 < 0$ and $f(1) > 0$

∴ The root lies between 0.6557 and 1.

The second approximation x_2

$$= \frac{(0.6557)(1.5747) - 1(-0.6507)}{1.5747 - (-0.6507)}$$

$$= \frac{1.0325 + 0.6507}{2.2254} = \frac{1.6832}{2.2254} = 0.7563$$

Now $f(0.7563) = -0.0761 < 0$ and $f(1) > 0$

∴ The root lies between 0.7563 and 1

∴ The third approximation to the root x_3

$$= \frac{(0.7653)(1.5747) - 1(-0.0761)}{1.5747 - (-0.0761)}$$

$$= \frac{1.1909 + 0.0761}{1.6508} = 0.7675$$

∴ The best approximation to the root upto three decimal places is 0.768

Newton–Raphson Method

Let x_0 be the approximate root of $f(x) = 0$ and let $x_1 = x_0 + h$ be the correct root. Then $f(x_1) = 0$

$\Rightarrow \quad f(x_0 + h) = 0 \qquad (1)$

Expanding Eq. (1) using Taylor's theorem,
We get $f(x_0) + hf'(x_0) + \cdots = 0$

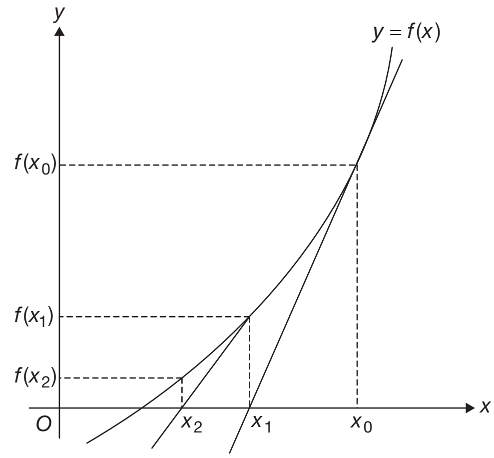
$$\Rightarrow \quad h = \frac{-f(x_0)}{f'(x_0)},$$

$$\therefore \quad x_1 = x_0 - \frac{f(x_0)}{f'(x_0)}$$

Now x_1 is the better approximation than x_0. Proceeding this way, the successive approximations $x_2, x_3, \ldots, x_{n+1}$ are given by $x_{n+1} = x_n - \dfrac{f(x_n)}{f'(x_n)}$

This is called Newton–Raphson formula.

Geometrical Interpretation of Newton–Raphson Formula



The geometrical meaning of Newton–Raphson method is a tangent is drawn at the point $[x_0, f(x_0)]$ to the curve $y = f(x)$. It cuts the x-axis at x_1 which will be a better approximation of the root. Now drawing another tangent at $[x_1, f(x_1)]$ which cuts the x-axis at x_2 which is a still better approximation and the process can be continued till the desired accuracy has been achieved.

Convergence of Newton–Raphson Method

The order of convergence of Newton–Raphson method is 2 or the convergence is quadratic. It converges if $|f(x). f''(x)| < |f'(x)|^2$. Also this method fails if $f'(x) = 0$

Newton's Iterative Formula to Find bth Root of a Positive Real Number a

The iterative formula is given by x_{n+1}

$$= \frac{1}{b}\left\{(b-1)x_n + \frac{a}{x_n^{\,b-1}}\right\}$$

Newton's Iterative Formula to Find a Reciprocal of a Number N

The iterative formula is given by

$$x_{i+1} = x_i\,(2 - x_i N)$$

Example 8

Find a real root of the equation $-4x + \cos x + 2 = 0$, by Newton–Raphson method upto four decimal places assuming $x_0 = 0.5$

Solution

Let $f(x) = -4x + \cos x + 2$ and

$$f'(x) = -4 - \sin x$$

Also $f(0) = 1 + 2 = 3 > 0$ and

$f(1) = -4 + \cos 1 + 2 = -1.4596 < 0$

So, a root lies between 0 and 1.

Given $x_0 = 0.5$

∴ The first approximation

$$x_1 = x_0 - \frac{f(x_0)}{f'(x_0)}$$

$$= 0.5 - \frac{[-4(0.5) + \cos(0.5) + 2}{-4 - \sin(0.5)}$$

$$= (0.5) - \frac{[-2 + 2 + \cos(0.5)}{-4 - \sin 0.5}$$

$$= 0.5 - \frac{0.8775}{-4.4794}$$

$$= 0.5 + 0.1958 = 0.6958.$$

Example 9

Obtain the cube root of 14 using Newton–Raphson method, with the initial approximation as 2.5.

Solution

We know that, the iterative formula to find $\sqrt[b]{a}$ is

$$x_{n+1} = \frac{1}{b}\left\{(b-1)x_n + \frac{a}{x_n^{b-1}}\right\}$$

Here $b = 3$ and $a = 14$ and let $x_0 = 2.5$

$$\therefore \quad x_1 = \frac{1}{3}\left\{2x_0 + \frac{14}{x_0^{\ 2}}\right\}$$

$$x_1 = \frac{1}{3}\left\{2(2.5) + \frac{14}{(2.5)^2}\right\}$$

$$= \frac{1}{3}\left\{5 + \frac{14}{6.25}\right\} = \frac{1}{3}\{5 + 2.24\} = 2.413$$

$$x_2 = \frac{1}{3}\left\{2(2.413) + \frac{14}{(2.413)^2}\right\}$$

$$= \frac{1}{3}\left\{4.826 + \frac{14}{5.822569}\right\}.$$

$$= \frac{1}{3}\{4.826 + 2.4044\} = 2.410$$

∴ The approximate cube root of 14 is 2.41.

Example 10

Find the reciprocal of 24 using Newton–Raphson method with the initial approximation as 0.041.

Solution

The iterative formula to find $\frac{1}{N}$ is,

$$x_{n+1} = x_n(2 - x_n N)$$

Let $x_0 = 0.041$. Then $x_1 = x_0(2 - x_0\,(24))$

$\Rightarrow \quad x_1 = (0.041)\,(2 - (24)\,(0.041))$

$= 0.04165$

$x_2 = (0.0416)\ \{2 - (24)\ (0.04165)\} = 0.04161$, similarly proceeding we get $x_3 = 0.041666$

∴ The reciprocal of 24 is 0.04166.

Curve Fitting

In engineering applications, many a times, we need to find a suitable relation or law that may exist between the variables x and y from a given set of observed values (x_1, y_1), (x_2, y_2), …, (x_n, y_n), The relation connecting x and y is called as empirical law.

The process of finding the equation of the curve of best fit which may be most suitable for predicting the value of y for a given value of x is known as curve fitting.

Least Squares Approximation

Least squares approximation method is one of the best methods available for curve fitting.

Let (x_1, y_1), (x_2, y_2), …, (x_n, y_n) be the pairs of observed set of values of x and y. Let $y = f(x)$ be the functional relationship sought between the variables x and y where $f(x)$ consists of some unknown parameters. We need to find the relationship $y = f(x)$ by using the observed values.

Procedure

1. Find the residual $d_i = y_i - f(x_i)$ $(i = 1, 2, \ldots, n)$ for every pair of observed value y_i and $f(x_i)$, the value of the functional relation $f(x)$ at $x = x_i$
2. Find the sum of the squares of residuals corresponding to all pairs of values of y_i and $f(x_i)$ and let it be S

   i.e., $S = \sum_{i=1}^{n}(y_i - f(x))^2.$
3. Find the values of the parameters in $f(x)$ such that S is minimum.

Fitting a Straight Line Let $y = a + bx$ be a straight line to be fitted to the data $(x_1\ y_1)$, $(x_2\ y_2)$, …, $(x_n\ y_n)$.

∴ Residual $= d_i = y_i - (a + bx_i)$, $i = 1, 2, \ldots, n$

Sum of the squares of the residuals $= S = \Sigma(y_i - (a + bx_i\,))^2$

Now we have to find the parameters a and b such that S is minimum

$$\frac{\partial S}{\partial a} = \sum 2[y_i - (a + bx_i)(-1)] \text{ and}$$

$$\frac{\partial S}{\partial b} = \sum [2(y_i - (a + bx_i))(-x_i)]$$

For S to be minimum,

$$\frac{\partial S}{\partial a} = 0 \text{ and } \frac{\partial S}{\partial a} = 0$$

$$\Rightarrow \sum[-2(y_i-(a+bx_i))]=0 \text{ and}$$
$$\sum[2(y_i-(a+bx_i))(-x_i)]=0$$
$$\Rightarrow \sum y_i = na + b\sum x_i \quad (1)$$
$$\text{and } \sum x_i y_i = a\sum x_i + b\sum x_i^2 \quad (2)$$

Eqs. (1) and (2) are known as normal equations.

By solving these equations, we get the values of 'a' and b

Fitting a Parabola (Quadratic Equation)

To fit a parabola of the type $y = a + bx + cx^2$ to the set of data points (x_1, y_1), (x_2, y_2), …, (x_n, y_n), by proceeding as above, we get the normal equations as

$$\sum y_i = na + b\sum x_i + c\sum x_i^2 \quad (1)$$
$$\sum x_i y_i = a\sum x_i + b\sum x_i^2 + c\sum x_i^3 \quad (2)$$
$$\sum x_i^2 y_i = a\sum x_i^2 + b\sum x_i^3 + c\sum x_i^4 \quad (3)$$

By solving Eqs. (1), (2) and (3), we can get the values of the parameters a, b and c

Fitting of various exponential curves that can be brought into the form of a straight line: Exponential curves of the type $y = ax^b$, $y = ab^x$ and $y = ae^{bx}$ can be fitted to the given data by transforming it into the form of a straight line by applying logarithm as follows.

Equation of the curve to be fitted	Equation obtained after applying $\log_e(= ln)$	Transformed equation into the form of a straight line
$y = ax^b$	$\ln y = \ln a + b\ln x$	$Y = A + bX$ where $Y = \ln y$; $A = \ln a$ and $X = \ln x$
$y = ab^x$	$\ln y = \ln a + x\ln b$	$Y = A + Bx$ where $Y = \ln y$; $A = \ln a$ and $B = \ln b$
$y = ae^{bx}$	$\ln y = \ln a + bx$	$Y = A + bx$ where $Y = \ln y$; $A = \ln a$

Example 11

Using the method of least squares, fit a straight line $y = a + bx$ to the following data.

x	1	2	3	4
y	4	11	35	100

Hence find the value of y at $x = 5$.

Solution

We have to fit the line $y = a + bx$ to the given data.

The normal equations are

$$\sum y_i = na + b\sum x_i \quad (1)$$
$$\sum x_i y_i = a\sum x_i + b\sum x_i^2 \quad (2)$$

The required values in the normal equations can be found using the following table

x_i	y_i	$x_i y_i$	x_i^2
1	4	4	1
2	11	22	4
3	35	105	9
4	100	400	16

$$\sum x_i = 10; \sum y_i = 150; \sum x_i y_i = 531; \sum x_i^2 = 30$$

Substituting these values in Eqn. (1) and (2), we get

$150 = 4a + 10b$ and $531 = 10a + 30b$

$\Rightarrow 4a + 10b = 150$

$10a + 30b = 531$

Solving these linear equations, we get

$a = -40.5$ and $b = 31.2$

$\therefore$ The straight line that fits to the given data is $y = a + bx$

$\Rightarrow y = -40.5 + 31.2x$

The value of y at $x = 5$ is

$y = -40.5 + 31.2 \times 5 \Rightarrow y = 115.5.$

Example 12

Fit a quadratic equation $y = a + bx + cx^2$ to the following data by the method of least squares.

x	–2	–1	0	1	2
y	1	5	10	22	38

Solution

We have to fit the curve $y = a + bx + cx^2$ to the given data.

Here the normal equations are

$$\sum y_i = na + b\sum x_i + c\sum x_i^2 \quad (1)$$
$$\sum x_i y_i = a\sum x_i + b\sum x_i^2 + c\sum x_i^3 \quad (2)$$
$$\sum x_i^2 y_i = a\sum x_i^2 + b\sum x_i^3 + c\sum x_i^4 \quad (3)$$

The values required in the normal equations can be obtained by the following table:

x_i	y_i	$x_i y_i$	x_i^2	x_i^3	x_i^4	$x_i^2 y_i$
–2	1	–2	4	–8	16	4
–1	5	–5	1	–1	1	5
0	10	0	0	0	0	0
1	22	22	1	1	1	22
2	38	76	4	8	16	152

$\sum x_i = 0$; $\sum y_i = 76$; $\sum x_i y_i = 91$; $\sum x_i^2 = 10$; $\sum x_i^3 = 0$; $\sum x_i^4 = 34$; $\sum x_i^2 y_i = 183$

Substituting these values in the normal equation we have

$$76 = 5a + b \times 0 + c \times 10$$
$$91 = a \times 0 + b \times 10 + c \times 0$$

$$183 = a \times 10 + b \times 0 + c \times 34$$
$$\Rightarrow 5a + 10c = 76$$
$$10b = 91$$
$$10a + 34c = 183$$

Solving these equations for a, b and c we get

$a = 10.77$, $b = 9.1$ and $c = 2.21$

Substituting these in $y = a + bx + cx^2$, we get the required parabola as

$y = 10.77 + 9.1x + 2.21x^2$.

Interpolation

The process of finding the most appropriate estimate for the unknown values of a function $y = f(x)$ at some values of x by using the given pairs of values $(x, f(x))$ is called interpolation.

Assumptions in Interpolation

1. The frequency distribution is normal and not marked by sudden ups and downs.
2. The changes in the series are uniform within a period.

   Before looking into interpolation, let us get familiarity with the finite differences which we use in interpolation.

Finite Differences

1. **Forward differences:** Consider a function $y = f(x)$. Let we were given the following table representing the values of $y = f(x)$ corresponding to the values x_1, x_2, …, x_n of x that are equally spaced (i.e., $x_i = x_0 + ih$; $i = 1, 2, \ldots, n$).

$x = x_i$	x_1	x_2	x_3	…	x_n
$y = f(x_i)$	y_1	y_2	y_3		y_n

The forward difference of $f(x)$ denoted by $\Delta y = \Delta[f(x)]$ can be defined as

$$\Delta y = \Delta[f(x)] = f(x + h) - f(x)$$
$$\therefore \Delta y_0 = f(x_0 + h) - f(x_0) = y_1 - y_0$$
$$\Delta y_1 = y_2 - y_1$$
$$\Delta y_2 = y_3 - y_2$$

.

.

.

$$\Delta y_{n-1} = y_n - y_{n-1}$$

where Δ is called the forward difference operator and $\Delta y_0, \Delta y_1, \ldots, \Delta y_{n-1}$ are called the first order forward differences of $y = f(x)$

Similarly, $\Delta^2 y = \Delta[f(x + h)] - \Delta[f(x)]$

$$\therefore \Delta^2 y_0 = \Delta y_1 - \Delta y_0$$
$$\Delta^2 y_1 = \Delta y_2 - \Delta y_1$$
$$\Delta^2 y_{n-2} = \Delta y_{n-1} - \Delta y_{n-2}$$

where $\Delta^2 y_0, \Delta^2 y_1, \ldots, \Delta^2 y_{n-2}$ are called the second order forward differences.

And in general, the nth order forward differences are given by

$$\Delta^n y = \Delta^n[f(x)] = \Delta^{n-1}[f(x + h)] - \Delta^{n-1}[f(x)]$$
$$\therefore \Delta^n y_0 = \Delta^{n-1} y_1 - \Delta^{n-1} y_0$$
$$\Delta^n y_1 = \Delta^{n-1} y_2 - \Delta^{n-1} y_1$$

.

.

.

These forward differences of various orders can be found and represented in a table called the forward difference table as shown below

x	**y = f(x)**	**Δy**	**Δ²y**	**Δ³y**	**Δ⁴y**	**Δ⁵y**
x_0	y_0					
		Δy_0				
$x_1 = x_0 + h$	y_1		$\Delta^2 y_0$			
		Δy_1		$\Delta^3 y_0$		
$x_2 = x_0 + 2h$	y_2		$\Delta^2 y_1$		$\Delta^4 y_0$	
		Δy_2		$\Delta^3 y_1$		$\Delta^5 y_0$
$x_3 = x_0 + 3h$	y_3		$\Delta^2 y_2$		$\Delta^4 y_1$	
		Δy_3		$\Delta^3 y_2$		
$x_4 = x_0 + 4h$	y_4		$\Delta^2 y_3$			
		Δy_4				
$x_5 = x_0 + 5h$	y_5					

2. **Backward differences:** Consider a function $y = f(x)$. Let we were given the following table representing the values of $y = f(x)$ corresponding to the values x_1, x_2, …, x_n of x that are equally spaced (i.e; $x_i = x_0 + ih$, $i = 1, 2, \ldots n$)

$x = x_i$	x_1	x_2	x_3	…	x_n
$y_i = f(x_i)$	y_1	y_2	y_3	…	y_n

The backward difference of $f(x)$ denoted by ∇y (or) $\nabla[f(x)]$ can be defined as

$$\nabla y = \nabla[f(x)] = f(x) - f(x - h)$$
$$\therefore \nabla y_1 = y_1 - y_0$$
$$\nabla y_2 = y_2 - y_1$$
$$\nabla y_3 = y_3 - y_2$$

.

.

.

$$\nabla y_n = y_n - y_{n-1}$$

where ∇ is called the backward difference operator and $\nabla y_1, \nabla y_2, \ldots, \nabla y_n$ are called the first order backward differences of $y = f(x)$

Similarly, $\nabla^2 y = \nabla^2[f(x)] = \nabla[f(x) - \nabla[f(x - h)]$

$\therefore\ \nabla^2 y_2 = \nabla y_2 - \nabla y_1$

$\nabla^2 y_3 = \nabla y_3 - \nabla y_2$

.

.

.

$\nabla^2 y_n = \nabla y_n - \nabla y_{n-1}$

where $\nabla^2 y_2, \nabla^2 y_3, \ldots, \nabla^2 y_n$ are called the second order backward differences.

And in general, the nth order backward differences are given by

$\nabla^n y = \nabla^n[f(x)] = \nabla^{n-1}[f(x)] - \nabla^{n-1}[f(x-h)]$

$\therefore\ \nabla^n y_n = \nabla^{n-1} y_n - \nabla^{n-1} y_{n-1}$

These backward differences of various orders can be found and represented in a table called the backward difference table as shown below

x	$y = f(x)$	∇y	$\nabla^2 y$	$\nabla^3 y$	$\nabla^4 y$	$\nabla^5 y$
x_0	y_0					
		∇y_1				
$x_1 = x_0 + h$	y_1		$\nabla^2 y_2$			
		∇y_2		$\nabla^3 y_3$		
$x_2 = x_0 + 2h$	y_2		$\nabla^2 y_3$			
		∇y_3		$\nabla^3 y_4$	$\nabla^4 y_4$	
$x_3 = x_0 + 3h$	y_3		$\nabla^2 y_4$			
		∇y_4		$\nabla^3 y_5$	$\nabla^4 y_5$	$\nabla^5 y_5$
$x_4 = x_0 + 4h$	y_4		$\nabla^2 y_5$			
		∇y_5				
$x_5 = x_0 + 5h$	Y_5					

Relation between forward and backward differences: First order: $\nabla[f(x+h)] = \Delta[f(x)]$

Second order: $\nabla^2[f(x+2h)] = \Delta^2[f(x)]$

Third order: $\nabla^3[f(x+3h)] = \Delta^3[f(x)]$

In general, the nth order forward and backward differences are connected by the relation.

$\nabla^n[f(x+nh)] = \Delta^n[f(x)]$

3. **Divided differences:** Consider a function $y = f(x)$. Let we were given a table of values of $y = f(x)$ at x_1, $x_2, x_3, \ldots, x_n$, (need not be equally spaced) as shown below.

$x = x_i$	x_1	x_2	x_3	…	x_n
$y_i = f(x_i)$	y_1	y_2	y_3	…	y_n

Then the first order divided differences are given by:

$$[x_0 x_x] = \frac{y_1 - y_0}{x_1 - x_0}$$

$$[x_1 x_2] = \frac{y_2 - y_1}{x_2 - x_1}$$

.

.

.

$$[x_{n-1}, x_n] = \frac{y_n - y_{n-1}}{x_n - x_{n-1}}$$

The second order divided differences are given by:

$$[x_0, x_1, x_2] = \frac{|x_1, x_2| - |x_0, x_1|}{x_3 - x_0}$$

$$[x_1, x_2, x_3] = \frac{[x_2, x_3] - [x_1, x_2]}{x_3 - x_1}$$

Similarly, the third order divided differences are given by

$$[x_0, x_2, x_3, x_4] = \frac{|x_1, x_2, x_3| - |x_0, x_1, x_2|}{x_3 - x_0}$$

$$[x_1, x_2, x_3, x_4] = \frac{|x_2, x_3, x_4| - |x_1, x_2, \ldots}{x_4 - x_1}$$

Note that $[x_0, x_1] = [x_1, x_0]$

And $[x_0, x_1, x_2] = [x_1, x_2, x_0] = [x_2, x_0, x_1]$

Interpolation Formulae

1. **Newton's forward interpolation formula:** If the function $y = f(x)$ takes the values $y_0, y_1, y_2, \ldots, y_n$ respectively at the equally spaced points $x_0, x_1, x_2, \ldots, x_n$ (i.e., $x_{i+1} = x_0 + ih$ (OR) $x_{i+1} = x_i + h$, then the Newton's forward interpolation formula is given by:

$$y_p = y_0 + p\Delta y_0 + \frac{p(p-1)}{2!}\Delta^2 y_0 + \frac{p(p-1)(p-2)}{3!}$$

$$\Delta^3 y_0 + \cdots + \frac{p(p-1)(p-2)\cdots(p-(n-1))}{n!}\Delta^n y_0$$

where $p = \dfrac{x - x_0}{h}$ (OR) $x = x_0 + ph$.

2. **Newton's backward interpolation formula:** If the function $y = f(x)$ takes the values $y_0, y_1, y_2, \ldots, y_n$ respectively at the equally spaced points $x_0, x_1, x_2, \ldots, x_n$ (i.e., $x_{i+1} = x_0 + ih$ (OR) $x_{i+1} = x_i + h$), then the Newton's backward interpolation formula is given by

$$Y_p = \nabla y_n + p\nabla y_n + \frac{p(p+1)}{2!}\nabla^2 y_n + \frac{p(p+1)(p+2)}{3!}$$

$$\nabla^3 y_n + \cdots + \frac{p(p+1)(p+2)\ldots(p+(n-1))}{n!}\nabla^n y_n$$

where $p = \dfrac{x - x_n}{h}$ (OR) $x = x_n + ph$.

NOTES

1. Newton's forward interpolation formula is used to interpolate (estimate) the values $y = f(x)$ near the beginning of the set of tabulated values given or for estimating the value of $y = f(x)$ to the left of the beginning.
2. Newton's backward interpolation formula is used to interpolate (estimate) the values $y = f(x)$ near the end of the set of tabulated values or for estimating the values of $y = f(x)$ to the right of the last tabulated value y_n.

When the values $x_0, x_1, x_2, \ldots, x_n$ of x are not equally spaced, then we can't make use of Newton's forward as well as backward interpolation formulae. In such situations, the following two interpolation formulae will be helpful.

3. **Newton's divided difference formula:** If the function $y = f(x)$ takes the values $y_0, y_1, y_2, \ldots, y_n$ corresponding to the values $x_0, x_1, x_2, \ldots, x_n$ (need not be equally spaced) of x, then the Newton's divided difference interpolation polynomial is given by
$y(x) = f(x) = y_0 + (x - x_0)[x_0, x_1] + (x - x_0)(x - x_1)[x_0, x_1, x_2] + \cdots + (x - x_0)(x - x_1)\cdots(x - x_{n-1})[x_0, x_1, \ldots x_n]$
4. **Lagrange's interpolation formula:** If the function $y = f(x)$ takes the values $y_0, y_1, \ldots, y_n$ respectively at the points $x_0, x_1, x_2, \ldots, x_n$ (need not be equally spaced) of x, then the Lagrange's interpolation polynomial is given by $y(x) = f(x) =$

$$\frac{(x-x_1)(x-x_2)\cdots(x-x_n)}{(x_0-x_1)(x_0-x_2)\cdots(x_0-x_n)}y_0 + \frac{(x-x_0)(x-x_2)\cdots(x-x_n)}{(x_1-x_0)(x_1-x_2)\cdots(x_1-x_n)}y_1 + \cdots + \frac{(x-x_0)(x-x_1)\cdots(x-x_{n-1})}{(x_n-x_0)(x_n-x_1)\cdots(x_n-x_{n-1})}y_n.$$

Example 13

If Δ denotes the forward difference operator, then show that $\Delta^4 y_0 = y_4 - 4y_3 + 6y_2 - 4y_1 + y_0$

Hence find the general expression for $\Delta^n y_0$ in terms of $y_0, y_1, \ldots, y_n$ that does not involve the difference operators.

Solution

We know that $\Delta y_0 = y_1 - y_0$

$\Delta^2 y_0 = \Delta y_1 - \Delta y_0$

$= (y_2 - y_1) - (y_1 - y_0)$

$= y_2 - 2y_1 + y_0$

$\Delta^3 y_0 = \Delta^2 y_1 - \Delta^2 y_0$

$= (y_3 - 2y_2 + y_1) - (y_2 - 2y_1 + y_0) = y_3 - 3y_2 + 3y_1 - y_0$

and $\Delta^4 y_0 = \Delta^3 y_1 - \Delta^3 y_0$

$= (y_4 - 3y_3 + 3y_2 - y_1) - (y_3 - 3y_2 + 3y_1 - y_0)$

$\therefore\ \Delta^4 y_0 = y_4 - 4y_3 + 6y_2 - 4y_1 + y_0$

From the above discussion, one can observe that the coefficients of y_i s are nothing but the binomial coefficients with positive and negative signs alternatively.

$\therefore\ \Delta^n y_0 = y_n - {}^nC_1\, y_{n-1} + {}^nC_2\, y_{n-2} + \cdots + (-1)^n y_0.$

Example 14

A function $y = f(x)$ is given by the following table

x	5	10	15	20	25
$y = f(x)$	31	42	51	62	76

Using Newton's forward interpolation formula, find the value of y at $x = 7$.

Solution

First let us form the forward difference table:

x	$y = f(x)$	Δy	$\Delta^2 y$	$\Delta^3 y$	$\Delta^4 y$
5	31				
		11			
10	42		–2		
		9		4	
15	51		2		–3
		11		–1	
20	62		3		
		14			
25	76				

By Newton's forward difference formula,

$$y_p = y_0 + p\Delta y_0 + \frac{p(p-1)}{2!}\Delta^2 y_0 + \frac{p(p-1)(p-2)}{3!}\Delta^3 y_0 + \frac{p(p-1)(p-2)(p-3)}{4!}\Delta^4 y_0 + \cdots \quad (1)$$

Here $x_0 = 5$; $h = 5$ and $x = 7$

$$\therefore\ p = \frac{x - x_0}{h} = \frac{7-5}{5} = 0.4$$

Substituting these in Eq. (1), we have

$$y(7) = 31 + (0.4)\times 11 + \frac{(0.4)(0.4-1)}{2!}\times(-2) + \frac{(0.4)(0.4-1)(0.4-2)}{3!}\times 4 + \frac{(0.4)(0.4-1)(0.4-2)(0.4-3)}{4!}\times(-3)$$

$= 31 + 4.4 + 0.24 + 0.256 + 0.1248 = 36.0208$

$\therefore$ The value of y at $x = 7$ is 36.0208.

Example 15

Following table shows the values of a function $y = f(x)$ at 0, 2, 5 and 9

x	0	2	5	9
$y = f(x)$	6	15	27	40

Using the Lagrange's interpolation formula, find $y(6)$.

Solution

Given values of $y = f(x)$ are

x	0	2	5	9
Y = f(x)	6	15	27	40

By Lagrange's interpolation formula, we have

$$f(x) = \frac{(x-x_1)(x-x_2)(x-x_3)}{(x_0-x_1)(x_0-x_2)(x_0-x_3)} y_0$$

$$+ \frac{(x-x_0(x-x_2)(x-c_3)}{(x_1-x_0)(x_1-x_2)(x_1-x_3)} y_1$$

$$+ \frac{(x-x_0)(x-x_1)(x-x_3)}{(x_2-x_0)(x_2-x_1)(x_2-x_3)} y_2$$

$$+ \frac{(x-x_0)(x-x_1)(x-x_2)}{(x_3-x_0)(x_3-x_1)(x_3-x_2)} y_3$$

$$\therefore f(x) = \frac{(x-2)(x-5)(x-9)}{(0-2)(0-5)(0-9)} \times 6 + \frac{(x-0)(x-5)(x-9)}{(2-0)(2-5)(2-9)} \times$$

$$15 + \frac{(x-0)(x-2)(x-9)}{(5-0)(5-2)(5-9)} \times 27 + \frac{(x-0)(x-2)(x-5)}{(9-0)(9-2)(9-5)} \times 40$$

Now, $y(6) = f(6) = \dfrac{(6-2)(6-5)(6-9)}{(-2)\times(-5)\times(-9)}$

$$\times 6 + \frac{(6-0)(6-5)(6-9)}{2x(-3)\times(-6)} \times 15 + \frac{(6-0)(6-2)(6-9)}{-5x-3x(-4)} \times$$

$$2 + \frac{(6-0)(6-2)(6-5)}{9\times7\times4} \times 40 = \frac{4}{5} - \frac{45}{7} + \frac{162}{5} + \frac{80}{21} = 30.5807.$$

Numerical Differentiation

In numerical differentiation, we find the derivatives by using the interpolation formulae.

1. **Derivatives using newton's forward difference interpolation formula:** We know that the Newton's forward difference interpolation formula is

$$y = y_0 + p\Delta\, y_0 + \frac{p(p-1)}{2!}\ \Delta^2 y_0\ + \frac{p(p-1)(p-2)}{3!}$$

$\Delta^3 y_0 + \ldots$

Differentiating both sides wrt p,

$$\frac{dy}{dp} = \Delta y_0 + \frac{2p-1}{2!}\Delta^2 y_0 + \frac{3p^2-6p+2}{3!}\Delta^3 y_0 + \cdots$$

As $p = \dfrac{x-x_0}{h} = \dfrac{dp}{dx} = \dfrac{1}{h}$

$$\text{Now } \frac{dy}{dx} = \frac{dy}{dp}\frac{dp}{dx} = [\Delta y_0 + \frac{(2p-1)}{2!}\Delta^2 y_0$$

$$+ \frac{3p^2-6p+2}{3!}\Delta y_0 + \cdots]\frac{1}{h}$$

$$\therefore \frac{dy}{dx} = \frac{1}{h}\left[\Delta y_0 + \frac{(2p-1)}{2!}\Delta^2 y_0 \right.$$

$$\left. + \frac{(3p^2-6p+2)}{3!}\Delta^3 y_0 + \cdots\right]$$

$\therefore \left(\dfrac{dy}{dx}\right)$ at $x = x_0$

$$= \frac{1}{h}\left[\Delta y_0 - \frac{1}{2}\Delta^2 y_0 + \frac{1}{3}\Delta^3 y_0 - \frac{1}{4}\Delta^4 y_0 + \frac{1}{5}\Delta^5{}_0 \ldots\right]$$

$(\because \text{At } i = x_0;\ p = 0)$

$$\text{And } \frac{d^2y}{dx^2} = \frac{d}{dx}\left(\frac{dy}{dx}\right) = \frac{d}{dp}\left(\frac{dy}{dx}\right)\frac{dp}{dx} = \frac{1}{h}$$

$$\left[\Delta^2 y_0 + \frac{6p-6}{3!}\Delta^3 y_0 + \frac{12p^2-36p+22}{4!}\Delta^4 y_0 \cdots\right]\frac{1}{h}$$

$$\left(\frac{d^2y}{dx^2}\right) = \frac{1}{h^2}\left[\Delta^2 y_0 + \frac{6p-6}{3!}\Delta^3 y_0 + \frac{12p^2-36p+22}{1!}\right.$$

$$\left.\Delta^4 y_0 \cdots\right]$$

$$\left(\frac{d^2y}{dx^2}\right)_{\text{at } x=x_0}$$

$$= \frac{1}{h^2}\left[\Delta^2 y_0 - \Delta^3 y_0 + \frac{11}{12}\Delta^4 y_0 - \frac{5}{6}\Delta^5 y_0 + \cdots\right]$$

$\therefore$ By using Newton's forward interpolation formula, the first and second derivatives of $y = f(x)$ at $x = x_0$ are given by $\left(\dfrac{dy}{dx}\right)_{x=x_0}$

$$= \frac{1}{h}\left[\Delta y_0 - \frac{1}{2}\Delta^2 y_0 + \frac{1}{3}\Delta^3 y_0 - \frac{1}{4}\Delta^4 y_0 + \frac{1}{5}\Delta^5 y_0 \ldots\right]$$

and

$$\left(\frac{d^2y}{dx^2}\right)_{x=x_0} = \frac{1}{h^2}\left[\Delta^2 y_0 - \Delta^3 y_0 + \frac{11}{12}\Delta^4 y_0 - \frac{5}{6}\Delta^5 y_0 + \ldots\right]$$

2. **Derivatives using newton's backward difference interpolation formula:** We know that the Newton's backward difference interpolation formula is $y = y_n +$

$$p\nabla\, y_n + \frac{p(p+1)}{2!}\ \nabla^2 y_n + \frac{p(p+1)(p+2)}{3!}\ + \nabla^3 y_n \ldots$$

Differentiating on both sides wrt p,

$$\frac{dy}{dx} = \nabla y_n + \frac{2p+1}{2}\nabla^2 y_n + \frac{3p^2+6p+2}{3!}\nabla^3 y_n + \cdots$$

As $p = \dfrac{x-x_n}{h}\dfrac{dp}{dx} = \dfrac{1}{h}$

$$\therefore \frac{dy}{dx} = \frac{dy}{dp}\frac{dp}{dx}$$

$$= \left[\nabla y_n + \frac{2p+1}{2!}\nabla^2 y_n + \frac{3p^2+6p+2}{3!}\nabla^3 y_n + \cdots\right]\frac{1}{h}$$

$$\therefore \frac{dy}{dx} = \frac{1}{h}\left[\nabla y_n + \frac{2p+1}{2!}\nabla^2 y_n + \frac{3p^2+6p+2}{3!}\nabla^3 y_n + \cdots\right]$$

$$\left(\frac{dy}{dx}\right)_{x=x_n} = \frac{1}{h}\left[\nabla y_n + \frac{1}{2}\nabla^2 y_n + \frac{1}{3}\nabla^3 y_n + \frac{1}{4}\nabla^4 y_n + \frac{1}{5}\nabla^5 y_n + \ldots\right]$$

$(\because \text{At } x = x_n;\ p = 0)$

$$\text{And } \frac{d^2y}{dx^2} = \frac{d}{dx}\left(\frac{dy}{dx}\right) = \frac{d}{dp}\left(\frac{dy}{dx}\right)\frac{dp}{dx}$$

$$= \frac{1}{h}\left[\nabla^2 y_n + \frac{6p+6}{3!}\nabla^3 y_n + \frac{12p^2+36p+22}{4!}\nabla^4 y_n + \cdots\right]\frac{1}{h}$$

$$\therefore \frac{d^2y}{dx^2} = \frac{1}{h^2}\left[\nabla^2 y_n + \frac{6p+6}{3!}\nabla^3 y_n + \frac{12p^2+36p+22}{4!}\nabla^4 y_n + \cdots\right]$$

$$\therefore \left(\frac{d^2y}{dx^2}\right)_{x=x_n} = \frac{1}{h^2}\left[\nabla^2 y_n + \nabla^3 y_n + \frac{11}{12}\nabla^4 y_n + \frac{5}{6}\nabla^5 y_n\right]$$

$\therefore$ By using Newton's backward difference interpolation formula, the first and second derivatives of $y = f(x)$ at $x = x_n$ are given by $\left(\frac{dy}{dx}\right)_{x=x_n}$

$$= \frac{1}{h}\left[\nabla y_n + \frac{1}{2}\nabla^2 y_n + \frac{1}{3}\nabla^3 y_n + \frac{1}{4}\nabla^4 y_n + \frac{1}{5}\nabla^5 y_n + \cdots\right]$$

and $\left(\frac{d^2y}{dx^2}\right)_{x=x_n}$

$$= \frac{1}{h^2}\left[\nabla^2 y_n + \nabla^3 y_n + \frac{11}{12}\nabla^4 y_n + \frac{5}{6}\nabla^5 y_n + \cdots\right]$$

Example 16

Using the values of a function $y = f(x)$ given in the following table, find the first two derivatives of $f(x)$ at $x = 7$.

x	2	3	4	5	6	7
y = f(x)	4	8	15	27	36	42

Solution

As we have to find the first two derivatives of $y = f(x)$ at $x = 7$, (end point of the given data), we use the derivatives' formulae obtained from Newton's backward interpolation formula.

The backward difference table for the given data is

X	y = f(x)	Δy	Δ²y	Δ³y	Δ⁴y	Δ⁵y
2	4					
		4				
3	8		3			
		7		–2		
4	15		5		6	
		12		–8		2
5	27		–3		8	
		9		0		
6	36		–3			
		6				
7	42					

By Newton's backward interpolation formula, we have $\left(\frac{dy}{dx}\right)_{x=x_n=7}$

$$= \frac{1}{h}\left[\nabla y_n + \frac{1}{2}\nabla^2 y_n + \frac{1}{3}\nabla^3 y_n + \nabla^4 y_n + \frac{1}{5}\nabla^5 y_n\right]$$

$$= \frac{1}{1}\left[6 + \frac{1}{2}\times(-3) + \frac{1}{3}\times 0 + \frac{1}{4}\times 8 + \frac{1}{5}\times 2\right] = \frac{69}{10} = 6.9$$

And $\left(\frac{d^2y}{dx^2}\right)_{x=x_n=7}$

$$= \frac{1}{h^2}\left[\nabla^2 y_n + \nabla^3 y_n + \frac{11}{12} + \nabla^4 y_n + \frac{5}{6}\nabla^5 y_n\right]$$

$$= \frac{1}{1^2}\left[-3 + 0 + \frac{11}{12}\times 8 + \frac{5}{6}\times 2\right] = 6.$$

Example 17

Find the first derivative at $x = 6$ for a function $y = f(x)$ with the following data.

x	5	7	10	11	13
y = f(x)	100	294	900	1210	2028

Solution

As the given values of x are not equally spaced, to find the first derivative of $f(x)$, we will make use of the Newton's divided difference interpolation formula, which is given by

$$y = f(x) = f(x_0) + (x - x_0)[x_0, x_1] + (x - x_0)(x - x_1)[x_0, x_1, x_2] + (x - x_0)(x - x_1)(x - x_2)[x_0, x_1, x_2, x_3] + (x - x_0)(x - x_1)(x - x_2)(x - x_3)][x_0, x_1, x_2, x_3, x_4] + \cdots \quad (1)$$

The divided differences of various orders for the given data can be represented as shown below.

x	$y = f(x)$	First divided differences	Second divided differences	Third divided differences	Fourth divided differences
5	100				
		$\frac{294-100}{7-5} = 97$			
			$\frac{202-97}{10-5} = 21$		
7	294				
		$\frac{900-294}{10-7} = 202$		$\frac{27-21}{11-5} = 1$	
			$\frac{310-202}{11-7} = 27$		$\frac{1-1}{13-5} = 0$
10	900				
		$\frac{1210-900}{11-10} = 310$		$\frac{33-27}{13-7} = 1$	
			$\frac{409-310}{13-10} = 33$		
11	1,210				
		$\frac{2028-1210}{13-11} = 409$			
13	2,028				

Substituting these in Eq. (1), we get

$y = f(x) = 100 + (x-5) \times 97 + (x-5)(x-7)\, 21 + (x-5)(x-7)(x-10) \times 1 + (x-5)(x-7)(x-10)(x-11) \times 0$

$\therefore f(x) = 100 + 97(x-5) + 21(x^2 - 12x + 35) + (x^3 - 22x^2 + 155x - 350)$

$$\therefore \frac{dy}{dx} = 97 + 21(2x - 12) + (3x^2 - 44x + 155)$$

$$\therefore \left(\frac{dy}{dx}\right)_{x=6} = 97 + 21(2 \times 6 - 12) + (3 \times 6^2 - 44 \times 6 + 155)$$

$= 97 + 0 + (-1) = 96.$

Numerical Integration

The numerical integration can be stated as follows: Given a set of $(n+1)$ data points (x_i, y_i), $i = 0, 1, 2, 3, \ldots, n$ of the function $y = f(x)$, where $f(x)$ is not known explicitly, it is required to find $\int_{x_0}^{x_n} f(x)dx$.

NOTE

Numerical integration is also known as Numerical quadrature.

Newton–Cote's Quadrature Formula

[General Quadrature formula]

Consider the integral $I = \int_a^b f(x)dx$

Let the interval $[a, b]$ be divided into 'n' equal subintervals of width h so that $a = x_0, x_1 = x_0 + h, x_2 = x_0 + 2h \ldots b = x_0 + nh$

$$\therefore I = \int_{x_0}^{x_0+nh} f(x)dx$$

Put $x = x_0 + mh \Rightarrow dx = h \cdot dm$ as $x \to x_0$, $m \to 0$ and $x \to x_0 + nh$, $m \to n$

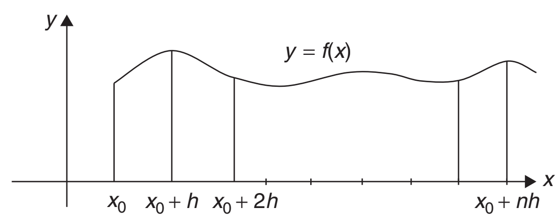
$$I = h\int_0^n f(x_0 + mh)dm$$

Applying Newton's forward interpolation formula

$$I = h\int_0^n \left(y_0 + m\Delta y_0 + \frac{m(m-1)}{2!}\Delta^2 y_0 + \cdots\right)dm$$

Integrating term by term and applying the limits, we get

$$\int_{x_0}^{x_0+nh} f(x)dx = nh\left[y_0 + \frac{n}{2}\Delta y_0 + \frac{n(2n-3)}{12}\Delta^2 y_0 + \frac{n(n-2)^2}{24}\Delta^3 y_0 + \cdots\right]$$ (Newton–Cotes quadrature formula)



On substituting $n = 1, 2, 3, \ldots$ in Newton-Cote's quadrature formula, we get various quadrature formulae.

Trapezoidal Rule [Two-point Quadrature]

Substituting $n = 1$ in the Newton–Cotes formula and taking the curve $y = f(x)$ through (x_0, y_0) and (x_1, y_1) as a straight line so that differences of order higher than one becomes zero, we get

$$\int_{x_0}^{x_n} f(x)dx = \int_{x_0}^{x_0+h} f(x)dx = h\left[y_0 + \frac{1}{2}\Delta y_0\right]$$

$$= h\left[y_0 + \frac{1}{2}(y_1 - y_0)\right] = \frac{h}{2}[y_0 + y_1]$$

Similarly,

$$\int_{x_1}^{x_2} f(x)dx = \int_{x_0+h}^{x_0+2h} f(x)dx = h\left[y_1 + \frac{1}{2}\Delta y_1\right] = \frac{h}{2}[y_1 + y_2]$$

$$\int_{x_2}^{x_3} f(x)dx = \int_{x_0+2h}^{x_0+3h} f(x)dx = \frac{h}{2}(y_2 + y_3$$

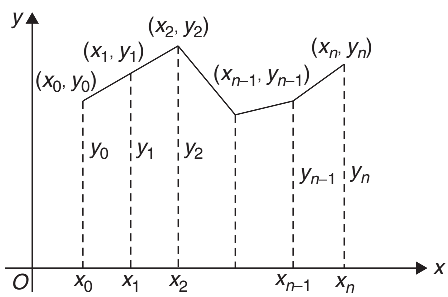
Proceeding, $$\int_{x_0+(n-1)h}^{(x_0+nh)} f(x)dx = \frac{h}{2}(y_{n-1} + y_n)$$

Hence, $$\int_{x_0}^{x_n} f(x)dx = \frac{h}{2}\left[(y_0 + y_n) + 2(y_1 + y_2 + \cdots + y_{n-1})\right]$$

Thus, $$\int_{x_0}^{x_n} f(x)dx = \frac{h}{2}\left[\begin{array}{l}\text{(sum of the first and last ordinates)} \\ +2\text{ (sum of remaining ordinates)}\end{array}\right]$$

The above rule is known as Trapezoidal rule.

Geometrical Interpretation of Trapezoidal Rule



Geometrically, the curve $y = f(x)$ is replaced by n straight line segments joining the points (x_0, y_0) and (x_1, y_1); (x_1, y_1) and (x_2, y_2); …, (x_{n-1}, y_{n-1}) and (x_n, y_n). The area bounded by the curve $y = f(x)$ is then approximately equal to the sum of the areas of n trapeziums as shown in the figure.

Simpson's One-third Rule [Three-point Quadrature]

Substituting $n = 2$ in the Newton–Cotes quadrature formula taking the curve through (x_0, y_0), (x_1, y_1) and (x_2, y_2) as a parabola, so that the differences of order higher than 2 becomes zero, we get

$$\int_{x_0}^{x_0+2h} f(x)dx = 2h\left(y_0 + \Delta y_0 + \frac{1}{6}\Delta^2 y_0\right)$$

$$= \frac{h}{3}(y_0 + 4y_1 + y_2)$$

Similarly,

$$\int_{x_0+2h}^{x_0+4h} f(x)dx = \frac{h}{3}(y_2 + 4y_3 + y_4)$$

$$\int_{x_0+(n-2)h}^{x_0+nh} f(x)dx = \frac{h}{3}(y_{n-2} + 4y_{n-1} + y_n)$$

Therefore adding all these we get when 'n' is even,

$$\int_{x_0}^{x_0+nh} f(x)dx = \frac{h}{3}\left[\begin{array}{l}(y_0 + y_n) + 4(y_1 + y_3 + \cdots + y_{n-1}) \\ + 2(y_2 + y_4 + \cdots + y_{n-2})\end{array}\right]$$

$= \frac{h}{3}$ [(sum of the first and last ordinates + 4 (sum of the odd ordinates) + 2 (sum of the even ordinates)]

This is known as Simpson's $\frac{1}{3}$ rule.

Simpson's Three-eighth Rule

Substituting $n = 3$ in the Newton Cotes quadrature formula and taking curve through (x_0, y_0), (x_1, y_1), (x_2, y_2) and (x_3, y_3) so that the differences of order higher than three becomes zero, we get

$$\int_{x_0}^{x_3} f(x)dx = 3h\left[y_0 + \frac{3}{2}\Delta y_0 + \frac{3}{2}\Delta^2 y_0 + \frac{1}{8}\Delta^3 y_0\right]$$

$$= \frac{3h}{8}(y_0 + 3y_1 + 3y_2 + y_3)$$

Similarly,

$$\int_{x_3}^{x_6} f(x)dx = \frac{3h}{8}(y_3 + 3y_4 + 3y_5 + y_6) \text{ and so on.}$$

Adding all these integrals from x_0 to x_n where 'n' is a multiple of 3, we get

$$\int_{x_0}^{x_n} f(x)dx = \frac{3h}{8}[(y_0 + y_n) + 3(y_1 + y_2 + y_4 + y_5 + \cdots + y_{n-2})$$
$$+ 2(y_3 + y_6 + y_9 + \cdots + y_{n-3})]$$

The above rule is called Simpson's $\frac{3}{8}$ rule which is applicable only when 'n' is a multiple of 3.

Example 18

Evaluate: $\int_0^2 \sqrt{1+x^2}\,dx$ taking $h = 0.2$ using

(i) Trapezoidal rule and

(ii) Simpson's $\frac{1}{3}$rd rule

Solution

Here, $a = 0$, $b = 2$, $h = 0.2$

So, $n = \frac{b-a}{h} = \frac{2-0}{0.2} = 10$

The values of x and y are tabulated as follows:

x	0	0.2	0.4	0.6	0.8	1	1.2	1.4	1.6	1.8	2
$y=\sqrt{1+x^2}$	1 y_0	1.0198 y_1	1.077 y_2	1.1661 y_3	1.2806 y_4	1.414 y_5	1.562 y_6	1.7204 y_7	1.8867 y_8	2.059 y_9	2.236 y_{10}

(i) By Trapezoidal rule,

$$\int_0^2 \sqrt{1+x^2}\,dx = \frac{h}{2}\left[(y_0+y_{10})+2(y_1+y_2+\cdots+y_9)\right]$$

$$= \frac{0.2}{2}[(1+2.236)+2(1.0198+1.077+1.1661+1.2806+1.414+1.562+1.7204+1.8867+2.059)]$$

$$= 0.1\,[(3.236)+2(13.1856)]$$

$$= 0.1\,[29.6072] = 2.96072.$$

(ii) By Simpson's $\frac{1}{3}$ rule,

$$\int_0^2 \sqrt{1+x^2}\,dx$$

$$= \frac{h}{3}\left[\begin{array}{l}(y_0+y_{10})+4(y_1+y_3+y_5+y_7+y_9)\\ \quad +2(y_2+y_4+y_6+y_8)\end{array}\right]$$

$$= \frac{0.2}{3}[(1+2.236)+4(1.0198+1.1661+1.414+1.7204+2.059)+2(1.077+1.2806+1.562+1.8867)]$$

$$= \frac{0.2}{3}[(3.236)+29.5172+11.6126]$$

$$= 2.95772.$$

Example 19

Evaluate $\int_0^{\pi/2} e^{\cos x}\,dx$ by Simpson's three-eighth rule.

Solution

Taking $h=\frac{\pi}{6}$, the range can be divided into three equal, sub intervals with the division points. The values of x and y are tabulated as below.

x	0	$\frac{\pi}{6}$	$\frac{\pi}{3}$	$\frac{\pi}{2}$
$y=e^{\cos x}$	2.718(y_0)	2.3774(y_1)	1.6487(y_2)	1(y_3)

By Simpon's three-eighth rule,

$$\int_0^{\pi/2} e^{\cos x}\,dx = \frac{3h}{8}\left[(y_0+y_3)+3(y_1+y_2)\right]$$

$$= \frac{3}{8}\times\frac{\pi}{6}\left[(2.718+1)+3(2.3774+1.6487)\right]$$

$$= \frac{\pi}{16}\left[(3.718)+(12.0783)\right] = 3.10159.$$

Numerical Solutions of Ordinary Differential Equations

The following methods are discussed on the numerical solutions of ordinary differential equations.

Single-step Methods

1. Taylor's series method
2. Picard's method of successive approximation

Multi-step Methods

1. Euler's method
2. Modified euler's method
3. Runge–Kutta method
4. Predictor–Corrector methods [Milne's and Adam's]

Taylor's Series Method

Consider the differential equation

$$\frac{dy}{dx} = f(x,y) \text{ with initial condition } y(x_0)=y_0 \qquad (1)$$

Let $y=f(x)$ be the solution of Eq. (1)

Writing the Taylor's series expansion of $f(x)$ at x_0

$$f(x) = f(x_0)+(x-x_0)f'(x_0)+\frac{(x-x_0)^2}{2!}f''(x_0)+\cdots$$

$$\Rightarrow y = y_0+(x-x_0)y_0'+\frac{(x-x_0)^2}{2!}y_0''+\cdots$$

Put $x=x_1$, we get

$$y_1 = y_0+(x_1-x_0)y_0'+\frac{(x_1-x_0)^2}{2!}y_0''+\cdots$$

If we take $h=x_1-x_0$

$$\Rightarrow y_1 = y_0+hy_0'+\frac{h^2}{2!}y_0''+\cdots$$

∴ In general,

$y_{n+1} = y_n + hy_n' + \frac{h^2}{2!} y_n'' + \ldots$ will be the iterative formula.

Example 22

Given $\frac{dy}{dx} = x - y^2$ with the initial condition $y(0) = 1$

Find $y(0.1)$ using Taylor series method with step size 0.1.

Solution

$$f(x, y) = x - y^2$$
$$x = 0.1, x_0 = 0, y_0 = 1, h = 0.1$$
$$y' = x - y^2 \Rightarrow y'(0) = x_0 - y_0^{\,2} = -1;$$
$$y'' = 1 - 2yy' \Rightarrow y''(0) = 1 - 2y_0y_0'$$
$$= 1 - 2\,(1)\,(-1) = 3$$
$$y''' = -2yy'' - 2(y')^2$$
$$\Rightarrow y'''\,(0) = -2\,(1)\,(3) - 2\,(-1)^2$$
$$= -6 - 2 = -8$$

By Taylor's formula,

$$y\,(0.1) = y_1 = y_0 + hy'\,(0) + \frac{h^2}{2!} y''\,(0) + \frac{h^3}{3!} y'''\,(0) + \cdots$$

$$\Rightarrow y_1 = 1 + (0.1)\,(-1) + \frac{(0.1)^2}{2!}(3) + \frac{(0.1)^3}{3!}(-8)\ + \cdots$$

$= 1 - 0.1 + 0.015 - 0.0013 + \cdots$

$y_1 = 0.9137.$

Picard's Method of Successive Approximation

Given the differential equation $\frac{dy}{dx} = f(x, y)$ (1)

Integrate Eq. (1) from x_0 to x, we get

$$\int_{x_0}^{x} dy = \int_{x_0}^{x} f(x, y)dx$$

$$\Rightarrow y(x) - y(x_0) = \int_{x_0}^{x} f(x, y)dx$$

$$\Rightarrow y(x) = y(x_0) + \int_{x_0}^{x} f(x, y)dx \qquad (2)$$

Put $y = y_0$, we get the first approximation,

$$y_n = y_0 + \int_{x_0}^{x} f(x, y_{n-1})dx.$$

Example 23

Given $\frac{dy}{dx} = 1 + xy$ and $y\,(0) = 1$. Evaluate $y\,(0.1)$ by Picard's method upto three approximations.

Solution

$$f\,(x, y) = 1 + xy$$
$$x_0 = 0, y_0 = 1$$

The first approximation $y_1 = y_0 + \int_{x_0}^{x} f(x, y_0)dx$

$$1 + \int_{x_0}^{x} 1 + xy_0 dx\ = 1 + \int_{0}^{x} 1 + xdx$$

$$y_1 = 1 + x + \frac{x^2}{2}$$

At $x = 0.1$, $y_1 = 1 + (0.1) + \frac{(0.1)^2}{2} = 1.105$

The second approximation y_2,

$$= y_0 + \int_{x_0}^{x} f(x, y_1)dx$$

$$\Rightarrow y_2 = 1 + \int_{0}^{x} 1 + xy_1 dx$$

$$\Rightarrow y_2 = 1 + \int_{0}^{x}\left[1 + x\left(1 + x + \frac{x^2}{2}\right)\right]dx$$

$$= 1 + \int_{0}^{x}\left(1 + x + x^2 + \frac{x^3}{2}\right)dx$$

$$= 1 + x + \frac{x^2}{2} + \frac{x^3}{3} + \frac{x^4}{8}$$

At $x = 0.1$, $y_2 = 1 + (0.1) + \frac{(0.1)^2}{2} + \frac{(0.1)^3}{3} + \frac{(0.1)^4}{8}$

$y(0.1) = 1.10534$

The third approximation $y_3 = y_0 + \int_{x_0}^{x} f(x, y_2)dx$

$$\Rightarrow y_3 = 1 + \int_{0}^{x}(1 + xy_2)dx.$$

$$1 + \int_{0}^{x}\left(1 + x\left[1 + x + \frac{x^2}{2} + \frac{x^3}{3} + \frac{x^4}{8}\right]\right)dx$$

$$1 + \int_{0}^{x}\left(1 + x + x^2 + \frac{x^3}{2} + \frac{x^4}{3} + \frac{x^5}{8}\right)dx$$

$$= 1 + x + \frac{x^2}{2} + \frac{x^3}{3} + \frac{x^4}{8} + \frac{x^5}{15} + \frac{x^6}{48}$$

At $x = 0.1$,

$$y_3 = 1 + (0.1) + \frac{(0.1)^2}{2} + \frac{(0.1)^3}{3} + \frac{(0.1)^4}{8} + \frac{(0.1)^5}{15} + \frac{(0.1)^6}{48}$$

$= 1 + 0.1 + 0.005 + 0.0003 + 0.0000125 + 0.0000006 + 0.00000002$

$y_3 = 1.105313$

Multi-step Methods

Euler's Method

For the differential equation $\frac{dy}{dx} = f(x, y)$ with initial condition $y(x_0) = y_0$, the Euler's iteration formula is

$$y_n = y_{n-1} + h f(x_{n-1}, y_{n-1}),\ n = 1, 2, 3,\ldots$$

NOTE

The process is very slow and to obtain accuracy, h must be very small, i.e., we have to divide $[x_0, x_n]$ into a more number of subintervals of length 'h'.

Example 24

Solve $\frac{dy}{dx} = \frac{y-x}{y+x}$, $y(0) = 1$, find $y(0.5)$ by Euler's method choosing $h = 0.25$.

Solution

$$f(x, y) = \frac{y-x}{y+x}$$

$$x_0 = 0, y_0 = 1, h = 0.25$$

Euler's iteration formula,

$$y_n = y_{n-1} + h f(x_{n-1}, y_{n-1})$$

Put $n = 1$,

$$x_1 = 0.25 \Rightarrow y_1 = y(0.25) = y_0 + h f(x_0, y_0)$$

$$= 1 + (0.25)\left(\frac{y_0 - x_0}{y_0 + x_0}\right)$$

$$= 1 + (0.25)\frac{1-0}{1+0} = 1.25$$

Put $n = 2$

$$x_2 = 0.5 \Rightarrow y_2 = y(0.5) = y_1 + h f(x_1, y_1)$$

$$= (1.25) + (0.25)\left[\frac{y_1 - x_1}{y_1 + x_1}\right]$$

$$= 1.25 + (0.25)\left[\frac{1.25 - 0.25}{1.25 + 0.25}\right]$$

$$= 1.25 + 0.166666 = 1.4166$$

$\therefore\ y(0.5) = 1.4166$

Modified Euler's Method

For the differential equation $\frac{dy}{dx} = f(x, y)$ with initial condition $y(x_0) = y_0$, the Modified Euler's iteration formula is

$$y_r^{(n)} = y_{r-1} + \frac{h}{2}\left[f(x_{r-1}, y_{r-1}) + f(x_r, y_r^{n-1})\right]$$

NOTE

To find y_n, we proceed to find the approximations $y_n^{(0)}$, $y_n^{(1)}$, $y_n^{(2)}$ … until the two successive approximations are approximately equal.

$y_n^{(0)}$ is found by Euler's method, i.e., $y_n^{(0)} = y_{n-1} + hf(x_{n-1}, y_{n-1})$

Example 25

Find y for $x = 0.1$ using modified Euler's method for the differential equation $\frac{dy}{dx} = \log(x + y)$ with $y(0) = 1$.

Solution

Given $f(x, y) = \log(x + y)$

$$x_0 = 0, y_0 = 1, h = 0.1$$

To find y_1, $x_1 = 0.1$

$$y_1^{(0)} = y_0 + h f(x_0, y_0)$$

$$= 1 + (0.1)\log(0 + 1) = 1$$

$$y_1^{(1)} = y_0 + \frac{h}{2}\left[f(x_0, y_0) + f(x_1, y_1^{(0)})\right]$$

$$= y_0 + \frac{h}{2}\left[\log(x_0 + y_0) + \log(x_1 + y_1^{(0)})\right]$$

$$= 1 + \frac{0.1}{2}\left[\log(0 + 1) + \log(0.1 + 1)\right]$$

$$= 1 + \frac{0.1}{2}\left[\log 1 + \log 1.1\right] = 1.0047$$

$$y_1^{(2)} = y_0 + \frac{h}{2}\left[f(x_0, y_0) + f(x_1, y_1^{(1)})\right]$$

$$= y_0 + \frac{h}{2}\left[\log(0 + 1) + \log(x_1 + y_1^{(1)})\right]$$

$$= 1 + \frac{0.1}{2}\left[\log(0 + 1) + \log(0.1 + 1.0047)\right]$$

$$= 1.0049$$

$$y_1^{(3)} = y_0 + \frac{h}{2}\left[f(x_0, y_0) + f(x_1, y_1^{(2)})\right]$$

$$= 1 + \frac{0.1}{2}\left[\log(0 + 1) + \log(0.1 + 1.0049)\right]$$

$$= 1.0049$$

$\therefore\quad y_1 = 1.0049.$

Runge–Kutta Methods

First Order Runge–Kutta Method

$$y_1 = y_0 + hy_0^1 \text{ [same as Euler's method]}$$

Second Order Runge–Kutta Method

The formula is $y_1 = y_0 + \frac{1}{2}(k_1 + k_2)$

where $k_1 = h f(x_0, y_0)$ and $k_2 = h f(x_0 + h, y_0 + k_1)$

Third Order Runge-Kutta Method

The formula is $y_1 = y_0 + \frac{1}{6}(k_1 + 4k_2 + k_3)$

where $k_1 = h f(x_0, y_0)$

$$k_2 = hf\left(x_0 + \frac{1}{2}h,\ y_0 + \frac{1}{2}k_1\right) \text{ and}$$

$k_3 = hf(x_0 + h, y_0 + k')$ where $k' = hf(x_0 + h, y_0 + k_1)$.

Fourth Order Runge–Kutta Method

The formula is $y_1 = y_0 + \frac{1}{6}(k_1 + 2k_2 + 2k_3 + k_4)$

where $k_1 = hf(x_0, y_0)$

$$k_2 = hf\left(x_0 + \frac{1}{2}h,\ y_0 + \frac{1}{2}k_1\right)$$

$$k_3 = hf\left(x_0 + \frac{1}{2}h,\ y_0 + \frac{1}{2}k_2\right)$$

and $k_4 = hf(x_0 + h, y_0 + k_3)$

Example 26

Given $\frac{dy}{dx} = x^2 + y^2$, $y(1) = 1.2$. Find $y(1.05)$ applying fourth order Runge–Kutta method, with $h = 0.05$.

Solution

$$f(x, y) = x^2 + y^2,\ x_0 = 1,\ y_0 = 1.2,\ h = 0.05$$

$$\therefore k_1 = hf(x_0, y_0) = (0.05)\,[x_0{}^2 + y_0{}^2]$$

$$= (0.05)\,[1^2 + (1.2)^2] = 0.122$$

$$k_2 = hf\left(x_0 + \frac{h}{2}, y_0 + \frac{k_1}{2}\right)$$

$$= (0.05)\,[f(x_0 + 0.025, y_0 + 0.061]$$

$$= (0.05)\,[f(1.025, 1.261)]$$

$$= (0.05)\,[(1.025)^2 + (1.261)^2] = 0.1320$$

$$k_3 = hf\left(x_0 + \frac{h}{2}, y_0 + \frac{k_2}{2}\right)$$

$$= (0.05)\,f(1 + 0.025,\ 1.2 + 0.066)$$

$$= (0.05)\,f(1.025,\ 1.266)$$

$= (0.05)\,[(1.025)^2 + (1.266)^2] = 0.1326$ and $k_4 = h\,f(x_0 + h, y_0 + k_3)$

$$= (0.05)\,f(1 + 0.05,\ 1.2 + 0.1326)$$

$$= (0.05)\,f(1.05,\ 1.3326)$$

$$= (0.05)\,[(1.05)^2 + (1.3326)^2] = 0.1439$$

$$\therefore y_1 = y(1.05) = y_0 + \frac{1}{6}(k_1 + 2k_2 + 2k_3 + k_4)$$

$$= 1.2 + \frac{1}{6}[0.122 + 2(0.1320) + 2(0.1326) + 0.1439]$$

$$= 1.2 + \frac{1}{6}[0.7951] = 1.3325$$

Predictor–Corrector Methods

Milne's Predictor Formula

$$y_{n+1}^p = y_{n-3} + \frac{4h}{3}\,(2y_{n-2} - y_{n-1} + 2y_n)$$

Milne's Corrector Formula

$$y_{n+1}^c = y_{n-1} + \frac{h}{3}\,[y_{n-1} + 4y_n + y_{n+1}{}^p]$$

Adams–Bashforth Predictor Formula

$$y_{n+1}^p = y_n + \frac{h}{24}[55y_n - 59y_{n-1} + 37y_{n-2} - 9y_{n-3}]$$

Adams–Moulton Corrector Formula

$$y_{n+1}^c = y_n + \frac{h}{24}\,[9y_{n+1}^p + 19y_n - 5y_{n-1} + y_{n-2}]$$

Exercises

1. Three of the roots of the equation $x^4 + lx^3 + mx^2 + nx + 24 = 0$ are 3, 1 and –2. Which of the following could be the value of $l + m - n$?

(A) 0 (B) 1
(C) 2 (D) 3

2. If one of the roots of the equation $x^3 + 5x^2 - 12x - 36 = 0$ is thrice another root, then the third root is

(A) –6 (B) 3
(C) –2 (D) $-\frac{89}{13}$

3. If the equation $x^6 + 5x^5 + 11x^4 + 34x^2 + 20x + 24 = 0$ has exactly four non-real roots, then the number of negative roots is

(A) 1 (B) 0
(C) 3 (D) 2

4. A student finds, by trial, two negative and one positive root(s) of the equation $x^5 + 5x^4 + 2802x + 3024 = 103x^3 + 329x^2$. How many non–real roots does the equation have?

(A) 0 (B) 1
(C) 2 (D) 4

5. If the equation $3x^4 - 13x^3 + 7x^2 + 17x + a - 10 = 0$ has exactly three positive roots, then a can be

(A) 11 (B) 4
(C) 13 (D) 12

6. If two of the roots of the equation $x^3 + 3x^2 - 10x - 24 = 0$ are such that one is twice the other, then the third root is

(A) –4 (B) –3
(C) –2 (D) 3

7. If 2.236146 is an approximation to $\sqrt{5}$, then the relative error is

(A) 3.4883×10^{-5} (B) 4.8383×10^{-5}
(C) 8.3483×10^{-4} (D) 5.8438×10^{-4}

8. The least number of terms required to be considered in the Taylor's series approximation of $f(x) = \dfrac{1}{(2+x)}$ about $x = 0$ such that the truncation error is at most 5×10^{-4} for $x \in [0, 1]$ is

(A) 3 (B) 5
(C) 6 (D) 8

9. Let $f(x) = x^3 - x - 5 = 0$. By bisection method first two approximations x_0 and x_1 are 1.5 and 2.25 respectively, then x_2 is

(A) 1.625 (B) 1.875
(C) 1.999 (D) None of these

10. Find the fourth approximation of the root of the equation $x^3 + x - 11 = 0$, between 2 and 3, using Bisection method.

(A) 1.925 (B) 2.832
(C) 2.5215 (D) 2.0625

11. The absolute error bisection method is

(A) 2^n (B) $\dfrac{1}{2^n}|b - a|$
(C) $\dfrac{1}{|b-a|}$ (D) $|b - a|2^n$

12. If the first two approximations x_0 and x_1 to a root of $x^3 - x - 4 = 0$ are 1.666 and 1.780 respectively, then find x_2 by Regula–Falsi method.

(A) 1.974 (B) 1.794
(C) 1.896 (D) None of these

13. Find the second approximation to the root of the equation $2x - 5 = 3\sin x$ between (2, 3) using the method of false position.

(A) 2.2523 (B) 2.012
(C) 2.8804 (D) None of these

14. For $N = 28$ and $x_0 = 5.5$, the first approximation to $\sqrt{N}$ by Newton's iteration formula is

(A) 5.295 (B) 5.582
(C) 5.396 (D) None of these

15. The Newton's iterative formula to find the value of $\sqrt[3]{N}$ is

(A) $x_{i+1} = \left(2x_i - \dfrac{N}{x_i^2}\right)$

(B) $x_{i+1} = \dfrac{1}{3}\left(x_i - \dfrac{N}{x_i^2}\right)$

(C) $x_{i+1} = \dfrac{1}{3}\left(2x_i + \dfrac{N}{x_i^2}\right)$

(D) $x_{i+1} = \dfrac{1}{3}\left(2x_i - \dfrac{N}{x_i^2}\right)$

16. Find the second approximation to the cube root of 24 correct to three decimal places using Newton's iterative formula.

(A) 2.695 (B) 2.885
(C) 3.001 (D) None of these

17. The Newton's iterative formula to find the value of $\dfrac{1}{N}$ is

(A) $x_{i+1} = x_i(2 + x_i N)$
(B) $x_{i+1} = x_i(2 - x_i N)$
(C) $x_{i+1} = x_i^2(2 + x_i N)$
(D) None of these

18. Find the reciprocal of 22 using Newton–Raphson method.

(A) 0.0454545 (B) 0.4504504
(C) 0.54054 (D) None of these

19. If the first approximation of the root of $x^3 - 3x - 5 = 0$ is $(x_0 =)$ 2, then find x_1 by Newton–Raphson method.

(A) 2.2806 (B) 2.2790
(C) 2.3333 (D) None of these

20. Find the first approximation of the real root by Newton–Raphson method for $x^4 + x^3 - 7x^2 - x + 5 = 0$ by taking $x_0 = 2$.

(A) 2.066 (B) 2.981
(C) 2.819 (D) None of these

21. If $y = 2.6 + 0.7x$ is a line that fits the data:

x	–2	–1	0	1	2
y	1	2	3	*K*	4

Then the value of K is

(A) 3 (B) 5
(C) 6 (D) 7

22. If a curve $y = ab^x$ is fitted to the following data, then the value of 'b' is

x	–2	–1	0	1	2
y	11	13	20	25	34

(A) 0.2911 (B) 0.9845
(C) 1.3379 (D) 2.0034

23. For a set of 5 pairs of values (x_0, y_0), (x_1, y_1), (x_2, y_2) (x_3, y_3) and (x_4, y_4) of (x, y), if $\Delta^3 y_0 = 4$ and $\Delta^3 y_1 = 10$, then the value of $\nabla^4 y_4$ is

(A) 4 (B) 6
(C) 10 (D) 14

24. The value of $y(1.5)$ computed from the following data using Newton's forward interpolation formula is

x	1	2	3	4	5
y	6	7	12	21	34

(A) 6 (B) 6.5
(C) 7 (D) 7.5

25. The Lagrange's interpolation polynomial corresponding to the pairs of values of x and y given in the following table is

x	1	3	4	7
y	36	16	9	72

(A) $x^3 - 6x^2 + 9x + 36$
(B) $x^3 - 6x^2 + 18x - 45$
(C) $3x^3 + 4x^2 - 5x + 27$
(D) $x^3 - 7x^2 + 5x + 37$

26. The values of $\frac{dy}{dx}$ and $\frac{d^2y}{dx^2}$ at $x = 5$ from the following table respectively are

x	0	1	2	3	4	5
y = f(x)	1	4	9	16	21	28

(A) 15.00 and 26.45
(B) 13.73 and 23.33
(C) 17.13 and 31.42
(D) 21.64 and 43.00

27. The value of $\frac{dy}{dx}$ at $x = 12$ from the table given below is

x	10	15	20	25
y = f(x)	354	332	291	260

(A) –3.9427 (B) 4.6125
(C) –0.4652 (D) 1.3549

28. The magnitude of error when $\frac{dy}{dx}$ at $x = 2$ is found by Newton's forward interpolation formula for $y =$ $y = \frac{1}{x}$ using the following data is

x	2	4	6	8
y = 1/x	0.5000	0.2500	0.1667	0.1250

(A) 0.0005 (B) 0.0025
(C) 0.0125 (D) 0.0625

29. Find the value of $\int_2^3 \frac{1}{1+x^2}dx$ taking four intervals by trapezoidal rule and also find the error when compared to its exact value.

(A) 0.1759, 0.000004 (B) 0.1826, 0.04
(C) 0.1953, 0.004 (D) 0.1423, –0.0004

30. Find $\int_0^1 \frac{x^2}{1+8x^3}dx$ using Trapezoidal rule by taking 4 strips.

(A) 0.0911 (B) 0.9011
(C) 0.1901 (D) None of these

31. The estimate of $\int_{0.5}^{1.5} \frac{dx}{x}$ obtained using Simpson's rule with three point function evaluation exceeds the exact value by

(A) 0.235 (B) 0.068
(C) 0.024 (D) 0.012

32. Find the value of $\int_2^6 x \log x dx$ taking 4 strips by Simpson's $\frac{1}{3}$ rd rule upto four decimals.

(A) 21.8901 (B) 22.8661
(C) 23.6581 (D) None of these

33. Evaluate $\int_0^{\pi/2} \sin x \, dx$ by Simpson's $\frac{1}{3}$ rule using six intervals.

(A) 0.97768 (B) 0.98869
(C) 0.99968 (D) None of these

34. Find the maximum error in evaluating the above when compared to its exact value.

(A) 0.000032 (B) 0.00032
(C) 0.00000032 (D) 0.0032

35. Evaluate $\int_0^3 \frac{1}{2+x^2}dx$ by using Simpson's $\frac{3}{8}$ rule by taking 3 strips.

(A) 0.507 (B) 0.5007
(C) 0.7839 (D) None of these

36. If $\frac{dy}{dx} = 1 - 3xy^2$, y (0) = 0, then by Taylor's method y (0.1) =

(A) 0.02 (B) 0.001
(C) 0.05 (D) 0.1

37. If $\frac{dy}{dx} = 2x + y$, $y(0) = 1$, the Picard's approximate of y upto second degree terms is

(A) $1 + x + x^2$ (B) $1 + x + \frac{x^2}{2}$
(C) $1 - x - \frac{x^2}{2}$ (D) None of these

38. If $y_0 = 1, f(x_0, y_0) = 1.2, f(x_1, y_1^{(0)}) = 1.9312, h = 0.3$, by modified Euler's formula $y_1^{(1)} =$

(A) 1.4696 (B) 1.2015
(C) 1.325 (D) 1.525

39. Using Euler's modified method, find a solution of the equation $\frac{dy}{dx} = x + \left|\sqrt{y}\right|$ with $y(0) = 1$ at $y(0.2)$.

(A) 1.3902 (B) 1.2309
(C) 1.3092 (D) None of these

40. Find k_1, by Runge–Kutta method of fourth order if $\frac{dy}{dx} = 2x + 3y^2$ and $y(0.1) = 1.1165$, $h = 0.1$.

(A) 0.3993 (B) 0.9393
(C) 0.3939 (D) None of these

Direction for questions 41 and 42:

41. Find $y(0.8)$ by Milne's predictor formula, given $\frac{dy}{dx} = x - y^2$, $y_2 = 0.0795$, $y\,(0.6) = 0.1762$, $y_0 = 0.0000$, $y_1^1 = 0.1996$, $y_2^1 = 0.3937$, $y_3^1 = 0.5689$, $h = 0.2$

(A) 0.9304 (B) 0.4930
(C) 0.3049 (D) None of these

42. For the above problem find $y(0.8)$ using Milne's corrector formula.

(A) 0.3046 (B) 0.4036
(C) 0.436 (D) None of these

Direction for questions 43 and 44:

43. Find using the Adams–Bashforth corrector formula y (0.4), for the differential equation $\frac{dy}{dx} = \frac{1}{2}xy$, given $y(0.1) = 1.01, y(0.2) = 1.022, y\,(0.3) = 1.023, y_0^1 = 0, y_1^1 = 0.0505, y_2^1 = 0.1022, y_3^1 = 0.1535$.

(A) 1.5418 (B) 1.0410
(C) 1.4100 (D) None of these

44. For the above differential equation find $y(0.5)$ using Adams–Bashforth predictor formula.

(A) 1.00463 (B) 1.06463
(C) 1.00599 (D) None of these

45. The Runge–Kutta methods has the error of order ______.

(A) 1 (B) 3
(C) 5 (D) 2

Previous Years' Questions

1. Given that one root of the equation $x^3 - 10x^2 + 31x - 30 = 0$, is 5 the other two roots are **[GATE, 2007]**

(A) 2 and 3 (B) 2 and 4
(C) 3 and 4 (D) −2 and −3

2. The following equation needs to be numerically solved using the Newton–Raphson method $x^3 + 4x - 9 = 0$

The iterative equation for this purpose is (k indicates the iteration level) **[GATE, 2007]**

(A) $x_{k+1} = \dfrac{2x_k^3 + 9}{3x_k^2 + 4}$ (B) $x_{k+1} = \dfrac{3x_k^2 + 4}{2x_k^2 + 9}$

(C) $x_{k+1} = x_k - 3x_k^2 + 4$ (D) $x_{k+1} = \dfrac{4x_k^2 + 3}{9x_k^2 + 2}$

3. Three values of x and y are to be fitted in a straight line in the form $y = a + bx$ by the method of least squares. Given : $\Sigma x = 6$, $\Sigma y = 21$, $\Sigma x^2 = 14$, and $\Sigma xy = 46$ the values of a and b are respectively. **[GATE, 2008]**

(A) 2 and 3 (B) 1 and 2
(C) 2 and 1 (D) 3 and 2

4. The table below gives values of a function $F(x)$ obtained for values of x at intervals of 0.25.

X	0	0.25	0.5	0.75	1.0
***F*(*x*)**	1	0.9412	0.8	0.64	0.50

The value of the integral of the function between the limits 0 to 1 using Simpon's rule is **[GATE, 2010]**

(A) 0.7854 (B) 2.3562
(C) 3.1416 (D) 7.5000

5. The square root of a number N is to be obtained by applying the Newton–Raphson iterations to the equation $x^2 - N = 0$. If i denotes the iteration index, the correct iterative scheme will be **[GATE, 2011]**

(A) $x_{i+1} = \dfrac{1}{2}\left(x_i + \dfrac{N}{x_i}\right)$

(B) $x_{i+1} = \dfrac{1}{2}\left(x_i^2 + \dfrac{N}{x_i^2}\right)$

(C) $x_{i+1} = \dfrac{1}{2}\left(x_i + \dfrac{N^2}{x_i}\right)$

(D) $x_{i+1} = \dfrac{1}{2}\left(x_i - \dfrac{N}{x_i}\right)$

6. Find the magnitude of the error (correct to two decimal places) in the estimation of following integral using Simpson's $\frac{1}{3}$ rule. (Take the step length as 1)

$$\int_0^4 (x^4 + 10)dx$$ **[GATE, 2013]**

7. In Newton–Raphson iterative method, the initial guess value (x_{inj}) is considered as zero while finding the roots of the equation: $f(x) = -2 + 6x - 4x^2 + 0.5x^3$. The correction, Δx, to be added to x_{inj} in the first iteration is ______. **[GATE, 2015]**

8. The quadratic equation $x^2 - 4x + 4 = 0$ is to be solved numerically, starting with the initial guess $x_0 = 3$. The Newton–Raphson method is applied once to get a new estimate and then the Secant method is applied once using the initial guess and this new estimate. The estimated value of the root after the application of the Secant method is ______. **[GATE, 2015]**

9. For step-size, $\Delta x = 0.4$, the value of following integral using Simpson's $\frac{1}{3}$ rule is ________.

$$\int_0^{0.8} (0.2 + 25x - 200x^2 + 675x^3 - 900x^4 + 400x^5)dx$$

[GATE, 2015]

10. Newton–Raphson method is to be used to find root of equation $3x - e^x + \sin x = 0$. If the initial trial value for the root is taken as 0.333, the next approximation for the root would be ______. (note: answer up to three decimal) **[GATE, 2016]**

TEST

Engineering Mathematics

Time: 60 Minutes

1. If λ is an eigen value of an orthogonal matrix A then which of the following is always TRUE?

P: $\frac{1}{\lambda}$ is also an eigen value of A

Q: λ is a non-zero eigen value.

(A) P only (B) Q only
(C) Both P and Q (D) Neither P nor Q

2. A fair die is rolled independently four times. The probability that a non-composite number turns up for atleast 3 times is ______.

(A) $\frac{16}{27}$ (B) $\frac{11}{27}$
(C) $\frac{1}{27}$ (D) $\frac{5}{27}$

3. The value of $I = \int_1^2 x^3 \ln x dx$ is ______.

(A) $4\ln 16 - 15$ (B) $4\ln 16 + 15$
(C) $\ln 16 + \frac{15}{16}$ (D) $\ln 16 - \frac{15}{16}$

4. If $x = \ln \frac{y}{x}$, then y has

(A) a local maximum at $x = -1$
(B) a local minimum at $x = -1$
(C) a local maximum at $x = 1$
(D) a local minimum at $x = 1$

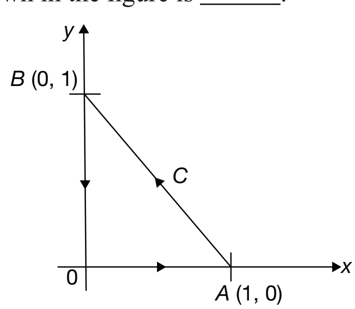
5. The complete solution of the initial value problem $\frac{d^2y}{dx^2} + 4y = 0$; $y(0) = 4$ and $y'(0) = 8$ is ______.

(A) $y = 4(\cos 2x + 2\sin 2x)$
(B) $y = 4\cos 2x$
(C) $y = 4\sin 2x$
(D) None of these

6. The value of $\lim_{n\to 0}\left(\frac{1+2n}{1+3n}\right)^{1/n}$ is ______

(A) e (B) e^{-1}
(C) e^{-2} (D) 1

7. The value of $\oint_c \bar{F}\cdot\overline{dr}$, where $\bar{F} = xy^2\bar{i} - x^2y\bar{j}$ over the path shown in the figure is ______.



(A) $\frac{1}{3}$ (B) $\frac{-1}{3}$
(C) $\frac{1}{6}$ (D) $\frac{-1}{6}$

8. If the eigen values of a matrix $A = \begin{bmatrix} 7 & a \\ 5 & b \end{bmatrix}$ are 10 and 2, then the values of 'a' and 'b' respectively are ______.

(A) $a = 3, b = -5$ (B) $a = -3, b = -5$
(C) $a = 3, b = 5$ (D) $a = 3, b = -5$

9. The Taylor's series expansion of $\frac{\cos x}{\frac{3\pi}{2} - x}$ at $x = \frac{3\pi}{2}$ is given by

(A) $1 - \frac{\left(x - \frac{3\pi}{2}\right)^2}{2!} + \frac{\left(x - \frac{3\pi}{2}\right)^4}{4!} \cdots \infty$

(B) $\left(x - \frac{3\pi}{2}\right) - \frac{\left(x - \frac{3\pi}{2}\right)^3}{3!} + \frac{\left(x - \frac{3\pi}{2}\right)^5}{5!} \cdots \infty$

(C) $1 - \frac{\left(x - \frac{3\pi}{2}\right)^2}{3!} + \frac{\left(x - \frac{3\pi}{2}\right)^4}{5!} \cdots \infty$

(D) $-1 + \frac{\left(x - \frac{3\pi}{2}\right)^2}{3!} - \frac{\left(x - \frac{3\pi}{2}\right)^4}{5!} + \cdots \infty$

10. If a scalar field f and a vector field $\bar{V}$ are related by $f = \text{Div}\,\bar{V}$, which of the following is TRUE?
Here S is a closed surface, enclosing a volume V_S.

(A) $\iint_S \text{curl}\,\bar{V}\cdot d\bar{s} = \iiint_{V_s} f\, dv$

(B) $\iint_S \bar{V}\cdot d\bar{s} = \iiint_{V_s} f\, dv$

(C) $\iiint_S f\, dv = \iiint_{V_s} \text{Div}\,\bar{V}\, d\bar{s}$

(D) $\iint_S \text{curl}\,\bar{V} \times d\bar{s} = \iiint_{V_s} f\, dv$

11. The curl of the vector field $2xy\bar{i} + xy^2z\bar{j} - 6xz^3\bar{k}$ at the point (0, 2, 3) is ______

(A) $2\bar{i} + 5\bar{j} - 6\bar{k}$ (B) $5\bar{i} + 2\bar{j}$
(C) $162\bar{j} + 12\bar{k}$ (D) None of these

12. Let S denote the set of all possible arrangements of letters of the word 'AUTHORISED' without repetitions. If an element in S is selected at random, then what is

the probability that, the letter 'I' appears at a later position, than all other vowels?

(A) $\frac{1}{5}$ (B) $\frac{1}{5!}$

(C) $\frac{4!}{5!}\times 2$ (D) $\frac{4!\times 5!}{10!}$

13. In the process of finding a solution to the equation $f(x) = 4x^2 = 4x - 15 = 0$ by Newton–Raphson method, with initial solution as $x_0 = 1.6$, the method converges to actual solution after _______ interaction, when the calculator is fixed to four decimal places.

(A) 2nd (B) 4th

(C) 6th (D) 8th

14. In the process of finding a root for $x^3 - 3x^2 - 5x + 6 = 0$ in between $a = 3$ and $b = 4$, by Regula Falsi method, the value of the root in the first iteration is _______.

(A) 3.8182 (B) 3.5

(C) 3.6235 (D) 3.3218

15. For the system of linear equations

$x + 2y + 3z = 4$

$2x + 3y + (a - 4)z = b$

$4x + 7y - z = 5$

has infinite number of solutions, then the values of 'a' and 'b' are _______

(A) $a = b = 3$ (B) $a = -b = 3$

(C) $a = b = -3$ (D) $a = -b = -3$

16. Evaluate $\int_0^{\pi/3} f(x)dx$ by Simpson's $\frac{3}{8}$ Rule using the following table

x	0	$\frac{\pi}{18}$	$\frac{\pi}{9}$	$\frac{\pi}{6}$	$\frac{2\pi}{9}$	$\frac{5\pi}{18}$	$\frac{\pi}{3}$
y = f(x)	0	0.1762	0.3638	0.5770	0.8385	1.1907	1.7299

(A) 0.5862 (B) 0.6929

(C) 0.5928 (D) 0.7234

17. If 'r' is the standard deviation of $a_1, a_2, a_3 \ldots a_n$, then the standard deviation of $ka_1 + 1, ka_2 + 1, ka_3 + 1, \ldots, ka_n + 1$ is

(A) kr (B) $kr + 1$

(C) $\frac{r}{k} - 1$ (D) $\frac{r}{k}$

18. If $\bar{a} = \bar{i} + \bar{j} - 2\bar{k}$ and $\bar{b} = \bar{i} - 2\bar{j} + \bar{k}$, then determinant of the matrix $\begin{bmatrix} \bar{a}\cdot\bar{a} & \bar{a}\cdot\bar{b} \\ \bar{b}\cdot\bar{a} & \bar{b}\cdot\bar{b} \end{bmatrix}$, where $\bar{a}\cdot\bar{b}$ denotes the dot product of the vector $\bar{a}$ and $\bar{b}$ is _______.

(A) 9 (B) 27

(C) 18 (D) 54

19. If x and y are two random variables, a and b are any two constants and $E(x)$ and var(x) denote the expectation and the variance of the random variable x, then which of the following is INCORRECT?

(A) var $(ax + b) = a^2$ var(x)

(B) $E(ax + b) = aE(x) + b$

(C) $E(x + y) = E(x) + E(y)$

(D) $E(x^2) = \text{var}(x)$

20. Which of the following pairs of vectors are orthonormal?

(A) $\begin{bmatrix}1\\1\\1\end{bmatrix};\begin{bmatrix}-1\\2\\-1\end{bmatrix}$ (B) $\begin{bmatrix}\frac{1}{\sqrt{4}}\\\frac{1}{\sqrt{4}}\\\frac{1}{\sqrt{2}}\end{bmatrix};\begin{bmatrix}\frac{1}{\sqrt{2}}\\\frac{1}{\sqrt{4}}\\\frac{-1}{\sqrt{4}}\end{bmatrix}$

(C) $\begin{bmatrix}1\\2\\3\end{bmatrix};\begin{bmatrix}3\\2\\1\end{bmatrix}$ (D) $\begin{bmatrix}\frac{1}{\sqrt{2}}\\\frac{-1}{\sqrt{2}}\\0\end{bmatrix};\begin{bmatrix}\frac{1}{\sqrt{3}}\\\frac{1}{\sqrt{3}}\\\frac{-1}{\sqrt{3}}\end{bmatrix}$

21. An integrating factor of the non-exact differential equation $(x^2 + 2xy - 2y^2)dx + (y^2 + 2xy - 2x^2)dy = 0$ is

(A) $x^3 + y^3$

(B) $\frac{1}{x^3 + y^3}$

(C) $x^3 - y^3$

(D) $\frac{1}{x^3 - y^3}$

22. The solution of the differential equation $x\frac{dy}{dx} + y = 3x^2$, $y(1) = 2$ is

(A) $y = x + \frac{1}{x}$

(B) $y = x + \frac{1}{x^2}$

(C) $y = x^3$

(D) $y = x^2 + \frac{1}{x}$

23. If $x = \sqrt{y + \sqrt{y + \sqrt{y + \cdots\infty}}}$, then the value of $\frac{dy}{dx}$ at $x = 1$ is _______.

(A) 0 (B) 1

(C) 4 (D) Undefined

24. Let $f(x) = \begin{Bmatrix} 2x-3\,;\ \text{for } x \geq \dfrac{3}{2} \\ 3-2x\,;\ \text{for } x < \dfrac{3}{2} \end{Bmatrix}$

Then which of the following is true?

(A) $f(x)$ is continuous and differentiable for all real values of x.

(B) $f(x)$ is not continuous at $x = \dfrac{3}{2}$.

(C) $f(x)$ is continuous for real values of x, except $x = \dfrac{3}{2}$.

(D) $f(x)$ is continuous for every x and differentiable for all values of x, except $x = \dfrac{3}{2}$.

25. If $L[f(t)] = \dfrac{2s+3}{s^2+5s+6}$, then the initial value of $f(t)$ is ______.

(A) 1 (B) 2

(C) 3 (D) 6

Engineering Mathematics Test I

Number of Questions: 25 **Time: 60 min.**

Directions for questions 1 to 25: Select the correct alternative from the given choices.

1. $\underset{x\to 0}{Lt}\dfrac{5^x-1}{\sqrt{x^2-x+1}-1}=$

(A) $\log_e 5$ (B) $2\log_e 5$

(C) $-2\log_e 5$ (D) 1

2. If $f(x) = x^2 + 5x - 13$, if $x < 1$,

$x - 8$ if $x \geq 1$, then $\underset{x\to 0}{Lt} f(x) =$

(A) –8 (B) –7

(C) 7 (D) does not exist

3. $f(x) = \dfrac{e^{\frac{1}{x}}}{1-e^{\frac{1}{x}}}$. for $x \neq 0$ is

$= 0$ for $x = 0$

(A) continuous at $x = 0$.

(B) not continuous at $x = 0$.

(C) continuous everywhere.

(D) none of these.

4. If $f(x) = a[x - 5] + b[x + 5]$ is continuous at $x = 5$, then the value of $a + b$ ($[x]$ is the greatest integer less than or equal to x) is

(A) 0 (B) 1

(C) 5 (D) 2

5. If $f(x) = \begin{cases}\dfrac{\sqrt{x}-3}{x-9}; \text{for } x\neq 9\\ 3k;\ \text{for } x=9\end{cases}$ is continuous everywhere,

then k is equal to ———.

(A) $\dfrac{1}{2}$ (B) $\dfrac{1}{3}$

(C) $\dfrac{1}{9}$ (D) $\dfrac{1}{18}$

6. If $y = ax^2 + 3\log x + bx$ has its extreme value at $x = 1$ and $x = -1$, then the value of $2a - b$ is

(A) 3 (B) 0

(C) –1 (D) –3

7. If $xy = 6$, then find the minimum value of $2x + 3y$, $x, y \in R^+$.

(A) 12 (B) 15

(C) 9 (D) 6

8. Which of the following functions have neither maximum nor minimum?

(A) $\dfrac{1}{2x}$ (B) $4x + 7$

(C) e^{5x+1} (D) All the above

9. Find the maximum value of the function $f(x) = 3x^4 - 2x^3 - 6x^2 + 6x + 1$ in the interval $[-1, 2]$.

(A) $\dfrac{39}{16}$ (B) 2

(C) 21 (D) 18

10. Let $f(x)$ and $g(x)$ be two continuous functions in $[a, b]$ and differentiable in (a, b) and $g^1(x) \neq 0$ for any $x \in (a, b)$ then there exists at least one value $c \in (a, b)$, by Cauchy mean value theorem which of the following is true?

(A) $\dfrac{f^2(c)}{g^1(c)}=\dfrac{f(b)-g(a)}{g(b)+f(a)}$

(B) $\dfrac{g^1(c)}{f^1(c)}=\dfrac{f(b)+g(b)}{f(a)+f(b)}$

(C) $\dfrac{f^1(c)}{g^1(c)}=\dfrac{f^1(b)-f^1(a)}{g^1(b)-g^1(a)}$

(D) $\dfrac{f'(c)}{g'(c)}=\dfrac{f(b)-f(a)}{g(b)-g(a)}$

11. If the function $f(x) = (\sin 2x)\, e^{-2x}$ satisfies Rolle's theorem in the interval $\left(0,\dfrac{\pi}{2}\right)$, then the value of $c \in \left(0,\dfrac{\pi}{2}\right)$ such that $f'(c) = 0$ is

(A) $\dfrac{\pi}{8}$ (B) $\dfrac{\pi}{4}$

(C) $\dfrac{\pi}{6}$ (D) $\dfrac{\pi}{3}$

12. By using Lagrange's mean value theorem for $f(x) = x(x + 2)(x - 1)$, find c for $c \in (-1, 0)$.

(A) $\dfrac{-1}{3}$ (B) $\dfrac{-3}{4}$

(C) $\dfrac{-2}{3}$ (D) $\dfrac{-4}{5}$

13. If $u = \tan^{-1}\left(\dfrac{x^3-y^3}{x+y}\right)$, then the value of $x\dfrac{\vartheta u}{\vartheta x}+y\dfrac{\vartheta u}{\vartheta y}$ is

(A) $2\sin u$ (B) $2\tan u$

(C) $\sin 2u$ (D) $2\cos 2u$

14. If $f(x, y)$ is a homogeneous function of degree n, then the value of

$y\dfrac{\vartheta^2 f}{\vartheta y^2}+x\dfrac{\vartheta^2 f}{\vartheta x\vartheta y}=$

(A) $n.\frac{\partial f}{\partial x}$ (B) $(n-1)\frac{\partial f}{\partial y}$

(C) $(n-1)\frac{\partial f}{\partial x}$ (D) $n.\frac{\partial f}{\partial y}$

15. If $u = \cos^{-1}\left(\frac{x^3+2y^3-4z^3}{x^7-y^7-z^7}\right)$, then the value of $\sum_{x,y,z} x\frac{\partial u}{\partial x}$ is

(A) $4\cot u$ (B) $-4\tan u$
(C) $-4\cos u$ (D) $-4\sin u$

16. If $z = \ln(x^2 + y^3)$, then

(A) $3x\frac{\partial z}{\partial x} = 2y\frac{\partial z}{\partial y}$

(B) $3x\frac{\partial z}{\partial x} + 2y\frac{\partial z}{\partial y} = 6$

(C) $x\frac{\partial z}{\partial x} - y\frac{\partial z}{\partial y} = 0$

(D) $2y\frac{\partial z}{\partial x} + 3x\frac{\partial z}{\partial y} = 6$

17. The value of the definite integral $\int_0^1 (x^2-2x+3)e^{-xdx}$ is ______.

(A) $3 + 4e$ (B) $3 - 4e$

(C) $3 + \frac{4}{e}$ (D) $3 - \frac{4}{e}$

18. $\int_0^{\frac{\pi}{2}} \frac{3\sec x + 4\operatorname{cosec} x}{\sec x + \operatorname{cosec} x}\,dx =$

(A) $\frac{7\pi}{4}$ (B) $\frac{7}{2}$

(C) $\frac{5\pi}{4}$ (D) $\frac{7\pi}{2}$

19. $\int_0^{\infty} \frac{x^2}{(1+x^2)^{\frac{5}{2}}}dx =$

(A) $\frac{2}{3}$ (B) $\frac{1}{3}$

(C) $\frac{\pi}{6}$ (D) $\frac{\pi}{3}$

20. Evaluate $\int_1^4 \frac{dx}{(x-2)(x-3)}$

(A) $\frac{1}{2}$ (B) $\frac{1}{3}$

(C) $\frac{2}{3}$ (D) diverges

21. $\int_0^{\infty} \frac{dx}{9+x^2} =$

(A) $\frac{\pi}{2}$ (B) –

(C) $\frac{\pi}{6}$ (D) $\frac{\pi}{3}$

22. The area bounded by the cure $y^2 = x + 2$ and $y = x - 4$ (in sq units) is

(A) $20\frac{5}{6}$ (B) $15\frac{5}{6}$

(C) $12\frac{2}{3}$ (D) $18\frac{3}{4}$

23. The area bounded by the curves $y^2 = 9ax$ and $x^2 = 9ay$ is

(A) $54a^2$
(B) $48a^2$
(C) $36a^2$
(D) $27a^2$

24. The volume of the solid formed by the revolution of the area A about y – axis is

(A) $\iint_A 2\pi dxdy$ (B) $\iint_A 2\pi ydxdy$

(C) $\iint_A \pi x^2 dxdy$ (D) $\iint_A \pi y^2 dxdy$

25. The taylor's series expansion of $2e^x + 3\sin x$ about $x = 0$ is

(A) $2 + 5x + x^2 + \frac{x^3}{6} + \frac{x^4}{12} + \frac{x^5}{24} + \ldots\ldots.$

(B) $2 + 5x + x^2 - \frac{x^3}{6} + \frac{x^4}{12} + \frac{x^5}{24} + \ldots\ldots\ldots..$

(C) $2 + 5x + x^2 + \frac{x^3}{6} - \frac{x^4}{12} + \frac{x^5}{24} + \ldots\ldots\ldots$

(D) $2 + 5x + x^2 + \frac{x^3}{+} + \frac{x^4}{12} + \frac{x^5}{24} + \ldots\ldots\ldots\ldots$

Hints and Explanations

1. $\underset{x\to 0}{Lt}\dfrac{5^x-1}{\sqrt{x^2-x+1}-1}\times\dfrac{\sqrt{x^2-x+1}+1}{\sqrt{x^2-x+1}+1}$

$= \underset{x\to 0}{Lt}\dfrac{(5^x-1)\left(\sqrt{x^2-x+1}+1\right)}{x^2-x+1-1}$

$= \underset{x\to 0}{Lt}\dfrac{(5^x-1)\sqrt{x^2-x+1}+1}{x(x-1)}$

$= \underset{x\to 0}{Lt}\dfrac{5^x-1}{x}\underset{x\to 0}{Lt}\dfrac{\sqrt{x^2-x+1}+1}{x-1}.$

$=\log_e 5\times\dfrac{2}{-1}=2\log_e 5$ Choice (C)

2. we know that $\underset{x\to 1}{Lt}\ f(x)=\underset{x\to 1^-}{Lt}\ f(x)=\underset{x\to 1^+}{Lt}\ f(x)$

$\underset{x\to 1^-}{Lt}\ f(x)=\underset{x\to 1^-}{Lt}\ (x^2+5x-13)=-7$

$\underset{x\to 1^+}{Lt}\ f(x)=\underset{x\to 1^+}{Lt}\ (x-8)=-7$

$\therefore\ \underset{x\to 1^-}{Lt}\ f(x)=\underset{x\to 1^+}{Lt}\ f(x)=-7$

$\Rightarrow\ \underset{x\to 1}{Lt}\ f(x)=-7.$ Choice (B)

3. $\underset{x\to 0^-}{Lt}\dfrac{e^{\frac{1}{x}}}{1-e^{\frac{1}{x}}}=\dfrac{0}{1-0}=0$ ----------- (1)

$\underset{x\to 0^+}{Lt}\dfrac{e^{\frac{1}{x}}}{1-e^{\frac{1}{x}}}=\underset{x\to 0^+}{Lt}\dfrac{e^{\frac{1}{x}}}{e^{\frac{1}{x}}\left(e^{\frac{-1}{x}}-1\right)}$

$=\underset{x\to 0^+}{Lt}\dfrac{1}{e^{\frac{-1}{x}}-1}=\dfrac{1}{0-1}=-1$ ------------- (2)

From (1) and (2) $\underset{x\to 0^-}{Lt}\ f(x)\neq\underset{x\to 0^+}{Lt}\ f(x)$

$\therefore\ f(x)$ is not continuous at $x=0$. Choice (B)

4. $f(x)=a[x-5]+b\,[x+5]$

$\therefore\ f(x)=a\,([x]-5)+b([x]+5)$

$\underset{x\to 5^-}{Lt}\ f(x)=\underset{x\to 5^{-1}}{Lt}\ \{a([x]-5)+b\,([x]+5)$

$=-a+9b$ ------ (1)

$\underset{x\to 5^+}{Lt}\ f(x)=\underset{x\to 5^+}{Lt}\ \{a([x]-5)+b\,([x]+5)\}$

$=10\,b$ ---- (2)

As $f(x)$ is continuous at $x=5$

$\Rightarrow\ \underset{x\to 5^-}{Lt}\ f(x)=\underset{x\to 5^+}{Lt}\ f(x)$

$\Rightarrow\ -a+9b=10b$

$\Rightarrow\ a+b=0.$ Choice (A)

5. Given $f(x)=\begin{cases}\dfrac{\sqrt{x}-3}{x-9}, & \text{for } x\neq 9\\ 3k, & \text{for } x=9\end{cases}$

As $f(x)$ is continuous everywhere

$f(x)$ is continuous at $x=9$

$\therefore\ \underset{x\to 9}{Lt}\ f(x)=f(9)$

$\Rightarrow\ \underset{x\to 9}{Lt}\left(\dfrac{\sqrt{x}-3}{x-9}\right)=3k$

$\Rightarrow\ \underset{x\to 9}{Lt}\left(\dfrac{\frac{1}{2\sqrt{x}}}{1}\right)=3k$ (By L'Hospital's Rule)

$\Rightarrow\ \dfrac{1}{2\sqrt{9}}=3k$

$\Rightarrow\ \dfrac{1}{6}=3k$

$\Rightarrow\ k=\dfrac{1}{18}.$ Choice (D)

6. Let $f(x)=ax^2+3\log x+bx$

$f^1(x)=2ax+\dfrac{3}{x}+b$

Given at $x=-1$ and 1 $f(x)$ has extreme values

$\Rightarrow\ f^1(-1)=0$ and $f^1(1)=0$

$f^1(-1)=2a\,(-1)+\dfrac{3}{-1}+b=0$

$\Rightarrow\ -2a+b=3$

$\Rightarrow\ 2a-b=-3.$ Choice (D)

7. Given $xy=6\Rightarrow y=\dfrac{6}{x}$

$2x+3y=2x+\dfrac{3\times 6}{x}$

Let $f(x)=2x+\dfrac{18}{x}$

$f^1(x)=2-\dfrac{18}{x^2}$

$\Rightarrow\ f^{11}(x)=\dfrac{36}{x^3}$ which is always positive as x, y and R^+

For maximum or minimum $f^1(x)=0$

$=2-\dfrac{18}{x^2}=0$

$\Rightarrow\ x=3$

$\therefore\ y=\dfrac{6}{x}$

$\Rightarrow\ y=2$

$\therefore$ At $x=3$ and $y=2$, $2x+3y$ has minimum value

The minimum value is $2(3)+3(2)=12.$ Choice (A)

8. Choice A: Let $f(x) = \dfrac{1}{2x} \Rightarrow f^1(x) \neq 0$ for any real value of x

Choice B: $f_1(x) = 4x + 7 \Rightarrow f_1^1(x) \neq 0$ for any real value of x

Choice C: $f_2(x) = e^{5x+1} \Rightarrow f_2^1(x) \neq 0$ for any real value of x

$\therefore$ None of the options have either maximum or minimum values. Choice (D)

9. Let $f(x) = 3x^4 - 2x^3 - 6x^2 + 6x + 1$

$f^1(x) = 12x^3 - 6x^2 - 12x + 6$

$f^1(x) = 0 \Rightarrow 2x^3 - x^2 - 2x + 1 = 0$

$(x - 1)(x + 1)(2x - 1) = 0$

$\Rightarrow x = \pm 1, \dfrac{1}{2}$

Max of $f(x)$ in $[-1, 2]$ = Max $\{f(-1), f\left(\dfrac{1}{2}\right), f(1), f(2)\}$

$= \text{Max}\left\{-6, \dfrac{39}{16} 2,\ 21\right\} = 21$. Choice (C)

10. Standard result of Cauchy mean value theorem. Choice (D)

11. Given $f(x) = e^{-2x} \sin 2x$

Clearly $f(x)$ is continuous on $\left[0, \dfrac{\pi}{2}\right]$ and differentiable in $\left(0, \dfrac{\pi}{2}\right)$ and $f(0) = f\left(\dfrac{\pi}{2}\right)$ then there exists $c \in \left(0, \dfrac{\pi}{2}\right)$ such that $f^1(c) = 0$

$f^1(x) = \sin 2x\,(-2e^{-2x}) + 2\cos 2x e^{-2x}$

$f^1(c) = 2e^{-2c}(\cos 2c - \sin 2c) = 0$

$\Rightarrow \sin 2c = \cos 2c$ or $\tan 2c = 1$

$\Rightarrow c = \dfrac{\pi}{8} \in \left(0, \dfrac{\pi}{2}\right)$

The required value of $c = \dfrac{\pi}{8}$. Choice (A)

12. Given $f(x) = x(x + 2)(x - 1)$

Clearly $f(x)$ is continuous on $[-1, 0]$ and differentiable on $(-1, 0)$

$a = -1, b = 0;$

$f(b) = 0, f(a) = (-1)(1)(-2) = 2$

$f^1(x) = 3x^2 + 2x - 2$ and $f^1(c) = 3c^2 + 2c - 2$

By Lagrange's mean value theorem

$$f^1(c) = \frac{f(b) - f(b)}{b - a}$$

$\Rightarrow 3c^2 + 2c - 2 = \dfrac{0 - 2}{1}$

$\Rightarrow 3c^2 + 2c = 0$

$c(3c + 2) = 0 \Rightarrow c = 0$ or $c = \dfrac{-2}{3}$ As $c \neq 0$,

$c = \dfrac{-2}{3} \in (-1, 0)$. Choice (C)

13. $U = \tan^{-1}\left(\dfrac{x^3 - y^3}{x + y}\right) \Rightarrow \tan u = \dfrac{x^3 - y^3}{x + y}$

Let $x = kx$ and $y = ky$ then

$\text{tanu} = \dfrac{k^3(x^3 - y^3)}{k(x + y)} = k^2\left(\dfrac{x^3 - y^3}{x + y}\right) = f(x)$ say

$\therefore$ f is a homogeneous function of degree 2

$\therefore$ By Euler's theorem $x \dfrac{\partial f}{\partial x} + \dfrac{\partial f}{\partial y} = = n(f)$ (n is degree of f)

$= x.\dfrac{\partial(\tan u)}{\partial x} + y\dfrac{\partial(\tan u)}{\partial y} = 2\tan u$

$= x\sec^2 u \cdot \dfrac{\partial u}{\partial x} + y\ \sec^2 u\ \dfrac{\partial u}{\partial y}\ \dfrac{\partial u}{\partial y} = 2\tan u$

$\therefore\ x\dfrac{\partial u}{\partial x} + y\dfrac{\partial u}{\partial y} = \sin 2u$. Choice (C)

14. Given $f(x, y)$ is a homogeneous function of degree n then by Euler's theorem we know that x $\dfrac{\partial f}{\partial x} + y\dfrac{\partial f}{\partial y}$

$= nf$ ------- (1)

Differentiating (1) w. r. to y partially we have

$$x.\frac{\partial^2 f}{\partial x \partial y} + \frac{\partial f}{\partial y} + y.\frac{\partial^2 f}{\partial y^2} = n.\frac{\partial f}{\partial y}$$

$\Rightarrow y\dfrac{\partial^2 f}{\partial y^2} + x\dfrac{\partial^2 f}{\partial x \partial y} = (n-1)\dfrac{\partial f}{\partial y}$ Choice (B)

15. $U = \cos^{-1}\left(\dfrac{x^3 + 2y^3 - 4z^3}{x^7 - y^7 - z^7}\right)$

$\Rightarrow \cos u = \dfrac{x^3 + 2y^3 - 4z^3}{x^7 - y^7 - z^7} = f(\text{say})$

Clearly f is a homogeneous function of degree – 4

$\therefore$ By Euler's theorem $x.\dfrac{\partial f}{\partial x} + y\dfrac{\partial f}{\partial y} + z\dfrac{\partial f}{\partial z} = n.f$

$\therefore\ x\dfrac{\partial(\cos u)}{\partial x} + y\dfrac{\partial(\cos u)}{\partial y} + z\dfrac{\partial(\cos u)}{\partial z}s = -4.\cos u$

$= -\left(x.\dfrac{\partial u}{\partial x}.(\sin u) + y.\dfrac{\partial u}{\partial y}(\sin u) + z\dfrac{\partial u}{\partial z}(\sin u)\right)$

$= -4\cos u$

$\therefore\ x\dfrac{\partial u}{\partial x} + y\dfrac{\partial u}{\partial y} + z\dfrac{\partial u}{\partial z} = 4\cot u$. Choice (A)

16. Given $z = \text{in}\,(x^2 + y^3)$

$$\Rightarrow \frac{\partial z}{\partial x} = \frac{2x}{x^2+y^3} \text{ and } \frac{\partial z}{\partial y} = \frac{3y^2}{x^2+y^3}$$

Consider $3x\frac{\partial z}{\partial x} + 2y\frac{\partial z}{\partial y} = \frac{6x^2}{x^2+y^3} + \frac{6y^3}{x^2+y^3}$

$$= \frac{6(x^2+y^3)}{x^2+y^3} = 6.$$

Choice (B)

17. We have $\int_0^1 (x^2-2x+3)e^{-x}dx$

$= (x^2-2x+3)(-e^{-x}) - (2x-2)(e^{-x}) + 2(-e^{-x})_0^1$

$= (-2e^{-1} - 0 - 2e^{-1}) - (-3 + 2 - 2)$

$= 3 - 4e^{-1} = 3 - \frac{4}{e}$

Choice (D)

18. We know that $\int_0^a f(x)\,dx = \int_0^a f(a-x)\,dx$

Let $I = \int_0^{\frac{\pi}{2}} \frac{3\sec x + 4\text{cosec}\, x}{\sec x + \text{c osec}\, x}$

$$= \int_0^{\frac{\pi}{2}} \frac{3\sec\left(\frac{\pi}{2}-x\right) + 4\,\text{c osec}\left(\frac{\pi}{2}-x\right)}{\sec\left(\frac{\pi}{2}-x\right) + \text{cosec}\left(\frac{\pi}{2}-x\right)}dx$$

$$= \int_0^{\frac{\pi}{2}} \frac{3\text{cosec}\, x + 4\sec x}{\text{cosec}\, x + \sec x}dx$$

$I + I$

$$= \int_0^{\frac{\pi}{2}} \frac{3\sec x + 4\,\text{cosec}\, x}{\text{cosec}\, x + \text{cosec}\, x}dx + \int_0^{\frac{\pi}{2}} \frac{3\text{cosec}\, x + 4\sec x}{\sec x + \text{cosec}\, x}dx$$

$$= \int_0^{\frac{\pi}{2}} \frac{3(\text{cosec}x + \sec x) + 4(\sec x + \text{cosec}x)}{\sec x + \text{cosec}x}dx$$

$$= \int_0^{\frac{\pi}{2}} 7dx = 7(x)_0^{\frac{\pi}{2}} = 7\frac{\pi}{2}$$

$\therefore\quad 2I = 7\frac{\pi}{2}$

$\Rightarrow\quad I = 7\frac{\pi}{4}$

Choice (A)

19. $\int_0^{\infty} \frac{x^2}{(1+x^2)^{\frac{5}{2}}}dx$ Let $x = \tan\theta \Rightarrow dx = \sec^2\theta d\theta$ $L.L$

When $x = 0$ $\theta = 0$ and $U.L$ when $x = \infty$, $\theta = \frac{\pi}{2}$

$$\therefore \int_0^{\frac{\pi}{2}} \frac{\tan^2\theta.\sec^2\theta}{(1+\tan^2\theta)^{\frac{5}{2}}}d\theta$$

$$= \int_0^{\frac{\pi}{2}} \frac{\sin^2\theta.\sec^2\theta}{\cos^2 0.\sec^5\theta}d\theta$$

$$= \int_0^{\frac{\pi}{2}} \sin^2\theta.\cos\theta d\theta = \left.\frac{\sin^3\theta}{3}\right]_0^{\frac{\pi}{2}} = \frac{1}{3}$$

Choice (B)

20. $\int_1^4 \frac{dx}{(x-2)(x-3)}$

$$= \int_1^2 \frac{dx}{(x-2)(x-3)} + \int_2^3 \frac{dx}{(x-2)(x-3)} + \int_3^4 \frac{dx}{(x-2)(x-3)}$$

$I = I_1 + I_2 + I_3$ (say)

Clearly as I has discontinuity at $x = 2$, I_1 diverges

As I_1 diverges I also diverges

$\therefore \int_1^4 \frac{dx}{(x-2)(x-3)}$ diverges.

Choice (D)

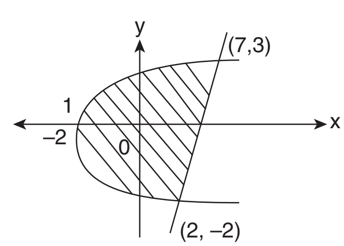
21. $\int_0^{\infty} \frac{dx}{9+x^2} = \underset{a\to\infty}{Lt} \int_0^a \frac{dx}{3^2+x^2} = \underset{a\to\infty}{Lt} \frac{1}{3}\left[\tan^{-1}\frac{x}{3}\right]_0^a$

$\underset{a\to\infty}{Lt} \frac{1}{3}\tan^{-1}\left(\frac{a}{3}\right) = \frac{\pi}{6}$

The given improper integral converges to $\frac{\pi}{6}$

Choice (C)

22.



$y^2 = x + 2$ and $y = x - 4$

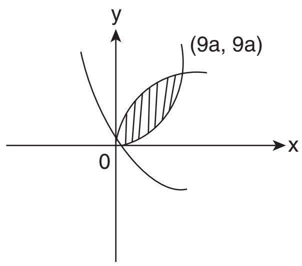
The above two intersect at (2, –2) and (7, 3).

The area bounded $= \int_{-2}^{+3} \left[(y+4) - (y^2-2)\right]dy$

$$= \left[\frac{y^2}{2} + 4y - \frac{y^3}{3} + 2y\right]_{-2}^{3}$$

$= \frac{125}{6} = 20\frac{5}{6}$ sq units. Choice (A)

23.



Given $y^2 = 9ax$ and $x^2 = 9ay$

The above two curves intersect at (0, 0) and ($9a$, $9a$).

The required area = $\int_0^{9a}\left(\sqrt{9ax} - \frac{x^2}{9a}\right)dx$

$= 3\sqrt{a}\left[\frac{x^{\frac{3}{2}}}{\frac{3}{2}}\right]_0^{9a} - \frac{1}{9a}\left(\frac{x^3}{3}\right)_0^{9a}$

$= 2\sqrt{a}\left((9a)^{\frac{3}{2}}\right) - \frac{1}{27a}(9a)^3$

$= 54a^2 - 27a^2 = 27a^2$. Choice (D)

24. Standard Result. Choice (A)

25. We have $2e^x + 3\sin x$

$= 2\left(1 + x + \frac{x^2}{2!} + \frac{x^3}{3!} + \frac{x^4}{4!}.....\right) + 3\left(x - \frac{x^3}{3!} + \frac{x^5}{5!} - \frac{x^7}{7!}.....\right)$

$= \left(2 + 2x + 2\frac{x^2}{2!} + 2.\frac{x^3}{3!} + 2\frac{x^4}{4!} + 2\frac{x^5}{5!} + ...\right)$

$+ \left(3x - 3\frac{x^3}{3!} + 3.\frac{x^5}{5!} - 3\frac{x^7}{7!} + ...\right)$

$= 2 + 5x + x^2 - \frac{x^3}{3!} + \frac{x^4}{12} + \frac{x^5}{24} + ...$ Choice (B)

Engineering Mathematics Test 2

Number of Questions: 25 **Time: 60 min.**

(Ordinary Differential Equations, Calculus (Vector Calculus))

Directions for questions 1 to 25: Select the correct alternative from the given choices.

1. The directional derivative of $f(x, y) = x^3y^2 + 3xy$ at (1, 2) in the direction of unit vector which makes an angle of $\frac{\pi}{4}$ with the x-axis is ________.

(A) $16\sqrt{2}$ (B) $8\sqrt{2}$

(C) $\frac{15}{\sqrt{2}}$ (D) $\frac{25}{\sqrt{2}}$

2. If the vector $e^{px-y-z}\left(\bar{i}+\bar{j}+\bar{k}\right)$ is solenoidal, then the value of p is ______.

(A) –3 (B) 3

(C) –2 (D) 2

3. Evaluate $\int_c \left(x^2+3yz\right)ds$ where c is the curve defined by $x = 6y$; $z = 4$ from $\left(3, \frac{1}{2}, 4\right)$ to (6, 1, 4).

(A) $15\sqrt{37}$ (B) $2\sqrt{37}$

(C) 199 (D) $37\sqrt{33}$

4. The unit normal vector to the surface $xy^3 + 3yz = 3$ at the point (3, –1, –2) is __________

(A) $\frac{-\bar{i}-3\bar{j}-3\bar{k}}{\sqrt{19}}$ (B) $\frac{-\bar{i}+3\bar{j}-3\bar{k}}{\sqrt{19}}$

(C) $\frac{\bar{i}+3\bar{j}-3\bar{k}}{\sqrt{19}}$ (D) $\frac{\bar{i}-3\bar{j}-3\bar{k}}{\sqrt{19}}$

5. Evaluate the integral $\int_c \left(yz+z+z^2\right)dx + (xz-1)\,dy + (xy+x+2xz)\,dz$ from (2, 3, 3) to (3, 4, 5).

(A) 146 (B) 107

(C) 39 (D) 185

6. Evaluate the integral $\oint_c (x+2y)dx + x^2y\,dy$, C is the triangle with vertices at (0, 0), (3, 0) and (3, 3) taken in that order.

(A) 18 (B) $\frac{45}{4}$

(C) $\frac{37}{3}$ (D) 15

7. Evaluate the surface integral $\iint_S \bar{F}.\bar{n}\,dA$, where $\bar{F} = z^2\,\bar{i} + xy\,\bar{j} + y^2\,\bar{k}$ and S is the portion of the surface of the cylinder $x^2 + y^2 = 49$; $0 \le z \le 5$ included in first octant.

(A) 518 (B) 2590

(C) $\frac{2590}{3}$ (D) 624

8. If $\bar{V} = (2x-y) - yz^2\,j - y^2z\,\bar{k}$, then evaluate $\oint_c \bar{V}.d\bar{r}$ where C is the curve bounding the projection on the semi sphere $x^2 + y^2 + z^2 = 9$, $z > 0$; in the xy plane.

(A) 18 π (B) 6 π

(C) 8 π (D) 9 π

9. If $\bar{r} = 2x\bar{i} + 3y\,\bar{j} + z\bar{k}$ and V is the volume of the sphere $x^2 + y^2 + z^2 = 16$ then $\iint_S \bar{r}.\bar{n}\,dA =$ _______.

(A) 38 π (B) 512 π

(C) 438 π (D) 348 π

10. The work done by the force $\bar{F} = 2xy\bar{i} + y^2\bar{j} + z\bar{k}$ in moving a particle over the circular path $x^2 + y^2 = 9$; $z = 0$ from (3, 0, 0) to (0, 3, 0) is ________.

(A) 17 (B) –12

(C) –9 (D) 6

11. The solution of $3(xdy + ydx) = 2xydy$ when $x = 1$, $y = 1$ is

(A) $3 \log(xy) - 2y + 2 = 0$

(B) $\log(xy) + y - 2 = 0$

(C) $\log x + \log y + 2 = 0$

(D) $\log(xy) - 5y + 2 = 0$

12. Solve $dy = (9x + y - 1)^2\,dx$ when $x = 0$, $y = 1$.

(A) $3 \tan x = 3x + y - 1$

(B) $3 \tan(3x) = 9x + y - 1$

(C) $\tan x = 9x + y - 1$

(D) $3 \tan 3x = 9x - y + 1$

13. The solution of the differential equation $\frac{x\,dy - ydx}{x} = \cos^2\left(\frac{y}{x}\right)dx$ is

(A) $\tan\left(\frac{y}{x}\right) = \log(cx)$ (B) $\tan\left(\frac{y}{x}\right) = x + c$

(C) $\tan^{-1}\left(\frac{y}{x}\right) = \log(cx)$ (D) $\tan\left(\frac{x}{y}\right) = \log x + c$

14. The integrating factor of $\frac{dy}{dx} - y\tan x - \cos x = 0$ is

(A) $\cos x$ (B) $\sin x$
(C) $\sec x$ (D) $\operatorname{cosec} x$

15. Solve the differential equation $\frac{dy}{dx} = \frac{x^2 + y^2}{2xy}$ with the boundary conditions $x = 1, y = 1$.

(A) $x^2 + y^2 = 3$ (B) $x^2 - y^2 = 0$
(C) $x^2 - y^2 = 2$ (D) $x^2 + y^2 = 2$

16. The solution of the differential equation $ydx = (x + 3y^3)dy$ when $x = 1, y = 1$ is

(A) $x = 3y^2 - 1$ (B) $3x = y(2y^2 - 1)$
(C) $2x = y(3y^2 + 1)$ (D) $2x = y(3y^2 - 1)$

17. The particular integral solution of the differential equation

$\frac{d^3y}{dx^3} - 5\frac{d^2y}{dx^2} + 7\frac{dy}{dx} - 3y = e^{4x}\sinh x$ is

(A) $\frac{1}{8}\left[e^{5x} - 2e^{3x}\right]$

(B) $\frac{1}{16}\left[e^{3x} - xe^{-5x}\right]$

(C) $\frac{1}{64}\left[e^{5x} - 8x\,e^{3x}\right]$

(D) $\frac{1}{4}\left[x\,e^{5x} - 2e^{3x}\right]$

18. The solution of the differential equation $(D^3 + 5D^2)y = 4$ is

(A) $y = C_1 + C_2e^{-5x} + \frac{1}{5}x^2$

(B) $y = C_1 + C_2x + C_3e^{-5x} + \frac{2}{5}x^2$

(C) $y = (C_1 + C_2x)\,e^{5x} + \frac{2}{5}x^2$

(D) $y = (C_1 + C_2x)\,e^{x} + \frac{2}{5}x^2 + e^{5x}$

19. The particular integral of the differential equation given by $(D^2 - 2D + 4)y = x^2 e^x$ is

(A) $\frac{1}{9}e^x(3x^2 - 2)$ (B) $\frac{1}{6}e^x(2x^2 - 3)$

(C) $\frac{1}{8}e^x(3x^2 - 1)$ (D) $\frac{1}{3}e^x(2x^2 - 3)$

20. The solution of the differential equation $(D^4 + D^2 + 36D + 52)y = 0$ is

(A) $y = (C_1 + C_2x)e^{-2x} + (C_3 + C_4x)e^{2x}$
(B) $y = (C_1 + C_2x + C_3\cos 3x + C_4\sin 3x)e^{2x}$
(C) $y = (C_1 + C_2x + (C_3\cos 3x + C_4\sin 3x)e^{-2x}$
(D) $y = (C_1 + C_2x)e^{-2x} + (C_3\cos 3x + C_4\sin 3x)e^{2x}$

21. The Laplace Transform of the function $f(t) = t^2\sin 3t$, $t > 0$ is ______.

(A) $\frac{(s^2 - 2s + 9)}{(s^2 + 9)^3}$ (B) $\frac{18(s^2 - 3)}{(s^2 + 9)^3}$

(C) $\frac{-(s^2 - 2s + 9)}{(s^2 + 9)^3}$ (D) $\frac{6(s^2 - 2s + 9)}{(s^2 + 9)^3}$

22. If $u(t - a)$ denotes the unit step function, then the Laplace Transform of $(t^2 + 3)\,u(t - 2)$ is ________.

(A) $\left(\frac{2}{s^3} + \frac{4}{s^2} + \frac{7}{s}\right)e^{-2s}$ (B) $\left(\frac{2}{s^3} + \frac{3}{s}\right)e^{-2s}$

(C) $\left(\frac{2}{s^2} + 3\right)e^{-2s}$ (D) $\left(\frac{1}{s^3} + \frac{4}{s^2} + \frac{7}{s}\right)e^{-2s}$

23. The Laplace Transform of solution of the initial value problem $\frac{d^2y}{dt^2} - 2\frac{dy}{dt} - 8y = 0$, $y(0) = 1$ and $y^1(0) = -2$ will be ____

(A) $\frac{1}{(s-4)(s+2)}$ (B) $\frac{1}{s-4}$

(C) $\frac{-1}{(s-4)(s+2)}$ (D) $\frac{1}{s+2}$

24. The inverse Laplace Transform of $\frac{3}{2}\left[\frac{1}{\sqrt{s^5}} - \frac{1}{\sqrt{s^3}}\right]$ is ______.

(A) $\sqrt{\frac{t}{\pi}}\,(2t - 3)$ (B) $\sqrt{\frac{t}{\pi}}\,(4t - 3)$

(C) $\sqrt{\frac{\pi}{t}}\,(2t + 3)$ (D) $\sqrt{\frac{\pi}{t}}\,(4t + 3)$

25. The inverses Laplace Tranform of $\frac{4(2s + 3)}{(s^2 + 4s + 20)}$ is

(A) $e^{2t}[2\cos 4t - \sin 4t]$
(B) $e^{2t}\{2\sin 4t - \cos 4t]$
(C) $e^{-2t}[2\cos 4t - \sin 4t]$
(D) $e^{-2t}[2\sin 4t - \cos 4t]$

Hints and Explanations

1. Given $f(x, y, z) = x^3 y^2 + 3xy$

$$\nabla f = \frac{\partial f}{\partial x}\bar{i} + \frac{\partial f}{\partial y}\bar{j} = (3x^2 y^2 + 3y)\bar{i} + (2x^3 y + 3x)\bar{j}$$

$$(\nabla f)_{(1,2)} = (12 + 6)\bar{i} + (4 + 3)\bar{j} = 18\bar{i} + 7\bar{j}$$

Given that unit vector makes an angle $\frac{\pi}{4}$ with x-axis

$\therefore$ unit vector must be $\bar{b} = \cos\frac{\pi}{4}\bar{i} + \sin\frac{\pi}{4}\bar{j} = \frac{\bar{i}+\bar{j}}{\sqrt{2}}$

The directional derivative of f in the direction $\bar{b}$ is $\nabla f.\bar{b}$

$$(18\bar{i}+7\bar{j}).\frac{(\bar{i}+\bar{j})}{\sqrt{2}} = \frac{18+7}{\sqrt{2}} = \frac{25}{\sqrt{2}}$$ Choice (D)

2. Given $\bar{V} = e^{px-y-z}(\bar{i}+\bar{j}+\bar{k})$ is solenoidal

We know that if $\bar{V}$ is solenoidal, div $\bar{V} = 0$

$$\frac{\partial V_1}{\partial x} + \frac{\partial V_2}{\partial y} + \frac{\partial V_3}{\partial z} = 0$$

$$= e^{px-y-z}.p + e^{px-y-z}.(-1) + e^{px-y-z}(-1) = 0$$

$\therefore p - 1 - 1 = 0 \Rightarrow p = 2$ Choice (D)

3. Let $x = t$; $y = \frac{t}{6}$; $z = 4$ and $3 \le t \le 6$.

$$ds = \sqrt{\left(\frac{dx}{dt}\right)^2 + \left(\frac{dy}{dt}\right)^2}\,.\,dt = \sqrt{1+\frac{1}{36}}\,dt = \frac{\sqrt{37}}{6}dt$$

$$\int_C (x^2+3yz)\,ds = \int_3^6 \left(t^2+3\frac{t}{6}.4\right)\frac{\sqrt{37}}{6}dt = d\left(\tan\left(\frac{y}{x}\right)\right)$$

$$= \tan\left(\frac{y}{x}\right) = \tan\left(\frac{y}{x}\right)$$ Choice (A)

4. Let $f(x, y, z) = xy^3 + 3yz - 3$

The normal vector to the surface $f(x, y, z)$ is

$$\frac{dy}{dx} - y\tan x - \cos x$$

$$\nabla f = y^3\,\bar{i} + (3xy^2 + 3z)\bar{j} + 3y\bar{k}$$

The normal vector at (3, –1, –2)

$$(\nabla f)_{(3,-1,-2)} = -\bar{i} + (9-6)\bar{j} - 3\bar{k} = -\bar{i} + 3\bar{j} - 3\bar{k}$$

$\therefore$ The unit normal vector to the surface f is $\frac{\nabla f}{|\nabla f|}$

$$= \frac{-\bar{i}+3\bar{j}-3\bar{k}}{\sqrt{19}}$$ Choice (B)

5. $\int (yz+z+z^2)dx + (xz-1)dy + (xy+x+2xz)dz$

Let $f(x, y, z) = yz + z + z^2$

$g(x, y, z) = xz - 1$

$h(x, y, z) = xy + x + 2xz$

$$\frac{\partial f}{\partial y} = z = \frac{\partial g}{\partial x}$$

$$\frac{\partial f}{\partial z} = y + 1 + 2z = \frac{\partial h}{\partial x}$$

$$\frac{\partial g}{\partial z} = x = \frac{\partial h}{\partial y}$$

The integral is independent of the path C.

The integral is exact differential

So there exists a function Φ

Such that $\frac{\partial \phi}{\partial x} = yz + z + z^2$ $\rightarrow$ (1)

$\frac{\partial \phi}{\partial y} = xz - 1$ $\rightarrow$ (2)

$\frac{x}{y} = \int 3y^2 .\frac{1}{y}dy + c = xy + x + 2xz$ $\rightarrow$ (3)

$$\frac{\partial \phi}{\partial x} = yz + z + z^2$$

Integrate wrt x.

$\phi = xyz + xz + xz^2 + Q(y, z)$ $\rightarrow$ (4)

Diff wrt y

$\frac{\partial \phi}{\partial y} = xz + \phi^1(y, z)$ $\rightarrow$ (5)

Comparing (2) and (5)

$\phi^1(y, z) = -1 \Rightarrow \phi(y, z) = -y + R(z)$

$\therefore$ $\phi = xyz + xz + xz^2 - y + R(z)$ $\rightarrow$ (6)

$$\frac{ydx - xdy}{y^2} = 3y\,dy = xy + x + 2xz + R^1(z)$$

Comparing (3) and (6)

$R^1(z) = 0$

$\Rightarrow$ $R(z) = k$

$\therefore$ $\phi = xyz + xz + xz^2 - y + k$

$$\therefore \int_{(3,4,5)} (yz+z+z^2)dx + (xz-1)dy + (xy+x+2xz)dz$$

$$= \int_{(2,3,3)} d(xyz + xz + xz^2 - y)$$

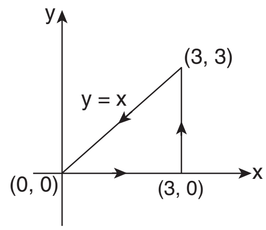
$$= xyz + xz + xz^2 - y\Big]_{(2,3,3)}^{(3,4,5)}$$

$= 146 - 39 = 107$ Choice (B)

6. $\oint_C (x+2y)dx + x^2 y\,dy$

$f(x, y) = x + 2y$ $\quad g(x, y) = x^2 y$

$$\frac{\partial f}{\partial y} = 2 \text{ and } \frac{\partial g}{\partial x} = 2xy$$



By green's theorem

$$\oint_C (x+2y)dx + x^2 y dy = \iint_R (2xy-2)dxdy$$

$$= \int_0^3 \int_0^x (2xy-2)dydx$$

$$= \int_0^3 \left. xy^2 - 2y\right]_0^x dx$$

$$= \int_0^3 (x^3 - 2x)dx$$

$$= \left.\frac{x^4}{4} - x^2\right]_0^3 = \frac{81}{4} - 9 = \frac{45}{4}$$

Choice (B)

7. Let $f(x, y, z) = x^2 + y^2 - 49$
Surface then
grad $f = 2x\bar{i} + 2y\,j$

$$\overset{\Delta}{n} = \frac{\text{grad } f}{|\text{grad } f|} = \frac{2x\bar{i}+2y\,j}{2\sqrt{x^2+y^2}} = \frac{1}{7}\left(x\bar{i}+y\bar{j}\right)$$

Consider the projection of S on the yz plane. It is a rectangle with sides 7 and 5.

$$dA = \frac{dy\,dz}{\bar{n}.\bar{i}} = \frac{dy\,dz}{\frac{x}{7}}$$

$$\bar{F}.\overset{\Delta}{n} = \left(z^2\,\bar{i} + xy\,\bar{j} + y^2\,\bar{k}\right).\left(\frac{x\bar{i}+y\bar{j}}{7}\right) = \frac{xz^2+xy^2}{7}$$

$$\therefore \quad \iint_S \bar{F}.\overset{\Delta}{n}\,dA = \iint_s \frac{xz^2+xy^2}{7}\,\frac{dy\,dz}{\frac{x}{7}}$$

$$= \int_{z=0}^{5}\int_{y=0}^{7} \left(z^2+y^2\right)dy\,dz = \int_{z=0}^{5} \left. z^2 y + \frac{y^3}{3}\right]_0^7 dz$$

$$= \int_{z=0}^{5} (7z^2 + \frac{343}{3})dz$$

$$\left.\frac{7z^3}{3} + \frac{343}{3}z\right]_0^5 = \frac{875}{3} + \frac{1715}{3} = \frac{2590}{3}$$

Choice (C)

8. Given $\bar{V} = (2x-y)\bar{i} - yz^2\,\bar{j} - y^2 z\,\bar{k}$

$$\oint \bar{V}.d\bar{r} = \iint_S \nabla\times V.ndA$$

(By stoke's theorem)

$$\nabla\times V = \begin{vmatrix} \bar{i} & \bar{j} & \bar{k} \\ \frac{\partial}{\partial x} & \frac{\partial}{\partial y} & \frac{\partial}{\partial z} \\ 2x-y & -yz^2 & -y^2 z \end{vmatrix}$$

$$= i(-2yz + 2yz) - j(0) + \bar{k}\,(0 - (-1)) = \bar{k}$$

$f(x, y, z) = x^2 + y^2 + z^2 - 9$ be the surface

grad $f = 2x\bar{i} + 2y\,\bar{j} + 2z\bar{k}$

$$\hat{n} = \frac{\text{grad } f}{|\text{grad } f|} = \frac{2x\bar{i}+2y\bar{j}+2z\bar{k}}{2\sqrt{x^2+y^2+z^2}}$$

$$\hat{n} = \frac{x\bar{i}+y\bar{j}+z\bar{k}}{3}$$

$$\therefore \quad \nabla\times\bar{V}.\overset{\Delta}{n} = \bar{k}.\frac{\left(x\bar{i}+y\bar{j}+z\bar{k}\right)}{3} = \frac{z}{3}$$

$$\iint_S \nabla\times V.\overset{\Delta}{n}\,dA = \iint_R \frac{z}{3}\frac{dx\,dy}{\bar{n}.\bar{k}}$$

$$= \iint_R \frac{z}{3}\frac{dx\,dy}{\frac{z}{3}} = \iint_R dx\,dy$$

Area of circular region in x-y plane $= 9\pi$ Choice (D)

9. By using divergence theorem

$$\iint_S \bar{r}.\bar{n}\,dA = \iiint_V div\,\bar{r}\,dV$$

$$\bar{r} = 2x\,\bar{i} + 3y\,\bar{j} + z\bar{k}$$

$$\text{Div } \bar{r} = 2+3+1 = 6 = \iiint_V div\,\bar{r}\,dv = \iiint_V 6dV = 6V$$

V is the volume of the sphere

$$= 6 \times \frac{4}{3} \times \pi(4)^3 = 512\,\pi$$

Choice (B)

10. Given $\bar{F} = 2xy\bar{i} + y^2\,\bar{j} + z\bar{k}$

Work done by the force is $\int_C F.d\bar{r}$

$$\bar{r} = x\bar{i} + y\bar{j} + z\bar{k} \Rightarrow d\bar{r} = dxi + dy\,\bar{j} + dz\bar{k}$$

$$\bar{F}.d\bar{r} = \left(2xy\bar{i} + y^2\,\bar{j} + z\bar{k}\right).\left(dx\bar{i} + dy\,\bar{j} + dz\bar{k}\right)$$

$$\bar{F}.d\bar{r} = 2xy\,dx + y^2\,dy + z\,dz$$

$$\int_C F.d\bar{r} = \int (2xy\,dx + y^2\,dy + z\,dz$$

Convert x, y, z in parametric form
$x = 3\cos t, y = 3\sin t, z = 0$
$dx = -3\sin t\, dt, dy = 3\cos t\, dt$
The limit of t is 0 to $\pi/2$

$$\int_C F.d\bar{r} = \int_0^{\frac{\pi}{2}} 2.3\cos t.3\sin t.(-3\sin t)\,dt + 9\sin^2 t\, 3\cos t\, dt$$

$$= -\int_0^{\frac{\pi}{2}} 27\sin^2 t\cos t\, dt$$

$$= -27\left.\frac{\mathrm{Sin}^3 t}{3}\right]_0^{\frac{\pi}{2}} = \frac{-27}{3} = -9$$ Choice (C)

11. $3(x\,dy + y\,dx) = 2xy\,dy$
$x(3-2y)\,dy + 3y\,dx = 0$

$$\frac{(3-2y)dy}{y} + \frac{3dx}{x} = 0$$

$$\int\left(\frac{3}{y} - 2\right)dy + 3\int\frac{dx}{x} = C_1$$

$3\log y - 2y + 3\log x = \log C$
$3\log(xy) - 2y = \log C$
Given when $x = 1, y = 1$
$\Rightarrow\ -2 = \log C$
$\therefore$ The required solution is $3\log(xy) - 2y + 2 = 0$.
Choice (A)

12. $dy = (9x + y - 1)^2 dx$ or $\frac{dy}{dx} = (9x + y - 1)^2$ ……. (1)

Let $9x + y - 1 = u$

$$9 + \frac{dy}{dx} = \frac{du}{dx}$$

$$\Rightarrow \frac{du}{dx} - 9 = u^2 \text{ (from 1)}$$

$$\frac{du}{dx} = u^2 + 9 \text{ or } \frac{du}{u^2+9} = dx$$

$$\int\frac{du}{u^2+9} = \int dx + c \Rightarrow \frac{1}{3}\mathrm{Tan}^{-1}\left(\frac{u}{3}\right) = x + c$$

i.e., $\frac{1}{3}\tan^{-1}\left(\frac{9x+y-1}{3}\right) = x + c$ or

$3\tan(3x + 3c) = 9x + y - 1$, when $x = 0, y = 1$

$$\frac{1}{3}\tan^{-1}(0) = C \Rightarrow C = 0$$

$\therefore$ The required solution is $3\tan(3x) = 9x + y - 1$.
Choice (B)

13. $\frac{x\,dy - y\,dx}{x} = \cos^2\left(\frac{y}{x}\right)dx$

Dividing both sides by $x\cos^2\left(\frac{y}{x}\right)$, we have

$$\left(\frac{x\,dy - y\,dx}{x^2}\right)\sec^2\left(\frac{y}{x}\right) = \frac{dx}{x}$$

$$d\left(\tan\left(\frac{y}{x}\right)\right) = d(\log x)$$

Integrating on both sides, we have

$$\tan\left(\frac{y}{x}\right) = \log x + \log c$$

$$\tan\left(\frac{y}{x}\right) = \log(cx).$$ Choice (A)

14. $\frac{dy}{dx} - y\tan x - \cos x = 0$

$$\Rightarrow \frac{dy}{dx} - y\tan x = \cos x$$

which is in the form of $\frac{dy}{dx} + Py = Q$

The integrating factor of above equation $e^{\int p dx} = e^{-\int \tan x\, dx}$
$= e^{\log\cos x} = \cos x$. Choice (A)

15. $\frac{dy}{dx} = \frac{x^2+y^2}{2xy}$ --------- (1)

$(x^2 + y^2)dx - 2xy\,dy = 0$
which is in the form of $Mdx + Ndy = 0$
Here $M = x^2 + y^2$, $N = -2xy$

$$\frac{\partial M}{\partial y} = 2y, \frac{\partial N}{\partial x} = -2y$$

$$\Rightarrow \text{ Here } \frac{1}{N}\left(\frac{\partial M}{\partial y} - \frac{\partial N}{\partial x}\right) = \frac{-1}{2xy}(2y + 2y) = \frac{-2}{x}$$

which is a function of x alone say $f(x)$ then the Integrating factor ($I.F$) is

$$e^{\int f(x)dx} = e^{\int\frac{-2}{x}dx} = e^{-2\log x} = e^{\log x^{-2}} = x^{-2}$$

Multiplying (1) by $I.F$, we have

$\left(1 + \frac{y^2}{x^2}\right)dx - \frac{2y}{x}dy = 0$ which is in the form of $M\,dx + N\,dy = 0$

$\therefore$ Solution is

$$\int m\,dx(\text{taking } y \text{ constant}) + \int(\text{terms of } N \text{ not containing } x)dy = C$$

$$\Rightarrow \int\left(1 + \frac{y^2}{x^2}\right)dx + \int 0\,dy$$

$$x - \frac{y^2}{x} = C$$

Given when $x = 1, y = 1 \Rightarrow C = 0$

$\therefore$ The required solution is $x - \frac{y^2}{x} = 0$ or $x^2 - y^2 = 0$.

Choice (B)

16. $y\,dx = (x + 3y^3)\,dy$

or $y\frac{dx}{dy} = x + 3y^3$

or $\frac{dx}{dy} - \frac{x}{y} = 3y^2$, which is a linear equation in y of the form $\frac{dx}{dy} + px = Q$ here $P = -\frac{1}{y}$ and $Q = 3y^2$

$\therefore$ $I.F = e^{\int pdy} = e^{-\int \frac{1}{y}dy} = e^{\log y^{-1}} = \frac{1}{y}$

$\therefore$ The solution is $x \,.\, e^{I.F} = \int Q.e.^{I.F}.dy$

$$\Rightarrow \frac{x}{y} = \int 3y^2.\frac{1}{y}dy + c$$

$$\frac{x}{y} = \frac{3y^2}{2} + c$$

Given when $x = 1, y = 1$

$\Rightarrow$ $1 = \frac{3}{2} + c$ or $c = \frac{-1}{2}$

$\therefore$ The required solutions is $\frac{x}{y} = \frac{3y^2}{2} - \frac{1}{2}$

i.e., $2x = y(3y^2 - 1)$

Alternate solution:

Given

$$ydx = (x + 3y^3)dy$$

$$ydx - xdy = 3y^3\,dy$$

$$\frac{ydx - xdy}{y^2} = 3y\,dy$$

$$d\left(\frac{x}{y}\right) = 3y\,dy$$

Integrating on both sides

$$\left(\frac{x}{y}\right) = \left(\frac{3y^2}{2}\right) + C$$

$2x = y(3y^2 + C_1)$

Given $x = 1; y = 1$

$2 = 3 + C_1 \Rightarrow C_1 = -1$

$\therefore$ required solution is $2x = y\,(3y^2 - 1)$. Choice (D)

17. $\frac{d^3y}{dx^3} - 5\frac{d^2y}{dx^2} + 7\frac{dy}{dx} - 3y = e^{4x}\sin hx$

i.e., $(D^3 - 5D^2 + 7D - 3)y$

$$= e^{4x}\left[\frac{e^x - e^{-x}}{2}\right] = \frac{e^{5x} - e^{3x}}{2}$$

i.e., $(D - 1)^2\,(D - 3)y = \frac{e^{5x} - e^{3x}}{2}$

Particular integral is $\frac{e^{5x} - e^{3x}}{(D-1)^2(D-3)}.\frac{1}{2}$

$$\frac{1}{2}\frac{e^{5x}}{(D-1)^2(D-3)} - \frac{1}{2(D-1)^2(D-3)}.e^{3x}$$

$$= \frac{1}{2}.\frac{e^{5x}}{(5-1)^2(5-3)} - \frac{1}{2}\frac{1}{(3-1)^2}.\frac{e^{3x}}{(D-3)}$$

$$= \frac{e^{5x}}{64} - .\frac{1}{8}.x.e^{3x} = \frac{1}{64}\left[e^{5x} - 8x\,e^{3x}\right]$$

Choice (C)

18. $(D^3 + 5D^2)\,y = 4$

Auxiliary equation $m^3 + 5m^2 = 0$

$m^2(m + 5) = 0$

$\Rightarrow$ $m = 0, 0, -5$

$\therefore$ $C.F$ is $(C_1 + C_2x)e^{0.x} + C_3e^{-5x} = (C_1 + C_2x) + C_3e^{-5x}$

$$P.I = \frac{1}{D^2(D+5)}4.e^{0.x}$$

$$= \frac{1}{5}.\frac{1}{D^2}4 = \frac{1}{5}\left[\frac{1}{D^2}.4\right] = \frac{2x^2}{5}.$$

Complementary Solution $y = C.F + P.I$

$$y = C_1 + C_2x + C_3\,e^{-5x} + \frac{2x^2}{5}$$

Choice (B)

19. $(D^2 - 2D + 4)\,y = x^2\,e^x$

$$P.I = \frac{e^x\,x^2}{(D^2 - 2D + 4)} = e^x\frac{1}{(D+1)^2 - 2(D+1) + 4}.x^2$$

$$= e^x\frac{1}{D^2 + 3}x^2$$

$$\Rightarrow e^x\frac{1}{3\left(1 + \frac{D^2}{3}\right)}x^2 = e^x\frac{1}{3}\left(1 + \frac{D^2}{3}\right)^{-1}x^2$$

$$= e^x\frac{1}{3}\left(1 - \frac{D^2}{3}\right)x^2$$

$$= e^x\frac{1}{3}\left(x^2 - \frac{2}{3}\right) = e^x\frac{1}{9}(3x^2 - 2)$$

Choice (A)

20. $(D^4 + D^2 + 36D + 52)\,y = 0$

Auxiliary equation of the above is $m^4 + m^2 + 36m + 52 = 0$

By trail and error we notice m = –2, –2, are the roots of the above

$\therefore$ $(m + 2)^2\,(m^2 - 4m + 13) = 0$

The roots are $m = -2, -2$, and $2 \pm 3i$

$\therefore$ The solution is

$y = (C_1 + C_2x)e^{-2x} + e^{2x}\,(C_3\cos 3x + C_4\sin 3x)$

Choice (D)

21. Let $g(t) = \sin 3t \Rightarrow f(t) = t^2 g(t)$

Now $L[g(t)] = L:[\sin 3t] = \dfrac{3}{s^2+9}$

$$L[f(t)] = L[t^2 g(t)] = \frac{d^2}{ds^2}\ (L[g(t)])$$

$$= \frac{d}{ds}\left(\frac{d}{ds}\left(\frac{3}{s^2+9}\right)\right)$$

$$= \frac{d}{ds}\left(\frac{-6s}{\left(s^2+9\right)^2}\right)$$

$$= \frac{-6\left[\left(s^2+9\right)^2.1 - s.2\left(s^2+9\right).2s\right]}{\left(s^2+9\right)^4}$$

$$= \frac{-6\left[s^2+9-4s^2\right]}{\left(s^2+9\right)^3}$$

$$= \frac{18(s^2-3)}{\left(s^2+9\right)^3}$$ Choice (B)

22. Let $f(t) = (t^2 + 3)\ u\ (t-2)$

$L\ [f(t)] = L\ [(t^2 + 3)\ u\ (t-2)]$

$L\ [((t-2) + 2)^2 + 3)\ u\ (t-2)]$

$\therefore\ \ L\ [f(t)] = L\ [(t-2)^2 + 4(t-2) + 7)\ u\ (t-2)]$ ----- (1)

Let $g\ (t) = t^2 + 4t + 7$

$\therefore\ \ L\ [g\ (t)] = L\ [t^2 + 4t + 7] = L\ [t^2] + 4L[t] + 7L\ [1]$

$\therefore\ \ L\ [g\ (t)] = \dfrac{2}{s^3} + \dfrac{4}{s^2} + \dfrac{7}{s}$

Now from (1)

$L\ [f(t)] = L\ [(t-2)^2 + 4(t-2) + 7)\ u\ (t-2)]$

$= L\ [g\ (t-2).\ U\ (t-2)]$

$= L\ [g\ (t)]\ e^{-2s}$ (By second shifting theorem)

$= \left(\dfrac{2}{s^3} + \dfrac{4}{s^2} + \dfrac{7}{s}\right)e^{-2s}.$ Choice (A)

23. Given initial value problem is

$$\frac{d^2y}{dt^2} - 2\frac{dy}{dt} - 8y = 0 \qquad \text{----------- (1)}$$

Where $y(0) = 1$ and $y^1(0) = -2$

Applying laplace transform on both sides of (1)

$$L\left[\frac{d^2y}{dt^2} - 2\frac{dy}{dt} - 8y\right] = L[0]$$

$$\Rightarrow\ L\left[\frac{d^2y}{dt^2}\right] - 2L\left[\frac{dy}{dt}\right] - 8L\ [y] = 0$$

$$\Rightarrow\ \left(s^2\bar{y} - sy(0) - y^1(0)\right) - 2\ \left(s\bar{y} - y(0)\right) - 8\ \bar{y} = 0$$

Where $\bar{y} = L[y]$

$$\Rightarrow\ s^2\ \bar{y} - s \times 1 - (-2) - 2\ s\ \bar{y} + 2 \times 1 - 8\ \bar{y} = 0$$

$$\Rightarrow\ \left(s^2 - 2s - 8\right)\ \bar{y} - s + 4 = 0$$

$$\Rightarrow\ \left(s^2 - 2s - 8\right)\ \bar{y} = s - 4$$

$$\Rightarrow\ \bar{y} = \frac{(s-4)}{\left(s^2-2s-8\right)} = \frac{(s-4)}{(s-4)(s+2)}$$

$$\bar{y} = \frac{1}{s+2}$$

The laplace transform of the solution of (1) is

$\bar{y} = L[y] = \dfrac{1}{s+2}.$ Choice (D)

24. We have to find $L^{-1}\left[\dfrac{3}{2}\left(\dfrac{1}{\sqrt{s^5}} - \dfrac{1}{\sqrt{s^3}}\right)\right]$

$$= \frac{3}{2}\left(L^{-1}\left[\frac{1}{s^{\frac{5}{2}}}\right] - L^{-1}\left[\frac{1}{s^{\frac{3}{2}}}\right]\right)$$

$$= \frac{3}{2}\left[\frac{t^{\frac{3}{2}}}{\Gamma\left(\frac{5}{2}\right)} - \frac{t^{\frac{1}{2}}}{\Gamma\left(\frac{3}{2}\right)}\right]$$

$$= \frac{3}{2}\left[\frac{t^{\frac{3}{2}}}{\frac{3}{2}\times\frac{1}{2}\left(\sqrt{\pi}\right)} - \frac{t^{\frac{1}{2}}}{\frac{1}{2}\left(\sqrt{\pi}\right)}\right]$$

$$= \frac{3}{2}\left(\frac{t^{\frac{3}{2}}}{\frac{3}{4}\sqrt{\pi}} - \frac{t^{\frac{1}{2}}}{\frac{1}{2}\sqrt{\pi}}\right) = -\times\frac{\sqrt{t}}{\sqrt{\pi}}\left[\frac{4t}{3} - 2\right]$$

$$= \sqrt{\frac{t}{\pi}} \times 3\left[\frac{2t}{3} - 1\right]$$

$$= \sqrt{\frac{t}{\pi}}\ (2t - 3).$$ Choice (A)

25. We have $L^{-1}\left[\dfrac{4(2s+3)}{s^2+4s+20}\right]$

$$= 4\ L^{-1}\left[\frac{2s+3}{\left(s^2+4s+4\right)+16}\right]$$

$$= 4L^{-1}\left[\frac{2(s+2-2)+3}{(s+2)^2+4^2}\right] = 4L^{-1}\left[\frac{2(s+2)-1}{(s+2)^2+4^2}\right]$$

$$= 4L^{-1}\left[\frac{2(s+2)}{(s+2)^2+4^2}\right] - 4L^{-1}\left[\frac{1}{(s+2)^2+4^2}\right]$$

$$= 8 \times \frac{1}{4}\ e^{-2t}\cos 4t - 4 \times \frac{1}{4}\ e^{-2t}\sin 4t$$

$= e^{-2t}\ [2\cos 4t - \sin 4t].$ Choice (C)

Engineering Mathematics Test 3

(Linear Algebra, Partial Differential Equations)

Number of Questions: 25 **Time: 60 min.**

Directions for questions 1 to 25: Select the correct alternative from the given choices.

1. If A is a square matrix of order 5 with $A^{-1} = A^T$ and non-negative determinant, then the determinant of A is _______.
   (A) 0 (B) 1
   (C) 2 (D) 5
2. For two matrices A and B, if $AB = A$ and $BA = B$, then which of the following statements is/are correct?
   I. A is an idempotent matrix.
   II. B is an idempotent matrix.
   (A) I only
   (B) II only
   (C) Both I and II
   (D) Neither I nor II
3. Consider the matrix $A = \begin{bmatrix} 1 & a & bc \\ 1 & b & ca \\ 1 & c & ab \end{bmatrix}$. Which of the following is NOT equal to the determinant of A?
   (A) $\begin{vmatrix} 1 & a & a^2 \\ 1 & b & b^2 \\ 1 & c & c^2 \end{vmatrix}$ (B) $\begin{vmatrix} a+bc & a & 1+a \\ b+ca & b & 1+b \\ c+ab & c & 1+c \end{vmatrix}$
   (C) $\begin{vmatrix} 0 & a-b & bc-ac \\ 0 & b-c & ca-ab \\ 1 & c & ab \end{vmatrix}$ (D) $\begin{vmatrix} 1 & a+1 & a^2+a \\ 1 & b+1 & b^2+b \\ 1 & c+1 & c^2+c \end{vmatrix}$
4. For a non-singular square matrix A, if $A^3 = A$, then A must be _______.
   (A) a nilpotent matrix
   (B) an idempotent matrix
   (C) an involutory matrix
   (D) None of these
5. If A is a matrix of order 6×9 with rank 5, then which of the following is true?
   (A) All the rows of A are linearly independent.
   (B) 5 columns of A are linearly independent.
   (C) AA^T is invertible.
   (D) A^TA is invertible.
6. The rank of the matrix $P = \begin{bmatrix} 1 & 2 & 4 & -3 \\ 2 & -3 & 5 & -4 \\ 4 & 1 & 13 & -10 \\ 3 & -8 & 6 & -5 \end{bmatrix}$ is _____.
   (A) 1 (B) 2
   (C) 3 (D) 4
7. The value of x_3 in the solution of the system of linear equations $x_1 + 2x_2 + 2x_3 = 4$, $2x_1 - 2x_2 - x_3 = -3$, $4x_1 + x_2 + 2x_3 = 3$ is —
   (A) 1 (B) −1
   (C) 2 (D) −2
8. For a homogeneous system of linear equations $AX = O$ with four equations in four unknowns, if the number of linearly independent solutions is one, then the rank of A is _______.
   (A) 1 (B) 2
   (C) 3 (D) 4
9. If $A = \begin{bmatrix} 1 & 10 & 16 & -20 \\ 0 & -1 & 159 & 237 \\ 0 & 0 & 1 & -431 \\ 0 & 0 & 0 & 1 \end{bmatrix}$; then the determinant of $A^9 - 7A^5 + 4A$ is _____.
   (A) 4 (B) −4
   (C) 16 (D) −16
10. If the characteristic equation of a 2×2 matrix A is $\lambda^2 - 4\lambda + 1 = 0$, then the trace and determinant of A respectively are _______.
    (A) −1 and 4 (B) 1 and −4
    (C) 4 and 1 (D) 4 and −1
11. If λ_1 and λ_2 are the eigenvalues of a 2×2 non-singular matrix A, then the eigenvalues of ad joint of A are _______.
    (A) λ_1 and λ_2 (B) λ_1^2 and λ_2^2
    (C) $\lambda_1 + \lambda_2$ and $\lambda_1 - \lambda_2$ (D) $\lambda_1 \times \lambda_2$ and $\dfrac{\lambda_1}{\lambda_2}$
12. If A is a 3×3 matrix with the characteristic equation $\lambda^3 - 5\lambda^2 + 2\lambda - 3 = 0$, then $3A^9 - 15A^8 + 6A^7 - 11A^6 + 10A^5 - 4A^4 + 10A^3 - 20A^2 + 8A - 9I$ is equal to ________.
    (A) $\begin{bmatrix} 1 & 0 & 0 \\ 0 & 1 & 0 \\ 0 & 0 & 1 \end{bmatrix}$ (B) $\begin{bmatrix} 2 & 0 & 0 \\ 0 & 2 & 0 \\ 0 & 0 & 2 \end{bmatrix}$
    (C) $\begin{bmatrix} 3 & 0 & 0 \\ 0 & 3 & 0 \\ 0 & 0 & 3 \end{bmatrix}$ (D) $\begin{bmatrix} 4 & 0 & 0 \\ 0 & 4 & 0 \\ 0 & 0 & 4 \end{bmatrix}$
13. Which of the following is NOT an eigenvector of the matrix $A = \begin{bmatrix} 1 & 0 & 0 \\ 2 & 3 & 0 \\ 3 & -1 & 4 \end{bmatrix}$?

(A) $\begin{bmatrix} 3 \\ -3 \\ -4 \end{bmatrix}$ B) $\begin{bmatrix} 0 \\ 0 \\ -4 \end{bmatrix}$

(C) $\begin{bmatrix} 0 \\ 1 \\ 1 \end{bmatrix}$ (D) $\begin{bmatrix} 0 \\ 2 \\ 0 \end{bmatrix}$

14. If the system of linear equations
$2x + 3y + 4z = 1$
$5x - y + z = 4$
$3x + ay - 3z = 3$
has a unique solution, then the value of $a + 4$ _______
(A) must be equal to 0,
(B) should not be equal to 0
(C) can be any real number,
(D) can be any rational number

15. If a_1, b_1, c_1, d_1, a_2, b_2, c_2 and d_2 are any non zero real numbers, then which of the following types of solution is NOT possible for the system of linear equations.
$a_1x + b_1y + c_1z = d_1$
$a_2x + b_2y + c_2z = d_2$
(A) Unique solution
(B) No solution
(C) Infinitely many solution
(D) None of these

16. The partial differential equation of $z = f(x + at) - g(x - at)$ is ______.

(A) $\frac{\partial^2 z}{\partial t^2} = a^2 \frac{\partial^2 z}{\partial x^2}$ (B) $\frac{\partial z}{\partial t} = a\frac{\partial z}{\partial x}$

(C) $\frac{\partial^2 z}{\partial t^2} = \frac{\partial^2 z}{\partial x^2}$ (D) $\frac{\partial^2 z}{\partial t^2} + \frac{\partial^2 z}{\partial x^2}$

17. The first order partial differential equation by eliminating the arbitary function from $z = f(x^3 - y^3)$ is
(A) $p + q = 0$ (B) $yp + xq = 0$
(C) $y^2p + x^2q = 0$ (D) $2y^2p + 3x^2q = 0$

18. The general solution of the partial differential equation $x^3 (y - z) p + y^3(z - x)q = z^3(x - y)$ is

(A) $\phi\left(xyz, \frac{1}{x} + \frac{1}{y} + \frac{1}{z}\right) = 0$

(B) $\phi\left(\frac{1}{x^2} + \frac{1}{y^2} + \frac{1}{z^2}, \frac{1}{x} + \frac{1}{y} + \frac{1}{z}\right) = 0$

(C) $\phi\left(\frac{1}{x} - \frac{1}{y} - \frac{1}{z}, \frac{1}{x^2} + \frac{1}{y^2} - \frac{1}{z^2}\right) = 0$

(D) $\phi\left(\frac{1}{x^2} - \frac{1}{y^2} - \frac{1}{z^2}, \frac{1}{x} - \frac{1}{y} + \frac{1}{z}\right) = 0$

19. The solution of the partial differential equation $xy^2z^2p + x^2yz^2q = x^2y^2z$ is
(A) $x^2 + y^2 = \phi\,(x^2 - y^2)$
(B) $x^2 + z^2 = \phi\,(x^2 - z^2)$
(C) $x^2 - y^2 = \phi\,(y^2 - z^2)$
(D) $y^2 - z^2 = \phi\,(x^2 - y^2 - z^2)$

20. The solution of $(p - q)\,(z - x\,p - y\,q) = 1$ is __________

(A) $z = ax - by + \frac{1}{a+b}$ (B) $z = ax - by$

(C) $z = ax + by$ (D) $z = ax + by + \frac{1}{a-b}$

21. If $u(x, y) = X(x).Y(y)$ be the solution of the partial differential equation $4\frac{\partial u}{\partial x} + 5\frac{\partial u}{\partial y} = 0$, which is obtained by solving it by the method of separation of variables, then $X(x)$ (the function of x only in $u(x, y)$) is _______
[Note: Here c and k are arbitrary constants]

(A) $X(x) = ce^{(kx)}\,x^2$ (B) $X(x) = ce^{\left(\frac{4k}{x}\right)}$

(C) $X(x) = ce^{\left(\frac{k}{4}\right)x}$ (D) $X(x) = ce^{(-5k)}x^2$

22. Which of the following second order partial differential equations is an elliptic equation?

(A) $3\frac{\partial^2 u}{\partial x^2} + 4\frac{\partial^2 u}{\partial x \partial y} - 5\frac{\partial^2 u}{\partial y^2} + 7\frac{\partial u}{\partial x} - \frac{\partial u}{\partial y} = 7x^2$

(B) $3\frac{\partial^2 u}{\partial x^2} - 4\frac{\partial^2 u}{\partial x \partial y} + 5\frac{\partial^2 u}{\partial y^2} - \frac{\partial u}{\partial x} + \frac{\partial u}{\partial y} = 6x^2 y$

(C) $-3\frac{\partial^2 u}{\partial x^2} + 4\frac{\partial^2 u}{\partial x \partial y} + 5\frac{\partial^2 u}{\partial y^2} + 4x\frac{\partial u}{\partial x} - 7y\frac{\partial u}{\partial y} = 0$

(D) $\frac{\partial^2 u}{\partial x^2} + 2\frac{\partial^2 u}{\partial x \partial y} + \frac{\partial^2 u}{\partial y^2} - 2\frac{\partial u}{\partial x} + 5\frac{\partial u}{\partial y} = 6xy^2$

23. The Fourier cosine series of the function $f(x) = \frac{1}{2}$, $0 \le x \le 1$ is
(A) 1 (B)
(C) 0 (D)

24. The Fourier series of $f(x) = e^{2x}$ in the $\frac{1}{4}\frac{a_0}{2}$ interval $(0, 2\pi)$ is

$f(x) = + \sum_{n=1}^{\infty} a_n \cos nx + \sum_{n=1}^{\infty} b_n \sin nx$, then the value of $\frac{a_0}{2}$ is

(A) $\frac{e^{4\pi} - 1}{4\pi}$ (B) $\frac{e^{2\pi} - 1}{2\pi}$

(C) $\frac{e^{4\pi} - 1}{2\pi}$ (D) $\frac{e^{2\pi} - 1}{4\pi}$

25. The Fourier series of the function

$$f(x) = \begin{cases} -2 \text{ for} -\pi < x < \frac{-\pi}{2} \\ 0 \text{ for} \frac{-\pi}{2} < x < \frac{\pi}{2} \\ 2 \text{ for} \frac{\pi}{2} < x < \pi \end{cases}$$

is $f(x) = \frac{a_0}{2} + \sum_{n=1}^{\infty} a_n \cos nx + \sum_{n=1}^{\infty} b_n \sin nx$, then $b_n =$

(A) $\frac{1}{n\pi}\left[\sin\frac{n\pi}{2} - \cos n\pi\right]$

(B) $\frac{4}{n\pi}\left[\cos\frac{n\pi}{2} - \cos n\pi\right]$

(C) $\frac{1}{4n\pi}\left[\cos n\pi - \cos\frac{n\pi}{2}\right]$

(D) $\frac{4}{n\pi}\left[\sin\frac{n\pi}{2} - \sin n\pi\right]$

Hints and Explanations

1. Given $A^{-1} = A^T$ and det of A is non-negative

$\therefore$ $A.A^T = A^T.A = I_5$

$\Rightarrow$ Det of $(A.A^T)$ = Det of I_5

$\Rightarrow$ $|A.A^T| = |I_5|$

$\Rightarrow$ $|A|\,|A^T| = 1$

$\Rightarrow$ $|A|\,.\,|A| = 1$ ($\because$ $|A| = |A^T|$)

$\Rightarrow$ $|A|^2 = 1 \Rightarrow |A| = \pm 1$

$\therefore$ The determinant of $A = 1$.

($\because$ $|A|$ is non-negative) Choice (B)

2. Given $AB = A$ and $BA = B$

Consider $BA = B$

$\Rightarrow$ $A(BA) = AB$

$\Rightarrow$ $(AB)A = A$ ($\because$ $AB = A$)

$AA = A \Rightarrow A^2 = A$

$\Rightarrow$ A is an idempotent matrix $\rightarrow$ (1)

Consider $AB = A$

$\Rightarrow$ $B(AB) = BA$

$\Rightarrow$ $(BA)B = B$ ($\because$ $BA = B$)

$\Rightarrow$ $BB = B \Rightarrow B^2 = B$

$\Rightarrow$ B is an idempotent matrix $\rightarrow$ (2)

$\therefore$ From (1) and (2), both I and II are correct.

Choice (C)

3. Given $A = \begin{bmatrix} 1 & a & bc \\ 1 & b & ca \\ 1 & c & ab \end{bmatrix}$

Consider the determinant given in option (B)

$$\begin{vmatrix} a+bc & a & 1+a \\ b+ca & b & 1+b \\ c+ab & c & 1+c \end{vmatrix} = \begin{vmatrix} a & a & 1+a \\ b & b & 1+b \\ c & c & 1+c \end{vmatrix} + \begin{vmatrix} bc & a & 1+a \\ ca & b & 1+b \\ ab & c & 1+c \end{vmatrix}$$

$$= 0 + \begin{vmatrix} bc & a & 1 \\ ca & b & 1 \\ ab & c & 1 \end{vmatrix} + \begin{vmatrix} bc & a & a \\ ca & b & b \\ ab & c & c \end{vmatrix}$$

$$= \begin{vmatrix} bc & a & 1 \\ ca & b & 1 \\ ab & c & 1 \end{vmatrix} + 0$$

$$= -1 \begin{vmatrix} 1 & a & bc \\ 1 & b & ca \\ 1 & c & ab \end{vmatrix}$$

= –Det of $A \neq$ Det of A

$\therefore$ The determinant given in option B is NOT equal to det of A. Choice (B)

4. Given A is non-singular and $A^3 = A$

$\Rightarrow$ $AA^2 = A$

$\Rightarrow$ $A^{-1}(AA^2) = A^{-1}A$

$\Rightarrow$ $(A^{-1}A)A^2 = A^{-1}A$

$\Rightarrow$ $A^2 = I$

$\Rightarrow$ A must be an involutory matrix. Choice (C)

5. Given A is a matrix of order 6×9.

Rank of $A = 5$

$\therefore$ Maximum number rows/columns of A that are linearly independent = 5.

$\therefore$ Option (B) is TRUE. Choice (B)

6. Given matrix is $P = \begin{bmatrix} 1 & 2 & 4 & -3 \\ 2 & -3 & 5 & -4 \\ 4 & 1 & 13 & -10 \\ 3 & -8 & 6 & -5 \end{bmatrix}$

$R_2 \rightarrow R_2 - 2R_1$, $R_3 - 4R_1$ and $R_4 \rightarrow R_4 - 3R_1$

$$\sim \begin{bmatrix} 1 & 2 & 4 & -3 \\ 0 & -7 & -3 & 2 \\ 0 & -7 & -3 & 2 \\ 0 & -14 & -6 & 4 \end{bmatrix}$$

$R_3 \to R_3 - R_2$ and $R_4 \to R_4 - 2R_2$

$$\sim \begin{bmatrix} 1 & 2 & 4 & -3 \\ 0 & -7 & -3 & 2 \\ 0 & 0 & 0 & 0 \\ 0 & 0 & 0 & 0 \end{bmatrix}$$

$R_2 \to \frac{-1}{7} R_2$

$$\therefore \quad P \sim \begin{bmatrix} 1 & 2 & 4 & -3 \\ 0 & 1 & 3/7 & -2/7 \\ 0 & 0 & 0 & 0 \\ 0 & 0 & 0 & 0 \end{bmatrix}$$

Which is in Row Echelon form.

$\therefore$ The rank of P = the number of non-zero rows in its Row Echelon form = 2. Choice (B)

7. Given system of equations is

$x_1 + 2x_2 + 2x_3 = 4$

$2x_1 - 2x_2 - x_3 = -3 \to (1)$

$4x_1 + x_2 + 2x_3 = 3$

It can be written in matrix form as

$AX = B \to (2)$

Where $A = \begin{bmatrix} 1 & 2 & 2 \\ 2 & -2 & -1 \\ 4 & 1 & 2 \end{bmatrix}$; $X = \begin{bmatrix} x_1 \\ x_2 \\ x_3 \end{bmatrix}$ and $B = \begin{bmatrix} 4 \\ -3 \\ 3 \end{bmatrix}$

Consider the augmented matrix

$$[A/B] = \begin{vmatrix} 1 & 2 & 2 & 4 \\ 2 & -2 & -1 & -3 \\ 4 & 1 & 2 & 3 \end{vmatrix}$$

$R_2 \to R_2 - 2R_1$ and $R_3 \to R_3 - 4R_1$

$$\sim \begin{bmatrix} 1 & 2 & 2 & 4 \\ 0 & -6 & -5 & -11 \\ 0 & -7 & -6 & -13 \end{bmatrix}$$

$R_3 \to 6R_3 - 7R_2$

$$\therefore [A/B] \sim \begin{bmatrix} 1 & 2 & 2 & 4 \\ 0 & -6 & -5 & -11 \\ 0 & 0 & -1 & -1 \end{bmatrix}$$

Hence the system of equations that has same solution as that of $AX = B$ is

$$\begin{bmatrix} 1 & 2 & 2 \\ 0 & -6 & -5 \\ 0 & 0 & -1 \end{bmatrix} \begin{bmatrix} x_1 \\ x_2 \\ x_3 \end{bmatrix} = \begin{bmatrix} 4 \\ -11 \\ -1 \end{bmatrix}$$

$\Rightarrow \quad x_1 + 2x_2 + 2x_3 = 4$

$-6x_2 - 5x_3 = -11$

$-x_3 = -1 \Rightarrow x_3 = 1.$ Choice (A)

8. Given the system of equations $AX = O$ has

Number of unknowns = $n = 4$

Number of equations = 4

$\therefore$ A is a 4×4 matrix

Also given the number of linearly independent solutions = 1. We know that the number of linearly independent solutions of a system of homogeneous linear equations.

$AX = O$ is $= n - r$

Where n = the number of unknowns and r = the rank of A.

$\therefore \quad n - r = 1$

$\Rightarrow \quad 4 - r = 1$

$\Rightarrow \quad r = 4 - 1 = 3$

$\therefore$ The rank of $A = 3$ Choice (C)

9. Given A = $\begin{bmatrix} 1 & 10 & 16 & -20 \\ 0 & -1 & 159 & 237 \\ 0 & 0 & 1 & -431 \\ 0 & 0 & 0 & 1 \end{bmatrix}$

The eigenvalues of A are 1, –1, 1 and 1.

If $\lambda = -1$ is an eigenvalue of A, then $(-1)^9 - 7(-1)^5 + 4(-1) = 2$ is an eigenvalue of $A^9 - 7A^5 + 4A$.

Also if $\lambda = 1$ is an eigenvalue of A then

$(1)^9 - 7(1)^5 + 4(1) = -2$ is an eigenvalue of $A^9 - 7A + 4A$

$\therefore$ The eigenvalues of $A^9 - 7A^5 + 4A$ are –2, 2, –2 and –2.

$\therefore$ The determinant of $A^9 - 7A^5 + 4A$ = Product of the eigenvalues of $A^9 - 7A^5 + 4A = (-2)(2)(-2)(-2) = -16.$ Choice (D)

10. Given the characteristic equation of a 2×2 matrix A is $\lambda^2 - 4\lambda + 1 = 0$

Let λ_1 and λ_2 be the eigenvalues of A.

$\therefore$ Trace of A = sum of the eigenvalues of A

$= \lambda_1 + \lambda_2 = (-(-4)) = 4$

Determinant of A = Product of the eigenvalues of $A = \lambda_1 . \lambda_2 = 1.$ Choice (C)

11. Let $A = \begin{bmatrix} a & b \\ c & d \end{bmatrix}$ be a 2×2 matrix with λ_1 and λ_2 as its eigenvalues.

The characteristic equation of A is

$$|A - \lambda I| = 0 \Rightarrow \begin{vmatrix} a-\lambda & b \\ c & d-\lambda \end{vmatrix} = 0$$

$\Rightarrow \quad (a - \lambda)(d - \lambda) - bc = 0$ ---- (1)

The adjoint of A is adj$(A) = \begin{bmatrix} d & -b \\ -c & a \end{bmatrix}$

$\therefore$ The characteristic equation of adj(A) is

$$\begin{vmatrix} d-\lambda & -b \\ -c & a-\lambda \end{vmatrix} = 0$$

$\Rightarrow \quad (d-\lambda)(a-\lambda) - bc = 0$ ---- (2)

As (1) and (2) are one and the same and λ_1 and λ_2 being the roots of (1), λ_1 and λ_2 will be the roots of (2).

$\therefore$ The eigenvalues of adj(A) are λ_1 and λ_2.

Choice (A)

12. The characteristic equation of A is $\lambda^3 - 5\lambda^2 + 2\lambda - 3 = 0$

$\therefore$ By Cayley Hamilton theorem, we have

$A^3 - 5A^2 + 2A - 3I = 0$ ----- (1)

Consider

$3A^9 - 15A^8 + 6A^7 - 11A^6 + 10A^5 - 4A^4 + 10A^3 - 20A^2 + 8A - 9I$

$= 3A^6(A^3 - 5A^2 + 2A - 3I) - 2A^6 + 10A^5 - 4A^4 + 10A^3 - 20A^2 + 8A - 9I$

$= 3A^6 \times 0 - 2A^3(A^3 - 5A^2 + 2A - 3I) + 4A^3 - 20A^2 + 8A - 9I$

(From (1)) $= 0 - 2A^3 \times 0 + 4(A^3 - 5A^2 + 2A - 3I) + 3I$

(From (1)) $= 4 \times 0 + 3I$ (From (1))

$$= 3I = 3\begin{bmatrix} 1 & 0 & 0 \\ 0 & 1 & 0 \\ 0 & 0 & 1 \end{bmatrix} = \begin{bmatrix} 3 & 0 & 0 \\ 0 & 3 & 0 \\ 0 & 0 & 3 \end{bmatrix}$$ Choice (C)

13. Given $A = \begin{bmatrix} 1 & 0 & 0 \\ 2 & 3 & 0 \\ 3 & -1 & 4 \end{bmatrix}$

The eigenvalues of A are 1, 3 and 4

If $x = \begin{bmatrix} x_1 \\ x_2 \\ x_3 \end{bmatrix}$ is an eigenvector of A, then x should satisfy any one of the three conditions. $AX = x$, $AX = 3X$ and $AX = 4X$

From the options given, it can be easily observed that the vectors given in options (A), (B) and (C), will satisfy one of these three conditions.

Consider the vector given in option (D),

$$AX = \begin{bmatrix} 1 & 0 & 0 \\ 2 & 3 & 0 \\ 3 & -1 & 4 \end{bmatrix}\begin{bmatrix} 0 \\ 2 \\ 0 \end{bmatrix} = \begin{bmatrix} 0 \\ 6 \\ -2 \end{bmatrix} \neq \lambda \begin{bmatrix} 0 \\ 2 \\ 0 \end{bmatrix}$$

For, $\lambda = 1, 2$ or 3

$\therefore$ Its not an eigenvector of A Choice (D)

14. Given system of linear equations is

$2x + 3y + 4z = 1$

$5x - y + z = 4$

$3x + ay - 3z = 3$ --------- (1)

It can be written in matrix form as $AX = B$

Where $A = \begin{bmatrix} 2 & 3 & 4 \\ 5 & -1 & 1 \\ 3 & a & -3 \end{bmatrix}$;

$X = \begin{bmatrix} x \\ y \\ z \end{bmatrix}$ and $B = \begin{bmatrix} 1 \\ 4 \\ 3 \end{bmatrix}$ consider the augmented matrix

$$[A|B] = \begin{bmatrix} 2 & 3 & 4 & 1 \\ 5 & -1 & 1 & 4 \\ 3 & a & -3 & 3 \end{bmatrix}$$

$R_2 \to 2R_2 - 5R_1$, $R_3 \to 2R_3 - 3R_1$

$$\sim \begin{bmatrix} 2 & 3 & 4 & 1 \\ 0 & -17 & -18 & 3 \\ 0 & 2a-9 & -18 & 3 \end{bmatrix}$$

$R_3 \to R_3 - R_2$

$$[A|B] \sim \begin{bmatrix} 2 & 3 & 4 & 1 \\ 0 & -17 & -18 & 3 \\ 0 & 2a+8 & 0 & 0 \end{bmatrix}$$

The given system of equations has a unique solution, if $P(A) = p([A/B]) = 3$ (= The no. of unknowns)

This is possible only if $2a + 8 \neq 0$

$\Rightarrow \quad a + 4 \neq 0.$ Choice (B)

15. Given system of equations is

$a_1x + b_1y + c_1z = d_1$ ______(1)

$a_2x + b_2y + c_2z = d_2$

It can be written in matrix form as

$AX = B$

Where $A = \begin{bmatrix} a_1 & b_1 & c_1 \\ a_2 & b_2 & c_2 \end{bmatrix}$; $x = \begin{bmatrix} x \\ y \\ z \end{bmatrix}$ and $B = \begin{bmatrix} d_1 \\ d_2 \end{bmatrix}$

Here two possibilities arise

(i) $P(A) \neq P(A/B])$

In this case, (1) has no solution

(ii) $P(A) = P([A/B]) < 3$(= The no. of unknowns)

In this case, (1) has infinitely many solutions.

So, the given system (1) do not have a unique solution. Choice (A)

16. $z = f(x + at) - g(x - at)$

$$\frac{\partial z}{\partial x} = f^1(x+at) - g^1(x-at)$$

$$\frac{\partial^2 z}{\partial x^2} = f^{11}(x+at) - g^{11}(x-at)$$

$$\frac{\partial z}{\partial t} = af^1(x+at) + ag^1(x-at)$$

$$\frac{\partial^2 z}{\partial t^2} = a^2f^{11}(x+at) - a^2g^{11}(x-at)$$

$$\frac{\partial^2 z}{\partial t^2} = a^2\frac{\partial^2 z}{\partial x^2}$$ Choice (A)

17. Given $z = f(x^3 - y^3)$

Let $x^3 - y^3 = u$

$z = f(u)$

$$\frac{\partial z}{\partial x} = \frac{\partial z}{\partial u}.\frac{\partial u}{\partial x} = f\ (u).3x^2$$

$$\frac{\partial z}{\partial y} = \frac{\partial z}{\partial u}.\frac{\partial u}{\partial y} = -f\ (u)3y^2$$

$$y^2\frac{\partial z}{\partial x} + x^2\frac{\partial z}{\partial y} = f\ (u)3x^2y^2\ - f^1(u)3x^2y^2 = 0$$

$\therefore$ The first order partial dE is $y^2p + x^2q = 0$

Choice (C)

18. $x^3(y - z)\, p + y^3\, (z - x)q = z^3(x - y)$

The subsidiary equation of the given differential equation is

$$\frac{dx}{x^3(y-z)} = \frac{dy}{y^3(z-x)} = \frac{dz}{z^3(x-y)} \quad \ldots\ldots\ldots\ldots (1)$$

using the multipliers $\frac{1}{x^2}, \frac{1}{y^2}$ and $\frac{1}{z^2}$ each fraction of

(1) is equal to $\dfrac{\frac{1}{x^2}dx + \frac{1}{y^2}dy + \frac{1}{z^2}dz}{0}$

$$\Rightarrow \frac{1}{x^2}dx + \frac{1}{y^2}dy + \frac{1}{z^2}dz = 0$$

On integrating the above, we get

$$-\frac{1}{x} - \frac{1}{y} - \frac{1}{z} = C \text{ or } \frac{1}{x} + \frac{1}{y} + \frac{1}{z} = C_1 \quad \ldots\ldots\ldots\ldots (2)$$

using the multipliers $\frac{1}{x^3}, \frac{1}{y^3}$ and $\frac{1}{z^3}$ each of the fraction (1) equal to $\dfrac{\frac{1}{x^3}dx + \frac{1}{y^3}dy + \frac{1}{z^3}dz}{0}$

On integrating both the sides, we get

$$\frac{1}{x^2} + \frac{1}{y^2} + \frac{1}{z^2} = C_2 \quad \ldots\ldots\ldots\ldots (3)$$

From (2) and (3) the general solutions is

$$\varphi\left(\frac{1}{x} + \frac{1}{y} + \frac{1}{z}, \frac{1}{x^2} + \frac{1}{y^2} + \frac{1}{z^2}\right) = 0.$$

Choice (B)

19. $xy^2z^2p + x^2yz^2q = x^2\, y^2\, z \quad \ldots\ldots\ldots\ldots\ldots\ldots (1)$

The subsidiary equations of (1) are

$$\frac{dx}{xy^2z^2} = \frac{dy}{x^2yz^2} = \frac{dz}{x^2y^2z} \quad \ldots\ldots\ldots\ldots (2)$$

Considering first two fractions of (2) we have $x\, dx = y\, dy$.

On integrating we get $x^2 = y^2$ or $x^2 - y^2 = C_1 \ldots\ldots\ldots (3)$

Considering the last two fractions of (2), we have $y\, dy = z\, dz$. On integrating, we get

$y^2 - z^2 = C_2 \quad \ldots\ldots\ldots\ldots\ldots (4)$

From (3) and (4) the general solution of (1) is

$x^2 - y^2 = \phi\, (y^2 - z^2)$.

Choice (C)

20. Given $(p - q)\, (z - x\, p - yq) = 1$

$$z = x\,p + yq + \frac{1}{p-q}$$

This is a clairaut equation and its solution is

$$z = ax + by + \frac{1}{a-b}$$

Choice (D)

21. Given $u = x(x), y(y)$ ------ (1) is the solution of the PDE

$$4\frac{\partial u}{\partial x} + 5\frac{\partial u}{\partial y} = 0 \text{ ----------- } (2)$$

Obtained by solving (2) by the method of separation of variables

$$\therefore \frac{\partial u}{\partial x} = x^1y \text{ and } \frac{\partial u}{\partial y} = xy^1$$

where $x^1 = \frac{dx}{dx}$ and $y^1 = \frac{dY}{dy}$

$\therefore$ (2) becomes

$4x^1y + 5xy^1 = 0$

$$\Rightarrow \frac{4x^1}{x} + 5\frac{y^1}{y} = 0$$

$$\Rightarrow \frac{4x^1}{x} = -5\frac{y^1}{y} = k \text{ (say) where } k \text{ is a constant}$$

$$\Rightarrow \frac{4x^1}{x} = k \text{ and } \frac{-5y^1}{y} = k$$

$$\Rightarrow x^1 = \frac{kx}{4} \qquad y^1 = \frac{-ky}{5}$$

$$\Rightarrow x^1 - \frac{kx}{4} = 0 \Rightarrow y^1 + \frac{ky}{5} = 0$$

$$\Rightarrow \frac{dX}{dx} = \frac{kx}{4} \Rightarrow \frac{dx}{x} = \frac{k}{4}\ dx$$

$$\Rightarrow \int\frac{dx}{x} = \frac{k}{4}\int dx \Rightarrow = \frac{k}{4}x + c^1$$

$$\Rightarrow x = e^{\frac{kx}{4}} + c^1 = e^{\frac{kx}{4}}c^1$$

$$\Rightarrow x = ce^{\left(\frac{kx}{4}\right)}; \text{ where } c = e^{c^1}$$

$$\therefore x(x) = ce^{\left(\frac{kx}{4}\right)}.$$

Choice (C)

22. A PDE is of the form

$Au_{xx} + Bu_{xy} + Cu_{yy} + F(x, y, u, u_x, u_y) = 0 \quad$ ----- (1)

is elliptic, if $B^2 - 4AC < 0$

From the PDE in the options, consider the PDE in option (B)

Comparing it with (1), we have

$A = 3$, $B = -4$ and $C = 5$

$\therefore$ $B^2 - 4AC = (-4)^2 - 4 \times 3 \times 5 = -44 < 0$

$\Rightarrow$ $B^2 - 4AC < 0$

Hence the PDE given in option (B) is elliptic

Also, it can be easily observed that the PDE given in options (A), (C) and (D) do not satisfy the property, $B^2 - 4AC < 0$. Choice (B)

23. The coefficients of Fourier cosine series are given by

$$a_0 = \frac{2}{1}\int_0^1 f(x)dx \text{ and}$$

$$a_n = \frac{2}{1}\int_0^1 f(x)\cos\left(\frac{n\pi x}{1}\right)dx$$

$$\therefore \quad a_0 = \frac{2}{1}\int_0^1 \frac{1}{2}dx = x\Big]_0^1 = 1$$

$$a_n = \frac{2}{1}\int_0^1 \frac{1}{2}\cos(n\pi x)dx = \int_0^1 \cos(n\pi x)dx$$

$$= \frac{\sin(n\pi x)}{n\pi}\Bigg]_0^1 = 0$$

$\therefore$ The required series is $f(x) = \frac{1}{2}$. Choice (B)

24. In the Fourier series of e^{2x}; a_0 is given by $\frac{1}{\pi}\int_0^{2\pi} f(x)dx$

$$a_0 = \frac{1}{\pi}\int_0^{2\pi} e^{2x}dx = \frac{1}{2\pi}\left[e^{2x}\right]_0^{2\pi}$$

$$= \frac{1}{2\pi}\left[e^{4\pi} - 1\right] \; \frac{a_0}{2} = \frac{e^{4\pi}-1}{2\times 2\pi} = \frac{e^{4\pi}-1}{4\pi}.$$ Choice (A)

25. In the Fourier series of $f(x)$, b_n is given by $\frac{1}{\pi}\int_{-\pi}^{\pi} f(x)\sin nx dx$

$$b_n = \frac{1}{\pi}\left[\int_{-\pi}^{\frac{-\pi}{2}} (-2)\sin nx dx + \int_{\frac{-\pi}{2}}^{\frac{\pi}{2}} 0.\sin nx dx + \int_{\frac{\pi}{2}}^{\pi} 2\sin nx dx\right]$$

$$= \frac{2}{\pi}\left[\frac{\cos nx}{n}\right]_{-\pi}^{\frac{-\pi}{2}} + \frac{2}{\pi}\left[\frac{-\cos nx}{n}\right]_{\frac{\pi}{2}}^{\pi}$$

$$= \frac{2}{\pi}\left[\frac{\cos n\frac{\pi}{2}}{n} - \frac{\cos n\pi}{n} - \frac{\cos n\pi}{n} + \frac{\cos n\frac{\pi}{2}}{n}\right]$$

$$= \frac{4}{n\pi}\left[\cos\frac{n\pi}{2} - \cos n\pi\right].$$ Choice (B)

ENGINEERING MATHEMATICS TEST 4

Number of Questions: 25 **Time: 60 min.**

(PROBABILITY AND STATISTICS)

Directions for questions 1 to 25: Select the correct alternative from the given choices.

1. If A, B and C are mutually exclusive such that $5P(B) = 8\ P(A)$, $4P(C) = 3P(B)$ and $19P(A \cup B) = 13$ then $P(A \cup B \cup C)$ is ________.
(A) 0.75
(B) 1
(C) 0.625
(D) Cannot be determined

2. 240 passengers travelling in a plane from Hyderabad to Sharjah like one or more of the three meals among sandwich, burger and pizza as given below. 140 passengers like sandwich,110 passengers like burger and 90 passengers like pizza. 40 of them like both sandwich and burger, 50 of them like both Sandwich and Pizza, 40 of them like both burger and pizza where as 30 of them like all the three meals. What is the probability that a randomly selected passenger likes pizza only?
(A) 0.125 (B) 0.250
(C) 0.375 (D) 0.500

3. Let S be the set of all 4 digit numbers that can be formed using the digits 2, 3, 5, 7, 8 and 9. Probability that a randomly selected number of S has all digits distinct is _______.
(A) $\frac{5}{12}$ (B) $\frac{5}{18}$
(C) $\frac{5}{24}$ (D) $\frac{5}{36}$

4. An unbiased coin is tossed until it shows up the same face in two consecutive throws. What is the probability that the number of tosses is not more than 4?
(A) $\frac{3}{4}$ (B) $\frac{1}{8}$
(C) $\frac{7}{8}$ (D) $\frac{1}{4}$

5. What is the probability that a quadratic equation $ax^2 + bx + c = 0$ has equal roots if a, b and c are distinct and are taken from {1, 2, 3, 4, 6, 8, 9}?
(A) $\frac{1}{35}$ (B) $\frac{2}{35}$
(C) $\frac{1}{105}$ (D) $\frac{2}{105}$

6. A bag contains 4 five rupee coins, 3 two rupee coins and 3 one rupee coins. If 6 coins are drawn from the bag at random, what are the odds in favour of the draw yielding maximum amount?
(A) 1 : 70 (B) 1 : 69
(C) 69 : 70 (D) 70 : 1

7. Kids and Toys factory is transporting balls of 5 different colours – yellow, blue, red, green and white. Mr. Bholeram, a worker in the factory has to separate these balls as per their colours into different boxes and label them with the corresponding coloured labels.
Mr. Bholeram, after separating the balls, sealed the boxes and then labelled the boxes at random. What is the probability that all the boxes are incorrectly labelled?
(A) 1 (B) 0
(C) $\frac{11}{120}$ (D) $\frac{11}{30}$

8. While shuffling a pack of cards, 4 cards are accidentally dropped. The probability that all of them are numbered cards (2 to 10) of the same suit is
(A) $\frac{4 \times {}^{9}C_{4}}{{}^{52}C_{4}}$ (B) $\frac{\left({}^{9}C_{4}\right)^{4}}{{}^{52}C_{4}}$
(C) $\frac{4 \times {}^{9}C_{1}}{{}^{52}C_{4}}$ (D) $\frac{\left({}^{9}C_{1}\right)^{4}}{{}^{52}C_{4}}$

9. Arpit and Bipin pick up a ball at random from a bag containing 5 violet, 2 red and 3 orange balls one after the other, replacing it every time till one of them gets an orange ball and the one who first gets an orange ball is declared a winner. If Arpit begins the game, then the probability of Bipin winning the game is
(A) $\frac{10}{17}$ (B) $\frac{7}{17}$
(C) $\frac{7}{10}$ (D) $\frac{3}{10}$

10. An urn A contains 6 white balls and 7 black balls. And urn B contains 8 white balls and 6 black balls. A person draws a ball at random from one of the two urns. It turns out to be black. What is the probability that the ball was drawn from urn A?
(A) $\frac{7}{14}$ (B) $\frac{49}{88}$
(C) $\frac{39}{88}$ (D) None of the above

11. The bivariate probability distribution of X and Y is as follows.

X \ Y	0	1	2
0	$\frac{1}{40}$	$\frac{2}{40}$	$\frac{3}{40}$
1	$\frac{2}{40}$	$\frac{3}{40}$	$\frac{1}{40}$
2	$\frac{3}{40}$	$\frac{1}{40}$	$\frac{7}{40}$
3	$\frac{4}{40}$	$\frac{5}{40}$	$\frac{8}{40}$

Find $P(X \le 1, Y = 2)$.

(A) $\frac{2}{5}$ (B) $\frac{1}{5}$
(C) $\frac{3}{10}$ (D) $\frac{1}{10}$

12. In a book of 500 pages, there are 50 typing errors. Assuming that the number of errors per page follows poission distribution, find the probability that randomly chosen 5 pages will contain no error.

(A) 0.6065 (B) 0.6078
(C) 0.6538 (D) 0.3935

13. The continuous random variable X is uniformly distributed with mean 2 and variance 12. Find $P(X > 0)$.

(A) $\frac{1}{3}$ (B) $\frac{4}{5}$
(C) $\frac{2}{3}$ (D) $\frac{1}{5}$

14. X and Y are two independent normal variates with means 3, 6 and variances, 1, 9 respectively. Find the value of k such that $P(X + Y \le k) = P(9X - Y \ge 2k)$.

(A) 9.3 (B) 9.6
(C) 8.6 (D) 10.3

15. Bag A contains 9 white balls and 5 green balls. Bag B contains 6 white balls and 7 green balls. One ball is drawn from bag A and is placed in bag B. Now one ball is drawn at random from bag B. It is found that the ball is green. Find the probability that white ball is transferred from bag A.

(A) $\frac{20}{103}$ (B) $\frac{63}{103}$
(C) $\frac{80}{103}$ (D) $\frac{75}{103}$

16. A dice is rolled twice the sum of the numbers appearing is 7, what is the probability that at least one dice shows 3?

(A) $\frac{3}{7}$ (B) $\frac{2}{3}$
(C) $\frac{1}{3}$ (D) $\frac{4}{7}$

17. A random variable X has the following probability distribution.

X = xi	0	1	2	3	4
P(x = xi)	K	2K	3K	5K	4K

Then find $P(X \ge 2)$.

(A) $\frac{4}{5}$ (B) $\frac{1}{5}$
(C) $\frac{2}{5}$ (D) $\frac{1}{15}$

18. The standard error is ______.
(A) accepting the null hypothesis when it is false.
(B) rejecting the null hypothesis when it is true.
(C) the standard deviation of the sampling distribution of a statistic.
(D) the probability that the test statistic does not lie in the critical region.

19. In large sampling, the sampling distribution of means follows ______
(A) Normal distribution
(B) t – distribution
(C) F – distribution
(D) x^2 – distribution

20. Which of the following distributions is used to test the equality of variances of two populations from which two small random samples are drawn?
(A) Normal distribution
(B) t – distribution
(C) F – distribution
(D) x^2 – distribution

21. If a statistic s follows t – distribution with $\nu = 10$ degrees of freedom, then s^2 follows F – distribution with degrees of freedom (ν_1, ν_2) = ______.

(A) (1,9) (B) (1,10)
(C) (1,11) (D) (9,1)

22. In testing of hypothesis, if the test statistic is outside the critical region, then we will
P : Accept the null hypothesis
Q : Reject the null hypothesis
R : Accept the alternative hypothesis
S : Reject the alternative hypothesis
Which of the following is true?
(A) P only
(B) R only
(C) P and S only
(D) Q and R only

23. Three letters are placed into three addressed envelopes randomly. A random variable X denotes the number of letters placed into corresponding envelopes. Find the variance of X.

(A) $\frac{5}{6}$ (B) 2

(C) 1 (D) 3

24. The variance of the data $x, x + 3, x + 5, x + 7, x + 10$ is

(A) 11.2 (B) 11.6

(C) $11.6 + x$ (D) $11.2 + x$

25. The median of the following data can be 3, 8, 12, 28, 16, 15, x

(A) 13 (B) 14

(C) 15 (D) Any of the above

Answer Keys

1. B	**2.** A	**3.** B	**4.** C	**5.** C	**6.** B	**7.** D	**8.** A	**9.** B	**10.** B
11. D	**12.** A	**13.** C	**14.** B	**15.** B	**16.** C	**17.** A	**18.** C	**19.** A	**20.** C
21. B	**22.** C	**23.** C	**24.** B	**25.** D					

Hints and Explanations

1. Given $5P(B) = 8P(A)$ and $4P(C) = 3P(B)$

$\Rightarrow P(A) = \frac{5}{8}P(B)$ and $P(C) = \frac{3}{4}P(B)$ ----- (1)

Now $19\,P(A \cup B) = 13 \Rightarrow P(A \cup B) = \frac{13}{19}$

$P(A) + P(B) = \frac{13}{19}$ ($\because$ A and B mutually exclusive)

$\Rightarrow \frac{5}{8}P(B) + P(B) = \frac{13}{19}$

$\Rightarrow \frac{13}{8}P(B) = \frac{13}{19}$

$\Rightarrow P(B) = \frac{8}{19}$

Now $P(A \cup B \cup C) = P(A) + P(B) + P(C)$

$= \frac{5}{8}P(B) + P(B) + \frac{3}{4}P(B)$

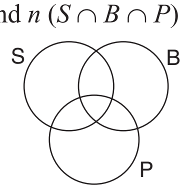
$= \left(\frac{5}{8} + 1 + \frac{3}{4}\right)P(B) = \frac{19}{8}P(B) = \frac{19}{8} \times \frac{8}{19} = 1.$

Choice (B)

2. The total number of passengers = 240

Let S, B and P denote the sets of passengers who like sandwich, burger and pizza respectively.

$\therefore$ $n(S) = 140$, $n(B) = 110$, $n(P) = 90$, $n(S \cap B) = 40$, $n(B \cap P) = 40$, $n(P \cap S)$ $= 50$ and $n(S \cap B \cap P) = 30$



$\therefore$ Probability that a randomly selected passenger likes only

pizza

$= \frac{(\text{The number of passengers who like only pizza})}{(\text{The total number of passengers})}$

$= \frac{n(P) - n(P \cap S) - n(B \cap P) + n(S \cap B \cap P)}{240}$

$= \frac{90 - 40 - 50 + 30}{240} = \frac{1}{8} = 0.125.$ Choice (A)

3. The number of 4 digit numbers that can be formed using the digits 2, 3, 5, 7, 8 and 9

= The number of elements of $S = 6^4$

The number of 4 digit numbers of S that have all digits distinct = The number of 4 digit numbers that can be formed using the digits 2, 3, 5, 7, 8 and 9 = ${}^6P_4$

$\therefore$ Probability that a randomly selected number of S has all digits distinct $= \frac{{}^6P_4}{6^4} = \frac{5}{18}$ Choice (B)

4. The number of tosses may be 2 or 3 or 4.

The possible cases and their corresponding probabilities:

Case 1 : HH OR TT $\rightarrow 2\left(\frac{1}{2}\right)^2$

Case 2 : *HTT* OR *THH* $\rightarrow 2\left(\frac{1}{2}\right)^3$

Case 3 : *HTHH* OR *THTT* $\rightarrow 2\left(\frac{1}{2}\right)^4$

Hence, the required probability is

$2\left[\frac{1}{4} + \frac{1}{8} + \frac{1}{16}\right] = \frac{7}{8}$ Choice (C)

5. Considering different values of a, b and c from the set {1, 2, 3, 4, 6, 8, 9}, we get different quadratic equations.

As a, b and c are distinct, ${}^7P_3 = 210$ different quadratic equations can be formed.

$\therefore$ Total ways are 210

For the quadratic equation $ax^2 + bx + c = 0$ to have equal roots, $b^2 = 4ac$.

The possible combinations of a, b and c respectively are 1, 6, 9 and 9, 6, 1.

Hence favourable cases are 2

$\therefore$ Required probability $=\frac{2}{210}=\frac{1}{105}$. Choice (C)

6. We have 4 five rupee coins, 3 two rupee coins and 3 one rupee coins.
For the draw to yield a maximum amount, of the 6 coins drawn 4 should be five rupee coins and 2 should be two rupee coins. The required probability is

$$\frac{{}^4C_4 \times {}^3C_2}{{}^{10}C_6}=\frac{3}{210}=\frac{1}{70}$$

Hence, odds in favour are favourable ways : unfavourable ways = 1 : 69. Choice (B)

7. There are 5 boxes and 5 labels. Hence the boxes can be labelled in 5! i.e. 120 different ways

$$P\text{ (all labelled incorrectly)}=\frac{1}{2!}-\frac{1}{3!}+\frac{1}{4!}-\frac{1}{5!}$$

$$=\frac{44}{120}=\frac{11}{30}$$ Choice (D)

8. There are 9 numbered cards in each suit.
P(all the 4 cards are numbered cards of same suit)

$$=\frac{{}^9C_4+{}^9C_4+{}^9C_4+{}^9C_4}{{}^{52}C_4}=\frac{4\times{}^9C_4}{{}^{52}C_4}$$ Choice (A)

9. The probability of picking up an orange ball is $\frac{3}{10}$ while not picking up an orange ball is $\frac{7}{10}$.

We compute the probability of Arpit (the beginner) winning the game.
Let A and B be the events of Arpit and Bipin picking up an orange ball respectively
The winning sequence of Arpit can be
$A,\ \bar{A}\,\bar{B}\,A,\quad \bar{A}\,\bar{B}\,\bar{A}\,\bar{B}\,A, \ldots\ldots$

As the above sequence indicates, Arpit may pick an orange ball right in the 1st trial with a probability of $\frac{3}{10}$ (or) in the third trial (as the 2nd trial is made by Bipin, and for Arpit to win, Bipin should not be getting an orange ball). The probability here being $\left(\frac{7}{10}\right)^2\times\frac{3}{10}$ (or) in the fifth trial with a probability of $\left(\frac{7}{10}\right)^4\times\frac{3}{10}$ and so on.

$$\therefore\ P(A)=\frac{3}{10}+\left(\frac{7}{10}\right)^2\times\frac{3}{10}+\left(\frac{7}{10}\right)^4\times\frac{3}{10}+\ldots..$$

$$=\frac{\frac{3}{10}}{1-\left(\frac{7}{10}\right)^2}=\frac{30}{51}=\frac{10}{17}$$

Probability of Bipin winning is the same as probability of Arpit losing i.e.,

$$\therefore\ P(B)=P(\bar{A})=1-\frac{10}{17}=\frac{7}{17}$$ Choice (B)

Note: If 'p' is the probability of success (in this case picking up an orange ball), the probability that the beginner wins the game $=\frac{1}{2-p}$

10. Probability of selecting urn A is $P(A)=\frac{1}{2}$.

and that of selecting urn B is $P(B)=\frac{1}{2}$

Probability of drawing a black ball (event E) when urn A is selected $P\left(\frac{E}{A}\right)=\frac{{}^7C_1}{{}^{13}C_1}$ and probability of E when urn B is selected $P\left(\frac{E}{B}\right)=\frac{{}^6C_1}{{}^{14}C_1}$

Probability of selecting black ball

$$=P(A).P\left(\frac{E}{A}\right)+P(B).P\left(\frac{E}{B}\right)$$

$$\frac{1}{2}.\frac{{}^7C_1}{{}^{13}C_1}+\frac{1}{2}.\frac{{}^6C_1}{{}^{14}C_1}$$

$$\text{Required Probability}=\frac{\frac{1}{2}.\frac{{}^7C_1}{{}^{13}C_1}}{\frac{1}{2}.\frac{{}^7C_1}{{}^{13}C_1}+\frac{1}{2}.\frac{{}^6C_1}{{}^{14}C_1}}$$

$$=\frac{\frac{7}{13}}{\frac{7}{13}+\frac{6}{14}}=\frac{\frac{7}{13}}{\frac{98+75}{13\times14}}=\frac{7\times14}{176}=\frac{49}{88}$$ Choice (B)

11. The marginal distributions are given below.

X \ Y	0	1	2	$P_x(x)$
0	$\frac{1}{40}$	$\frac{2}{40}$	$\frac{3}{40}$	$\frac{6}{40}$
1	$\frac{2}{40}$	$\frac{3}{40}$	$\frac{1}{40}$	$\frac{6}{40}$
2	$\frac{3}{40}$	$\frac{1}{40}$	$\frac{7}{40}$	$\frac{11}{40}$
3	$\frac{4}{40}$	$\frac{5}{40}$	$\frac{8}{40}$	$\frac{17}{40}$
$P_y(y)$	$\frac{10}{40}$	$\frac{11}{40}$	$\frac{19}{40}$	1

$P(X \le 1, Y = 2) = P(X = 0, Y = 2) + P(X = 1, Y = 2)$

$= \frac{3}{40} + \frac{1}{40} = \frac{4}{40} = \frac{1}{10}$ Choice (D)

12. Average number of errors per page $\lambda = \frac{50}{500} = \frac{1}{10}$

Average number of errors per 5 pages $= 5 \times \frac{1}{10} = \frac{1}{2}$

Probability of k errors per page is $P(x = k) = \frac{\lambda^k}{k!} e^{-\lambda}$.

$\therefore$ here $k = 0$

$\therefore$ $P(k = 0) = \frac{\lambda^k}{k!} e^{-\lambda} = e^{-\frac{1}{2}}$

$\therefore$ Probability that a random sample of 5 pages has no error $= e^{-0.5} = 0.6065$ Choice (A)

13. We know that X is uniform random variable in the interval $[a, b]$ then $p(x) = \frac{1}{b-a}$, $a < x < b$ and mean $= \frac{a+b}{2}$, variance $= \frac{(b-a)^2}{12}$

Given mean $= 2 \Rightarrow \frac{a+b}{2} = 2$

$\Rightarrow a + b = 4$ ---- (1)

Variance $= 12 \Rightarrow \frac{(b-a)^2}{12} = 12$

$\Rightarrow (b - a)^2 = 144 \Rightarrow b - a = 12$ ------ (2)

Solving (1) and (2) $a = -4$, $b = 8$

$\therefore$ $P(x) = \frac{1}{b-a} = \frac{1}{8-(-4)} = \frac{1}{12}$

$$P(x > 0) = \int_0^b p(x)dx = \int_0^8 \frac{1}{12} dx = \frac{1}{12} x \Big]_0^8 = \frac{8}{12} = \frac{2}{3}$$

Choice (C)

14. Given mean of $X = 3$
Variance of $X = 1$
Mean of $Y = 6$
Variance of $Y = 9$
$X = N(3, 1)$ $Y = N(6, 3)$ and X and Y are independent.
Let $u = x + y$; and $v = 9x - y$
Then u, v are also normal variates
$U = x + y = N(3 + 6, 1 + 9) = N(9, 10)$
$V = 9x - y = N(9(3) - 6, 81(1) + 9) = N(21, 90)$
By definition

$Z = \frac{u-9}{\sqrt{10}}$ and for $u = k \Rightarrow Z = \frac{k-9}{\sqrt{10}} = z$

Again $z = \frac{v-21}{\sqrt{90}}$ and for $v = 2k \Rightarrow Z = \frac{2k-21}{\sqrt{90}} = z_1$

Given $P(x + y \le k) = p(9x - y \ge 2k)$
$P(z \le z_1) = p(z \ge z_2)$
$P(z \le z_1) = p(z \le -2z)$

$= \frac{k-9}{\sqrt{10}} = \frac{-(2k-21)}{\sqrt{90}} = k - 9$

$= \frac{-2k+21}{3}$

$3k - 27 = -2k + 21$

$5k = 48 \Rightarrow k = \frac{48}{5} = 9.6$ Choice (B)

15. Let B_1: transfer of white ball to bag B.
B_2: transfer of green ball to bag B.

$P(B_1) = \frac{9}{14}; P(B_2) = \frac{5}{14}$

Let E be the event of drawing a green ball from bag B after transfer.

$P\left(\frac{E}{B_1}\right)$ = probability of drawing green ball if white ball is transferred to bag $B = \frac{7}{14}$

$P\left(\frac{E}{B_2}\right)$ = probability of drawing a green ball if green ball is transferred to bag $B = \frac{8}{14}$.

$\therefore$ $P(E) = P(B_1) \,.\, P\left(\frac{E}{B_1}\right) + P(B_2) \,.\, P\left(\frac{E}{B_2}\right)$

$= \frac{9}{14} . \frac{7}{14} + \frac{5}{14} . \frac{8}{14} = \frac{63}{196} + \frac{40}{196} = \frac{103}{196}$

$\therefore$ The required probability $P\left(\frac{B_1}{E}\right)$

$= \frac{P(B_1).P\left(\frac{E}{B_1}\right)}{P(E)} = \frac{\frac{9}{14}.\frac{7}{14}}{\frac{103}{196}} = \frac{63}{103}$ Choice (B)

16. Let A be the event that the number 3 appears atleast once.
B be the event that sum of the numbers appearing is 7.
$A \cap B$ be the event that the sum is 7 and 3 appear atleast once $P(B) = \frac{6}{36} \Rightarrow P(A \cap B) = \frac{2}{36}$

A/B denotes atleast one number show 3 while the sum of the numbers is 7.

$P\left(\frac{A}{B}\right) = \frac{P(B \cap A)}{P(B)} = \frac{\frac{2}{36}}{\frac{6}{36}} = \frac{1}{3}$ Choice (C)

17. We know $\sum P(X = x_1) = 1$

$\therefore\ k + 2k + 3k + 4k + 5k = 1$

$15k = 1 \Rightarrow k = \dfrac{1}{15}$

$P(X \geq 2) = P(X = 2) + P(X = 3) + P(X = 4)$

$= 3k + 5k + 4k = 12k = \dfrac{12}{15} = \dfrac{4}{5}$ Choice (A)

18. By definition. Choice (C)

19. Standard Result. Choice (A)

20. Standard Result. Choice (C)

21. We know that, if a statistic 's' follows t-distribution with degrees of freedom = ν, then 's^2' follows F–distribution with degrees of freedom $(1, \nu)$

Here ν = 10

$\therefore$'s^2' follows F-distribution with degrees of freedom $= (1, \nu) = (1, 10)$. Choice (B)

22. When the test statistic is outside the critical region, it lies in the acceptance region. So, we will accept the null hypothesis and reject the alternative hypothesis.

$\therefore$ Both P and S are true. Choice (C)

23. Three letters are placed into 3 addressed envelopes randomly in 3! = 6 ways.

X denotes the number of letters placed into corresponding addressed envelopes. The probability distribution table is as follows.

$X = x_i$	0	1	2	3
$P(x = x_i)$	$\frac{2}{6}$	$\frac{3}{6}$	0	$\frac{1}{6}$

$\therefore$ mean $(M) = \sum X_i P(x = x_i)$

$$= 0 \times \frac{2}{6} + 1 \times \frac{3}{6} + 2 \times \frac{0}{6} + 3 \times \frac{1}{6}$$

$$= \frac{0+3+0+3}{6} = \frac{6}{6} = 1$$

Variance $= \sum x_i^2 P(x = x_i) - \mu^2$

$$= 0 \times \frac{2}{6} + 1 \times \frac{3}{6} + 4 \times 0 + 9 \times \frac{1}{6} - 1$$

$$= \frac{3+9}{6} - 1 = 2 - 1 = 1.$$ Choice (C)

24. We know that variance $(x, x + 3, x + 5, x + 7, x + 10)$ = variance (0, 3, 5, 7, 10)

$$AM(0, 3, 5, 7, 10) = \frac{0+3+5+7+10}{5} = \frac{25}{5} = 5$$

$$\text{Variance } (0, 3, 5, 7, 10) = \frac{\sum (x_1 - A)^2}{n}$$

$$= \frac{(0-5)^2 + (3-5)^2 + (5-5)^2 + (7-5)^2 + (10-5)^2}{5}$$

$$= \frac{25+4+0+4+25}{5} = \frac{58}{5}$$

Variance $= \dfrac{58}{5} = 11.6$. Choice (B)

25. The ascending order of the given data except x is 3, 8, 12, 15, 16, 28

If $x < 12$, the fourth observation is 12 hence median is 12 if $x > 15$, the fourth observation is 15, hence median is 15. If $12 < x < 15$, the fourth observation is x, hence median is x.

Median is always lies between [12, 15]. Choice (D)

Engineering Mathematics Test 5

Number of Questions: 25 **Time: 60 min.**

Numerical Methods

Directions for questions 1 to 25: Select the correct alternative from the given choices.

1. In the process of finding an approximate root of $f(x) = 0$ in $[a, b]$ (where $f(a)$ and $f(b)$ are of opposite signs) by Regula – Falsi method, we assume that the curve $f(x) = 0$ in between $x = a$ and $x = b$ can be approximated to ________.
   (A) a parabola
   (B) a straight line
   (C) a hyperbola
   (D) a rectangular hyperbola

2. The iterative formula to find a root of the equation $f(x) = x^3 - 5x + 7 = 0$ by Newton Raphson method is _______.
   (A) $x_{k+1} = \dfrac{x_k^3 + 5x - 7}{3x_k^2 + 5}$ (B) $x_{k+1} = \dfrac{2x_k^3 + 5x}{3x_k^2 + 7}$
   (C) $x_{k+1} = \dfrac{2x_k^3 - 7}{3x_k^2 - 5}$ (D) $x_{k+1} = \dfrac{x_k^3 - 5x}{3x_k^2 + 7}$

3. With $x_0 = 0.5$ as the initial approximation, the value of the root of $f(x) = x + \sin x - 1 = 0$, after first iteration by Newton Raphson method is _______.
   (A) 0.7456 (B) 0.5110
   (C) 0.4998 (D) 0.2644

4. Applying the secant method, the first approximation to the root of $f(x) = xe^x - 2 = 0$, starting with function value at $x = 0.5$ and $x = 1$ is _______.
   (A) 1.1756 (B) 0.4035
   (C) 0.8104 (D) 0.5473

5. The extreme (minimum or maximum) point of a function $f(x)$ is to be determined by solving $\dfrac{df(x)}{dx} = 0$ using the Newton Raphson method. Let $f(x) = x^3 - 4x^2 + 5$ and $x_0 = 3$ be the initial guess of x. The value of x after first iteration (x_1) is ______.
   (A) 2.70 (B) 4.33
   (C) 3.30 (D) 1.77

6. In the process of evaluating $\int_0^{\frac{\pi}{2}} \left(x^3 + \sin 2x + 5\right) dx$ using Simpson's Rule with $h = \dfrac{\pi}{8}$, the absolute value of the error does not exceed ______.
   (A) 0.12351×10^{-4} (B) 1.03503×10^{-4}
   (C) 3.01243×10^{-4} (D) 6.2475×10^{-4}

7. The following table gives the velocity v of a particle at time t.

T(in seconds)	0	2	4	6	8	10	12
n(in m/sec)	6	10	16	20	22	30	40

   The distance moved by the particle in 12 seconds, when calculated by the Trapeziodal rule with $h = 2$ is ________.
   (A) 200 meters (B) 210 meters
   (C) 242 meters (D) 262 meters

8. A curve is drawn to pass through the points given by the following table

X	1.0	1.5	2.0	2.5	3.0	3.5	4.0
Y	1.0	1.7	2.5	3.4	4.1	3.7	2.9

   The area bounded by the curve, the x – axis and the lines $x = 1$ and $x = 4$, when calculated by the Simpson's $\dfrac{3}{8}th$ Rule is _____ square units.
   (A) 8.7562 (B) 5.7435
   (C) 6.7134 (D) 8.4296

9. The absolute error (correct up to 4 decimal places) in calculating the value $\log_e 2$ by trapezoidal rule, with 4 intervals using the formulae $\log_e 2 = \int_1^2 \dfrac{dx}{x}$ is _______.
   (A) 0.1314 (B) 0.0039
   (C) 0.0000 (D) 0.0004

10. With reference to finding solution of a differential equation by numerical methods, which of the following methods is NOT a predictor correct method?
   (A) Picard's method
   (B) Modified Euler's method
   (C) Adams – Bash forth method
   (D) Milne's method

11. The differential equation $\dfrac{dy}{dx} - x^2 = y$; $y(0) = 1$ is to be solved by the modified Euler's method. With $h = 0.1$, the value of y_1 correct to four decimal places is ______.
   (A) 1.2046 (B) 1.1058
   (C) 0.9954 (D) 0.8764

12. Using Taylor's series method, the solution of the differential equation $\dfrac{dy}{dx} - xy = 1$ with $y(0) = 3$ at $x = 0.1$ with $h = 0.1$ is correct upto three decimal places is _______.
   (A) 3.1153 (B) 2.9847
   (C) 4.1572 (D) 3.7893

13. The solution of the differential equation $\frac{dy}{dx} = x + y$; $y(0) = 0$ at $x = 0.2$ by Runge Kutta method of fourth order with $h = 0.2$ is ______.

(A) 1.0034 (B) 0.0456
(C) 0.9984 (D) 0.0214

14. Consider an equation $f(x) = 0$ for which $x = 4.50$ is an exact root. In the process of finding a root of $f(x) = 0$ by a numerical method, the approximations obtained in four successive iterations are 4.45, 4.54, 4.47 and 4.52 respectively. Then these approximate values of the root of $f(x) = 0$ are ______.

(A) precise but not accurate
(B) not precise but accurate
(C) both precise and accurate
(D) neither precise nor accurate

15. For an equation $f(x) = 0$, if x_e is the exact root and x_a is the approximate root, then the percentage error is ______.

(A) $(x_e - x_a)\times 100$ (B) $|x_e - x_a|\times 100$
(C) $\frac{(x_e - x_a)}{x_e}\times 100$ (D) $\frac{|x_e - x_a|}{|x_e|}\times 100$

16. Consider the following two statements

P: Truncation error in numerical analysis arise when approximations are used to estimate some quantity.

Q: Round off error in numerical analysis occurs because of the computing devices inability to deal with certain number.

Then

(A) Both *P* and *Q* are true
(B) *P* is true but *Q* is false
(C) *P* is false but *Q* is true
(D) Both *P* and *Q* are false

17. In the process of fitting a quadratic equation of the form $y = a + bx + cx^2$ to a set of n points (x_1, y_1), (x_2, y_2), ….., (x_n, y_n) by the method of least squares, which of the following is not a normal equation?

(A) $\sum y_i = na + b\sum x_i + c\sum x_i^2$
(B) $\sum x_i y_i = a\sum x_i + b\sum x_i^2 + c\sum x_i^3$
(C) $\sum x_i y_i^2 = a\sum x_i^2 + b\sum x_i^3 + c\sum x_i^4$
(D) $\sum x_i^2 y_i = a\sum x_i^2 + b\sum x_i^3 + c\sum x_i^4$

18. If $y = 3x + 7$ is the best fit for 6 pairs of values of x and y by the method of least squares and $\sum y = 150$, then $\sum x$ is ______.

(A) 144 (B) 102
(C) 46 (D) 36

19. In the process of fitting a curve $y = \frac{x^2}{ax+b}$ to a given set of n pairs of values of x and y by converting it into a linear form $Y = a + bX$, X and Y respectively stand for ______.

(A) $\frac{1}{x^2}$ and $\frac{x^2}{y}$ (B) $\frac{1}{x}$ and $\frac{x}{y}$
(C) x^2 and $\frac{y}{x^2}$ (D) x and $\frac{y}{x}$

20. In the process of fitting a curve $\exp(y) = ab^x$ to a given set of n pairs of values of x and y by converting it into a linear form $y = A + Bx$, A and B respectively stand for ______

(A) $\ln a$ and $\ln b$ (B) $\ln a$ and $\log_{10} b$
(C) $\log_{10} a$ and $\ln b$ (D) $\log_{10} a$ and $\log_{10} b$

21. If Δ denotes the forward difference operator then the value of $\Delta^{18}\left[(1+2x^3)(1-3x^4)(1+4x^5)(1-5x^6)\right]$ is ______.

(A) $5! \times 18!$
(B) $6! \times 18!$
(C) $5! \times 17!$
(D) $6! \times 17!$

22. The central difference operator δ is defined as

$y_r - y_{r-1} = \delta y_{r-\frac{1}{2}}$

Then which of the following is an identity? (Note that Δ and ∇ denote the forward and the backward difference operators respectively)

(A) $\Delta y_5 = \nabla y_4 = \delta y_{\frac{7}{2}}$
(B) $\Delta y_5 = \nabla y_4 = \delta y_4$
(C) $\Delta y_4 = \nabla y_5 = \delta y_{\frac{9}{2}}$
(D) $\Delta y_4 = \nabla y_5 = \delta y_4$

23. Match the following

	Group – I		Group – II
P.	To extrapolate the values of y to the left of y_0 when x values are equally spaced	1.	Newton's divided difference formula
Q.	To interpolate the values of y near the end value y_n when x values are equally spaced	2.	Lagrange's interpolation formula
R.	To split the given function into partial fractions	3.	Newton's forward interpolation formula
S.	To interpolate the values of y when x values are unequally spaced.	4.	Newton's backward interpolation formula

(A) $P-(1), Q-(2), R-(3), S-(4)$
(B) $P-(3), Q-(2), R-(4), S-(1)$
(C) $P-(3), Q-(4), R-(2), S-(1)$
(D) $P-(2), Q-(1), R-(4), S-(3)$

24. The 9th divided difference of a polynomial of degree 8 is ______.
(A) zero
(B) a non – zero constant
(C) a linear polynomial
(D) a quadratic polynomial

25. If $f(0) = -12$, $f(3) = 6$ and $f(4) = 12$, then the value of $f(6)$ obtained by the Lagrange's interpolation formula is ______.
(A) 18 (B) 24
(C) 20 (D) 26

Hints and Explanations

1. Standard Result. Choice (B)

2. Given, $f(x) = x^3 - 5x + 7 = 0$
$\Rightarrow f^1(x) = 3x^2 - 5$.
By Newton Raphson's method, the interative formulae to find a root is

$$x_{k+1} = x_k - \frac{f(x_k)}{f^1(x_k)} = x_k - \frac{(x_k^3 - 5x_k + 7)}{(3x_k^2 - 5)}$$

$$\therefore \quad x_{k+1} = \frac{2x_k^3 - 7}{3x_k^2 - 5}.$$ Choice (C)

3. Given, $f(x) = x + \sin x - 1 = 0$
$\Rightarrow f^1(x) = 1 + \cos x$ and $x_0 = 0.5$
By Newton Raphson's method

$$x_1 = x_0 - \frac{f(x_0)}{f^1(x_0)}$$

$$= (0.5) - \frac{(0.5 + \sin(0.5) - 1)}{(1 + \cos(0.5))}$$

$= 0.5110$. Choice (B)

4. Here, $f(x) = xe^x - 2 = 0$
By the secant method, the approximate root of $f(x) = 0$ after first iteration is given by

$$x_2 = \frac{x_0 f(x_1) - x_1 f(x_0)}{f(x_1) - f(x_0)} \qquad \text{---------- (1)}$$

Here, $x_0 = 0.5$ and $x_1 = 1$
$\therefore$ $f(x_0) = f(0.5) = -1.1756$ and $f(x_1) = f(1) = 0.7183$
Substituting these in (1) we have

$$x_2 = \frac{(0.5)(0.7183) - (1)(-1.1756)}{(0.7183) - (-1.1756)}$$

$\therefore \quad x_2 = 0.8104$. Choice (C)

5. Given, $f(x) = x^3 - 4x^2 + 5$

$$\frac{df(x)}{dx} = 0 \Rightarrow 3x^2 - 8x = 0$$

Let, $g(x) = 3x^2 - 8x = 0$.

$\therefore$ We have to find the approximate root of $g(x) = 0$ after first interaction by the Newton Raphson method with $x_0 = 3$.
$\therefore$ $g^1(x) = 6x - 8$
By Newton Raphson method

$$x_1 = x_0 - \frac{g(x_0)}{g^1(x_0)}$$

$$= 3 - \frac{(3(3)^2 - 8(3))}{6(3) - 8} = 2.7.$$ Choice (A)

6. We have $\int_0^{\frac{\pi}{2}} (x^3 + \sin 2x + 5)dx$.

Let $y = f(x) = x^3 + \sin 2x + 5$.

The absolute value of the maximum error in Simpson's Rule is

$$|E|_{\max} = \frac{(b-a)h^4}{180} m \qquad \text{----------- (1)}$$

Where $m = \max - \{y_0^{(iv)}, y_2^{(iv)}, y_4^{(iv)}\}$

Here, $h = \frac{\pi}{8}$ and $y^{(iv)} = 16 \sin 2x$, $a = 0$, $b = \frac{\pi}{2}$

$\therefore \quad m = \max [16\sin 0, 16\sin\left(2 \times \frac{\pi}{4}\right),$

$16 \sin\left(2 \times \frac{\pi}{2}\right)] = 16$

From (1)

$$|E_{\max}| = \frac{\left(\frac{\pi}{2}\right)\left(\frac{\pi}{8}\right)}{180} \times 16 = 1.0350 \times 10^{-4}$$

The absolute value of the maximum error cannot exceed 1.03503×10^{-4}.

Choice (B)

7. Given velocity of the particle at various times is

T	0	2	4	6	8	10	12
n	6	10	16	20	22	30	40

Distance traveled in 12 seconds = $\int_0^{12} \nu dt$.

By trapezoidal rule

$$\int_0^{12} \nu dt = \frac{h}{2}[(\nu_0 + \nu_6) + 2(\nu_1 + \nu_2 + \nu_3 + \nu_4 + \nu_5)]$$

$$= \frac{2}{2}[(6 + 40) + 2(10 + 16 + 20 + 22 + 30)]$$

$= 242$ meters. Choice (C)

8. Let $y = f(x)$ be the curve, that pass through the points

X	1.0	1.5	2.0	2.5	3.0	3.5	4.0
Y	1.0	1.7	2.5	3.4	4.1	3.7	2.9

$\therefore$ The area bounded by the curve $y = f(x)$, x – axis andthe lines $x = 1$ and $x = 4$ is $\int_1^4 f(x)dx$.

By Simpson's $\frac{3}{8}th$ Rule, we have

$$\int_1^4 f(x)dx = \frac{3h}{8}[(y_0 + y_6) + 3(y_1 + y_2 + y_4 + y_5) + 2y_3]$$

$$= \frac{3\times(0.5)}{8}[(1.0 + 2.9) + 3(1.7 + 2.5 + 4.1 + 3.7) + 2 \times 3.4] = 8.7562.$$

Choice (A)

9. Let $y = f(x) = \frac{1}{x}$

Here, $a = 1$, $b = 2$ and $n = 4$

$\therefore \quad h = \frac{b-a}{n} = 0.25$

X	1	1.25	1.5	1.75	2
F(x)	1	0.8	0.667	0.5714	0.5

We have $\log_e 2 = \int_1^2 \frac{dx}{x}$

By the trapezoidal rule, we have

$$\int_1^2 \frac{dx}{x} = \int_1^2 f(x)dx = \frac{h}{2}[(y_0 + y_4) + 2(y_1 + y_2 + y_3)]$$

$$\frac{0.25}{2}[(1+ 0.5) + 2(0.8 + 0.6667 + 0.5714)]$$

$$\therefore \quad \log_e 2 = \int_1^2 \frac{dx}{x} = 0.6970 \qquad \text{---------- (1)}$$

The exact value of $\log_e 2 = 0.6931$ -------- (2)

The absolute error in calculating $\log_e 2$ by the trapezoidal rule = 0.6970 – 0.6931 = 0.0039. Choice (B)

10. A predictor corrector method is one in which we predict the solution first and then we improve it for accuracy Picard's method is not a predictor corrector method and all other methods are predictor corrector methods. Choice (A)

11. Given different equation is $\frac{dy}{dx} - x^2 = y$ and $y(0) = 1$

$$\Rightarrow \frac{dy}{dx} = x^2 + y$$

$\therefore \quad f(x, y) = x^2 + y$, $x_0 = 0$, $y_0 = y(x_0) = 1$ and $h = 0.1$

By Euler's method

$$y_1^{(0)} = y_0 + h\,(f(x_0, y_0) = y_0 + h\left(x_0^2 + y_0\right)$$

$$= 1 + (0.1)\,(0 + 1)$$

$$y_1^{(0)} = 1.1$$

By modified Euler's method

$$y_1^{(1)} = y_0 + \frac{h}{2}\left[f\left(x_0, y_0\right) f\left(x_1 y_1^{(0)}\right)\right]$$

$$= y_0 + \frac{h}{2}\left[\left(x_0^2 + y_0\right) + \left(x_1^2 + y_1^{(0)}\right)\right]$$

$$= 1 + \frac{(0.1)}{2}[(0 + 1) + (10.1)^2 + 1.1)] = 1.1055$$

$$y_1^{(2)} = y_0 + \frac{h}{2}\left[f\left(x_0, y_0\right) + f\left(x_1, y_1^{(1)}\right)\right]$$

$$= y_0 + \frac{h}{2}\left[\left(x_0^2 + y_0\right) + \left(x_1^2 + y_1^{(1)}\right)\right]$$

$$= 1 + \frac{(0.1)}{2}[(0 + 1) + ((0.1)^2 + 1.1055)]$$

$$= 1.1058$$

$$y_1^{(3)} = y_0 + \frac{h}{2}\left[f\left(x_0, y_0\right) + f\left(x_1, y_1^{(2)}\right)\right]$$

$$= y_0 + \frac{h}{2}\left[\left(x_0^2 + y_0\right) + \left(x_1^2 + y_1^{(2)}\right)\right]$$

$$= 1 + \frac{(0.1)}{2}[(0 + 1) + ((0.1)^2 + 1.1058)]$$

$$= 1.1058$$

The solution of a given different equation at $x_1 = 0.1$ is $y_1 = 1.1058$. Choice (B)

12. Given differential equation is $\frac{du}{dx} - xy = 1$ and $y(0) = 3$

$$\Rightarrow \frac{dy}{dx} = 1 + xy$$

Here $f(x, y) = 1 + xy$, $x_0 = 0$, $y_0 = y(x_0) = 3$ and $h = 0.1$

By Taylar's series we have

$$y_1 = y(x_1) = y_0 + h_0\, y_0^1 + \frac{h^2}{2!}\, y_0^{11} + \frac{h^3}{3!}\, y_0^{111} + \ldots\ldots \infty \qquad \text{----(1)}$$

$$y_0^1 = \left(\frac{dy}{dx}\right)_{x=0} = f(x_0, y_0) = 1 + x_0\, y_0 = 1 + (0)(3) = 1$$

$$\frac{d^2y}{dx^2} = \frac{d}{dx}\left(\frac{dy}{dx}\right) = \frac{d}{dx}\,(1 + xy) = xy^1 + y$$

$$\therefore \quad y_0^{11} = \left(\frac{d^2y}{dx^2}\right)_{atx=x_0} = x_0\; y_0^1 + y_0 = 0 \times 1 + 3 = 3$$

$$\frac{d^3y}{dx^3} = \frac{d}{dx}\left(\frac{d^2y}{dx^2}\right) = \frac{d}{dx}\,(xy^1 + y) = xy^{11} + 2y^1$$

$$\therefore \quad y_0^{111} = \frac{d^3y}{dx^3}_{atx=x_0} = x_0\; y_0^{11} + 2\, y_0^1 = 0 \times 3 + 2 \times 1 = 2$$

$$\frac{d^4y}{dx^4} = \frac{d}{dx}\left(\frac{d^3y}{dx^3}\right) = \frac{d}{dx}\,(xy^{11} + 2y^1) = xy^{111} + 3y^{11}$$

$$y_0^{(iv)} = \frac{d^4y}{dx^4}_{atx=x_0} = x_0\; y_0^{111} + 3\, y_0^{11} = 0 \times 2 + 3 \times 3 = 9$$

Substituting these in (1), we have

$$y_1 = 3 + (0.1) \times 1 + \frac{(0.1)^2}{2!} \times 3 + \frac{(0.1)^3}{3!} \times 2 + \frac{(0.1)^4}{4!} \times 9 + \ldots = 3.1153.$$

Choice (A)

13. Given differential equation is $\frac{dy}{dx} = x + y, y(0) = 0$

Here $f(x, y) = x + y$, $x_0 = 0$; $y_0 = 0$ and $h = 0.2$

$\therefore \quad x_1 = x_0 + h = 0.2$

By R – K method of fourth order we have

$Y_{\text{at } x = 0.1} = y_1 = y_0 + \Delta y$ ---------- (1)

Where $\Delta y = \frac{1}{6}\,[k_1 + 2k_2 + 2k_3 + k_4]$ ------- (2)

Here $k_1 = h\, f(x_0, y_0) = h(x_0 + y_0)$

$= (0.2)\,(0 + 0)$

$\therefore \quad k_1 = 0$

$$k_2 = h\, f\left(x_0 + \frac{h}{2}, y_0 + \frac{k_1}{2}\right)$$

$$= h\left(\left(x_0 + \frac{h}{2}\right) + \left(y_0 + \frac{k_1}{2}\right)\right)$$

$$= (0.2)\left[\left(0 + \frac{(0.2)}{2}\right) + \left(0 + \frac{0}{2}\right)\right]$$

$\therefore \quad k_2 = 0.02$

$K_3 = 0.022$ and $k_4 = h\, f(x_0 + h\,, y_0 + k_3)$

$= h\,[(x_0 + h) + (y_0 + k_3)]$

$= (0.2)\,[(0 + 0.2) + (0 + 0.022)]$

$\therefore \quad k_4 = 0.0444$

$\therefore$ From (2),

$$\Delta y = \frac{1}{6}\,[0 + 2 \times 0.02 + 2 \times 0.022 + 0.0444]$$

$\Delta y = 0.0214$

$\therefore$ From (1), $y_1 = y_0 + \Delta y = 0 + 0.0214 = 0.0214.$

Choice (D)

14. The four approximations given are not relatively close to each other. So, they are not precise. All the four approximations are close to the exact root $x = 4.50$. So, they are accurate. Choice (B)

15. By definition. Choice (D)

16. By definitions of the round off and the truncation errors. Choice (A)

17. Given set of n points are $(x_1, y_1,)$, $(x_2, y_2), \ldots, (x_n, y_n)$

We have to fit the quadratic equation

$y = a + bx + cx^2$ $\rightarrow$ (1)

to the given set of n points

Here a, b and c are constants to be determined such that

$$S = \sum\left[y_i - \left(a + bx_i + cx_i^2\right)\right]^2 \quad \rightarrow (2)$$

is minimum

S is minimum for those values of a, b and c at which

$$\frac{\partial S}{\partial a} = 0, \frac{\partial S}{\partial b} = 0 \text{ and } \frac{\partial S}{\partial c} = 0.$$

i.e., $-2\left(\sum\left[y_i - \left(a + bx_i + cx_i^2\right)\right]\right) = 0$

$$-2x_i\left(\sum\left[y_i - \left(a + bx_i + cx_i^2\right)\right]\right) = 0$$

and $-2x_i^2\left(\sum\left[y_i - \left(a + bx_i + cx_i^2\right)\right]\right) = 0$

$\therefore$ the normal equations are

$$\Rightarrow \quad \sum y_i = na + b\sum x_i + c\sum x_i^2$$

$$\sum x_i y_i = a\sum x_i + b\sum x_i^2 + c\sum x_i^3$$

And $\sum x_i^2 y_i = a\sum x_i^2 + b\sum x_i^3 + c\sum x_i^4$

$\therefore$ the equation given in option (C) is not a normal equation. Choice (C)

18. Given that $y = 3x + 7$ is the best fit for 6 pairs of values of x and y also given $\sum y = 150$

$\therefore$ We know that

$\sum y = 3\sum x + n7$

(Here n = number of points = 6)

$\Rightarrow$ $150 = 3\sum x + 6 \text{ x } 7$

$\Rightarrow$ $3\sum x = 108$

$\Rightarrow$ $\sum x = 36.$ Choice (D)

19. Given curve is $y = \frac{x^2}{ax + b}$

$$\Rightarrow \quad \frac{1}{y} = \frac{ax + b}{x^2}$$

$$\Rightarrow \quad \frac{}{y} = \frac{a}{x} + \frac{b}{x}$$

$$\Rightarrow \quad \frac{x}{y} = a + \frac{b}{x}$$

$$\Rightarrow \quad \frac{x}{y} = a + \frac{b}{x}$$

Which is of the linear from $Y = a + bX$

Where $X = \frac{1}{x}$ and $Y = \frac{x}{y}$ Choice (B)

20. Given curve is $\exp(y) = ab^x$

i.e., $e^y = ab^x$

Applying logarithm (ln) on both sides,

We have

$\ln(e^y) = \ln(ab^x)$

$\Rightarrow \quad y = \ln a + \ln b^x$

$\Rightarrow \quad y = \ln a + x\ln b$

Which is of the form

$y = A + Bx$

Where $A = \ln a$ and $B = \ln b$. Choice (A)

21. We have $\Delta^{18}\left[\left(1+2x^3\right)\left(1-3x^4\right)\left(1+4x^5\right)\left(1-5x^6\right)\right]$

$= \Delta^{18}\left[2x(-3)x4x(-5)x^{18} + k_1x^{17} + k_2x^{16} + \ldots + k_{15}x^3 + 1\right]$

$= 5!\ \Delta^{18}\ [x^{18}]$

$(\because\ \Delta^{18}[x^n] = 0$ for $n < 18)$

$= 5! \times 18!$. Choice (A)

22. We know that $\Delta y_{r-1} = y_r - y_{r-1}$ $\rightarrow (1)$

$\nabla y_r = y_r - y_{r-1}$ $\rightarrow (2)$

and given that $\delta y_{r-\frac{1}{2}} = y_r - y_{r-1}$ $\rightarrow (3)$

From (1), (2) and (3), we have

$\Delta y_{r-1} = \nabla y_r = \delta y_{r-\frac{1}{2}}$ $\rightarrow (4)$

Among the options given, we can get option (C) by taking $r = 5$ in (4),

$\therefore \quad \Delta y_4 = \nabla y_5 = \delta y_{\frac{9}{2}}$ Choice (C)

23. Standard result Choice (C)

24. We know that the n^{th} divided difference of any polynomial of degree less than n is always zero. Choice (A)

25. Given pairs of values of x and $f(x)$ are

X	0	3	4
f(x)	–12	6	12

By Lagrange's interpolation formula, we have

$$f(x) = \frac{(x-x_1)(x-x_2)}{(x_0-x_1)(x_0-x_2)} f(x_0)$$

$$+ \frac{(x-x_0)(x-x_2)}{(x_1-x_0)(x_1-x_2)} f(x_1) + \frac{(x-x_0)(x-x_1)}{(x_2-x_0)(x_2-x_1)} f(x_2)$$

$$= \frac{(x-3)(x-4)}{(0-3)(0-4)} \times (-12) + \frac{(x-0)(x-4)}{(3-0)(3-4)} \times 6$$

$$+ \frac{(x-0)(x-3)}{(4-0)(4-3)} \times 12$$

By taking $x = 6$ on both sides,

We have

$$f(6) = \frac{(6-3)(6-4)}{3\times 4} \times (-12) + \frac{(6-0)(6-4)}{3\times(-1)} \times 6$$

$$+ \frac{(6-0)(6-3)}{4\times 1} \times 12$$

$\therefore \quad f(6) = 24$ Choice (B)

Chapter 1

Number Systems

LEARNING OBJECTIVES

- *Digital circuits*
- *Number system with different base*
- *Conversion of number systems*
- *Complements*
- *Subtraction with complement*
- *Numeric codes*
- *Weighted and non-weighted codes*
- *Error detection and correction code*
- *Sequential, reflective and cyclic codes*
- *Self complementing code*

Digital Circuits

Computers work with binary numbers, which use only the digits '0' and '1'. Since all the digital components are based on binary operations, it is convenient to use binary numbers when analyzing or designing digital circuits.

Number Systems with Different Base

Decimal number system

Decimal numbers are usual numbers which we use in our day-to-day life. The base of the decimal number system is 10. There are ten numbers 0 to 9.

The value of the nth digit of the number from the right side = nth digit $\times$ (base)$^{n-1}$

Example 1: $(99)_{10} \rightarrow 9 \times 10^1 + 9 \times 10^0$
$= 90 + 9 = 99$

Example 2: $(332)_{10} \rightarrow 3 \times 10^2 + 3 \times 10^1 + 2 \times 10^0$
$= 300 + 30 + 2$

Example 3: $(1024)_{10} \rightarrow 1 \times 10^3 + 0 \times 10^2 + 2 \times 10^1 + \times 10^0$
$= 1000 + 0 + 20 + 4 = 1024$

Binary number system

In binary number system, there are only two digits '0' and '1'. Since there are only two numbers, its base is 2.

Example 4: $(1101)_2 = 1 \times 2^3 + 1 \times 2^2 + 0 \times 2^1 + 1 \times 2^0$
$= 8 + 4 + 1 = (13)_{10}$

Octal number system

Octal number system has eight numbers 0 to 7. The base of the number system is 8. The number $(8)_{10}$ is represented by $(10)_8$.

Example 5: $(658)_8 = 6 \times 8^2 + 5 \times 8^1 + 8 \times 8^0$
$= 384 + 40 + 8 = (432)_{10}$

Hexadecimal number system

In hexadecimal number system, there are 16 numbers 0 to 9, and digits from 10 to 15 are represented by A to F, respectively. The base of hexadecimal number system is 16.

Example 6: $(1A5C)_{16} = 1 \times 16^3 + A \times 16^2 + 5 \times 16^1 + C \times 16^0$
$= 1 \times 4096 + 10 \times 256 + 5 \times 16 + 12 \times 1$
$= 4096 + 2560 + 80 + 12 = (6748)_{10}$.

Table 1 *Different number systems*

Decimal	Binary	Octal	Hexadecimal
0	000	0	0
1	001	1	1
2	010	2	2
3	011	3	3
4	100	4	4
5	101	5	5
6	110	6	6
7	111	7	7
8	1000	10	8
9	1001	11	9
10	1010	12	A
11	1011	13	B
12	1100	14	C
13	1101	15	D
14	1110	16	E
15	1111	17	F

(*Continued*)

Table 1 (*Continued*)

Decimal	Binary	Octal	Hexadecimal
16	10000	20	10
17	10001	21	11
18	10010	22	12
19	10011	23	13
20	10100	24	14

1. For a number system with base n, the number of different symbols in the number system will be n. Example: octal number system will have total of 8 numbers from 0 to 7.
2. The number 'n' in the number system with base 'n' is represented as $(10)_n$.
3. The equivalent of number $(a_3a_2a_1a_0 \cdot a_{-1}a_{-2})_n$ in decimal is $a_3 \times n^3 + a_2 \times n^2 + a_1 \times n^1 + a_0 \times n^0 + a_{-1} \times n^{-1} + a_{-2} \times n^{-2}$.

Conversion of Number Systems

The conversion of decimal to any other number system involves successive division by the radix until the dividend reaches 0. At each division, the remainder gives a digit of converted number; and the last one is most significant digit, the remainder of the first division is least significant digit.

The conversion of other number system to decimal involves multiplying each digit of number system with the weight of the position (in the power of radix) and sum the products calculated, the total is the equivalent value in decimal.

Decimal to binary conversion

Example 7: $(66)_{10}$

$$\begin{array}{r|ll} 2 & 66 & \\ 2 & 33 & 0 \\ 2 & 16 & 1 \\ 2 & 8 & 0 \\ 2 & 4 & 0 \\ & 2 & 0 \\ & 1 & 0 \end{array}$$

Reading remainders from bottom to top

$= (1000010)_2$

Example 8: $(928)_{10}$

$$\begin{array}{r|ll} 2 & 928 & \\ 2 & 464 & 0 \\ 2 & 232 & 0 \\ 2 & 116 & 0 \\ 2 & 58 & 0 \\ 2 & 29 & 0 \\ 2 & 14 & 1 \\ 2 & 7 & 0 \\ 2 & 3 & 1 \\ & 1 & 1 \end{array}$$

$= (1110100000)_2$

Example 9: $(105.75)_{10}$

$$\begin{array}{r|ll} 2 & 105 & \\ 2 & 52 & 1 \\ 2 & 26 & 0 \\ 2 & 13 & 0 \\ 2 & 6 & 1 \\ 2 & 3 & 0 \\ & 1 & 1 \end{array}$$

$(105)_{10} = (1101001)_2$

$(0.75)_{10}$

Multiply 0.75 by 2 = 1.50

Multiply 0.50 by 2 = 1.00

Reading integers from top to bottom $0.75 = (0.11)_2$

$\therefore (105.75)_{10} = (1101001.11)_2$

Binary to decimal conversion

Example 10: $(10100011)_2$

$= 1 \times 2^7 + 0 \times 2^6 + 1 \times 2^5 + 0 \times 2^4 + 0 \times 2^3 + 0 \times 2^2 + 1 \times 2^1 + 1 \times 2^0$

$= 128 + 0 + 32 + 0 + 0 + 0 + 2 + 1$

$= (163)_{10}$

Example 11: $(11010011.101)_2$

$= 1 \times 2^7 + 1 \times 2^6 + 0 \times 2^5 + 1 \times 2^4 + 0 \times 2^3 + 0 \times 2^2 + 1 \times 2^1 + 1 \times 2^0 + (1 \times 2^{-1}) + (0 \times 2^{-2}) + (1 \times 2^{-3})$

$= 128 + 64 + 0 + 16 + 0 + 0 + 2 + 1 + 0.5 + 0 + 0.125$

$= (211.625)_{10}$

Decimal to octal conversion

Example 12: $(16)_{10}$

$$\begin{array}{r|ll} 8 & 16 & 0 \\ & 2 & \end{array}$$

Remainder from bottom to top $= (20)_8$

Example 13: $(347.93)_{10}$

$(.93)_{10}$

$0.93 \times 8 =$ 7.44

$0.44 \times 8 =$ 3.52

$0.52 \times 8 =$ 4.16

$0.16 \times 8 =$ 1.28

……..

Read the integers of octal point from top to bottom.

$\therefore (0.93)_{10} = (0.7341)_8$

$(347)_{10}$

$$\begin{array}{r|ll} 8 & 347 & 3 \\ 8 & 43 & 3 \\ & 5 & \end{array}$$

$\therefore (347)_{10} = (533)_8$

Ans: $(533.7341)_8$

Octal to decimal conversion

Example 14: $(33)_8$

$3 \times 8^1 + 3 \times 8^0 = 24 + 3$

$(27)_{10}$

Example 15: $(1023.06)_8$

$1 \times 8^3 + 0 \times 8^2 + 2 \times 8^1 + 3 \times 8^0 + 0 \times 8^{-1} + 6 \times 8^{-2}$

$= 512 + 0 + 16 + 3 + 0 + 0.0937 = (2095.0937)_{10}$

Octal to binary conversion

To convert octal to binary, replace each octal digit with their equivalent 3-bit binary representation.

Example 16: $(7777)_8$

Convert each octal digit to binary

$= \frac{7}{111}\ \frac{7}{111}\ \frac{7}{111}\ \frac{7}{111}$

$= (111\ \ 111\ \ 111\ \ 111)_2$

Example 17: $(567.62)_8$

5	6	7	.	6	2
101	110	111	.	110	010

$= (101110111.110010)_2$

Binary to octal conversion

To convert a binary number to an octal number, starting from the binary point, make groups of 3-bits each on either side of the binary point, and replace each 3-bit binary group by the equivalent octal digit.

Example 18: $(010011101)_2$

$\frac{010}{2}\ \frac{011}{3}\ \frac{101}{5} = (235)_8$

Example 19: $(10010111011.1011)_2$

$\frac{010}{2}\ \frac{010}{2}\ \frac{111}{7}\ \frac{011}{3} \cdot \frac{101}{5}\ \frac{100}{4} = (2273.54)_8$

Decimal to hexadecimal conversion

Example 20: $(527)_{10}$

$$\begin{array}{r|ll} 16 & 527 & \\ 16 & 32 & 15 \\ & 2 & 0 \end{array}$$

Decimal		Hexa
2	→	2
0	→	0
15	→	F

$= (20F)_{16}$

Example 21: $(18.675)_{10}$

$(18)_{10}$

$$\begin{array}{r|ll} 16 & 18 & \\ & 1 & 2 \end{array}$$

Decimal		Hexa
1	–	1
2	–	2

$(18)_{10} = (12)_{16}$

$(0.675)_{10}$

$$\begin{array}{l|l} 0.675 \times 16 & 10.8 \\ 0.800 \times 16 & 12.8 \\ 0.800 \times 16 & 12.8 \\ 0.800 \times 16 & 12.8 \end{array}$$

Decimal	Hexa
10	A
12	C
12	C
12	C

$= (0.ACCC)_{16}$

∴ Hexadecimal equivalent is

$= (12.AC\ CC)_{16}$

Hexadecimal to decimal conversion

Example 22: $(A3F)_{16}$

Decimal		Hexa
A	–	10
3	–	3
F	–	15

$\rightarrow 10 \times 16^2 + 3 \times 16^1 + 15 \times 16^0$

$\rightarrow 2560 + 48 + 15 \quad \rightarrow (2623)_{10}$

Example 23: $(1F63.0EB)_{16}$

1	1
F	15
6	6
3	3
0	0
E	14
B	11

$\rightarrow 1 \times 16^3 + 15 \times 16^2 + 6 \times 16^1 + 3 \times 16^0 \times (0 \times 16^{-1})$
$+ (14 \times 16^{-2}) + (11 \times 16^{-3})$

$\rightarrow 4096 + 3840 + 96 + 3 + 0 + 0.0546 + 0.0026$

$\rightarrow (8035.0572)_{10}$

Hexadecimal to binary number system

To represent hexadecimal in binary, represent each HEX number with its 4-bit binary equivalent.

Example 24: $(34F)_{16}$

Hexa	Decimal	Binary
3	3	0011
4	4	0100
F	15	1111

$= (001101001111)_2$

Example 25: $(AFBC \cdot BED)_{16}$

Hexa	Decimal	Binary
A	10	1010
F	15	1111
B	11	1011
C	12	1100
B	11	1011
E	14	1110
D	13	1101

$= (1010111110111100.101111101101)_2$

Binary to hexadecimal number system

To convert binary number to a hexadecimal number, starting from the binary point, make groups of 4-bits each on either side of the binary point and replace each 4-bit group by the equivalent hexadecimal digit.

Example 26: $(11001001)_2$

$\rightarrow \underline{1100}\ \underline{1001}$
$\quad 12 \quad 9$

$\rightarrow (C9)_{16}$

Example 27: $(1011011011.01111)_2$

$$\frac{0010}{2}\ \frac{1101}{D}\ \frac{1011}{B} \cdot \frac{0111}{7}\ \frac{1000}{8} = (2\,DB.78)_{16}$$

Hexadecimal to octal number system

The simplest way to convert hexadecimal to octal is, first convert the given hexadecimal number to binary and the Binary number to Octal.

Example 28: $(C3AF)_{16}$

$\rightarrow 001100001110101111$

$\rightarrow (141657)_8$

Example 29: $(C6.AE)_{16}$

$\rightarrow 0011000110.10101110$

$\rightarrow (306.534)_8$

Octal to hexadecimal number system

The simplest way to convert octal to hexadecimal is first convert the given octal number to binary and then the binary number to hexadecimal.

Example 30: $(775)_8$

$\rightarrow (000111111101)_2$

$\rightarrow (1FD)_{16}$

Example 31: $(34.7)_8$

$\rightarrow (00011100.1110)_2$

$\rightarrow (1C.E)_{16}$

Complements

Complements are used in digital computers to simplify the subtraction operation and for logical manipulation.

There are two types of complements for each base - r-system.

1. Radix complement (or) r's complement: the r's complement of an m digit number N in base r is $r^m - N$ for $N \neq 0$.
   For example, $N = 0$, r's complement is 0.
2. Diminished radix complement: (or) $(r-1)$'s complement: Given a number N in base r having m digits, then $(r-1)$'s complement is $(r^m - 1) - N$.
   For example, decimal number system will have 10's complement and 9's complement.
   Similarly, binary number system will have 2's complement and 1's complement.

Example 32: 10's complement of $(2657)_{10}$ is $(10)^4 - 2657$

10000
<u>2657</u>
<u>7343</u>

Example 33: 9's complement of $(2657)_{10}$ is $(10^4 - 1) - 2657$

10000
<u>– 1</u>
9999
<u>2657</u>
<u>7342</u>

- r's complement can be obtained by adding 1 to $(r-1)$'s complement.

$$r^m - N = \{(r^m - 1) - N\} + 1$$

Example 34: 2's complement of $(101101)_2$ is

$= (2)^6 - 101101$

$(2^6)_{10} = (100000)_2$

2's complement is 100000
<u>–101101</u>
010011

Example 35: 1's complement of $(101101)_2$ is

$2^6 - 1 = 1000000$
<u>– 1</u>
111111
<u>101101</u>

1's complement –010010

The one's complement of a binary number is formed by changing 1's to 0's and 0's to 1's, The 2's complement can be formed by leaving all least significant 0's and the first 1 unchanged, and replacing 1's with zeros and zeros with 1's in all other bits.

If the number M contains radix point, the point should be removed temporarily in order to form r's/$(r-1)$'s complement.

The radix point is then restored to the complemented number in the same relative position.

Example 36: What is 1's complement of $(1001.011)_2$?

$\rightarrow$ Consider without radix point 1001011

Take 1's complement 0110100

Place radix point again $(0110.100)_2$

Example 37: What is 2's complement of $(1001.011)_2$?

Consider without radix point 1001011

Take 2's complement 0110101

Place radix point again $(0110.101)_2$

Complement of a complement is equal to the original number $r^m - (r^m - M) = M$

Subtraction with Complements

Subtraction of two n digit unsigned numbers $A - B$ in base r can be done as follows by r's complement method.

Add A to the r's complement of B. Mathematically $A + (r^n - B) = A - B + r^n$

If $A \geq B$ the sum will produce an end carry r^n; which can be discarded. (Discarding carry is equivalent to subtracting r^n from result). What is left is the result $A - B$?

$$
\begin{array}{llr}
A = 1100 & \rightarrow & 1100 \\
B = 1010 & \text{(2's complement)} & +\ \underline{0110} \\
 & \text{Sum:} & 10010 \\
\text{discard carry } (-r^n) & & -\ \underline{10000} \\
 & A - B: & \underline{0010}
\end{array}
$$

If $A < B$, the sum does not produce an end carry and result is $r^n - (B - A)$. Then take r's complement of the sum, and place a negative sign in front.

If $A = 1010$
$B = 1100$
$A - B$ can be done as

$$
\begin{array}{llr}
A \rightarrow & & 1010 \\
B \rightarrow \text{2's complaint} & & +\ \underline{0100} \\
 & \text{Sum:} & 1110
\end{array}
$$

Here, no carry generated, so result is a negative number.
2's complement of result $\rightarrow 0010 = 2$
result $= -2$

Subtraction of unsigned numbers by using $(r - 1)$'s complement can be done in similar way. However, $(r - 1)$'s complement is one less than the r's complement. Because of this, the sum produced is one less than the correct difference when an end carry occurs. So end carry will be added to the sum. Removing the end carry and adding 1 to the sum is referred to as an end-around-carry.

Consider $A = 1100$, $B = 1010$
For $A - B$

$$
\begin{array}{llr}
A \rightarrow & & 1100 \\
B \rightarrow \text{(1's complement)} & & +\ \underline{0101} \\
 & \text{Sum:} & \underline{10001} \\
\text{End around carry} & & +\ \underline{1} \\
 & & A - B = 0010
\end{array}
$$

For $B - A$

$$
\begin{array}{llr}
B \rightarrow & & 1010 \\
A \rightarrow \text{(1's complement)} & & +\ \underline{0011} \\
 & \text{Sum:} & \underline{1101}
\end{array}
$$

There is no end carry, for there result is
$-(B - A) = -(\text{1's complement of } 1101)$
$= -0010 = -2$

Signed Binary Numbers

Positive integers can be represented as unsigned numbers; but to represent negative integer, we need a notation for negative values in binary.

It is customary to represent the sign with a bit placed in the left most position of the number. The convention is to make the sign bit 0 for positive and 1 for negative. This representation of signed numbers is referred to as sign-magnitude convention

S Magnitude

+24 is $\underbrace{0}_{\text{sign}}\ \underbrace{11000}_{\text{magnitude}}$

–24 is $\underbrace{1}_{\text{sign}}\ \underbrace{11000}_{\text{magnitude}}$

Other notation for representation of signed numbers is signed complement system. This is convenient to use in a computer for arithmetic operations. In this system, a negative number is indicated by its complement (i.e., complement of corresponding positive number) whereas the sign-magnitude system negates a number by changing its sign bit, the signed-complement system negates a number by taking its complement. Positive numbers use same notation in sign-magnitude as well as sign-complement systems.

The signed-complement system can be used either as the 1's complement or the 2's complement.

But 2's complement is the most common.
+24 in 1's/2's complement representation is 011000
–24 in 1's complement representation 100111
–24 in 2's complement representation 101000

Table 2 *Signed binary numbers – (4-bits)*

Decimal	Signed-Magnitude	Signed 1's Complement	Signed 2's Complement
+7	0111	0111	0111
+6	0110	0110	0110
+5	0101	0101	0101
+4	0100	0100	0100
+3	0011	0011	0011
+2	0010	0010	0010
+1	0001	0001	0001
+0	0000	0000	0000
–0	1000	1111	–
–1	1001	1110	1111
–2	1010	1101	1110
–3	1011	1100	1101
–4	1100	1011	1100
–5	1101	1010	1011
–6	1110	1001	1010
–7	1111	1000	1001
–8	–	–	1000

The ranges of signed binary numbers with n-bits

Signed-magnitude: $-2^{n-1} + 1$ to $+2^{n-1} - 1$
1's complement representation: $-2^{n-1} + 1$ to $+2^{n-1} - 1$
2's complement representation: -2^{n-1} to $+2^{n-1} - 1$

Signed 2's complement representation can be directly used for arithmetic operations. The carryout of the sign bit position is discarded.

In order to obtain a correct answer, we must ensure that the result has a sufficient number of bits to accommodate the sum/product.

Example 38: $X = 00110$, $Y = 11100$ are represented in 5-bit signed 2's complement system

Then their sum $X + Y$ in 6-bit signed 2's complemented representation is?

Solution: $X = 00110$
$Y = 11100$
are 5-bit numbers
But result needs to be in 6-bit format.
Operands X and Y also should be in 6-bit format

$$X = 000110$$
$$Y = \underline{111100}$$
$$X + Y = (1)\ 000010$$

The carry out of sign bit position is discarded result is 000010.

Example 39: $(36x\ 70)_{10}$ is 10's complement of $(yzyz0)_{10}$ Then values of x, y, z are?
(A) 4, 5, 2
(B) 4, 6, 3
(C) 3, 6, 3
(D) 3, 5, 4

Solution: (C)
$(36x70)_{10}$ is 10's complement of $(yzyz0)_{10}$.
10's complement of $(yzyz0)_{10}$ is

$$10^5 - yzyz0 = 36 \times 70$$

So $36x70 + yzyz0 = 100000$

$$\begin{array}{r} 36x70 \\ +\underline{yzyz0} \\ 100000 \end{array}$$

so $7 + z = 10$,
$1 + x + y = 10 \quad z = 3$
$1 + 6 + z = 10 \quad y = 6$
$1 + 3 + y = 10$,
$\rightarrow x = 3$

Example 40: The 10's complement of $(843)_{11}$ is?
(A) $(157)_{11}$
(B) $(267)_{11}$
(C) $(156)_{11}$
(D) $(268)_{11}$

Solution: (B)
Given $(843)_{11}$ is base 11 number system and the number in the number system range from 0 to 9 & A ($A = 10$)
10's complement for $(843)_{11}$ means $(r - 1)$'s complement.
So $(r^n - 1) - N = [(11)^n - 1] - N$

$$\begin{array}{r} (11)^n - 1 \Rightarrow 1000 \\ \underline{-\quad 1} \\ AAA \\ \underline{-843} \\ 267 \end{array}$$

10's complement is $(267)_{11}$

Example 41: Consider the signed binary number to be 10111011. What is the decimal equivalent of this number if it is in Sign-Magnitude form, or 1's complement form, or 2's complement form?

Solution: Given binary number = 10111011. As sign bit is 1, it is a negative number. If it is in sign-magnitude format, then MSB is sign bit, and remaining bits represent the magnitude,

$(0111011)_2 = 32 + 16 + 8 + 2 + 1 = 59$. So if the given number is in sign-magnitude format, then the number is –59.

If it is in 1's complement/2's complement form, then the magnitude of negative number can be obtained by taking 1's complement/2's complement for the number, respectively.

10111011 ⇒ 1's complement ⇒ 01000100 = $(68)_{10}$.
In 1's complement format, the number is –68.
10111011 ⇒ 2's complement ⇒ 01000101 = $(69)_{10}$.
In 2's complement format, the number is –69.

Example: Find $(-9.625)_{10}$ in signed 2's complement representation.

Signed binary fraction can be represented in the same way of signed integer.

$$\begin{array}{r|l} 2 & 9 \\ 2 & 4-1 \\ 2 & 2-0 \\ & 1-0 \end{array}$$

$0.625 \times 2 = 1.25$
$0.25 \times 2 = 0.5$
$0.5 \times 2 = 1.0$
$= 0.101$
$+(9.625) = 01001.101$
$-9.625 = 10110.011$ (by taking 2's complement)

Binary Multipliers

Multiplication of binary number is done in the same way as multiplication of decimal.

The multiplicand (m) is multiplied by each bit of the multiplier (N), starting from the LSB.

Let
$M = B_3\ B_2\ B_1\ B_0$
$N = A_3\ A_2\ A_1\ A_0$
If $M \times N = P$

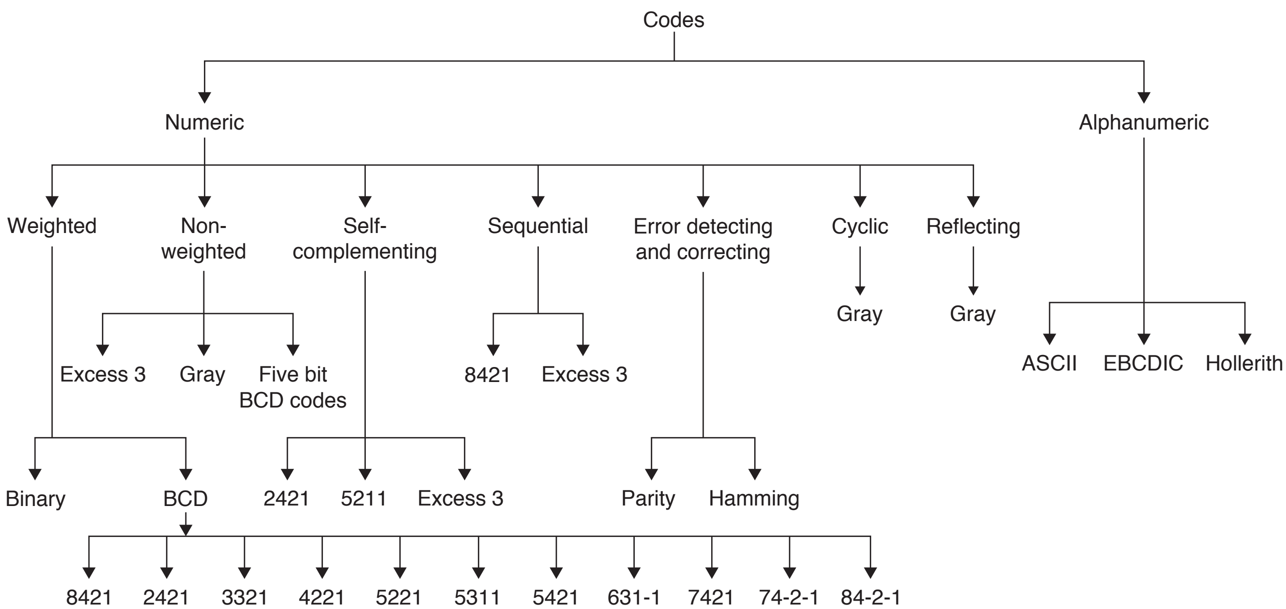
			A_0B_3	A_0B_2	A_0B_1	A_0B_0	
		A_1B_3	A_1B_2	A_1B_1	A_1B_0		
	A_2B_3	A_2B_2	A_2B_1	A_2B_0			
A_3B_3	A_3B_2	A_3B_1	A_3B_0				
P_7P_6	P_5	P_4	P_3	P_2	P_1	P_0	$=P$

Example: Let $M = 1\ 0\ 1\ 1$
$N = 1\ 1\ 0\ 0$
$M \times N = P$

$$\begin{array}{r} 1\,0\,1\,1 \times \\ \underline{1\,1\,0\,0} \\ 0\,0\,0\,0 \\ 0\,0\,0\,0 \\ 1\,0\,1\,1 \\ 1\,0\,1\,1 \\ \underline{1\,1\,1} \\ 1\,0\,0\,0\,0\,1\,0\,0 = P \end{array}$$

Binary Codes

Binary codes can be classified as numeric codes and alphanumeric codes. The figure below shows the classification of codes.



Numeric Codes

Numeric Codes are the codes which represent numericals in binary, i.e., only numbers as a series of 0s and 1s.

Weighted and non-weighted codes

- The weighted codes are those which obey the position-weighting principle. Each position of a number represents a specific weight.
  Example: BCD, Binary, 84-2-1, 2421,
- Non-weighted codes are codes which are not assigned fixed values.
  Example: Excess-3, Gray code
  2421, 5211, 84 – 2 – 1 are examples of weighted codes, in which weight is assigned to each position in the number.
  $(27)_{10}$ in 2421 code $\rightarrow$ 0010 1101
  $(45)_{10}$ in 5211 code $\rightarrow$ 0111 1000
  $(36)_{10}$ in 84 – 2 – 1 code $\rightarrow$ 0101 1010
  Any digit in decimal will be represented by the weights represented by the code.

Error-detecting and correcting codes

Codes which allow only error detection are error-detecting codes.

Example: Parity

Codes which allow error detection as well as correction are called error correcting codes.

Example: Hamming codes

Sequential codes

A sequential code is one in which each succeeding code word is one binary number greater than the preceding code word.
Example: XS–3, BCD

Cyclic codes (unit distance codes)

Cyclic codes are those in which each successive code word differs from the preceding one in only one bit position.
Example: Gray code

Reflective codes

Binary code in which the n least significant bits for code words 2^n through $2^{n+1} - 1$ are the mirror images of than for 0 through $2^n - 1$ is called reflective codes.
Example: Gray Code

Self-complementing codes

A code is said to be self-complementing, if the code word of the 9's complement of number 'N', i.e., of "9-N" can be obtained from the code word of 'N' by interchanging all the zeros and ones, i.e., by taking 1's complement. In other words, logical complement of number code is equivalent to representation of its arithmetic complement.

Example: 84-2-1, 2421, XS -3.
All weighted BCD codes are self-complementing codes.

Binary-coded decimal (BCD)

In BCD, each decimal digit 0 to 9 is coded by a 4-bit binary number. BCD codes are convenient to convert to/or from decimal number system.

Decimal	BCD Digit
0	0000
1	0001
2	0010
3	0011
4	0100
5	0101
6	0110
7	0111
8	1000
9	1001

Example 42: $(628)_{10} = (0110\ 0010\ 1000)_{BCD}$

BCD addition

- BCD addition is performed by individually adding the corresponding digits of the decimal number expressed in 4-bit binary groups starting from the LSB.
- If there is no carry and the sum term is not an illegal code, no correction is needed.
- If there is a carry out of one group to the next group or if the sum term is an illegal code, the $(6)_{10}$ is added to the sum term of that group, and the resulting carry is added to the next group.

Example 43: 44 + 12

0100	0100	(44 in BCD)
0001	0010	(12 in BCD)
0101	0110	(56 in BCD)

Example 44: 76.9+ 56.6

	0111	0110 . 1001		
	0101	0110 . 0110		
	1100	1100 . 1111		(all are illegal codes)
	0110	0110 . 0110		
	0010	0010 . 0101		
	+1	+1	+1	(propagate carry)
0001	0011	0011 . 0101		
1	3	3 . 5		

BCD subtraction BCD subtraction is performed by subtracting the digits of each 4-bit group of the subtrahend from the corresponding 4-bit group of the minuend in binary starting from the LSB.

Example 45:

42	0100	0010	(42 in BCD)
–12	–0001	0010	(12 IN BCD)
30	0011	0000	(No borrow, so this is the correct difference)

Example 46:

247.7	0010	0100	0111 .	0111	(Borrow are present, subtract 0110)
–156.9	0001	0101	0110 .	1001	
90.8	0000	0111	·0000 .	1110	
		–01001	–0110		
		1001	000 ·	1000	Corrected difference (90.8)

Excess-3 (XS-3) code

Excess-3 code is a non-weighted BCD code, where each digit binary code word is the corresponding 8421 code word plus 0011.

Find the XS-3 code of

Example 47: $(3)_{10} \rightarrow (0011)_{BCD} = (0110)_{xS3}$

Example 48: $(16)_{10} \rightarrow (0001\ 0110)_{BCD}$
$\rightarrow (0100\ 1001)_{xS3}$

Gray code

Each gray code number differs from the preceding number by a single bit.

Decimal	Gray Code
0	0000
1	0001
2	0011
3	0010
4	0110
5	0111

Binary to gray conversion

Step I: Shift the binary number one position to the right, LSB of the shifted number is discarded.

Step II: Exclusive or the bits of the binary number with those of the binary number shifted.

Example 49: Convert $(1001)_2$ to gray code

Binary $\rightarrow$ 1010
Shifted Binary $\rightarrow$ 101 $\oplus$
Gray $\rightarrow$ 1111

Gray to binary conversion

(a) Take the MSB of the binary number is same as MSB of gray code number.
(b) X-OR the MSB of the binary to the next significant bit of the gray code.
(c) X-OR the 2nd bit of binary to the 3rd bit of Gray code to get 3rd bit binary and so on.
(d) Continue this till all the gray bits are exhausted.

Example 50: Convert, gray code 1010 to binary

Gray	1		0		1		0
1010	$\Downarrow$	$\oplus$	$\parallel$	$\oplus$	$\parallel$	$\oplus$	$\parallel$
1100	1		1		0		0

$= (1100)_2$

Exercises

Practice Problems I

Directions for questions 1 to 15: Select the correct alternative from the given choices.

1. Assuming all the numbers are in 2's complement representation, which of the following is divisible by 11110110?
(A) 11101010 (B) 11100010
(C) 11111010 (D) 11100111

2. If $(84)_x$ (in base x number system) is equal to $(64)_y$ (in base y number system), then possible values of x and y are
(A) 12, 9 (B) 6, 8
(C) 9, 12 (D) 12, 18

3. Let A = 1111 1011 and B = 0000 1011 be two 8-bit signed 2's complement numbers. Their product in 2's complement representation is

(A) 11001001 (B) 10011100
(C) 11010101 (D) 10101101

4. Let r denotes number system's radix. The only value(s) of r that satisfy the equation $\sqrt[3]{(1331)_r} = (11)_r$ is/are
(A) 10 (B) 11
(C) 10 and 11 (D) any $r > 3$

5. X is 16-bit signed number. The 2's complement representation of X is $(F76A)_{16}$. The 2's complement representation of $8 \times X$ is
(A) $(1460)_{16}$ (B) $(D643)_{16}$
(C) $(4460)_{16}$ (D) $(BB50)_{16}$

6. The HEX number $(CD.EF)_{16}$ in octal number system is
(A) $(315.736)_8$ (B) $(513.637)_8$
(C) $(135.673)_8$ (D) $(531.367)_8$

7. 8-bit 2's complement representation a decimal number is 10000000. The number in decimal is
(A) +256 (B) 0
(C) −128 (D) −256

8. The range of signed decimal numbers that can be represented by 7-bit 1's complement representation is
(A) −64 to + 63 (B) −63 to + 63
(C) −127 to + 128 (D) −128 to +127

9. Decimal 54 in hexadecimal and BCD number system is respectively
(A) 63, 10000111 (B) 36,01010100
(C) 66, 01010100 (D) 36, 00110110

10. A new binary-coded hextary (BCH) number system is proposed in which every digit of a base −6 number system is represented by its corresponding 3-bit binary code. For example, the base −6 number 35 will be represented by its BCH code 011101.

In this numbering system, the BCH code 001001101011 corresponds to the following number in base −6 system.
(A) 4651 (B) 4562
(C) 1153 (D) 1353

11. The signed 2's complement representation of $(-589)_{10}$ in Hexadecimal number system is
(A) $(F24D)_{16}$ (B) $(FDB3)_{16}$
(C) $(F42D)_{16}$ (D) $(F3BD)_{16}$

12. The base of the number system for which the following operation is to be correct $\frac{66}{5} = 13$
(A) 6 (B) 7
(C) 8 (D) 9

13. The solution to the quadratic equation $x^2 - 11x + 13 = 0$ (in number system with radix r) are $x = 2$ and $x = 4$. Then base of the number system is (r) =
(A) 7 (B) 6
(C) 5 (D) 4

14. The 16's complement of BADA is
(A) 4525 (B) 4526
(C) ADAB (D) 2141

15. $(11A1B)_8 = (12CD)_{16}$, in the above expression A and B represent positive digits in octal number system and C and D have their original meaning in Hexadecimal, the values of A and B are?
(A) 2, 5 (B) 2, 3
(C) 3, 2 (D) 3, 5

Practice Problems 2

Directions for questions 1 to 20: Select the correct alternative from the given choices.

1. The hexadecimal representation of $(567)_8$ is
(A) 1AF (B) D77
(C) 177 (D) 133

2. $(2326)_8$ is equivalent to
(A) $(14D6)_{16}$ (B) $(103112)_4$
(C) $(1283)_{10}$ (D) $(09AC)_{16}$

3. $(0.46)_8$ equivalent in decimal is?
(A) 0.59375 (B) 0.3534
(C) 0.57395 (D) 0.3435

4. The 15's complement of $(CAFA)_{16}$ is
(A) $(2051)_{16}$ (B) $(2050)_{16}$
(C) $(3506)_{16}$ (D) $(3505)_{16}$

5. 53 in 2's complement from is?
(A) 1001011 (B) 001010
(C) 0110101 (D) 001011

6. Signed 2's complement representation of $(-15)_{10}$ is
(A) 11111 (B) 10001
(C) 01111 (D) 10000

7. $(0.25)_{10}$ in binary number system is?
(A) (0.01) (B) (0.11)
(C) 0.001 (D) 0.101

8. The equivalent of $(25)_6$ in number system with base 7 is?
(A) 22 (B) 23
(C) 24 (D) 26

9. The operation 35 + 26 = 63 is true in number system with radix
(A) 7 (B) 8
(C) 9 (D) 11

10. The hexadecimal equivalent of largest binary number with 14-bits is?
(A) 2FFF (B) 3FFFF
(C) FFFF (D) 1FFFF

11. If x is radix of number system, $(211)_x = (152)_8$, then x is
(A) 6 (B) 7
(C) 9 (D) 5

12. The value of r for which $\sqrt{(224)_r} = (13)_r$ is valid expression, in number system with radix r is?
(A) 5 (B) 6
(C) 7 (D) 8

13. Which of the representation in binary arithmetic has a unique zero?
(A) sign-magnitude (B) 1's compliment
(C) 2's complement (D) All of these

14. For the binary number 101101111 the equivalent hexadecimal number is
(A) 14E (B) 9E
(C) B78 (D) 16F

15. Subtract 1001 from 1110
(A) 0010 (B) 0101
(C) 1011 (D) 1010

16. Which of the following is a positively weighted code?
(A) 8421 (B) 84-2-1
(C) EXS-3 (D) 74-2-1

17. Match the items correctly

Column 1	Column 2
(P) 8421	(1) Cyclic code
(Q) 2421	(2) self-complementing
(R) 5212	(3) sequential code
(S) Gray code	(4) non-sequential code

(A) P–2, Q–4, R–3, S–1
(B) P–1, Q–4, R–3, S–2
(C) P–3, Q–2, R–4, S–1
(D) P–2, Q–4, R–1, S–2

18. Perform the subtraction in XS-3 code 57.6 – 27.8
(A) 0101 1100.1011 (B) 0010 1001.1100
(C) 00011101.1100 (D) 1010 1110.1011

19. The 2's complement representation of –17 is
(A) 101110 (B) 111110
(C) 101111 (D) 110001

20. The decimal 398 is represented in 2421 code by
(A) 110000001000 (B) 001110011000
(C) 001111111110 (D) 010110110010

Previous Years' Questions

1. $(1217)_8$ is equivalent to **[2009]**
(A) $(1217)_{16}$ (B) $(028F)_{16}$
(C) $(2297)_{10}$ (D) $(0B17)_{16}$

2. P is a 16-bit signed integer. The 2's complement representation of P is $(F87B)_{16}$. The 2's complement representation of $8*P$ is **[2010]**
(A) $(C3D8)_{16}$ (B) $(187B)_{16}$
(C) $(F878)_{16}$ (D) $(987B)_{16}$

3. The smallest integer that can be represented by an 8-bit number in 2's complement form is **[2013]**
(A) –256 (B) –128
(C) –127 (D) 0

4. The base (or radix) of the number system such that the following equation holds is ______ $\frac{312}{20} = 13.1$ **[2014]**

5. Consider the equation $(123)_5 = (x8)_y$ with x and y as unknown. The number of possible solutions is ______. **[2014]**

6. Consider the equation $(43)_x = (y3)_8$ where x and y are unknown. The number of possible solutions is ______ **[2015]**

7. Suppose X_i for i = 1, 2, 3 are independent and identically distributed random variables whose probability mass functions are $Pr[X_i = 0] = Pr[X_i = 1] = ½$ for i = 1, 2, 3. Define another random variable $Y = X_1 X_2 \oplus X_3$, where $\oplus$ denotes XOR. Then
$Pr[Y = 0|X_3 = 0]$ = ______ **[2015]**

8. The 16-bit 2's complement representation of an integer is 1111 1111 1111 0101; its decimal representation is ____ . **[2016]**

9. Consider an eight - bit ripple - carry adder for computing the sum of A and B, where A and B are integers represented in 2's complement form. If the decimal value of A is one, the decimal value of B that leads to the longest latency for the sum to stabilize is _____ . **[2016]**

10. Let $x_1 \oplus x_2 \oplus x_3 \oplus x_4 = 0$ where x_1, x_2, x_3, x_4 are Boolean variables, and $\oplus$ is the XOR operator. Which one of the following must always be **TRUE**? **[2016]**
(A) $x_1 x_2 x_3 x_4 = 0$
(B) $x_1 x_3 + x_2 = 0$
(C) $\bar{x}_1 \oplus \bar{x}_3 = \bar{x}_3 \oplus \bar{x}_4$
(D) $x_1 + x_2 + x_3 + x_4 = 0$

11. Consider a quadratic equation $x^2 - 13x + 36 = 0$ with coefficients in a base b. The solutions of this equation in the same base b are $x = 5$ and $x = 6$. Then b = ______. **[2017]**

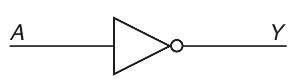
Boolean Algebra and Minimization of Functions

LEARNING OBJECTIVES

- *Logic gates*
- *Boolean algebra*
- *AXIOMS and Laws of Boolean algebra*
- *Properties of Boolean algebra*
- *Conversion from Min term to Max term*
- *Minimization of Boolean function*
- *K-map method*
- *Prime implicant*
- *Implementation of function by using NAND-NOR Gates*
- *EX-OR, EX-NOR GATE*

Logic Gates

1. **Inverter or NOT gate (7404 IC):** The inverter performs a basic logic operation called inversion or complementation. The purpose of the inverter is to change one logic level to the opposite level. In terms of digital circuits, it converts 1 to 0 and 0 to 1.



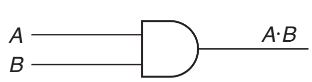
Symbol

$Y = \overline{A}$

Table 1 *Truth Table*

Input	Output
A	***Y***
0	1
1	0

2. **AND gate (logical multiplier 7408 IC):** The AND gate performs logical multiplication more commonly know as AND function. The AND gate is composed of 2 or more inputs and a single output



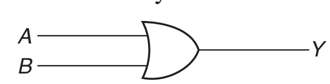
$Y = A \cdot B$

Figure 1 2 input AND gate

Table 2 *Truth Table*

Input		Output
A	***B***	***Y***
0	0	0
0	1	0
1	0	0
1	1	1

3. **OR gate (logical adder 7432 IC):** The OR gate performs logical, addition commonly known as OR function.



Symbol

$Y = A + B$

Figure 2 2 input OR gate

Table 3 *Truth Table*

Input		Output
A	***B***	***Y***
0	0	0
0	1	1
1	0	1
1	1	1

4. **NAND gate (7400 IC):** The NAND gate's function is basically AND + NOT function.

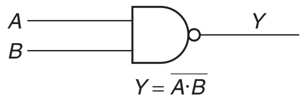


Figure 3 2 input NAND gate

Table 4 *Truth Table*

Input			Output
A	B	$A \cdot B$	$\overline{A+B}$ (Y)
0	0	0	1
0	1	0	1
1	0	0	1
1	1	1	0

5. **NOR gate (7402 IC):** The NOR gate is basically OR + NOT function.

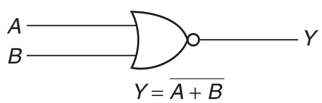

Figure 4 2 input NOR gate

Table 5 *Truth Table*

Input			Output
A	B	$A + B$	$\overline{A+B}$ (Y)
0	0	0	1
0	1	1	0
1	0	1	0
1	1	1	0

6. **Exclusive OR gate X-OR (7486 IC):** X-OR is a gate in which unequal inputs create a high logic level output and if both inputs are equal, the output will be low. Other name for EX-OR gate is unequivalent gate.
2 input X-OR Gate

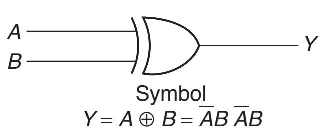

Figure 5 2 input X-OR Gate

Table 6 *Truth Table*

A	B	Y
0	0	0
0	1	1
1	0	1
1	1	0

7. **Exclusive NOR gate (X-NOR):** X-NOR is a gate in which equal inputs create a high logic level output; and if both inputs are unequal, then the output will be low. Other name for X-NOR gate is equivalent gate.

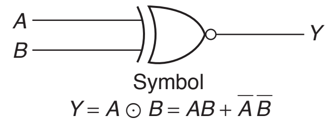

Figure 6 2 input X-NOR Gate

Table 7 *Truth Table*

A	B	Y
0	0	1
0	1	0
1	0	0
1	1	1

X-NOR Gate is complement of X-OR Gate.

Boolean Algebra

Boolean algebra is a system of mathematical logic. It is an algebraic system consisting of the set of elements (0, 1), two binary operators OR and AND and one unary operator NOT. The Boolean algebra is governed by certain well-developed rules and laws.

AXIOMS and Laws of Boolean Algebra

1. **AXIOMS**
   - **(a) AND operation**
     - (1) $0 \cdot 0 = 0$
     - (2) $0 \cdot 1 = 0$
     - (3) $1 \cdot 0 = 0$
     - (4) $1 \cdot 1 = 1$
   - **(b) OR operation**
     - (5) $0 + 0 = 0$
     - (6) $0 + 1 = 1$
     - (7) $1 + 0 = 1$
     - (8) $1 + 1 = 1$
   - **(c) NOT operation**
     - (9) $\overline{1} = 0$
     - (10) $\overline{0} = 1$
2. **Laws**
   - **(a) Complementation law**
     - (1) $\overline{0} = 1$
     - (2) $\overline{1} = 0$
     - (3) If $A = 0$, then $\overline{A} = 1$
     - (4) If $A = 1$, then $\overline{A} = 0$
     - (5) $\overline{\overline{A}} = A$
   - **(b) AND laws**
     - (1) $A \cdot 0 = 0$ (NULL Law)
     - (4) $A \cdot 1 = A$ (Identity Law)
     - (3) $A \cdot A = A$
     - (4) $A \cdot \overline{A} = 0$

(c) OR laws

(1) $A + 0 = A$ (NULL Law)

(2) $A + 1 = 1$ (Identity Law)

(3) $A + A = A$

(4) $A + \overline{A} = 1$

(d) Commutative laws

(1) $A + B = B + A$

(2) $A \cdot B = B \cdot A$

(e) Associative laws

(1) $(A + B) + C = A + (B + C)$

(2) $(A \cdot B)C = A(B \cdot C)$

(f) Distributive laws

(1) $A(B + C) = AB + AC$

(2) $A + BC = (A + B)(A + C)$

(g) Redundant literal rule (RLR)

(1) $A + \overline{A}B = A + B$

(2) $A(\overline{A} + B) = AB$

(h) Idempotence laws

(1) $A \cdot A = A$

(2) $A + A = A$

(i) Absorption laws

(1) $A + A \cdot B = A$

(2) $A(A + B) = A$

3. Theorems

(a) Consensus theorem

Theorem 1:

$$AB + \overline{A}C + BC = AB + \overline{A}C$$

Proof:

$$\begin{aligned} \text{LHS} &= AB + \overline{A}C + BC \\ &= AB + \overline{A}C + BC(A + \overline{A}) \\ &= AB + \overline{A}C + BCA + BC\overline{A} \\ &= AB(1 + C) + \overline{A}C(1 + B) \\ &= AB(1) + \overline{A}C(1) \\ &= AB + \overline{A}C \\ &= \text{RHS.} \end{aligned}$$

Theorem 2:

$$(A + B)(\overline{A} + C)(B + C) = (A + B)(\overline{A} + C)$$

Proof:

$$\begin{aligned} \text{LHS} &= (A + B)(\overline{A} + C)(B + C) \\ &= (A\overline{A} + AC + B\overline{A} + BC)(B + C) \\ &= (AC + BC + \overline{A}B)(B + C) \\ &= ABC + BC + \overline{A}B + AC + BC + \overline{A}BC \\ &= AC + BC + \overline{A}B \end{aligned}$$

$$\begin{aligned} \text{RHS} &= (A + B)(\overline{A} + C) \\ &= A\overline{A} + AC + BC + \overline{A}B \\ &= AC + BC + \overline{A}B \\ &= \text{LHS.} \end{aligned}$$

(b) Transposition theorem

$$AB + \overline{A}C = (A + C)(\overline{A} + B)$$

Proof:

$$\begin{aligned} \text{RHS} &= (A + C)(\overline{A} + B) \\ &= A\overline{A} + C\overline{A} + AB + CB \\ &= 0 + \overline{A}C + AB + BC \\ &= \overline{A}C + AB + BC(A + \overline{A}) \\ &= AB + ABC + \overline{A}C + \overline{A}BC \\ &= AB + \overline{A}C \\ &= \text{LHS} \end{aligned}$$

(c) De Morgan's theorem

Law 1: $\overline{A + B} = \overline{A} \cdot \overline{B}$

This law states that the complement of a sum of variable is equal to the product of their individual complements.

Law 2: $\overline{AB} = \overline{A} + \overline{B}$

This law states that the complement of the product of variables is equal to the sum of their individual complements.

Example 1: Simplify the Boolean function $Y = A(A + \overline{B})$

$$Y = A \cdot A + A \cdot \overline{B}$$

Solution:

$$\begin{aligned} Y &= A + A\overline{B} \\ &= A(1 + \overline{B}) \\ &= A \end{aligned}$$

Example 2: Simplify the Boolean function $Y = A + \overline{A}B$

Solution:

$$\begin{aligned} Y &= A \cdot (B + 1) + \overline{A} \cdot B \\ &= A \cdot B + A + \overline{A}B \\ &= B(A + \overline{A}) + A \\ &= A + B \end{aligned}$$

Example 3: Simplify the Boolean function

$$Y = A(A + B) + B(\overline{A} + B)$$

Solution:

$$\begin{aligned} Y &= A \cdot A + A \cdot B + B \cdot \overline{A} + B \cdot B \\ &= A + B(A + \overline{A}) + B \\ &= A + B \cdot 1 + B \\ &= A + B + B \\ &= A + B \end{aligned}$$

Example 4: Simplify the Boolean function

$$Y = \overline{A}\,\overline{B}\,\overline{C} + \overline{A}B\overline{C} + AB\overline{C} + A\overline{B}\,\overline{C}$$

Solution:

$$\begin{aligned} Y &= \overline{A}\,\overline{C}(\overline{B} + B) + A\overline{C}(B + \overline{B}) \\ &= \overline{A}\,\overline{C} + A\overline{C} \\ &= \overline{C}(\overline{A} + A) \\ &= \overline{C} \end{aligned}$$

Example 5: Simplify the Boolean function

$$Y = \overline{\overline{A}BC + \overline{A}B\overline{C} + \overline{A}\,\overline{B}C}$$

Solution:

$$\begin{aligned} &= \overline{\overline{A}C(B + \overline{B}) + \overline{A}B\overline{C}} \\ &= \overline{\overline{A}C + \overline{A}B\overline{C}} \\ &= \overline{\overline{A}(C + B\overline{C})} \\ &= \overline{\overline{A}(C + B)} \\ &= A + \overline{C}\,\overline{B} \end{aligned}$$

Example 6: Simplify the Boolean function

$$Y = AB + C\overline{B} + CA + ABD$$

Solution: $Y = AB(1+D) + C\overline{B} + CA$

$$= AB + C\overline{B} + CA$$
$$= AB + C\overline{B}$$

Properties of Boolean Algebra

With n variables, maximum possible distinct functions $= 2^{2^n}$.

Duality consider the distributive law

1. $x(y+z) = xy + xz$
2. $x + yz = (x+y)(x+z)$

Second one can be obtained from the first law if the binary operators and the identity elements are interchanged. This important property of Boolean algebra is called the duality principle.

The dual of an algebraic expression can be written by interchanging OR and AND operators, 1s by 0, and 0s by 1s.

Example 7: $x + x' = 1 \xleftrightarrow{\text{Dual}} x \cdot x' = 0$

Solution: $xy + xy' = x \xleftrightarrow{\text{Dual}} (x+y)(x+y') = x$

$$x + x'y = x + y \xleftrightarrow{\text{Dual}} x(x'+y) = xy$$

Example 8: The dual of $F = xy + xz + yz$ is?

Solution: Dual of $F = (x+y)(x+z)(y+z)$

$$= (x + xz + xy + yz)(y+z) = xy + yz + xz$$

So dual of $xy + xz + yz$ is same as the function itself; For N variables maximum possible self-dual functions $= 2^{2^{n-1}} = 2^{(2^n/2)}$

Example 9: Which of the following statement/*s* is/are true

S_1: The dual of NAND function is NOR

S_2: The dual of X-OR function is X-NOR

(A) S_1 and S_2 are true
(B) S_1 is true
(C) S_2 is true
(D) None of these

Solution: (A)

NAND $= (xy)' = x' + y'$

Dual of NAND $= (x+y)' = x'y'$

X-OR $= xy' + x'y$

Dual of X-OR $= (x+y')(x'+y) = xy + x'y' =$ X-NOR

Both S_1 and S_2 are true

Operator precedence The operator precedence for evaluating Boolean expression is

1. Parentheses
2. NOT
3. AND
4. OR

So the expression inside the parentheses must be evaluated before all the operations. The next operation to be performed is the complement and then follows AND and finally the OR.

Complement of function The complement of a function F is F' is obtained from an interchange of 0s for 1s and 1s for 0s in the value of F. The complements of a function may be derived algebraically through De Morgan's theorems.

$$(x_1 \,.\, x_2 \,.\, x_3 \ldots x_n)' = x_1' + x_2' + x_3' + \cdots + x_n'$$
$$(x_1 + x_2 + x_3 + \cdots + x_n)' = x'_1 \,.\, x'_2 \,.\, x'_3 \,.\, x'_4 \ldots x'_n$$

Example 10: The complement of function $F = a(b'c + bc')$ is?

Solution: $(F)' = [a(b'c + bc')]'$

$$= a' + (b'c + bc')'$$
$$= a' + (b'c)' \cdot (bc')'$$
$$= a' + (b + c)'(b' + c)$$
$$F' = a' + bc + b'c'$$

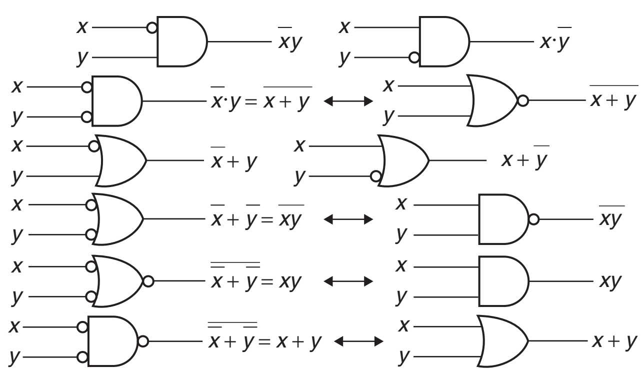

Figure 7 Gates with inverted inputs

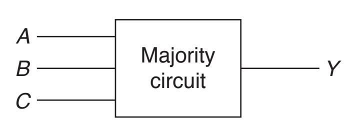
Boolean Functions, Min Terms and Max Terms

The starting point for designing most logic circuits is the truth table, which can be derived from the statement of problem. The truth table is then converted into a Boolean expression and finally create the assembly of logic gates accordingly.

Let us consider the example of majority circuit. This circuit takes three inputs (A, B, C) and have one output (Y) which will give the majority of the inputs, i.e., if A, B, C are having more number of zeros. $Y = 0$ else if A, B, C are having more number of 1s, $Y = 1$.

So from the statements we can derive the truth table as follows:



As we are using three Boolean variables A, B, C, total number of combinations in truth table are $2^3 = 8$.

Similarly for n variables, the truth table will have total of 2^n combinations, for a Boolean function.

	Input			Output	
Sl. no.	*A*	*B*	*C*	*Y*	
1	0	0	0	0	$\longrightarrow$ $Y = 0$, If inputs are having more zeros.
2	0	0	1	0	
3	0	1	0	0	
4	0	1	1	1	$\longrightarrow$ $Y = 1$, If inputs are having more 1's
5	1	0	0	0	
6	1	0	1	1	
7	1	1	0	1	
8	1	1	1	1	

For some combinations, output $Y = 1$, and for others $Y = 0$. The input combinations for which output $Y = 1$ are called as min terms.

Similarly the input combinations for which output $Y = 0$ are called as max terms.

Min terms are expressed as product terms, Similarly, max terms are expressed as sum terms.

The output $Y = 1$, only in rows 4, 6, 7, 8.

So the min terms combinations are 011, 101, 110, 111 in Boolean Algebra, 1 input will be written as A, B, C and 0 input will be written as $\overline{A}, \overline{B}, \overline{C}$ in complement form, we express these min terms as product terms, $\overline{A}BC, A\overline{B}C, AB\overline{C}, ABC$.

To express Y as Boolean expression, we can write it as sum of the min terms.

$$Y = \overline{A}BC + A\overline{B}C + AB\overline{C} + ABC$$

We know that AND operation is a product while OR is sum. So the above equation is a sum of the products (SOP), (or) min terms expression.

The other way of expressing Y is $Y = \Sigma m$ (3, 5, 6, 7).

$$Y = m_3 + m_5 + m_6 + m_7.$$

The min term numbers are the decimal equivalent of input binary combinations.

Similar to SOP we can have product of sums (POS) Boolean expression.

The output $Y = 0$ for the input combinations 000, 001, 010, 100. For max terms 1 input will be indicated as $\overline{A}, \overline{B}, \overline{C}$ in complement form, 0 input will be indicated as A, B, C and max terms are expressed as sum terms.

$$A + B + C,\ A + B + \overline{C},\ A + \overline{B} + C,\ \overline{A} + B + C$$

Any function can be expressed as product of max terms.

So $Y = (A + B + C)\,(A + B + \overline{C})\,(A + \overline{B} + C)\,(\overline{A} + B + C)$

The above equation is a product of sum expression (POS) or max terms expression.

In other way $Y = \pi M\,(0, 1, 2, 4)$

$$= M_0 \cdot M_1 \cdot M_2 \cdot M_4$$

The max term numbers are decimal equivalents of corresponding input binary combinations.

Min Term and Max Term

All the Boolean expressions can be expressed in a standard sum of product (SOP) form or in a standard product of sum (POS) form.

- A standard SOP form is one in which a number of product terms, each contains all the variables of the function either in complement or non-complement form are summed together.
- A standard POS form is one in which a number of sum terms, each one of which contain all the variable of he function either in complemented or non-complemented form are multiplied together.
- Each of the product term in standard SOP form is called a min term.
- Each of the sum term in the standard POS form is called a max term.

Conversion from min terms to max terms representation

$$Y = \overline{A}BC + A\overline{B}C + AB\overline{C} + ABC$$

$$Y' = (\overline{A}BC + A\overline{B}C + AB\overline{C} + ABC)'$$

$$= (\overline{A}BC)'(A\overline{B}C)'(AB\overline{C})'(ABC)'$$

$$(Y')' = [(A + \overline{B} + \overline{C})(\overline{A} + B + \overline{C})(\overline{A} + \overline{B} + C)(\overline{A} + \overline{B} + \overline{C})]'$$

$$= [\pi(3, 5, 6, 7)]^1 = \pi(0, 1, 2 ,4)$$

$$Y = (A + B + C)(A + B + \overline{C})(A + \overline{B} + C)(\overline{A} + B + C)$$

$$\text{or } Y = \Sigma(3, 5, 6, 7) = \pi(0, 1, 2, 4)$$

Conversion from normal SOP/POS form to canonical SOP/POS

Let us consider $f(A, B, C) = A + BC + \overline{A}C$

The above function is in normal (minimized) SOP from, to convert this function to standard SOP(or) canonical SOP form, include missing variable in each and every term, to make it complete. First term A, Missing literals are B, C. Consider $A\ X\ X$, so possible combinations are $\overline{A}BC, A\overline{B}C, AB\overline{C}, ABC$ or we can write

$$A = A = A(B + \overline{B})(C + \overline{C}) = ABC + AB\overline{C} + A\overline{B}C + A\overline{B}\overline{C}$$

Second term BC-missing literal is A. Consider $XBC \Rightarrow$ So possible combinations are ABC, $\overline{A}BC$ or we can write

$$BC = (A + \overline{A})BC$$

$$= ABC + \overline{A}BC$$

Third term $\overline{A}C$ = missing literal is B. Consider $\overline{A}XC \rightarrow$ so possible combinations are $\overline{A}BC, \overline{A}, \overline{B}C$ or we can write

$$\overline{A}C = \overline{A}(B + \overline{B})C$$

$$= \overline{A}BC + \overline{A}\overline{B}C$$

Now, $f(A,B,C) = ABC + AB\overline{C} + A\overline{B}C + \overline{A}BC + \overline{A}\overline{B}C$, after removing the redundant terms.

Now consider

$$f(A,B,C) = (A+B)\,(\overline{A}+C)$$

To convert this expression to canonical form or standard POS form we can write

$$f(A,B,C) = (A+B+C\cdot\overline{C})\,(\overline{A}+B\cdot\overline{B}+C)$$

Here the C variables is absent from first term and B from second term. So add $C\cdot\overline{C} = (0)$ to first, and $B\cdot\overline{B}$ to second, and using distributive law arrive at the result.

$$f(A,B,C) = (A+B+C)\,(A+B+\overline{C})\,(\overline{A}+B+C)(\overline{A}+\overline{B}+C)$$

Minimization of Boolean Functions

Simplification Procedure

- Obtain truth table, and write output in canonical form or standard form
- Generate K-map!
- Determine Prime implicants.
- Find minimal set of prime implicants.

Karnaugh Map (K-map) Method

Karnaugh map method is a systematic method of simplifying the Boolean expression. K-map is a chart or a graph composed of an arrangement of adjacent cell, each representing a particular combination of variable in sum or product form. (i.e., min term or max term).

Two-variable K-map

x	y	F
0	0	m_0
0	1	m_1
1	0	m_2
1	1	m_3

m_0	m_1
m_2	m_3

$x \backslash y$	0	1
0	$x'y'$	$x'y$
1	xy'	xy

Three-variable K-map

A three-variable map will have eight min terms (for three variables $2^3 = 8$) represented by 8 squares

x	y	z	F
0	0	0	m_0
0	0	1	m_1
0	1	0	m_2
0	1	1	m_3
1	0	0	m_4
1	0	1	m_5
1	1	0	m_6
1	1	1	m_7

m_0	m_1	m_3	m_2
m_4	m_5	m_7	m_6

$x \backslash yz$	00	01	11	10
0	$x'y'z$	$x'y'z$	$x'yz$	$x'yz'$
1	$xy'z'$	$xy'z$	xyz	xyz'

3-variable K-map

Four-variable K-maps

The K-map for four variables is shown here, 16 min terms are assigned to 16 squares.

$wx \backslash yz$	00	01	11	10
00	0	1	3	2
01	4	5	7	6
11	12	13	15	14
10	8	9	11	10

The map is considered to lie on a surface with the top and bottom edges as well as the right and left edge touching each other to form adjacent squares.

- One square $\rightarrow$ a min term of four literals
- Two adjacent square $\rightarrow$ a term of three literals
- Four adjacent square $\rightarrow$ a term of two literals
- Eight adjacent square $\rightarrow$ a term of one literal
- Sixteen adjacent square $\rightarrow$ The constant one

Don't-care Combinations

It can often occur that for certain input combinations, the value of the output is unspecified either because the input combination are invalid or because the precise value of the output is of no consequence. The combination for which the values of the expression are not specified are called don't-care combinations. During the process of design using an SOP, K-map, each don't-care is treated as a 1 if it is helpful in Map Reduction, otherwise it is treated as a 0 and left alone. During the process of design using a POS K-map, each Don't-care is treated as a 0 if it is useful in Map Reduction, otherwise it is treated as a 1 and left alone.

Example 11: Find the Minimal expression
$\Sigma m\,(1, 5, 6, 12, 13, 14) + d\,(2, 4)$

Solution:

$AB \backslash CD$	00	01	11	10
00		1		×
01	×	1		1
11	1	1		1
10				

$$\therefore \quad F = B\overline{C} + B\overline{D} + \overline{A}\,\overline{C}D$$

Pairs, Quads and Octets

A \ BC	00	01	11	10
0		1	1	
1				

The map contains a pair of 1s those are horizontally adjacent. Those cells represent $\bar{A}\,\bar{B}C, \bar{A}BC$.

For these two min terms, there is change in the form of variable B. By combining these two cells we can form a pair, which is equal to $\bar{A}\,\bar{B}C + \bar{A}BC = \bar{A}C(\bar{B} + B) = \bar{A}C$.

If more than one pair exists on K-map, OR the simplified products to get the Boolean function.

A \ BC	00	01	11	10
0	1			1
1		1	1	

$F = \bar{A}\,\bar{C} + AC$

AB \ CD	00	01	11	10
00	1	1	1	
01	1			
11				1
10	1	1		1

$F = \bar{A}\,\bar{C}\,\bar{D} + \bar{A}\,\bar{B}D + A\bar{B}\,\bar{C} + AC\bar{D}$

So Pair eliminates one variable by minimization.

Quad

Quad is a group of four 1s those are horizontally or vertically adjacent.

A \ BC	00	01	11	10
0		1	1	
1		1	1	

$F = C$

A \ BC	00	01	11	10
0		1	1	
1		1	1	

$F = \bar{A}C + AC = (\bar{A} + A)C = C$

By considering two pairs also it will be simplified to C.
Quad eliminates two variables from the function

AB \ CD	00	01	11	10
00		1	1	
01	1			1
11	1			1
10		1	1	

$F = B\bar{D} + \bar{B}D$

Corner min terms can from a Quad

PQ \ RS	00	01	11	10
00	1			1
01				
11				
10	1			1

$F = \bar{Q}\,\bar{S}$

Octet

The group of eight cells will form one octet.

XY \ ZW	00	01	11	10
00				
01	1	1	1	1
11	1	1	1	1
10				

$F = Y$

Other variable X, Z, W changes their form in octet. Octet can eliminate three variables and their complements.

AB \ CD	00	01	11	10
00	1			1
01	1			1
11	1			1
10	1			1

$F = \bar{D}$

Other variable A, B, C are vanished.

Eliminating Redundant Groups

A \ BC	00	01	11	10
0		1	1	
1			1	1

$AB + \bar{A}C + BC$

A \ BC	00	01	11	10
0		1	1	
1			1	1

$AB + \bar{A}C$

Here BC is redundant pair, which covers already covered min terms of $AB, \bar{A}C$.

PQ \ RS	00	01	11	10
00		1		
01		1	1	1
11	1	1	1	
10			1	

This K-map gives fourpairs and one quad.

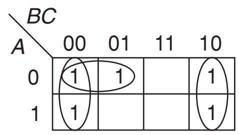
PQ \ RS	00	01	11	10
00		1		
01		1	1	1
11	1	1	1	
10			1	

But only four pairs are enough to cover all the min times, Quad is not necessary.

$\bar{P}\,\bar{R}S + \bar{P}QR + PQ\bar{R} + PRS$ is minimized function.

Prime Implicant

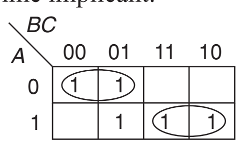
The group of adjacent min terms is called a Prime Implicant, i.e., all possible pairs, quads, octets, etc.



Prime implicants are $\bar{B}\bar{C}$, $B\bar{C}$, $\bar{C}$, $\bar{A}\bar{B}$. Minimized function is $\bar{C}+\bar{A}\bar{B}$

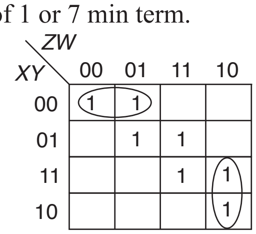
Essential Prime Implicant

The prime implicant which contains at least one min term which cannot be covered by any other prime implicant is called Essential prime implicant.



Min term 0, 6 can be grouped with only one pair each.

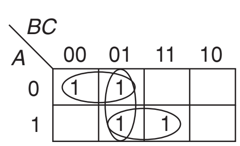
The total possible prime implicants are $\bar{A}\bar{B}$, $\bar{B}C$, AC, AB but min term 0, 6 can be covered with $\bar{A}\bar{B}$, AB. So we call them as essential prime implicants. Min term 5 can be paired with any of 1 or 7 min term.



The essential prime Implicants are $XZ\bar{W}$, $\bar{X}\bar{Y}\bar{Z}$

Redundant Prime Implicant

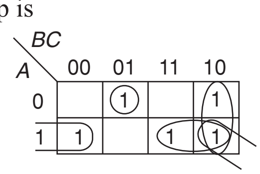
The prime implicant whose min terms are already covered by at least one min term is called redundant prime implicants.



Here prime implicants are $\bar{A}\bar{B}$, AC, $\bar{B}C$. But $\bar{B}C$ is already covered by other min terms So $\bar{B}C$ is redundant prime implicant.

Example 12: Find the minimal expression for $\Sigma m(1, 2, 4, 6, 7)$ and implement it using Basic gates.

Solution: K-map is



$$F = A\bar{C} + AB + B\bar{C} + \bar{B}C + \bar{A}\bar{B}C$$

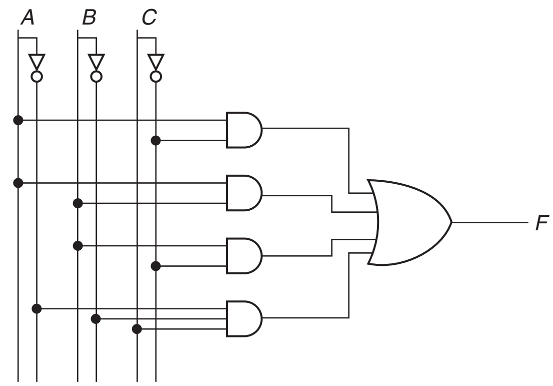


Figure 8 Logic diagram

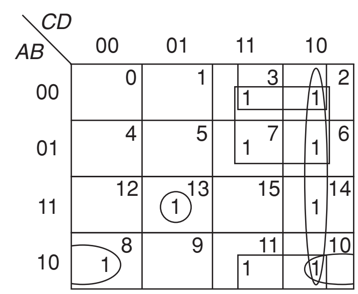
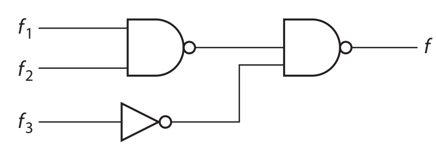
Example 13: Find the minimal expression for Σm (2, 3, 6, 7, 8, 10, 11, 13, 14)

Solution: K-map is:



$$\therefore \quad F(A,B,C,D) = AB\bar{C}D + A\bar{B}\bar{D} + \bar{A}C + \bar{B}C + C\bar{D}$$

Example 14: Three Boolean functions are defined as below $f_1 = \Sigma m(0, 1, 3, 5, 6)$, $f_2 = \Sigma m(4, 6, 7)$ $f_3 = \Sigma m(1, 4, 5, 7)$, then find f.



Solution: When two Boolean functions are ANDed, the resultant will contain the common min terms of both of the functions (like, intersection of min terms). If two Boolean functions are ORed, then resultant is the combination of all the min terms of the functions (like union of min terms)

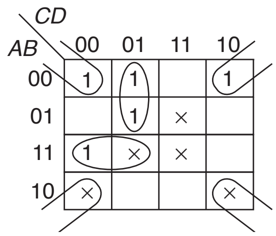
Here $f = \overline{\overline{f_1 f_2} \cdot \overline{f_3}} = f_1 f_2 + f_3$

Here $f_1 \cdot f_2$ = Common min terms in f_1 and $f_2 = \Sigma m(6)$

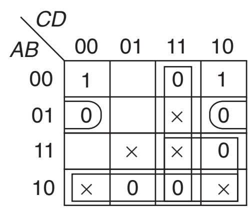
$f_1 \cdot f_2 + f_3$ = Combination of min terms of $f_1 \cdot f_2$ and f_3 $= \Sigma(1, 4, 5, 6, 7)$

Example 15: What is the literal count for the minimized SOP, and minimized POS form for the following function? $f(A, B, C, D) = \Sigma m(0, 1, 2, 5, 12) + \phi d(7, 8, 10, 13, 15)$

Solution: $f(A, B, C, D) = \Sigma m(0, 1, 2, 5, 12) + \phi(7, 8, 10, 13, 15)$



$f = 1$ quad + 2 pairs
Literal count $= 1 \times 2 + 2 \times 3 = 8$
$f(A, B, C, D) = \pi M(3, 4, 6, 9, 11, 14) + \phi(7, 8, 10, 13, 15)$



f will consists of 3 quads + 1pair
$= 3 \times 2 + 1 \times 3 = 6 + 3 = 9$

Implementation of Function by Using NAND–NOR Gates

NAND or NOR gates are called as universal gates, because any function can be implemented by using only NAND gates or only using NOR gates.

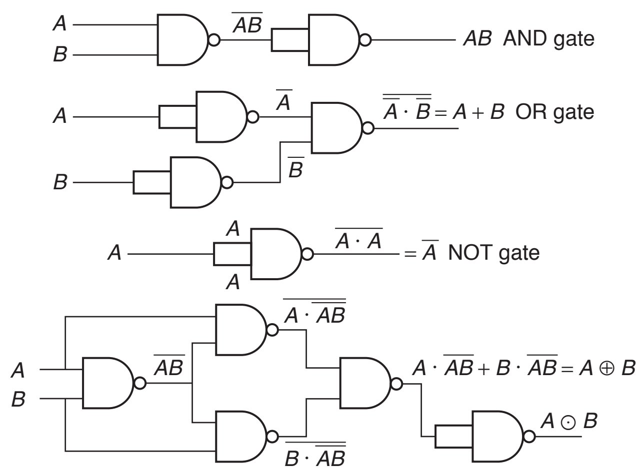


Figure 9 Implement of basics gates by using NAND gates

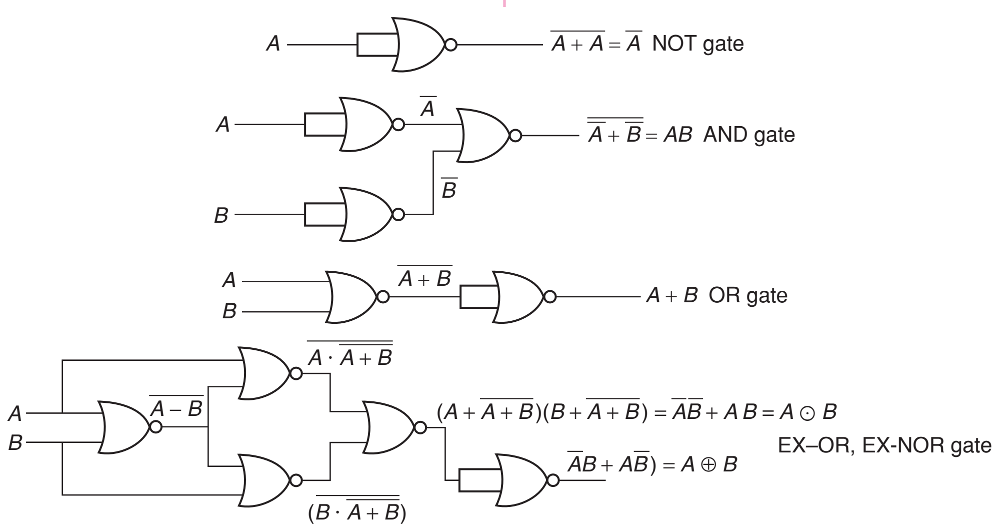

Figure 10 Implementation of basic gates by using NOR gates

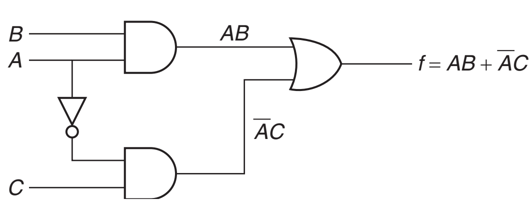
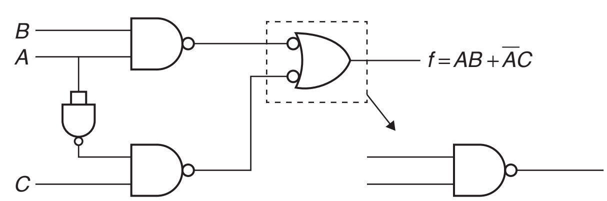
Any function which is in the SOP form can be implemented by using AND-OR gates, which is also equivalent to NAND–NAND gates.

$$F = AB + \overline{A}C$$



By considering bubble at AND gate output and OR gate input, and by changing NOT gates to NAND gates the circuit becomes as,



Now the circuit is in completely in NAND – NAND form

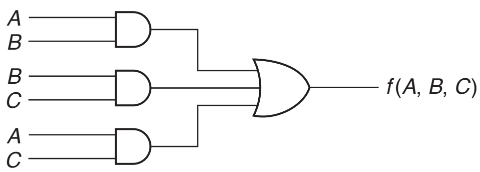
So the functions expressed in SOP form, can be implemented by using AND – OR, (or) NAND–NAND gates.

Any function in POS from, can be implemented by using OR–AND gates, which is similar to NOR–NOR gate.

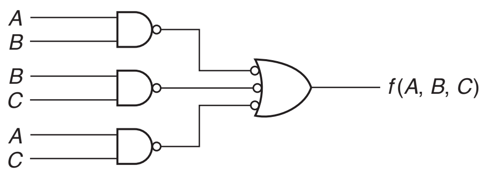
Example 16: How many number of NAND gates are required to implement $f(A, B, C) = AB + BC + AC$

(A) 3 (B) 4 (C) 5 (D) 6

Solution:



By considering bubbles at output of AND gate and input of OR gate.

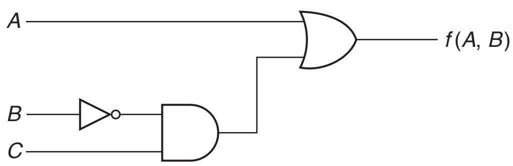


So four NAND gates are required.

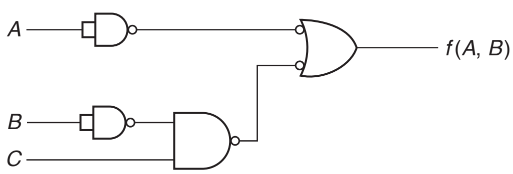
Example 17: Number of NAND gates required for implementation of $f(A,B) = A + \bar{B}C$ is

(A) 3 (B) 4 (C) 5 (D) 6

Solution:



To convert the all gates into NAND gates, place bubble output of AND, and inputs of OR gates. Now, the circuit can be drawn as



Four NAND gates are required.

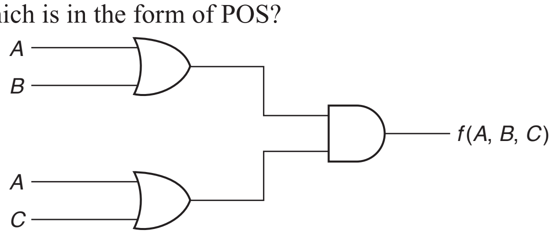
Example 18: $f = A + BC$, the number of NOR gates required to implement f, are?

(A) 3 (B) 4 (C) 5 (D) 2

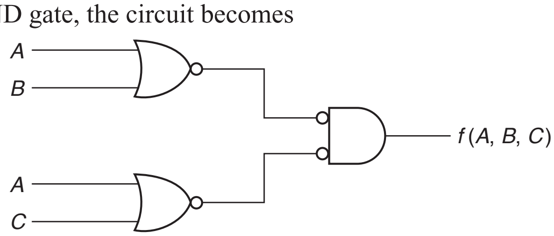
Solution: $A + BC$ is in SOP form.

To implement this function by using NOR gates, we can write $f(A, B, C) = A + BC = (A + B)(A + C)$

Which is in the form of POS?



By including bubbles at output of OR gate, and input of AND gate, the circuit becomes



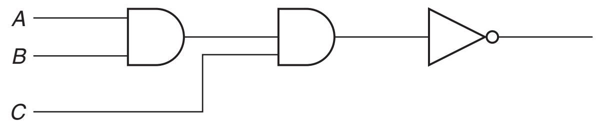
Now the circuit consists of all NOR gates. Three NOR Gates are required.

Example 19: How many number of two-input NAND–NOR gates are required to implement three-input NAND–NOR gates respectively?

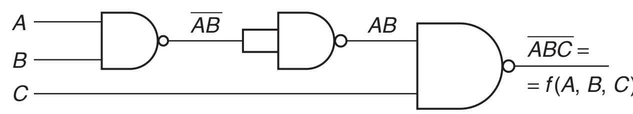
(A) 2, 2 (B) 2, 3
(C) 3, 2 (D) 3, 3

Solution: $f(A,B,C) = \overline{ABC} = \overline{AB} + \overline{C}$

(1) Implement above function by using two-inputs gates

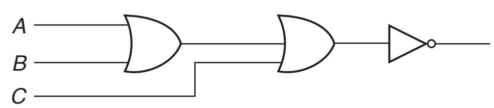


Now convert each gate to NAND gate

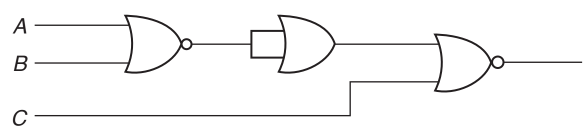


Three two-input NAND gates are required.

(2) $G(A,B,C) = \overline{A+B+C}$ Implement it by using two-input gates



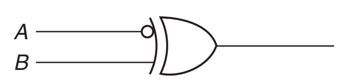
Now convert each gate to NOR gate



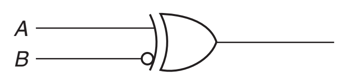
Three two-input, NOR gates are required.

EX-OR, EX-NOR Gates

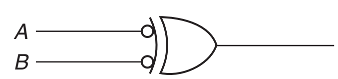
Inverted inputs for EX OR, EX-NOR gates



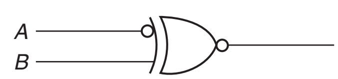
$$\bar{A} \oplus B = \bar{\bar{A}}B + \bar{A}\,\bar{B} = AB + \bar{A}\,\bar{B} = A \odot B$$



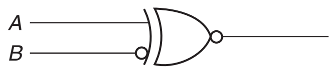
$$A \oplus \bar{B} = A\bar{\bar{B}} + \bar{A}\,\bar{B} = AB + \bar{A}\,\bar{B} = A \odot B$$



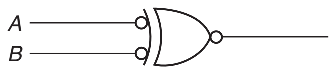
$$\bar{A} \oplus \bar{B} = \bar{A}\,\bar{\bar{B}} + \bar{\bar{A}}\,\bar{B} = \bar{A}B + A\bar{B} = A \oplus B$$



$$\bar{A} \odot B = \bar{A}B + \bar{\bar{A}}\,\bar{B} = \bar{A}B + A\bar{B} = A \oplus B$$



$$A \odot \overline{B} = A\overline{B} + \overline{A}\,\overline{\overline{B}} = A\overline{B} + \overline{A}B = A \oplus B$$

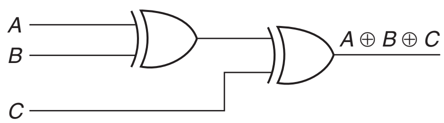


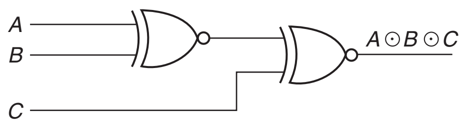
$$\overline{A} \odot \overline{B} = \overline{A}\,\overline{B} + \overline{\overline{A}}\,\overline{\overline{B}} = \overline{A}\,\overline{B} + AB = A \odot B$$

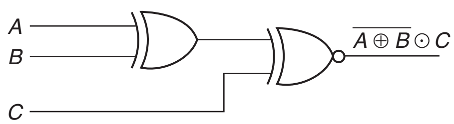
From the above discussions we can conclude that inverted input EXOR gate is EX-NOR gate.

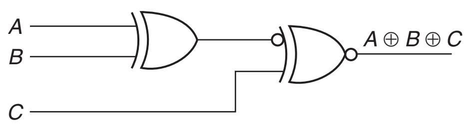
Similarly, inverted input EX-NOR gate is EX-OR gate. If both inputs are inverted the EX-OR / EX-NOR will remain as it is.

Consider a three-inputs X-OR gates by using two-input XOR gates.



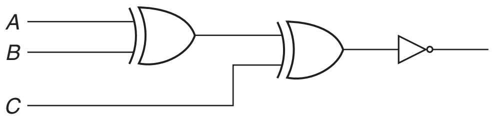


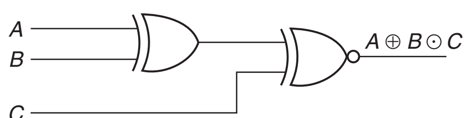




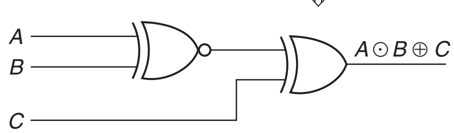
So we can conclude that $A \oplus B \oplus C = A \odot B \odot C$

$$\overline{A \oplus B \oplus C} = \overline{A \odot B \odot C}$$





$\Downarrow A$



$$\overline{A \oplus B \oplus C} = \overline{A \odot B \odot C} = A \oplus B \odot C$$

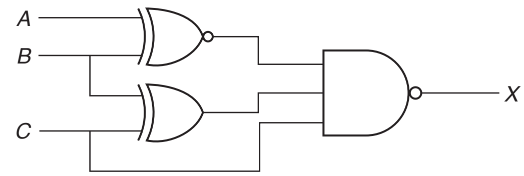
$= A \odot B \oplus C$

$A \oplus B \oplus C \oplus D = A \oplus B \odot C \odot D = A \odot B \odot C \oplus D = A \odot B \oplus C \odot D$

$$A \odot B \odot C \odot D = \overline{A \oplus B \oplus C \oplus D}$$

$A \odot B \odot C \odot D = A \oplus B \oplus C \odot D = A \oplus B \odot C \oplus D$

Example 20: For the logic circuit shown in figure, the required input condition (A, B, C) to make the output $X = 0$ is?



(A) 1, 1, 1 (B) 1, 0, 1
(C) 0, 1, 1 (D) 0, 0, 1

Solution: (D)

To get output $X = 0$, all inputs to the NAND gate should be 1, so $C = 1$.

When $C = 1$, the output of X-OR gate $B \oplus C = 1$ only when $B = 0$.

If $B = 0$ the output of X-NOR gate $A \odot B = 1$.

Only when $A = 0$

So $X = 1$, only when $(A, B, C) = (0, 0, 1)$.

Example 21: The minimized expression of

$(A + \overline{B})\,(A\overline{B} + AC)\,(\overline{A}\,\overline{C} + \overline{B})$ is

Solution: $(A + \overline{B})\,(A\overline{B} + AC)\,(\overline{A}\,\overline{C} + \overline{B})$

$$= (A + \overline{B})\,(A\overline{B}\cdot\overline{A}\,\overline{C} + A\overline{B}\cdot\overline{B} + AC\cdot\overline{A}\,\overline{C} + AC\cdot\overline{B})$$

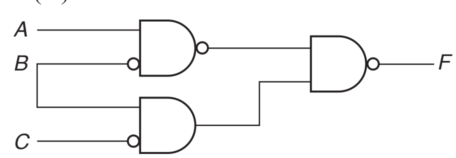
$$= (A + \overline{B})\,(A\overline{B} + A\overline{B}C) = (A + \overline{B})A\overline{B}(1 + C)$$

$$= A\overline{B} + A\overline{B} = A\overline{B}$$

Example 22: The Boolean function f is independent of

(A) a (B) b
(C) c (D) None of these

Solution: (A)

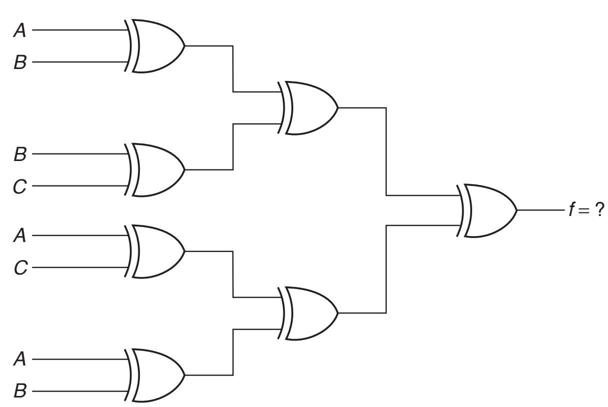


$F = \overline{\overline{ab}\cdot\overline{bc}}$

$= ab + \overline{\overline{b}c} = ab + b + \overline{c}$

$= b + \overline{c}$ is independent of 'a'.

Example 23:



Solution: $f = \{A \oplus B \oplus B \oplus C\} \oplus \{A \oplus C \oplus B \oplus A\}$

$= \{A \oplus 0 \oplus C\} \oplus \{0 \oplus C \oplus B\}$

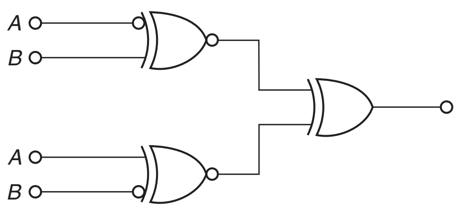
$= A \oplus C \oplus C \oplus B = A \oplus 0 \oplus B = A \oplus B$

Solved Examples

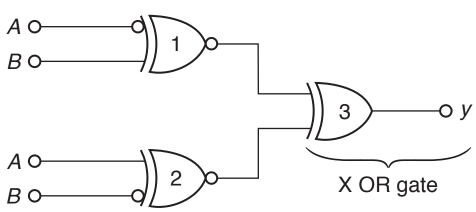
Example 1: Simplify the Boolean function, $x\,y + x'z + y\,z$

Solution: $x\,y + x'\,z + y\,z$
By using consensus property
$xy + x'z + yz = xy + x'z$
$Y = xy + x'z$

Example 2: The output of the given circuit is equal to



Solution: $\overline{A} \odot B = \overline{A}B + A\overline{B}$

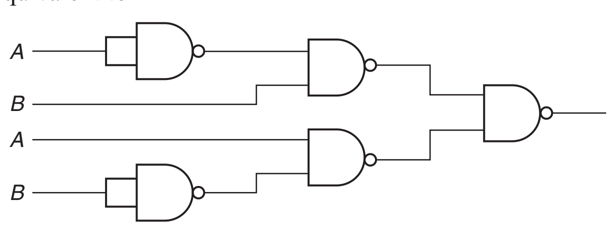


$$A \odot \overline{B} = \overline{A}B + A\overline{B}$$

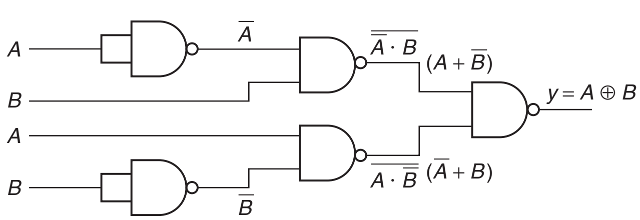
So the output of above circuit is '0'. As two inputs are same at third gate.
Output of XOR gate with two equal inputs is zero.

$$\therefore\ y = 0$$

Example 3: The circuit shown in the figure is functionally equivalent to



Solution:



$Y = \overline{(\overline{\overline{A}\cdot B}\cdot\overline{A\overline{B}})} = \overline{(A+\overline{B})(\overline{A}+B)} \quad \because \quad (\overline{A\cdot B} = \overline{A}+\overline{B})$

$= \overline{(A+\overline{B})} + \overline{(\overline{A}+B)} = \overline{A}\cdot\overline{\overline{B}} + \overline{\overline{A}}\cdot\overline{B}$

$= \overline{A}\cdot B + A\cdot\overline{B} = A \oplus B$

Example 4: Simplify the Boolean function $A \oplus \overline{A}B \oplus \overline{A}$

Solution: $A \oplus \overline{A}B \oplus \overline{A}$

Associativity

$= 1 \oplus \overline{A}B = \overline{\overline{A}B}$

$= A + \overline{B}$ $(\because$ De Morgan's)

Example 5:

CD \ AB	00	01	11	10
00	0	0	1	1
01	0	×	×	1
11	×	×	1	×
10	1	0	1	1

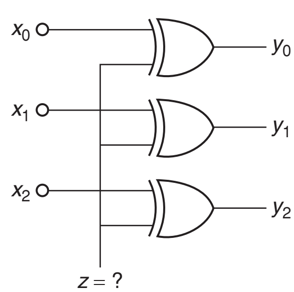
The minimized expression for the given K–map is

Solution:

CD \ AB	00	01	11	10
00	0	0	1	1
01	0	×	×	1
11	×	×	1	×
10	1	0	1	1

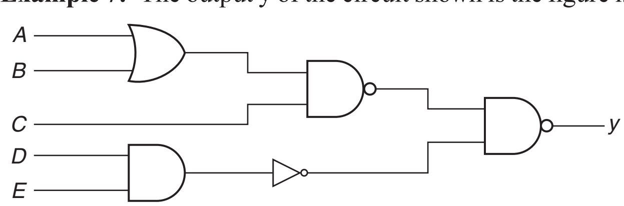
$= A + \overline{B}C$

Example 6: In the figure shown, y_2, y_1, y_0 will be 1s complement of $x_2\,x_1\,x_0$ if $z = ?$

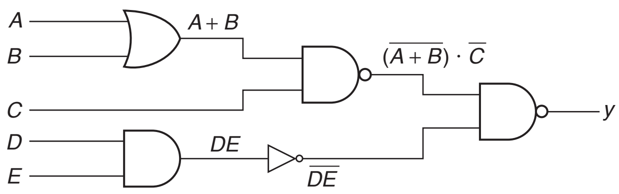


Solution: We are using X-OR gate
$\therefore$ XOR out-put is complement of input only when other input is high.
$\therefore Z = 1$

Example 7: The output y of the circuit shown is the figure is



Solution:



$$y = \overline{\overline{(A+B)\cdot C}\cdot \overline{DE}} = \overline{\overline{(A+B)\cdot C}} + \overline{\overline{DE}}$$

$$= (A+B)C + DE(\overline{x\cdot y} = \bar{x} + \bar{y})$$

Example 8: Simplify the following function

$$f = \overline{\overline{\bar{A}(\overline{AB})}\cdot\overline{\bar{B}(\overline{AB})}}$$

Solution: $\overline{\overline{\overline{\bar{A}(\overline{AB})}}\cdot\overline{\overline{\bar{B}(\overline{A\cdot B})}}}$

$$\overline{[A+(AB)]\cdot[B+(AB)]} = \overline{A+(AB)} + \overline{(B+AB)}$$

$$= \bar{A}\cdot\overline{(AB)} + \bar{B}\cdot\overline{(AB)} = \bar{A}\cdot(\bar{A}+\bar{B}) + \bar{B}(\bar{A}+\bar{B})$$

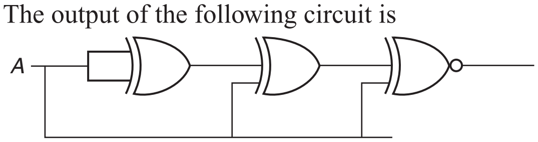
$$= \bar{A}\cdot\bar{A} + \bar{A}\,\bar{B} + \bar{B}\,\bar{A} + \bar{B}\cdot\bar{B} = \bar{A}+\bar{B} = \overline{AB}$$

Exercises

Practice Problems I

Directions for questions 1 to 25: Select the correct alternative from the given choices.

1. The output of the following circuit is



(A) 0 (B) 1
(C) A (D) A'

2. The circuit which will work as OR gate in positive level will work as ___ gate in negative level logic
(A) NOR gate
(B) NAND gate
(C) Both NAND and NOR gate
(D) AND gate

3. Four logical expressions are given below:

(a) $\bar{A}\cdot\bar{B}\cdot\bar{C}\cdot\bar{D}\bar{E}\cdot\bar{F}\cdot\bar{G}\cdot\bar{H}$

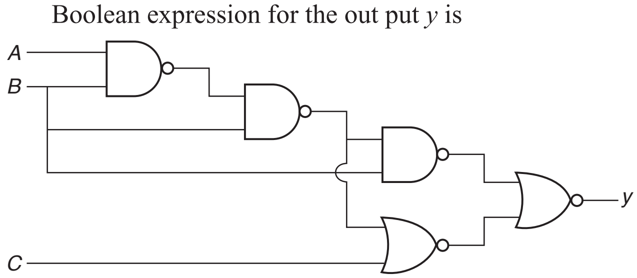
(b) $\overline{AB}\cdot\overline{CD}\cdot\overline{EF}\cdot\overline{GH}$

(c) $\bar{A}+\bar{B}+\bar{C}+\bar{D}+\bar{E}+\bar{F}+\bar{G}+\bar{H}$

(d) $(\bar{A}+\bar{B})\,(\bar{C}+\bar{D})\,(\bar{E}+\bar{F})\,(\bar{G}+\bar{H})$

Two of these expression are equal. They are
(A) c and d (B) b and d
(C) a and b (D) a and c

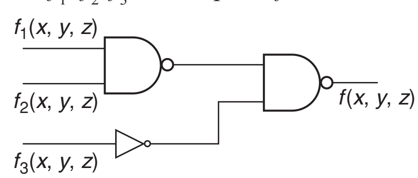
4. For the logic circuit shown in figure, the simplified Boolean expression for the out put y is



(A) $A + B + C$ (B) A
(C) ABC (D) $B\bar{C}$

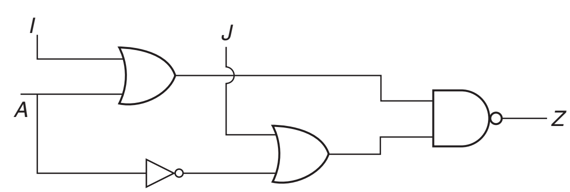
5. In a digital system, there are three inputs A, B and C. The output should be high when at least two inputs are high. The minimized Boolean expression for the out put is
(A) $AB + BC + AC$
(B) $ABC + AB\bar{C} + \bar{A}BC + A\bar{B}C$
(C) $AB\bar{C} + A\bar{B}C + \bar{A}BC$
(D) $A\bar{B} + B\bar{C} + \bar{A}C$

6. Consider the following logic circuit whose inputs are functions f_1, f_2, f_3 and output is f.



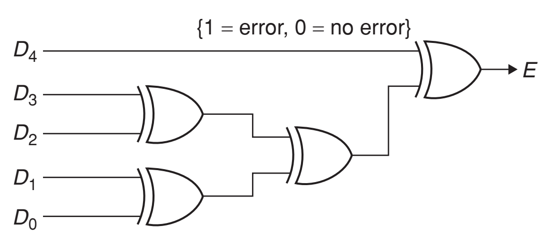
Given that $f_1(x, y, z) = \bullet(0, 1, 3, 5)$ $f_2(x, y, z) = \bullet(6, 7)$ and $f(x, y, z) = \bullet(1, 4, 5)$, then f_3 is
(A) •(1, 4, 5) (B) •(6, 7)
(C) •(0, 1, 3, 5) (D) None of these

7. The circuit shown above is to be used to implement the function $z = f(A, B) = \bar{A} + B$ what values are to be selected for I and J?



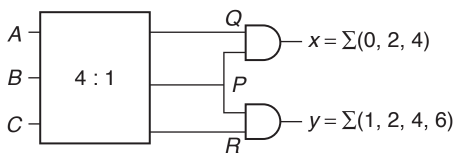
(A) $I = 0, J = B$ (B) $I = 1, J = B$
(C) $I = B, J = 1$ (D) $I = B, J = 0$

8. Parity checker output from the below figure, if input is 11111 ($D_4\,D_3\,D_2\,D_1\,D_0$) and 10000 ($D_4\,D_3\,D_2\,D_1\,D_0$).



(A) error, error
(B) error, no error
(C) no error, error
(D) no error , no error

9. For the given combinational network with three inputs A, B and C, three intermediate outputs P, Q and R, and two final outputs $X = P \cdot Q = \Sigma(0, 2, 4)$ and $Y = P \cdot R = \Sigma(1, 2, 4, 6)$ as shown below. Find the smallest function P(containing minimum number of min terms that can produce the output x and y)



(A) $\Sigma(2, 4)$
(B) $\Sigma(0, 1, 2, 4, 6)$
(C) $\Sigma(3, 5, 7)$
(D) $\Sigma(1, 2, 6)$

10. The standard form of expression $AB + ACD + \bar{A}C$ is

(A) $AB\bar{C}\bar{D} + ABC\bar{D} + AB\bar{C}D + ABCD + A\bar{B}CD + \bar{A}BCD + \bar{A}BC\bar{D} + \bar{A}\,\bar{B}CD + \bar{A}\bar{B}C\bar{D}$

(B) $AB + ACD + \bar{A}C$

(C) $AB\bar{C} + ABC + ABCD + \bar{A}CB + \bar{A}C\bar{B}\,\bar{D}$

(D) $\bar{A}\bar{B}\bar{C}\,\bar{D} + ABCD + \bar{A}BC + AB\bar{D} + ABC$

11. Factorize $\bar{A}\,\bar{B}\bar{C}\,\bar{D} + \bar{A}\,\bar{B}\bar{C}D + A\bar{B}\bar{C}\bar{D} + A\bar{B}\bar{C}D$

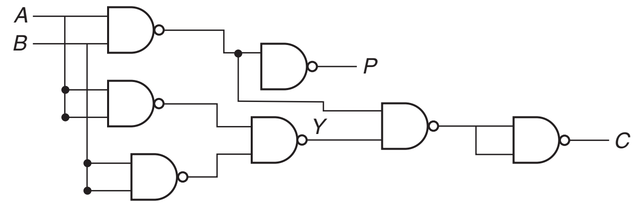
(A) $B + C$
(B) $AB + CD$
(C) $\bar{B}\bar{C}$
(D) AC

12. The K-map of a function is as shown. Find the function.

wx \ yz	00	01	11	10
	1			1
	1	1	1	1
	1			1
	1			1

(A) wx
(B) $\bar{z}$
(C) $\overline{w}(z + \bar{z}) + \bar{z}w$
(D) $\overline{w}x + \bar{z}$

13. The Boolean expression for P is



(A) AB
(B) $\overline{AB}$
(C) $\bar{A} + \bar{B}$
(D) $A + B$

14. The Boolean expression for the truth table is

A	B	C	f
0	0	0	0
0	0	1	0
0	1	0	0
0	1	1	1
1	0	0	0
1	0	1	0
1	1	0	1
1	1	1	0

(A) $B(A + C)(\bar{A} + \bar{C})$
(B) $\bar{B}(A + \bar{C})(\bar{A} + \bar{C})$
(C) $B(A + \bar{C})(\bar{A} + C)$
(D) $\bar{B}(A + C)(\bar{A} + \bar{C})$

15. Simplify (d represents don't-care)

C \ AB	00	01	11	10
0	1	d		1
1	1	d		1

(A) $\bar{B}$
(B) $\bar{B} + C$
(C) $\bar{B} + \bar{A}$
(D) $A + \bar{C}$

16. Simplify $\overline{(AB + \bar{C})(\overline{A + B} + C)}$

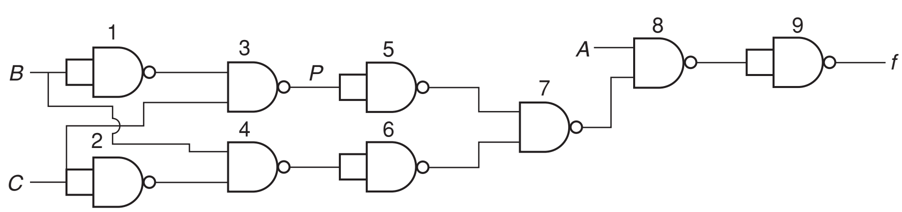
(A) $(\bar{A} + \bar{B} + \bar{C}) \cdot (A + B + C)$

(B) $(\bar{A} + B + C) \cdot (A + \bar{B} + \bar{C})$

(C) $(\bar{A} + \bar{B}) \cdot (A + B + C)$

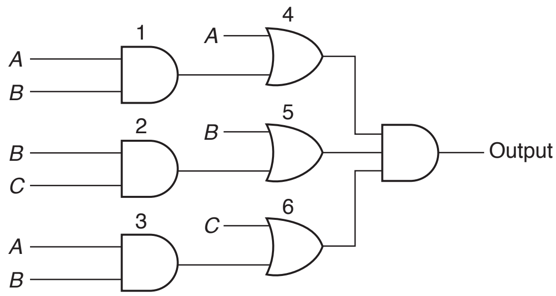
(D) None of these

17. The point P in the figure is stuck at 1. The output f will be



(A) $\overline{ABC}$
(B) $\bar{A}$
(C) $AB\bar{C}$
(D) A

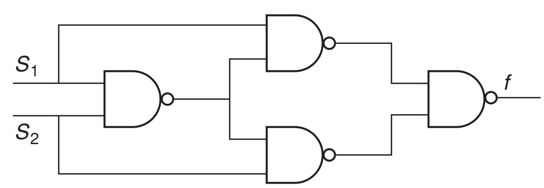
18. Find the function represented by the figure



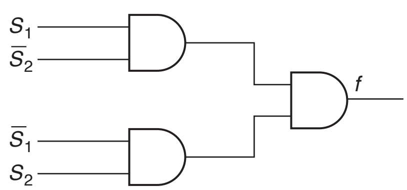
(A) $A + B + C$ (B) AB
(C) $AB + C$ (D) $B + C$

19. A staircase light is controlled by two switches, one is at the top of the stairs and other at the bottom of stairs. Realization of this function using NAND logic results in which of the following circuits? (Assume S_1 and S_2 are the switches)

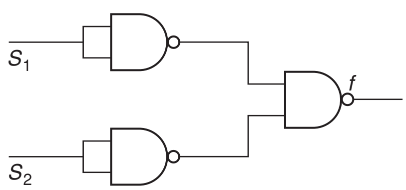
(A)



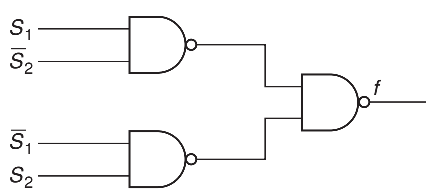
(B)



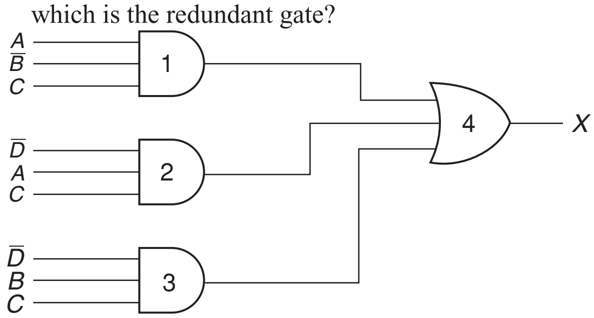
(C)



(D)



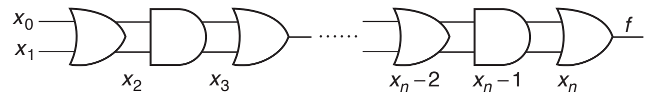
20. For the given figure simplify the expression and find which is the redundant gate?



(A) $ABC + DBC$, 4 (B) $A\bar{B}C + \bar{D}AC$, 3
(C) $\bar{D}AC + \bar{D}BC$, 1 (D) $A\bar{B}C + \bar{D}BC$, 2

21. The function $f = A \oplus B \oplus C \oplus D$ is represented as
(A) $f(A, B, C, D) = \Sigma(2, 6, 10, 11, 12, 13, 14)$
(B) $f(A, B, C, D) = \Sigma(3, 5, 7, 10, 11, 12, 13, 14)$
(C) $f(A, B, C, D) = \Sigma(1, 2, 6, 8, 10, 12, 13, 14)$
(D) $f(A, B, C, D) = \Sigma(1, 2, 4, 7, 8, 11, 13, 14)$

22. Find the function represented

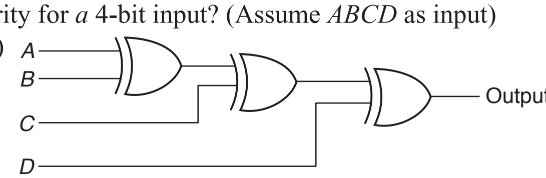


(A) $(x_0 + x_1)(x_2 + x_3)(x_4 + x_5) \ldots (x_{n-1} + x_n)$
(B) $x_0 + x_1 + x_2 + x_3 + \cdots + x_n$
(C) $x_0x_2x_4 \ldots x_n + x_1x_2 \ldots x_n + x_{n-1}x_n$
(D) $x_0x_1 + x_2x_3 + \cdots + x_{n-1}x_n$

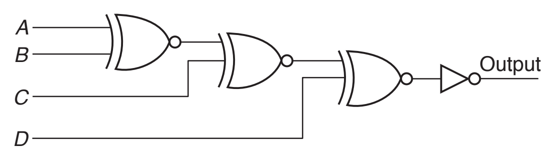
23. The minimum number of NAND gates required to implement $A \oplus B \oplus C$ is
(A) 8 (B) 10
(C) 9 (D) 6

24. Which of the following circuit will generate an odd parity for *a* 4-bit input? (Assume *ABCD* as input)

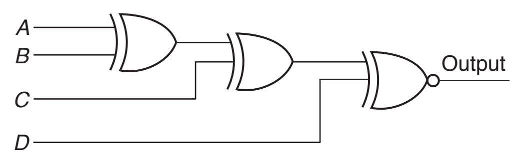
(A)



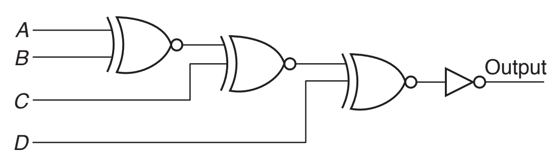
(B)



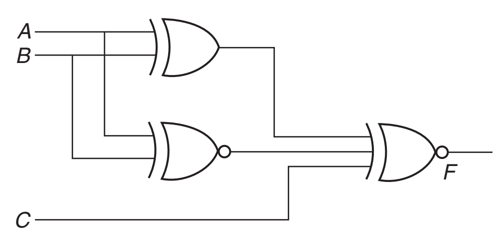
(C)



(D)



25. For the output F to be 1 in the circuit, the input combination should be



(A) $A = 1, B = 1, C = 0$ (B) $A = 1, B = 0, C = 0$
(C) $A = 0, B = 1, C = 0$ (D) $A = 0, B = 0, C = 1$

Practice Problems 2

Directions for questions 1 to 25: Select the correct alternative from the given choices.

1. An OR Gate has six inputs. How many input words are there in its truth table?

(A) 6 (B) 36
(C) 32 (D) 64

2. Sum of product form can be implemented by using

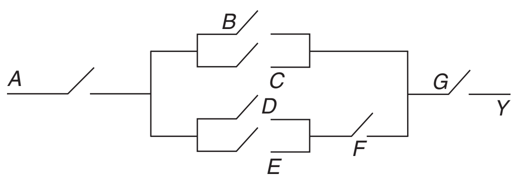
(A) AND – OR
(B) NAND – NAND
(C) NOR – NOR
(D) Both A and B

3. Which one of the following is equivalent to the Boolean expression?

$Y = AB + BC + CA$

(A) $\overline{AB + BC + CA}$
(B) $(\bar{A} + \bar{B})(\bar{B} + \bar{C})(\bar{A} + \bar{C})$
(C) $\overline{(A + B)(B + C)(A + C)}$
(D) $\overline{(\bar{A} + \bar{B})(\bar{B} + \bar{C})(\bar{C} + \bar{A})}$

4. What Boolean function does the following circuit represents?



(A) $A\,[F + (B + C)\cdot(D + E)]\,G$
(B) $A + BC + DEF + G$
(C) $A\,[(B + C) + F\,(D + E)]\,G$
(D) $ABG + ABC + F\,(D + E)$

5. The minimum number of two input NOR gates are required to implement the simplified value of the following equation

$f(w, x, y, z) = \Sigma m(0, 1, 2, 3, 8, 9, 10, 11)$

(A) One (B) Two
(C) Three (D) Four

6. The out put of a logic gate is '1' when all inputs are at logic '0'. Then the gate is either

(1) NAND or X-OR gate
(2) NOR or X-OR gate
(3) NOR or X-NOR gate
(4) NAND or X-NOR gate

(A) 1 and 2 (B) 2 and 3
(C) 3 and 4 (D) 4 and 1

7. If the functions w, x, y, and z are as follows.

$w = R + \bar{P}Q + \bar{R}S$

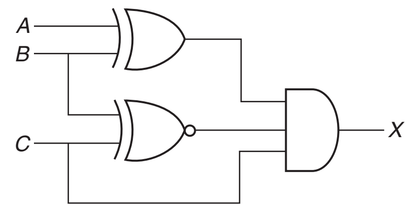
$x = PQ\bar{R}\bar{S} + \bar{P}\bar{Q}\bar{R}\bar{S} + P\bar{Q}\bar{R}\bar{S}$

$y = RS + \overline{PR + P\bar{Q} + \bar{P}\cdot\bar{Q}}$

$z = R + S + \overline{PQ + \bar{P}\cdot\bar{Q}\cdot\bar{R} + P\cdot\bar{Q}\cdot\bar{S}}$

(A) $w = z,\ x = y$ (B) $w = z,\ x = \bar{z}$
(C) $w = y$ (D) $w = y = z$

8. For the logic circuit shown in the figure, the required in put condition (A, B, C) to make the output (x) = 1 is



(A) 0, 0, 1 (B) 1, 0, 1
(C) 1, 1, 1 (D) 0, 1, 1

9. Which of the following is a basic gate?

(A) AND (B) X-OR
(C) X-NOR (D) NAND

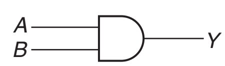
10. Which of the following represent the NAND gate?

(a) 
(b) 
(c) 
(A) a only (B) a, b, c
(C) b, a (D) a, c

11. The universal gates are

(A) NAND and NOR (B) AND, OR, NOT
(C) X-OR and X-NOR (D) All of these

12. In the circuit the value of input A goes from 0 to 1 and part of B goes from 1 to 0. Which of the following represent output under a static hazard condition?



(a) 
(b) 

(c) 
(d) 
(A) Output a (B) Output b
(C) Output c (D) Output d

13. The consensus theorem states that

(A) $A + \bar{A}B = A + B$
(B) $A + AB = A$
(C) $AB + \bar{A}C + BC = AB + \bar{A}C$
(D) $(A + B)\cdot(A + \bar{B}) = A$

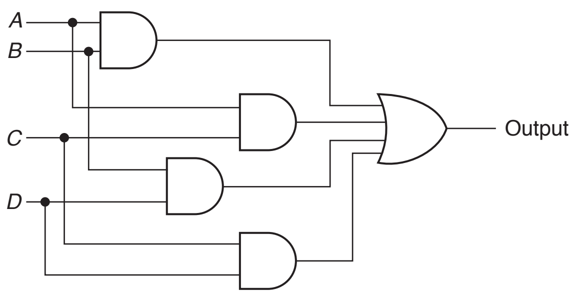
14. The dual form of expression

$AB + \bar{A}C + BC = AB + \bar{A}C$ is

(A) $(A+B)(\bar{A}+C)(B+C) = (A+B)(\bar{A}+C)$
(B) $(A+B)(\bar{A}+C)(B+C) = (\bar{A}+\bar{B})(A+\bar{C})$
(C) $(\bar{A}+\bar{B})(\bar{A}+\bar{C})(\bar{B}+\bar{C}) = (\bar{A}+\bar{B})(A+\bar{C})$
(D) $\bar{A}\bar{B} + A\bar{C} + \bar{B}\bar{C} = \bar{A}\bar{B} + A\bar{C}$

15. The max term corresponding to decimal 12 is
(A) $\bar{A}+\bar{B}+C+D$ (B) $A+B+\bar{C}+\bar{D}$
(C) $\bar{A}\bar{B}CD$ (D) $ABC\bar{D}$

16. The given circuit is equivalent to



(A) $(A + C)(B + D)$ (B) $AC + BD$
(C) $(A + D)(B + C)$ (D) $(\bar{A} + \bar{B})(\bar{C} + \bar{D})$

17. Minimized expression for Karnaugh map is

C \ AB	00	01	11	10
0	1			1
1	1			1

(A) $AB + C$ (B) $\bar{A}B + C$
(C) $\bar{B}$ (D) $\bar{B} + C$

18. An XOR gate will act as ________ when one of its input is one and as ________ when one of its input is zero.
(A) buffer, buffer (B) buffer, inverter
(C) inverter, buffer (D) inverter, inverter

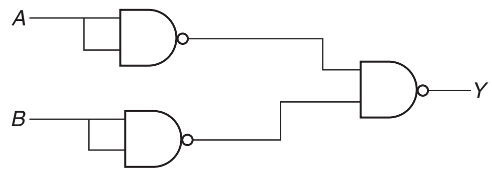
19. The minimum number of two input NAND gates required to implement $A \odot B$ if only A and B are available
(A) 6 (B) 3
(C) 5 (D) 4

20. Negative logic in a logic circuit is one in which
(A) logic 0 and 1 are represented by GND and positive voltage respectively.
(B) logic 0 and 1 are represented by negative and positive voltage.
(C) logic 0 voltage level is lower than logic 1 voltage level.
(D) logic 0 voltage level is higher than logic 1 voltage level.

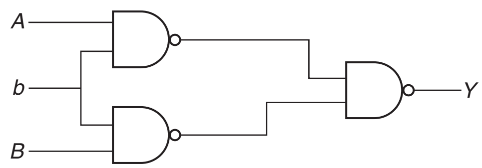
21. If the input to a gate is eight in number, then its truth table contains ________ input words.
(A) 128 (B) 8
(C) 64 (D) 256

22. The X-OR gate implementation using NAND gate is

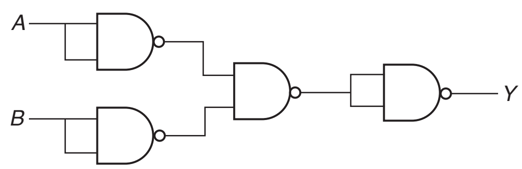
(A)



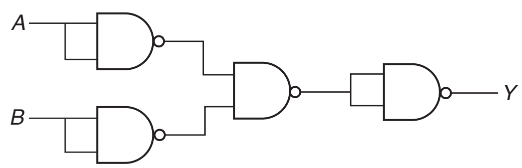
(B)



(C)



(D)



23. The equivalent of AND–OR logic circuit is
(A) NAND–NOR (B) NOR–AND
(C) NAND–NAND (D) NAND–OR

24. The X-OR is equivalent to

(A)  (B) 
(C)  (D) 
25. Simplify $A\bar{B}C + B + B\bar{D} + AB\bar{D} + \bar{A}C$
(A) B (B) $B + C$
(C) $C + A$ (D) $\bar{A} + B$

Previous Years' Questions

1. Let $f(w,x,y,z)=\Sigma(0,\ 4,\ 5,\ 7,\ 8,9,\ 13,\ 15)$. Which of the following expressions are NOT equivalent to f? **[2007]**

(P) $x'y'z' + w'xy' + wy'z + xz$
(Q) $w'y'z' + wx'y' + xz$
(R) $w'y'z' + wx'y' + xyz + xy'z$
(S) $x'y'z' + wx'y' + w'y$

(A) P only (B) Q and S
(C) R and S (D) S only

2. Define the connective $*$ for the Boolean variables X and Y as: $X * Y = XY + X'Y'$. Let $Z = X * Y$. Consider the following expressions P, Q and R. **[2007]**

$P : X = Y * Z$ $Q : Y = X * Z$
$R: X * Y * Z = 1$

Which of the following is TRUE?

(A) Only P and Q are valid.
(B) Only Q and R are valid.
(C) Only P and R are valid.
(D) All P, Q, R are valid.

3. In the Karnaugh map shown below, × denotes a don't-care term. What is the minimal form of the function represented by the Karnaugh map? **[2008]**

cd \ ab	00	01	11	10
00	1	1		1
01	×	1		
11	×			
10	1	1		×

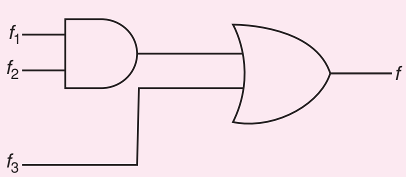
(A) $\bar{b}\cdot\bar{d}+\bar{a}\cdot\bar{d}$

(B) $\bar{a}\cdot\bar{b}+\bar{b}\cdot\bar{d}+\bar{a}\cdot b\cdot\bar{d}$

(C) $\bar{b}\cdot\bar{d}+\bar{a}\cdot b\cdot\bar{d}$

(D) $\bar{a}\cdot\bar{b}+\bar{b}\cdot\bar{d}+\bar{a}\cdot\bar{d}$

4. Given f_1, f_3 and f in canonical sum of products form (in decimal) for the circuit **[2008]**



$f_1 = \Sigma m(4, 5, 6, 7, 8)$
$f_3 = \Sigma m(1, 6, 15)$
$f = \Sigma m(1, 6, 8, 15)$
then f_2 is

(A) $\Sigma m(4, 6)$ (B) $\Sigma m(4, 8)$
(C) $\Sigma m(6, 8)$ (D) $\Sigma m(4, 6, 8)$

5. If P, Q, R are Boolean variables, then $(P+\bar{Q})(P\cdot\bar{Q}+P\cdot R)(\bar{P}\cdot\bar{R}+\bar{Q})$ simplifies to **[2008]**

(A) $P\cdot\bar{Q}$ (B) $P\cdot\bar{R}$
(C) $P\cdot\bar{Q}+R$ (D) $P\cdot\bar{R}+Q$

6. What is the minimum number of gates required to implement the Boolean function $(AB + C)$, if we have to use only two-input NOR gates? **[2009]**

(A) 2 (B) 3
(C) 4 (D) 5

7. The binary operation □ is defined as follows **[2009]**

P	Q	P□Q
T	T	T
T	F	T
F	T	F
F	F	T

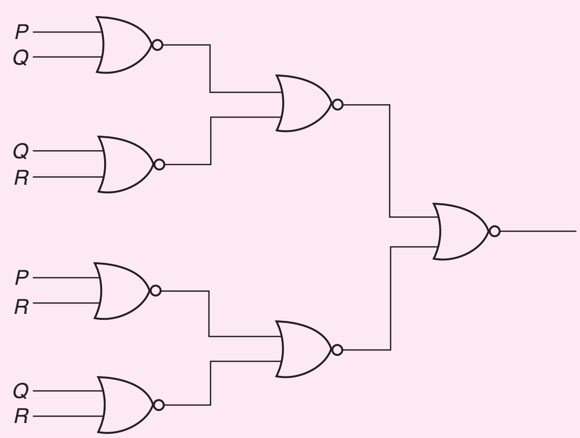
Which one of the following is equivalent to P□Q?

(A) $\neg Q\ \neg P$ (B) P□$\neg Q$
(C) $\neg P$□Q (D) $\neg P$□$\neg Q$

8. The min term expansion of $f(P, Q, Q) = PQ + Q\bar{R} + P\bar{R}$ is **[2010]**

(A) $m_2 + m_4 + m_6 + m_7$
(B) $m_0 + m_1 + m_3 + m_5$
(C) $m_0 + m_1 + m_6 + m_7$
(D) $m_2 + m_3 + m_4 + m_5$

9. What is the Boolean expression for the output f of the combinational logic circuit of NOR gates given below? **[2010]**



(A) $\overline{Q+R}$ (B) $\overline{P+Q}$
(C) $\overline{P+R}$ (D) $\overline{P+Q+R}$

10. The simplified SOP (Sum of Product) form of the Boolean expression. **[2011]**

$(P+\overline{Q}+\overline{R})(P+\overline{Q}+R)(P+Q+\overline{R})$ is

(A) $(PQ+\overline{R})$ (B) $(P+\overline{Q}\,\overline{R})$

(C) $(\overline{P}Q+R)$ (D) $(PQ+R)$

11. Which one of the following circuits is NOT equivalent to a two-input X-NOR (exclusive NOR) gate? **[2011]**

(A) 
(B) 
(C) 
(D) 
12. The truth table **[2012]**

X	Y	F(X, Y)
0	0	0
0	1	0
1	0	1
1	1	1

represents the Boolean function

(A) X (B) $X+Y$

(C) $X \oplus Y$ (D) Y

13. What is the minimal form of the Karnaugh map shown below? Assume that × denotes a don't-care term. **[2012]**

cd \ ab	00	01	11	10
00	1	×	×	1
01	×			1
11				
10	1			×

(A) $\overline{b}\,\overline{d}$ (B) $\overline{b}\,\overline{d}+\overline{b}\,\overline{c}$

(C) $\overline{b}\,\overline{d}+a\overline{b}\,\overline{c}d$ (D) $\overline{b}\,\overline{d}+\overline{b}\,\overline{c}+\overline{c}\,\overline{d}$

14. Which one of the following expressions does not represent exclusive NOR of x and y? **[2013]**

(A) $xy+x'y'$ (B) $x \oplus y'$

(C) $x' \oplus y$ (D) $x' \oplus y'$

15. Consider the following Boolean expression for F:

$F(P,Q,R,S)=PQ+\overline{P}QR+\overline{P}Q\overline{R}S$

The minimal sum of products form of F is **[2014]**

(A) $PQ+QR+QS$ (B) $P+Q+R+S$

(C) $\overline{P}+\overline{Q}+\overline{R}+\overline{S}$ (D) $\overline{P}R+\overline{P}\,\overline{R}S+P$

16. The dual of a Boolean function $f(x_1, x_2, \ldots x_n, +, ., ')$, written as F^D, is the same expression as that of F with + and . swapped. F is said to be self-dual if $F = F^D$. The number of self-dual functions with n Boolean variables is **[2014]**

(A) 2^n (B) 2^{n-1}

(C) 2^{2^n} (D) $2^{2^{n-1}}$

17. Consider the following min term expression for F:

$F(P, Q, R, S) = \Sigma m(0, 2, 5, 7, 8, 10, 13, 15)$

The min terms 2, 7, 8 and 13 are 'don't-care terms. The minimal sum of products form for F is **[2014]**

(A) $Q\overline{S}+\overline{Q}S$

(B) $\overline{Q}\,\overline{S}+QS$

(C) $\overline{Q}\,\overline{R}\,\overline{S}+\overline{Q}R\overline{S}+Q\overline{R}S+QRS$

(D) $\overline{P}\,\overline{Q}\,\overline{S}+\overline{P}QS+PQS+P\overline{Q}\,\overline{S}$

18. The binary operator ≠ is defined by the following truth table

p	q	p ≠ q
0	0	0
0	1	1
1	0	1
1	1	0

Which one of the following is true about the binary operator ≠? **[2015]**

(A) Both commutative and associative
(B) Commutative but not associative
(C) Not commutative but associative
(D) Neither commutative nor associative

19. Consider the operations **[2015]**

$f(X, Y, Z) = X^1\,YZ + XY^1 + Y^1Z^1$ and

$g(X, Y, Z) = X^1\,YZ + X^1\,YZ^1 + XY.$

Which one of the following is correct?

(A) Both $\{f\}$ and $\{g\}$ are functionally complete
(B) Only $\{f\}$ is functionally complete
(C) Only $\{g\}$ is functionally complete
(D) Neither $\{f\}$ nor $\{g\}$ is functionally complete

20. The number of min-terms after minimizing the following Boolean expression is _______ **[2015]**

$[D^1 + AB^1 + A^1C + AC^1D + A^1C^1D]^1$

21. Let # be a binary operator defined as **[2015]**

$X \# Y = X^1 + Y^1$ where X and Y are Boolean variables.

Consider the following two statements.

(S1) $(P \# Q) \# R = P \# (Q \# R)$

(S2) $Q \# R = R \# Q$

Which of the following is/are true for the Boolean variables P, Q and R?

(A) Only S_1 is true
(B) Only S_2 is true

(C) Both S_1 and S_2 are true
(D) Neither S_1 nor S_2 are true

22. Given the function $F = P^1 + QR$, where F is a function in three Boolean variables P, Q and R and $P^1 = !P$, consider the following statements. **[2015]**

(S_1) $F = \Sigma(4, 5, 6)$

(S_2) $F = \Sigma(0, 1, 2, 3, 7)$

(S_3) $F = \pi(4, 5, 6)$

(S_4) $F = \pi(0, 1, 2, 3, 7)$

Which of the following is true?
(A) (S_1) – False, (S_2) – True, (S_3) – True, (S_4) – False
(B) (S_1) – True, (S_2) – False, (S_3) – False, (S_4) – True
(C) (S_1) – False, (S_2) – False, (S_3) – True, (S_4) – True
(D) (S_1) – True, (S_2) – True, (S_3) – False, (S_4) – False

23. The total number of prime implicants of the function $f(w, x, y, z) = \Sigma(0, 2, 4, 5, 6, 10)$ is ______ **[2015]**

24. Consider the Boolean operator # with the following properties: **[2016]**

$x \# 0 = x$, $x \# 1 = \bar{x}$, $x \# x = 0$ and

$x \# \bar{x} = 1$. Then $x \# y$ is equivalent to

(A) $x\bar{y} + \bar{x}y$
(B) $x\bar{y} + \bar{x}\bar{y}$
(C) $\bar{x}y + xy$
(D) $xy + \bar{x}\bar{y}$

25. Consider the Karnaugh map given below, where X represents *"don't care"* and blank represents 0.

dc \ ba	00	01	11	10
00		X	X	
01	1			X
11	1			1
10		X	X	

Assume for all inputs (a, b, c, d), the respective complements ($\bar{a}, \bar{b}, \bar{c}, \bar{d}$) are also available. The above logic is implemented using 2-input NOR gates only. The minimum number of gates required is ________. **[2017]**

26. If w, x, y, z are Boolean variables, then which one of the following is INCORRECT? **[2017]**
(A) $wx + w(x + y) + x(x + y) = x + wy$
(B) $\overline{w\bar{x}(y+\bar{z})} + \bar{w}x = \bar{w} + x + \bar{y}z$
(C) $\left(w\bar{x}\left(y + x\bar{z}\right) + \bar{w}\bar{x}\right)y = x\bar{y}$
(D) $(w + y)(wxy + wyz) = wxy + wyz$

27. Given $f(w,x,y,z) = \Sigma m(0,1,2,3,7,8,10) + \Sigma d(5,6,11,15)$, where d represents the *don't-care* condition in Karnaugh maps. Which of the following is a minimum product-of-sums (POS) form of $f(w, x, y, z)$? **[2017]**

(A) $f = (\bar{w}+\bar{z})(\bar{x}+z)$
(B) $f = (\bar{w}+z)(x+z)$
(C) $f = (w + z)(\bar{x} + z)$
(D) $f = (w+\bar{z})(\bar{x}+z)$

28. Let ⊕ and ⊙ denote the Exclusive OR and Exclusive NOR operations, respectively. Which one of the following is NOT CORRECT? **[2018]**
(A) $\overline{P \oplus Q} = P \odot Q$
(B) $\bar{P} \oplus Q = P \odot Q$
(C) $\bar{P} \oplus \bar{Q} = P \oplus Q$
(D) $(P \oplus \bar{P}) \oplus Q = (P \odot \bar{P}) \odot \bar{Q}$

29. Consider the minterm list form of a Boolean function F given below.

$$F(P, Q, R, S) = \sum m(0, 2, 5, 7, 9, 11) + d(3, 8, 10, 12, 14)$$

Here, m denotes a minterm and d denotes a don't care term. The number of essential prime implicants of the function F is ______. **[2018]**

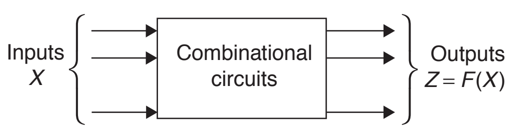
Introduction

Combinational logic is a type of logic circuit whose output is a function of the present input only.



Combinational Logic Design

The design of combinational circuit starts from the problem, statement and ends with a gate level circuit diagram.

The design procedure involves the following steps:

1. Determining the number of input variables and output variables required, from the specifications.
2. Assigning the letter symbols for input and output.
3. Deriving the truth table that defines the required relationship between input and output.
4. Obtaining the simplified Boolean function for each output by using K-map or algebraic relations.
5. Drawing the logic diagram for simplified expressions.

We will discuss combinational circuits under the following categories:

- Arithmetic circuits
- Code converters
- Data processing circuits

Arithmetic Circuits

Arithmetic circuits are the circuits that perform arithmetic operation. The most basic arithmetic operation is addition.

Half Adder

Addition is an arithmetic operation, and here to implement addition in digital circuits we have to implement by logical gates. So the addition of binary numbers will be represented by the logical expressions. Half adder is an arithmetic circuit which performs the addition of two binary bits, and the result is viewed in two output—sum and carry.

The sum 'S' is the X-OR of 'A' and 'B' where A and B are inputs.

$$\therefore \quad S = A\bar{B} + B\bar{A} = A \oplus B$$

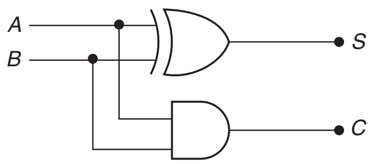
The carry 'C' is the AND of A and B.

$$\therefore C = AB$$

Table 1 *Truth Table*

Inputs		Outputs	
A	**B**	**S**	**C**
0	0	0	0
0	1	1	0
1	0	1	0
1	1	0	1

So, half adder can be realized by using one X-OR gate and one AND gate.

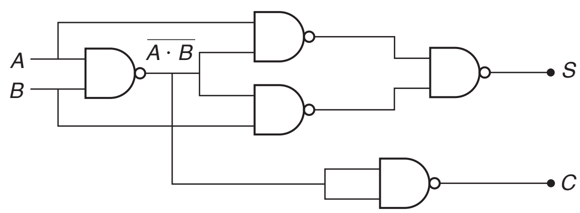


Half adder can also be realized by universal logic such as only NAND gate or only NOR gate as given below.

NAND logic

$$
\begin{aligned}
S &= A\overline{B} + \overline{A}B \\
&= A\overline{B} + A\overline{A} + \overline{A}B + B\overline{B} \\
&= A(\overline{A} + \overline{B}) + B(\overline{A} + \overline{B}) \\
&= \overline{\overline{A\overline{AB}} \cdot \overline{B\overline{AB}}}
\end{aligned}
$$

$$C = AB = \overline{\overline{A \cdot B}}$$

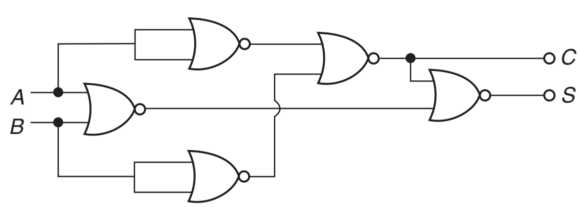


Half adder using NAND logic

NOR logic

$$
\begin{aligned}
S &= A \cdot \overline{B} + \overline{A}B \\
&= A\overline{B} + A\overline{A} + \overline{A}B + B\overline{B} \\
&= A(\overline{A} + \overline{B}) + B(\overline{A} + \overline{B}) \\
&= (A + B)\,(\overline{A} + \overline{B}) \\
&= \overline{\overline{A + B} + \overline{(\overline{A} + \overline{B})}}
\end{aligned}
$$

$$C = A \cdot B = \overline{\overline{A \cdot B}} = \overline{\overline{A} + \overline{B}}$$



Half adder using NOR logic

Full Adder

Full adder is an arithmetic circuit that performs addition of two bits with carry input. The result of full adder is given by two outputs—sum and carry. The full adder circuit is used in parallel adder circuit as well as in serial adder circuit.

For full adder, if total number of 1's is odd at input lines, the sum output is equal to logic 1, and if total number of 1's at input lines are more than or equal to 2, then the carry output is logic 1.

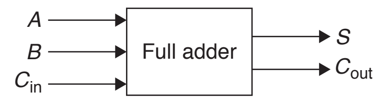


Figure 1 Block diagram

Table 2 *Truth Table*

A	B	C_{in}	S	C_{out}
0	0	0	0	0
0	0	1	1	0
0	1	0	1	0
0	1	1	0	1
1	0	0	1	0
1	0	1	0	1
1	1	0	0	1
1	1	1	1	1

$$
\begin{aligned}
S &= \overline{A}\,\overline{B}C_{in} + \overline{A}B\overline{C_{in}} + A\overline{B}\,\overline{C_{in}} + ABC_{in} \\
&= A \oplus B \oplus C_{in} \\
C_{out} &= \overline{A}BC_{in} + A\overline{B}C_{in} + AB\overline{C_{in}} + ABC_{in} \\
&= AB + (A \oplus B)\,C_{in} \\
&= AB + A\,C_{in} + B\,C_{in}
\end{aligned}
$$

Full adder can also be realized using universal logic gates, i.e., either only NAND gates or only NOR gates as explained below.

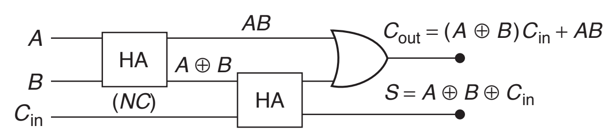

Figure 2 Block diagram of full adder by using Half adder

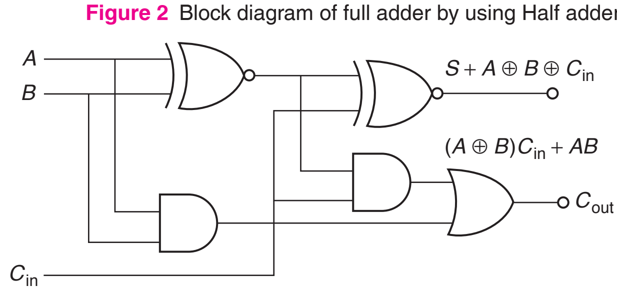

Figure 3 Logic diagram of full adder

NAND logic

$$A \oplus B = \overline{\overline{A\overline{AB}} \quad \overline{B\overline{AB}}}$$

So $A \oplus B \oplus C_{in}$

Let $A \oplus B = x$ then $s = \overline{\overline{X \cdot \overline{XC_{in}}} \quad \overline{C_{in}\overline{X \cdot C_{in}}}}$

$$= X \oplus C_{in}$$

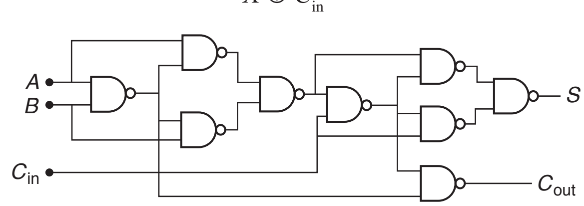

Figure 4 Logic diagram of a full adder using only 2-input NAND gates

NOR logic

Full adder outputs

Sum = $a \oplus b \oplus c$, carry = $ab + bc + ac$ are self dual functions

[∵ A function is called as self dual if its dual is same as the function itself $f^D = f$]

For self dual functions, the number of NAND gates are same as number of NOR gates.

By taking the dual for above NAND gate implementation, all gates will become NOR gates, and the output is dual of the sum and carry, but they are self dual ($f^D = f$).

So, output remain same, and only 9 NOR gates are required for full adder, structure similar to NAND gate circuit.

Half Subtractor

Half subtractor is an arithmetic circuit which performs subtraction of one bit (subtrahend) from other bit (minuend), and the result gives difference and borrow each of one bit. The borrow output is logic 1 only if there is any subtraction of 1 from 0.

When a bit 'B' is subtracted from another bit 'A', a difference bit (d) and a borrow bit (b) result according to the rule given below.

Table 3 *Truth Table*

A	B	d	b
0	0	0	0
1	0	1	0
1	1	0	0
0	1	1	1

$$\begin{aligned} d &= A\overline{B} + B\overline{A} \\ &= A \oplus B \\ b &= \overline{A}B \end{aligned}$$

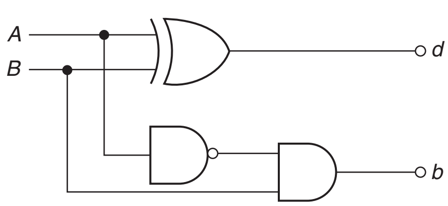

Figure 5 Logic diagram of a half subtractor

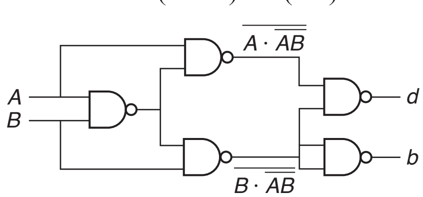
A half subtractor can also realized using universal logic either using only NAND gates or only NOR gates as explained below.

NAND logic

$$\begin{aligned} d &= A \oplus B \\ &= \overline{\overline{A\overline{AB}} \cdot \overline{B\overline{AB}}} \end{aligned}$$

$$b = \overline{A}B = B(\overline{A} + \overline{B}) = B(\overline{AB}) = \overline{\overline{B \cdot \overline{AB}}}$$



NOR logic

$$\begin{aligned} d &= A \oplus B \\ &= A\overline{B} + \overline{A}B \\ &= A\overline{B} + B\overline{B} + \overline{A}B + A\overline{A} \\ &= \overline{B}(A+B) + \overline{A}(A+B) \\ &= \overline{B + \overline{A+B}} + \overline{A + \overline{A+B}} \\ b &= \overline{A}B \\ &= \overline{A}(A+B) \\ &= \overline{\overline{\overline{A}(A+B)}} \\ &= \overline{A + (\overline{A+B})} \end{aligned}$$

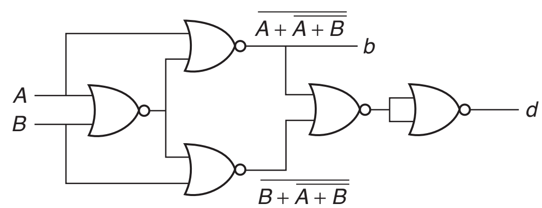


Figure 6 Logic diagram of half subtractor using NOR gate

Full Subtractor

Full subtractor is an arithmetic circuit similar to half subtractor but it performs subtraction with borrow, it involves subtraction of three bits—minuend, subtrahend and borrow-in, and two outputs—difference and borrow. The subtraction of 1 from 0 results in borrow to become logic 1. The presence of odd number of 1's at input lines make difference as logic 1.

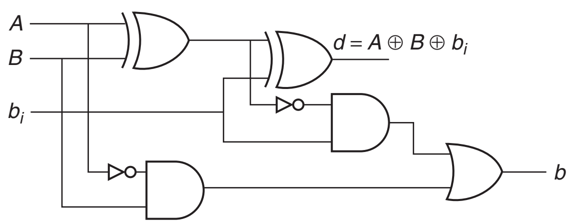
Table 4 *Truth Table*

A	B	b_i	d	b
0	0	0	0	0
0	0	1	1	1
0	1	0	1	1
0	1	1	0	1
1	0	0	1	0
1	0	1	0	0
1	1	0	0	0
1	1	1	1	1

$$\begin{aligned} d &= \overline{A}\,\overline{B}b_i + \overline{A}B\overline{b_i} + A\overline{B}\,\overline{b_i} + ABb_i \\ &= b_i(AB + \overline{A}\,\overline{B}) + \overline{b_i}(A\overline{B} + \overline{A}B) \\ &= b_i(\overline{A \oplus B}) + \overline{b_i}(A \oplus B) \\ &= A \oplus B \oplus b_i \end{aligned}$$

and

$$b = \bar{A}\bar{B}b_i + \bar{A}B\bar{b}_i + \bar{A}Bb_i$$
$$= \bar{A}B + \overline{(A\oplus B)}b_i$$



NAND logic

$$d = A \oplus B \oplus b_i$$
$$= \overline{\overline{(A\oplus B)\overline{(A\oplus B)b_i}}\;\overline{b_i\overline{(A\oplus B)b_i}}}$$
$$b = \bar{A}B + b_i\overline{(A\oplus B)}$$
$$= \overline{\overline{\bar{A}B + b_i\overline{(A\oplus B)}}}$$
$$= \overline{\overline{\bar{A}B}\;\overline{b_i\,\overline{(A\oplus B)}}}$$
$$= \overline{\overline{B(\bar{A}+\bar{B})}\;\overline{b_i\left[\overline{b_i + (A\oplus B)}\right.}}$$

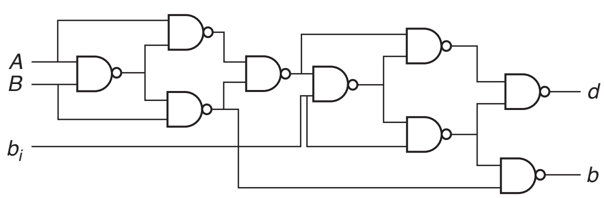


Figure 7 Logic diagram of a full subtractor using NAND logic

NOR logic

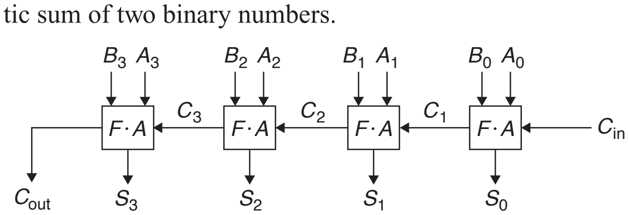
Output of full subtractor is also self dual in nature. So, same circuit, with all NAND gates, replaced by NOR gates gives the NOR gate full subtractor. 9 NOR gates required.

Example 1: How many NAND gates are required for implementation of full adder and full subtractor respectively?
(A) 11, 10 (B) 11, 11 (C) 9, 9 (D) 9, 10

Solution: (C)
From the circuit diagrams in the previous discussion, full adder requires 9 NAND gates and full subtractor requires 9 NAND gates.

Binary Adder

A binary adder is a digital circuit that produces the arithmetic sum of two binary numbers.



Four bit parallel adder the output carry from each full adder is connected to the input carry of next full adder.

The bits are added with full adders, starting from the LSB position to form the sum bit and carry bit.

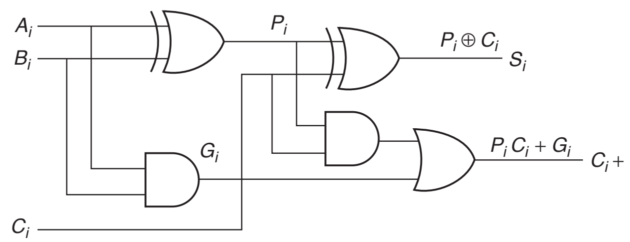
The longest propagation delay time in parallel adder is the time it takes the carry to propagate through the full adders.

For n-bit parallel adders consider t_{pds} is the propagation delay for sum of each full adder and t_{pdc} is the propagation delay of carry.

The total time required to add all n-bits at the nth full adder is

$$T_S = t_{pds} + (n-1)t_{pdc}$$

So propagation delay increases with number of bits. To overcome this difficulty we use look ahead carry adder, which is the fastest carry adder.



Consider the full adder circuit for ith stage, in parallel adder, with two binary variables A_i, B_i, input carry C_i are:

Carry propagate (P_i) and carry generate (G_i)

$$P_i = A_i \oplus B_i$$
$$G_i = A_i \cdot B_i$$

The output sum and carry can be expressed as

$$S_i = P_i \oplus C_i$$
$$C_{i+1} = P_i C_i + G_i$$

Now, the Boolean functions for each stage can be calculated as substitute $i = 0$

C_0 is input carry

$$C_1 = G_0 + P_0 C_0$$

Substitute $i = 1, 2 \ldots$

$$C_2 = G_1 + P_1C_1 = G_1 + P_1(G_0 + P_0C_0)$$
$$= G_1 + P_1 G_0 + P_1 P_0 C_0$$
$$C_3 = G_2 + P_2 C_2 = G_2 + P_2(G_1 + P_1 G_0 + P_1 P_0 C_0)$$
$$= G_2 + P_2 G_1 + P_2 P_1 G_0 + P_2 P_1 P_0 C_0$$

Since the Boolean function for each output carry is expressed in SOP form, each function can be implemented with AND–OR form or two level NAND gates.

From the above equations we can conclude that this circuit can perform addition in less time as C_3 does not have to wait for C_2 and C_1 to propagate. C_3, C_2, C_1 can have equal time delays.

The gain in speed of operation is achieved at the expense of additional complexity (hardware).

n-bit Comparator

The comparison of two numbers is an operation that determines whether one number is greater than, less than, or equal to the other number.

A magnitude comparator is a combinational circuit that compares two input numbers A and B, and specifies the output with three variables, $A > B$, $A = B$, $A < B$:

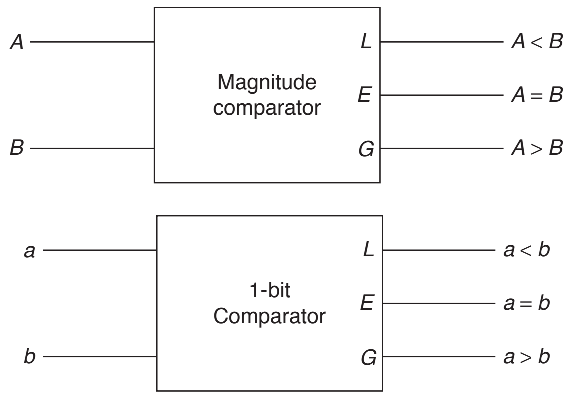


Figure 8 1-bit comparator will have only 1 bit input *a*, *b*.

a	b	$a < b$	$a = b$	$a > b$
0	0	0	1	0
0	1	1	0	0
1	0	0	0	1
1	1	0	1	0

By considering minterms for each output.

$$(a < b) = a'b$$
$$(a = b) = a'b' + ab = a \odot b$$
$$(a > b) = ab'$$

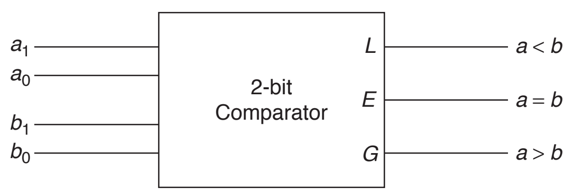

Figure 9 2-bit comparator will have 2-bit inputs a_1 a_0 and b_1 b_0.

a_1	a_0	b_1	b_0	L $a < b$	E $a = b$	G $a > b$
0	0	0	0	0	1	0
0	0	0	1	1	0	0
0	0	1	0	1	0	0
0	0	1	1	1	0	0
0	1	0	0	0	0	1
0	1	0	1	0	1	0
0	1	1	0	1	0	0
0	1	1	1	1	0	0
1	0	0	0	0	0	1
1	0	0	1	0	0	1
1	0	1	0	0	1	0
1	0	1	1	1	0	0
1	1	0	0	0	0	1
1	1	0	1	0	0	1
1	1	1	0	0	0	1
1	1	1	1	0	1	0

$$(a < b) = \Sigma(1, 2, 3, 6, 7, 11)$$
$$(a > b) = \Sigma(4, 8, 9, 12, 13, 14)$$
$$(a = b) = \Sigma(0, 5, 10, 15)$$

a_1a_0 \ b_1b_0	00	01	11	10
00		1	1	1
01			1	1
11				
00			1	

$$a < b = a_1'a_0'b_0 + a_0'b_1b_0 + a_1'b_1$$
$$L = \overline{a_1}\,b_1 + (a_1 \odot b_1)\,\overline{a_0}\,b_0$$

Similarly, $a > b = a_0b_1'b_0' + a_1a_0b_0' + a_1b_1'$

$$G = a_1\overline{b_1} + (a_1 \odot b_1)\,a_0\overline{b_0}$$

$a = b$ is possible when $a_1 = b_1$, $a_0 = b_0$

So $(a = b) = (a_1 \odot b_1)(a_0 \odot b_0)$

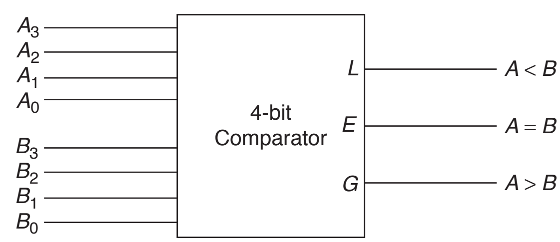

Figure 10 4-bit comparator will compare 2 input numbers each of 4-bits A_3 A_2 A_1 A_0 and B_3 B_2 B_1 B_0 ($A = B$) output will be 1 when each bit of input A is equal to corresponding bit in input B.

So we can write $(A = B) = (A_3 \odot B_3)\,(A_2 \odot B_2)\,(A_1 \odot B_1)\,(A_0 \odot B_0)$.

To determine whether A is greater or less than B, we inspect the relative magnitudes of pairs of significant bits, starting from MSB. If the two bits of a pair are equal, we compare the next lower significant pair of bits. The comparison continues until a pair of unequal bits is reached.

for $A < B$, $A = 0$, $B = 1$

for $A > B$, $A = 1$, $B = 0$

$$A < B = A_3'B_3 + (A_3 \odot B_3)\,A_2'B_2 + (A_3 \odot B_3)(A_2 \odot B_2) \times A_1'B_1 + (A_3 \odot B_3)(A_2 \odot B_2)\,(A_1 \odot B_1)\,A_0'B_0$$

$$A > B = A_3B_3' + (A_3 \odot B_3)\,A_2B_2' + (A_3 \odot B_3)\,(A_2 \odot B_2) \times A_1B_1' + (A_3 \odot B_3)(A_2 \odot B_2)\,(A_1 \odot B_1)\,A_0B_0'$$

4-bit comparator will have total 8 inputs and $2^8 = 256$ input combinations in truth table.

For 16 combinations $(A = B) = 1$, and for 120 combinations $A < B = 1$.

For remaining 120 combination $A > B = 1$

Parity Bit Generator and Parity Bit Checker

When digital information is transmitted, it may not be received correctly by the receiver. To detect one bit error at receiver we can use parity checker.

For detection of error an extra bit, known as parity bit, is attached to each code word to make the number of 1's in the code even (in case of even parity) or odd (in case of odd parity).

For n-bit data, we use n-bit parity generator at the transmitter end. With 1 parity bit and n-bit data, total $n + 1$ bit will be transmitted. At the receiving end $n + 1$ parity checker circuit will be used to check correctness of the data.

For even parity transmission, parity bit will be made 1 or 0 based on the data, so that total $n + 1$ bits will have even number of 1's. For example, if we want to transmit data 1011 by even parity transmission, then we will use parity bit as 1, so data will have even number of 1's, i.e., data transmitted will be $\underline{1}1011$. At the receiving end this data will be received and checked for even number of ones.

To transmit data $B_3B_2B_1B_0$ using even parity, we will transmit sequence $P\,B_3B_2B_1B_0$, where $P = B_3 \oplus B_2 \oplus B_1 \oplus B_0$. (Equation for parity generator)

At the receiving end we will check data received $PB_3B_2B_1B_0$ for error, $E = P \oplus B_3 \oplus B_2 \oplus B_1 \oplus B_0$ (equation for parity checker). If $E = 0$ (no error), or if $E = 1$ (1 bit error).

We use EX-OR gates for even parity generator/checker as EX-OR of bits gives output 1 if there are odd number of 1's else EX-OR output is 0.

Odd parity generator/checker is complement of even parity generator/checker. Odd parity circuits check for presence of odd number of 1's in data.

Code Converters

There are many situations where it is desired to convert from one code to another within a system. For example, the information from output of an analog to digital converter is often in gray code, before it can be processed in arithmetic unit, conversion to binary is required.

Let us consider simple example of 3-bit binary to gray code converter. This will have input lines supplied by binary codes and output lines must generate corresponding bit combination in gray code. The combination circuit code converter performs this transformation by means of logic gates.

The output logic expression derived for code converter can be simplified by using the usual techniques including 'don't-care' if any present. For example, BCD code uses only codes from 0000 to 1001 and remaining combinations are treated as don't-care combinations. Similarly, EXS-3 uses only combinations from 0011 to 1100 and remaining combinations are treated as don't-care.

The relationship between the two codes is shown in the following truth table:

Decimal	B_2	B_1	B_0	G_2	G_1	G_0
0	0	0	0	0	0	0
1	0	0	1	0	0	1
2	0	1	0	0	1	1
3	0	1	1	0	1	0
4	1	0	0	1	1	0
5	1	0	1	1	1	1
6	1	1	0	1	0	1
7	1	1	1	1	0	0

For conversion we have to find out minimized functions of

$$G_2(B_2, B_1, B_0) = \sum m(4, 5, 6, 7)$$
$$G_1(B_2, B_1, B_0) = \sum m(2, 3, 4, 5)$$
$$G_0(B_2, B_1, B_0) = \sum m(1, 2, 5, 6)$$

B_0 \ B_1B_2	00	01	11	10
0		1		1
1		1		1

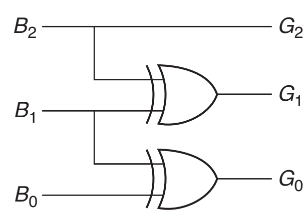
$$G_0(B_2, B_1, B_0) = B'_1B_0 + B_1B'_0 = B_1 \oplus B_0$$

B_0 \ B_1B_2	00	01	11	10
0			1	1
1	1	1		

$$G_1(B_2, B_1, B_0) = B'_1B_2 + B_1B'_2 = B_2 \oplus B_1$$

B_0 \ B_1B_2	00	01	11	10
0				
1	1	1	1	1

$$G_2(B_2, B_1, B_0) = B_2$$



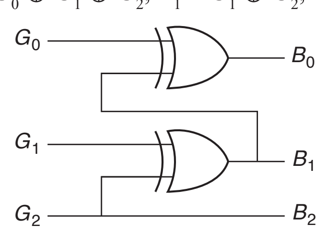
In similar fashion we can derive n-bit binary to gray code conversion as

$$G_n = B_n$$
$$G_{n-1} = B_{n-1} \oplus B_n$$
$$G_{i-1} = B_{i-1} \oplus B_i$$

Thus conversion can be implemented by $n - 1$ X-OR gates for n-bits.

For reverse conversion of gray to binary, by following similar standard principle of conversion, we will get

$$B_0 = G_0 \oplus G_1 \oplus G_2,\ B_1 = G_1 \oplus G_2,\ B_2 = G_2$$



In general for n-bit gray to binary code conversion

$$B_i = G_n \oplus G_{n-1} \oplus G_{n-2} \ldots \oplus G_{i-1} \oplus G_i$$

$B_n = G_n$ (MSB is same in gray and binary). It also requires $n-1$ X-OR gates for n-bits.

Example 2: Design 84-2-1 to XS-3 code converter.

Solution: Both 84-2-1 and *XS*-3 are *BCD* codes, each needs 4-bits to represent. The following table gives the relation between these codes. 84-2-1 is a weighted code, i.e., each position will have weight as specified. *XS*-3 is non-weighted code; the binary code is 3 more than the digit in decimal.

Decimal	84-2-1 $B_3B_2B_1B_0$	*XS*-3 $X_3X_2X_1X_0$
0	0000	0011
1	0111	0100
2	0110	0101
3	0101	0110
4	0100	0111
5	1011	1000
6	1010	1001
7	1001	1010
8	1000	1011
9	1111	1100

We will consider minterm don't-care combinations as 1, 2, 3, 12, 13, 14. For these combinations 84-2-1 code will not exist and the remaining minterms can be found from truth table.

$$X_0(B_3, B_2, B_1, B_0) = \sum m(0, 4, 6, 8, 10) + \sum \Phi(1, 2, 3, 12, 13, 14) = \overline{B_0}$$

$$X_1(B_3, B_2, B_1, B_0) = \sum m(0, 4, 5, 8, 9, 15) + \sum \Phi(1, 2, 3, 12, 13, 14) = \overline{B_1}$$

$$X_2(B_3, B_2, B_1, B_0) = \sum m(4, 5, 6, 7, 15) + \sum \Phi(1, 2, 3, 12, 13, 14) = B_2$$

$$X_3(B_3, B_2, B_1, B_0) = \sum m(8, 9, 10, 11, 15) + \sum \Phi(1, 2, 3, 12, 13, 14) = B_3$$

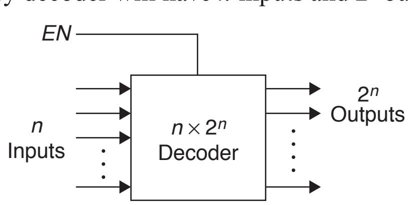
Decoder

A binary code of n-bits is capable of representing up to 2^n elements of distinct elements of coded information.

The three inputs are decoded into eight outputs, each representing one of the minterms of the three input variables.

A decoder is a combinational circuit that converts binary information from n input lines to a maximum 2^n unique output lines.

A binary decoder will have n inputs and 2^n outputs.



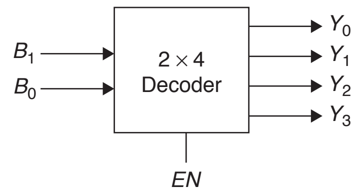


Figure 11 2 × 4 decoder

Table 5 *Truth Table*

EN	B_1	B_0	Y_3	Y_2	Y_1	Y_0
0	X	X	0	0	0	0
1	0	0	0	0	0	1
1	0	1	0	0	1	0
1	1	0	0	1	0	0
1	1	1	1	0	0	0

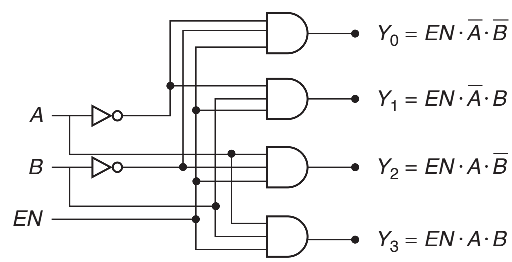

Figure 12 2 × 4 decoder

Decoder outputs are implemented by AND gates, but realization of AND gates at circuit level is done by the NAND gates (universal gates). So, the decoders available in IC form are implemented with NAND gates, i.e., the outputs are in complemented form and outputs are maxterms of the inputs rather than minterms of inputs as in AND gate decoders.

Furthermore, decoders include one or more enable inputs to control the circuit operation. Enable can be either active low/high input.

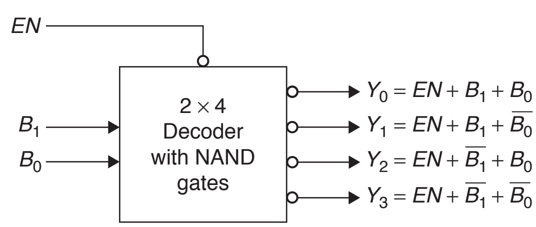

Figure 13 Active low 2 × 4 decoder

Table 6 *Truth Table*

EN	B_1	B_0	Y_3	Y_2	Y_1	Y_0
1	X	X	1	1	1	1
0	0	0	1	1	1	0
0	0	1	1	1	0	1
0	1	0	1	0	1	1
0	1	1	0	1	1	1

The block diagram shown here is 2 × 4 decoder with active low output and active low enable input.

The logic diagram is similar to the previous 2 × 4 decoder, except, all AND gates are replaced by NAND gates and *EN* will have inverter, $\overline{EN}$ is connected to all NAND inputs, as $\overline{EN}$ is active low input for this circuit.

The decoder is enabled when EN is equal to 0.

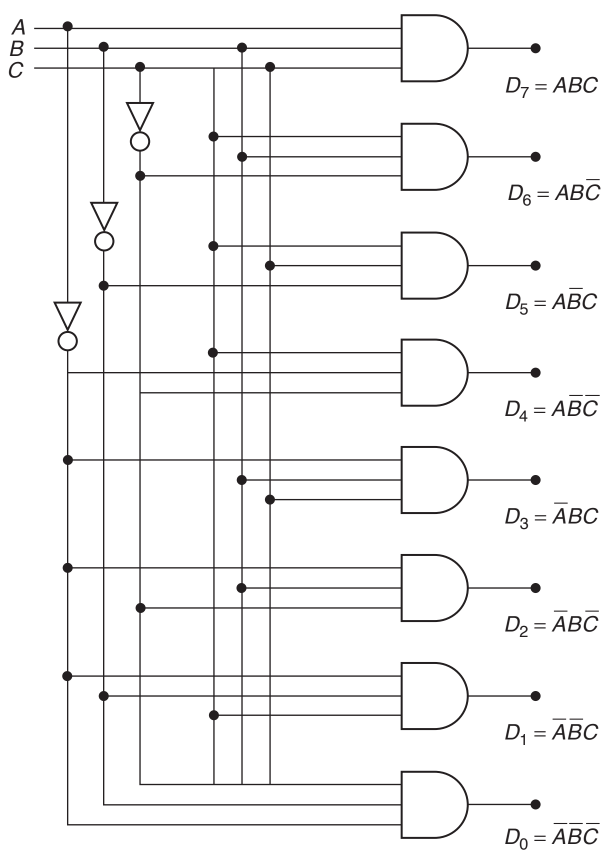
As shown in the truth table, only one output can be equal to 0 at any given time, all other outputs are equal to 1. The output whose value is equal to 0 represents the minterm selected by inputs, enable.

Consider a 3–8 line decoder

Table 7 *Truth Table*

Inputs			Outputs							
A	*B*	*C*	D_0	D_1	D_2	D_3	D_4	D_5	D_6	D_7
0	0	0	1	0	0	0	0	0	0	0
0	0	1	0	1	0	0	0	0	0	0
0	1	0	0	0	1	0	0	0	0	0
0	1	1	0	0	0	1	0	0	0	0
1	0	0	0	0	0	0	1	0	0	0
1	0	1	0	0	0	0	0	1	0	0
1	1	0	0	0	0	0	0	0	1	0
1	1	1	0	0	0	0	0	0	0	1

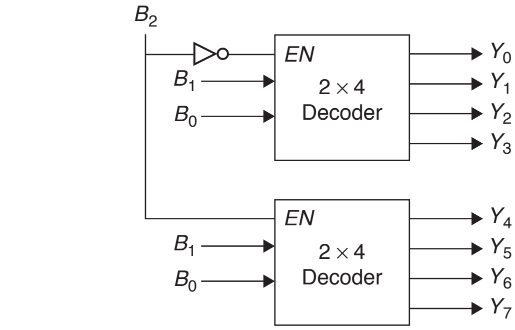
A 3–8 decoder has 3 input lines and 8 output lines, based on the combination of inputs applied for the 3 inputs, one of the 8 output lines will be made logic 1 as shown in the truth table. So, each output will have only one minterm.



Designing High Order Decoders from Lower Order Decoders

Decoder with enable input can be connected together to form larger decoder circuit.

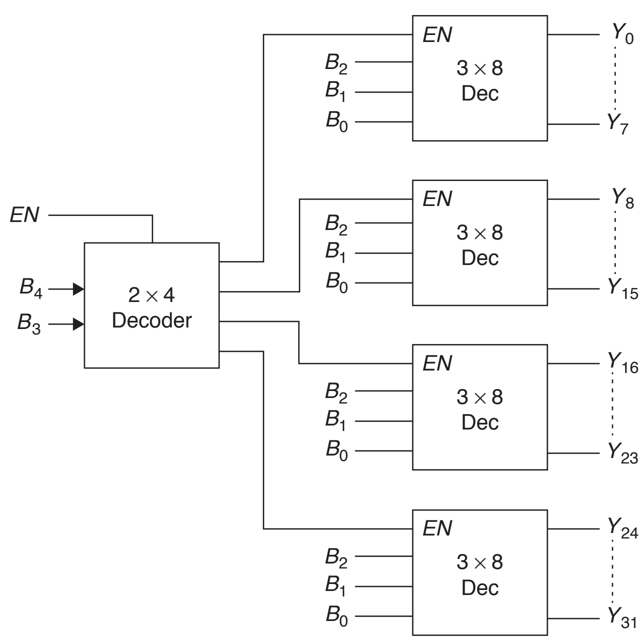
The following configuration shows 3 × 8 decoder with 2 × 4 decoders.



When $B_2 = 0$, top decoder is enabled and other is disabled, for 000–011 inputs, outputs are Y_0–Y_3, respectively, and other outputs are 0.

For $B_2 = 1$, the enable conditions are reversed.

The bottom decoder outputs generates minterms 100–111, while the outputs of top decoder are all 0's. 5 × 32 decoder with 3 × 8 decoders, 2 × 4 decoders



5 × 32 decoder will have 5 inputs $B_4 B_3 B_2 B_1 B_0$. 3 × 8 decoder will have 8 outputs, so 5 × 32 requires four 3 × 8 decoders, and we need one of the 2 × 4 decoders to select one 3 × 8 decoders and the connections are as shown in the circuit above.

Combinational Logic Implementation

An $n \times 2^n$ decoder provides 2^n minterms of *n* input variables. Since any Boolean function can be expressed in sum-of-minterms form, a decoder that generates the minterms of

the function, together with an external OR gate that forms their logical sum, provides a hardware implementation of the function.

Similarly, any function with n inputs and m outputs can be implemented with $n \times 2^n$ decoders and m OR gates.

Example 3: Implement full adder circuit by using 2 × 4 decoder.

Sum = Σ (1, 2, 4, 7), Carry = Σ (3, 5, 6, 7)

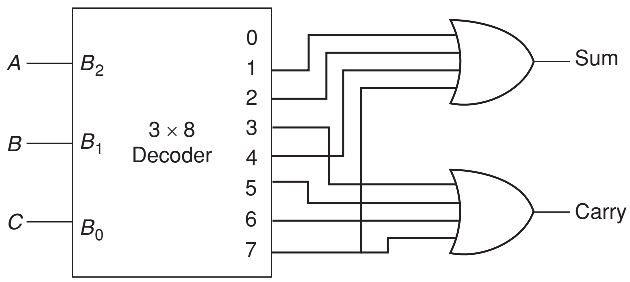


Figure 14 Implementation of full adder circuit with decoder

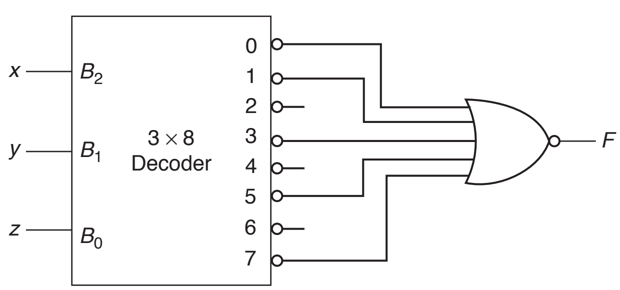
The 3 × 8 decoder generates the 8 minterms for A, B, and C. The OR gate for output sum forms the logical sum of minterms 1, 2, 4 and 7. The OR gate for output carry forms the logical sum of minterms 3, 5, 6 and 7.

Example 4: The minimized SOP form of output $F(x, y, z)$ is

(A) $x' y + z'$ (B) $x' y' + z'$
(C) $x' y' + z'$ (D) $x' + y' z$



Solution: (C)

The outputs of decoder are in active low state. So, we can express outputs as $\overline{Y_7}, \overline{Y_6} \cdots \overline{Y_0}$

Outputs 0, 1, 3, 5, 7 are connected to NAND gate to form function $F(x, y, z)$

So $$F = \overline{\overline{Y_0} \cdot \overline{Y_1} \cdot \overline{Y_3} \cdot \overline{Y_5} \cdot \overline{Y_7}}$$
$$= Y_0 + Y_1 + Y_3 + Y_5 + Y_7$$
$$= \Sigma(0, 1, 3, 5, 7)$$

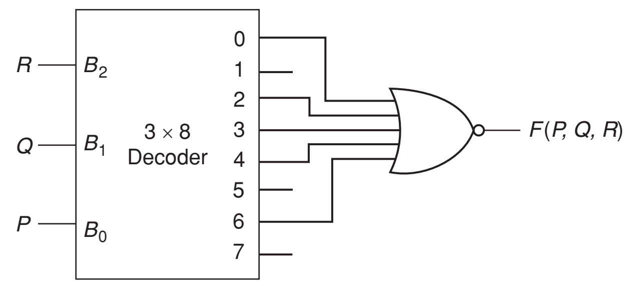
By using K-maps

x \ yz	00	01	11	10
0	1	1	1	
1		1	1	

$F = z + x'y'$

Example 5. The minimal *POS* form of output function $f(P, Q, R)$ is

(A) $P\overline{Q} + PR$ (B) $P + \overline{Q}R$
(C) $P(\overline{Q} + R)$ (D) $Q(\overline{P} + R)$



Solution: (C)

The outputs of decoder are in normal form. 0, 2, 3, 4, 6 outputs are connected to NOR gate to form $F(P, Q, R)$

So $$F = \overline{Y_0 + Y_2 + Y_3 + Y_4 + Y_6}$$
$$= \overline{Y_0} \cdot \overline{Y_2} \cdot \overline{Y_3} \cdot \overline{Y_4} \cdot \overline{Y_6}$$

$Y_0, Y_1, \ldots, Y_7$ indicate minterms, whereas $\overline{Y_0}, \overline{Y_1}, \cdots, \overline{Y_7}$ are maxterms.

So $F = \pi$ (0, 2, 3, 4, 6)

Here, from the decoder circuit MSB is R, LSB is P.

By using K-map

R \ QP	00	01	11	10
0	0		0	0
1	0			0

$$F(P, Q, R) = P(R + \overline{Q})$$

ENCODERS

It is a digital circuit that performs the inverse operation of a decoder.

An encoder has 2^n (or fewer) input lines and n output lines.

It is also known as an octal to binary converter.

Consider an 8–3 line encoder:

Table 8 *Truth Table*

Inputs								Outputs		
D_0	D_1	D_2	D_3	D_4	D_5	D_6	D_7	A	B	C
1	0	0	0	0	0	0	0	0	0	0
0	1	0	0	0	0	0	0	0	0	1
0	0	1	0	0	0	0	0	0	1	0
0	0	0	1	0	0	1	0	0	1	1
0	0	0	0	1	0	0	1	1	0	0
0	0	0	0	0	1	0	0	1	0	1
0	0	0	0	0	0	1	0	1	1	0
0	0	0	0	0	0	0	1	1	1	1

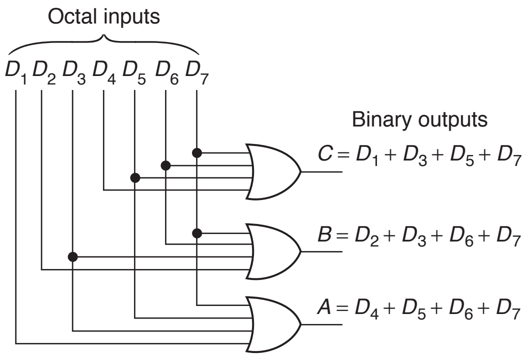


Figure 15 Logic diagram

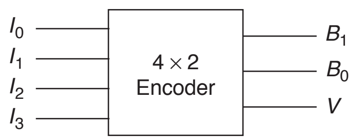
Priority Encoder

A priority encoder is an encoder circuit that includes the priority function.

When two or more inputs are present, the input with higher priority will be considered.

Consider the 4 × 2 priority encoder.



I_3	I_2	I_1	I_0	B_1	B_0	V
1	X	X	X	1	1	1
0	1	X	X	1	0	1
0	0	1	X	0	1	1
0	0	0	1	0	0	1
0	0	0	0	X	X	0

I_3–I_0 are inputs and B_1 B_0 are binary output bits, valid (V) output is set to 1, when at least one input is present at input ($I_3 - I_0$).

When there is no input present, ($I_3 - I_0 = 0000$) then $V = 0$, for this combination the output B_1B_0 will not be considered.

The higher the subscript number, the higher the priority of the input. Input I_3 has the highest priority, I_2 has the next priority level. Input I_0 has lowest priority level. The Boolean expressions for output B_1 B_0 are

$$B_1 = I_3 + \bar{I}_3 I_2$$
$$= I_3 + I_2$$
$$B_0 = I_3 + \bar{I}_3 \bar{I}_2 I_1$$
$$= I_3 + \bar{I}_2 I_1$$
$$V = I_3 + I_2 + I_1 + I_0$$

Multiplexer

A multiplexer (MUX) is a device that allows digital information from several sources to be converted on to a single line for transmission over that line to a common destination. The MUX has several data input lines and a single output line. It also has data select inputs that permits digital data on any one of the inputs to be switched to the output line.

Depending upon the binary code applied at the selection inputs, one (out of 2^n) input will be gated to single output. It is one of the most widely used standard logic circuits in digital design. The applications of multiplexer include data selection, data routing, operation sequencing, parallel to serial conversion, and logic function generation.

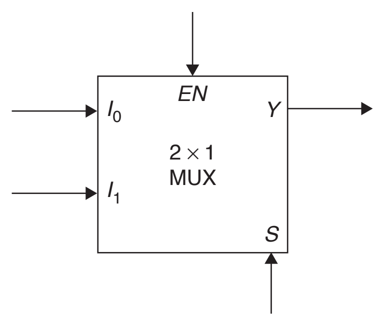
2^n inputs will be controlled by n selection lines and multiplexer will have 1 output, we denote it as $2^n \times 1$ multiplexer (data selector).

In other words, a multiplexer selects 1 out of n input data sources and transmits the selected data to a single output channel, this is called as multiplexing.

Basic 2 × 1 Multiplexer

The figure shows 2 × 1 multiplexer block diagram; it will have 2 inputs—I_0 and I_1, one selection line S, and one output Y. The function table is as shown here.

EN	*S*	*Y*
0	x	0
1	0	I_0
1	1	I_1

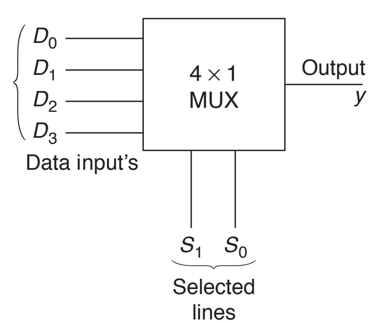


The output equation of 2 × 1 multiplexer is $Y = EN(I_0\bar{S} + I_1 S)$.

When enable is 1, the multiplexer will work in normal mode, else the multiplexer will be disabled.

Sometimes enable input will be active low enable $\overline{EN}$, then $Y = \overline{EN}(I_0\bar{S} + I_1 S)$.

The 4 × 1 Multiplexer



If a binary zero $S_1 = 0$ and $S_0 = 0$ as applied to the data select line the data input D_0 appear on the data output line and so on.

S_1	S_0	y
0	0	D_0
0	1	D_1
1	0	D_2
1	1	D_3

$$y = \overline{S_1}\,\overline{S_0}D_0 + \overline{S_1}S_0D_1 + S_1\overline{S_0}D_2 + S_1S_0D_3$$

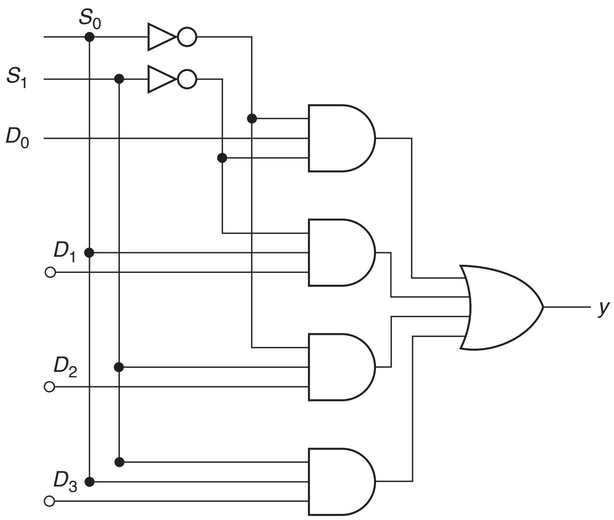


Figure 16 Logic diagram

For 8 × 1 multiplexer with 8 inputs from I_0–I_7 based on selection inputs $S_2 S_1 S_0$, the equation for output

$$Y = I_0\overline{S_2S_1S_0} + I_1\overline{S_2S_1}S_0 + I_2\overline{S_2}S_1\overline{S_0} + I_3\overline{S_2}S_1S_0$$
$$+ I_4S_2\overline{S_1S_0} + I_5S_2\overline{S_1}S_0 + I_6S_2S_1\overline{S_0} + I_7\overline{S_2S_1S_0}$$

From multiplexer equation, we can observe, each input is associated with its minterm (in terms of selection inputs).

Basic Gates by Using MUX

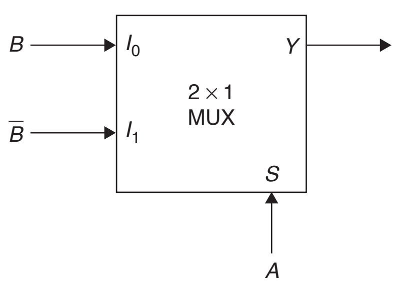

Figure 17 X-OR gate by using 2 × 1 MUX

$Y = \overline{A}B + A\overline{B} =$ X-OR gate, we can interchange inputs A and B also,

By interchanging inputs I_0 and I_1, $Y = \overline{A}\,\overline{B} + AB$, X-NOR gate.

Similarly, we can build all basic gates by using 2 × 1 multiplexer.

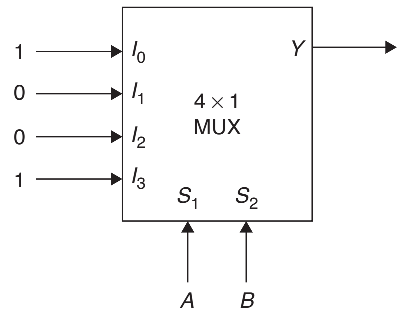
Example 6: If $I_0 = 1$, $I_1 = 0$, $S = A$, then Y is

Solution: $Y = (I_0\overline{S} + I_1S) = \overline{A}$. It Implements NOT gate.

Example 7: What should be the connections to implement NAND gate by using 2 × 1 MUX?

Solution: $Y = \overline{AB} = \overline{A} + \overline{B} = \overline{A} + A\overline{B} = 1\cdot\overline{A} + \overline{B}\cdot A$

By considering $I_0 = 1$, $I_1 = \overline{B}$, $S = A$, we can implement NAND gate, or by interchanging A and B also we can get the same answer.



For the above 4 × 1 multiplexer $Y = \overline{AB} + AB =$ X-NOR gate, similarly to implement 2 input gates by using 4 × 1 multiplexer, the inputs I_0, I_1, I_2, I_3 should be same as the terms in the truth table of that gate.

Logic Function Implementation by Using Multiplexer

Let us consider a full subtractor circuit (borrow) to be implemented by using multiplexer.

Full subtractor borrow (B) is a function of 3 inputs X, Y, Z. The truth table is

X	Y	Z	B	4 × 1 MUX	2 × 1 MUX
0	0	0	0	$B = Z$	$B = Y + Z$
0	0	1	1		
0	1	0	1	$B = 1$	
0	1	1	1		
1	0	0	0	$B = 0$	$B = YZ$
1	0	1	0		
1	1	0	0	$B = Z$	
1	1	1	1		

To implement borrow by using 8 × 1 multiplexer, connect the three variables X, Y, Z directly to selection lines of the multiplexer, and connect the corresponding values of B to inputs, i.e., for $I_0 = 0$, $I_1 = 1$, $I_2 = 1$, etc. as per above truth table.

To implement borrow by using 4 × 1 multiplexer, connect any two variables to selection lines (in this case X, Y) and write output (B) in terms of other variable, for $XY = 00$, output B is same as Z, so connect $I_0 = Z$, similarly 1, 0, Z for remaining inputs.

To implement the function by using 2 × 1 multiplexer, connect 1 variable as selection line (in this case consider X) and write output (B) in terms of other variables, for $X = 0$,

output B is varies as $B = Y + Z$, so connect $I_0 = Y + Z$. For $X = 1$, output B varies as $B = YZ$, connect $I_1 = YZ$.

N–variable function can be implemented by using $2^{N-1} \times 1$ multiplexer without any extra hardware.

Implementation of Higher Order Multiplexer by Using Lower Order Multiplexers

By using lower order multiplexers, we can implement higher order multiplexers, for example by using 4×1 multiplexer, we can implement 8×1 MUX or 16×1 MUX or other higher order multiplexers.

Let us consider implementation of 16×1 MUX by using 4×1 MUX. 16×1 MUX will have inputs I_0–I_{15} and selection lines S_0–S_3, whereas 4×1 MUX will have only 4 input lines, and 2 selection lines, so we require four 4×1 MUX to consider all inputs I_0–I_{15}, and again to select one of the four outputs of these four multiplexers one more 4×1 multiplexer is needed (for which we will connect higher order selection lines S_2 and S_3). So, total of 5, 4×1 multiplexers are required to implement 16×1 MUX.

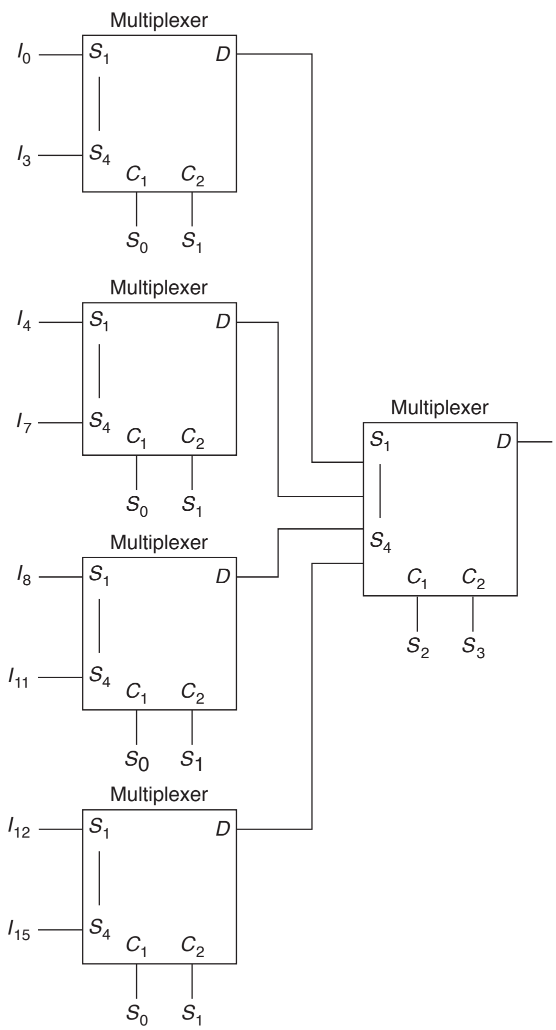


Figure 18 Realization of 16 x 1 multiplexer by using 4 x 1 multiplexers

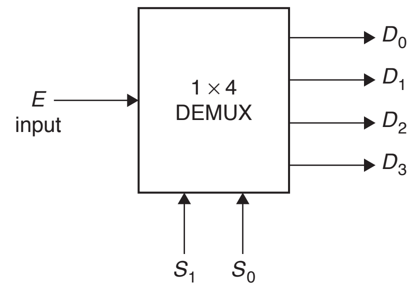
In a similar fashion, to design 4×1 MUX, we require 3, 2×1 multiplexers, and to design 8×1 multiplexer, we require 7, 2×1 multiplexers.

Demultiplexer

The demultiplexer [DeMUX] basically serves opposite of the multiplexing function. It takes data from one line and distributes them to a given number of output lines.

The other name for demultiplexer is data distributor, as it receives information on a single line and distributes it to a possible 2^n output lines, where n is the number of selection lines, and value of n selects the line.



S_1	S_0	D_3	D_2	D_1	D_0
0	0	0	0	0	E
0	1	0	0	E	0
1	0	0	E	0	0
1	1	E	0	0	0

When $S_1S_0 = 10$; D_2 will be same as input E, and other outputs will be maintained at zero (0).

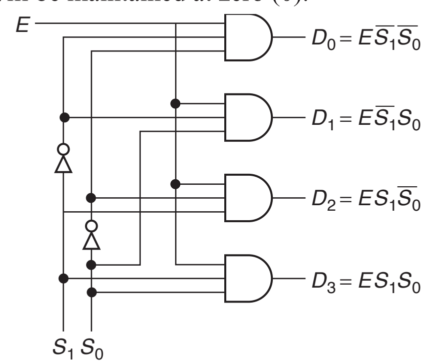


Figure 17 Logic diagram

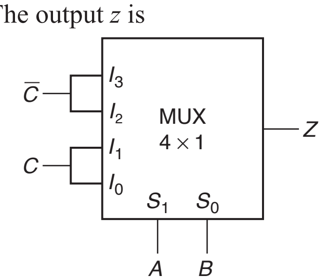
Solved Examples

Example 1: The multiplexer shown in the figure is a 4 : 1 multiplexer. The output z is

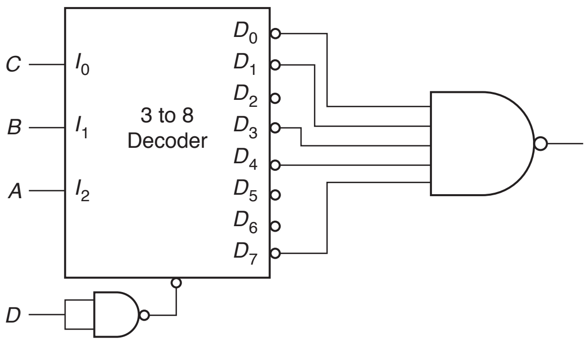


Solution:

A_1	B_0	Z
0	0	C
0	1	C
1	0	$\bar{C}$
1	1	$\bar{C}$

$$\therefore \quad Z = \bar{A}\,\bar{B}C + \bar{A}BC + AB\bar{C} + A\bar{B}\,\bar{C}$$
$$= \bar{B}(\bar{A}C + A\bar{C}) + B(\bar{A}C + A\bar{C})$$
$$= (\bar{A}C + A\bar{C})(B + \bar{B})(x + \bar{x} = 1)$$
$$\therefore \quad = \bar{A}C + A\bar{C} = A \oplus C$$

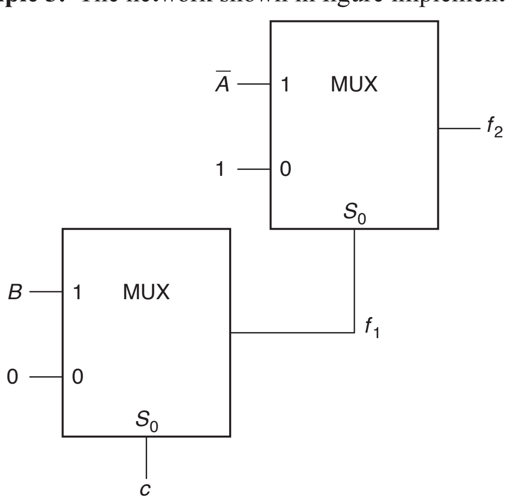
Example 2: The logic circuit shown in figure implements



Solution: $z = D(\bar{A}\,\bar{B}\,\bar{C} + \bar{A}\,\bar{B}C + \bar{A}BC + A\bar{B}\,\bar{C} + ABC)$

$$= D(\bar{A}\,\bar{B}(C + \bar{C}) + BC(\bar{A} + A) + A\bar{B}\,\bar{C})$$
$$\times D(\bar{B}\,\bar{A} + \bar{B}\,\bar{C} + BC)$$
$$= D(B \,\Theta\, C + \bar{A}\bar{B})$$

Example 3. The network shown in figure implements

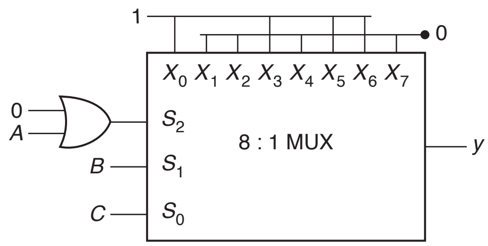


Solution: $f_1 = \bar{C}0 + CB = CB, f_1 = CB$

$$F_2 = \bar{f_1} + f_1\bar{A} = \bar{A} \cdot CB + \overline{CB}$$
$$= \bar{A} + \overline{CB}$$
$$= \bar{A} + \bar{C} + \bar{B} = \overline{ABC}$$

$\therefore$ NAND Gate

Example 4: In the TTL circuit in figure, S_2–S_0 are select lines and x_7–x_0 are input lines. S_0 and X_0 are LSBs. The output Y is

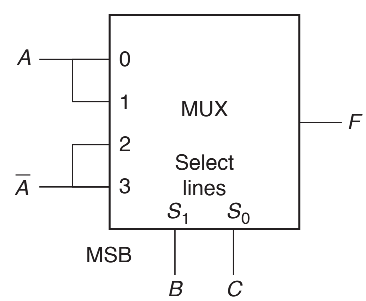


Solution: $S_2 = A, S_1 = B, S_0 = C$

$S_2(A)$	$S_1(B)$	$S_0(C)$	Y
0	0	0	1
0	0	1	0
0	1	0	0
0	1	1	1
1	0	0	0
1	0	1	1
1	1	0	1
1	1	1	0

$$Y = \bar{A}\,\bar{B}\,\bar{C} + AB\bar{C} + A\bar{B}C + \bar{A}BC$$
$$= \bar{C}(\bar{A}\,\bar{B} + AB) + C(A\bar{B} + \bar{A}B)$$
$$Y = \bar{C}(\bar{A} \oplus B) + C(A \oplus B) = A \oplus B \odot C$$

Example 5: The logic realized by the adjoining circuit is

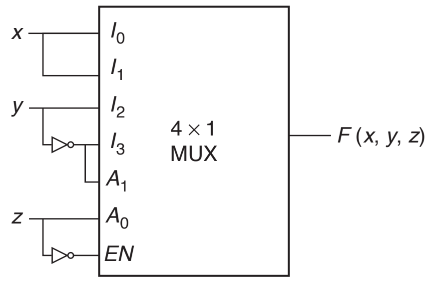


Solution: $F = \bar{B}\,\bar{C}A + \bar{B}CA + B\bar{C}\,\bar{A} + BC\bar{A}$

$$\times \bar{C}(\bar{B}A + B\bar{A}) + C(\bar{B}A + B\bar{A})$$
$$\times A\bar{B} + \bar{A}B(C + \bar{C}) = A \oplus B$$

Example 6: Consider the following multiplexer, where I_0, I_1, I_2, I_3 are four date input lines selected by two address line combinations A_1A_0 = 00, 01, 10, 11, respectively and f

is the output of the multiplexer. EN is the enable input, the function $f(x, y, z)$ implemented by the below circuit is



Solution: $A_1 = \bar{y} \cdot A_0 = z, EN = \bar{z}$

A_1	A_0	S	I
0	0	$(y\bar{z})$	x
0	1	$(y\,z)$	x
1	0	$(\bar{y}\,\bar{z})$	y
1	1	$(\bar{y}z)$	$\bar{y}$

$$f(x, y, z) = \text{S.I} = (xy + 0 + \bar{y}z) \cdot EN$$
$$= xy \cdot \bar{z}$$

Exercises

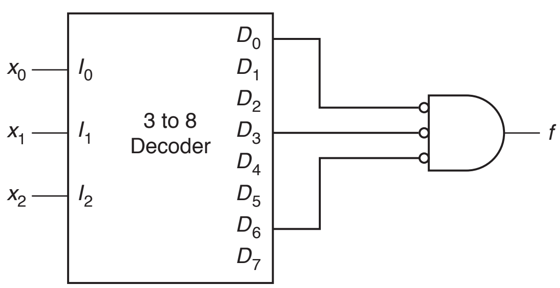
Practice Problems I

Directions for questions 1 to 21: Select the correct alternative from the given choices.

1. The binary number 110011 is to be converted to gray code. The number of gates and type required are
(A) 6, AND (B) 6, X-NOR
(C) 6, X-OR (D) 5, X-OR

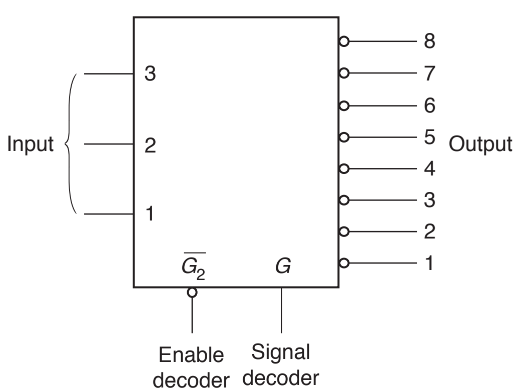
2. The number of 4-to 16-line decoder required to make an 8- to 256-line decoder is
(A) 16 (B) 17
(C) 32 (D) 64

3. $f(x_2, x_1, x_0) = ?$



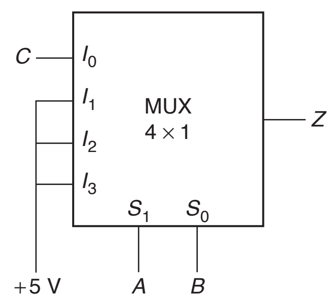
(A) $\pi(1, 2, 4, 5, 7)$ (B) $\Sigma(1, 2, 4, 5, 7)$
(C) $\Sigma(0, 3, 6)$ (D) $\pi(0, 2, 3, 6)$

4. A 3-to-8 decoder is shown below



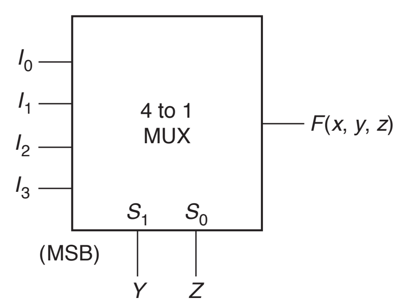
All the output lines of the chip will be high except pin 8, when all the inputs 1, 2, and 3
(A) are high; and G, G_2 are low
(B) are high; and G is low G_2 is high
(C) are high; and G, G_2 are high
(D) are high; and G is high G_2 is low

5. The MUX shown in figure is 4 × 1 multiplexer the output z is



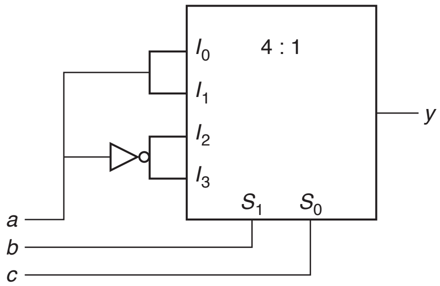
(A) $A\ B\ C$
(B) $A \oplus B \oplus C$
(C) $A \ominus B \ominus C$
(D) $A + B + C$

6. If a 4 to 1 MUX (shown below) realizes a three variable function $f(x, y, z) = xy + x\bar{z}$ then which of the following is correct?



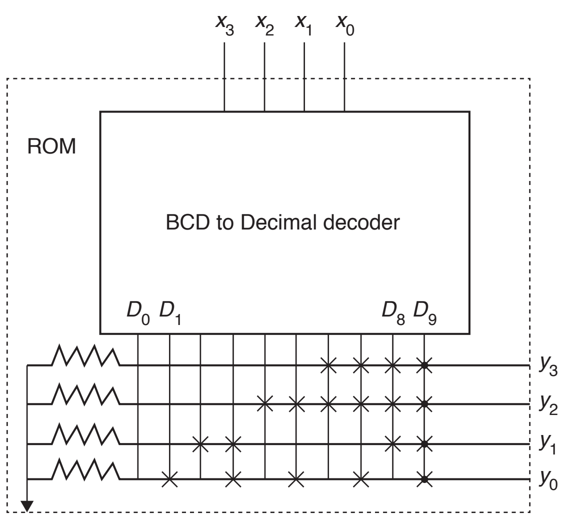
(A) $I_0 = X, I_1 = 0, I_2 = X, I_3 = X$
(B) $I_0 = 0, I_1 = 1, I_2 = Y_1, I_3 = X$
(C) $I_0 = X, I_1 = 1, I_2 = 0, I_3 = X$
(D) $I_0 = X, I_1 = 0, I_2 = X, I_3 = Z$

7. The circuit shown in the figure is same as



(A) two input NAND gate with a and c inputs
(B) two input NOR gate with a and c inputs
(C) two input X-OR gates with a and b inputs
(D) two input X-NOR gate with b and c inputs

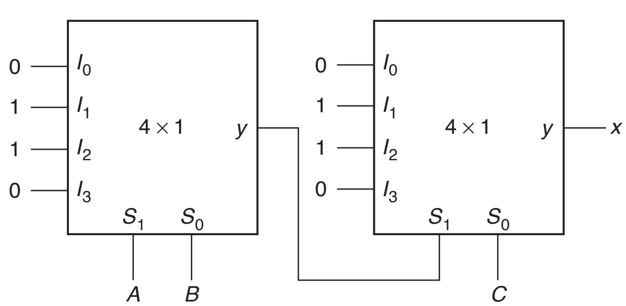
8. If the input x_3, x_2, x_1, x_0 to the ROM in the figure are 8421 BCD numbers, then the outputs y_3, y_2, y_1, y_0 are



(A) gray code numbers (B) 2421 *BCD*
(C) Excess – 3 code numbers (D) 84–2–1

9. A 4-bit parallel full adder without input carry requires
(A) 8 HA, 4 OR gates (B) 8 HA, 3 OR gates
(C) 7 HA, 4 OR gates (D) 7 HA, 3 OR gates

10. In the circuit find X.

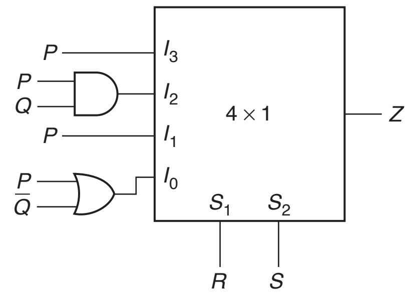


(A) $A\bar{B}\bar{C} + \bar{A}B\bar{C} + \bar{A}\bar{B}C + ABC$

(B) $\bar{A}BC + A\bar{B}C + AB\bar{C} + \bar{A}\bar{B}\bar{C}$

(C) $AB + BC + AC$
(D) $\bar{A}\bar{B} + \bar{B}\bar{C} + \bar{A}\bar{C}$

11. Find the function implemented.



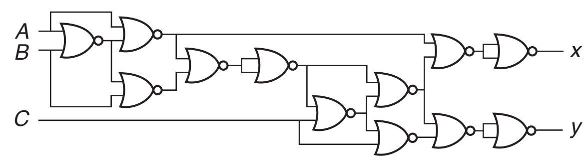
(A) $PQ + PS + \bar{Q}\bar{R}\bar{S}$

(B) $P\bar{Q} + PQ\bar{R} + \bar{P}\bar{Q}\bar{S}$

(C) $P\bar{Q}\bar{R} + \bar{P}QR + PQRS + \bar{Q}\bar{R}\bar{S}$

(D) $PQ\bar{R} + PQR\bar{S} + P\bar{Q}\bar{R}S + \bar{Q}\bar{R}\bar{S}$

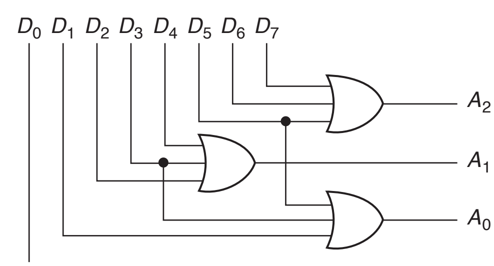
12. Which function is represented by the given circuit?



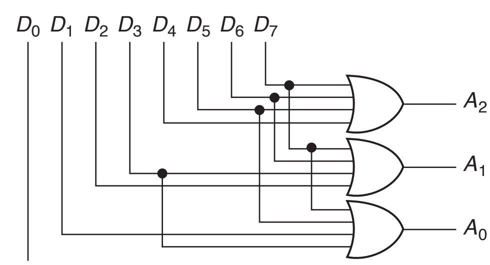
(A) Full adder (B) Full subtractor
(C) Comparator (D) Parity generator

13. Which of the following represents octal to binary encoder?

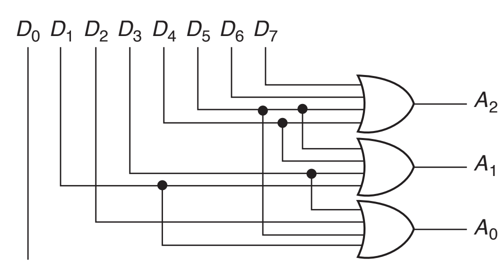
(A)



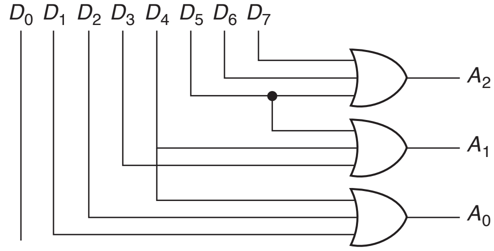
(B)



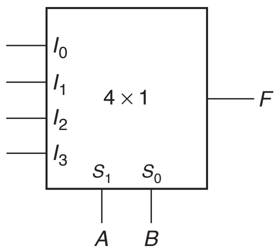
(C)



(D)

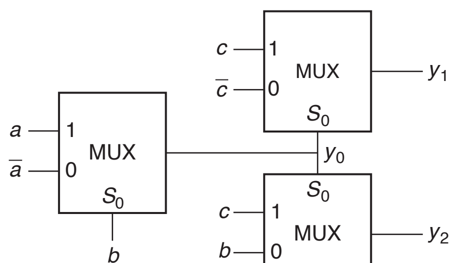


14. For a MUX to function as a full adder what should be the input provided to the I_0, I_1, I_2, I_3 if the A and B are the select lines?



(A) $I_0 = I_1 = C_{in}$; $I_2 = I_3 = \overline{C}_{in}$
(B) $I_0 = I_1 = \overline{C}_{in}$; $I_2 = I_3 = C_{in}$
(C) $I_0 = I_3 = C_{in}$; $I_1 = I_2 = \overline{C}_{in}$
(D) $I_0 = I_3 = \overline{C}_{in}$; $I_1 = I_2 = C_{in}$

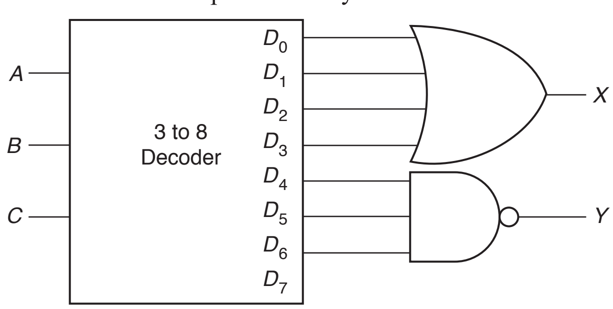
15. The given circuit act as



(A) Full adder (B) Half adder
(C) Full subtractor (D) Half subtractor

16. For a 4 × 16 decoder circuit, the outputs of decoder $(y_0, y_1, y_4 \cdot y_5 \cdot y_{10} \cdot y_{11} \cdot y_{14} \cdot y_{15})$ are connected to 8 input NOR gate, the expression of NOR gate output is
(A) $A \oplus D$ (B) $A \odot D$
(C) $A \odot C$ (D) $A \oplus C$

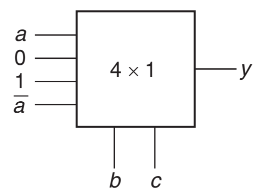
17. The function implemented by decoder is



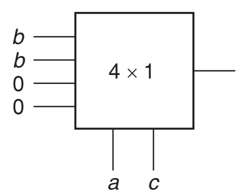
(A) $X = A'BC' + B'C', y = A + B$
(B) $X = A'C' + B'C', y = 1$
(C) $X = \overline{A}, y = 0$
(D) $X = \overline{A}, y = 1$

18. A relay is to operate with conditions that it should be on when the input combinations are 0000, 0010, 0101, and 0111. The states 1000, 1001, 1010 don't occur. For rest of the status, relay should be off. The minimized Boolean expression notifying the relationship is
(A) $BC + ACD$
(B) $\overline{B}\overline{D} + \overline{A}BD$
(C) $BD + AC$
(D) $AB + CD$

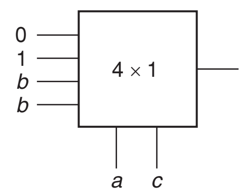
19. If a function has been implemented using MUX as shown, implement the same function with a and c as the select lines



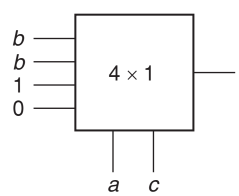
(A)



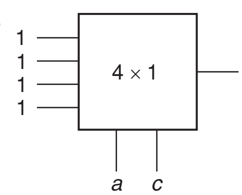
(B)



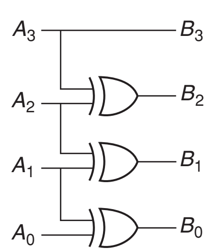
(C)



(D)

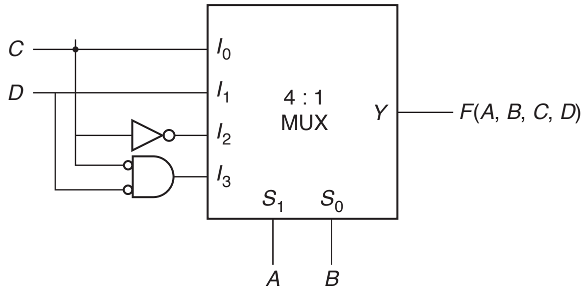


20. The circuit is used to convert one code to another. Identify it.



(A) Binary to gray
(B) Gray to binary
(C) Gray to XS–3
(D) Gray to 8421

21. The Boolean function realised by logic circuit is



(A) $F = \Sigma m(0, 1, 3, 5, 9, 10, 14)$

(B) $F = \Sigma m(2, 3, 5, 7, 8, 12, 13)$

(C) $F = \Sigma m(1, 2, 4, 5, 11, 14, 15)$

(D) $F = \Sigma m(2, 3, 5, 7, 8, 9, 12)$

Practice Problems 2

Directions for questions 1 to 21: Select the correct alternative from the given choices.

1. For a binary half subtractor having two input A and B, the correct set of logical expression for the outputs D = (A minus B) and X (borrow) are

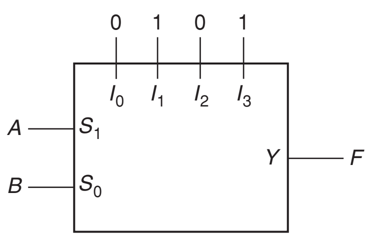
(A) $D = AB + \overline{AB}, X = \bar{A}B$

(B) $D = \overline{AB} + A\bar{B}+, A\bar{B}, X = \bar{A}B$

(C) $D = \bar{A}B + A\bar{B}, X = \bar{A}B$

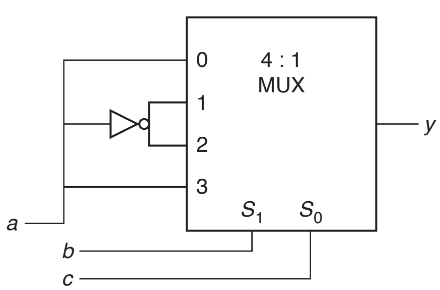
(D) $D = AB + \bar{A}\,\bar{B}, X = \bar{A}B$

2. The function 'F' implemented by the multiplexer chip shown in the figure is



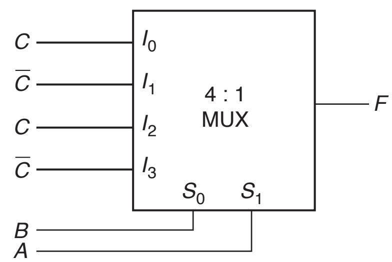
(A) A
(B) B
(C) $\bar{A}B$
(D) $A\bar{B} + \bar{A}B$

3 The following multiplexer circuit is equal to



(A) implementation of sum equation of full adder
(B) implementation of carry equation of full adder
(C) implementation of borrow equation of full substractor
(D) all of the above

4 The output 'F' of the multiplexer circuit shown in the figure will be



(A) $AB + B\bar{C} + \bar{C}A + \bar{B}\bar{C}$
(B) $A \oplus B \oplus C$
(C) $A \oplus B$
(D) $B \oplus C$

5. Full subtractor can be implemented by using
(A) 3-to-8 line decoder only
(B) 3-to-8 line decoder and one OR gate
(C) 3-to-8 line decoder and two OR gates
(D) None

6. What are the difference and borrow equations for the above circuit?
(A) $D = x \,\Theta\, y \,\Theta\, z, B = x'y + yz + zx'$
(B) $D = X \oplus y \oplus z, B = xy + yz + zx$
(C) $D = x \oplus y \oplus z, B = x'y + yz + zx'$
(D) A and C both

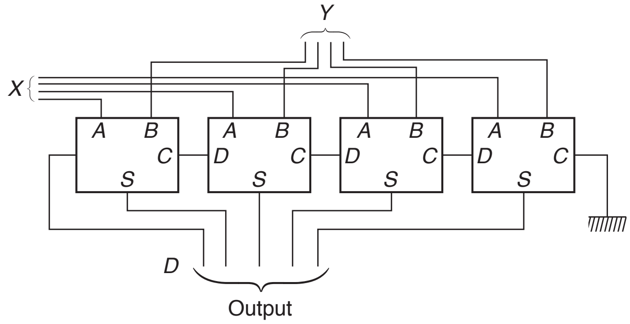
7. Combinational circuits are one in which output depends __________, whereas sequential circuit's output depends __________
(A) only on present input, only on past input
(B) only on present input, only on past and future input
(C) only on present input, only on present input and past output
(D) on present input, on past and present output

8. The sum output of the half adder is given by (assume A and B as inputs)
(A) $S = AB(\overline{A+B})$
(B) $S = (A+B)\overline{AB}$
(C) $S = (A+B)(AB)$
(D) $S = (\bar{A} + \bar{B})(\bar{A}B)$

9. MUX implements which of the following logic?
(A) NAND–XOR
(B) AND–OR
(C) OR–AND
(D) XOR–NOT

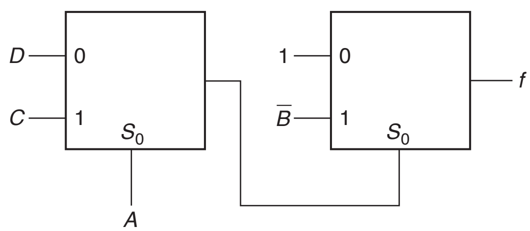
10. A DeMUX can be used as a
(A) Comparator
(B) Encoder
(C) Decoder
(D) Adder

11. If we have inputs as A, B and C and output as S and D. We are given that $S = A \oplus B \oplus C$. $D = BC + \bar{A}B + \bar{A}C$. Which of the circuit is represented by it?



(A) 4-bit adder giving $X + Y$
(B) 4-bit subtractor giving $X - Y$
(C) 4-bit subtractor giving $Y - X$
(D) 4-bit adder giving $X + Y + S$

12. The Boolean function f implemented in the figure using two input multiplexers is



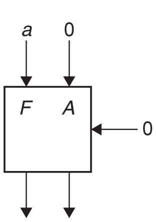
(A) $A\bar{C} + \bar{A}\bar{D} + \bar{D}C + \bar{A}\bar{B}D + A\bar{B}C$
(B) $\bar{A} + A\bar{C} + \bar{A}\bar{D} + \bar{D}\bar{C}$
(C) $\bar{B} + A\bar{C} + \bar{A}\bar{D} + \bar{D}\bar{C}$
(D) $AC + AD + A + B$

13. The carry generate and carry propagate function of the look ahead carry adder is
(A) $CG = A + B$, $CP = A \oplus B$
(B) $CG = A \oplus B$, $CP = A + B$
(C) $CG = AB$, $CP = A \oplus B$
(D) $CG = AB$, $CP = A + B$

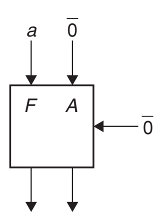
14. If we have a comparator and if E represents the condition for equality i.e., ($A_n \oplus B_n$), if A_n and B_n are to be compared then the expression $A_3\bar{B}_3 + E_3A_2\bar{B}_2 + E_3E_2A_1\bar{B}_1 + E_3E_2E_1A.\bar{B}$. represents which of the condition for a 4-bit number?
(A) $A > B$
(B) $B > A$
(C) $A = B$
(D) None of these

15. When full adder is used to function as a 1-bit incrementor, which of the circuit configurations must be used?

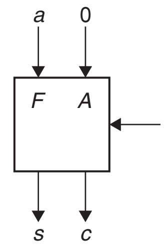
(A)



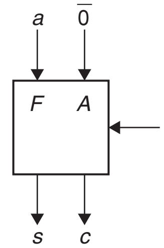
(B)



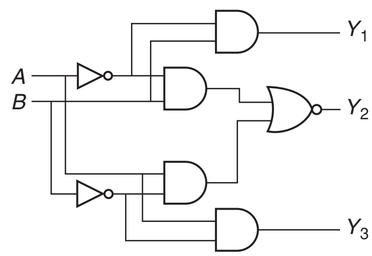
(C)



(D)



16. Identify the circuit.



(A) Half adder
(B) Full adder
(C) 1-bit magnitude comparator
(D) Parity generator

17. In order to implement n variable function (without any extra hardware) the minimum order of MUX is
(A) $2^n \times 1$
(B) $2^n \times 1$
(C) $(2^n - 1) \times 1$
(D) $(2^{n-1}) \times 1$

18. A full adder circuit can be changed to full subtractor by adding a
(A) NOR gate
(B) NAND gate
(C) Inverter
(D) AND gate

19. The half adder when implemented in terms of NAND logic is expressed as
(A) $A \oplus B$
(B) $\overline{A\cdot\overline{AB}\cdot B\cdot\overline{AB}}$
(C) $\overline{\overline{A\cdot\overline{AB}}\cdot\overline{B\cdot\overline{AB}}}$
(D) $\overline{\overline{A\cdot\overline{AB}}B\cdot\bar{A}B}$

20. For a DeMUX to act as a decoder, what is the required condition?
(A) Input should be left unconnected and select lines behave as a input to decoder
(B) Input should be always 0 and select line behave as inputs to decoder
(C) Both are same
(D) Input should become enable and select lines behave as inputs to decoder

21. For a full subtractor, which of the combination will give the difference?

(A) $\overline{\overline{(A\oplus B)\overline{(A\oplus B)b_i}}\cdot\overline{b_i\overline{(A\oplus B)b_i}}}$

(B) $\overline{B\cdot\overline{AB}\cdot\overline{b_i(A\oplus B)}}$

(C) $\overline{\bar{A}+\bar{B}}+\overline{\bar{b}_i+\overline{A\oplus B}}$

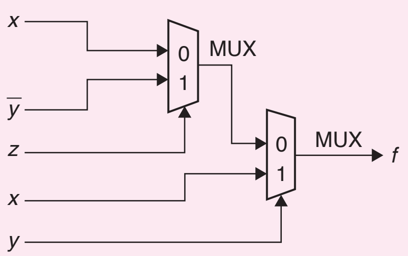
(D) None of these

Previous Years' Questions

1. A 4-bit carry look ahead adder, which adds two 4-bit numbers, is designed using AND, OR, NOT, NAND, NOR gates only. Assuming that all the inputs are available in both complemented and uncomplemented forms and the delay of each gate is one time unit, what is the overall propagation delay of the adder? Assume that the carry network has been implemented using two-level AND–OR logic. **[2004]**

(A) 4 time units (B) 6 time units
(C) 10 time units (D) 12 time units

2.



Consider the circuit above. Which one of the following options correctly represents $f(x, y, z)$? **[2006]**

(A) $x\overline{z} + xy + \overline{y}z$ (B) $x\overline{z} + xy + \overline{yz}$
(C) $xz + xy + \overline{yz}$ (D) $xz + x\overline{y} + \overline{y}z$

3. Given two 3-bit numbers $a_2a_1a_0$ and $b_2b_1b_0$ and c, the carry in, the function that represents the carry generate function when these two numbers are added is **[2006]**

(A) $a_2b_2+a_2a_1b_1+a_2a_1a_0b_0+a_2a_0b_1b_0+a_1b_2b_1+a_1a_0b_2b_0 + a_0b_2b_1b_0$
(B) $a_2b_2+a_2b_1b_0+a_2a_1b_1b_0+a_1a_0b_2b_1+a_1a_0b_2+a_1a_0b_2b_0 + a_2a_0b_1b_0$
(C) $a_2 + b_2 + (a_2 \oplus b_2)(a_1 + b_1 + (a_1 \oplus b_1)(a_0 + b_0))$
(D) $a_2b_2 + \overline{a_2}a_1b_1 + \overline{a_2a_1}a_0b_0 + \overline{a_2}a_0\overline{b_1}b_0 + a_1\overline{b_2}b_1 + \overline{a_1}a_0\overline{b_2}b_0 + a_0\overline{b_2b_1}b_0$

4. We consider the addition of two 2's complement numbers $b_{n-1}b_{n-2} \ldots b_0$ and $a_{n-1}a_{n-2} \ldots a_0$. A binary adder for adding unsigned binary numbers is used to add the two numbers. The sum is denoted by $c_{n-1}c_{n-2} \ldots c_0$ and the carry-out by c_{out}. Which one of the following options correctly identifies the overflow condition? **[2006]**

(A) $c_{out}(\overline{a_{n-1} \oplus b_{n-1}})$
(B) $a_{n-1}b_{n-1}\overline{c_{n-1}} + \overline{a_{n-1}}\,\overline{b_{n-1}}c_{n-1}$
(C) $c_{out} \oplus c_{n-1}$
(D) $a_{n-1} \oplus b_{n-1} \oplus c_{n-1}$

5. Consider numbers represented in 4-bit gray code. Let $h_3h_2h_1h_0$ be the gray code representation of a number n and let $g_3g_2g_1g_0$ be the gray code of $(n + 1)$ modulo 16 value of the number. Which one of the following functions is correct? **[2006]**

(A) $g_0(h_3h_2h_1h_0) = \Sigma(1, 2, 3, 6, 10, 13, 14, 15)$
(B) $g_1(h_3h_2h_1h_0) = \Sigma(4, 9, 10, 11, 12, 13, 14, 15)$
(C) $g_2(h_3h_2h_1h_0) = \Sigma(2, 4, 5, 6, 7, 12, 13, 15)$
(D) $g_3(h_3h_2h_1h_0) = \Sigma(0, 1, 6, 7, 10, 11, 12, 13)$

6. How many 3-to-8 line decoders with an enable input are needed to construct a 6-to-64 line decoder without using any other logic gates? **[2007]**

(A) 7 (B) 8
(C) 9 (D) 10

7. Suppose only one multiplexer and one inverter are allowed to be used to implement any Boolean function of n variables. What is the minimum size of the multiplexer needed? **[2007]**

(A) 2^n line to 1 line (B) 2^{n+1} line to 1 line
(C) 2^{n-1} line to 1 line (D) 2^{n-2} line to 1 line

8. In a look-ahead carry generator, the carry generate function G_i and the carry propagate function P_i for inputs A_i and B_i are given by:

$P_i = A_i \oplus B_i$ and $G_i = A_iB_i$

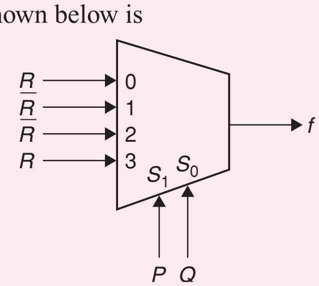
The expressions for the sum bit S_i and the carry bit C_{i+1} of the look-ahead carry adder are given by:

$S_i = P_i \oplus C_i$ and $C_{i+1} = G_i + P_iC_i$, where C_0 is the input carry.

Consider a two-level logic implementation of the look-ahead carry generator. Assume that all P_i and G_i are available for the carry generator circuit and that the AND and OR gates can have any number of inputs. The number of AND gates and OR gates needed to implement the look-ahead carry generator for a 4-bit adder with S_3, S_2, S_1, S_0 and C_4 as its outputs are respectively: **[2007]**

(A) 6, 3 (B) 10, 4
(C) 6, 4 (D) 10, 5

9. The Boolean expression for the output f of the multiplexer shown below is



(A) $\overline{P \oplus Q \oplus R}$
(B) $P \oplus Q \oplus R$
(C) $P + Q + R$
(D) $\overline{P + Q + R}$

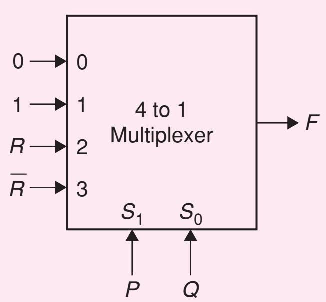
10. The amount of ROM needed to implement a 4-bit multiplier is **[2012]**
(A) 64 bits
(B) 128 bits
(C) 1K bits
(D) 2K bits

11. In the following truth table, $V = 1$ if and only if the input is valid.

Inputs				Outputs		
D_0	D_1	D_2	D_3	X_0	X_1	V
0	0	0	0	x	x	0
1	0	0	0	0	0	1
x	1	0	0	0	1	1
x	x	1	0	1	0	1
x	x	x	1	1	1	1

What function does the truth table represent? **[2013]**
(A) Priority encoder
(B) Decoder
(C) Multiplexer
(D) Demultiplexer

12. Consider the 4-to-1 multiplexer with two select lines S_1 and S_0 given below.



The minimal sum-of-products form of the Boolean expression for the output F of the multiplexer is **[2014]**

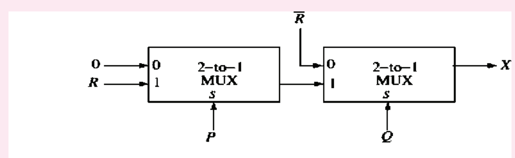
(A) $\bar{P}Q + Q\bar{R} + P\bar{Q}R$
(B) $\bar{P}Q + \bar{P}Q\bar{R} + PQ\bar{R} + P\bar{Q}R$
(C) $\bar{P}QR + \bar{P}Q\bar{R} + Q\bar{R} + P\bar{Q}R$
(D) $PQ\bar{R}\ \bar{P}QR + \bar{P}Q\bar{R} + Q\bar{R} + P\bar{Q}R$

13. Consider the following combinational function block involving four Boolean variables x, y, a, b, where x, a, b are inputs and y is the output. **[2014]**
$f(x, y, a, b)$
{
if (x is 1) $y = a$;
else $y = b$;
}
Which one of the following digital logic blocks is the most suitable for implementing this function?
(A) Full adder (B) Priority encoder
(C) Multiplexer (D) Flip–flop

14. Let ⊕ denote the Exclusive OR (X-OR) operation. Let '1' and '0' denote the binary constants. Consider the following Boolean expression for F over two variables P and Q:
$F(P, Q) = ((1 \oplus P) \oplus (P \oplus Q)) \oplus ((P \oplus Q) \oplus (Q \oplus 0))$ **[2014]**
The equivalent expression for F is
(A) $P + Q$ (B) $\overline{P + Q}$
(C) $P \oplus Q$ (D) $\overline{P \oplus Q}$

15. A half adder is implemented with XOR and AND gates. A full adder is implemented with two half adders and one OR gate. The propagation delay of an XOR gate is twice that of an AND/OR gate. The propagation delay of an AND/OR gate is 1.2 microseconds. A 4-bit ripple-carry binary adder is implemented by using four full adders. The total propagation time of this 4-bit binary adder in microseconds is _____ **[2015]**

16. Consider the two cascaded 2-to-1 multiplexers as shown in the figure.



minimal sum of products form of the output x is

The minimal sum of products form of the output X is **[2016]**
(A) $\bar{P}\ \bar{Q}\ + PQR$ (B) $\bar{P}\ Q + QR$
(C) $PQ + \bar{P}\ \bar{Q}\ R$ (D) $\bar{P}\ \bar{Q}\ + PQR$

17. When two 8-bit numbers $A_7 \ldots A_0$ and $B_7 \ldots B_0$ in 2's complement representation (with A_0 and B_0 as the least significant bits) are added using a **ripple-carry adder**, the sum bits obtained are $S_7 \ldots S_0$ and the carry bits are $C_7 \ldots C_0$. An overflow is said to have occurred if **[2017]**
(A) the carry bit C_7 is 1
(B) all the carry bits $(C_7, \ldots, C_0)$ are 1
(C) $(A_7 \cdot B_7 \cdot \overline{S_7} + \overline{A_7} \cdot \overline{B_7} \cdot S_7)$ is 1
(D) $(A_0 \cdot B_0 \cdot \overline{S_0} + \overline{A_0} \cdot \overline{B_0} \cdot S_0)$ is 1

Chapter 4

Sequential Circuits

LEARNING OBJECTIVES

- *Sequential circuit*
- *Basic storage elements*
- *Latches (SR Latch, D Latch, JK Latch)*
- *Flip-flops (JK flip-flop, T flip-flop, D flip-flop)*
- *Counters*
- *Asynchronous counter design*
- *Synchronous counter design*
- *Registers*
- *Various types of registers*
- *Application of shift register*

Sequential Circuits

In sequential circuits the output depends on the input as well as on the previous history of output, i.e., they contain memory elements.

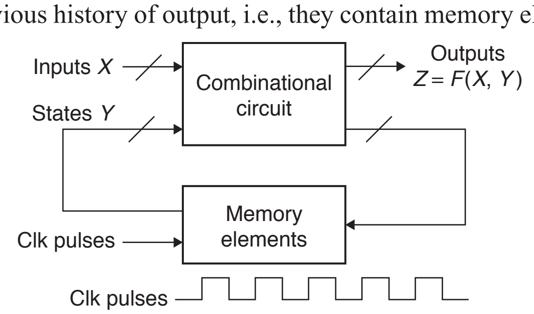

Figure 1 Block diagram of sequential circuit

Table 1 *Comparison between combinational and sequential circuits*

Combinational Circuits	Sequential Circuits
1. Output at any time depends on the combine set of input applied to it simultaneously at that instant of time	Output depends on the present input as well as on the previous history of output
2. Contains no memory element	Contains at least one memory element
3. Easy to design due to absence of memory	Difficult to design
4. Totally described by the set of output values	Its performance is totally described by the set of subsequent values as well as set of output values
5. Faster in speed because all inputs are primary inputs and applied simultaneously	Slower in speed because secondary inputs are also needed which are applied after delay
6. It need more hardware for realization	Less hardware required
7. Expensive in cost	Cheap in cost

Sequential circuits are of two types:

1. Clocked or synchronous
2. Unclocked or asynchronous

In synchronous sequential circuits the logic circuits action is allowed to occur in synchronization with the input clock pulse from a system clock.

In asynchronous sequential circuits the logic sequential action is allowed to occur at any time.

Basic Storage Elements

Latches and flip-flops

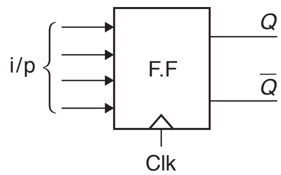
A storage element in digital circuit can maintain a binary state indefinitely until directed by an input signal to switch states. Storage elements that operate with signal levels (i.e., level triggering of signal inputs) are referred to as latches. Those controlled by a clock transition (i.e., edge triggering) are flip-flops.

Latches and filp-flops are related because latches are basic circuits from which all flip-flops are constructed. Latches are useful for storing binary information and for the design of asynchronous sequential circuits. But latches are not practical for use in synchronous sequential circuits, so we use flip-flops.

Flip-flops

They are also known as bistable multivibrators. This is a basic memory element to store 1-bit of information 0 or 1 and is used in storage circuits, counters, shift register, and many other computer applications. It has two stable states: 1 and 0. The high state is called set state and zero as reset.

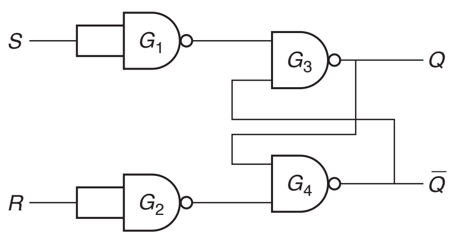
It has two outputs one being the complement of the other usually designated by Q and $\bar{Q}$.



There are different types of flip-flops S-R flip-flop, D-flip-flop, T-flip-flop, J-K flip–flops, etc.

Latches

(i) S-R Latch: The simplest latch is called S-R latch. S-R means Set-Reset. It has two outputs Q and $\bar{Q}$ and two inputs S and R, which represent set or reset signal.



Above figure shows two cross coupled gates G_3 and G_4 and inverters G_1 and G_2. Here output of G_3 is connected to the input of G_4 and output of G_4 is applied to the input of G_3. $S = 1$, $R = 0$ output of $G_1 = 0$ and $G_2 = 1$. Since one of the input of G_3 is 0, so its output will be certainly 1 and consequently both input of G_4 will be 1 and the output $\bar{Q} = 0$.

For $S = 1$, $R = 0$, $Q = 1$, $\bar{Q} = 0$. $S = 0$, $R = 1$ the output will be $Q = 0$ and $\bar{Q} = 1$. The first of the input condition $S = 1$ and $R = 0$ makes $Q = 1$ which referred as the set state and the second condition $S = 0$ and $R = 1$ makes $Q = 0$ which is referred as reset state.

For $S = 0$ and $R = 0$ output of both G_1 and G_2 will be one and hence there will be no change in Q and $\bar{Q}$.

For $S = R = 1$, both the outputs Q and $\bar{Q}$ will try to become one, which produces invalid results and should not be used for the above latch.

Input		Output		
S	R	Q	$\bar{Q}$	State
1	0	1	0	Set
0	1	0	1	Reset
0	0	0	0	No change
1	1	?	?	Invalid

(ii) SR latch by using NAND/NOR gates: The SR latch is a circuit with two cross-coupled NOR gates or two cross-coupled NAND gates. Two inputs labelled S for set and R for reset. Latch will have two outputs:

- Q: output state in normal form and
- Q': output state in complemented form.

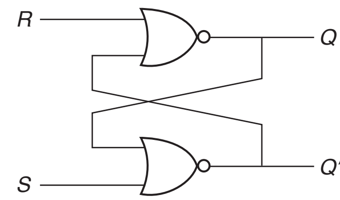


Figure 2 Logic diagram for SR latch

S	R	Q_{n+1}	Q'_{n+1}	
0	0	Q_n	Q'_n	(no change)
0	1	0	1	(Reset)
1	0	1	0	(set)
1	1	0	0	(invalid)

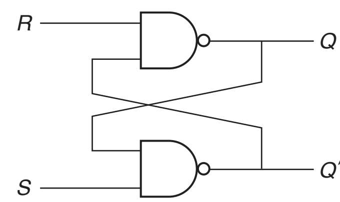

Figure 3 $\bar{S}\,\bar{R}$ Latch

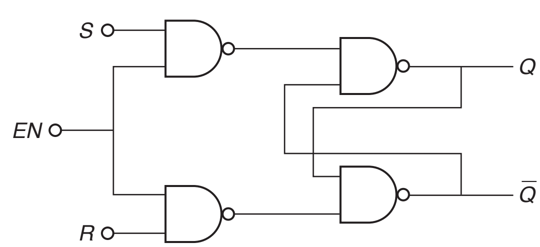
S	R	Q_{n+1}	$\bar{Q}_{n+1}$	
0	0	1	1	(Invalid)
0	1	1	0	(Set)
1	0	0	1	(Reset)
1	1	Q_n	Q'_n	(No change)

$\bar{S}\,\bar{R}$ latch is active low SR latch

(iii) SR latch with control input: The working of gated SR latch is exactly the same as SR latch when the EN pulse is present. When the EN pulse is not present (EN pulse = 0) the gates G_1 and G_2 are inhibited and will not respond to the input.



Characteristic table of SR latch shows the operation of latch in tabular form. Q_t stands as the binary state of the latch before the application of latch pulse and referred to as the present state. The S and R columns give the possible values of the inputs and Q_{t+1} is the state of the latch after the application of a single pulse, referred to as next stage. EN input is not included in the characteristic table.

Characteristic table for SR latch is given below:

Q_t	S	R	Q_{t+1}
0	0	0	0
0	0	1	0
0	1	0	1
0	1	1	X
1	0	0	1
1	0	1	0
1	1	0	1
1	1	1	X

Characteristic equation of the latch is derived from the K-map.

Q_t \ SR	00	01	11	10
0			×	1
1	1		×	1

$$\therefore Q_{t+1} = S + \bar{R}Q_t$$

This equation specifies the value of the state as a function of the present state and the inputs.

(iv) Preset and clear inputs: For the latch/flip-flop, when the power is switched ON, the state of the circuit is uncertain. It can be either $Q = 0$ (reset) or $Q = 1$ (set) state.

In many applications it is desired to set or reset the circuit, so that initial state of the circuit will be known. This is accomplished by using the asynchronous, inputs referred to as preset (Pr) and clear (Clr), inputs.

These inputs can be applied any time, and are not synchronized with EN input/Clr input.

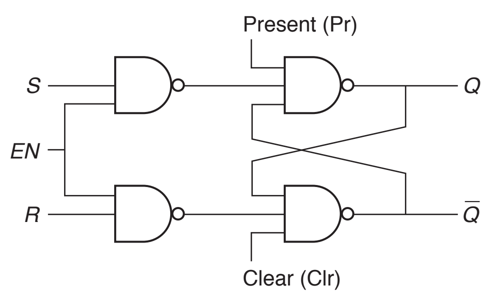


Figure 4 SR latch with Pr and Clr inputs

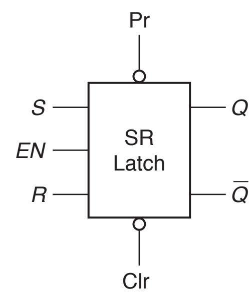
If Pr = Clr = 1, the circuits operates as of S–R latch explained previously.
If Pr = 0, Clr = 1, the output Q will become 1, which in turn changes $\bar{Q} = 0$.
If Pr = 1, Clr = 0 the output $\bar{Q}$ will become 1, which in turn changes $Q = 0$.
If Pr = Clr = 0, both Q and $\bar{Q}$ will become 1, which is invalid case, so Pr = Clr = 0 condition must not be used.

Pr	Clr	Q_{n+1}
1	1	Q – No change
0	1	1 – Set
1	0	0 – Reset
0	0	X – Invalid



(v) D latch (Transparent latch): One way to eliminate the invalid condition of SR latch (when $S = R = 1$) is to ensure that inputs S and R are never equal to 1 at the same time.

By connecting a NOT gate between S and R inputs. i.e, complement of S will be given to R, we can form D latch as shown in block diagram.

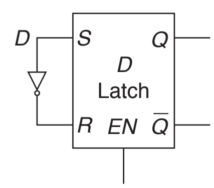


Figure 5 Block diagram for D latch

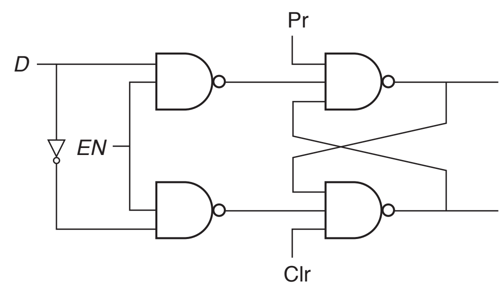

Figure 6 Logic diagram for D latch

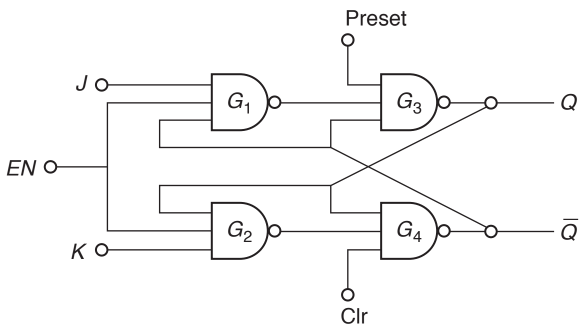
EN	D	Q_{n+1}
0	X	Q_n – No change (Disabled)
1	0	0 – Reset state
1	1	1 – Set state

When EN = 0, the circuit will be disabled and input D will not have only effect on output, and output will be same as previous state.

When EN = 1, $D = 0$, i.e., $S = 0$, $R = 1$ which makes output $Q = 0$ and $\bar{Q} = 1$ (Reset state).

When EN = 1, $D = 1$, i.e., $S = 1$, $R = 0$ which makes output $Q = 1$, and $\bar{Q} = 0$ (Set state).

(vi) JK latch: The function of JK latch is identical to that of SR latch except that it has no invalid state as that of SR latch where $S = R = 1$. In this case the state of the output is changed as complement of previous state.



EN	J	K	Q_{t+}	
1	0	0	Q_t	No change
1	0	1	0	Reset
1	1	0	1	Set
1	1	1	$\bar{Q}_t$	Toggle
0	x	x	Q_t	No change

JK latch by using SR latch: The uncertainty of SR flip-flop (when $S = 1$, $R = 1$) can be eliminated by converting it into JK latch.

The data inputs J and K, which are ANDed with $\bar{Q}$ and Q respectively, to obtain S and R inputs.

$$S = J \cdot \bar{Q}, \quad R = K \cdot Q$$

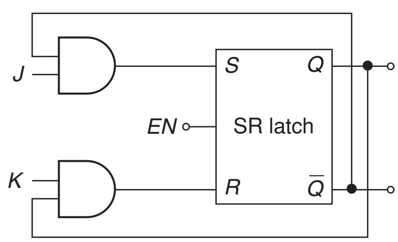


Figure 7 JK latch by using SR latch

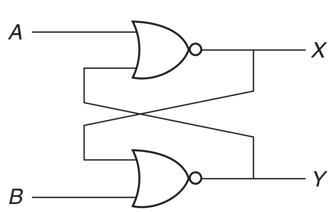
J	K	S	R	Q_{n+1}	$\bar{Q}_{n+1}$
0	0	0	0	Q_n	$\bar{Q}_n$-No change
0	1	0	Q_n	0	1-Reset
1	0	$\bar{Q}_n$	0	1	0-Set
1	1	$\bar{Q}_n$	Q_n	$\bar{Q}_n$	Q_n-Toggle

Example 1: The following binary values were applied to A and B inputs of NOR gate latch shown in the figure, in the sequence indicated below. $A = 1, B = 0$; $A = 1, B = 1$; $A = 0$, $B = 0$. The corresponding stable X, Y outputs will be



(A) 10, 01, 10 or 01
(B) 11, 00, 10
(C) 01, 00, 10 or 01
(D) 10, 11, 10 or 01

Solution: (C)

Given circuit is RS latch with NOR gates.

By comparing with RS latch $A = R$, $B = S$, and $X = Q$, $Y = \bar{Q}$, so from truth table of RS latch

S/B	R/A	Q/X	$\bar{Q}$/Y	
0	1	0	1	Reset (Invalid)
1	1	0	0	
0	0	1	0	(Same as previous state)
		0	1	

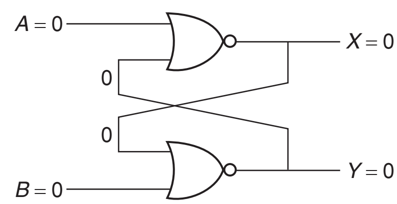
After invalid case $S = 1$, $R = 1$, i.e., $A = B = 1$,

The output $Q = 0, \bar{Q} = 0$, i.e., $X = Y = 0$

By applying $A = 0$, $B = 0$

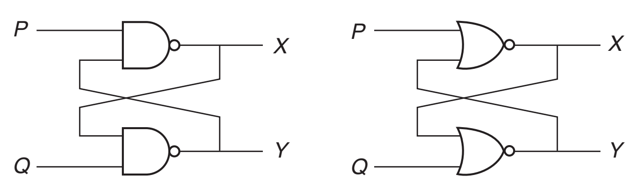
The output X becomes $\overline{(0+0)} = 1$ and which in turn changes

$Y = \overline{(B + X)} = \overline{(0+1)} = 0$



(or) the output Y becomes $\overline{(0+0)} = 1$ and which in turn changes $X = \overline{(Y + A)} = \overline{(0+1)} = 0$. So, output ($X$, Y) cannot be predicted after the invalid condition. So, $X = 0$, $Y = 1$ or $X = 1$, $Y = 0$

Example 2: Refer to the NAND and NOR latches shown in the figure the inputs (P, Q) for both the latches are first made (1, 0) and then after a few seconds, made (0, 0). The corresponding stable outputs (X, Y) are



(A) NAND: first (0, 1) then (0, 1); NOR: first (1, 0) then (1, 0)
(B) NAND: first (0, 1) then (1, 1); NOR: First (0, 1) then (0, 1)
(C) NAND: first (1, 0) then (0, 0); NOR: first (1, 0) then (1, 0)
(D) NAND: first (1, 0), then (1, 0); NOR: first (1, 0) then (1, 1)

Solution: (B)

From the truth table of SR latch and $\bar{S}\,\bar{R}$ latch SR latch with NOR gates:

For $(P, Q) = (1, 0) = (R, S)$ output $(X, Y) = (Q, \bar{Q}) = (0, 1)$

Then (P, Q) are made (0, 0), i.e., (R, S) = (0, 0), which results in no change at output. So, $(X, Y) = (Q, \bar{Q}) = (0,1)$

SR latch with NAND gates:

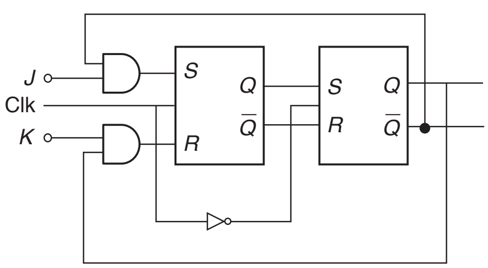
For $(P, Q) = (1, 0) = (S, R)$ output $(X, Y) = (Q, \bar{Q}) = (0,1)$. Then (P, Q) are made (0, 0), i.e., $(S, R) = (0, 0)$ which is invalid conditions for $\bar{S}\,\bar{R}$ latch. So, $(X, Y) = (Q, \bar{Q}) = (1,1)$

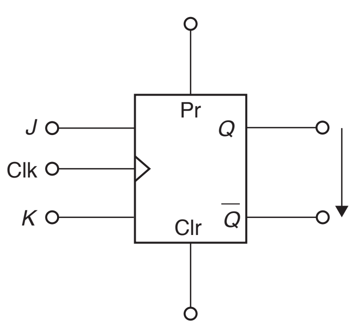
(vii) Race around condition: The difficulties of both the inputs ($S = R = 1$) being not allowed in an SR latch is eliminated in JK latch by using the feedback connection from the output to the input of the gate G_1 and G_2. In a normal JK latch if $J = K = 1$ and $Q = 0$ and enable signal is applied without RC differentiator, after a time interval Δt (the propagation delay through two NAND gate in series) the output will change to $Q = 1$. Now we have $J = K = 1$ and $Q = 1$ and after another time interval of Δt the output will change back to $Q = 0$. Hence for the duration of (t_p) of the enable signal the output will oscillates back and forth between 0 and 1. At the end of the enable signal the values of Q is uncertain. This situation is referred to as race around condition.

The race around condition can be avoided if enable time period $t_p < \Delta t$ but it may be difficult to satisfy this condition, because of very small propagation delays in ICs. To solve this problem the enable signals are converted to narrows spike using RC differentiator circuit having a short time constant. Its output will be high during the high transmission time of the enable. Another method to avoid this problem is master-slave JK flip-flop.

Flip-Flops

(i) Master-slave JK flip-flop: This is a cascade of 2 SR latches with feedback from the output of the second SR latch to the inputs of the first as shown in the figure below.





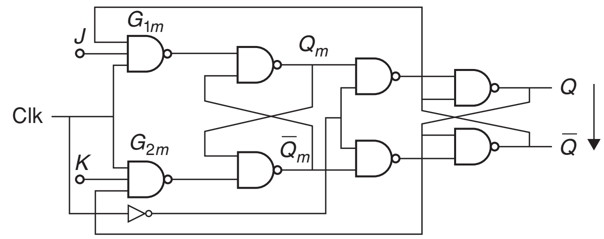


Figure 8 Logic diagram of JK flip-flop

Positive clock pulse is applied to the first latch and the clock pulse will be inverted before its arrival at the second latch. When Clk = 1, the first latch is enabled and the outputs Q_m and $\bar{Q}_m$ responds to the inputs J and K, according to the truth table of JK latch. At this time the 2nd latch is inhibited because its clock is low $(\overline{\text{Clk}} = 0)$. When the clock goes low (Clk = 0), the first latch is inhibited and the second is enabled. Therefore, the outputs Q and $\bar{Q}$ follow the outputs Q_m and $\bar{Q}_m$, respectively. Since the second latch simply follows the first one, it is referred to as slave and the first one as the master. Hence this configuration is known as master-slave JK flip-flop. In this circuit, the input to the gate G_{1m} and G_{2m} do not change, during the clock pulse levels.

The race around condition does not exist.

Table 2 *State/characteristic Table*

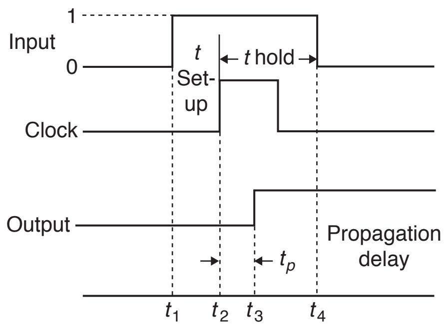
Clk	J	K	Q_t	Q_{t+1}	
↓	0	0	0	0	Q_t
↓	0	0	1	1	
↓	1	0	0	1	1
↓	1	0	1	1	
↓	0	1	0	0	0
↓	0	1	1	0	
↓	1	1	0	1	$\bar{Q}_t$
↓	1	1	1	0	

Q \ JK	00	01	11	10
0			1	1
1	1			1

$$Q_{t+1} = J\bar{Q}_t + Q_t\bar{K}$$

(ii) Flip-flop switching time: In designing circuits with flip-flop the following parameters are important:

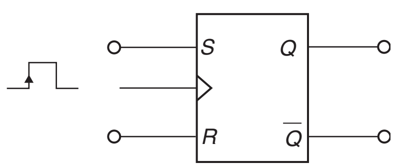
1. **Set-up time:** The minimum amount of time required for the data input to be present before the clock arrived.
2. **Hold time:** The minimum amount of time that the data input to be present after the clock trigger arrived.
3. **Propagation delay:** The amount of time it takes for the output to change states after an input trigger.



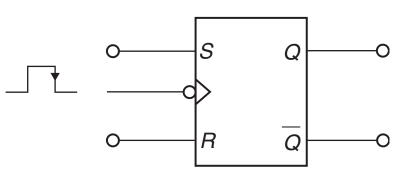
For example, t setup = 50 m sec and t hold = 5 m sec, the data bit has to be the input at least 50 m sec before the clock bit arrives and hold at least 5 m sec after the clock edge.

(iii) Triggering of flip-flop: The flip-flop can be triggered to set or reset either at one of the edges of the clock pulse. There are three types of triggering as described below:

1. **Positive edge triggering flip-flop:** These set or reset at the positive (rising or leading) edge of the clock pulse depending upon the state of i/p signal and o/p remain steady for 1 clock period. Positive edge triggering is indicated by an arrow head at the clock terminal of the flip-flop.



2. **Negative edge triggered flip-flop:** There are flip-flops those in which state transmissions take place only at the negative edge (falling or trailing) of the clock signal. Negative edge triggering is indicated by arrow head with bubble at the clock terminal.



3. **Level triggering:** Level triggering means the specified action occurs based on the steady state value of the input. That is, when a certain level is reached (0 or 1) the output will change states level triggering will be used in latches.

(iv) *D* flip-flop: It receives the designation from its ability to hold data into its internal storage. An SR/JK flip-flop has two inputs. It requires two inputs S/J and R/K to store 1 bit. This is a serious disadvantage in many application to overcome the difficulty D flip-flop has been developed which has only one input line. A D flip-flop can be realized using a SR/JK as show in the figure below.

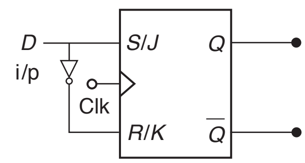


Table 3 *Truth Table*

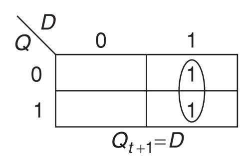
clk	D	Q_{t+1}
$\not\uparrow$	X	Q_t
↑	0	0
↑	1	1

There is no raising problem with D flip-flop. High or 1 state will set the flip-flop and a low or 0 state will reset the flip-flop. The presence of inverter at the input ensure that S/J and R/K inputs will always be in the opposite state.

Table 4 *Characteristic Table of D Flip-flop*

Q_t	D	Q_{t+1}
0	0	0
0	1	1
1	0	0
1	1	1



From the characteristic table of D.flip-flop, the next state of the flip-flop is independent of the present state since $Q_{t+1} = D$, whether $Q_t = 0$ or 1.

(v) *T* flip-flop: In a JK flip-flop $J = K = 1$ and the resulting flip-flop is referred to as a T flip-flop.

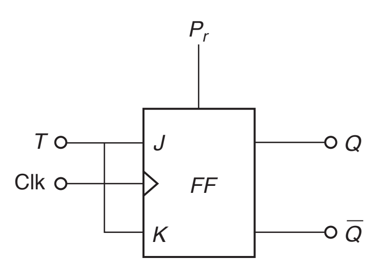


Table 5 *Truth Table*

Clk	T	Q_{n+1}
↑	0	Q_n
↑	1	$\overline{Q}_n$
$\not\uparrow$	x	Q_n

If $T = 1$, it acts as a toggle switch for every Clk pulse with high input, the Q changes to its opposite state.

Table 6 *Characteristic Table*

Q_t	T	Q_{t+1}
0	0	0
0	1	1
1	0	1
1	1	0
1	0	1

Q \ T	0	1
0		1
1	1	

$$Q_{t+1} = T\overline{Q}_t + Q_t\overline{T}$$

(vi) Excitation table of flip-flops: The truth table of flip-flop is also referred to as the characteristic table, which specifies the operational characteristic of flip-flop.

Sometimes we come across situations in which present state and the next state of the circuit are known and we have to find the input conditions that must prevail to cause the desired transition of the state.

Consider initially JK flip-flop output $Q_n = 1, \overline{Q}_n = 0$, after clock pulse it changed to $Q_{n+1} = 0,\ \overline{Q}_{n+1} = 1$,

The input conditions, which made this transition, can be

Toggle – for $J = 1,\ K = 1,\ Q_{n+1} = \overline{Q}_n$

or

Reset – for $J = 0,\ K = 1,\ Q_{n+1} = 0,\ \overline{Q}_{n+1} = 1$

From the above conditions we can conclude that for transition $Q_n = 1$ to $Q_{n+1} = 0$ occurs when $J = 0$ (or) 1 (don't care) and $K = 1$.

Similarly, input conditions can be found out for all possible situations.

Table 7 *Excitation table of flip-flop.*

Present State	Next State	SR Flip-flop		JK Flip-flop		T Flip-flop	D Flip-flop
Q_n	Q_{n+1}	S	R	J	K	T	D
0	0	0	×	0	×	0	0
0	1	1	0	1	×	1	1
1	0	0	1	×	1	1	0
1	1	×	0	×	0	0	1

These excitation tables are useful in the design of synchronous circuits.

(vii) State diagrams of flip-flops: State diagram is a directed graph with nodes connected with directed arcs. State of the circuit is represented by the node, the directed arcs represent the state transitions, from present state (node) to next state (node) at the occurrence of clock pulse.

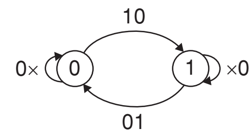

Figure 9 State diagram of SR flip-flop

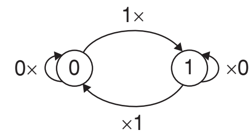

Figure 10 State diagram of JK flip-flop

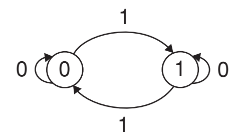

Figure 11 State diagram of T flip-flop

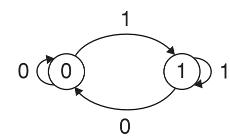

Figure 12 State diagram of D flip-flop

(viii) Conversion of one flip-flop to other flip-flop

Conversion of T flip-flop to JK flip-flop

1. Write the characteristic table of required flip-flop (here JK).
2. Write the excitation table of available or given Flip-flop (here T).
3. Solve for inputs of given flip-flop in terms of required flip-flop inputs and output.

Table 8 *JK flip-flop characteristic and T flip-flop excitation table*

JK Flip-flop Characteristic Table			*T* Flip-flop Excitation Table	
J	K	Q_n	Q_{n+1}	T
0	0	0	0	0
0	0	1	1	0
0	1	0	0	0
0	1	1	0	1
1	0	0	1	1
1	0	1	1	0
1	1	0	1	1
1	1	1	0	1

J \ KQ_n	00	01	11	10
0			1	
1	1		1	1

$$T = J\overline{Q}_n + KQ_n$$

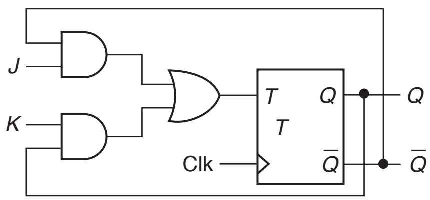

Figure 13 *D* Flip-flop by using other flip-flops

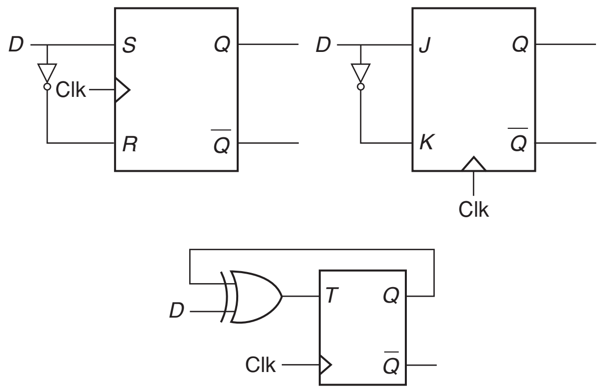

Figure 14 *T* flip-flop by using other flip-flops

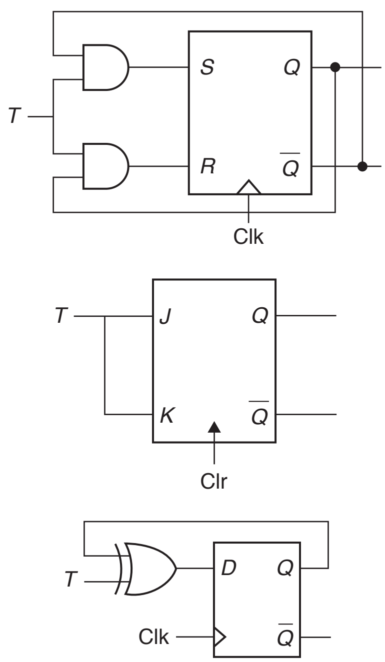
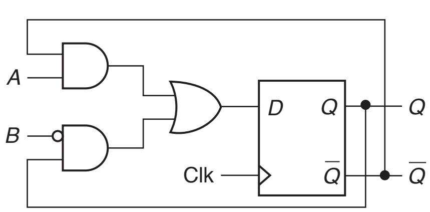


Example 3: A sequential circuit using D flip-flop and logic gates is shown in the figure, where A and B are inputs and Q is output.



The circuit is

(A) SR flip-flop with inputs $A = S, B = R$

(B) SR flip-flop with inputs $A = \overline{R}, B = S$

(C) JK flip-flop with inputs $A = J, B = K$

(D) JK flip-flop with inputs $A = K, B = \overline{J}$

Solution: (C)

The characteristic equation of D flip-flop is

$$Q_{n+1} = D$$

Here input $D = A\overline{Q}_n + \overline{B}Q_n$

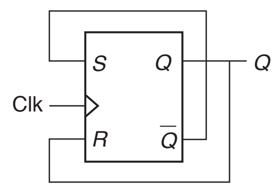
So, output $Q_{n+1} = A\overline{Q}_n + \overline{B}Q_n$

By comparing this equation with characteristic equation of JK

$$Q_{n+1} = J\,\overline{Q}_n + \overline{K}Q_n$$

If $A = J$, $B = K$, then this circuit works like JK flip-flop.

Example 4: The input Clk frequency for the flip-flop given is 10 kHz, then the frequency of Q will be



(A) 10 kHz (B) 5 kHz

(C) 20 kHz (D) 2.5 kHz

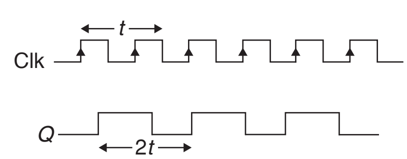
Solution: (B)

Form circuit we can say $S = \overline{Q}_n, R = Q_n$.

If initially $(Q_n, \overline{Q}_n) = (0, 1)$, then inputs $(S, R) = (1, 0)$, by applying clk pulse $(Q_{n+1}\overline{Q}_{n+1})$ becomes $(1, 0)$…

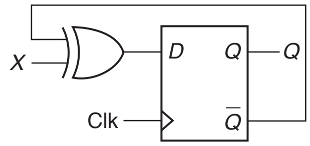
Clk	Q_n	$\overline{Q}_n$	S	R	Q_{n+1}	$\overline{Q}_{n+1}$
1	0	1	1	0	1	0
2	1	0	0	1	0	1
3	0	1	1	0	1	0
4	1	0	0	1	0	1

The output Q_{n+1} toggles for every clock pulse.



So frequency of $Q = \dfrac{1}{2t} = \dfrac{f}{2} = \dfrac{10}{2} = 5$ kHz

Examples 5: For the D flip-flop shown, if initially Q_n is set then what is the output state Q_{n+1} for $X = 0$, and for $X = 1$?



(A) 0, 0 (B) 0, 1
(C) 1, 0 (D) 1, 1

Solution: (B)
The characteristic equation of D is $Q_{n+1} = D$
Here $D = X \oplus \overline{Q_n}$
So $Q_{n+1} = X \oplus \overline{Q_n}$
We have $Q_n = 1$ (Q_n is set) for $X = 0$

$$Q_{n+1} = 0 \oplus 0 = 0$$

We have $Q_n = 1$ (Q_n is set), for $X = 1$

$$Q_{n+1} = 1 \oplus 0 = 1$$

Applications of flip-flops:

1. Data storage: A group of flip-flops connected in series/parallel is called a register, to store a data of N-bits, N-flip-flops are required. Data can be stored in parallel or serial order. Similarly, serial to parallel conversion and parallel to serial conversion can be done by using registers.
2. Counting: A number of flip-flops can be connected in a particular fashion to count the pulses applied (Clk) electronically. One flip-flop can count 2 Clk pulses, two flip-flops can count up to $2^2 = 4$ pulses, similarly n flip-flops can count up to 2^n pulses. Flip-flops may be used to count up/down.
3. Frequency division: Flip-flops may be used to divide input signal frequency by any number. A single flip-flop may be used to divide the input frequency by 2. Similarly n flip-flops may be used to divide the input frequency by 2^n. Output of a MOD-n counter (i.e., which counts n states) will divide input frequency by n.

Counters

Digital counters consist of a number of flip-flops. Their function is to count the number of clock pulses arriving at its clock input.

(i) Counter classification: Counters are classified according to their operational characteristic. Some of these characteristics include:

1. Counter triggering techniques
2. Frequency division characteristic
3. Counter modulus
4. Asynchronous or synchronous

In a synchronous counter all flip-flops are clocked simultaneously. In asynchronous counter the flip-flops are not clocked simultaneously. Each flip-flop is triggered by the previous flip-flop.

(ii) Asynchronous counters (ripple counters): Asynchronous counters do not have a common clock that controls all the flip-flop stages. The control clock is input to the first stage. The clock for each stage subsequent is obtained from the flip-flop of the prior stages. Let us analyze the 3-bit counter and its corresponding wave form diagram shown below.

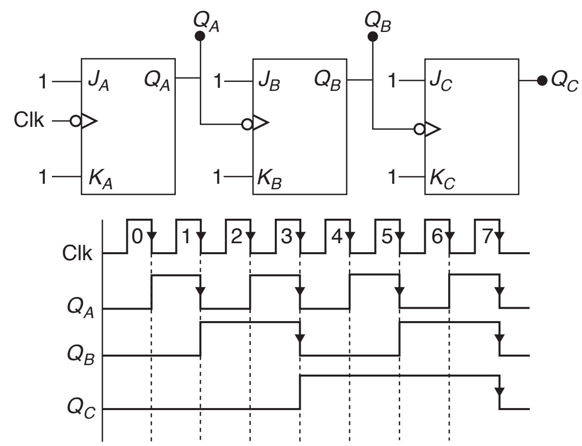


Figure 15 Timing diagrams

- The counter has three flip-flops and three output bits, therefore it is a three stage counter.
- The input clock does not trigger the three flip-flops, therefore it is an asynchronous counter.
- The J and K inputs are tied together as kept high. So they are considered to be toggle flip-flops.
- The flip-flops are negative edge triggered.
- The wave form analysis reveals that Q_A is the LSB and that its frequency is $\frac{1}{2}$ the input clock frequency. Further more, Q_c is the MSB and its frequency is $\frac{1}{8}$ the input clock frequency.
- The count sequence is 000, 001, 010, 011, 100, 101, 110, 111 where the LSB is Q_A. Thus it is MOD-8 binary up counter.
- Asynchronous counters are also known as ripple counters because the effect of the input clock ripples through the counter until it reaches the final stage.

Asynchronous Counter Design

Step I: Write the counting sequence.
Step II: Tabulate the values of reset signals. R for various state of counter.
Step III: Obtain the minimal expression for R and $\overline{R}$ using K-map or any other method.
Step IV: Provide a feedback such that R or $\overline{R}$ resets all the flip-flops after the desired count.

Table 9 *Identification of up/down Counters*

Clock Triggering	Q	Type
+ve edge	$\overline{Q}$	Up
+ve edge	Q	Down
–ve edge	$\overline{Q}$	Down
–ve edge	Q	Up

Clock is negative triggering pulse and Q is connected to next level clock, it is acting like a up counter.

Table 10 *Identification of GATE to Clear the Flip-flops*

Input to the Gate	Output of the Gate	Type of Gate
$\overline{Q}$	$\overline{\text{Clr}}$	OR
$\overline{Q}$	Clr	NOR
Q	$\overline{\text{Clr}}$	NAND
Q	Clr	AND

Example:

(i) 
(ii) 
Example 6: Design and Implement a MOD-6 asynchronous counter using T flip-flops.

Solution: Counting sequence is 00, 001, 010, 011, 100, 101

After Pulses	States Q_3, Q_2, Q_1	Reset R
0	000	0
1	001	0
2	010	0
3	011	0
4	100	0
5	101	0
6	110	1
7	↓↓↓	
	000	0
	111	X

From the Truth table $R = Q_3 Q_2$

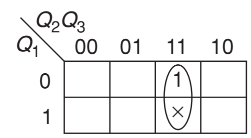
For active Low $\overline{R}$ is used.

$\therefore$ $R = 0$ for 000 to 101

$R = 1$ for 110

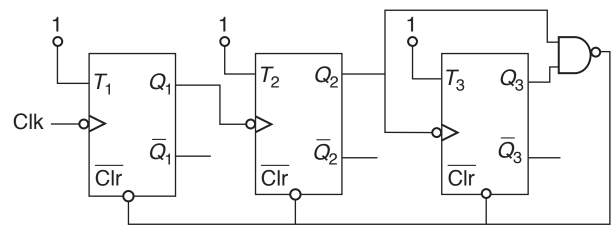
$R = X$ for 111

$\therefore$ K-map is



$\therefore$ $R = Q_2 Q_3$

Logic diagram is



Asynchronous Decode Counter

A ripple counter is an asynchronous sequential circuit, clock is applying only for LSB side. Decade ripple counter it counts from 0 to 9 for up counter.

MOD-10 counter it counts starting from 0000 to 1001. If the NAND gate output is logic '0' at that instant the counter reset to initial state.

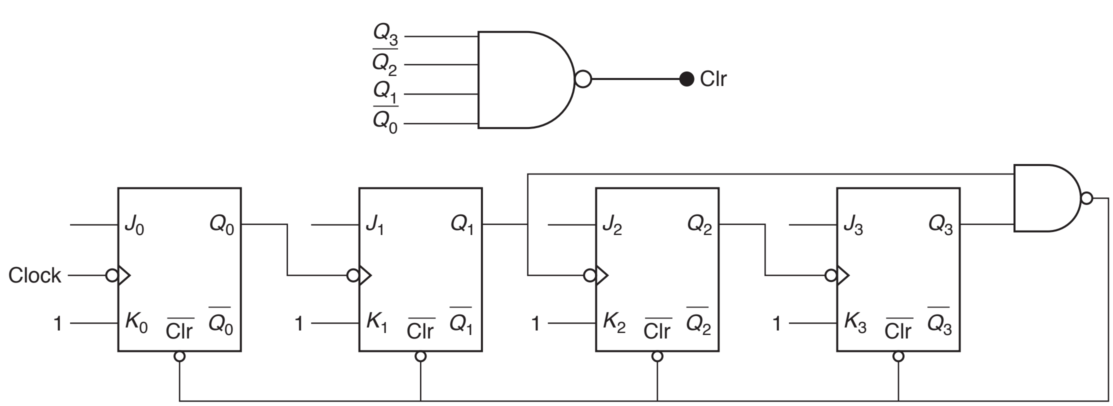


Figure 16 MOD-10 or decade counter

To design a MOD-N counter minimum number of flip-flops required is

$N \le 2^n$

where $N \rightarrow$ MOD

$n \rightarrow$ No. of flip-flops

Example:

MOD-5 counter

$5 \le 2^n$

$\therefore n = 3$

Operating Clock Frequency

(i) Synchronous counter:

$$f_{\text{Clk}} \le \frac{1}{t_{pd}}$$

(ii) Asynchronous counter:

$$f_{\text{Clk}} \le \frac{1}{n t_{pd}}$$

Output frequency of the MOD-N counter is

$$\Rightarrow f_o = \frac{f_{\text{Clk}}}{N}.$$

(iii) Synchronous counter: When counter is clocked such that each flip-flop in the counter is triggered at the same time, the counter is called as synchronous counter.

- Synchronous counters have the advantage of high speed and less severe decoding problems.
- Disadvantage is having more circuiting than that of asynchronous counter.

Synchronous Series Carry Counters

For normal ring counters to count N sequence total N flip-flops are required.

Unused states in ring counter = $2^N - N$.

Unused states in Johnson ring counter = $2^N - 2N$.

Asynchronous counters are slower than the synchronous counters. By using synchronous series carry adders we can design MOD-N counter with n Flip-flops-only.

For non-binary counters $N \le 2^n$

3-bit series carry up counter

It counts from initial state 000 to 111.

$\therefore$ MOD = 2^n = 8 states

$\therefore$ MOD-8

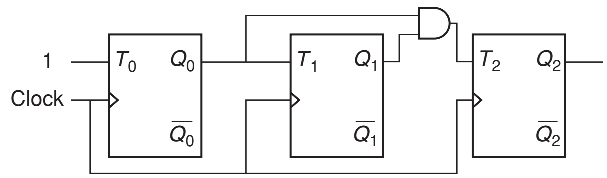

Figure 17 3-bit series carry counter

$$f_{\text{Clk}} \le \frac{1}{t_{pd} + (n-2)t_{pd\ \text{AND}}}$$

where

$t_{pd} \rightarrow$ Propagation delay of each flip-flop.

$t_{pd\ \text{AND}} \rightarrow$ Propagation delay of AND gate.

$n \rightarrow$ Number of flip-flops.

In this, Q_o toggles for every clock pulse.

Q_1 toggles when Q_o is 1.

Q_2 toggles when o/p of AND gate is logic 1.

Note: To design a synchronous series carry down counter. Connect $\overline{Q_o}$ to the next flip-flop input.

Design of Synchronous Counter

Step I: Determine the required number of flip-flop.

Step II: Draw the state diagram showing all possible states.

Step III: Select the type of flip-flop to be used and write the excitation table.

Step IV: Obtain the minimal expressions for the excitations of the FFs using the K-maps.

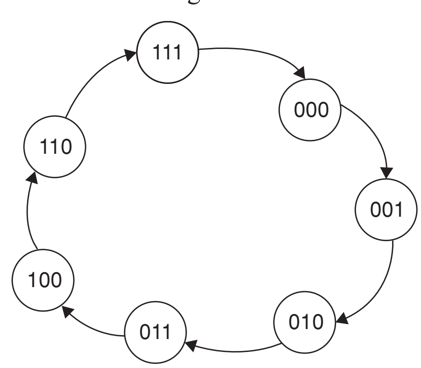
Step V: Draw a logic diagram based on the minimal expression. Let us employ these techniques to design a MOD-8 counter to count in the following.

Example 7: Sequence: 0, 1, 2, 3, 4, 5, 6, and 7. Design a synchronous counter by using JK flip-flops.

Solution:

Step I: Determine the required number of flip-flops. The sequence shows a 3-bit up counter that requires 3 flip-flops.

Step II: Draw the state diagram.

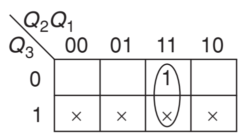


Step III: Select the type of flip-flop to be used and write the excitation table.

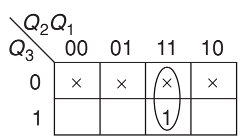
JK flip-flop is selected and excitation table of a 3-bit up counter is

PS	*NS*	Required Excitation
$Q_3\ Q_2\ Q_1$	$Q_3\ Q_2\ Q_1$	$J_3\ K_3\ J_2\ K_2\ J_1\ K_1$
0 0 0	0 0 1	0 x 0 x 1 x
0 0 1	0 1 0	0 x 1 x x 1
0 1 0	0 1 1	0 x x 0 1 x
0 1 1	1 0 0	1 x x 1 x 1
1 0 0	1 0 1	x 0 0 x 1 x
1 0 1	1 1 0	x 0 1 x x 1
1 1 0	1 1 1	x 0 x 0 1 x
1 1 1	0 0 0	x 1 x 1 x 1

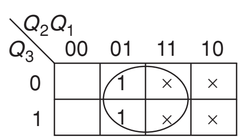
Step IV: Obtain the minimal expression using K-map.



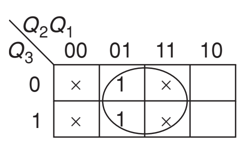
$J_3 = Q_2Q_1$



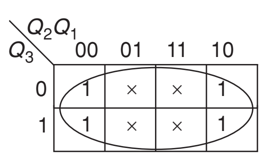
$K_3 = Q_2Q_1$



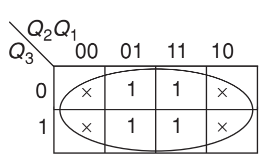
$J_2 = Q_1$



$K_3 = Q_1$



$J_1 = 1$



$K_1 = 1$

Step V: Draw the logic diagram based on the minimal expression.

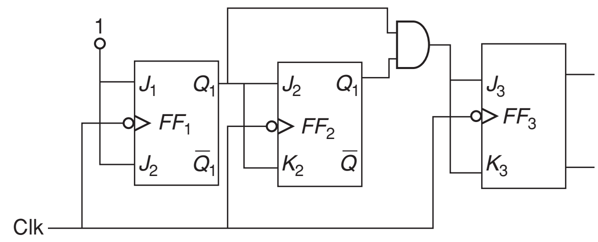


Table 11 *Comparison between asynchronous counter and synchronous counter*

Asynchronous Counter	Synchronous Counter
1. In this type of counter, flip-flops are connected in such a way that output of first flip-flop drives the clock for the next flip-flop	In this type there is no connection between output of first flip-flop and clock input of the next flip-flop
2. All the flip-flops are not clocked simultaneously	All the flip-flops are clocked simultaneously
3. Logic circuit is very simple even for more number of states	Design involves complex logic circuits as number of state increases
4. Main draw back of these counters is their low speed as the clock is propagated through number of flip-flops before it reaches last flip-flop	As clock is simultaneously given to all flip-flops, there is no problem of propagation delay. Hence they are preferred when number of flip-flops increases in the given design.

The main drawback of ripple counters is their high delays, if propagation delay of each flip-flop is assumed as x, then to get output of the first flip-flop it takes x, i.e., after x seconds the second flip-flop will get its clock pulse from previous stage, and output of second flip-flop will be out after another x seconds, similarly the final output of last flip-flop will be after nx seconds, where n is the number of flip-flops. So the propagation delay of ripple counter is nx, which is directly proportionate to the number of flip-flops.

The maximum frequency of operation of ripple counter is inverse of delay, $f_{\max} = \dfrac{1}{nx}$

Maximum operating frequency is the highest frequency at which a sequential circuit can be reliably triggered. If the clock frequency is above this maximum frequency the flip-flops in the circuit cannot respond quickly and the operation will be unreliable.

In case of synchronous counters (synchronous circuits) as clock is applied simultaneously to all the flip-flops, the output of all the flip-flops change by x seconds (delay of one flip-flop) and this delay is independent of number of flip-flops used in circuit.

The maximum frequency of operation of synchronous counter is inverse of delay $f_{\max} = \dfrac{1}{x}$

Example 8: The maximum operation frequency of a MOD-64 ripple counter is 33.33 kHz, the same flip-flops are used to design a MOD-32 synchronous counter, and then the maximum operating frequency of the new counter is

(A) 400 kHz (B) 200 kHz
(C) 40 kHz (D) 500 kHz

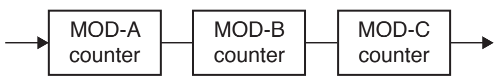
Solution: For ripple counter $f_{\max} = \frac{1}{nx}$, given is a MOD-64 ripple counter, i.e., 2^6 states, so $n = 6$ flip-flops are required.

$$x = \frac{1}{33.33K \times 6} = 5\mu S$$

For synchronous counter

$$f_{\max} = \frac{1}{x} = \frac{1}{5\ \mu S} = 0.2\ \text{MHz} = 200\ \text{kHz}$$

When multiple counters are connected in cascade, then the total number of states of the new counter is $A \times B \times C$, i.e., it will work as MOD-$A \times B \times C$ counter.



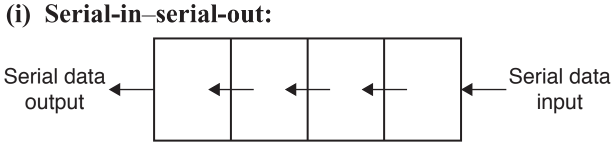
For example, decade counter counts from 0 to 9, 10 states – If two such decade counters are connected in cascade, then the total counting states will be 10 × 10 = 100, it will work as MOD-100 counter, which counts from 00 to 99.

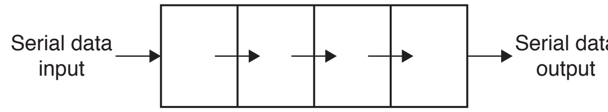
Registers

A number of flip-flops connected together such that data may be shifted into and shifted out of them is called a shift register. There are four basic types of shift register:

1. Serial-in–serial-out
2. Serial-in–parallel-out
3. Parallel-in–serial-out
4. Parallel-in–serial-out

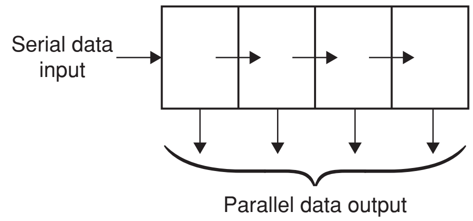
(i) Serial-in–serial-out:



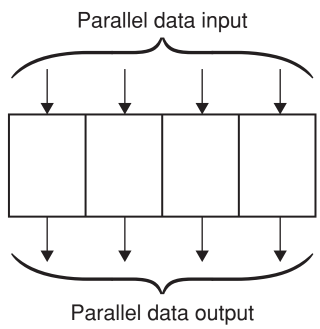


Serial-in–serial-out right-shift register

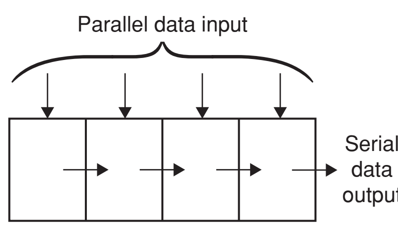
(ii) Serial-in–parallel-out:



(iii) Parallel-in–parallel-out:



(iv) Parallel-in–serial-out:



Serial input and serial output register: This type of shift register accepts data serially, i.e., one bit at a time and also outputs data serially. The logic diagram of 4-bit serial input, serial output, shift-right, shift register is shown in the following figure. With four D flip-flops the register can store up to four bits of data.

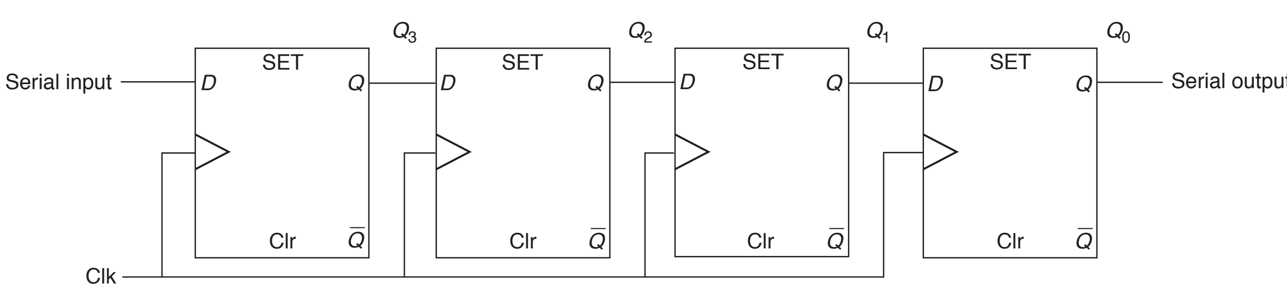


Figure 18 Serial input and serial output register

If initially, all flip-flops are reset, then by applying serial input 1101, the flip-flop states will change as shown in below table.

Clk	S.I	Q_3	Q_2	Q_1	Q_0
0	1	0	0	0	0
1	0	1	0	0	0
2	1	0	1	0	0
3	1	1	0	1	0
4		1	1	0	1

The first data bit 1 will appear at serial output after 4 clock pulses.

Application of Shift Registers

1. Delay line: Serial input and serial output shift register can be used to introduce delay in digital signals.
$$\text{Delay} = \text{no.of flip-flops} \times \frac{1}{\text{Clk frequency}} = \text{No. of}$$
flip-flops × time period of clock pulse
2. Serial to parallel, parallel to serial converter: SIPO, PISO registers used for data conversion.
3. Sequence generator: A circuit, which generates a prescribed sequence of bits, with clock pulses is called as sequence generator
The minimum number of flip-flops 'n' required to generate a sequence of length 'S' bits is given by $S \le 2^n - 1$

Shift register counters

One of the applications of the shift register is that they can be arranged to work as ring counters. Ring counters are constructed by modifying the serial-in, serial-out, shift registers. There are two types of ring counters—basic ring counter and twisted ring counter (Johnson counter). The basic ring counter is obtained from SISO shift register by connecting serial output to serial input.

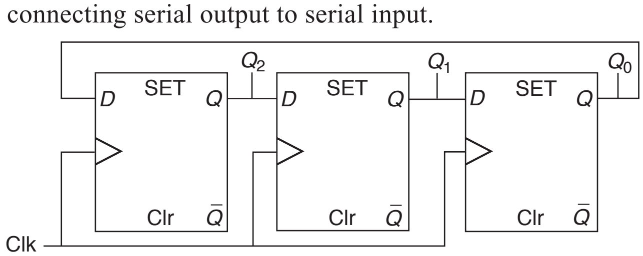

Figure 19 Ring counter

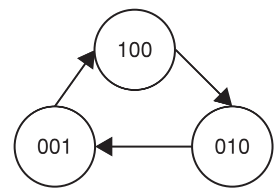
In most instances, only a single 1 or single 0 is in the register and is made to circulate around the register as long as the clock pulses are applied. Consider initially first flip-flop is set, and others are reset. After 3 clock pulses, again we will get initial state of 100. So this is a MOD-3 counter.

Clk	Q_2	Q_1	Q_0
0	1	0	0
1	0	1	0
2	0	0	1
3	1	0	0
4	0	1	0



A ring counter with N flip-flops can count up to N states, i.e., MOD-N counter, whereas, N-bit asynchronous counter can count up to 2^N states. So, ring counter is uneconomical compared to a ripple counter, but has the advantage of requiring no decoder. Since it is entirely synchronous operation and requires no gates for flip-flop inputs, it has further advantage of being very fast.

Twisted ring counter (Johnson counter): This counter is obtained from a SISO shift register by connecting the complement of serial output to serial input as shown in below figure.

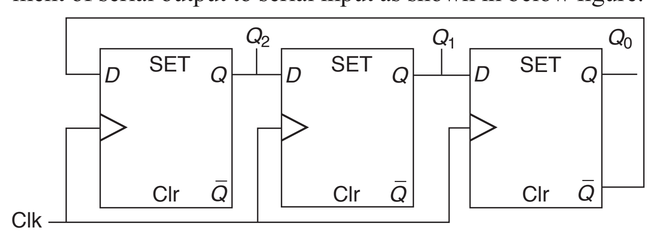


Figure 20 Twisted Ring Counter

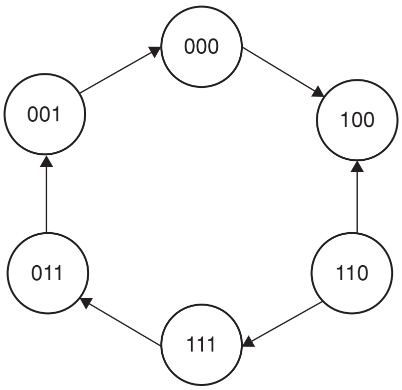
Let initially all the FFs be reset, after each clock pulse the complement of last bit will appear as at MSB, and other bits shift right side by 1-bit. After 6 clock pulses the register will come to initial state 000. Similarly, the 3-bit Johnson counter will oscillate between the states 101, 010.

Clk	Q_2	Q_1	Q_0
0	0	0	0
1	1	0	0
2	1	1	0
3	1	1	1
4	0	1	1
5	0	0	1
6	0	0	0



An n-bit Johnson counter can have $2n$ unique states and can count up to $2n$ pulses, so it is a MOD-$2n$ counter. It is more economical than basic ring counter but less economical than ripple counter.

Solved Examples

Example 1: Assume that 4-bit counter is holding the count 0101. What will be the count after 27 clock pulses?

Solution: Total clock pulses: 27 = 16 + 11
0101 + 1011 = 0000

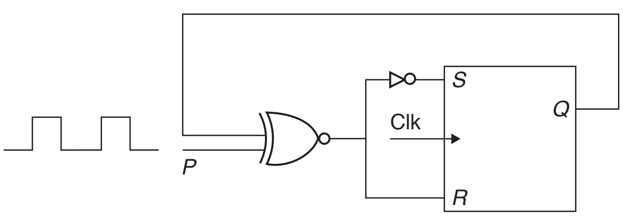
Example 2: A MOD-2 counter followed by MOD-5 counter is

Solution: A decade counter, counts 10 states (5×2).

Example 3: A 4-bit binary ripple counter uses flip-flops with propagation delay time of 25 msec each. The maximum possible time required for change of state will be

Solution: The maximum time = 4×25 ms = 100 ms

Example 4: Consider the circuit, the next state Q^+ is



Solution

P	Q	S	R	Q^+
0	0	0	1	0
0	1	1	0	1
1	0	1	0	1
1	1	0	1	0

So, $Q^+ = P \oplus Q$

Example 5: A certain JK FF has $t_{pd} = 12\ n$ sec what is the largest MOD counter, that can be constructed from these FF and still operate up to 10 MHz?

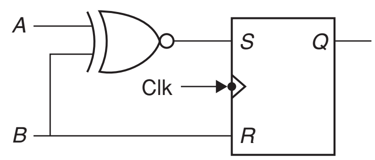
Solution: $N \le \dfrac{1}{f_{\max} \cdot t_{pd}}$

$f_{\max} = 10$ MHz $\;N \le 8$
$t_{pd} = 12$ ns

$$N \le \frac{1}{10 \times 10^6 \times 12 \times 10^{-9}}$$

MOD counter is $= 2^N = 2^8 = 256$

Example 6: An AB flip-flop is constructed from an SR flip-flop as shown below. The expression for next state Q^+ is

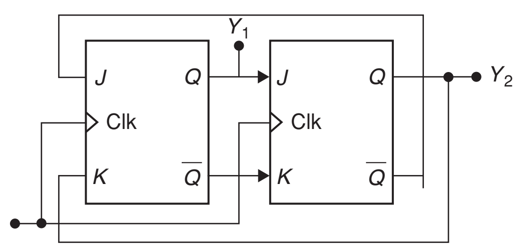


Solution:

A	B	Q	S	R	Q^+
0	0	0	1	0	1
0	0	1	1	0	1
0	1	0	0	1	0
0	1	1	0	1	0
1	0	0	0	0	0
1	0	1	0	0	1
1	1	0	1	1	×
1	1	1	1	1	×

$\therefore Q^+ = \overline{A}\overline{B} + AQ = \overline{A}\overline{B} + \overline{B}Q$

Example 7: In the circuit shown below, the output y_1 and y_2 for the given initial condition $y_1 = y_2 = 1$ and after four input pulses will be



Solution:
After 1st pulse $y_1 = 0, y_2 = 1$
After 2nd pulse $y_1 = 0, y_2 = 0$
After 3rd pulse $y_1 = 1, y_2 = 0$
After 4th pulse $y_1 = 1, y_2 = 1$

Example 8: A ripple counter is to operate at a frequency of 10 MHz. If the propagation delay time of each flip-flop in the counter is 10 ns and the storbing time is 50 ns, how many maximum stages can the counter have?

Solution: $nt_{pd} + t_s \le \frac{1}{f}$

where, n = number of stages

t_{pd} = propagation delay time

t_s = strobing time

f = frequency of operation = $10 \times 10^{-9}n + 50 \times 10^{-9}$

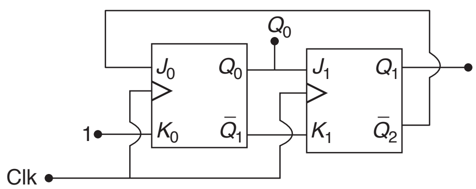
$$\le \frac{1}{10 \times 10^6}$$

(or) $10n + 50 \le 100$

(or) $10n \le 50$

For max stages $n = \frac{50}{10} = 5$

Example 9: In the circuit assuming initially $Q_0 = Q_1 = 0$. Then the states of Q_0 and Q_1 immediately after the 33rd pulse are

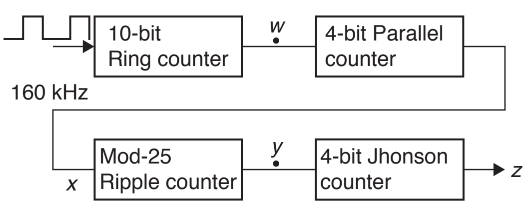


Solution:

J_0	K_0	J_1	K_1	Q_0	Q_1	Count
1	1	0	1	0	0	Initial
1	1	1	0	1	0	1st pulse
0	1	0	1	0	1	2nd
1	1	0	1	0	0	3rd
1	1	1	0	1	0	4th
0	1	0	1	0	1	5th pulse

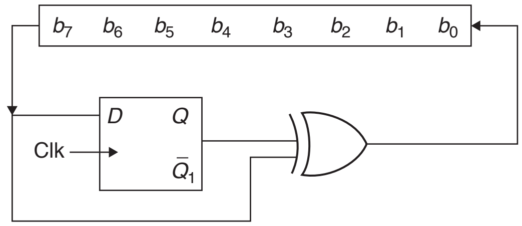
After 4th pulse, output is same as after 1st one, so, sequence gets repeated. So output after 33rd pulse would be same as after 3rd pulse. i.e., (00).

Example 10: The frequency of the pulse at z in the network shown in figure is



Solution: 10-bit ring counter is a MOD-10. So, it divides the 160 kHz input by 10. Therefore, w = 16 kHz. The 4-bit parallel counter is a MOD-16. Thus, the frequency at x = 1 kHz. The MOD-25 ripple counter produces a frequency at y = 40 Hz (1 kHz/25 = 40 Hz). The 4-bit Johnson counter is a MOD-8. The frequency at Z = 5Hz.

Example 11: The 8-bit shift left shift register, and D flip-flop shown in the figure is synchronized with the same clock. The D flip-flop is initially cleared. The circuit acts as



Solution: The output of XOR gate is $Z = b_{i+1} \oplus b_i$ and this output shift the register to left. Initially, $Z = 0$

After 2nd clock $Z = b_7 \oplus 0 = b_7$

After 2nd clock $Z = b_7 \oplus b_6$

3rd clock $Z = b_6 \oplus b_5$

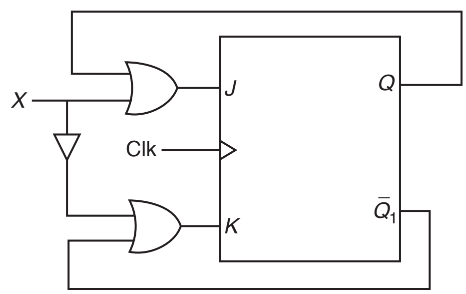
4th clock $Z = b_5 \oplus b_4$

It is a binary to gray code converter.

Example 12: A 4-bit MOD-16 ripple counter uses JK flip-flops. If the propagation delay of each flip-flop is 50 ns sec, the maximum clock frequency that can be used is equal to

Solution: Max = clock frequency $= \frac{1}{4 \times 50 \times 10^{-9}}$ = 5 MHz

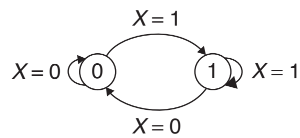
Example 13: What is the state diagram for the sequential circuit shown?



(A) 
(B) 
(C) 
(D) 
Solution: (D)

State diagram of a sequential circuit will have states (output) of all the flip-flops.

Present state	Next state	Q_{n+1}
Q_n	For $x = 0$	For $x = 1$
0	0	1
1	0	1



Exercises

Practice Problems I

Directions for questions 1 to 22: Select the correct alternative from the given choices.

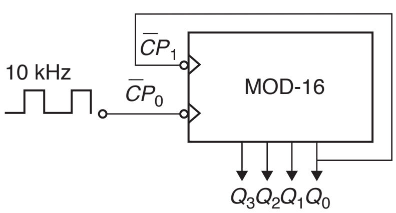
1. How many flip-flops are needed for MOD-16 ring counter and MOD-16 Johnson counter?

(A) 16, 16 (B) 16, 8
(C) 4, 3 (D) 4, 4

2. A 2-bit synchronous counter uses flip-flops with propagation delay time of 25 n sec, each. The maximum possible time required for change of state will be

(A) 25 n sec (B) 50 n sec
(C) 75 n sec D) 100 n sec

3. For given MOD-16 counter with a 10 kHz clock input determine the frequency at Q_3

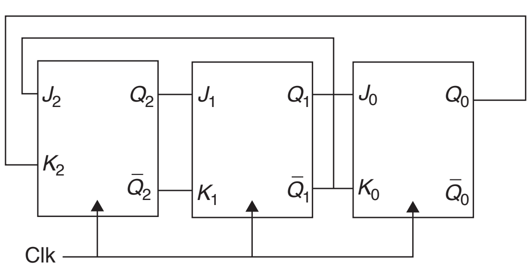


(A) 625 Hz (B) 10 kHz
(C) 2.5 kHz (D) 0 Hz

4. A 4-bit ripple counter and a 4-bit synchronous counter are made using flip-flops having a propagation delay of 10 n sec each. If the worst case delay in the ripple counter and the synchronous counter be R and S, respectively, then

(A) $R = 10$ ns, $S = 40$ ns (B) $R = 40$ ns, $S = 10$ ns
(C) $R = 10$ ns, $S = 30$ ns (D) $R = 30$ ns, $S = 10$ ns

5. The counter shown in the figure has initially $Q_2Q_1Q_0 = 000$. The status of $Q_2Q_1Q_0$ after the first pulse is

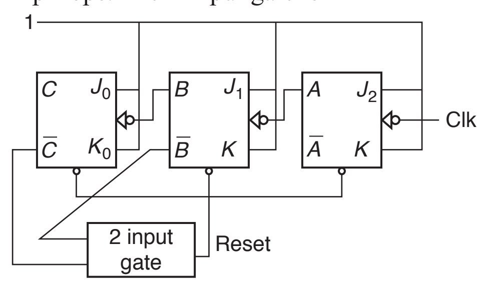


(A) 001 (B) 010
(C) 100 (D) 101

6. 12 MHz clock frequency is applied to a cascaded counter of MOD-3 counter, MOD-4 counter and MOD-5 counter. The lowest output frequency is

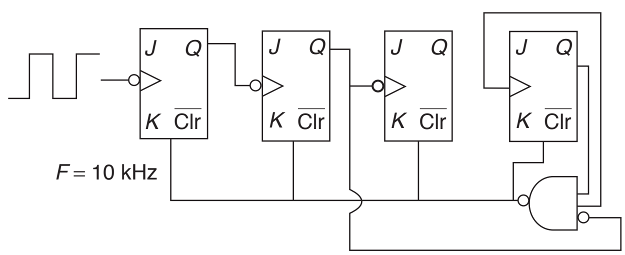
(A) 200 kHz (B) 1 MHz
(C) 3 MHz (D) 4 MHz

7. In the modulo-6 ripple counter shown in the figure below, the output of the 2-input gate is used to clear the JK flip-flops. The 2-input gate is



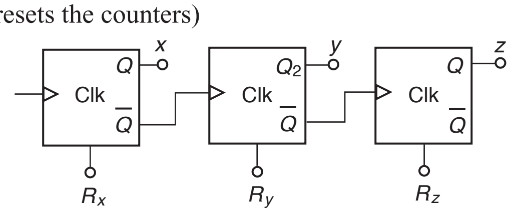
(A) a NAND gate (B) a NOR gate
(C) an OR gate (D) an AND gate

8. In figure, J and K inputs of all the 4 flip-flops are made high, the frequency of the signal at output y is

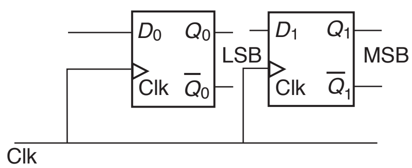


(A) 0.833 kHz (B) 1.0 kHz
(C) 0.91 kHz (D) 0.77 kHz

9. In a number system a counter has to recycle to 0 at the sixth count. Which of the connections indicated below will realize this resetting? (a logic '0' at the R inputs resets the counters)



(A) 
(B) 
(C) 
(D) 
10. Two D flip-flops, as shown below, are to be connected as a synchronous counter that goes through the following Q_1Q_0 sequence $00 \rightarrow 01 \rightarrow 11 \rightarrow 10 \rightarrow 00$. The inputs D_0 and D_1 respectively should be connected as



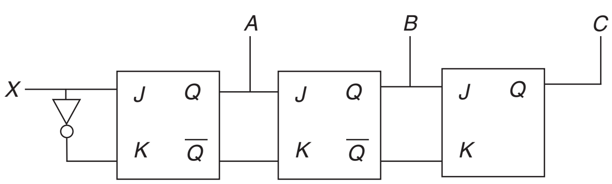
(A) $\overline{Q}_0$ and Q_1 (B) $\overline{Q}_0$ and Q_1

(C) $\overline{Q}_1\overline{Q}_0$ and $\overline{Q}_1Q_0$ (D) $\overline{Q}_1\overline{Q}_0$ and $\overline{Q}_1Q_0$

11. N flip-flops can be used to divide the input clock frequency by

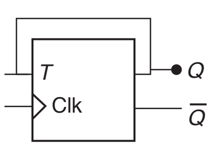
(A) N (B) $2N$
(C) 2^N (D) 2^{N-1}

12. For a shift register as shown, $x = 1011$, with initially FF cleared, ABC will have value of after 3 clock pulses



(A) 101 (B) 011
(C) 001 (D) 111

13. If a FF is connected as shown what will be the output? (initially $Q = 0$)



(A) 11111 (B) 0000
(C) 1010 (D) 0101

14. The excitation table for a FF whose output conditions are if $AB = 00$, no change of state occurs
$AB = 01$, FF becomes 1 with next clock pulse
$AB = 10$, FF becomes 0 with next clock pulse
$AB = 11$, FF changes its state

(A)

Q_n	Q_{n+1}	A	B
0	0	0	x
0	1	1	x
1	0	x	1
1	1	x	0

(B)

Q_n	Q_{n+1}	A	B
0	0	1	x
0	1	0	x
1	0	x	0
1	1	x	1

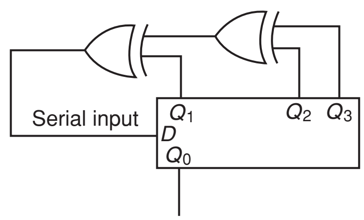
(C)

Q_n	Q_{n+1}	A	B
0	0	x	0
0	1	x	1
1	0	x	x
1	1	0	x

(D)

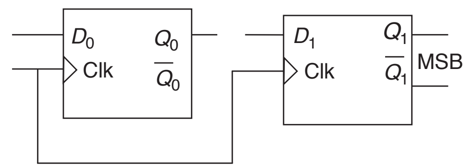
Q_n	Q_{n+1}	A	B
0	0	x	0
0	1	1	x
1	0	x	1
1	1	0	x

15. A shift register that shift the bits 1 position to the right at each clock pulse is initialized to 1100 (Q_0, Q_1, Q_2, Q_3). The outputs are combined using an XOR gate circuit and fed to the D input. After which clock pulse, will the initial pattern reappear at the output?



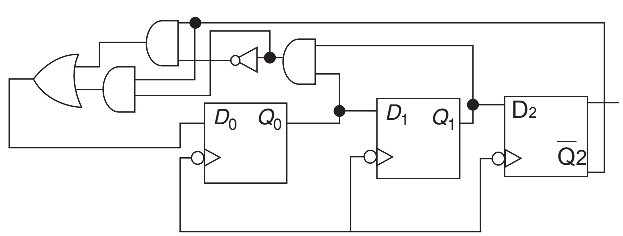
(A) 6th (B) 5th
(C) 4th (D) 7th

16. If we need to design a synchronous counter that goes through the states $00 \rightarrow 01 \rightarrow 11 \rightarrow 10 \rightarrow 00$ using D FF, what should be the input to the FF?



(A) $D_0 = Q_0, D_1 = \overline{Q}_1$
(B) $D_0 = \overline{Q}_1, D_1 = Q_0$
(C) $D_0 = \overline{Q}_1 \cdot Q_0,\ D_1 = \overline{Q}_1\overline{Q}_0$
(D) $D_0 = \overline{Q}_0,\ D_1 = Q_1$

17. Find the counter state sequence (Assume Q_0 as MSB).

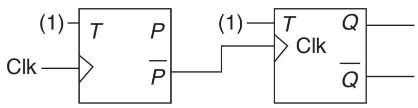


(A) 4, 6, 7, 3, 1, 0, 4 (B) 4, 6, 5, 3, 1, 0, 4
(C) 4, 5, 6, 7, 0, 4, 5 (D) 4, 6, 7, 1, 0, 4

18. If the propagation delay of each FF is 50 ns, and for the AND gate to be 20 ns. What will be the f_{max} for MOD-32 ripple and synchronous counters?

(A) 14.3 MHz, 4 MHz (B) 14.3 MHz, 5 MHz
(C) 5 MHz, 14.3 MHz (D) 3.7 MHz, 14.3 MHz

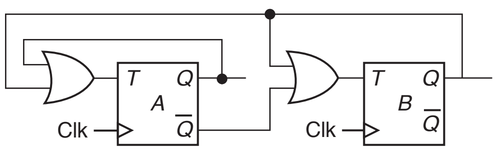
19. For a given counter identify its behavior



The output is taken from *PQ*.

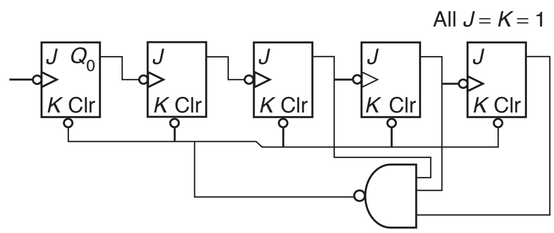
(A) MOD-4 up counter
(B) MOD-2 down counter
(C) MOD-4 down counter
(D) MOD-2 up counter

20. A circuit using *T* FF is given. Identify the circuit.



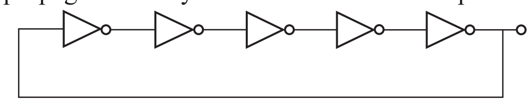
(A) MOD-2 counter
(B) MOD-4 counter
(C) MOD-3 counter
(D) MOD-2 generate 00, 10, 00

21. The MOD number of asynchronous counter shown



(A) 24 (B) 48
(C) 29 (D) 28

22. For the oscillator, find the fundamental frequency if propagation delay of each inverter is 1000 psec.



(A) 100 MHz (B) 10 MHz
(C) 1 GHz (D) 10 GHz

Practice Problems 2

Directions for questions 1 to 30: Select the correct alternative from the given choices.

1. Match List 1 (operation) with List 2 (associated device) and select the correct answer using the codes given below:

List 1	List 2
(a) Frequency Ddivision	(1) ROM
(b) Decoding	(2) Multiplexer
(c) Data selection	(3) Demultiplexer
(d) Code conversion	(4) Counter

(A) a–3, b–4, c–2, d–1
(B) a–3, b–4, c–1, d–2
(C) a–4, b–3, c–1, d–2
(D) a–4, b–3, c–2, d–1

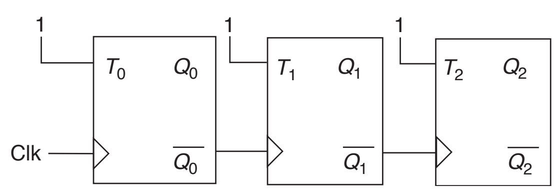
2. A MOD-5 synchronous counter is designed by using JK flip-flop, the number of counts skipped by it will be

(A) 2 (B) 3
(C) 5 (D) 0

3. A counter starts off in the 0000 state, then clock pulses are applied. Some time later the clock pulses are removed and the counter flip-flops read 0011. How many clock pulses have occurred?

(A) 3 (B) 35
(C) 51 (D) Any of these

4. Figure below shown as ripple counter using positive edge triggered flip-flops. If the present state of the counters is $Q_2\,Q_1\,Q_0 = 011$, then its next state ($Q_2Q_1Q_0$) will be

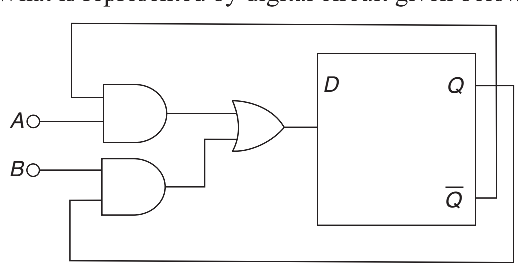


(A) 010 (B) 100
(C) 111 (D) 101

5. A synchronous sequential circuit is designed to detect a bit sequence 0101 (overlapping sequence include). Every time, this sequence is detected, the circuit produces output of 1. What is the minimum number of states the circuit must have?

(A) 4 (B) 5
(C) 6 (D) 7

6. What is represented by digital circuit given below?



(A) An SR flip-flop with $A = S$ and $B = R$
(B) A JK flip-flop with $A = K$ and $B = J$
(C) A JK flip-flop with $A = J$ and $B = \bar{K}$
(D) An SR flip-flop with $A = R$ and $B = S$

7. In a ripple counter, the state whose output has a frequency equal to $\frac{1}{8}$th that of clock signal applied to the first stage, also has an output periodically equal to $\frac{1}{8}$th that of the output signal obtained form the last stage. The counter is
(A) MOD-8 (B) MOD-6
(C) MOD-64 (D) MOD-16

8. A flip-flop is popularly known as
(A) Astable multivibrator
(B) Bistable multivibrator
(C) Monostable multivibrator
(D) None of these

9. Which of the following represents the truth table for JK flip-flop?

(A)

J	K	Output
0	0	Q_0
0	1	0
1	0	1
1	1	$\bar{Q}_0$

(B)

J	K	Output
0	0	$\bar{Q}_0$
0	1	0
1	0	1
1	1	Q_0

(C)

J	K	Output
0	0	Q_0
0	1	0
1	0	1
1	1	Invalid

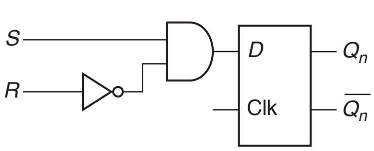
(D)

J	K	Output
0	0	1
0	1	0
1	0	1
1	1	0

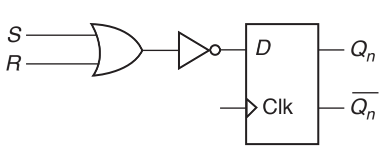
10. One disadvantage of master-slave FF is
(A) setup time becomes longer.
(B) it requires input to be held constant before clock transition.
(C) unpredictable output even if input held constant.
(D) hold time becomes longer.

11. Which of the following converts D FF to SR FF?

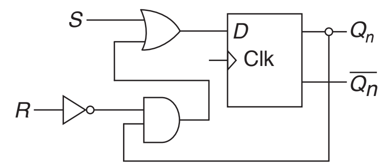
(A)



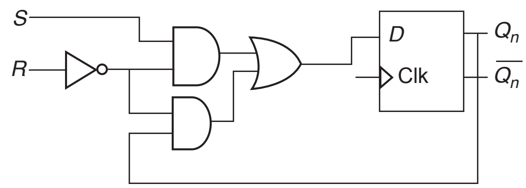
(B)



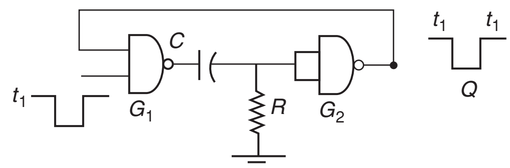
(C)



(D)



12. Which of the circuit is being represented by the figure?



(A) NAND gate
(B) Monostable multivibrator
(C) Astable multivibrator
(D) Schmitt trigger

13. Hold time is
(A) time for which output is held constant.
(B) time for which clock is to be held constant on applying input.
(C) time for which input should be maintained constant after the triggering edge of clock pulse.
(D) time for which input should be maintained constant prior to the arrival of triggering edge of clock pulse.

14. Shift registers are made up of
(A) MOS inverters (B) FF
(C) Latches (D) None of these

15. Data from a satellite is received in serial form. If the data is coming at 8 MHz rate, how long will it take to serially load a word in 40-bit shift register?
(A) 1.6 μs (B) 5 μs
(C) 6.4 μs (D) 12.8 μs

16. A JK FF can be converted into T FF by connecting
(A) $\bar{Q}$ to 0
(B) 0 to $\bar{Q}$
(C) 0 to Q
(D) by connecting both J and K inputs to T

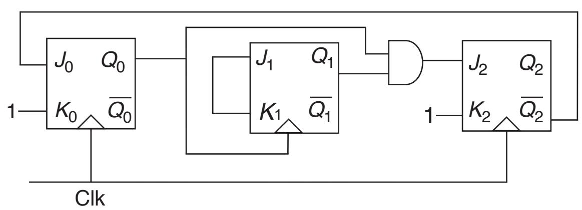
17. The flip-flop that is not affected by race around condition
(A) T FF (B) JK FF
(C) SR FF (D) None of these

18. The characteristic equation of JK FF is
(A) $J'Q(t) + KQ'(t)$ (B) $J'Q(t) + KQ(t)$
(C) $JQ'(t) + K'Q(t)$ (D) None of these

19. For a D.FF input, the s $\overline{Q}$ is connected. What would be the output sequence?
(A) 0000 (B) 1111
(C) 010101 (D) 101010

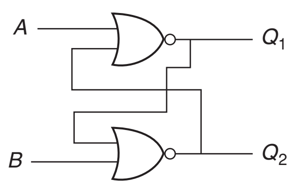
20. In order to implement a MOD-6 synchronous counter we have 3 FF and a combination of 2 input gate(s). Identify the combination circuit.
(A) One AND gate
(B) One OR gate
(C) One AND and one OR gate
(D) Two AND gates

21. Given a MOD-5 counter. The valid states for the counter are (0, 1, 2, 3, 4). The propagation delay of each FF is T_F and that of AND gate is t_A. The maximum rate at which counter will operate satisfactorily



(A) $\dfrac{1}{t_F + t_A}$ (B) $\dfrac{1}{3t_F}$
(C) $\dfrac{1}{2t_F + t_A}$ (D) $\dfrac{1}{3t_F - t_A}$

22. For a NOR latch as shown up A and B are made first (0, 1) and after a few seconds it is made (1, 1). The corresponding output (Q_1, Q_2) are



(A) first (1, 0) then (0, 0)
(B) first (1, 0) then (1, 0)
(C) first (1, 0) then (1, 1)
(D) first (1, 0) then (0, 1)

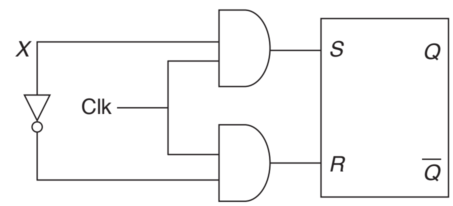
23. In order to design a pulse generator to generate the wave form using a shift register, what is the number of FF required?

(A) 3 (B) 4
(C) 5 (D) 6

24. For what minimum value of propagation delay in each FF will a 10-bit ripple counter skip a count when it is clocked at 5 MHz?
(A) 10 ns (B) 20 ns
(C) 25 ns (D) 15 ns

25. A divide by 50 counter can be realized by using
(A) 5 no. of MOD-10 counter
(B) 10 no. of MOD-5 counter
(C) One MOD-5 counter followed by one MOD-10 counter
(D) 10 no. of MOD-10 counter

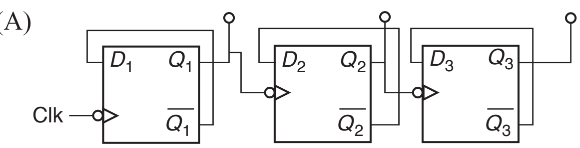
26. The following latch is



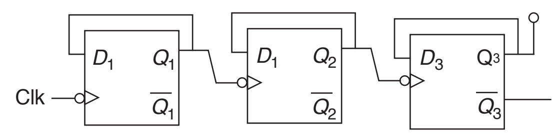
(A) D latch (B) T latch
(C) JK latch (D) RS latch

27. Which of the following represent a 3-bit ripple counter using D FF?

(A)

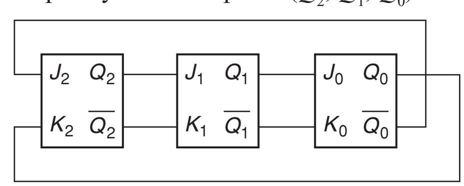


(B)



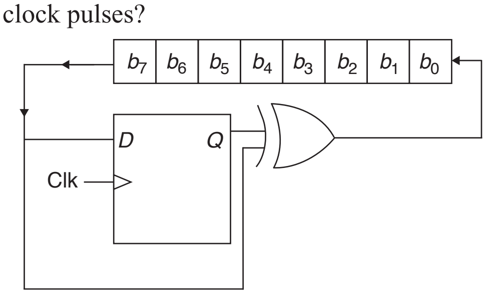
(C) Both (A) and (B)
(D) None of these

28. For the Johnson counter with initial Q_2, Q_1, Q_0 as 101, the frequency of the output is (Q_2, Q_1, Q_0)



(A) $\dfrac{f_c}{8}$ (B) $\dfrac{f_c}{6}$
(C) $\dfrac{f_c}{2}$ (D) $\dfrac{f_c}{4}$

29. For the given circuit the contents of register ($b_7 - b_0$) are 10010101, what will be the register contents after 8 clock pulses?



(A) 10010101 (B) 01101010
(C) 11011111 (D) 01101011

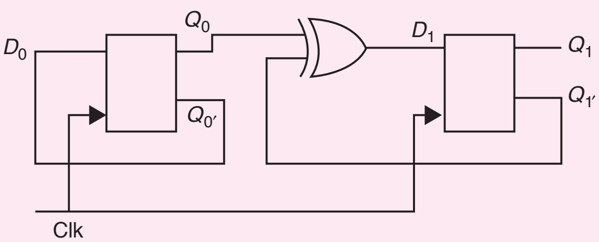
30. A latch is to be build with A and B as input. From the table find the expression for the next state Q^+

A	B	Q	Q+
0	0	0	0
0	0	1	0
0	1	0	0
0	1	1	0
1	0	0	1
1	0	1	1
1	1	0	1
1	1	1	1

(A) A
(B) B
(C) $A+\overline{B}$
(D) $A\overline{B}+AB$

Previous Years' Questions

1. Consider the following circuit.

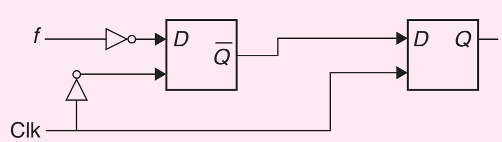


The flip-flops are positive edge triggered D FFs. Each state is designated as a 2-bit string Q_0Q_1. Let the initial state be 00. The state transition sequence is **[2005]**

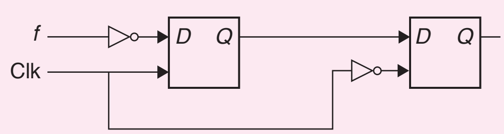
(A) 00 → 11 → 01
(B) 00 → 11
(C) 00 → 11 → 01 → 11
(D) 00 → 11 → 01 → 10

2. You are given a free running clock with a duty cycle of 50% and a digital waveform f which changes only at the negative edge of the clock. Which one of the following circuits (using clocked D flip-flops) will delay the phase of f by 180°? **[2006]**

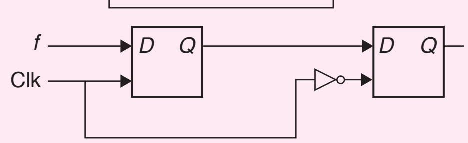
(A)



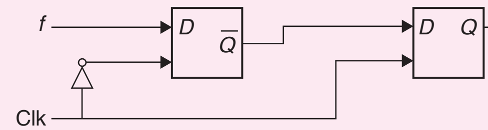
(B)



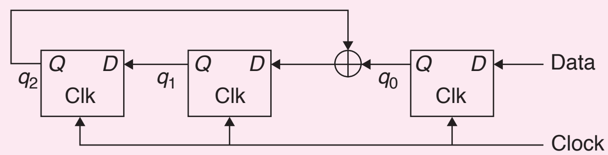
(C)



(D)



3. Consider the circuit in the diagram. The ⊕ operator represents Ex-OR. The D flip-flops are initialized to zeros (cleared). **[2006]**



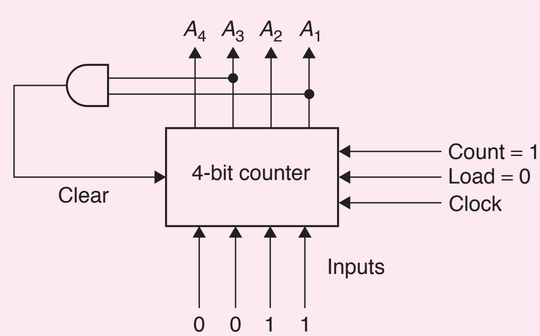
The following data: 100110000 is supplied to the data terminal in 9 clock cycles. After that the values of $q_2q_1q_0$ are

(A) 000 (B) 001
(C) 010 (D) 101

4. The control signal functions of a 4-bit binary counter are given below (where X is 'don't care'):

Clear	Clock	Load	Count	Function
1	X	X	X	Clear to 0
0	X	0	0	No change
0	↑	1	X	Load input
0	↑	0	1	Count next

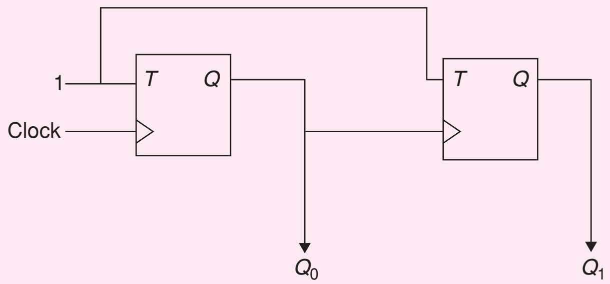
The counter is connected as follows:



Assume that the counter and gate delays are negligible. If the counter starts at 0, then it cycles through the following sequence: **[2007]**

(A) 0, 3, 4 (B) 0, 3, 4, 5
(C) 0, 1, 2, 3, 4 (D) 0, 1, 2, 3, 4, 5

5. In the sequential circuit shown below, if the initial value of the output Q_1Q_0 is 00, what are the next four values of Q_1Q_0? **[2010]**

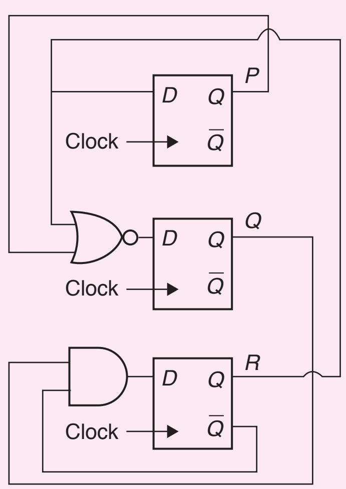


(A) 11, 10, 01, 00 (B) 10, 11, 01, 00
(C) 10, 00, 01, 11 (D) 11, 10, 00, 01

6. The minimum number of *D* flip-flops needed to design a MOD-258 counter is **[2011]**

(A) 9 (B) 8
(C) 512 (D) 258

Common Data for Questions 7 and 8: Consider the following circuit involving three D-type flip-flops used in a certain type of counter configuration.



7. If all the flip-flops were reset to 0 at power on, what is the total number of distinct outputs (states) represented by PQR generated by the counter? **[2011]**

(A) 3 (B) 4
(C) 5 (D) 6

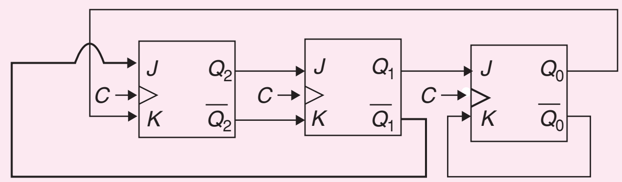
8. If at some instance prior to the occurrence of the clock edge, *P*, *Q*, and *R* have a value 0, 1, and 0, respectively, what shall be the value of PQR after the clock edge? **[2011]**

(A) 000 (B) 001
(C) 010 (D) 011

9. Let $K = 2^n$. A circuit is built by giving the output of an n-bit binary counter as input to an n-to-2^n-bit decoder. This circuit is equivalent to a **[2014)**

(A) K-bit binary up counter
(B) K-bit binary down counter
(C) K-bit ring counter
(D) K-bit Johnson counter

10.



The above synchronous sequential circuit built using *JK* flip-flops is initialized with $Q_2Q_1Q_0 = 000$. The state sequence for this circuit for the next 3 clock cycles is **[2014]**

(A) 001, 010, 011 (B) 111, 110, 101
(C) 100, 110,111 (D) 100, 011, 001

11. Consider a 4-bit Johnson counter with an initial value of 0000. The counting sequence of this counter is **[2015]**

(A) 0, 1, 3, 7, 15, 14, 12, 8, 0
(B) 0, 1, 3, 5, 7, 9, 11, 13, 15, 0
(C) 0, 2, 4, 6, 8, 10, 12, 14, 0
(D) 0, 8, 12, 14, 15, 7, 3, 1, 0

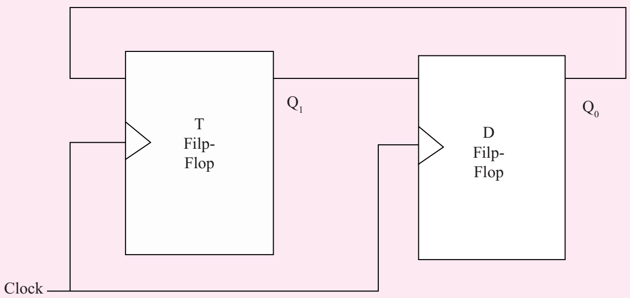
12. A positive edge-triggered D–flip-flop is connected to a positive edge-triggered JK flip-flop as follows. The *Q* output of the D flip-flop is connected to both the *J* and *K* inputs of the JK flip-flop, while the *Q* output of the JK flip-flop is connected to the input of the D flip-flop. Initially, the output of the D flip-flop is set to logic one and the output of the JK flip-flop is cleared. Which one of the following is the bit sequence (including the initial state) generated at the *Q* output of the JK flip-flop when the flip-flops are connected to a free-running common clock? Assume that $J = K = 1$ is the toggle mode and $J = K = 0$ is the state-holding mode of the JK flip-flop. Both the flip-flops have non-zero propagation delays. **[2015]**

(A) 0110110… (B) 0100100…
(C) 011101110… (D) 011001100…

13. The minimum number of JK flip-flops required to construct a synchronous counter with the count sequence (0, 0, 1, 1, 2, 2, 3, 3, 0, 0, …) is _______ **[2015]**

14. We want to design a synchronous counter that counts the sequence 0-1-0-2-0-3 and then repeats. The minimum number of *J-K* flip-flops required to implement this counteris ______ . **[2016]**

15. Consider a combination of T and D flip-flops connected as shown below. The output of the D flip-flop is connected to the input of the T flip-flop and the output of the T flip-flop is connected to the input of the D flip-flop.



Initially, both Q_0 and Q_1 are set to 1 (before the 1st clock cycle). The outputs **[2017]**

(A) $Q_1 Q_0$ after the 3rd cycle are 11 and after the 4th cycle are 00 respectively

(B) $Q_1 Q_0$ after the 3rd cycle are 11 and after the 4th cycle are 01 respectively

(C) $Q_1 Q_0$ after the 3rd cycle are 00 and after the 4th cycle are 11 respectively

(D) $Q_1 Q_0$ after the 3rd cycle are 01 and after the 4th cycle are 01 respectively

16. The next state table of a 2-bit saturating up-counter is given below.

Q_1	Q_0	Q_1^+	Q_0^+
0	0	0	1
0	1	1	0
1	0	1	1
1	1	1	1

The counter is built as a synchronous sequential circuit using T flip-flops. The expressions for T_1 and T_0 are **[2017]**

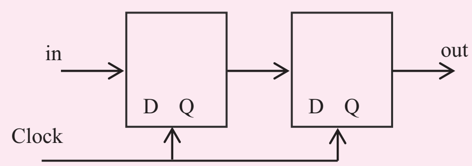
(A) $T_1 = Q_1 Q_0,$ $\quad T_0 = \overline{Q}_1 \overline{Q}_0$

(B) $T_1 = \overline{Q}_1 Q_0,$ $\quad T_0 = \overline{Q}_1 + \overline{Q}_0$

(C) $T_1 = Q_1 + Q_0,$ $\quad T_0 = \overline{Q}_1 + \overline{Q}_0$

(D) $T_1 = \overline{Q}_1 Q_0,$ $\quad T_0 = Q_1 + Q_0$

17. Consider the sequential circuit shown in the figure, where both flip-flops used are positive edge-triggered D flip-flops.



The number of states in the state transition diagram of this circuit that have a transition back to the same state on some value of "in" is ______. **[2018]**

TEST

DIGITAL LOGIC

Time: 60 min.

Directions for questions 1 to 30: Select the correct alternative from the given choices.

1. What is the range of signed decimal numbers that can be represented by 4-bit 1's complement notation?
(A) –7 to + 7 (B) –16 to +16
(C) –7 to +8 (D) –15 to +16

2. Which of the following signed representation have a unique representation of 0?
(A) Sign-magnitude (B) 1's complement
(C) 0's complement (D) 2's complement

3. Find the odd one out among the following
(A) EBCDIC (B) GRAY
(C) Hamming (D) ASCII

4. Gray code for number 8 is
(A) 1100 (B) 1111
(C) 1000 (D) 1101

5. Find the equivalent logical expression for $z = x + \bar{x}y$
(A) $z = x\underline{y}$ (B) $Z = \bar{x}y$
(C) $Z = \bar{x} + y$ (D) $Z = x + y$

6. The number of distinct Boolean expression of 3 variables is
(A) 256 (B) 16
(C) 1024 (D) 65536

7. The Boolean expression for the truth table shown is

X	*Y*	*Z*	*F*
0	0	0	0
0	0	1	0
0	1	0	0
0	1	1	1
1	0	0	0
1	0	1	0
1	1	0	1
1	1	1	0

(A) $\underline{Y}(X + Z)(\bar{X} + \bar{Z})$ (B) $Y(X + \bar{Z})(\bar{x} + Z)$
(C) $\bar{Y}(X + \bar{Z})(\bar{x} + Z)$ (D) $\bar{Y}(X + Z)(\bar{X} + \bar{Z})$

8. The number of essential prime implicants for the Boolean functions shown in the given K-map.

XY \ WZ	00	01	11	10
00	1	1	0	1
01	1	0	0	1
11	1	0	0	0
10	1	0	0	1

(A) 4 (B) 5
(C) 6 (D) 8

9. The number of product terms in the minimized SOP from is

1	0	0	1
0	*D*	0	0
0	0	*D*	1
1	0	0	1

(A) 2 (B) 4
(C) 5 (D) 3

10. The minimum number of 2 input NAND gates needed to implement $Z = XY + VW$ is
(A) 2 (B) 3
(C) 4 (D) 5

11. The operation $\bar{a} \oplus \bar{b}$ represents
(A) $ab + \bar{a}\,\bar{b}$ (B) $\bar{a}b + \overline{ab}$
(C) $a\bar{b} + \bar{a}b$ (D) $a - \bar{b}$

12. Find the dual of $X + [Y + XZ] + U$
(A) $X + [Y(X + Z)] + U$ (B) $X(Y + XZ)U$
(C) $X + [Y(X + Z)]U$ (D) $X[Y(X + Z)]U$

13. The simplified form of given function $AB + BC + A\bar{C}$ is equal to
(A) $AB + A\bar{C}$ (B) $A\bar{C} + BC$
(C) $\bar{A}C + BC$ (D) $A\bar{B} + A\bar{C}$

14. Simplify the following

WX \ YZ			
1	1	0	1
1	1	0	1
0	0	1	1
0	0	0	0

(A) $\bar{W}\,\bar{Y} + \bar{W}\,\bar{Z} + WXY$
(B) $\bar{W}\,\bar{X} + \bar{W}\,\bar{Z} + WXY$
(C) $WY + WYZ + WXY + XY\bar{Z}$
(D) $\bar{W}\,\bar{X} + \bar{Y}\,\bar{Z} + \bar{W}\,\bar{Z}$

15. Simplify the following
$F = ABCD + A\bar{B}CD + \bar{A}C\bar{B}D + \bar{A}BCD$
(A) CD (B) BC
(C) AB (D) $\bar{C} + \bar{D}$

16. Find the equivalent Boolean expression for $AC + B\bar{C}$
(A) $\bar{A}C + B\bar{C} + AC$
(B) $ABC + A\bar{B}C + AB\bar{C} + \bar{A}B\bar{C}$
(C) $ABC + A\bar{B}C + AB\bar{C} + \bar{A}\,\bar{B}\bar{C}$
(D) $\bar{A}C + B\bar{C} + \bar{A}\bar{C}$

17. Simplify the following expression

$\bar{A}\bar{B}\bar{C}+\bar{A}B\bar{C}+\bar{A}BC+AB\bar{C}$

(A) $\bar{A}\bar{C}+B\bar{C}+\bar{A}B$ (B) $A\bar{C}+B\bar{C}+\bar{A}B$

(C) $\bar{A}\bar{C}+\bar{B}C+\bar{A}B$ (D) $\bar{A}\bar{C}+\bar{B}\bar{C}+\bar{A}B$

18. If $A = 1$ in the logic equation $[A+C\{\bar{B}+(\bar{C}+A\bar{B})\}]$ $[\bar{A}+\bar{C}(A+B)]=1$, then

(A) $B = C$ (B) $B = \bar{C}$

(C) $C = 1$ (D) $C = 0$

19. Which is the odd function with 3 Boolean variables in it

(A) $\Sigma(0, 3, 5, 6)$ (B) $\Sigma(0, 2, 4, 6)$

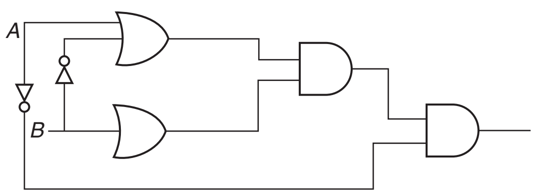
(C) $\Sigma(1, 2, 4, 7)$ (D) $\Sigma(1, 3, 5, 7)$

20. Which of the following expressions is/are incorrect?

(A) $\overline{a+b}=\bar{a}\,\bar{b}$ (B) $\overline{\bar{\bar{a}}+b}=\bar{a}\,\bar{b}$

(C) $\overline{\bar{\bar{a}}\,\bar{\bar{b}}}=\bar{a}+\bar{b}$ (D) $\overline{\bar{a}+\bar{b}}=\bar{a}\,\bar{b}$

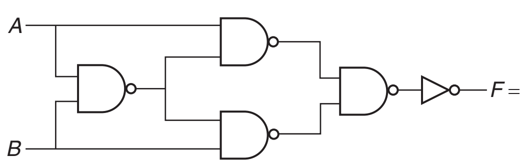
21. The simplified form of logic circuit is



(A) $A + B$ (B) $\overline{AB}$

(C) $\bar{A}+\bar{B}$ (D) $\bar{A}\,\bar{B}$

22. The circuit shown in figure is equivalent to —— gate.



(A) X-OR gate (B) EX-NOR gate

(C) Half adder (D) Half subtractor

23. The truth table of the circuit shown in figure

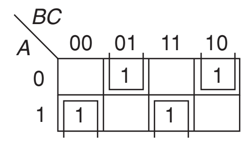
A	B	C	Z
0	0	0	1
0	0	1	0
0	1	0	1
0	1	1	1
1	0	0	1
1	0	1	1
1	1	0	1
1	1	1	1

The Boolean expression for Z

(A) $\overline{(\overline{\bar{A}+B})(\overline{B+\bar{C}})}$ (B) $\overline{(\overline{A+B})(\overline{B+\bar{C}})}$

(C) $\overline{(\overline{\bar{A}+B})\,(\overline{B+C})}$ (D) All of the above

24. A combinational circuit has input A, B and C and its K-map is as shown in figure. The output of the circuit is given by



(A) $(\bar{A}B+A\bar{B})\bar{C}$ (B) $(AB+\bar{A}\,\bar{B})\bar{C}$

(C) $\bar{A}\,\bar{B}\bar{C}$ (D) $A\oplus B\oplus C$

25. Which of the following two 2-input gates will realize the Boolean expression $X(P, Q, R) = \pi(0, 5)$

(A) AND and OR (B) NAND and OR

(C) AND and X-OR (D) OR and X-OR

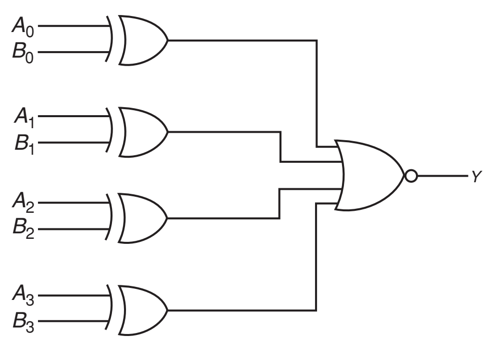
26. Simplify the given function

$f(x, y, z) = \Sigma m(0, 2, 3, 4, 5, 7)$

(A) $\bar{x}y+\bar{y}\,\bar{z}+xz$ (B) $\bar{x}\,\bar{z}+x\bar{y}+yz$

(C) Both (A) and (B) (D) $\bar{x}\,\bar{z}+\bar{x}y+x\bar{y}+xz$

27. Figure below shows a digital circuit, which compares two numbers $A_0\ A_1\ A_2\ A_3$, $B_0\ B_1\ B_2\ B_3$. Choose the pair of correct input number to get output $Y = 0$.



(A) 1100, 1100 (B) 0110, 0110

(C) 1011, 0010 (D) 1011, 1011

28. How many 3 to 8 line decoders with an enable input are required to build 6 of 34 decoder?

(A) 6 (B) 2

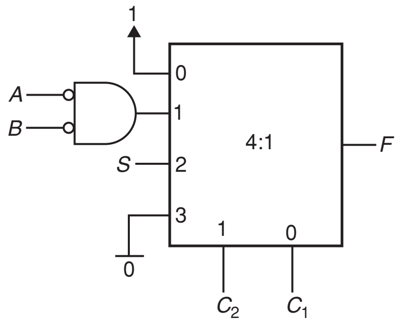
(C) 9 (D) 4

29. It is required to construct a 2^n to 1 multiplexer by using 2-to-1 multiplexer only. How many of 2-to-1 multiplexer are needed?

(A) n (B) 2^{2n}

(C) 2^{n-1} (D) $2^n - 1$

30. Consider the following circuit



Which one of the following give the function implemented by the MUX based digital circuit?

(A) $F = C_2 \cdot \overline{C_1} S + \overline{C_2} C_B (\overline{A} + \overline{A})$

(B) $F = \overline{C_2} \cdot \overline{C_1} + C_2 C_1 + C_2 \overline{C_1} S + \overline{C_2} C_1 \overline{AB}$

(C) $F = \overline{AB} + S$

(D) $F = \overline{C_2} \cdot \overline{C_1} + C_2 \cdot \overline{C_1} S + \overline{C_2} C_1 \overline{A} \cdot \overline{B}$

Digital Logic Test I

Number of Questions: 25 **Section Marks: 30**

Directions for questions 1 to 25: Select the correct alternative from the given choices.

1. Assume the propagation delay time of 2 input gates as EXOR-20 ns, AND – 10 ns, OR-10 ns, the propagation delay time for sum and carry output of a full adder circuit are respectively, when all the data inputs are applied simultaneously?

(A) 30 ns, 20 ns (B) 40 ns, 30 ns
(C) 40 ns, 20 ns (D) 20 ns, 20 ns

2. The minimized POS expression of the function $f(A, B, C, D) = AB + A\bar{C} + C + AD + A\bar{B}C + ABC$

(A) $A + \bar{C}$ (B) $\bar{A} + \bar{B}$
(C) AC (D) $A + C$

3. The signed two's complement representation of $(-783)_{10}$ is (in HEX):

(A) 830FH (B) 04F1H
(C) FCF1H (D) F3F1H

4. The two numbers represented in signed 2's complement form are:
P = 11011101 and Q = 11100101, if Q is subtracted from P, the value obtained in signed 2's complement form is?

(A) 11110111 (B) 11000010
(C) 11111000 (D) 00000111

5. The subtraction of a binary number B from another binary number A, done by adding the 2's complement of B to A, results in a binary number without carry, this implies that the result is:

(A) negative and is in normal form
(B) positive and is in normal form
(C) negative and is in 2's complement form
(D) positive and is in 2's complement form

6. $f(a, b, c) = ab + b^1c$ in the canonical POS form is represented as:

(A) $(a + b + c)(a + b + c^1)(a + b^1 + c)(a^1 + b^1 + c)$
(B) $(a + b^1 + c)(a + b^1 + c^1)(a + b + c)(a^1 + b + c)$
(C) $(a + b + c)(a^1 + b^1 + c)(a + b^1 + c)$
(D) $(a^1 + b + c)(a^1 + b^1 + c)(a + b + c)(a + b^1 + c)$

7. The Essential prime Implicants of the function
$f(A, B, C, D) = \bar{A}C + ABD + \bar{A}B + \bar{B}\bar{D} + \bar{A}\bar{B}\bar{C}\bar{D}$ are:

(A) $BD, \bar{B}\bar{D}, \bar{A}$ (B) $\bar{A}C, \bar{B}\bar{D}, B$
(C) $BD, \bar{A}C, \bar{B}$ (D) $\bar{A}\bar{B}, \bar{B}\bar{D}, C$

8. A combinational circuit has 3 inputs x, y, z and three outputs A, B, C. When the binary input is 4, 5, 6 and 7, the binary output is 2 less than the binary input. When the binary input is 0, 1, 2 and 3, the output is 4 more than the binary input the Boolean expression for output A and C respectively are:

(A) $x^1 y, z$ (B) $x + y^1, z^1$
(C) x, z (D) $x^1 + y, z$

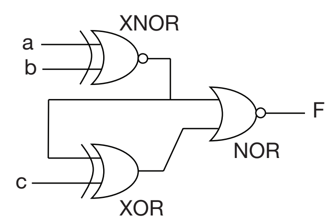
9. In the above problem statement, how many number of NOR are gates required implement output B.

(A) 3 (B) 4
(C) 5 (D) 6

10. A combinational circuit takes 2 inputs and output is the 2's complement of input binary number. Consider the inputs as a and b and output as x and y, the equations of x and y respectively?

(A) $a \odot b, b$ (B) $a^1 b, a \odot b$
(C) $a^1 b, ab^1$ (D) $a \oplus b, b$

11. The output F in the digital logic circuit shown in the figure is:



(A) $a^1 bc + ab^1 c$ (B) $a^1bc^1 + ab^1c^1$
(C) $a^1b^1c + abc$ (D) $a^1b^1c^1 + abc$

12. To construct a 5 to 32 line decoder, how many numbers of 3 to 8 line decoders and 2 to 4 line decoders are required respectively without using any extra hardware?

(A) 3, 2 (B) 4, 1
(C) 2, 4 (D) 2, 2

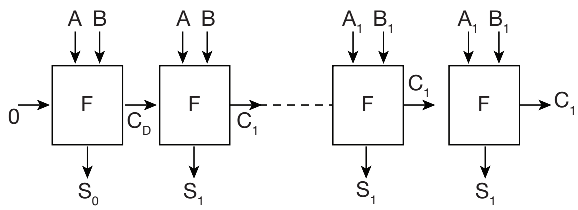
13. Parity is a common error detection mechanism that is often used in data reception or retrieval systems. Consider a parity encoder that is used for data transmission or storage. If a word contains an even number of 1's, the parity bit is 0. If the word has odd number of 1's the parity bit is 1. If the data is w, x, y, z then the min terms for parity bit is?

(A) $\sum m(1, 2, 4, 7, 8, 11, 13, 14)$
(B) $\sum m(0, 3, 5, 6, 9, 10, 12, 15)$
(C) $\sum m(0, 1, 3, 5, 8, 10, 13, 15)$
(D) $\sum m(1, 3, 5, 7, 9, 11, 13, 15)$

14. Consider the Boolean functions
$f_1(A, B, C, D) = AC + BD$
$f_2(A, B, C, D) = \sum m(4, 5, 6, 7, 10, 11, 14, 15)$
Then find $f_1 + f_2$ in minimized POS form

(A) $(\bar{A} + \bar{B})(B + D)(\bar{A} + \bar{B} + C)$
(B) $(A + B)(B + C)(\bar{A} + C + D)$
(C) $(A + \bar{B})(B + D)(\bar{A} + C + D)$
(D) $(A + D)(B + C)(\bar{A} + B + C)$

15. A 16-bit ripple carry adder is realized using 16 identical full address as shown in figure. The carry propagation delay of each FA is 15 ns and the sum propagation delay of each FA is 18 ns.
The worst delay of this 16-bit adder will be:



(A) 243 ns (B) 228 ns
(C) 240 ns (D) 270 ns

16. For an n-variable Boolean function, the maximum number of prime implicants is:

(A) $\frac{n}{2}$ (B) $2^n - 1$
(C) 2^{n-1} (D) 2^n

17. If the Boolean function $f(a, b, c, d) = a + b + c + d$ has to be implemented with only 2 input NAND gates, then how many NAND gates are required?

(A) 6 (B) 7
(C) 8 (D) 9

18. The following expression is valid for the number system with base _______ $\frac{302}{20} = 12.1$.

(A) 6 (B) 5
(C) 4 (D) 8

19. P is a 16 bit signed number integer, the 2's complement representation of P is $(FB8A)_{16}$. The 2's complement representation of $8 \times P$ is:

(A) $(B8\,A0)_{16}$ (B) $(C\,7B4)_{16}$
(C) $(ABCD)_{16}$ (D) $(DC50)_{16}$

20. For a 4 bit magnitude comparator with two inputs each of 4 bit $A(a_3, a_2, a_1, a_0)$ and $B(b_3, b_2, b_1\, b_0)$, the Boolean equation for $A < B$ is:

(A) $a_3^1 b_3 + a_2^1 b_2 + a_1^1 b_1 + a_0^1 b_0$

(B) $a_3 b_3^1 + (a_3 \oplus b_3) a_2 b_2^1 + (a_3 \oplus b_3)(a_2 \oplus b_3) a_2 b_1 + (a_3 \oplus b_3)(a_2 \oplus b_2)(a_1 \oplus b_1) a_0 b_0$

(C) $a_3^1 b_3 + (a_3 \odot b_3) a_2^1 b_2 + (a_3 \odot b_3)(a_2 \odot b_2) a_1^1 b_1 + (a_3 \odot b_3)(a_2 \odot b_2)(a_1 \odot b_1) a_0^1 b_0$

(D) $a_3^1 b_3 + (a_3 \oplus b_3) a_2^1 b_2 + (a_3 \oplus b_3) a_1^1 b_1 + (a_3 \oplus b_3)(a_2 \oplus b_2)(a_1 \oplus b_1) a_0^1 b_0$

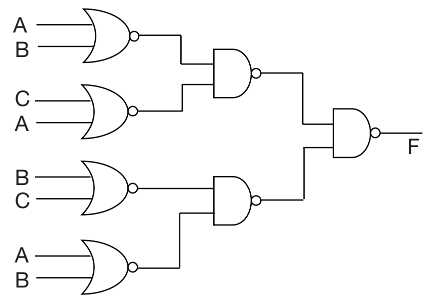
21. The simultaneous equations on the Boolean variables a, b, c and d.

$a + b + c = 1$
$ab = 0$
$ac + d = 1$
$ab + \bar{c}\bar{d} = 0$

have the following solutions for a, b, c and d respectively:

(A) 1011 (B) 1100
(C) 1000 (D) 1101

22. What is Boolean expression for output (F) of the combinational logic circuit of NAND-NOR gate given below?



(A) $\overline{A + B}$ (B) $\overline{A + C}$
(C) $\overline{ABC}$ (D) $\overline{A + B + C}$

23. Let $f(A, B, C, D) = \sum m(0, 2, 3, 4, 5, 7, 9, 13, 15)$
Which of the following expressions is not equivalent of f?

(P) $\bar{A}\bar{B}\bar{D} + \bar{A}B\bar{C} + \bar{A}CD + A\bar{C}DBD$

(Q) $\bar{A}\bar{C}\bar{D} + \bar{A}\bar{B}C + A\bar{C}D + BD$

(R) $\bar{A}\bar{B}\bar{D} + \bar{A}B\bar{C} + BCD + A\bar{C}D$

(S) $\bar{A}\bar{B}\bar{D} + \bar{A}CD + ABD + A\bar{C}D$

(A) only Q (B) only S
(C) P and S (D) P and Q

24. The range of integers that can be represented by an 'n' bit 2's complement signed number system is:

(A) -2^{n-1} to $+(2^{n-1} - 1)$
(B) $-(2^{n-1} - 1)$ to $+(2^{n-1} - 1)$
(C) $-2^{n-1} + 1$ to $+2^{n-1}$
(D) -2^{n-1} to $+2^{n-1}$

25. The minimized POS expression for k-map shown is:

CD \ AB	00	01	11	10
00	0		0	X
01	X		X	X
11	0		0	0
10	0		0	0

(A) $\bar{A} + B$ (B) $\bar{A}B$
(C) $\bar{A} + \bar{B}(\bar{A} + B)(A + B)$ (D) $\bar{A}(A + B)$

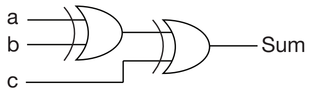
Answer Keys

1. B	**2.** D	**3.** C	**4.** C	**5.** C	**6.** B	**7.** A	**8.** D	**9.** C	**10.** D
11. B	**12.** B	**13.** A	**14.** B	**15.** A	**16.** C	**17.** D	**18.** C	**19.** D	**20.** C
21. A	**22.** D	**23.** D	**24.** A	**25.** B					

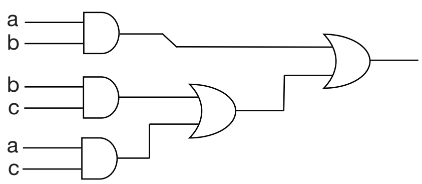
Hints and Explanations

1. Sum $= a \oplus b \oplus c$

Carry $= ab + bc + ac$



$20 + 20 = 40$ ns



$10 + 10 + 10 = 30$ ns

Two level exor gate for sum

So $20 + 20 = 40$ ns

Carry will be implemented with 2 input gates in 3 levels, so $10 + 10 + 10 = 30$ ns Choice (B)

2. $f = AB + A\bar{C} + C + AD + A\bar{B}C + ABC$

$= AB + A + C + AD + AC$

$= A(B + 1 + D + C) + C$

$= A + C$ Choice (D)

3. $783 = 512 + 256 + 8 + 4 + 2 + 1 = 1100001111$

$+783 = 0000\ 0011\ 0000\ 1111$ (add 0's to MSB)

$-783 = 1111\ 1100\ 1111\ 0001$ (2's complement of +783)

In $HEX \Rightarrow FCF1$ Choice (C)

4. $P = 11011101$

00100011 (by taking 2's complement)

$P = -35$

$Q = 11100101$

00011011 (By taking 2's complement)

$Q = -27$

$P - Q = -35 - (-27) = -8 = 1111\ 1000$ (in signed 2's complement form)

(or)

$P = 1101\ 1101$

$Q = 1110\ 0101$ (direct subtraction)

1111 1000 Choice (C)

5. $A - B$ has to be performed

So, the 2's complement of B (which is $2^n - B$, n = no. of bits in B) is added to A

So result is $A + 2^n - B$; and there is no carry

$A + 2^n - B = 2^n - (A - B)$

So, the result is negative and it is in 2's complement form. Choice (C)

6. $f(a, b, c) = ab + b^1 \cdot c$

$= (ab + b^1)(ab + c)$ $[x + yz = (x + y)(x + z)]$

$= (a + b^1)(a + c)(b + c)$

$= (a + b^1 + c \cdot c^1)(a + b \cdot b^1 + c)(a \cdot a^1 + b + c)$

$= (a + b^1 + c)(a + b^1 + c^1)(a + b + c)(a + b^1 + c)(a + b + c)$

$(a^1 + b + c)$

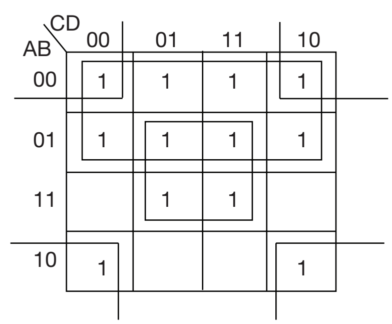
$= (a + b^1 + c)(a + b^1 + c^1)(a + b + c)(a^1 + b + c)$

Choice (B)

7. $f(A, B, C, D) = \bar{A}C + ABD + \bar{A}B + \bar{B}\bar{D} + \bar{A}\bar{B}\bar{C}D$

Product term	Equivalent	Min terms
$\bar{A}C$	0X1X	0010, 0011, 0110, 0111
ABD	11X1	1101, 1111
$\bar{A}B$	01XX	0100, 0101, 0110, 0111
$\bar{B}\bar{D}$	X0X0	0000, 0010, 1000, 1010
$\bar{A}\bar{B}\bar{C}D$	0001	0001

$f(A, B, C, D) = \sum m(0, 1, 2, 3, 4, 5, 6, 7, 8, 10, 13, 15)$



$f(A, B, C, D) = \bar{A} + BD + \bar{B}\bar{D}$

Essential prime implicants are $\bar{A}, BD, \bar{B}\bar{D}$

Choice (A)

8. The truth table is:

x	y	z	A	B	C
0	0	0	1	0	0
0	0	1	1	0	1
0	1	0	1	1	0
0	1	1	1	1	1
1	0	0	0	1	0
1	0	1	0	1	1
1	1	0	1	0	0
1	1	1	1	0	1

output is 4 more than input (rows 000–011)

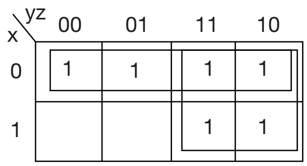
output is 2 less than input (rows 100–111)

$A(x, y, z) = \sum m(0, 1, 2, 3, 6, 7)$

$B(x, y, z) = \sum m(2, 3, 4, 5)$

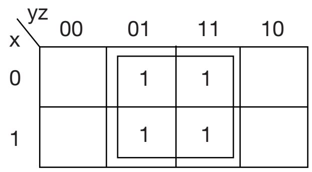
$C(x, y, z) = \sum m(1, 3, 5, 7)$

The k map for A



$A = x^1 + y$

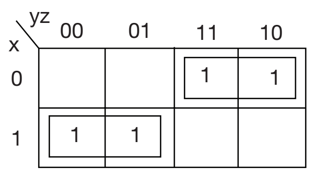
The k map for C



$C = z$

Choice (D)

9. $B(x, y, z) = \sum m(2, 3, 4, 5)$



$B = xy^1 + x^1y = x \oplus y$

2 input XOR required 5 NOR gates. Choice (C)

10. a, b are inputs of 2's complementer, and x, y are the outputs.
So truth table is

a	b	x	y
0	0	0	0
0	1	1	1
1	0	1	0
1	1	0	1

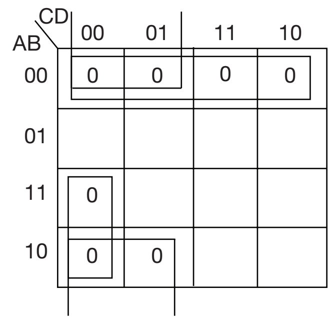
$x = a^1b + ab^1 = a \oplus b$
$y = b$ Choice (D)

11. Output of XNOR $= a \odot b = a^1b^1 + ab$
Output of XOR $= [a \odot b] \oplus c =$
Output of NOR gate $= [a \odot b \oplus c + (a \odot b)]^1$
$(x \oplus y + x) = x^1y + xy^1 + x = x + y$
$[(a \odot b) \oplus c + (a \odot b)]^1 = (a \odot b + c)^1$
$= (a \odot b)^1 \cdot C^1 = (a \oplus b)\, c^1 = a^1bc^1 + ab^1c^1$
Choice (B)

12. 5 to 32 line decoder will have 32 output lines
So 4, 3 to 8 line Decoders are required, these 4 decoders will be selected by one 2 to 4 lines decoder.
So 4, 3 to 8 line decoder and 1, 2 to 4 line decoder
(or)
5 to 32 line decoder will have 32 output lines
So 8, 2 to 4 line Decoders are required, to select one of these 8, one 3 to 8 line Decoder is required.
8, 2 to 4 Decoders, and 1, 3 to 8 Decoder. Choice (B)

13. For even number of 1's parity bit is 0.
So even parity,
Even parity can be implemented by XOR gate
XOR of even 1's given output 0.
XOR of add 1's gives output 1.
So parity bit $P = w \oplus x \oplus y \oplus z$
$P = \sum m(0001, 0010, 0100, 0111, 1000, 1011, 1101, 1110)$
$= \sum m(1, 2, 4, 7, 8, 11, 13, 14)$ Choice (A)

14. $f_1(A, B, C, D) = AC + BD$
$= AC(B + \bar{B})(C + \bar{C}) + (A + \bar{A})(C + \bar{C})BD$
$= \sum m(5, 7, 10, 11, 13, 14, 15)$
$= \Pi M(0, 1, 2, 3, 4, 6, 8, 9, 12)$
$f_2 = \sum m(4, 5, 6, 7, 10, 11, 14, 15)$
$= \Pi M(0, 1, 2, 3, 8, 9, 12, 13)$
$f_1 + f_2 = \Pi M(0, 1, 2, 3, 8, 9, 12)$ [common max terms of f_1 and f_2]

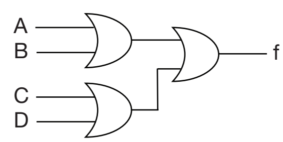


$f_1 + f_2 = (A + B)\,(B + C)\,(A + C + D)$ Choice (B)

15. The final carry we will get after n times of the delay of the carry of each full adder. But sum has more propagation delay. To get the carry of last but one, stage (C_{14}) we required $15 \times t$ carry $= 15 \times 15 = 225$ ns
The next carry C_{15} we get after another 15 ns, but sum S_{15} we get after another 18 ns (= 243 ns)
The worst delay $= (n - 1)t_{\text{carry}} + t_{\text{sum}} = (16 - 1) \times 15 + 18 = 243$ Choice (A)

16. Choice (C)

17.



Each 2 input OR gate required 3–2 input NAND gates
So total 9 NAND gates are required. Choice (D)

18. $\dfrac{(302)_r}{(20)_r} = (12.1)_r$

Convert to decimal number system

$$\frac{3r^2 + 0r^1 + 2r^0}{2r^1 + 0 \cdot r^0} = 1r^1 + 2r^0 + 1\frac{1}{r}$$

$$-\frac{3r^2 + 0 \cdot r^1 + 2 \cdot r^0}{2r^1 + 0 \cdot r^0} = 1 \cdot r^1 + 2 \cdot r^0 + 1 \cdot \frac{1}{r}$$

$$\frac{3r^2 + 2}{2r} = r + 2 + \frac{1}{r} \Rightarrow 3r^2 + 2 = 2r^2 + 4r + 2$$

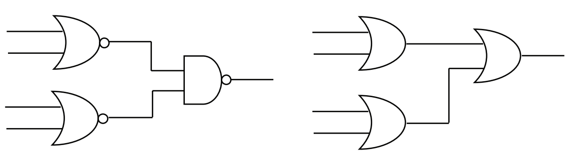
$\Rightarrow r^2 = 4r \Rightarrow r = 0$ or 4
$r = 4$ is valid Choice (C)

19. $P = FB8A = 1111101110001010$
$8P = 2^3\, P \rightarrow P$ shifted to left by 3 bits,
$8P = 1101\ 1100\ 0101\ 0000$
$= (DC50)_{16}$ Choice (D)

20. If $A(a_3\, a_2\, a_1\, a_0)$ and $B(b_3\, b_2\, b_1\, b_0)$ are the two inputs the $A < B$ is possible only when the bits in A are 0 and the bits in B are 1. So we can check MSB by using $a_3^1 b_3$, if the MSB bits are equal, then we check next bits $(a_3 \odot b_3)\ a_2^1\ b_2$ and if the higher order bits are equal then we move to next bits so $(A < B) = a_3^1 b_3 + (a_3 \odot b_3)$ $a_2^1 b_2 + (a_3 \odot b_3)\ (a_2 \odot b_2)\ a_1^1 b_1 + (a_3 \odot b_3)(a_2 \odot b_2)$ $(a_1 \odot b_1)\ a_0^1\, b_0$. Choice (C)

21. $a + b + c = 1$
$ab = 0 \rightarrow$ by substituting in 4th equation
$ab + \overline{c}\overline{d} = 0 \Rightarrow 0 + \overline{c}\overline{d} = 0 \Rightarrow \overline{c + d} = 0$
$\Rightarrow \quad c + d = 1$
$ac + d = 1 \Rightarrow (a + d)\ (c + d) = 1$
already $c + d = 1$ so $a + d = 1$
So we have now $a + b + c = 1$, $ab = 0$, $c + d = 1$, $a + d = 1$ by verification option (A) is valid for all the four equations. Choice (A)

22. NOR–NAND is equivalent to OR-OR



So output of 1st NOR-NAND structure $= A + B + C + A$
$= A + B + C$

Similarly output of 2nd NOR-NAND structure
$= A + B + C$
So output $F = \overline{A + B + C}$ Choice (D)

23. We can verify by writing the min terms

(P) $\overline{A}\overline{B}\overline{D} + \overline{A}B\overline{C} + \overline{A}CD + A\overline{C}D + BD$
00X0 010X 0X11 1X01 X1X1
$\Sigma m(0, 2, 3, 4, 5, 7, 9, 13, 15)$

(Q) $\overline{A}\overline{C}\overline{D} + \overline{A}\overline{B}C + A\overline{C}D + BD$
0X00 001X 1X01 X1X1
$\Sigma m(0, 2, 3, 4, 5, 7, 9, 13, 15)$

(R) $\overline{A}\overline{B}\overline{D} + \overline{A}B\overline{C} + BCD + A\overline{C}D$ 00X0, 010X, X111, 1X01
$\Sigma m(0, 2, 4, 5, 7, 9, 13, 15)$ – min term 3 missing

(S) $\overline{A}\overline{B}\overline{D} + \overline{A}CD + ABD + A\overline{C}D$ 00X0, 0X11, 11X1, 1X01
$\Sigma m(0, 2, 3, 7, 9, 13, 15)$ – min terms 4, 5 missing.
Choice (D)

24. Choice (A)

25. Two octates present so minimized expression is $\overline{A} \cdot B$

CD \ AB	00	01	11	10
00	0		X	X
01	X		X	X
11	0		0	0
10	0		0	0

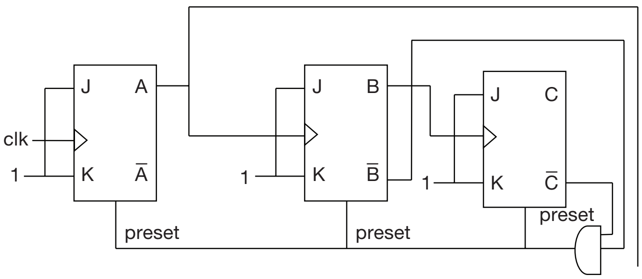
Choice (B)

Digital Logic Test 2

Number of Questions: 25 **Section Marks: 30**

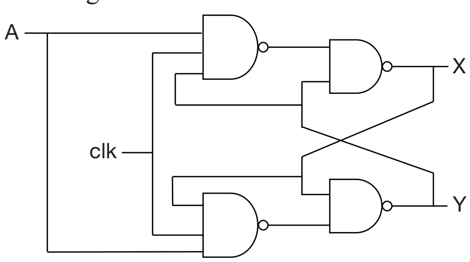
Directions for questions 1 to 25: Select the correct alternative from the given choices.

1. The ripple counter shown in figure works as a:



(A) Mod-6 up counter
(B) Mod-5 up counter
(C) Mod-5 down counter
(D) Mod-6 down counter

2. Consider the given circuit:

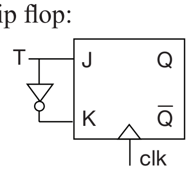


In this circuit, the race around condition
(A) does not occur
(B) occurs when clk = 0
(C) occurs when clk = 0, A = 1 and $X = Y = 1$
(D) occurs when clk = 1, A = 1

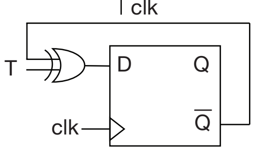
3. Three, modulo-4 counters are cascaded together then the resultant counter modulus is
(A) 3×4 (B) 3^4
(C) $4 \times 4 \times 4$ (D) $3 + 4$

4. Which of the following flip flop configuration works as T flip flop:

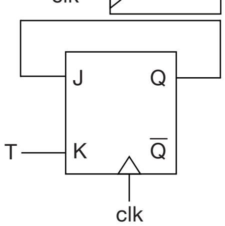
(A)



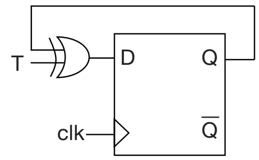
(B)



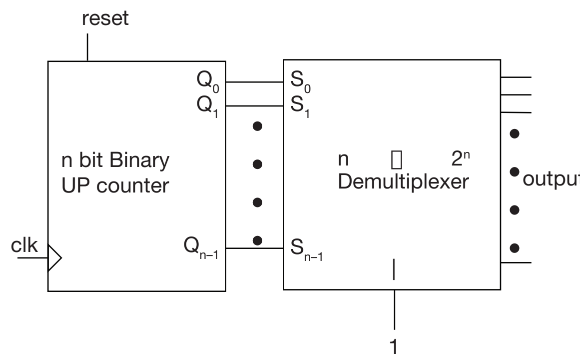
(C)



(D)

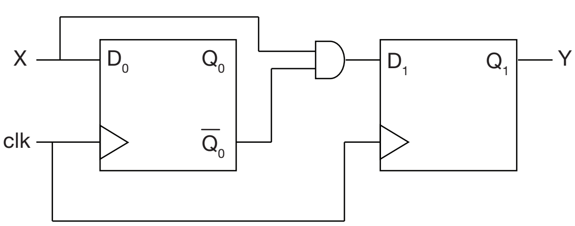


5.



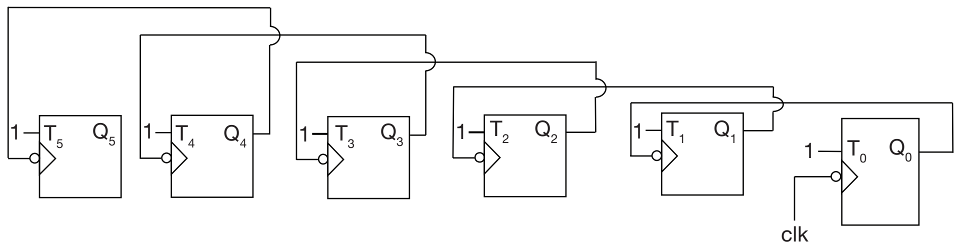
'n' bit Binary UP counter is connected to $n \times 2^n$ Demultiplxer with input I = 1, as shown in the figure.
If the counter starts from reset, the above configuration works as
(A) Modulo – 2^n twisted ring counter
(B) Modulo – n ring counter
(C) Modulo – $2n$ Johnson counter
(D) Modulo – 2^n ring counter

6. Consider the following circuit with initial state $Q_0 = Q_1 = 0$. The D flip flops are positive edge triggered.



Consider the following timing diagrams of X and clk. Which one is the correct wave form of Y?

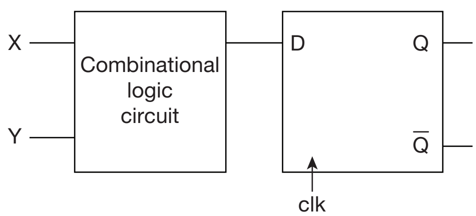
(A) 
(B) 
(C) 
(D) 
7. Six JK Flip flops are cascaded to form the circuit shown in figure. Clock pulses at a frequency of 128 kHz are applied as shown, The frequency (in kHz) of the wave form at Q_4 is ______.



(A) 32 kHz (B) 16 kHz
(C) 8 kHz (D) 4 kHz

8. The following truth table has to be realized with *D* flip flop.

XY	Q_{n+1}
0 0	Q_n
0 1	1
1 0	0
1 1	$\bar{Q}_n$

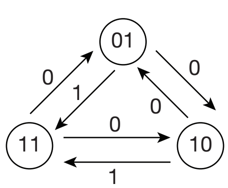


Then what is the equation of combinational logic circuit output in terms of *X*, *Y* and Q_n?

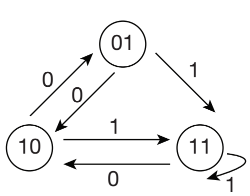
(A) $D = \bar{X}Q_n + Y\bar{Q}_n$ (B) $D = X\bar{Q}_n + \bar{Y}Q_n$
(C) $D = XY + Q_n$ (D) $D = (X + Y) + Q_n$

9. A clocked sequential circuit has 3 states *A*, *B*, *C* and 1 input *X*. As long as input $X = 0$, the circuit alternates between states *A* and *B*, if input $X = 1$ (either in state *A* or *B*), The circuit goes to state *C* and remain in state *C* as long as $X = 1$, from state *C*, circuit returns to state *A* when input $X = 0$, and then a repeats its behavior. Assume $A = 01$, $B = 10$, $C = 11$ the state diagram will be:

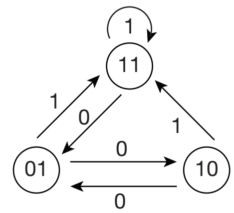
(A)



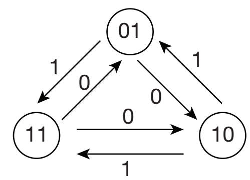
(B)



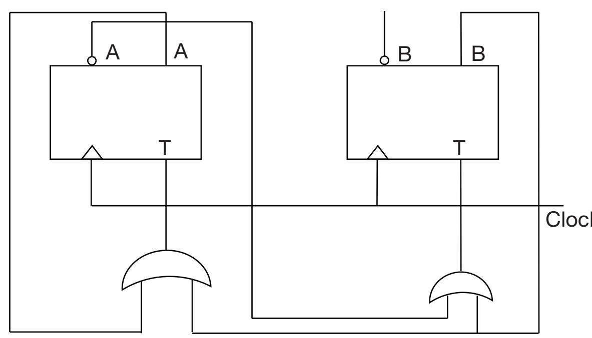
(C)



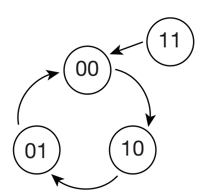
(D)



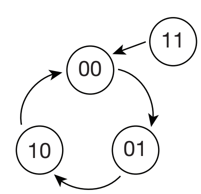
10. Find the state (*AB*) diagram for the following sequential circuit?



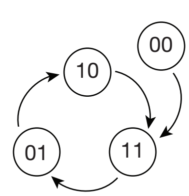
(A)



(B)

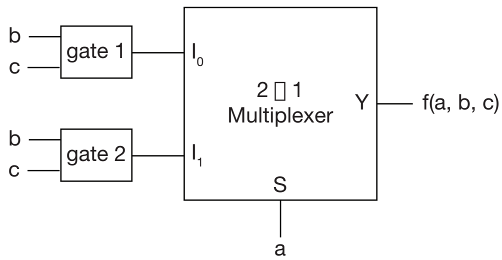


(C)



(D) None of these

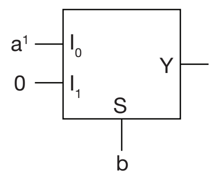
11. The Boolean function $f(a, b, c) = a^1\, b + b^1\, c + ac^1$ has to be implemented by the following 2×1 multiplexer then the gate 1 and gate 2 are respectively?



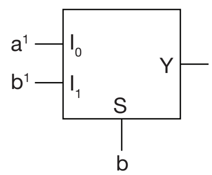
(A) OR, NAND (B) AND, OR
(C) NOR, AND (D) NAND, OR

12. Which of the following multiplexer implements 2 input NAND gate?

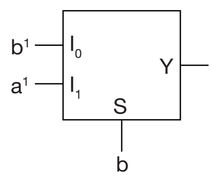
(*P*)



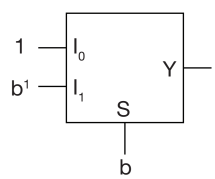
(*Q*)



(*R*)

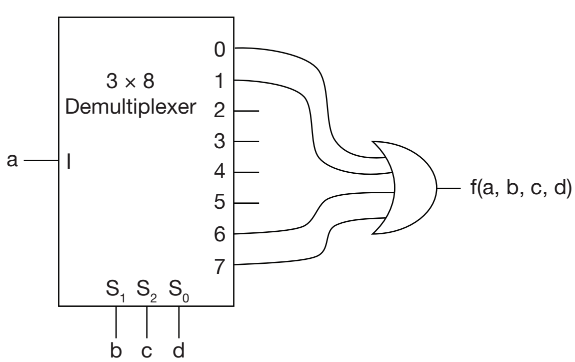


(*S*)



(A) *Q*, *R* (B) *P*, *R*
(C) *P*, *S* (D) *R*, *S*

13. The output of the following Demultiplexer circuit is:



(A) $a(b \odot c)$ (B) $a(b \odot c)$
(C) $(a \odot b)c$ (D) $(a \odot b)c$

14. An 8 × 1 multiplexer has inputs *A*, *B*, *C* connected to the selection inputs S_2, S_1 and S_0 respectively. The data inputs I_0 through I_7 are as follows. $I_1 = I_2 = 0$; $I_3 = I_5 = I_7 = 1$; $I_0 = I_4 = D$; and $I_6 = D^1$ then the Boolean function that the multiplexer implements is?

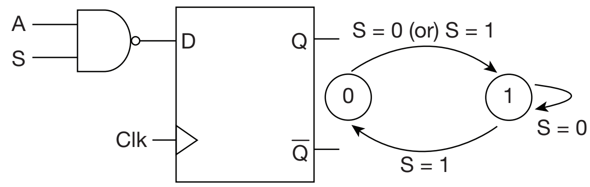
(A) $AB + BC + A\bar{C}D + \bar{B}\bar{C}D$

(B) $AC + BD + A\bar{B}D + B\bar{C}\bar{D}$

(C) $\bar{B}\bar{C}D + AB\bar{D} + BC + AC$

(D) $A\bar{B}D + \bar{B}\bar{C}D + A\bar{C} + BC$

15. The digital circuit shown in the figure satisfies the given state diagram, when *Q*, is connected to input *A* of NAND gate



Suppose the NAND gate is replaced by an OR gate which are of the following options preserves the state diagram.

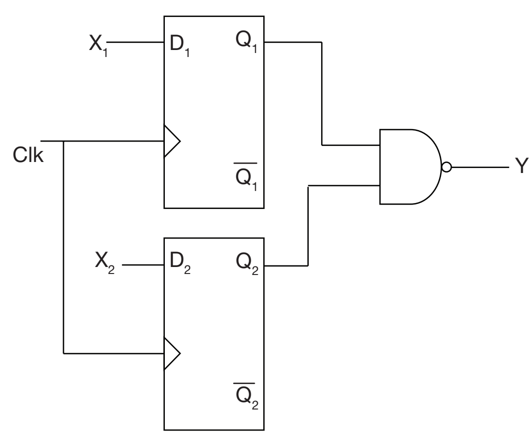
(A) input *A* is connected to $\bar{Q}$

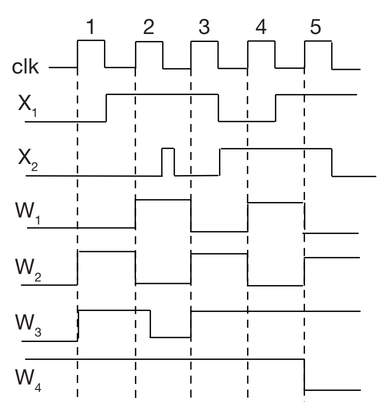
(B) input *A* is connected to 1 and *S* is complemented

(C) input *A* is connected to *S*

(D) input *A* is connected to $\bar{Q}$ and *S* is complemented

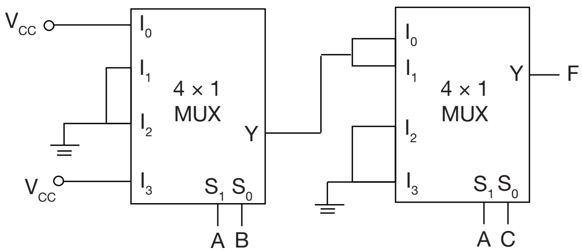
16. In the circuit shown choose the correct timing diagram of output *Y* from the given wave forms W_1, W_2, W_3 and W_4





(A) W_1 (B) W_2
(C) W_3 (D) W_4

17. In the circuit shown the output F is given by:



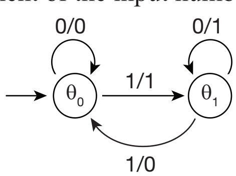
(A) $\overline{A} + \overline{B} + \overline{C}$ (B) ABC
(C) $\overline{A}B$ (D) $\overline{(A + B)}$

18. Suppose only one multiplexer and one inverter allowed to be used to implement any Boolean function of n variables. What is the minimum size of the multiplexer needed?

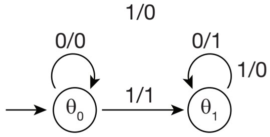
(A) 2^n line to 1 line (B) 2^{n-1} line to 1 line
(C) 2^{n-2} line to 1 line (D) 2^{n+1} line to 1 line

19. Which one of the following state diagram represents finite state machine, which takes as input a binary number from the least significant bit and computes 2's complement of the input number.

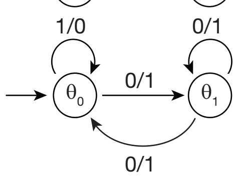
(A)



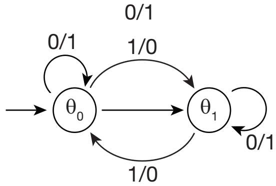
(B)



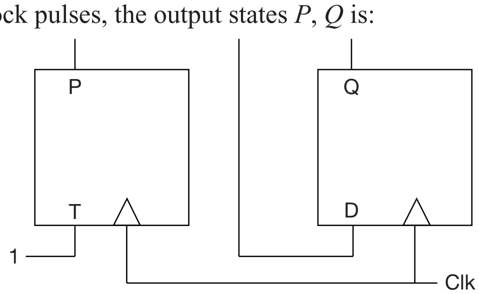
(C)



(D)

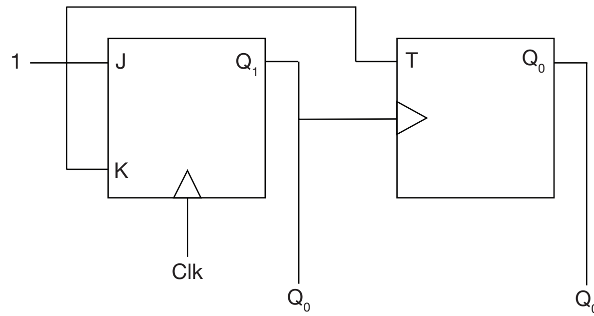


20. The following arrangement of Master-slave flip flips has the initial state of P, Q as 0, 1 respectively after the 3 clock pulses, the output states P, Q is:



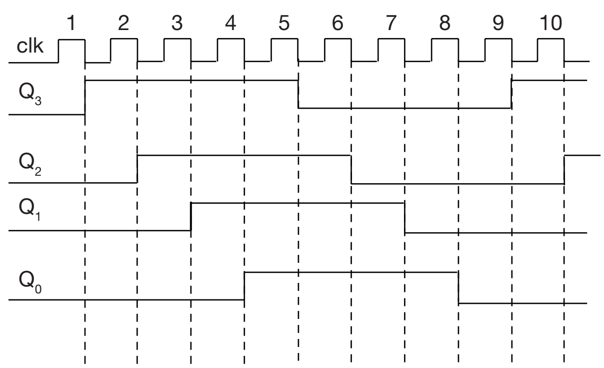
(A) 1, 0 (B) 0, 1
(C) 1, 1 (D) 0, 0

21. In the sequential circuit below, if the initial value of the output Q_1 Q_0 is 00, what are the next four values Q_1, Q_0?



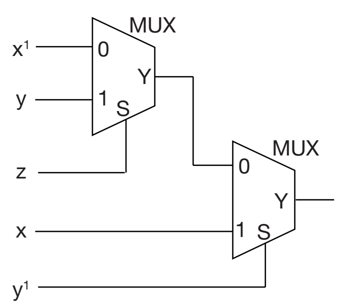
(A) 01, 10, 11, 00
(B) 11, 10, 01, 00
(C) 01, 11, 10, 00
(D) 10, 11, 01, 00

22. The waveforms of a counter are shown below, this is a



(A) synchronous BCD counter
(B) ripple counter
(C) ring counter
(D) twisted ring counter

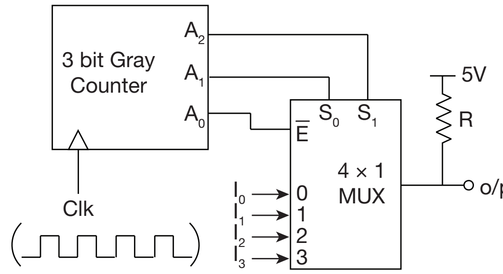
23. Consider the circuit, here, which are the following options correctly represents $f(x, y, z)$



(A) $x^1y^1 + xy + xz$
(B) $xy^1 + x^1y + xz$
(C) $x^1y + xy^1 + y^1z$
(D) $xy + x^1y^1 + xyz$

24. The outputs Q and $\bar{Q}$ of a master slave SR flip flop are connected to its R and S inputs respectively. Its output Q when clock pulses are applied will be:
(A) permanently 0
(B) permanently 1
(C) fixed 0 or 1
(D) complementing with every clock pulse

25. A 3 bit gray counter is used to control the output of the multiplexer as shown in figure, the initial state of the counter is 000. The output is pulled high, the output of the circuit follows the sequence



(A) 1, I_0, I_1, 1, 1, I_3, I_2, 1, 1
(B) I_0, 1, 1, I_1, I_3, 1, 1, I_2, I_0
(C) I_0, 1, I_1, 1, I_2, 1, I_3, 1, I_0,
(D) 1, I_0, 1, I_1, I_2, 1, I_3, 1, I

Answer Keys

1. D	**2.** D	**3.** C	**4.** D	**5.** D	**6.** A	**7.** D	**8.** A	**9.** C	**10.** B
11. A	**12.** D	**13.** B	**14.** C	**15.** D	**16.** D	**17.** D	**18.** B	**19.** B	**20.** A
21. B	**22.** D	**23.** B	**24.** D	**25.** B					

Hints and Explanations

1. All flip flops have $J = K = 1$, so all are toggle switches The output of flip flop is connected to rising edge clk input of next flip flop, so Down counter. clk input is given to flip flop A (LSB).
Preset is active high, so as preset = 1, all flip flops get 111, so AND gate $o/p = 1$, when $A = 1$, $B = 0$, $C = 0$ as $A, \bar{B}, \bar{C}$ are inputs, so the $CBA = 001$,
modulus = 111 – 001 = 6. Choice (D)

2. The given circuit is T latch, The input A is connected to first two NAND gates (J, K inputs connected together to make T latch)
So race around condition occurs when $A = 1$, clk = 1.
Choice (D)

3. When two counters are connected in cascade, the resultant modulus is the multiplication of the individual modulus.
So 3 counters are connected so resultant modulus
= 4 × 4 × 4 = 64. Choice (C)

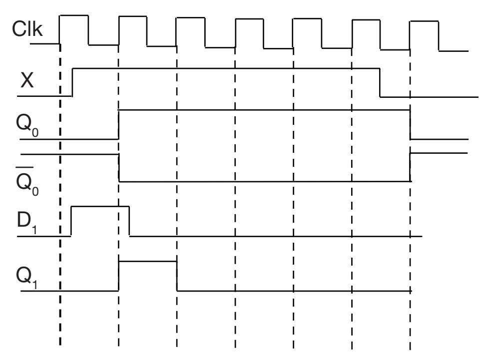
4. JK flip flop works as T flip flop if $J = K = T$
For D flip flop $Q_{n+1} = D$, $Q_{n+1} = T \oplus Q_n$ (T flip flop)
So by taking $D = T \oplus Q_n$ we get T flip flop.
Choice (D)

5. n bit binary UP counter counts in Binary sequence, so same binary sequence is applied to Demultiplexer, so input $I = 1$, will be at output in sequence, for 3 bit example.

$Q_2\ Q_1\ Q_0$	$S_2\ S_1\ S_0$	$Y_0\ Y_1\ Y_2$ ...... Y_7
0 0 0	0 0 0	1 0 0 0
0 0 1	0 0 1	0 1 0 0
0 1 0	0 1 0	0 0 1 0

It works like a module 2^n ring counter. Choice (D)

6. For D flip flop whatever input we apply, same output we get after clk pulse



Choice (A)

7. The frequency of $Q_1 = \dfrac{fclk}{2}$

$$\text{Frequency of } Q_1 = \frac{\frac{fclk}{2}}{2} = \frac{fclk}{4}$$

$$\text{Frequency of } Q_2 = \frac{\frac{fclk}{4}}{2} = \frac{fclk}{8}$$

$$\text{Frequency of } Q_3 = \frac{fclk}{16}$$

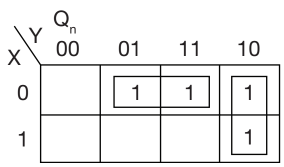
$$\text{Frequency of } Q_4 = \frac{fclk}{32} = \frac{128}{32} = 4 \text{ kHz}$$

$$\text{Frequency of } Q_5 = \frac{fclk}{64}$$

Choice (D)

8. The given XY flip flop truth table is

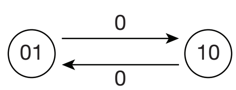
$X\ Y\ Q_n$	Q_{n+1}
0 0 0	0
0 0 1	1
0 1 0	1
0 1 1	1
1 0 0	0
1 0 1	0
1 1 0	1
1 1 1	0

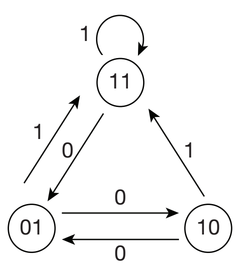


$Q_{n+1} = \bar{X}Q_n + Y\bar{Q}_n$

The characteristic equation of D flip flop is $Q_{n+1} = D$, This has to work like above XY flip flop. By equating $Q_{n+1} = D = \bar{X}Q_n + Y\bar{Q}_n$. Choice (A)

9. $A = 01$, $B = 10$, alternate states when $X = 0$
When $X = 1$, A, B go to state $C = 11$ as long as $X = 1$, C will remain in same state

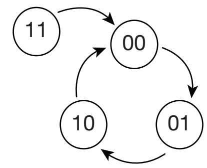




When $X = 0$, C will return to state $A = 01$ Choice (C)

10. Let us consider states as AB if initially state of the circuit is 00 (reset)

Clk	A B	T_A (A + B)	T_B (A^1 + B)	
0 1 2 3	0 0 0 1 1 0 0 0	0 1 1	1 1 0	If initially at 00 state, after 3 Clk pulses it comes back to same state 00.
0 1	1 1 0 0	1	1	If initial state is 11, it goes to 00 state after clock pulse



Choice (B)

11. Given $f(a, b, c) = a^1b + b^1c + ac^1$
$= a^1b + (a + a^1)b^1c + ac^1$
$= a^1b + a^1b^1c + ab^1c + ac^1$
$= a^1[b + b^1c] + a[b^1c + c^1]$
$= a^1[b + c] + a[b^1 + c^1]$
By comparing this equation with output of 2 × 1 multiplexer
$Y = I_0\ \bar{S} + I_1\ S = I_0\bar{a} + I_1 a = [b + c]a^1 + [\overline{bc}]a$
Gate 1 is OR gate, gate 2 is NAND gate.
Choice (A)

12. For multiplexer P, $Y = I_0\ I_0\bar{S} + I_1S = a^1\ b^1 + 0 \cdot b$
For mux, Q $Y = a^1\ b^1 + b^1 \cdot b = a^1\ b^1$
For mux, R, $Y = b^1.b^1 + a^1 \cdot b = a^1 + b^1 = (ab)^1$
For mux, S, $Y = 1 \cdot a^1 + b^1 \cdot a = a^1 + b^1 = (ab)^1$
So, R, S implement NAND gate P, Q implements NOR gate. Choice (D)

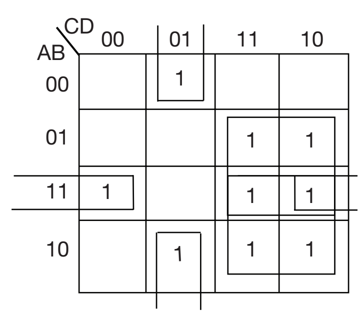
13. The demultiplexer output $Y_0 = I\bar{S}_2\bar{S}_1\bar{S}_0$
$Y_1 = I\bar{S}_2\bar{S}_1S_0$
$Y_2 = I\bar{S}_2S_1\bar{S}_0$
$Y_3 = IS_2\bar{S}_1\bar{S}_0$... ... etc
$f(a, b, c, d) = Y_0 + Y_1 + Y_6 + Y_7$
$= ab^1c^1d^1 + ab^1c^1d + abcd^1 + abcd$
$= ab^1c^1 + abc$
$= a[b \odot c]$ Choice (B)

14. For 8 × 1 multiplexer output

$$Y = l_0\bar{S}_2\bar{S}_1\bar{S}_0 + I_1\bar{S}_2\bar{S}_1S_0 + I_2\bar{S}_2S_1\bar{S}_0 + I_3\bar{S}_2S_1S_0 + I_4S_2\bar{S}_1\bar{S}_0 + I_5S_2\bar{S}_1S_0 + I_6S_2S_1\bar{S}_0 + I_7S_2S_1S_0$$

$$= \bar{A}\bar{B}\bar{C}D + 0 + 0 + \bar{A}BC + A\bar{B}\bar{C}D + A\bar{B}C + AB\bar{C}\bar{D} + ABC$$

$= \sum m\,(1, 6, 7, 9, 10, 11, 12, 14, 15)$



$Y = \bar{B}\bar{C}D + AB\bar{D} + BC + AC$ Choice (C)

15. The input $D = \overline{A \cdot S} = \bar{A} + \bar{S}$
This NAND gate is replaced by OR gate
So A input should be complemented (to $\bar{Q}$) and S input should be complemented. Choice (D)

16. NAND gate output = 0
When two inputs are 1.
Only at last clk pulse $X_1 = X_2 = 1$
So $Y = 0$, remaining cases $Y = 1$, Choice (D)

17. Output of 1st multiplexer is

$Y = I_0\bar{A}\bar{B} + I_1\bar{A}B + I_2A\bar{B} + I_3AB$

$= \bar{A}\bar{B} + AB = A \odot B$

Output of 2nd multiplexer is

$Y = (A \odot B)\,\bar{A}\bar{C} + (A \odot B)\,\bar{A}\,C + 0 \cdot A\bar{C} + 0 \cdot AC$

$= (A \odot B)[\bar{A}\bar{C} + \bar{A}C] = (\bar{A}\bar{B} + AB)\bar{A}$

$= \bar{A}\bar{B} = (\overline{A + B})$ Choice (D)

18. Choice (B)

19. If two 2's complement has to be calculated we require two states.

(Inputs)	0	1
$Q_0(0)$	Q_0, 0	Q_1, 1
$Q_1(1)$	Q_1, 1	Q_1, 0

We can get 2's complement from LSB, by considering all zero's and the first 1 as it is, there after complementing 0's and 1's. Choice (B)

20.

Clk	States	Input
	P Q	T D
0	0 1	1 0
1	1 0	1 1
2	0 1	1 0
3	1 0	1 1

Choice (A)

21. The given circuit is an asynchronous counter (ripple counter) states will change in Binary sequence. Q is connected to rising edge clk pulse so down counter, so sequence is 00, 11, 10, 01, 00 ... Choice (B)

22. By observing sequence 0000 → 1000 → 1100 → 1110 → 1111 → 0111 → 0011 → 0001 → 0000
It is twisted ring counter. Choice (D)

23. Output of 1st multiplexer $Y = I_0\bar{S} + I_1S = x^1z^1 + yz$

Output of 2nd multiplexer $Y = I_0\bar{S} + I_1S$
$= (x^1z^1 + yz)\,(y^1)^1 + xy^1$
$= x^1yz^1 + yz + xy^1 = \sum m\,(2, 3, 4, 5, 7)$

x \ yz	00	01	11	10
0			1	1
1	1	1	1	

f = xy¹ + x¹y + yz

x \ yz	00	01	11	10
0			1	1
1	1	1	1	

f = xy¹ + x¹y + xz

Choice (B)

24. Q is connected to R, $\bar{Q}$ to S input

So $Q_{n+1} = S + \bar{R}Q_n = \bar{Q}_n + \bar{Q}_n \cdot Q_n$

So $Q_{n+1} = \bar{Q}_n$ so next state is complement of present state. Choice (D)

25.

A_2 A_1 A_0	**E** S_1 S_0	**o/p**
0 0 0	0 0 0	I_0
0 0 1	1 0 0	1
0 1 1	1 0 1	1
0 1 0	0 0 1	I_1
1 1 0	0 1 1	I_3
1 1 1	1 1 1	1
1 0 1	1 1 0	1
1 0 0	0 1 0	I_2
0 0 0	0 0 0	I_0

Enable is active low, when $E = 1$, the output is logic 1
When $E = 0$, output is from multiplexer. Choice (B)

Chapter 1

Programming in C

LEARNING OBJECTIVES

- *Basic concepts*
- *Character set*
- *Identifier*
- *Declaring a variable*
- *Visualization of declaration*
- *Constants*
- *Single character constants*
- *String constants*
- *Using const keyword*
- *Precedence decreases as we move from top to bottom*
- *Type conversion*
- *Documentation section*
- *Preprocessing*
- *Global declaration*
- *Control statements*
- *Selection/Decision making statement*
- *Looping statements*
- *Unconditional jump statements*

Basic Concepts

Character Set

A character refers to an alphabet, digit or a special symbol. Alphabets: $A - Z$, $a - z$

Digits: 0 -9
Special symbols:
~ ! # % ∧ and ∗ ( ) − + { } [ ] − < > , . | ? \ | : ; " ' White space

Identifier

Identifier is a user-defined name used for naming a variable or a function.
Rules for naming an identifier

- Consists only letters, digits and underscore
- Starts only with an alphabet or underscore
- Keywords cannot be used.
- Can be as long as you like, first 31 characters are significant.

Example: Valid identifiers: RollNo, Roll_No, _Roll_No
rollno, Name2;
Invalid: 2name, Roll No.

Variable

The name itself represents value, is not constant. Variable is a data name whose value varies/changes during program execution. Variable name is a name given to memory cell (may be one or multiple bytes).

Data Types

Represents type of data and set of operations to perform on data .

Data Type

Primitive/Basic	Derived	User defined	Valueless
– Char	– Array	– Structure	
– float	– pointer	– union	– void
– double		Enumeration	
– integer			

Type	Keyword	Number of Bytes
Integer	int	2
Floating	float	4
Double	double	8
Character	char	1

Declaring a Variable

- Before using a variable, you must give some information to compiler about the variable. i.e., you must declare it.
- Declaration statement includes the type and variable name.

Syntax:
Datatype Var_name;
Example:

```
int roll_no;
char ch;
float age;
```

- When we declare a variable
  - memory space is allocated to hold a value of specified type.
  - space is associated with variable name
  - space is associated with a unique Address.

Table 1 *Visualization of declaration*

	roll no
int roll no;	garbage
	2002
	marks
int marks = 10;	10
	3008
	diameter
float diameter = 5.9	5.9
	4252
	ch → variable name
char ch : 'A'	A → value
	2820 → address

Note: The default value is garbage, i.e., an unknown value is assigned randomly.

Renaming data types with typedef Typedef is a keyword, which can form complex types from the basic type, and will assign some simpler names for such combinations. This is more helpful when some declaration is very tough, confusing or varies from one implementation to another.

For example, the data type unsigned long int is redefined as LONG as follows:

typedef unsigned long int LONG;

Uses of enumerated data types Enumerated data types are most useful when one is working over small, discrete set of values, in which each is having a meaning and it is not a number.

A best example can be given on months jan, feb, mar, …, dec, which are 12 in number, with assigning consecutive numbers for it.

The main advantages are storage efficiency, the *c*-code can become readable

Constants

A constant value is one which does not change during the execution of a program.
C supports several types of constants:

1. Integer constants
2. Real constants
3. Single character constants
4. Strings constants

Integer constants

An integer constant is a sequence of digits. It consists of a set of digits 0 to 9 preceded by an optional + or − sign spaces, commas, and non-digit characters are not permitted between digits.
Examples for valid decimal integer constants are
123
–31
0
562321
+78
Examples for invalid integer constants are
20,000
₹1000

Real constants

Real constants consist of a fractional part in their representation. Integer constants are inadequate to represent quantities that vary continuously.
Examples of real constants are
0.0026
–0.97
435.29
+487.0

Single character constants

A single character constant represents a single character which is enclosed in a pair of quotation symbols.
Examples for character constants are
'5'
'x'
';'

String constants

A string constant is a set of characters enclosed in double quotation marks. The characters in a string constant sequence may be alphabet, number, special character and blank space.
Examples of string constants are
"VISHAL"
"1234"
"C language"
"!….?"

Naming constants

A name given to a constant value. Value of name does not change during program execution.

Using const keyword

When we use 'const' with data type, memory will be allocated to variable and the initialized value does not change.
const int $x = 10$;
const float pi = 3.141;

Using # define

define x 10
define pi 3.141
Where '# define' is instruction to preprocessor so memory is allocated. The preprocessor replace each occurrence of name with value in program before execution.

OPERATOR

An operator is a symbol which performs operations on given data elements.

Table 2 *Precedence and Associativity*

( ) Parenthesis [ ] Index → Member of • Member of	$L - R$
Pre ++, – – (unary) – , &(address of) * (Indirection)	$R - L$
Arithmetic * , /, %	$L - R$
Arithmetic: +, –	$L - R$
Bitwise shift : ≪, ≫	$L - R$
Relational: <, >, =. >, > = = =, ! =	$L - R$
Bitwise ex –OR : ∧	$L - R$
Logical AND : &&	$L - R$
Logical OR : ||	$L - R$
Conditional: ? :	$R - L$
Assignment & compound Assignment =, + =, – =, * =, / = ; % =	$R - L$
Separation operator: , (comma)	$L - R$

Note: For Assignment operator, only a variable is allowed on its left.

Precedence Decreases as We Move from Top to Bottom

Examples:

1. int a,b,c;
   $a = b = c = 0$;
   Assigns '0' to a,b,c;
2. int a, $b = 55$, $c = 10$;
   initializes 'b' with 55 and 'c' with '10'.
   $b + c = a$; // Invalid
   Only variable is allowed on left side of assignment.
3. int $a = 15$, $b = 20$, $c = 2$, $d = 5$, $e = 10$, f, g, h, i;
   $f = a << c$;
   'a' is left shifted for 'c' times and result stored in 'f'
   i.e.,
   $a = 15 = (1\ 1\ 1\ 1)_2$
   ↓ ↓ ↓ ↓
   1 1 1 1 0 (After first shift)
   ↓ ↓ ↓ ↓
   1 1 1 1 0 0 (After second shift)
   One left shift multiplies 15 by 2 = 30
   Again the 2nd left shift multiplies 30 by 2 = 60
   Thus $15 \times 2^2 = 60$, where the power of 2 is the number of times shift is made. Value of 'f' becomes 60.

Note: Left shift multiplies the value by 2. Right shift divides the value by 2.

$g = a$ and b;

a – 0 1 1 1 1
b – 1 0 1 0 0

0 0 1 0 0 = 4

'&' performs bitwise AND. So 'g' value is '4'.

$h = a|b$; a – 0 1 1 1 1
b – 1 0 0 0 0

1 1 1 1 1 = 31

"I" performs bitwise 'OR'. R value is '31'.

$i = a \wedge d$: a – 1 1 1 1
b – 0 1 0 1

1 0 1 0 = 10

'^' performs bit-wise ex – OR. i value is '10'.

4. int $a = 100$, $b = 200$, $c = 300$, x;

```
x = (a>b)?((a>c)?a:c):((b>c)? b:c);
     false                      c
x = c
so, x = 300
```

5. int $i = 10$, $j = 10$, x, y;

```
x = i+++++i+i+++++i+++i
executes as
++ i
++ i  pre-increments
++ i
X = i + i + i + i + i
i ++ ;  post-increments
i ++ ;
so x = 65, i = 15.
y = j - - + - - j + j - -  + - - j +
- - j
```

```
executes as
- - j;
- - j;  pre decrements
- - j;
y = j + j + j + j + j ;
j - -;
j - -;  post decrements.
y = 35; j = 5
```

6. int i = 10;

```
printf("%d%d%d%d%d", i++, ++i, ++i,
i++, ++i);
evaluates the values in printf from
right to left.
So
i++, ++i, ++i, i++, ++i
<------------------------
Prints 14 14 13 11 11
Printf ("%d", i)
Prints 15:
```

Type Conversion

'*C*' allows mixed mode operations, i.e., variables of different type may appear in same expression. To perform the operation, the data need to convert into compatible type.

The conversion takes place in two ways:

Implicit

C automatically converts any intermediate values to proper type so that the expression can be evaluated without losing any significance.

For mixed mode operations, generally the 'lower' type is automatically converted to 'higher' type before the operation proceeds.

Explicit

'*C*' allows programmer to use type conversion operator to convert a data value to the required type.

Syntax:
*V*1 = (type) *V*2;
Type in parenthesis represents the destination type.

Example: int a = 3, b = 2, float x, y;

Case I: $x = a/b$;
results x = 1.000000

Case II: y = (float) a/b;
results y = 1.500000.

Because, in case 1, the integer division is performed and so returns an integer by division operator. While assigning the integer value implicitly converted to 1.000000, then assigns to float variable x where as in case 2, (float)a converts value of 'a' to float, the second variable 'b' is integer. The compiler implicitly converts integer to float. Then it performs float division. So 1.500000 is stored into floating variables.

Notes: '*C*' allows both implicit and explicit type conversion. Type conversion is of two types:

1. Narrowing**:** Conversion of 'higher' type to 'lower' type.
2. Widening**:** Conversion of 'lower' type to 'higher' type.

Widening →

Char – int –– long – float – double – long double

← **Narrowing**

Note: Narrowing causes loss of data.

Input/output Functions

Function	Purpose
printf	prints formatted string
scanf	reads formatted string
getchar	reads character
putchar	displays a character
gets	reads a string
puts	displays a string

Format Specifier	Purpose
%c	single character
%d	decimal integer
%e	floating point
%f	floating point
%h	short int
%o	octal integer
%x	hexa decimal
%s	string
%u	unsigned decimal integer

Note: scanf("%s", string_var); does not read string which contains white space. Hence to read multi word string use gets(string_var);

Example 1: Which of following comment regarding the reading of a string using scanf( ) and gets ( ) is true?

(A) Both can be used interchangeably
(B) scanf is delimited by end of line, gets is delimited by blank space
(C) scanf is delimited by blank, gets is delimited by end of line
(D) None of these

Ans: (C)

Program Structure

```
/* Documentation section */
Preprocessor commands;
Global declaration;
main ()
```

```
{
Body of main;
}
User defined function area;
```

Documentation section/comments Ignored by compiler, provides additional information to user to improve readability.

Preprocessing Tells the compiler to do pre-processing before doing compilation. For example

#include < stdio.h > tells to include stdio header file.

Global declaration It contains variable declarations, these are accessible in more than one function.

Function Functions are main building blocks of 'C' program. Every 'C' program contains one or more functions. A mandatory function called 'main( )' instructs the compiler to start execution from here.

User defined area Here user can define his own functions.

Control Statements

The statement that controls the execution sequence of a program is called "control statement".

The control statements are classified as:

1. Selection statement: if, switch
2. Iterative/looping statement: While, do-while, for
3. Unconditional jump statements: break, continue, return, goto

Selection/Decision-making Statement

Makes a decision to select and execute statement(s) based on the condition. 'C' supports if and switch selection statements.

The if statement "if" is called two-way selection statement.

Syntax:

```
if (expression) // simple-if
       statement(s);
if (expression) // if-else
{
       statement1(s);
}
else
{
       statements(s);
}
if (expression) // ladder else-if.
{
       Statement1(s);
}
else if (expression2)
{
Statement2(s);
}
else
{
Statement3(s);
}
```

Nested if:

```
       if (expression1)
{
       Statement(s)1;
       if (expression(s)2)
 else
       Statement(s)3;
}
else
Statement(s)4;
```

Note: If the expression evaluates to true then the statements of if block gets executed otherwise else block statements will execute.

Example 2: Consider the following program segment:

```
if (a > b) printf ("a > b");
else
printf ("else part");
printf ("a < = b");
a < = b will be printed if
```

(A) $a > b$ (B) $a < b$
(C) $a = b$ (D) all of these

Ans: (D)

Because the statement, printf("$a < = b$"); is not the part of either if block or else block.

The switch statement Switch is a multi-way (n-way) selection statement.

Syntax:

```
switch (var_name/exp)
{
case const1: stmts1;
             break;
case const2: stmts2;
             break;
        .
        .
        .
case constn: stmts n;
             break;
default: statements;
}
```

Notes:

- For switch only the integral (integer/char) type variables or expression evaluates to integral allowed.
- Absence of break after case statements leads continuation execution of all case statements followed by matching case block.

Example 3:

```
main ()
{
int i = 10;
switch(i)
{
case 10 : printf ("case 10");
case 15 : printf ("case 15");
case 20 : printf ("case 20");
default : printf ("default case");
}
}
```

Output: Case 10 case 15 case 20 default case

Reason: Missing break after each case, leads to execution of all the cases from matching case.

Example 4:

```
main ( )
{
int i = 10;
switch (i)
{
case 10 : printf("case 10");
break ;
case 8 + 2 : printf("case 8+2");
             break;
default : printf(" No matching case");
}
}
```

Program raises an error called 'Duplicate case' while compiling because the expression '8 + 2' evaluates to '10'.

Looping Statements

Sometimes, there is a situation to execute statement(s) repeatedly for a number of times or until the condition satisfies. *C*' supports following looping statements: while, do-while, for.

While Statement

Syntax: while (condition)

```
{
Statement(s);
}
```

If the condition is true the block of statements will execute and control returns to condition, i.e., the statement(*s*) executes till the condition becomes false.

Notes:

- 'While' executes the block either '0' or more times.
- 'While' is called entry control loop.

Do-while Statement.

Syntax:

```
do
        {
                Statement(s);
        } while (condition);
```

do-while is same as 'while; except that the statement(s) will execute for at least once.

Notes:

- The condition will not be evaluate to execute the block for first time.
- 'do-while' is called exit-control loop.

Example 5:

```
main ( )
{
int i = 0;
while (i! = 0)
{
        printf("%d", i);
        i++;
}
}
```

No output, because the condition is false for the first time.

```
main ( )
        {
        int  i = 0;
        do
        {
        printf("%d", i);
        i++;
} while (i! = 0);
}
```

Output: Displays 0 to 32767 and–32768 to–1

The for loop 'for' provides more concise loop control structure.

Syntax:

```
for(exp1; exp2; exp3)
{
Statement(s);
}
```

Expression 1: Initialization expression may contain multiple initializations. It executes only once before executing the loop for first time.

Expression 2: Condition expression. Only one condition expression is allowed. That may be single or compound condition, evaluates before every execution.

Expression 3: Modification statement may contain multiple statements. It executes on completion of loop body for every iteration.

Note: All the expressions in parenthesis are optional. Two semi-colons (;) are compulsory even though there are no expressions.

Odd loops In the for loop, while loop, the condition specifies the number of times a loop can be executed. Sometimes a user may not know, about the number of times a loop is to be executed. If we want to execute a loop for unknown number of times, then the concept of odd loops should be implemented, these can be done using the for, while (or) do-while loops. Let us illustrate odd–loop with a program

```
# include <stdio.h>
main()
{
int num, x;
num = 1;
while (num = = 1)
{
printf ("enter a number");
scanf ("%d", & x);
if((x % 2) = = 0)
printf("number is even");
else
printf("number is odd");
printf("do u want to test any num.");
printf("for yes-enter '1', No-enter '0'");
Scanf("%d",& num);
}
}
```

Unconditional Jump Statements

- "*C*" language permits to jump from one statement to another.
- '*C*' supports break, continue, return and goto jump statements.

Break statement Breaks the execution sequence. That is when the break statement executes in a block (loop) it'll come out from block (loop).

Syntax:

```
break;
```

Continue statement Used to skip a part of the loop under certain conditions.

Syntax:

```
continue;
```

Return statement Terminates the execution of a function and returns the control to the calling function.

Syntax:

```
return [exp/value];
```

Goto statement Jumps from one point to another with in a function.

Syntax:

```
label1:              goto label2:
Statement(s);        Statement(s);
goto label1;         label2;
reverse jump         forward jump
```

Reverse jump, executes the statements repeatedly where as in forward jump, the statements are skipped from execution.

Example 6:

```
main( )
{
int i ;
for (i=1; i<=10; i++)
{
        if (i = = 5)
                break;
        printf("%d" , i);
}
}
```

output: 1 2 3 4

if $i = 5$, then the loop will break.

Example 7:

```
main( )
{
        int i ;
        for (i  = 1; i<=10; i++)
        {
                if (i = = 5)
                continue;
                printf("%d" , i);
        }
}
```

o/p: 1 2 3 4 6 7 8 9 10

if $i = 5$, the loop statements skipped for that iteration. So it does not print '5'.

Example 8:

Output for the following program segment

```
for (i = 1, j = 10 ; i < 6; ++i, --j)
printf("\n %d %d", i, j);
```

Output:

1	10
2	9
3	8
4	7
5	6

Note: Since for statement allows multiple initialization and multiple update statements, expression 1 and expression 3, does not raise any error.

Exercises

Practice Problems 1

Directions for questions 1 to 15: Select the correct alternative from the given choices.

1. What will be the output of the following program?

```
void main()
{
int i;
char a[ ] =" \0 ";
if (printf("%s\n", a))
printf ("ok \n");
else
printf("program error \n");
}
```

(A) ok (B) progam error
(C) no output (D) compilation error

2. Output of the following will be

```
# define FALSE-1
# define TRUE 1
# define NULL 0
main( )
{
    if(NULL)
    puts("NULL");
    else if(FALSE)
    puts("TRUE");
    else
    puts("FALSE");
    }
```

(A) NULL (B) TRUE
(C) FALSE (D) 1

3. main( )

```
{
    printf("%x",-1 << 4) ;
}
```

For the above program output will be
(A) FFF0 (B) FF00
(C) 00FF (D) 0FFF

4. For the following program
# define sqr (*a*) *a***a*
main( )

```
    {
    int i;
    i = 64 / sqr(4);
    printf( "%d", i);
    }
```

output will be
(A) 4 (B) 16
(C) 64 (D) compilation error

5. #define clrscr ( ) 1000

```
main ( )
{
clrscr();
    printf ( "%d \n", clrscr());
  }
```

Output of the above program will be?
(A) error (B) No output
(C) 1000 (D) 1

6. Output of the following program is

```
main( )
{
    int i = -2;
    +i;
    printf("i = %d, +i = %d\n", i, +i);
```

(A) error (B) –2, +2
(C) –2, –2 (D) –2, 2

7. main( )

```
{
  int n;
  printf("%d", scanf ("%d", & n));
}
```

For the above program if input is given as 20. What will be the output?
(A) 20 (B) 1
(C) 2 (D) 0

8. How many times will the following code be executed?

```
{
    x = 10;
    while (x = 1)
            x ++;
}
```

(A) Never
(B) Once
(C) 15 times
(D) Infinite number of times

9. The following statement

```
printf("%d", 9%5); prints
```

(A) 1.8 (B) 1.0
(C) 4 (D) 2

10. int *a*;

```
printf("%d", a);
```

What is the output of the above code fragment?
(A) 0 (B) 2
(C) Garbage value (D) 3

11. printf("%d", printf("time"));
(A) syntax error
(B) outputs time 4
(C) outputs garbage
(D) prints time and terminates abruptly

12. The following program

```
main( )
{
    int i = 2;
    {
    int i = 4, j = 5;
```

```
        printf ("%d%d",i,j);
        }
        printf ("%d%d",i,j);
    }
```
(A) Compiler error: unrecognised symbol *j*;
(B) Prints 2545
(C) Print 4525
(D) None of the above

13. What is the output of the following program fragment?
```
for (i = 3; i < 15; i + = 3);
printf ("%d", i);
```
(A) a syntax error (B) an execution error
(C) prints 12 (D) prints 15

14. What is the output of the following program segment?
```
int a = 4, b = 6;
printf("%d", a = b);
```
(A) Outputs an error message
(B) Prints 0
(C) Prints 1
(D) None of these

15. The statements:
```
a = 7;
printf("%d", (a++));
prints
```
(A) Value of 8 (B) Value of 7
(C) Value of 0 (D) None of the above

Practice Problems 2

Directions for questions 1 to 12: Select the correct alternative from the given choices.

1. If the condition is missing in a FOR loop of a C program then
(A) It is assumed to be present and taken to be false
(B) It is assumed to be present and taken to be true
(C) It results in syntax error
(D) Execution will be terminated abruptly

2. Which of the following operators in '*C*' does not associate from the right?
(A) = (B) + =
(C) postfix++ (D) >

3. In a C programming language $x - = y + 1$ means
(A) $x = -x - y - 1$ (B) $x = x - y + 1$
(C) $x = x - y - 1$ (D) $x = -x + y + 1$

4. Minimum number of temporary variables needed to swap two variables is
(A) 1 (B) 2
(C) 3 (D) 0

5. A preprocessor command
(A) need not start on a new line
(B) need not start on the first column
(C) has # as the first character
(D) comes after the first executable statement

6. printf ("%d", printf ("%d", printf("time4kids")));
(A) Outputs time (B) Syntax error
(C) Outputs 9 (D) None of the above

7. for (i = 1; i < 5; i++)

if (i!=3)

printf("%d", i);

Outputs:
(A) 12345 (B) Error
(C) 1245 (D) 0000

8. Which operand in '*C*' takes only integer operands?
(A) * (B) /
(C) % (D) +

9. An unrestricted use of 'goto' statement is harmful because
(A) it results in increasing the executing time of the program
(B) it increases the memory of the program
(C) it decreases the readability and testing of program
(D) None of the above

10. What will be the output?
```
main()
{
int i = 0, j = 0;
if(i && j ++)
printf("%d..%d", i++, j);
printf("%d..%d", i, j);
}
```
(A) 1..1 (B) 2..2
(C) 0..0 (D) 1..1, 1..1

11. What is the output?
```
main ()
{
int a = 0;
int b = 20;
char x = 1;
char y = 10;
if(a, b, x, y);
printf("hello");
}
```
(A) logical error (B) Garbage value
(C) hello (D) 20

12. What will be the value of count after executing the below program:
```
main ( ) {
int count = 10, digit = 0;
while (digit < = 9) {
printf ("%d\n", ++count);
++digit;
}
}
```
(A) 10 (B) 11
(C) 20 (D) 21

Previous Years' Questions

1. Which one of the following are essential features of an object-oriented programming language?
(i) Abstraction and encapsulation
(ii) Strictly-typedness
(iii) Type-safe property coupled with sub-type rule
(iv) Polymorphism in the presence of inheritance

[2005]

(A) (i) and (ii) only
(B) (i) and (iv) only
(C) (i), (ii) and (iv) only
(D) (i), (iii) and (iv) only

2. Which of the following are true?

(i) A programming language which does not permit global variables of any kind and has no nesting of procedures/functions, but permits recursion can be implemented with static storage allocation

(ii) Multi-level access link (or display) arrangement is needed to arrange activation records only if the programming language being implemented has nesting of procedures/functions

(iii) Recursion in programming languages cannot be implemented with dynamic storage allocation

(iv) Nesting procedures/functions and recursion require a dynamic heap allocation scheme and cannot be implemented with a stack-based allocation scheme for activation records

(v) Programming languages which permit a function to return a function as its result cannot be implemented with a stack-based storage allocation scheme for activation records

[2008]

(A) (ii) and (v) only (B) (i), (iii) and (iv) only
(C) (i), (ii) and (v) only (D) (ii), (iii) and (v) only

3. What will be the output of the following C program segment?

char inChar = 'A';
switch(inChar) {
case 'A': printf("choice A\n"):
case 'B':
case 'C': printf("choice B");
case 'D'
case 'E':
default: printf("No Choice");} **[2012]**

(A) No choice
(B) Choice A
(C) Choice A
Choice B No choice
(D) Program gives no output as it is erroneous

4. Suppose n and p are unsigned int variables in a C program. We wish to set p to ${}^nC_3$. If n is large, which one of the following statements is most likely to set p correctly?

[2014]

(A) $p = n * (n - 1) * (n - 2)/6;$
(B) $p = n * (n - 1) /2* (n - 2)/3;$
(C) $p = n * (n - 1) /3 * (n - 2)/2;$
(D) $p = n * (n - 1) * (n - 2)/6.0;$

5. The secant method is used to find the root of an equation $f(x) = 0$. It is started from two distinct estimates x_a and x_b for the root. It is an iterative procedure involving linear interpolation to a root. The iteration stops if $f(x_b)$ is very small and then x_b is the solution. The procedure is given below. Observe that there is an expression which is missing and is marked by ?. Which is the suitable expression that is to put in place of ? so that it follows all steps of the secant method?

[2015]

Secant

Initialize: x_a, x_b, ε, N // ε = convergence indicator
// N = maximum no. of iterations
$f_b = f(x_b)$
$i = 0$
while ($i < N$ and $|f_b| > ε$) do
$i = i + 1$ // update counter
$x_t = ?$ // missing expression for
// intermediate value
$x_a = x_b$ // reset x_a
$x_b = x_t$ // reset x_b
$f_b = f(x_b)$ // function value at new x_b
end while
if $|f_b| > ε$ then // loop is terminated with $i = N$
write "Non-convergence"
else
write "return x_b"
end if

(A) $x_b - (f_b - f(x_a))\, f_b / (x_b - x_a)$
(B) $x_a - (f_a - f(x_a))\, f_a / (x_b - x_a)$
(C) $x_b - (x_b - x_a)\, f_b / (f_b - f(x_a))$
(D) $x_a - (x_b - x_a)\, f_a / (f_b - f(x_a))$

6. Consider the following C program:

```
#include<stdio.h>
int main( )
{
int i, j, k = 0;
j = 2 * 3 / 4 + 2.0 / 5 + 8 / 5;
k -= --j;
for (i = 0; i < 5; i ++)
{
switch(i + k)
```

```
{
case 1:
case 2: printf("\n%d", i + k);
case 3: printf("\n%d", i + k);
default: printf(("\n%d", i + k);
}
}
return 0;
}
```

The number of times printf statement is executed is _______. [2015]

7. Consider the C program fragment below which is meant to divide x by y using repeated subtractions. The variables x, y, q and r are all unsigned int.

```
while (r >= y) {
    r = r – y;
    q = q + 1;
}
```

Which of the following conditions on the variables x, y, q and r before the execution of the fragment will ensure that the loop terminates in a state satisfying the condition x == (y*q + r)? [2017]
(A) (q == r) && (r == 0)
(B) (x > 0) && (r == x) &&(y > 0)
(C) (q == 0) && (r == x) && (y > 0)
(D) (q == 0) && (y > 0)

8. Consider the following C Program.

```
#include<stdio.h>
int main () {
        int m = 10;
        int n, nl ;
        n = ++m;
        nl = m++;
        n--;
        --nl;
        n  -= nl;
        printf ("%d",  n) ;
        return 0;
}
```

The output of the program is ___________. [2017]

Chapter 2

Functions

LEARNING OBJECTIVES

- *Functions*
- *Library functions*
- *User defined functions*
- *Defining user defined functions*
- *Recursion*
- *Parameter passing*
- *Pass by value*
- *Pass by address*
- *Scope*
- *Life time*
- *Binding*

Functions

A function is a block of code that performs a specific task. It has a name and is reusable, i.e., it can be executed from as many different parts in a program as required.

Functions make possible top down modular programming. In this style of programming, the high-level logic of overall problem is solved first, whereas the detail of each lower-level function is addressed later. This approach reduces the complexity in writing program.

1. Every C program can be thought of collection of functions.
2. main( ) is also a function.

Types of Functions

Library functions

These are the in-built functions of '*C*' library. These are already defined in header files.

Example 1: printf( ); is a function which is used to print at output. It is defined in '`stdio.h`' file.

User-defined functions

Programmers can create their own function in '*C*' to perform specific tasks.

Example 2:
```
# include <stdio.h>
main( )
{
message( );
}
message( )
{
printf("Hello");
}
```

- A function receives zero (or) more parameters, performs a specific task, and returns zero or one value.
- A function is invoked by its name and parameters.
- No two functions have the same name in a single C program.
- The communication between the function and invoker is through the parameter and the return value.
- A function is independent.
- It is "completely" self-contained.
- It can be called at any place of your code and can be ported to another program.
- Functions make programs reusable and readable.

Example 3: Return the largest of two integers.
```
int maximum (int a, int b)
{
if (a > b)
return a;
else
return b;
}
```

Note: Function calls execute with the help of execution stack. Execution of 'C program' starts with main( ) function. Main( ) is a user-defined function.

Defining User-defined Functions

In order to work with user-defined functions, it requires the following concepts about functions:

- Declaration of a function
- Definition of a function
- Function call

Declaration specifies what

- is the name of the function
- are the parameters to pass (type, order and number of parameters).
- it returns on completion of execution

Example 4: int maximum (int, int); int maximum (int *a*, int *b*);

Syntax:

```
Return_type Function_Name(Parameter_list);
```

- Names of parameters are optional in declaration.
- Default return type for 'C' functions is 'int'.
- A function, whose return type is void returns nothing.
- Empty parenthesis after a function name in declaration says, function does not accept any parameters.

Definition specifies *how*

- to perform the specified task
- to accept passed parameters
- to process parameters or execute instruction to producer equired results (return value).

Function definition is a self-contained block of instructions, will be executed on call:

Syntax:

```
Return _type Function -Name(paralist)
{
Local declaration(s);
Executable statements(s);
}
int maximum (int a, int b)
{
if (a > b)
  return a;
else
  return b;
}
```

Function call specifies

1. where to execute the function
2. when to execute the function

Note: If the function definition provided before use (call), the declaration is optional.

The following example describes control flow during function call:

```
void hello(); // Declaration
void main()
{
printf("\n function");
hello();
printf("\n Main after call to hello")
void hello()//Definition
 {
printf ("\n function Hello");
return;
 }
```

A *return* statement has two important uses:

1. first, it causes an immediate exit from the function.
2. second, it may be used to return a value.

If a function does not return any value, then the return statement is optional.

Recursion

In general, programmers use two approaches to write repetitive algorithms. One approach using *loops*, the other is *recursion*.

Recursive functions typically implement recurrence relations, which are mathematical formula in which the desired expression (function) involving a positive integer, *n*, is described in terms of the function applied to corresponding values for integers less than '*n*'.

1. The function written in terms of itself is a recursive case.
2. The recursive case must call the function with a decreasing '*n*'.
3. Recursion in computer programming is exemplified when a function defined in terms of itself.
4. Recursion is a repetitive process in which a function calls itself.

Note: Recursive function must have an *if* condition to force the function to return without recursive call being executed. If there is no such condition, then the function execution falls into infinite loop.

Rules for designing recursive function
1. Determine base case
2. Determine general case
3. Combine, base and general case into a function

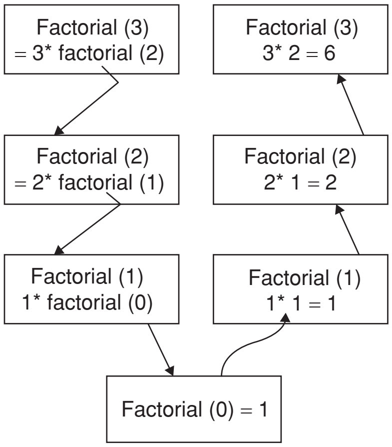
Example 5: Recursive factorial function

```
1. int factorial (int n)
2. {
3. if (n = = 0)
4. return 1;
5. else
6. return (n * factorial (n - 1));
7. }
```

The statement 3 is a base condition, which stops the recursive call of function.

The statement 6 reduces the size of problem by recursively calling the factorial with $(n - 1)$.

Execution sequences for factorial (3):



Disadvantages:

1. Recursive programs increase the execution time of program.
2. Recursive programs typically use a large amount of computer memory and the greater the recursion, the more memory is used.
3. Recursive programs can be confusing to develop and extremely complicated to debug.

Parameter Passing

There are two ways of passing parameters to functions in ‘C’ language.

1. Pass-by-value: When parameters are passed by value, create copies in called function. This mechanism is used when we do not want to change the value of actual parameters.
2. Pass-by-address: In this case, only the addresses of parameters are passed to the called function. Therefore, manipulation of formal parameters affects actual parameters.

Examples 6:

```
void swap1(int, int); /* function – to swap
two numbers by passing values */
void swap2 (int *, int *); /* function to
swap two numbers by passing Address * /
   void main ()
{
int a = 10, b = 15, c = 5, d = 25;
printf("value of a and b before swapping
:%d, %d" a , b );
swap1(a, b);
printf("values of a and b after swapping :
%d, %d", a, b);
printf ("values of c and d before swapping
:%d%d", c,d );
Swap2(&c, &d);
printf("values of c and d after swapping
%d, %d", c, d);
}
void swap1(int x, int y )
{
int temp;
temp = x;
x = y;
y = temp;
}
void swap2 (int *x, int *y)
{
int temp;
temp = *x;
*x = *y:
*y = temp;
}
```

Output:

Value of *a* and *b* before swapping: 10, 15
Value of *a* and *b* after swapping: 10, 15
Value of *c* and *d* before swapping: 5, 25
Value of *c* and *d* after swapping: 25, 5

Solved Examples

Example 1: Consider the program below:

```
#include<stdio.h>
int fun (int n, int *fp)
```

Table 1 *Comparison of pass-by-value and pass-by-address*

	Pass-by-value		Pass-by-address
1.	Also known as call-by-value	1.	Also known as call-by-address or call by-reference
2.	Pass the values of actual parameters	2.	Pass the address of actual parameters
3.	Formal parameters act as duplicates or as a copy to actual parameters	3.	Formal parameters acts as references to the actual parameters
4.	Operations on formal parameter does not affect actual parameters	4.	Operations on formal parameters affect actual parameters
5.	Passing of parameters is time consuming as the data size increases	5.	The size of parameters does not affect the time for transferring references.
6.	Actual parameters are secured	6.	Helps to return multiple parameters

```
{
int t,f;
if (n < =1)
{
*fp=1;
return 1;
 }
t = fun(n-1, fp);
f = t+ *fp;
*fp = t;
return f;
}
int main ()
{
int x = 15;
printf (“%d\n”, fun(5,&x));
return 0;
}
```

What is the output?

(A) 2 (B) 4

(C) 8 (D) 16

Solution: (C)

Execution stack

Function call sequence	Corresponding values of *t*, *f*, *n*, *x*			
	t	*f*	*n*	*x*
main()	–	–	–	15

	t	*f*	*n*	*x*(f_p)
fun (5 &x)	*G*	*G*	5	15
main()	–	–	–	15

	t	*f*	*n*	*x*(f_p)
fun (4 &x)	*G*	*G*	4	15
fun (5 &x)	*G*	*G*	5	15
main()	–	–	–	15

	t	*f*	*n*	*x*(f_p)
fun (3 &x)	*G*	*G*	3	15
fun (4 &x)	*G*	*G*	4	15
fun (5 &x)	*G*	*G*	5	15
main()	–	–	–	15

	t	*f*	*n*	*x*(f_p)
fun (2, &x)	*G*	*G*	2	15
fun (3, &x)	*G*	*G*	3	15
fun (4, &x)	*G*	*G*	4	15
fun (5, &x)	*G*	*G*	5	15
main()	–	–	–	15

Note: ‘–’ indicates *no memory* allocated to variable. ‘*G*’ indicates *garbage value*.

	t	*f*	*n*	*x*(f_p)
fun (1, &x)	*G*	*G*	1	15
fun (2, &x)	*G*	*G*	2	15
fun (3, &x)	*G*	*G*	3	15
fun (4, &x)	*G*	*G*	4	15
fun (5, &x)	*G*	*G*	5	15
main()	–	–	–	15

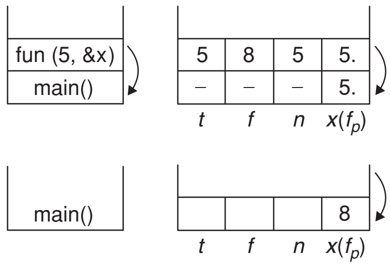
For the function call fun(1, &x) condition (*n*<=1) is true. So Assigns ‘1’ to fp and returns ‘1’.

	t	*f*	*n*	*x*(f_p)
fun (1, &x)	*G*	*G*	1	1.
fun (2, &x)	*G*	*G*	2	1.
fun (3, &x)	*G*	*G*	3	1.
fun (4, &x)	*G*	*G*	4	1.
fun (5, &x)	*G*	*G*	15	1.
main()	–	–	–	1.

	t	*f*	*n*	*x*(f_p)
fun (2, &x)	1	2	2	1.
fun (3, &x)	*G*	*G*	3	1.
fun (4, &x)	*G*	*G*	4	1.
fun (5, &x)	*G*	*G*	15	1.
main()	–	–	–	1.

	t	*f*	*n*	*x*(f_p)
fun (3, &x)	2	3	3	2.
fun (4, &x)	*G*	*G*	4	2.
fun (5, &x)	*G*	*G*	5	2.
main()	–	–	–	1.

	t	*f*	*n*	*x*(f_p)
fun (4, &x)	3	5	4	3.
fun (5, &x)	*G*	*G*	5	3.
main()	–	–	–	1.



Finally, x contains '8', so printf prints '8'.

Example 2: What does the following program prints?

```
#include < stdio.h>
void f (int *p, int *q)
{
p=q;
*p=12;
}
int i = 0, j=1;
int main()
{
f(&i, &j);
printf(" %d%d ", i, j);
return 0 ;
}
```

(A) 2 12 (B) 12 1
(C) 0 1 (D) 0 12

Solution: (D)

```
main( )
f (&i, &j)
address of 'i' is stored in to p.
and address of 'j' is stored into 'q'.
i.e., *p and*q refers i and j.
The statement:
p = q; updates pointer 'p', so that both
pointers refer to parameter 'j'.
*p = 12
Changes value of 'j' to '12' But 'i' does
not effected. So, prints 0 12.
```

Example 3: What is the value printed by the following program?

```
# include <stdio.h>
int f(int *a, int n)
{
if (n<=0) return 0 ;
else if(*a%2 = = 0)
return *a + f(a+1, n-1);
else
return *a - f(a+1, n-1);
}
int main ( )
{
int G [ ] = { 12, 7, 13, 4, 11, 6};
printf("%d", f (a,b));
return 0;
}
```

(a) –9 (b) 12
(c) 15 (d) 20

Solution: (C)

	0	1	2	3	4	5
a	12	7	13	4	11	6

$f(a, 6)$ is the first call to function $f(\,)$.

The array _ name refers to base address of array, i.e., address of first element.

Thus,

$F(a, 6)$

12 % 2 = 0. So,

$$12 + f\left(\overline{(a+1)}, \left(\frac{n-1}{5}\right)\right)[{*a} \text{ is even}]$$
$$\downarrow 7$$

$$12 + \left(7 - \left(\begin{matrix} f(a+1), \left(\dfrac{n-1}{4}\right) \\ \downarrow 13 \end{matrix}\right)\right)[{*a} \text{ is odd}]$$

$$12 + \left(7 - \left(13 - f\left(\begin{matrix}(a+1)\\ \downarrow 4\end{matrix}\right), \left(\frac{n-1}{3}\right)\right)\right)[{*a} \text{ is odd}]$$

$$12 + \left(7 - \left(13 - \left(4 + f\left(\begin{matrix}(a+1), \dfrac{(n-1)}{2} \\ \downarrow 11\end{matrix}\right), \right)\right)\right)[{*a} \text{ is even}]$$

$$12 + \left(7 - \left(13 - \left(4 + \left(11 - f\left(\begin{matrix}(a+1), \left(\dfrac{n-1}{1}\right) \\ \downarrow 6\end{matrix}\right)\right)\right)\right)\right)[{*a} \text{ is odd}]$$

$$12 + \left(7 - \left(13 - \left(4 + \left(11 - \left(6 + \frac{f(a+1), \dfrac{(n-1)}{0}}{\downarrow 0}\right)\right)\right)\right)\right)[{*a} \text{ is even}]$$

$$12 + (7 \quad (13 - (4 + (11 - (6 + 0))))) = 15$$

Scope, Lifetime and Binding

Storage classes specify the scope, lifetime and binding of variables. To fully define a variable, one needs to mention not only its 'type' but also its 'storage class'.

A variable name identifies some physical location within computer memory where a collection of bits are allocated for storing value of variable.

Storage class tells us:

1. Where the variable would be stored (either in memory or CPU registers)?
2. What will be the initial value of a variable, if no value is specifically initialized?
3. What is the scope of a variable (where it can be accessed)?
4. What is the life of a variable?

Scope

The scope defines the visibility of an object. It defines where an object can be referenced/accessed; generally, the scope of variable is local or global.

1. The variables defined within a block have *local scope*. They are *visible only to the block* in which they are defined.
2. The variables defined in global area are visible from their definition until the end of program. It is *visible everywhere* in program.

Lifetime

The lifetime of a variable defines the duration for which the computer allocates memory for it (the duration between allocation and deallocation of memory).

In *C*, variable can have automatic, static or dynamic lifetime.

1. Automatic: Variables with automatic lifetime are created each time their declaration are encountered and are destroyed each time their blocks are exited.
2. Static: A variable is created when the declaration is executed for the first time and destroyed when the execution stops/terminates.
3. Dynamic: The variable's memory is allocated and deallocated through memory management functions.

Binding

Binding finds the corresponding binding occurrence (declaration/definition) for an applied occurrence (usage) of an identifier. For Binding.

1. Scope of variables should be known. What is the block structure? In which block the identifier is variable?
2. What will happen if we use same identifier name again? '*C* forbids use of same identifier name in the same scope'. Same name can be used in different scopes.

Examples:

1.
```
double f,y;
int f(  ) // error
{
.
.
.
}
double y; // error
```

2.
```
double y;
int f( )
{
double f;// legal
int y; //legal
}
```

There are four storage classes in *C*.

Storage class	Storage Area	Default Initial Value	Lifetime	Scope	Keyword
Automatic	Memory	Till the control remains in block	Till the control remains in block	Local	auto
Register	CPU register	An unpredictable value (or) garbage value	Till the control remains in block	Local	register
Static	Memory	Zero	Value of variable persist between function calls	Local	static
External	Memory	Unpredictable or garbage value	Throughout program execution	Global	extern

Note: Default storage class is auto.

Example 4: What will be the output for the program?

```
int i = 33;
main( )
{
   extern int i;
     {
         int i = 22;
          {
               const volatile unsigned i
               = 11;
                   printf (" %d ", i);
              }
                   printf (" %d ", i);
              }
printf ("%d ", i) ;
}
```

(A) error
(B) 11 22 33
(C) 11 22 garbage
(D) 11 11 11

Solution: (B)

'{' introduces new block and thus new scope. In the innermost block, *i* is declared as const volatile unsigned which is a valid declaration. *i* is assumed of type int. So printf prints 11. In the next block, *i* has value 22 and so printf prints 22. In the outermost block, *i* is declared as extern, so no storage space is allocated for it. After compilation is over, the linker resolves it to global variable, *i* since it is the only variable visible there. So it prints its value as 33.

Example 5: Consider the following C program:

```
int f(int n)
{
static int r;
if (n<=0) return 1;
if (n> 3)
{
r=n;
return (f(n-2)+2));
}
return f(n-1) + r;
}
```

What is the value of $f(5)$?

(a) 15 (b) 17
(c) 18 (d) 19

Solution: (C)

Call Sequence	*r*	Return Sequence
$f(5)$ ↓	5	18
$f(3)+2$	5	16+2 ↓
$f(2)+r$	5	11+5 ↓
$f(1)+r$	5	6+5 ↓
$f(0)+r$	5	1+5 ↓

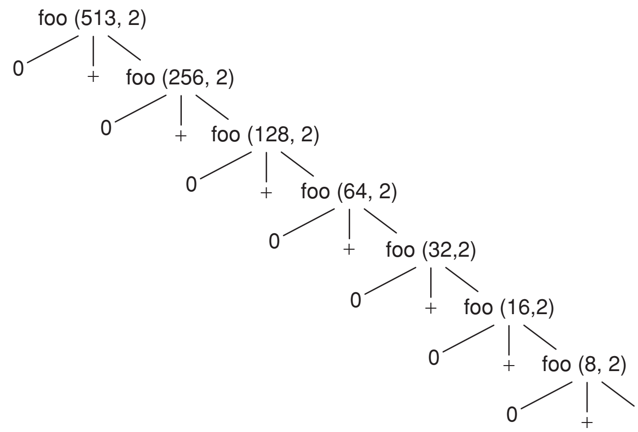
Common data for questions 6 and 7: Consider the following recursive 'C' function that takes two arguments.
unsigned int foo (unsigned int n, unsigned int r)

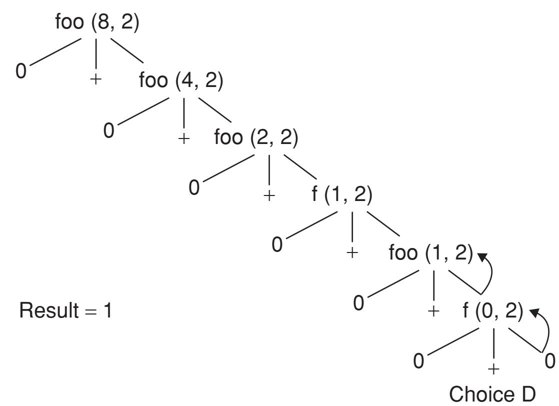
```
{
if (n>0)
return ((n%r)+ foo(n/r,r));
else
return 0;
}
```

Example 6: What is the return value of the function foo when it is called as foo (512,2)?

(A) 9 (B) 8
(C) 2 (D) 1

Solution: (D)



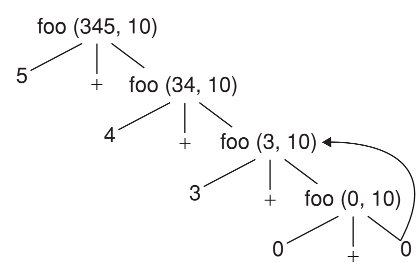


Result = 1

Example 7: What is return value for the function call foo (345, 10)?

(A) 345 (B) 12
(C) 5 (D) 3

Solution: (B)



result 5 + 4 + 3 = 12

Exercises

Practice Problems 1

Directions for questions 1 to 15: Select the correct alternative from the given choices.

1. What will be the output of the following program?

```
main( )
{
main( );
}
```

(A) overflow error (B) syntax error
(C) returns 0 (D) returns 1

2. Output of the following program is

```
 main( )
  {
static int var = 6;
printf("%d\t", var--);
if(var)
                   main( );
  }
```

(A) 5 4 3 2 1 0 (B) 6 6 6 6 6 6
(C) 6 5 4 3 2 1 (D) Error

3. Which of the following will be the output of the program?

```
main( )
{
 char str[ ] = "Hello";
 display( str );
}
void display (char *str)
    {
        printf ( "%s", str) ;
    }
```

(A) compilation error (B) hello
(C) print null string (D) no output

4. Consider the following C function

```
int fun (int n)
{
  static int x = 0;
  if (n<=0) return 1;
  if (n>3)
     {
          x = n;
       return fun(n-2)+3;
      }
 return fun(n-1)+ x;
 }
```

What is the value of fun(5)?
(A) 4 (B) 15
(C) 18 (D) 19

5. For the following C function

```
void swap (int a, int b)
{
   int t;
        t = a;
        a = b;
    b = t;
}
```

In order to exchange the values of two variables *w* and *z*,
(A) call swap (*w*, *z*)
(B) call swap (and *w*, and *z*)
(C) swap (*w*, *z*) cannot be used as it does not return any value
(D) swap (*w*, *z*) cannot be used as the parameters are passed by value

6. Choose the correct option to fill? *x* and? *y* so that the program below prints an input string in reverse order. Assume that the input string is terminated by a new line character:

```
void Rev(void) {
  int a;
  if (?x) Rev( );
  ?y
      }
main( ) {
printf("Enter the text");
printf(" \n");
Rev( );
printf("\n");
}
```

(A) `? x is (getchar( )! = '\n')`
`? y is getchar (A);`
(B) `? x is((A = getchar( )) ! = '\n')`
`? y is getchar(A) ;`
(C) `? x is (A! = '\n')`
`? y is putchar (A);`
(D) `? x is (A = getchar ( )) ! = '\n')`
`? y is putchar(A) ;`

7.

```
main ( )
  {
     extern int a;
      a = 30;
       printf ("%d", a);
  }
```

What will be the output of the above program?
(A) 30 (B) Compiler error
(C) Runtime error (D) Linker error

8. Which of the following will be the output of the program?

```
void main ( )
 {
    int n = ret(sizeof(float));
    printf("\n value is %d ", ++n);
}
int ret(int ret)
{
```

```
    ret += 2.5;
   return (ret);
}
```

(A) Value is 6 (B) Value is 6.5
(C) Value is 7 (D) Value is 7.5

9. The following program

```
main( )
{
    pt( ); pt( );pt( );
}
pt( )
{
    static int a;
    printf("%d", ++a) ;
}
prints
```

(A) 0 1 2
(B) 1 2 3
(C) 3 consecutive, but unpredictable numbers
(D) 1 1 1

10. What is the output of the following program?

```
main( ) {
    int i = 0;
    while (i < 4) {
                    sum(i);
                    i++;
                }
          }
void sum(int i) {
    static int k;
printf ("%d", k + i);
k++;
                }
```

(A) 0 2 4 6 (B) 0 1 2 3
(C) 0 2 0 0 (D) 1 3 5 7

11. What will be the output of following code?

```
# include <stdio.h>
aaa() {
printf("hi");
}
bbb() {
printf("hello");
}
ccc()
{
printf("bye");
}
main ()
{
int *ptr[3]( );
ptr[0] = aaa;
ptr[1] = bbb;
ptr[2] = ccc;
ptr[2]();
}
```

(A) hi (B) hello
(C) bye (D) Garbage value

12. What is the output?

```
void main()
{
static int i = 5;
if(--i)
{
main();
printf("%d", i);
}
}
```

(A) 5 (B) 5 5 5 5
(C) 0 0 0 0 (D) 1 1 1 1

13. If the following function gets compiled, what error would be raised?

```
double fun(int x, double y)
{
int x;
x = 100;
return y;
}
```

(A) Function should be defined as int fun(int *x*, double *y*)
(B) Missing parenthesis in return
(C) Redeclaration of *x*
(D) All of these

14. Consider the following function:

```
fun(int x)
{
if ((x/2)! = 0)
return (fun (x/2)  10 + x%2);
else return 1;
}
```

What will happen if the function 'fun' called with value 16 i.e., as fun(16).
(A) Infinite loop
(B) Random value will be returned
(C) 11111
(D) 10000

15. What is the output of the following program?

```
void main( )
{
static int x = 5;
printf("%d", x - - );
if (x ! = 0)
main( );
}
```

(A) error:main( ) cannot be called from main( )
(B) Infinite loop
(C) 5 4 3 2 1
(D) 0

Practice Problems 2

Directions for questions 1 to 15: Select the correct alternative from the given choices.

1. An external variable
(A) is globally accessible by all functions
(B) has a declaration "extern" associated with it when declared within a function
(C) will be initialized to 0, if not initialized
(D) all of the above

2. The order in which actual arguments are evaluated in a function call
(A) is from the left (B) is from the right
(C) is unpredictable (D) none of the above

3. In *C* language, it is necessary to declare the type of a function in the calling program if the function
(A) returns an integer (B) Returns a float
(C) both (A) and (B) (D) none of the above

4. What is the output?
```
void main()
{
int k = ret(sizeof(int));
printf("%d", ++k);
}
int ret (int ret)
{
ret + = 2.5;
return (ret);
}
```
(A) 3.5 (B) 5
(C) 4 (D) logical error

5. When a recursive function is called, all its automatic variables are
(A) maintained in stack
(B) retained from last execution
(C) initialized during each call of function
(D) none of these

6. Consider the following program segment:
```
int fun(int x, int y)
{
if(x > 0)
return ((x % y) + fun(x/y, y));
else
return 0;
}
```
What will be the output of the program segment if the function is called as fun(525, 25)?
(A) 25 (B) 12
(C) 21 (D) 42

7. Consider the following C program segment:
```
int fun (int x)
{
static int i = 0;
if (x < = 0)
return 1;
else if (x > 5)
{
i = x;
return fun (x – 3) +2;
}
return fun (x – 2) + i;
}
```
What is the value of fun(7)?
(A) 17 (B) 10
(C) 11 (D) 9

8. Consider the following C program:
```
void rearrange( )
{
char ch;
if (X)
rearrange( );
Y;
}
void main ( )
{
printf("\n enter text to print reverse
order :");
rearrange( ) ;
}
```
Choose the correct option to fill *X* and *Y*, so that the program prints the entered text in reverse order. Assume that input string terminates with new line.
(A) `X: (getchar(ch) = = '\n')`
`Y: putchar(ch);`
(B) `X: (getchar(ch)! = '\n')`
`Y: ch = putchar( );`
(C) `X: ((ch = getchar( ) )! = '\n')`
`Y: putchar(ch);`
(D) `X: ((ch = getchar( )) = = '\n')`
`Y: putchar (ch);`

9. Consider the following C function:
```
int f(int n)
{
static int i = 1;
if (n > = 5) return n;
n = n + i;
i++ ;
return f(n);
}
```
The value returned by *f*(1) is
(A) 5 (B) 6
(C) 7 (D) 8

10. Consider the following C function:
```
int incr (int i)
{
static int count = 0;
count = count + i;
return (count);
```

```
}
main ( )
{
int i, j;
for (i = 0; i < =4; i++)
j = incr (i);
}
```

The *j* value will be

(A) 10
(B) 4
(C) 6
(D) 7

11. The following function

```
int Trial (int a, int b, int c)
{
if ((a > = b) && (c < b))
return b;
else if(a > = b)
return Trail(a, c, b);
else return Trail (b, a, c);
}
```

(A) finds the maximum of *a*, *b*, *c*
(B) finds the middle value of *a*, *b*, *c* after sorting
(C) finds the minimum of *a*, *b*, *c*
(D) none of the above

12. Consider the following pseudo code

```
f(a, b)
{
while(b! = 0)
{
t = b;
b = a % b;
a = t;
}
return a;
}
```

(A) The above code computes HCF of two numbers *a* and *b*
(B) The above code computes LCM of *a* and *b*
(C) The above code computes GCD of *a* and *b*
(D) None of the above

13.
```
1. main ( )
2. {int a = 10, *j;
3. void *k;
4. j = k = &a;
5. j++;
6. k++;
7. printf("\n %u, %u", j, k);
8. }
```

Which of the following is true in reference to the above code?

(A) The above code will compile successfully
(B) Error on line number 6
(C) Error on line number 3
(D) Error on line number 4

14. Aliasing in the context of programming language refers to

(A) multiple variables having the same memory location
(B) multiple variables having the same value
(C) multiple variables having the same identifier
(D) multiple uses of the same variable

15. Match the following:

X:	*m* = malloc (5); *m* = NULL;	1:	Using dangling pointers
Y:	free (*n*); *n* ↓ value = 5;	2:	Using un initialized pointers
Z:	char **p*; **p* = '*a*';	3:	Lost memory

(A) X – 1 Y – 3 Z – 2
(B) X – 3 Y – 1 Z – 2
(C) X – 3 Y – 2 Z – 1
(D) X – 2 Y – 1 Z – 3

Previous Years' Questions

1. In the following C function, let $n \geq m$.

```
int gcd(n,m)
{
if (n%m ==0) return m;
   n = n%m;
return gcd(m,n);
}
```

How many recursive calls are made by this function? **[2007]**

(A) $\Theta(\log_2 n)$ (B) $\Omega(n)$
(C) $\Theta(\log_2 \log_2 n)$ (D) $\Theta(\sqrt{n})$

2. What is the time *complexity* of the following recursive function?

```
int DoSomething (int n) {
if (n <= 2)
     return 1;
 else
return(DoSomething(floor(sqrt(n)))+ n);}
```

[2007]

(A) $\Theta(n^2)$ (B) $\Theta(n \log_2 n)$
(C) $\Theta(\log_2 n)$ (D) $\Theta(\log_2 \log_2 n)$

3. Choose the correct option to fill ? 1 and ? 2 so that the program below prints an input string in reverse order. Assume that the input string is terminated by a newline character.

```
void reverse (void) {
int c;
if (?1) reverse( );
?2
}
main ( ) {
printf ("Enter Text") ; printf ("\ n");
reverse ( ); printf ("\ n") ;
}
```

[2008]

(A) ?1 is (getchar( )! = '\n')
    ?2 is getchar(c);
(B) ?1 is (c = getchar( ))! = '\n')
    ?2 is getchar(c);
(C) ?1 is (c! = '\n')
    ?2 is putchar(c);
(D) ?1 is ((c = getchar( ))! = '\n')
    ?2 is putchar(c);

4. Consider the program below:

```
# include < stdio.h >
   int fun(int n, int * f_p) {
      int t, f;
      if (n <=1) {
            *f_p =1;
      return 1;
      }
      t = fun (n-1, f_p);
      f = t+*f_p;
      *f_p = t;
      return f;
      }
      int main( ) {
      int x = 15;
      printf ("%d\n", fun(5,&x));
      return 0;
      }
```

The value printed is **[2009]**

(A) 6 (B) 8
(C) 14 (D) 15

5. What is the value printed by the following C program?

```
#include <stdio.h>
int f(int *a, int n)
{
if (n <= 0)return 0;
else if(*a % 2 = = 0) return * a + f(a+1,
n-1);
else return *a-f(a+1, n-1);
}
int main( )
{
int a[ ] = {12, 7, 13, 4, 11, 6};
printf("%d", f(a,6));
return 0;
}
```

[2010]

(A) –9 (B) 5
(C) 15 (D) 19

Common data for questions 6 and 7: Consider the following recursive C function that takes two arguments.

unsigned int foo (unsigned int n, unsigned int r)

```
{
if ( n > 0 ) return ((n % r) + foo (n /r,
r));
else return 0;
}
```

6. What is the return value of the function foo when it is called as foo (513, 2)? **[2011]**

(A) 9 (B) 8
(C) 5 (D) 2

7. What is the return value of the function foo when it is called as foo (345, 10)? **[2011]**

(A) 345 (B) 12
(C) 5 (D) 3

Common data for questions 8 and 9: Consider the following C code segment

```
int a, b, c = 0;
void prtFun (void);
main ( )
{ static int a = 1;
prtFun( );
a+ = 1;
prtFun( );
printf("\n %d %d", a, b);
}
void prtFun(void)
{static int a = 2;
int b = 1;
a+ = ++b;
printf("\n %d %d", a, b);
}
```

8. What output will be generated by the given code segment if: **[2012]**

Line 1 is replaced by **auto int** a **= 1;**
Line 2 is replaced by **register int** a **= 2;**

(A)	(B)	(C)	(D)
3 1	4 2	4 2	4 2
4 1	6 1	6 2	4 2
4 2	6 1	2 0	2 0

9. What output will be generated by the given code segment? **[2012]**

(A)	(B)	(C)	(D)
3 1	4 2	4 2	3 1
4 1	6 1	6 2	5 2
4 2	6 1	2 0	5 2

10. What is the return value of $f(p, p)$, if the value of p is initialized to 5 before the call? Note that the first parameter is passed by reference, whereas the second parameter is passed by value.

```
int f(int &x, int c) {
   c = c - 1;
   if (c == 0) return 1;
   x = x + 1;
   return f(x, c) * x;
}
```

[2013]

(A) 3024 (B) 6561
(C) 55440 (D) 161051

11. Consider the following pseudo code. What is the total number of multiplications to be performed? **[2014]**

```
D = 2
for i = 1 to n do
for j = i to n do
for k = j +1 to n do
D = D * 3
```

(A) Half of the product of the three consecutive integers.
(B) One-third of the product of the three consecutive integers.
(C) One-sixth of the product of the three consecutive integers.
(D) None of the above.

12. Consider the function func shown below:

```
int func (int num) {
int count = 0;
while (num) {
count ++;
num>>=1;
}
return (count);
}
```

The value returned by func(435) is ______ **[2014]**

13. Consider the following function

```
double f (double X)
if (abs(X*X – 3) < 0.01)return X;
else return f(X/2 + 1.5/X);
}
```

Give a value q(to two decimals) such that $f(q)$ will return q:________ **[2014]**

14. Consider the following pseudo code, where x and y are positive integers **[2015]**

```
begin
        q := 0
        r := x
        while r ≥ y do
               begin
                      r := r – y
                      q := q + 1
               end
        end
```

The post condition that needs to be satisfied after the program terminates is

(A) $\{r = qx + y \wedge r < y\}$
(B) $\{x = qy + r \wedge r < y\}$
(C) $\{y = qx + r \wedge 0 < r < y\}$
(D) $\{q + 1 < r - y \wedge y > 0\}$

15. Consider the following C function **[2015]**

```
int fun(int n) {
     int x = 1, k;
     if (n == 1) return x;
     for (k = 1; k < n; ++k)
          x = x + fun(k)*fun(n - k);
     return x;
}
```

The return value of fun(5) is ______

16. Consider the following recursive C function

```
void get (int n)
{
     if (n < 1) return;
     get (n - 1);
     get (n - 3);
     printf("%d", n);
}
```

If get (6) function is being called in main ( ) then how many times will the get ( ) function be invoked before returning to the main ( )?

(A) 15 (B) 25
(C) 35 (D) 45

17. Consider the following C program **[2015]**

```
#include<stdio.h>
int f1(void);
int f2(void);
int f3(void);
int x = 10;
int main ( )
{
int x = 1;
x += f1( ) + f2 ( ) + f3 ( ) + f2 ( );
     printf("%d", x);
     return 0;
}
int f1 () { int x = 25; x++; return x;}
int f2 () { static int x = 50; x++; return x;}
int f3 () { x *= 10; return x};
```

The output of the program is ______

18. Suppose $c = < c[0],\ldots,c[k-1]>$ is an array of length k, where all the entries are from the set {0, 1}. For any positive integers a and n, consider the following pseudo code. **[2015]**

DOSOMETHING (c, a, n)
$z \leftarrow 1$
for $i \leftarrow 0$ to $k - 1$
do $z \leftarrow z^2$ mod n
if $c[i] = 1$
then $z \leftarrow (z \times a)$ mod n
return z

If $k = 4$, $c = <1, 0, 1, 1>$, $a = 2$ and $n = 8$, then the output of DOSOMETHING(c, a, n) is ______

19. What will be the output of the following C program? **[2016]**

```
void count (int n) {
static int d = 1;
printf("%d ",n);
printf("%d ",d);
d ++;
if (n > 1) count (n -1);
printf("%d ", d);
}
void main ( ) {
count (3);
}
```

(A) 3 1 2 2 1 3 4 4 4
(B) 3 1 2 1 1 1 2 2 2
(C) 3 1 2 2 1 3 4
(D) 3 1 2 1 1 1 2

20. The following function computes X^Y for positive integers X and Y. **[2016]**

```
int exp (int X, int Y)
{
int res = 1, a = X, b = Y;
while (b! = 0)
{
if (b%2 = = 0) {a = a*a; b = b/2;}
else {res = res *a; b = b -1;}
}
return res;
}
```

Which one of the following conditions is **TRUE** before every iteration of the loop?

(A) $X^Y = a^b$
(B) $(\text{res} * a)^Y = (\text{res} * X)^b$
(C) $X^Y = \text{res} * a^b$
(D) $X^Y = (\text{res} * a)^b$

21. Consider the following two functions.

```
void fun1 (int n) {          void fun2 (int n) {
    if (n == 0) return;      if (n == 0) return;
    printf ("%d", n);        printf ("%d", n);
    fun2 (n - 2) ;           fun1(++n)
    printf ("%d", n);        printf ("%d", n);
}                            }
```

The output printed when fun1 (5) is called is **[2017]**

(A) 53423122233445 (B) 53423120112233
(C) 53423122132435 (D) 53423120213243

22. Consider the C functions foo and bar given below:

```
int foo (int val) {
  int x = 0;
  while (val > 0) {
    x =x + foo (val--);
  }
  return val;
}
int bar (int val) {
  int x = 0;
  while (val > 0) {
    x =x +bar (val - 1);
    }
  return val;
}
```

Invocations of foo (3) and bar (3) will result in: **[2017]**

(A) Return of 6 and 6 respectively.
(B) Infinite loop and abnormal termination respectively.
(C) Abnormal termination and infinite loop respectively.
(D) Both terminating abnormally.

23. The output of executing the following C program is______.

```
# include <stdio.h>
int total (int v)  {
  static int count = 0;
  while (v)  {
    count + = v&1;
    v >> = 1;
  }
   return count;
}
void main ( )  {
    static int x = 0;
    int i = 5;
    for (; i > 0,i--)  {
      x = x + total (i);
    }
    printf ("%d\n", x);
}
```

[2017]

24. Consider the following C program:

```
#include <stdio.h>
int counter = 0;
int calc (int a, int b) {
    int c;
    counter++;
    if (b==3) return (a*a*a);
    else {
        c = calc (a, b/3);
        return (c*c*c);
    }
}
int main () {
    calc (4, 81);
    printf ("%d", counter);
}
```

The output of this program is ______. **[2018]**

25. Consider the following program written in pseudo-code. Assume that *x* and *y* are integers.

```
Count (x,y) {
if (y ! = 1) {
    if (x ! = 1) {
        print ("*");
        Count (x/2, y);
    }
    else {
        y = y-1;
        Count (1024, y);
        }
    }
}
```

The number of times that the print statement is executed by the call count (1024, 1024) is ______. **[2018]**

Chapter 3

Arrays, Pointers and Structures

LEARNING OBJECTIVES

- *Arrays*
- *Array initialization*
- *Passing array elements to function*
- *Two dimensional arrays*
- *Syntax for 3D array declaration*
- *Pointers*
- *Pointer to pointer*
- *Pointer to void (generic pointer)*
- *Array of pointers*
- *Pointer to function*
- *Dynamic memory management*
- *Memory allocation function*
- *Realloc*
- *Structures*
- *Nesting of structures*
- *Array of structures*
- *Structures & functions*
- *Union*
- *Declaration*
- *Bit fields*

Arrays

In *C* we have the following derived data types:

- Arrays
- Pointers
- Structures
- Unions

Imagine a problem that requires to read, process, and print 10 integers. We can declare 10 variables, each with different name. Having 10 different names creates a problem; we need 10 read and 10 write statements each for different variable.

Definition

An array is a collection of elements of same data type. Array is a sequenced collection. So, we can refer to the elements in array as 0th element, 1st element, and so on, until we get the last element. The array elements are individually addressed with their subscripts/indices along with array name. We place subscript value in square brackets ([ ]) followed by array name. This notation is called indexing.

There is a powerful programming construct, loop, that makes array processing easy. It does not matter if there are 1, 10, 100 or 1000 elements.

We can also use a variable name in subscript, as the value of variable changes; it refers different elements at different times.

Syntax of Array Declaration

```
Data_type array_name_[size];
```

Here, data type says the type of elements in collection, array_name is the name given to collection of elements and size says the number of elements in array.

Example: int marks[6];

Here, 'int' specifies the type of variable, marks specifies name of variable. The number 6 tells the dimension/size. The '[ ]' tells the compiler that we are dealing with array.

Accessing array elements: All the array elements are numbered, starting from 0, thus marks [3] is not the third, but the fourth element.

Example: marks[2] – 3rd element
marks[0] – 1st element
We can use the variable as index.
Thus marks[i] – ith element. As the value of i changes, refers different elements in array.

Summary about Arrays

- An array is a collection of similar elements.
- The first element in array is numbered 0, and the last element is one less than the total size of the array.
- An array is also known as subscripted variable.
- Before using an array, its type and dimension must be declared.
- How big an array is, its elements are always stored in contiguous memory locations.
- Individual elements accessed by index indicating relative position in collection.
- Index of an array must be an integer.

Array Initialization

Syntax

```
Data_type array_name[size] = {values};
```

Example:

```
int  n[6]= {2,4,8,12,20,25};  //  Array  ini-
tialized with list of values
int num[10] = {2,4,12,20,35};
// remaining 5 elements are initialized with
0
// values
int  b[10]  =  {0};  //  Entire  array  elements
initialized with 0.
```

Note:

- Till the array elements are not given any specific value, they are supposed to contain garbage values.
- If the number of elements used for initialization is lesser than the size of array, then the remaining elements are initialized with zero.
- Where the array is initialized with all the elements, mentioning the dimension is optional.

Array Elements in Memory

Consider the following declaration – int num[5].

What happens in memory when we make this declaration?

- 10 bytes get received in memory, 2 bytes each for 5 integers.
- Since array is not initialized, all five values in it would be garbage. This happens because the default storage class is auto. If it is declared as static, all the array elements would be initialized with 0.

Note: In *C*, the compiler does not check whether the subscript used for array exceeds the size of array.

Data entered with a subscript exceeding the array size will simply be placed in memory out size the array, and there will be no error/warning message to warn the programmer.

Passing array elements to function

Array elements can be passed to a function by value or by reference.

Example: A program to pass an array by value:

```
void main( )
{
void display(int[  ]);// Declaration
int marks[ ] = {10,15,20,25,30};
display (marks);// function call
}
void display(int n[ ] )// function definition
{
int i;
for(i = 0 ; i < 5 ; i++)
printf("%d ", n[ i ] );
}
```

Output:

10 15 20 25 30

Here, we are passing the entire array by name. The formal parameter to receive is declared as an array, so it receives entire array elements.

To pass the individual elements of an array, we have to use index of element with array name.

Example: display (marks[*i*]); sends only the ith element as parameter.

Example: A program to demonstrate call by reference:

```
void main( )
{
void display (int *);
int marks[ ] = {5, 10 15, 20, 25};
display(&marks[0]);
}
void display(int *p)
{
int i;
for(i = 0; i < 5; i++)
printf("%d ",*(p+i));
}
```

Output:

5 10 15 20 25

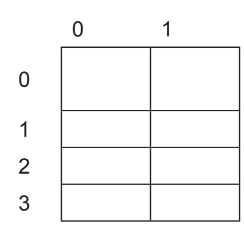
Here, we pass the address of very first element. Hence, the variable in which this address is collected (*p*) is declared as a pointer variable.

Note: Array elements are stored in contiguous memory location, by passing the address of the first element; entire array elements can be accessed.

Two-dimensional Arrays

In *C* a two-dimensional array looks like an array of arrays, i.e., a two-dimensional array is the collection of one-dimensional arrays.

Example: `int x[4][2];`



By convention, first dimension says the number of rows in array and second dimension says the number of columns in each row.

In memory, whether it is one-dimensional or a two-dimensional array, the array elements are stored in one continuous chain.

The arrangement of array elements of a two-dimensional array in memory is shown below:

X[0][0]	x[0][1]	x[1][0]	x[1][1]	x[2][0]	X[2][1]	X[3][0]	X[3][1]
6000	6002	6004	6006	6008	6010	6012	6014

Initialization

We can initialize two-dimensional array as one-dimensional array:

```
int a[4] [2] = {0,1,2,3,4,5,6,7}
```

The nested braces can be used to show the exact nature of array, i.e.,

```
int a[4][2] = {{0,1},{2,3}{4,5},{6,7}}
```

Here, we define each row as a one-dimensional array of two elements enclosed in braces.

Note: If the array is completely initialized with supplied values, then we can omit the size of first dimension of an array (the left most dimension).

- For accessing elements of multi-dimensional arrays, we must use multiple subscripts with array name.
- Generally, we use nested loops to work with multi-dimensional array.

Multidimensional Arrays

C allows array of two or more dimensions and maximum numbers of dimensions a C program can have depends on the compiler, we are using. Generally, an array having one dimension is called 1D array; array having two dimensions is called 2D array and so on.

Syntax:
type array-name[*d*1] [*d*2] [*d*3] [*d*4]…[*dn*];
where dn is the size of last dimension.

Example:
int table[5][5][20];
float arr[5][6][5][6][5];
In our example array “table” is a 3D. (A 3D array is an array of array of array)

Declaration and Initialization of 3D array

A 3D array can be assumed as an array of arrays; it is an array of 2D arrays and as we know 2D array itself is an array of 1D arrays. A diagram can help you to understand this.

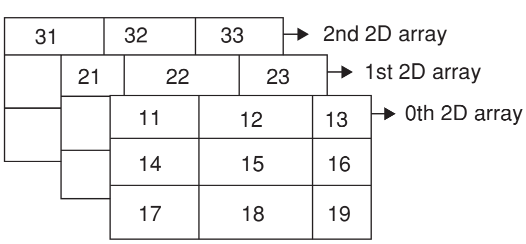


Figure 1 3D array conceptual view

Example:

```
void main( )
{
int i, j, k;
int arr [3] [3] [3] =
{
{11, 12, 13},
{14, 15, 16},
{17, 18, 19}
},
{21, 22, 23},
{24, 25, 26},
{27, 28, 29}
},
{31, 32, 33},
{34, 35, 36},
{37, 38, 39}
}
};
printf(“3D Array Elements \n”);
for (i = 0; i<3; i++)
{
for(j =0; j <3; j++)
{
for (k= 0; k<3; k++)
{
printf (“% d\t”, arr[i][j][k]);
}
printf (“\n”);
}
printf (“\n);
}
}
```

Output: 3D Array Elements

11	12	13
14	15	16
17	18	19
21	22	23
24	25	26
27	28	29
31	32	33
34	35	36
37	38	39

Syntax for 3D Array Declaration

data–type array–name [table] [row] [column];
To store values in any 3D array, first point to table number, row number and lastly to column number.

POINTERS

Pointer is a variable which contains address of another variable. *C*'s clever use of pointers makes it the excellent language.

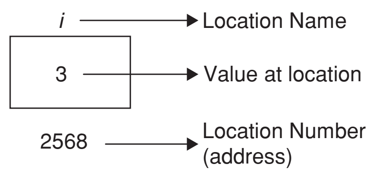
Consider the declaration:

```
int i = 3;
```

The declaration tells the *C* compiler to:

- Reserve space in memory to hold in integer value.
- Associate the name *i* with this memory location.
- Store the value 3 at this location.

Memory map is:



Computer may choose different location at different times for same variable. The important point is the address is a number.

The expression '&i' gives the address of variable '*i*'.

p = &i;

Assigns the address of '*i*' to variable '*p*'.

The variable '*p*' is declared as:

int **p*;

* tells the compiler that variable '*p*' is an address variable.

Memory map of i, **p* is –

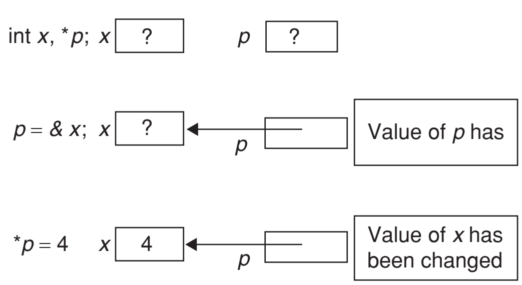
**p*	*i*
2568	3
2720	2568

Now, pointer '*p*' is referring to the variable '*i*'.

The variable '*i*' can be accessed in two ways:

- By using the name of variable.
- By using the pointer variable referring to location '*i*'.

The operator '*' can also be used along with pointer variable in expressions. The operator '*' acts as indirection operator.



Usage of '*p*' refers to value of '*p*', where as '**p*' refers to value at the address stored in '*p*', i.e., value of '*i*'.

Example:
```
int *p;
float *x;
char *ch ;
```

Here, *p*, *x* and ch are pointer variables, i.e., variables capable of holding address. Since addresses are always whole numbers, pointers would always contain whole numbers.

The declaration float **x* does not mean that *x* contains floating value, *x* will contain address of floating point variable. Similarly, 'ch' contains address of char value.

Pointer to Pointer

We know, pointer is a variable that contains address of another variable. Now this variable address might be stored in another pointer. Thus, we now have a pointer that contains address of another pointer, known as pointer to pointer.

Example:

```
void main()
{
int i = 3, *p, **q;
p = &i;
q =&p;
printf("\n Address of i = %u", &i);
printf("\n Address of i = %u", p);
printf("\n Address of i = %u", *q);
printf("\n Address of p= %u", &p);
printf(\n Address of p= %u, q);
printf("\n Address of q = %u", &q)
printf('\n value of i= %d",i);
printf('\n value of i= %d",*(&i));
printf('\n value of i= %d",*p);
printf('\n value of i= %d",**q);
}
```

If the memory map is

***q*	**p*	*i*
2010	2000	3
2050	2010	2000

Then the output is:

Address of *i* = 2000
Address of *i* = 2000
Address of *i* = 2000
Address of *p* = 2010
Address of *p* = 2010
Address of *q* = 2050
Value of *i* = 3
Value of *i* = 3
Value of *i* = 3
Value of *i* = 3

Note: We can extend pointer to a pointer to pointer. In principal, there is no limit on how far we can go on extending this definition.

Pointers for Inter-function Communication

We know that functions can be called by value and called by reference.

- If the actual parameter should not change in called function, pass the parameter-by value.

- If the value of actual parameter should get changed in called function, then use pass-by reference.
- If the function has to return more than one value, return these values indirectly by using call-by-reference.

Example: The following program demonstrates how to return multiple values.

```
void main( )
{
void areaperi(int, int *, int *);
int r;
float a,p;
printf("\n Enter radius of a circle");
scanf("%d", &r);
areaperi(r, &a, &p);
printf("Area = %f", a);
printf("\n Perimeter = %f", p);
}
void areaperi(int x, int *p, int *q)
{
*p = 3.14*x*x;
*q = 2 * 3.14*x;
}
```

Output:
Enter radius of circle 5
Area = 78:500000
Perimeter = 31.400000

Compatibility: Pointers have a type associated with them. They are not just pointer types, but rather are pointers to a specific type. The size of all pointers is same, which is equal to size of int. Every pointer holds the address of one memory location in computer, but size of variable that the pointer references can be different.

Pointer to Void (Generic Pointer)

A pointer to void is a generic type; this can point to any type. Its limitation is that the pointed data cannot be referenced directly. Since void pointer has no object type, so its length is undetermined; it cannot be dereference unless it is cast.

Example: The following example demonstrates generic pointer.

```
void main ( )
{
int a = 10;
float x = 5.7;
void *p;
p = &a;
printf("\n value of a = %d", *((int*)p));
p= &x;
printf ("\n value of x = % f", *((float *)p));
}
```

Output:
value of *a* = 10
value of *x* = 5.700000

Operations can be Performed on Pointers

1. Addition of a number to a pointer.

Example:
```
int i = 4, *j, *k;
  j =&i;
  j = j +1;
  k = j +5;
```

2. Subtraction of a number from a pointer.

Example:
```
int i = 4, * j, * k;
  j = &i; j = j -1;
  k = j - 3;
```

3. Subtraction of one pointer from another. One pointer variable can be subtracted from another (provided both variables point to same array elements). The resulting value indicates the number of bytes (elements) separating (the corresponding array elements).

Example:
```
void main ( )
{
int a[ ] = {5,10,15,20,25} ,*i, *j;
i = &a[0];
j = &a[4];
printf("%d, %d", j-i,*j-*i);
}
```

Output: 4, 20
The expression *j-i* prints 4 but not 8. because j and i pointing to integers that are 4 integers apart.

4. Comparison of two pointer variables. Pointer variables can be compared provided both pointing to the same data type.

Notes: Do not attempt the following operations on pointers:
1. Addition of two pointers.
2. Multiplication of a pointer with a number or another pointer.
3. Division of a pointer with a number or another pointer.

Important points about pointer arithmetic

- A pointer when incremented always points to an immediately next location.
- A pointer when decremented always points to an element precedes the current element.

Notice the difference with:

```
(*p)++
```

Here, the expression would have been evaluated as the value pointed by *p* increased by one. The value of *p* would not be modified if we write

$$\boxed{*p{+}{+} = *q{+}{+};}$$

Because ++ has a higher precedence than *, both *p* and *q* are increased, but because both increase operators (++) are used as postfix and not prefix, the value assigned to **p* is

*q before both *p* and *q* are increased. And then both are increased, it would be equivalent to

```
*p = *q
++p;
++q;
```

Implementation of arrays in C

Array name is the pointer to the first element in array. The following discussion explains how pointers are used for implementing arrays in *C*.

```
int n[ ] = {10,20,30,40,50};
```

n					
	10	20	30	40	50
	5512	5514	5516	5518	5520

- We know that mentioning the array name gets the base address.

  ```
  int *p = n;
  ```

  Now 'p' points to 0^{th} element of array '*n*'.
- 0th element can be accessed as *array_ name.

  ```
  int  x = *n;
  stores n[0] into 'x'.
  ```
- we can say that *array _ name and *(array _ name+0) are same. This indicates the following are same.

  ```
  num[i]
  *(num + i)
  *(i+num)
  ```

  (num is an array; i is an index)

Array of Pointers

The way there can be an array of ints or array of floats, similarly there can be an array of pointers. An array of pointers is the collection of addresses.

These arrays of pointers may point to isolated elements or an array element.

Example 1: Array of pointers pointing to isolated elements:

```
int i = 5, j=10, k =15;
int *ap[3];
ap[0] = &i; ap[1] = &j; ap[2] = &k;
```

Example 2: Array of pointers pointing to elements of an array:

```
int a[ ] = {0,20,45,50,70};
int *p[5], i ;
for(i = 0; i <5 ; i++ )
p[i] = &a[i] ;
```

Example 3: Array of pointers pointing to elements of different arrays;

```
int a[ ] = {5,10,20,25};
int b[ ] = {0,100,200,300,400};
int c[ ] = {50,150,250,350,450};
int *p[3];
p[0] = a; p[1] = b; p[2]=c;
```

Example 4: Array of pointers pointing to 0th element of each row of a two-dimensional array

```
int a[3][2] = {{1,2} {3,4}, {5,6}};
int *p[3];
p[0] = a[0]; p[1] =a[1];p[2] = a[2];
```

Pointer to Function

Function is a set of instructions stored in memory, so the function also contains the base address. This address can hold by using a pointer called pointer to function.

Syntax:

```
return_type  (*function_pointer)(parameter –
list );
```

Example: `int (*fp)(float, char, char);`

Example:

```
// pointer to functions
# include <iostream>
Using name space std;
int addition(int a, int b)
{
return (a + b);
}
int subtraction(int a, int b)
{
return (a – b) ;
}
int operation (int x, int y, int (*funtocall)
(int, int))
{
int g;
g = (*functocall)(x, y);
return (g);
}
int main( )
{
int m, n;
int (*minus)(int, int) = substraction;
m = operation(7, 5, addition);
n = operation(20, m, minus);
cout < < n;
return 0;
}
```

In the example, minus is a pointer to a function that has two parameters of type int. It is immediately assigned to point to the function subtraction, all in a single line.

Example: Program to demonstrate function pointer

```
int add(int, int);
int sub(int, int);
void main( )
{
Int (*fp) (int, int);
fp = add;
```

```
printf("\n 4+5=%d", fp(4,5));
fp = sub;
printf ("\n 4 - 5 = %d", fp(4,5));
}
int add(int x, int y)
{
return x + y;
}
int sub(int x,int y)
{
return x - y;
}
```

Output: 4 + 5 = 9
4 – 5 = –1

Pointer to structure The main usage of pointer to structure is we can pass structure as parameter to function as call by reference.

The other usage is to create linked lists and other dynamic data structures which depend on dynamic allocation.

Consider the declaration

struct employee

```
{
char name[20];
Int age;
float salary;
};
```

struct employee * *p*;

Variable of structures can be accessed using '.' Operator (or) → operator that is

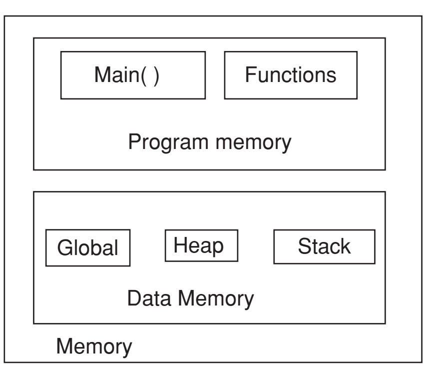
(**p*).age = 20 ; (or) *p* → age = 20;

(**p*).salary = 40, 231.0; (or) *p* → salary = 40,231.0;

Dynamic Memory Management

We can allocate the memory to objects in two ways—static and dynamic allocation. Static memory allocation requires declaration and definition of memory fully specified in the source program. The number of bytes required cannot be changed during run time. Dynamic memory allocation uses predefined functions to allocate and de-allocate memory for data dynamically during the execution of program.

We can refer to dynamically allocated memory only through pointers. Conceptual view of memory:



Memory Allocation Function

- Static memory allocation uses stack memory for variables.
- Dynamic memory management allocates memory from heap.

The following are the four memory management functions available in alloc.h and stdlib.h.

1. **Malloc (Block memory allocation):** Malloc function allocates block of memory that contained the number of bytes specified in parenthesis. It returns 'void' pointer to the first byte of allocated memory. The allocated memory is not initialized. If the memory allocation is not successful then it return NULL pointer.
   Declaration
   void *malloc (size_t size);
   The type size_t is defined as unsigned int in several header files including `stdio.h.`

   Syntax: pointer = (type*) malloc(size);
2. **Calloc (contiguous memory allocation):** Calloc is primarily used to allocate memory for arrays. It initializes the allocated memory with null characters.

   Declaration: void *calloc (size_t ele_count, size_t ele_size);

   Syntax: ptr = (type*)calloc(ele-count,ele-size);
3. **Realloc (reallocation of memory):** The realloc function is highly inefficient. When given a pointer to a previously allocated block of memory, realloc changes the size of block by deleting or extending the memory at the end of block. If the memory cannot be extended, then realloc allocates completely new block, copies the contents from existing memory location to new location, and deletes the old location.

   Declaration: void *realloc (void *ptr, size_t new_size);

   Syntax: ptr = (type*)realloc(ptr, new_ size);
4. **Free (Releasing memory):** When the memory allocated by malloc, calloc or realloc is no longer needed, they can be freed using the function free( ).

   Declaration: void free(void *ptr);

   Syntax: free(ptr);

Free function de-allocates complete memory referenced by the pointer. Part of the memory block cannot be de-allocated.

Structures

Arrays are used to store large set of data and manipulate them but the disadvantage is that all the elements stored in an array are to be of the same data type. When we require using a collection of different data items of different data types, we can use a structure.

- Structure is a method of packing data of different types.
- A structure is a convenient method of handling a group of related data items of different data types.

Syntax for declaration

```
struct sturct_name
{
Data_type_1 var1;
Data_type_2 var2;
:
Data_type_n varn;
};
```

Example:

```
struct lib - books
{
char title [20];
char author[15];
int pages;
float price;
};
```

The keyword struct declares a structure to hold the details of four fields namely title, author, pages and price, these are members of the structures.

We can declare structure variables using the tag name anywhere in the program.

Example: struct lib – books book1, book2, book3;

- Declares book1, book2, book3 as variables of type struct lib _ books, each declaration has four elements of the structure lib_ books.

  Memory map of book1:

Book1		
	Title	20 bytes
	Author	15 bytes
	Pages	2 bytes
	Price	4 bytes

- Memory will not be allocated to the structure until it is instantiated. i.e., till the declaration of a variable to structure.
- To access the members of a structure variable, *C* provides the member of (.) operator.

Example: To access author of book 1 – book1. author

Syntax: `structure_var.member_name;`

- The structures can also be initialized as any other variable of C.

Example: struct lib-books book4={"Let us *C*", "yashwanth", 450, 200.95};

Note: The values must provide in the same order as they appear in structure declaration.

- One structure variable can be assigned to another structure variable.
- Structure variables cannot be compared.

Example:

```
# include <stdio.h>
void main( )
{
Struct s1{
int id_no;
char name[20];
char address[20];
char combination[3];
   int age;
   } newstudent;
printf (" Enter student Information");
printf ("Enter student id _ no");
scanf ("%d", &newstudent.id_no):
printf (" Enter the name of the student");
scanf ("%s", & newstudent.name);
printf (" Enter the address  of the student");
scanf ("%s", &newstudent.address);
printf("Enter   the   combination   of   the
student")';
scanf("%s", &newstudent.combination");
printf (" Enter the age of student);
scanf ("%d ", &newstudent.age");
printf (" student information");
printf  ("  student id_no  =  %d",  newstudent.
id - no);
printf("student   name   =   %s",   newstudent.
name);
printf("student address = %s", newstudent.
address);
printf ("students combination = %s", newstu-
dent. combination);
printf("Age  of  student  =  %d",  newstudent.
age);
}
```

Nesting of Structures

The structures can be nested in two ways:

- Placing the structure variable as a member in another structure declaration.
- Declaration of the entire structure in another structure.

Example:

```
struct date
{
int day;
int month;
int year;
};
struct student
{
int id_no;
char name[20];
char address [20];
int age;
structure date doa;
} oldstudent, newstudent;
```

The structure 'student' contains another structure date as one of its members.

To access the day of date of admission (doa) of old student – oldstudent.doa.day.

Example:

```
struct outer
{
```

```
int o1;
float o2;
struct inner
{
int i1;
float i2;
};
} out1, out2;
```

The innermost members in a nested structure can be accessed by chaining all the concerned structure variables, from outermost to innermost; accessing i1 for out1-out1. inner.i1;

Array of Structures

It is possible to define an array of structures. For example, if we are maintaining information of all the students in the college and if 100 students are studying in the college, we need to use an array than single variables.

Example:

```
structure information
{
int id _ no;
char name[20];
char address[20];
char combination[3];
int age;
}
student[100];
```

Example:

```
# include <stdio.h>
{
struct info
{
int  id _ no;
char name[20];
char address[20];
char combination[3];
int age;
}
struct info std[100];
int, i ,n;
printf (" Enter the number of students");
scanf ("%d", &n);
scanf("Enter id_no, name, address, combina-
tion and age");
for (i = 0; i<n; i ++)
scanf(" %d  %s  %s  %s  %d",  &std[i].id_no,
std[i].name, std[i].address,
std[i]. combination,&std [i].age);
printf("student information");
for (i = 0 ; i < n; i ++)
printf("%d  %s  %s  %  s  %  d",  std[i].id_no,
std[i].name, std[i].address, std[i]. combi-
nation, std[i]. age);
```

Structures and Functions

- An entire structure can be passed as a parameter like any other variable.
- A function can also return a structure variable.

Example:

```
# include <stdio.h>
struct employee
{
int emp_id;
char name[25];
char department[10];
float salary;
};
void main( )
{
static struct employee emp1 = {
12, "shyam", "computer", 7500.00};
/* sending entire employee structure */
display(emp1);
}
/* function to pass entire structure vari-
able */
display(empf)
struct employee empf
{
printf (" %d %s % s %f", empf.empid, empf.
name, empf.department, empf.salary);
}
```

Union

Union, like structure contains members whose individual data types may differ from one another. The members that compose union all share the same storage area within the computer's memory whereas each member within a structure is assigned its own unique storage area. Thus, unions are used to conserve memory.

Declaration

```
union item
{
int m;
float p;
char c;
}Code;
```

This declares a variable code of type union item.

The union contains three members each with a different data type. However, we can use only one of them at a time. The compiler allocates a piece of storage that is large enough to access a union member; we can use the same syntax that we use to access structure members, i.e.,

```
Code.m
Code.p
Code.c
```

are all valid member variables. During accessing, we should make sure that we are accessing the member whose value is currently stored.

Example:

```
union marks
{
float perc;
char grade;
}
main( )
{
union marks student1;
student1.perc = 98.5;
printf("marks are %f address is %16ℓu", stu-
dent1.perc, &student1. perc);
student1. grade = 'c';
printf("grade is %c address is %16ℓu", stu-
dent1. grade, &student1. grade);
}
```

Example:

```
# include <stdio.h>
void main ( )
{
Union u_example
{
float decval;
int p_num;
double my_value;
}U1;
U1.my_value = 125.5;
U1.pnum = 10;
U1.decval = 1000.5f;
printf("decval = %f pnum = %d my_value = % lf
", U1. decval, U1.pnum, U1.my_value);
printf(" U1 size = %d decval size =%d,
pnum size = %d my-value size = % d",
sizeof (U1), sizeof (U1.decval), sizeof
(U1.pnum), sizeof (U1.my_value));
       }
```

Bit Fields

When a program variable '*x*' is declared as int, then '*x*' takes the values from (-2^{15}) to ($2^{15} - 1$), if *x* in the program takes only two values, 1 and 0, which requires only one bit, then the remaining 15 bits are waste.

In order to not to have this wastage, we can use bit fields with the several variables with the small enough maximal values, which can pack into a single memory location

Example:

```
struct student
{
Int gender : 1 ; // gender takes only 0,1
values
Int marriage : 2 ; // marriage takes 4(0, 1,
2, 3) values
Int marks : 7 ; // marks takes values from
0 - 127
}
```

Exercises

Practice Problems I

Directions for questions 1 to 15: Select the correct alternative from the given choices.

1. Output of the following C program is

```
intF(int x, int *py, int **pz)
{
int y, z;
** pz+= 1;
z = *pz;
*py+= 2;
y = *py;
x+ = 3;
return x+y+z;
}
void main( )
{
int c, *b, **a ;
c = 4;
b = &c;
a = &b;
printf( "%d", F(c, b, a));
}
```

(A) 30 (B) 22
(C) 20 (D) Error

2.
```
main( )
{
    char  *ptr;
    ptr = "Hello World";
     printf("%c\n",*&*ptr);
}
```

Output of the above program is
(A) Garbage value
(B) Error
(C) H
(D) Hello world

3.
```
#include <stdio.h>
main( )
{
register a =10;
char b[ ] = "Hi";
printf("%s %d ", b, a);
}
```

Output is
(A) Hi 10 (B) Error
(C) Hi (D) Hi garbage value

4.
```
main ( )
{
    int fun( ) ;
    (*fun)( ) ;
}
int fun( )
{ printf("Hello") ;
}
```
(A) Hello (B) Error
(C) No output (D) H

5. Let B be a two-dimensional array declared as
B : array[1...10] [1...15] of integer;

Assuming that each integer takes one memory location the array is stored in row major order and the first element of the array is stored at location 100, what is the address of the element $B[i]$ $[j]$?

(A) $15i + 10j + 84$ (B) $15i + j - 16$
(C) $15i + j$ (D) $15i + j + 84$

6. Consider the following C program which is supposed to compute the transpose of a given 4×4 matrix M. Note that, there is a Y in the program which indicates some missing statements. Choose the correct option to replace Y in the program.

```
# include <stdio.h>
int M[4][4] = { 8, 10, 9, 16, 12, 13, 11,
15, 14, 7, 6, 3, 4, 2, 1, 5 };
main( )
{
   int i, j, temp;
    for (i = 0; i<4; ++i)
     {
            Y
     }
     for (i=0; i<4; ++i)
     for (j=0; j<4; ++j)
      printf("%d", M[i] [j]);
}
```
(A)
```
for (j=0; j<4; ++j)
    {
       M[j] [i] = temp;
        temp = M[j][i];
         M[j][i] = M[i][j];
        }
```
(B)
```
for (j=0; j<4; ++j)
    {
       temp = M[j][i];
       M[i][j] = M[j][i];
        M[j][i] =  temp;
        }
```
(C)
```
for (j=i; j<4; ++j)
    {
       temp = M[i][j];
       M[i][j] = M[j][i];
        M[j][i] =  temp;
        }
```
(D)
```
for (j=i; j<4; ++j)
        {
       M[i][j] = temp;
        temp = M[j][i];
       M[j][i] = M[i][j] ;
        }
```

7. Consider the C program shown below:
```
# include <stdio.h>
# define print(a) printf("%d", a)
int a;
void z(int n)
{
  n += a;
print (n);
}
void x(int *p)
{
   int a = *p+2;
   z(a) ;
*p = a;
   print(a);
}
main(void)
  {
     a = 6;
     x(&a);
     print(a);
  }
```
The output of this program is
(A) 14 8 6 (B) 16 6 6
(C) 8 6 6 (D) 22 11 12

8. Consider the program below:
```
# include <stdio.h>
int fun(int n, int *p)
{
    int x,y;
    if (n<=1)
     {
         *p = 1;
          return 1;
    }
x = fun(n-1, p);
y = x +p;
*p = x;
return y;
}
int main( )
    {
        int a =15;
    printf( "%d\n", fun(5, &a));
    return 0;
    }
```
The output value is
(A) 14 (B) 15
(C) 8 (D) 95

9. Consider the following C program segment

```
char p[20] ;
int i;
char *s = "string" ;
int l = strlen(s);
for (i=0; i<l; i++)
p[i] = s[l - i] ;
printf("%s", p) ;
```

The output of the program is

(A) string
(B) gnirt
(C) gnirts
(D) No output is printed

10.
```
# include <stdio.h>
main( )
{
    struct AA
      {
            int A = 5;
             char name[ ] = "ANU";
      };
    struct  AA  *p  =  malloc(sizeof(struct
    AA));
                printf("%d",p->A);
                printf("%s",p->name);
}
```

Output of the program is

(A) 5 ANU
(B) Runtime error
(C) Compiler error
(D) Linker error

11. The declaration

```
union u_tag {
int ival;
float fval;
char sval;
} u;
```

denotes *u* is a variable of type *u*_tag and

(A) *u* can have a value of int, float and char
(B) *u* can represent either integer value, float value or character value at a time
(C) *u* can have a value of float but not integer
(D) None of the above

12. If the following program is run from command line as myprog 1 2 3, what would be the output?

```
main (int argc, char *argv[ ])
{
int i;
i = argv [1] + argv [2] - argv [3];
printf ("%d", i);
}
```

(A) 123 (B) 6
(C) 0 (D) Error

13. The following C program is run from the command line as
myprog one two;
what will be the output?

```
main (int argc, char *argv [ ])
{
printf ("%c",**++argv);
}
```

(A) m (B) o
(C) myprog (D) one

14. The following program

```
change(int *);
main( ) {
int a = 4;
change(a);
printf ("%d", a);
}
change(a)
int a;
{
printf("%d", a);
}
```

Outputs

(A) 44 (B) 55
(C) 34 (D) 22

15. What is the output of the following program:

```
main( )
{
    const int x = 10;
    int *ptrx;
    ptrx = &x;
    *ptrx = 20;
    printf ("%d", x);
}
```

(A) 5 (B) 10
(C) Error (D) 20

Practice Problems 2

Directions for questions 1 to 11: Select the correct alternative from the given choices.

1. The following program segment

```
int *i;
*i = 10;
```

(A) Results in run time error
(B) Is a dangling reference
(C) Results in compilation error
(D) Assigns 10 to *i*

2. A $m \times n$ matrix is stored in column major form. The expression which accesses the (ij)th entry of the same matrix is
(A) $n \times (j-1) + i$
(B) $m \times (j-1) + i$
(C) $n \times (m-1) + ij$
(D) $m \times (n-1) + j$

3. int * $S[a]$ is 1D array of integers, which of the following refers to the third element in the array?
(A) $*(S+2)$ (B) $*(S+3)$
(C) $S+2$ (D) $S+3$

4. If an array is declared as char a[10][12]; what is referred to by $a[5]$?
(A) Pointer to 3rd Row
(B) Pointer to 4th Row
(C) Pointer to 5th Row
(D) Pointer to 6th Row

5. The following code is run from the command line as myprog 1 2 3. What would be the output?

```
main(int argc, char *argv[ ])
{
    int i, j = 0;
    for (i = 1; i < argc; i++)
    j = j + atoi (argv [i]);
    printf ("%d", j);
}
```

(A) 123 (B) 6
(C) Error (D) "123"

6. What will be the following C program output?

```
main (int argc, char *argv[ ], char *env
[ ]) {
int i;
for(i = 1; i < argc; i++)
printf ("%s", env[i]);
}
```

(A) List of all arguments
(B) List of all path parameters
(C) Error
(D) List of environment variables

7. The declaration

```
enum colors {
    red,
    blue,
    yellow = 1,
    green
};
```

assigns the value 1 to
(A) Red and Yellow
(B) Blue
(C) Red and blue
(D) Blue and yellow

8. What would be the output of the following program?

```
sum = 0;
for (i = -10; i < 0; i++)
    sum = sum + abs(i);
printf ("%d", sum);
```

(A) 100 (B) −505
(C) 55 (D) −55

9. An integer occupies 2 bytes of memory, float occupies 4 bytes and character occupies 1 byte. A structure is defined as:

```
struct tab {
    char a;
    int b;
    float c;
} table [10];
```

Then the total memory requirement (in bytes) is
(A) 14 (B) 70
(C) 40 (D) 100

10. What are the values of u1 and u2?

```
int u1, u2;
int x = 2;
int *ptr;
u1 = 2*(x + 10);
ptr = &x;
u2 = 2*(*ptr + 10);
```

(A) $u1 = 8, u2 = 16$
(B) $u1 = 23, u2 = 24$
(C) $u1 = 24, u2 = 24$
(D) None of the above

11. What is the output?

```
func(a, b)
int a, b;
{
return (a = (a = = b));
}
main ()
{
int process(), func();
printf("The value of process is %d", pro-
cess (func,3,6));
}
process (pf, val1, val2)
int (*pf) ();
```

```
int val1, val2;
{
return ((*pf) (val1, val2));
}
```

(A) The value of process is 0
(B) The value of process is 3
(C) The value of process is 6
(D) Logical error

Previous Years' Questions

1. Consider the following program in C language:

```
# include < stdio. h>
main ()
{
int i;
int *pi = &i;
scanf ("%d", pi);
printf("%d\n", i + 5);
}
```

Which one of the following statement is TRUE? **[2014]**

(A) Compilation fails
(B) Execution results in a run-time error
(C) On execution, the value printed is 5 more than the address of variable *i*.
(D) On execution, the value printed is 5 more than the integer value entered.

2. Consider the following C function in which size is the number of elements in the array *E*:

```
int MyX (int *E, unsigned int size)
{
int Y = 0;
int Z;
int i, j, k;
for (i = 0; i < size; i++)
Y = Y + E[i];
for (i = 0; i < size; i++)
for (j = 1; j < size; j++)
{
Z = 0;
for (k = i; k < = j; k++)
Z = Z + E[k];
if (Z > Y)
Y = Z;
}
return Y;
}
```

The value returned by the function My X is the **[2014]**

(A) maximum possible sum of elements in any sub - array of array *E*.
(B) maximum element in any sub-array of array *E*.
(C) sum of the maximum elements in all possible sub-arrays of array *E*.
(D) the sum of all the elements in the array *E*.

3. The output of the following C program is _______ **[2015]**

```
void f1 (int a, int b)  {
      int c;
      c=a; a=b; b=c;
}
void f2(int *a, int *b)  {
      int c;
      c=*a; *a=*b; *b=c;
}
int main ( ) {
      int a=4, b=5, c=6;
      f1 (a, b);
      f2 (&b, &c);
      printf("%d", c-a-b);
}
```

4. What is the output of the following C code? Assume that the address of *x* is 2000 (in decimal) and an integer requires four bytes of memory. **[2015]**

```
int main ( ) {
  unsigned int x[4] [3] =
  { {1, 2, 3}, {4, 5, 6}, {7, 8, 9},
  {10, 11, 12}};
  printf ("%u, %u, %u", x + 3, *(x +
  3), *(x + 2) + 3);
}
```

(A) 2036, 2036, 2036 (B) 2012, 4, 2204
(C) 2036, 10, 10 (D) 2012, 4, 6

5. Consider the following function written in the C programming language. **[2015]**

```
void foo(char *a {
      if ( *a && *a != ' '){
            foo(a + 1);
            putchar(*a);
      }
}
```

The output of the above function on input "ABCD EFGH" is

(A) ABCD EFGH (B) ABCD
(C) HGFE DCBA (D) DCBA

6. Consider the following C program segment. **[2015]**

```
#include <stdio.h>
int main()
{
   char s1[7] = "1234", *p;
```

```
    p = s1 + 2;
    *p = '0';
    printf("%s", s1);
}
```

What will be printed by the program?

(A) 12 (B) 120400
(C) 1204 (D) 1034

7. Consider the following C program **[2015]**

```
    #include<stdio.h>
    int main ( )
    {
    static int a[ ] = {10, 20, 30, 40, 50};
    static int *p[ ] = {a, a+3, a+4, a+1, a+2};
    int **ptr = p;
    ptr++;
    printf("%d%d", ptr-p, **ptr);
    }
```

8. Consider the following C program. **[2016]**

```
void f (int, short);
void main( )
{
int i = 100;
short s = 12;
short *p = &s;
_____; // call to f( )
}
```

Which one of the following expressions, when placed in the blank above, will **NOT** result in a type checking error?

(A) $f(s,*s)$ (B) $i = f(i,s)$
(C) $f(i,*s)$ (D) $f(i,*p)$

9. Consider the following *C* program. **[2016]**

```
# include<stdio.h>
void mystery (int *ptra, int *ptrb) {
int *temp;
temp = ptrb;
ptrb = ptra;
ptra = temp;

}
int main ( ) {
int a = 2016, b = 0, c = 4, d = 42;
mystery (&a, &b);
if (a < c)
    mystery(&c, &a);
mystery (&a, &d);
printf("%d\n", a)
}
```

The output of the program is _____.

10. The following function computes the maximum value contained in an integer array p [ ] of size n ($n >= 1$). **[2016]**

```
int max (int *p, int n) {
    int a = 0, b = n – 1;
    while (_____) {
        if (p [a] < = p [b]) {a = a+1;}
        else                 { b = b – 1;}
    }
    return p[a];
}
```

The missing loop condition is

(A) $a\ != n$
(B) $b\ != 0$
(C) $b > (a + 1)$
(D) $b\ != a$

11. The value printed by the following program is ___. **[2016]**

```
void f (int* p, int m) {
m = m +5;
*p = *p + m;
return;
}
void main () {
int i = 5, j = 10;
f(&i, j);
print f ("%d", i +j);
}
```

12. Consider the following program: **[2016]**

```
int f (int *p, int n)
{   if (n < = 1) return 0;
else return max (f (p +1, n – 1), p [0] – p [1] );
}
int main ()
{
int a[ ] = {3,5,2,6,4};
printf ("%d", f(a,5));
}
```

Note: *max (x,y) returns the maximum of x and y.*

The value printed by this program is ______

13. Consider the following C code:

```
# include <stdio.h>
int *assignval (int *x, int val) {
     *x = val;
     return x;
}
void main ( )  {
    int *x = malloc (sizeof (int));
    if (NULL == x) return;
     x = assignval (x, 0);
     if (x)  {
          x  =  (int  *)  malloc
          (sizeof (int));
          if (NULL == x) return;
          x = assignval (x, 10);
     }
    printf("%d\n", *x);
    free (x);
}
```

The code suffers from which one of the following problems: **[2017]**

(A) compiler error as the return of malloc is not typecast appropriately

(B) compiler error because the comparison should be made as x == NULL and not as shown

(C) compiles successfully but execution may result in dangling pointer

(D) compiles successfully but execution may result in memory leak

14. Consider the following C program.

```
# include <<stdio.h>
# include <<string.h>
void printlength (char *s, char *t)
{
   unsigned int c = 0;
   int  len  =  ((strlen(s)  -  strlen
   (t))  > c)  ? strlen  (s)  : strlen
   (t);
   printf ("%d\n", len);
}
void main ( ) {
   char *x = "abc";
   char *y = "defgh";
   printlength (x, y);
}
```

Recall that strlen is defined in string.h as returning a value of type size_t, which is an unsigned int. the output of the program is _________. **[2017]**

15. Given the following binary number in 32-bit (single precision) IEEE-754 format:

00111110011011010000000000000000

The decimal value closest to this floating-point number is **[2017]**

(A) 1.45×10^{1} (B) 1.45×10^{-1}

(C) 2.27×10^{-1} (D) 2.27×10^{1}

16. Match the following:

(P) static char var;	(i) Sequence of memory locations to store addresses
(Q) m = malloc (10); m = NULL;	(ii) A variable located in data section of memory
(R) char *ptr [10];	(iii) Request to allocate a CPU register to store data
(S) register int var1;	(iv) A lost memory which cannot be freed

[2017]

(A) P → (ii), Q → (iv), R → (i), S → (iii)

(B) P → (ii), Q → (i), R → (iv), S → (iii)

(C) P → (ii), Q → (iv), R → (iii), S → (i)

(D) P → (iii), Q → (iv), R → (i), S → (ii)

17. Consider the following function implemented in C:

```
void printxy (int x, int y) {
     int *ptr;
     x = 0;
     ptr = &x;
     y = *ptr;
     *ptr = 1;
     printf ("%d, %d" x, y);
}
```

The output of invoking printxy (1, 1) is **[2017]**

(A) 0, 0 (B) 0, 1

(C) 1, 0 (D) 1, 1

18. Consider the following snippet of a C program. Assume that swap (&x, &y) exchanges the contents of x and y.

```
int main ()  {
       int array[] = {3, 5, 1, 4, 6, 2};
       int done = 0;
       int i;
while (done == 0)  {
    done = 1;
    for (i=0; i <=4; i++)  {
        if (array[i] < array[i+1]) {
            swap(&array[i], &array[i + 1]) ;
            done = 0;
        }
    }
    for (i=5; i >=1; i--)  {
          if (array[i] > array[i-1]) {
               swap(&array[i], &array[i-1]);
               done = 0;
          }
     }
  }
```

```
    printf{"%d", array[3]);
}
```

The output of the program is ________. **[2017]**

19. Consider the following C Program.

```
#include<stdio.h>
#include<string,h>
int main ()  {
            char* c = "GATECSIT2017";
            char* p = c;
            printf{"%d",
            (int) strlen(c+2[p]-6[p]-1)) ;
            return 0;
}
```

The output of the program is __________. **[2017]**

20. Consider the following C program.

```
#include<stdio.h>
struct Ournode {
    char x, y, z;
} ;
Int main () {
    struct Ournode p = {'1', '0', 'a'+2};
    struct Ournode *q = &p;
    printf ("%c, %c", *( (char*)q+1),
                       * ( (char*)q+2) );
    return 0;
}
```

The output of this program is: **[2018]**

(A) `0, c`
(B) `0, a+2`
(C) `'0', 'a+2'`
(D) `'0', 'c'`

21. Consider the following C program:

```
#include<stdio.h>
void fun1 (char *s1, char * s2) {
char *tmp;
tmp = s1;
s1 = s2
s2 = tmp;
}
void fun2 (char **s1, char **s2) {
char *tmp;
tmp = *s1;
*s1 = *s2;
*s2 = tmp;
}
int main () {
char *str1 = "Hi", *str2 = "Bye";
fun1 (str1, str2);
printf ("%s %s ", str1, str2);
fun2 (&str1, &str2);
printf ("%s %s", str1, str2);
return 0;
}
```

The output of the program above is: **[2018]**

(A) Hi Bye Bye Hi
(B) Hi Bye Hi Bye
(C) Bye Hi Hi Bye
(D) Bye Hi Bye Hi

Chapter 4

Linked Lists, Stacks and Queues

LEARNING OBJECTIVES

- *Data structure*
- *Linked list*
- *Single-linked list*
- *Double-linked list*
- *Circular linked list*
- *Double circular-linked list*
- *Stack*
- *Queue*
- *Double-ended queue*
- *Circular queue*
- *Priority queue*
- *Array implementation*
- *Linked list implementation*
- *Linked list implementation of priority queue*

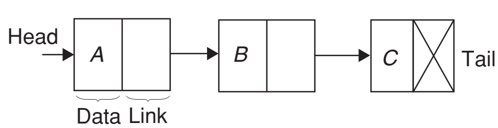
Data Structure

Data structure represents the logical arrangement of data in computer memory for easily accessing and maintenance.

Linked List

A linked list is a data structure that consists of a sequence of nodes, each of which contains data field and a reference (i.e., link) to next node in sequence.

- Generally node of linked list is represented as self-referential structure.
- The linked list elements are accessed with special pointer(s) called head and tail.



- The principal benefit of a linked list over a conventional array is that the list elements can easily be added or removed without reallocation or reorganization of the entire structure because the data items need not be stored contiguously in memory or on disk.
- Linked lists allow insertion and removal of nodes at any point in the list.
